ple″o·cy·to′sis (plee″o·sigh·to′sis) [*pleo-*, *kytos*; G. *-ōsis*, condition]. Increase of cells in the cerebrospinal fluid.

ple″o·mas′ti·a, ple″o·ma′zi·a [*pleio-*; G. *mastos*, breast]. See *polymastia*.

ple″o·mor′phism [*pleio-*, G. *morphē*, form]. The occurrence of widely different forms of the same species; applied especially to bacteria and to malignant cells. —**pleomorphic**, **pleomorphous**, *adj*.

ple″o·nasm (plee′o·naz·um) [G. *pleonasmos*, superfluity]. Any deformity marked by superabundance of certain organs or parts. —**pleonas′tic**, *adj*.

ple″o·nec′tic [G. *pleonektikos*, greedy]. 1. Pertaining to, or characterized by pleonexia. 2. Pertaining to blood having more than the normal saturation of oxygen.

ple″o·nex′i·a [G., greediness]. 1. Excessive desire to have or to possess. 2. Increased body resistance.

ple″on·os″te·o′sis [G. *pleiōn*, more; *osteon*, bone; *-ōsis*, condition]. Excessive or premature ossification.

p. of Léri. A rare hereditary condition characterized by thickening and deformity of the digits, limited joint movements, short stature, and mongoloid facies.

ple″o·no′tus [*pleio-*, G. *ous*, ear]. An earlike appendage located on the neck; cervical auricle.

ple″ro·cer′coid [G. *plērēs*, full; *kerkos*, tail; *eidos*, form]. The second larval stage in the second intermediate host of certain cestodes.

ple·ro′sis [G. filling]. 1. The restoration of lost tissue. 2. Plethora.

ple″si·o·gna′thus [G. *plēsios*, near; *gnathos*, jaw]. An accessory mouth in the parotid region.

ple″si·o·mor′phism (plee″see·o·mor′fiz·um, plee″see·o) [*plesios*, G. *morphē*, form]. Similarity in form.

ple″si·o·pi′a (plee″see·o·pee′ah, plee·see·or) [*plesios*; G. *ōps*, eye]. Increased convexity of the crystalline lens, producing myopia.

pless″es·the′si·a (pless″es·thee′zhuh, ·zee·uh) [G. *plēssein*, to strike; *aisthēsis*, perception]. Palpatory percussion performed by placing the left middle finger firmly against the body surface and percussing with the index finger of the right hand, allowing it to remain in contact with the left finger for few seconds.

ples·sim′e·ter. See *pleximeter*.

ples′sor. See *plexor*.

pleth′o·ra, ple·tho′ra [G. fullness]. A state characterized by excess of blood in the body. —**plethor′ic**, *adj*.

p. apocoptica. A temporary increase in the volume of the blood in other parts of the body caused by forcing blood from part to be amputated.

ple·thys′mo·gram. A record made by plethysmograph.

ple·thys′mo·graph (pli·thiz′mo·graf, ·thiss′mo·graf) [G. *plēthysmos*, making multiple; *graphein*, to write]. A device for ascertaining the change in volume of an organ or part, through an increase in the quantity of the blood therein.

pleth″ys·mog′ra·phy (pleth″i·smog′ruh·fee, pleth″iz·) [*plēthysmos*; *graphein*]. Measurement of volume changes of an extremity or of an organ.

pleu′ra (pl. *pleurae*) [G., rib]. The serous membrane enveloping the lung (pulmonary or visceral pleura) and lining the internal surface of the thoracic cavity (parietal pleura). —**pleural**, *adj*.

costal p. The portion of the parietal pleura which lines the bony wall of the thoracic cavity.

diaphragmatic p. The reflection of the parietal pleura upon the upper surface of the diaphragm.

mediastinal p. A continuation of the parietal pleura covering the side of the mediastinum.

pericardiac p. The portion of the parietal pleura contiguous to the pericardium.

pleu″ra·cen·te′sis. See *pleurocentesis*.

pleu″ra·cot′o·my [*pleura*; G. *tomē*, cutting]. Incision of the thoracic wall and pleura, usually exploratory. Also called *thoracotomy*.

pleu·ral′gi·a [*pleura*; G. *algos*, pain]. Pain in the pleura or in the side; intercostal neuralgia. —**pleuralgic**, *adj*.

pleu·ram′ni·on [*pleura*; G. *amnion*, inner membrane around the fetus]. An amnion developing by folds, as in sauropsidans and some mammals. See *schizamnion*.

pleu″ra·poph′y·sis [*pleura*; G. *apophysis*, process]. One of the lateral processes of vertebra, having the morphologic valence of rib. —**pleurapophys′eal**, *adj*.

pleur′otome. The areas of the pleura supplied with sensory fibers from single spinal nerve.

pleu·rec′to·my [*pleura*; G. *ektomē*, excision]. Excision of any portion of the pleura.

pleu′ri·cin. An antibiotic derived from a species of Basidiomycetes.

pleu′ri·sy [G. *pleuritis*, pleurisy]. Inflammation of the pleura; pleuritis.

acute p. A type with sudden onset in which the exudate may be fibrinous, fibrinoserous, purulent, putrid, or hemorrhagic. It may develop in the

course of bacteremia, bacteria occasionally being recovered, or originate from infection of the underlying lung as part of pneumonia, or from inflammatory processes in the mediastinum or other neighboring structures. Characterized by fever, pain with breathing, and crepitation or friction sounds on auscultation.

adhesive p. A form of fibrinous pleurisy in which fibrinous bands extend from the parietal to the visceral pleura.

chronic p. A slowly developing type, usually adhesive, as that seen in tuberculosis.

diaphragmatic p. Pleurisy of the upper surface of the diaphragm.

encapsulated p. Walled-off pocket of exudate in the pleural space.

fibrinous p. Pleurisy in which there is fibrinous exudate; it may be the primary infection or complication of another inflammatory condition of the lung or of infections such as pericarditis or periostitis of the ribs. Also called *dry p.*

hemorrhagic p. A type in which the exudate is serosanguineous, usually associated with tuberculosis or malignant disease.

interlobar p. Localized inflammation of pleural surfaces between the lobes of the lung.

plastic p. A form of adhesive pleurisy in which small amount of exudate causes extensive pleural changes resulting in decrease of the hemithorax.

p. root. Asclepias.

purulent p. Empyema; pyothorax; suppurative inflammation of the pleura.

rheumatic p. A type which is fibrinous, later becoming fibrinoserous; complication of rheumatic fever.

serous p. Pleurisy with effusion.

suppurative p. See *empyema*.

pleu·rit'ic [G. *pleuritikos*, suffering from pleurisy]. Pertaining to, affected with, or of the nature of, pleurisy.

pleu·ri'tis. See *pleurisy*.

pleu·ro-, pleur- [G. *pleura*, rib]. A combining form denoting *connection with the pleura* or *with the side* or *rib*.

pleu"ro·cen·te'sis [*pleura*; G. *kentēsis*, pricking]. Puncture of the pleura. Also called *thoracentesis*.

pleu"ro·cen'trum (pl. *pleurocentra*) [*pleura*; G. *kentron*, center]. The lateral half of a vertebral body as in cleft centrum, or when only a lateral half is ossified. Also called *hemicentrum*. —**pleurocentral**, *adj.*

pleu"ro·chol"e·cys·ti'tis (·kol"e·sis·tye'tis, ·ko"li·) [*pleura*; G. *cholē*, bile; *kystis*, bladder; *-itis*, inflammation]. Inflammation of the gallbladder with involvement of the pleura.

pleu"ro·cu·ta'ne·ous [*pleura*; L. *cutis*, skin]. In relation with the pleura and the skin, as pleurocutaneous fistula.

pleu'ro·dont [*pleura*; G. *odous*, tooth]. Having teeth affixed to the side of the bone which supports them, as certain lower vertebrates. See *acrodont*, *thecodont*.

pleu"ro·dyn'i·a [*pleura*; G. *odynē*, pain]. A syndrome of unknown cause, characterized by abrupt onset and severe pain, most commonly in the abdominal wall and intercostal spaces, and generally accompanied by mild fever.

epidemic p. That observed in epidemics and occurring usually in children and young adults. Syn., *Bornholm disease*, *devil's grip*, *epidemic myalgia*.

pleu"ro·gen'ic, pleu·rog'e·nous (ploo·rodj'i·nus) [*pleura*; G. *genesthai*, from *gignesthai*, to be produced]. Originating in the pleura.

pleu"ro·hep·a·ti'tis [*pleura*; G. *hēpar*, liver; *-itis*, inflammation]. Inflammation of the liver and diaphragmatic part of the pleura.

pleu'ro·lith [*pleura*; G. *lithos*, stone]. A calculus in the pleura or the pleural space.

pleu·rol'y·sis [*pleura*; G. *lysis*, loosing]. Separation of the parietal pleura from the chest wall.

pleu·ro'ma. Mesothelioma of the pleura.

pleu"ro·me'lus [*pleura*; G. *melos*, limb]. An individual having a parasitic or accessory limb arising from the thorax laterally.

pleu"ro·mu·ti'lin. An antibiotic, $C_{22}H_{34}O_5$, isolated from culture liquids of the Basidiomycete *Pleurotus mutilus*.

pleu"ro·per"i·car'di·al [*pleura*; G. *perikardios*, around the heart]. Pertaining to both pleura and pericardium.

pleu"ro·per"i·car·di'tis [*pleura*; *pericardium*; G. *-itis*, inflammation]. Pleurisy associated with pericarditis.

pleu"ro·pneu·mo'ni·a. Combined pleurisy and pneumonia.

bovine p. A disease of cattle, characterized by extensive consolidation and subpleural effusion in one or both lungs, caused by a pleuropneumonialike organism (proposed name, *Borrelomyces pleuropneumoniae*) numerous in the serous exudate. It spreads slowly in herds, and occurs throughout the world except in India, western Europe, and North America.

pleu"ro·pneu·mo'ni·a·like or'gan·isms. Highly pleomorphic, filterable microorganisms, usually stained by special methods, which can be cultured on infusion mediums enriched by high concentrations of serum or ascitic fluid. One form is the causative agent of bovine pleuropneumonia. Pathogenicity for man has not been established, but it is suggested that the organisms may contribute to, or cause inflammation of, the cervix, arthritis, Reiter's syndrome, and venereal disease not yet named. Abbreviated, PPLO or L organisms.

pleu"ro·pneu"mo·ni'tis. Inflammation of the lungs and pleura.

radiation p. See radiation *pneumonitis*.

pleu"ro·pros"o·pos·chi'sis (ploor"o·pros"o·pos'ki·sis) [*pleura*; G. *prosōpon*, face; *schisis*, cleavage]. A general term for oblique and transverse facial clefts.

pleu"ro·pul'mo·nar"y (ploor"o·pul'mo·nerr"ee) [*pleura*; L. *pulmo*, lung]. Pertaining to the pleura and the lungs.

pleu·ros'co·py [*pleura*; G. *skopein*, to examine]. Examination of the pleural cavity. See *thoracoscopy*.

pleu"ro·so'ma [*pleura*; G. *sōma*, body]. Fissure of both abdomen and thorax with lateral eventration and atrophy or imperfect development of the arm on the side of the eventration.

pleu"ro·so"ma·tos'chi·sis (ploor"o·so"muh·tos'ki·sis) [*pleura*; *sōma*; G. *schisis*, cleavage]. Lateral abdominal fissure.

pleu"ro·so'mus [*pleura*; *sōma*]. A monster exhibiting pleurosoma.

pleu'ro·spasm [*pleura*; G. *spasmos*, spasm]. Cramp or spasm in the side, of pleural origin.

pleu"ros·thot'o·nos. See *pleurothotonos*.

pleu"ro·thot'o·nos [G. *pleurothen*, from the side; *tonos*, tension]. A form of tetanic spasm of the muscles in which the body is bent to one side.

pleu'ro·tin. An antibiotic substance derived from the fungus *Pleurotus griseus*, active, in vitro, against several species of bacteria.

pleu·rot'o·my [G. *pleura*, rib; *tomē*, a cutting]. Incision into the pleura.

pleu"ro·ty'phoid [*pleura*; G. *typhōdēs*, delirious]. Typhoid fever with involvement of the pleura.

pleu"ro·vis·cer·al [*pleura*; L. *viscera*, inner organs]. Pertaining to the pleura or side and to the viscera.

plex'i·form [L. *plexus*, a twining; *forma*, form]. Resembling a network or plexus.

plexiglas. Trade-mark for a transparent plastic.

plex·im'e·ter [G. *plēxis*, stroke; *metron*, measure]. 1. A finger, usually the left third finger, held firmly against the skin to receive the stroke in indirect percussion. 2. A small, thin, oblong plate of hard but flexible material, such as ivory or rubber, used for the same purpose. Also called *plessimeter*.

plex'or [*plēxis*]. 1. A finger when used to tap the surface of the body in performing percussion. 2. A small hammer with rubber head used for the same purpose. Also called *percussion hammer*.

plex'us [L., a twining]. A network of interlacing nerves or anastomosing blood vessels or lymphatics. See Tables of Nerves and of Veins in the Appendix. —**plexal,** *adj.*

anococcygeal p. A nerve plexus formed from the anterior branches of the fifth sacral and coccygeal nerves and part of the anterior branch of the fourth sacral nerve.

anterior sacral p. A venous plexus which connects the sacral intervertebral veins with the lumbar and pelvic veins.

aortic p. A fine network of sympathetic nerves surrounding the aorta; continuous around both the thoracic and abdominal portions of the aorta through the aortic opening in the diaphragm.

atrial p. A nerve plexus found in the embryo surrounding the atrial region of the heart.

Auerbach's p. See myenteric p.

axillary p. A plexus of lymph nodes and lymphatic vessels in the axilla.

basilar p. A venous plexus over the basilar part of the occipital bone connecting the two inferior petrosal sinuses and the marginal and internal vertebral plexuses. See Table of Veins in the Appendix.

Batson p. See vertebral venous system.

brachial p. A plexus of nerves located in the neck and axilla and composed of the anterior rami of the lower four cervical and first thoracic nerves. See Plate 16.

bulbar p. A nerve plexus found in the embryo surrounding the bulbus cordis.

cardiac p. A network of nerves situated at the base of the heart. The superficial part lies beneath the arch of the aorta just anterior to the right pulmonary artery. The deep part of the cardiac plexus lies anterior to the bifurcation of the trachea between it and the arch of the aorta. Each portion contains nerve fibers of both sympathetic and vagal origin.

carotid plexuses. Nerves of the sympathetic system surrounding the internal, external, and common carotid arteries, respectively.

cavernous p. 1. A nerve plexus associated with the corpus cavernosum of the penis or clitoris. 2. A sympathetic plexus in the cavernous sinus surrounding the internal carotid artery.

cavernous p. of nasal conchae. See p. cavernosi concharum.

celiac p. A large sympathetic plexus lying in front of the aorta around the origin of the celiac artery. It is formed by fibers from the splanchnic and vagus nerves and is distributed to the abdominal viscera.

cephalic gangliated p. The four parasympathetic ganglions in close topographic relation to the branches of the fifth cranial nerve, known as the ciliary, sphenopalatine, otic, and submandibular ganglions, and connected by fine nerve filaments with the superior cervical ganglion of the sympathetic system.

cervical p. A plexus in the neck formed by the anterior branches of the upper four cervical nerves.

cervical posterior p. A nerve plexus derived from the posterior branches of the first, second, and third cervical nerves lying beneath the semispinalis muscle. Also called *posterior cervical p. of Cruveilhier*.

cervicothoracic p. The cervical and brachial plexuses considered together.

choroid p. See choroid p.

choroid p. One of the longitudinal, lobulated, invaginated processes, consisting of a vascular plexus and a covering of ependyma, which project into the third, fourth, and lateral ventricles of the brain.

coccygeal p. One formed by the union of the anterior branches of the coccygeal nerve and the fifth sacral nerve with a communicating filament from the fourth sacral nerve.

corneal p. A nerve plexus of the cornea, derived from the ciliary nerves and divided into three parts: an **annular c. p.** about the periphery of the cornea, a **subepithelial c. p.** beneath the corneal epithelium; an **intraepithelial c. p.**

coronary p. A continuation of the cardiac plexus, arbitrarily divided into a larger posterior part which accompanies the left coronary artery and is distributed chiefly to the left atrium and ventricle and a smaller anterior part which follows the right coronary artery and is distributed to the right atrium and ventricle.

crural p. A nerve plexus surrounding the upper portion of the femoral artery. Syn., *femoral p.*

cystic p. A nerve plexus near the gallbladder.

deferential p. A nerve plexus surrounding the ductus deferens and seminal vesicle.

dental p. A plexus of nerve fibers in the alveolar canals of each jaw. That of the upper jaw is formed by branches of the infraorbital (maxillary) nerve and that of the lower jaw is derived from the inferior alveolar nerve.

diaphragmatic p. A nerve plexus near the inferior phrenic artery.

enteric p. The myenteric and submucosal plexuses considered together.

epigastric p. Celiac plexus.

esophageal p. A nerve plexus surrounding the esophagus.

extraspinal p. A large venous plexus extending the length of the vertebral column and lying between it and the multifidus muscle.

facial p. A nerve plexus enveloping part of the external maxillary artery.

femoral p. A nerve plexus surrounding the femoral artery. Syn., *crural p.*

gastric p. Any nerve plexus associated with the stomach. The **anterior g. p.** lies along the anterior surface of the lesser curvature of the stomach; its fibers are derived mainly from the left vagus, a few from the right vagus, and some sympathetic fibers. The **posterior g. p.** lies along the posterior surface of the lesser curvature; its fibers are derived mainly from the right vagus. The **inferior g. p.** accompanies the left gastroepiploic artery; its fibers are derived from the splenic plexus. The **superior g. p.** accompanies the left gastric artery and receives fibers from the celiac plexus.

gastroduodenal p. A branch of the celiac plexus distributed to the stomach and duodenum.

hemorrhoidal p. (a) A venous plexus surrounding the lower part of the rectum. (b) Inferior and middle nerve plexuses derived from the pelvic plexus and located near the rectum.

hepatic p. A sympathetic nerve network accompanying the hepatic artery to the liver.
hypogastric p. A large sympathetic nerve plexus lying just in front of the promontory of the sacrum. Also called *presacral nerve*.
iliac p. A nerve plexus surrounding the common iliac artery.
infraorbital p. A nerve plexus under the levator labii superioris muscle.
intercellular p. A network of dendrites and axonic ramifications surrounding the cells in a sympathetic ganglion.
intermediate p. A nerve plexus found in the embryo between the bulbar and atrial plexuses.
intramural p. One located within the wall of an organ, as the submucous or myenteric plexus.
laryngeal venous p. A venous plexus draining blood from the larynx to the anterior and inferior laryngeal veins and communicating with the pharyngeal venous plexus.
lingual p. A nerve plexus surrounding the lingual artery.
lumbar p. One formed by the anterior divisions of the upper four lumbar spinal nerves in the posterior part of the psoas major muscle.
lumbosacral p. A network formed by the anterior branches of lumbar, sacral, and coccygeal nerves which for descriptive purposes are divided into the lumbar, sacral, and pudendal plexuses. See Plate 16.
mammary lymphatic p. One originating in the walls of the ducts and between the lobules of the mamma, which also drains the overlying skin, areola, and nipple. The efferent vessels empty into the pectoral group of axillary nodes laterally, the sternal group medially, and occasionally the subclavian nodes superiorly. See Plate 11.
mammary venous p. A venous plexus draining blood from the mammary glands to the axillary vein.
maxillary plexuses. Nerve plexuses found around the external and internal maxillary arteries.
Meissner's p. See submucous p.
meningeal p. A nerve plexus found about the middle meningeal artery.
mesenteric p. A sympathetic nerve plexus surrounding the mesenteric arteries. That accompanying the superior mesenteric artery is derived from the celiac plexus and that surrounding the inferior mesenteric artery is derived from the aortic plexus.
myenteric p. A nerve plexus situated between the circular and longitudinal muscle layers of the digestive tube. Also called *Auerbach's p.*
nasopalatine p. A plexus uniting the nasopalatine nerves in the incisive foramen.
obturator p. See subsartorial p.
occipital p. A sympathetic network around the occipital artery.
ophthalmic p. A sympathetic plexus surrounding the ophthalmic artery.
ovarian p. (a) A network of veins in the broad ligament. (b) A nerve plexus distributed to the ovaries.
pampiniform p. A network of veins in the spermatic cord in the male, and in the broad ligament near the ovary in the female.
pancreaticoduodenal p. A sympathetic plexus whose nerve fibers are distributed to the duodenum and the pancreas.
parotid p. The branches of the facial nerve in close relation to the parotid gland.
patellar p. A nerve network situated in front of the patella.
pelvic p. A nerve plexus situated at the side of the rectum and urinary bladder and distributed to the pelvic viscera.
pericellular p. In *pathology*, newly formed nerve fibers which arise from the cell body or adjacent axon or cell and grow in circles around the cells in spinal ganglions, forming an interlocking network of fibers.
perivascular p. A network of nerve fibers which innervate the blood vessels. They may bring about vasoconstriction or vasodilation.
pharyngeal p. (a) A nerve plexus innervating the pharynx. (b) A plexus of veins situated at the side of the pharynx.
phrenic p. A nerve network which accompanies the inferior phrenic artery to the diaphragm.
p. cavernosus conchae. Venous plexuses found in the mucous membrane overlying the inferior nasal concha.
p. cavernosus. A nerve plexus distributed to the cavernous tissue of the penis or clitoris.
p. of Cruveilhier. See cervical posterior p.
p. venosus seminalis. A venous plexus about the seminal vesicles.
popliteal p. A nerve plexus surrounding the popliteal artery.
posterior cervical p. of Cruveilhier. See cervical posterior p.
prevertebral p. The collateral ganglions and nerve fibers of the sympathetic nervous system, such as the cardiac, celiac, and hypogastric plexuses.
prostatic p. (a) A nerve plexus situated at the side of the prostate whose fibers are distributed to the urethra, prostate, and penis. (b) A venous plexus found in the areolar tissue around the prostate gland.
pterygoid p. A plexus of veins which accompanies the internal maxillary artery between the pterygoid muscles. See Table of Veins in the Appendix. See Plate 10.
pudendal p. (a) A plexus formed by the anterior branches of the second, third, and fourth sacral nerves. (b) A venous plexus lying around the urinary bladder and prostate. See Table of Veins in the Appendix.
pulmonary p. A nerve plexus composed chiefly of vagal fibers situated on the anterior and posterior aspects of the bronchi and accompanying them into the substance of the lung.
pyloric p. A nerve plexus which innervates the region of the pylorus.
renal p. A nerve plexus derived from the celiac and abdominal aortic plexuses. It accompanies the renal artery and is distributed to the kidney.
sacral p. (a) A nerve plexus formed by the anterior branch of the first, and contributions from the anterior branches of the second and third sacral nerves. (b) A venous plexus. See anterior sacral p.
sinocarotid p. Nerve fibers supplying the carotid sinus.
solar p. See celiac p.
spermatic p. A nerve plexus derived from the aortic and renal plexuses and running on each side with the internal spermatic artery to the testis.
sphenoid p. The upper part of the internal carotid plexus.
splenic p. A nerve plexus accompanying the splenic artery.
stroma p. A nerve plexus derived from the ciliary nerves found in the substantia propria of the cornea.
subclavian p. A nerve plexus found about the subclavian artery.
subepithelial p. A nerve plexus found beneath the epithelial cells of the cornea. It is a continuation of the stroma plexus.

submucous p. A nerve network lying in the submucosa of the digestive tube. Also called *Meissner's p.*
subpapillary p. A flat network of small, thin-walled vessels in the deeper part of the papillary layer and in the superficial part of the reticular layer of the dermis. also called *venous p.*
subperitoneal p. An arterial plexus, in the extraperitoneal fat of the lumbar region, formed by twigs from the lumbar inferior phrenic, iliolumbar hepatic, renal, and colic arteries.
subpleural p. An arterial plexus in the mediastinum, derived from small twigs of the pericardiacophrenic and intercostal arteries
subsartorial p. A nerve network situated beneath the sartorius muscle. Syn., *obturator p*
subtrapezial p. A nerve plexus lying beneath the trapezius muscle.
suprarenal p. A sympathetic nerve plexus surrounding the adrenal gland.
sympathetic p. A general term used to describe branches of sympathetic nerves surrounding organs or vessels. Each is named from the structure with which it is associated.
thyroid impar p. A venous plexus found in the substance of the thyroid gland and on its surface beneath the capsule; also called *p. thyreoideus impar*
thyroid p. A sympathetic nerve plexus in the region of the thyroid gland. The superior part goes to the thyroid gland and the inferior part surrounds the external carotid and inferior thyroid arteries and is distributed to the larynx and pharynx as well as the thyroid gland.
tonsillar p. A nerve network whose fibers are distributed to the tonsils, fauces, and nearby region of the soft palate.
tympanic p. A nerve network formed by the tympanic branch of the glossopharyngeal, the lesser superficial petrosal and tympanopetrosal branches of the facial and sympathetic nerves derived from the internal carotid plexus.
uterine p. (a) A venous plexus on the walls of the uterus and extending into the broad ligament. (b) A nerve plexus supplying the cervix and lower part of the uterus.
uterovaginal p. (a) A nerve plexus on each side of the uterine cervix, composed of the pelvic part of the hypogastric plexus and the third and fourth sacral nerves. (b) A venous plexus t the cervix of the uterus, draining into the hypogastric vein.
vaginal p. (a) A nerve network supplying the walls of the vagina. (b) A plexus of veins near the entrance to the vagina.
venous p. See subpapillary p.
ventricular p. A nerve plexus found in the ependyma of the ventricles. It has been described in the cat and monkey
vertebral p. (a) A sympathetic nerve plexus surrounding the vertebral and basilar arteries. (b) A plexus of large veins associated with the vertebral column throughout its length. They may be subdivided into the anterior and posterior external, and the anterior and posterior internal longitudinal plexus.
vesical p. (a) A sympathetic plexus surrounding the vesical arteries. (b) A venous plexus about the lower part of the urinary bladder and base of the prostate gland.
vesicopudendal p. The vesical and pudendal venous plexuses, collectively

pli'ca (pl. *plicae*) [L. *plicare*, to fold]. A fold. For terms not listed here see under *fold*. —**plicate,** *adj* **plica tion** *n.*
alar p. One of the fringelike folds of the synovial membrane of the knee joint, on either side of the articular surface of the patella.
axillary p. A fold of skin and muscle which bounds the axilla anteriorly or posteriorly
cecal p. A fold of peritoneum the unfused portion of the ascending mesocolon, which forms the right boundary of the cecal fossa.
ciliary p. One of the small folds between the ciliary processes.
circular p. See *circular folds* under *fold*.
duodenojejunal p. An inconstant fold of peritoneum extending to the left from the duodenojejunal flexure to the posterior abdominal wall; it may contain the main stem of the inferior mesenteric vein.
duodenomesocolic p. An inconstant fold of peritoneum extending from the ascending part of the duodenum to the posterior abdominal wall.
gastropancreatic p. A fold of peritoneum on the posterior wall of the omental bursa, extending from the pancreas to the right side of the cardia of the stomach. It contains the left gastric artery
genital p. Genital ridge.
longitudinal duodenal p. A fold in the medial wall of the descending portion of the duodenum extending pward from the papilla marking the opening of the common bile duct.
malleolar p. One of the two ligamentous bands, anterior and posterior on the medial surface of the tympanic membrane, extending from either side of the tympanic notch to the lateral process of the malleus.
patellar synovial p. A fold of synovial membrane in the knee joint which extends from the infra patellar fatty mass to the anterior part of the intercondyloid notch; its free margins form the alar plicae.
plicae iridis. Radiating folds on the posterior surface of the iris.
plicae palmatae cervicis. See arbor vitae, 2.
p. lacrimalis. See Hasner valve.
p. of the ampulla. One of the longitudinal folds of the tunica mucosa of the ampulla of Vater
p. polonica. A matted condition of the hair caused by filth and neglect. Syn., *Polish plait.*
rectouterine plicae. Two folds of peritoneum extending from the cervix of the uterus on either side of the rectum to the sacrum, and forming the lateral boundaries of the mouth of the rectouterine pouch. See uterosacral *ligament.*
rectovesical p. A peritoneal fold extending from the posterior part of the urinary bladder to the rectum and sacrum also called *sacrogenital fold.*
semilunar p. The thin fold of mucous membrane across the supratonsillar fossa, between the palatine arches.
septal p. One of several folds occasionally in the fetus on the posteroinferior portion of the nasal septum.
sublingual p. Sublingual fold; the elevation of the mucous membrane of the floor of the mouth, on either side of the tongue, caused by the projection of the sublingual gland.
synovial p. A fold of the synovial membrane of joint, extending toward or between the articular surfaces; it may contain fat or provide for the course of vessels.
transverse vesical p. A variable fold of peritoneum extending from the urinary bladder laterally to the pelvic wall; it is seen only when the viscus is empty
tubal plicae. F lds of the tunica mucosa in the uterine tubes.
ureteric p. A transverse ridge on the internal surface of the urinary bladder formed by each ureter as it passes through the wall, marking the upper angle of the trigone on either side.

pneu"mo hy"dro per"i car'di um [*pneumōn*; G *hydōr* water *pericardium*]. An accumulation of air and fluid in the pericardial sac.

pneu"mo hy"po-der'ma [*pneumōn*, G *hypo*, under; *derma*, skin]. Subcutaneous emphysema.

pneu"m ko ni-o sis. See *pneumoconiosis*.

pneu mo lith [*pneumōn*; G *lithos*, stone]. A calculus or concretion occurring in lung.

pneu"m li thi'a sis [*pneumōn*, *lithos*; NL. *-iasis*, condition]. The occurrence of calculi or concretions in a lung. Also called *pneumonolithiasis*.

pneu mol'y sis [*pneumōn*, G *lysis*, a loosing]. Old term for pneumonolysis.

pneu"mo-me di as-ti'num [*pneumōn*, L. *medius*, middle]. Air in the mediastinal tissues.

pneu mom e try Measurement of lung capacity in the living individual, including vital capacity maximum breathing capacity tidal volume, residual olume, etc.

pneu"mo-my co'sis (new mo migh ko sis) See *pneumonomycosis*.

pneu'mon-. See *pneumono-*.

pneu"m nec't my [*pneumōn*, G *ektomē*, excision]. Excision of an entire lung also called *pneumectomy*.

cautery p. The removal of lung by cautery

pneu mo ni-a [G from *pneumōn*]. A disease resulting from inflammation of the lungs; pneumonitis.

aspiration p. That resulting from the inhalation of foreign body usually fluids or food particles, from the pharynx into the air passages of the lungs, usually in the course of general anesthesia.

bronchial p. See *bronchopneumonia*.

central p. Occasional term for pneumonia with consolidated areas near the hilum, giving rise to relatively few signs.

chemical p. That caused by inhalation of chemical irritant, particularly beryllium.

hronic p. Long-standing lung infection.

dermal p. *In bacteriology* and *immunology*, an experimental pathologic process produced by injecting virulent pneumococci into the skin of rabbits.

double p. Involvement of both lungs.

fibroid p. See organizing p.

Friedländer p. That due to infection with *Klebsiella pneumoniae* (Friedländer' bacillus)

hypostatic p. Infection of dependent parts of lungs which are hyperemic due to staying in one position for long periods of time, usually seen in elderly patients.

influenza p. That due to infection by *Hemophilus influenzae*.

interstitial p. Infection particularly of the stroma of the lungs including the peribronchial tissues and the septa between alveoli. It may originate from the pleura or mediastinum.

lipid, lipoid p. That due to aspiration of oily substances, particularly from nose drops, mineral oil, or cod-liver oil More common in children or in adults when the cough reflex is impaired. The inflammation is often chronic and is mostly in lower lobes.

lobar p. An acute febrile disease involving one or more lobes of the lung, due to infection by one of the pneumococci. Characterized by brupt onset, fever dyspnea, pain, cough, rusty sputum, and general toxic symptoms. Typically the f ver drops by crisis after about week. The involved lung i consolidated, gradually returning to normal by resolution.

lobular p. Bronchopneumonia.

Löffler's p. See Loeffler' *syndrome*.

massive p. One which involves large area of lung, or an entire lung.

metastatic p. A type due to the presence in the lungs of infected emboli.

migratory p. Pneumonia infection which seems to shift from one part of the lungs to another

organizing p. That in which the healing process is characterized by organization and cicatrization of the exudate rather than by resolution and resorption.

pneumococcal p. That due to infection by pneumococci. See lobar p. *bronchopneumonia*.

p. lba. Diffuse interstitial fibrosis of the alveolar walls of the fetal lung due to prenatal syphilis; the lungs are white and often atelectatic at birth.

primary atypical p. Bronchopneumonia of unknown etiology not secondary to any other acute infectious disease. Suspected of being caused by any one of several different strains of filtrable virus. Typically endemic, but may appear in mild epidemic form. Characterized clinically by failure to respond to sulfonamides and penicillin, absence of characteristic blood changes, tendency to protracted course and delayed resolution, and generally good prognosis.

rheumatic p. Pneumonia in the acute stage of rheumatic fever

staphylococcal p. A serious type caused by *Micrococcus pyogenes* var *aureus*. Epidemics of this disease may follow influenza

streptococcal p. A pneumonia, usually caused by the Lancefield group A streptococci, after primary or complicating an upper respiratory infection.

terminal p. That occurring in the course of other diseases and resulting in death.

tuberculous p. An exudative reaction in the lung caused by *Mycobacterium tuberculosis* Usually it is an extensive lesion which clinically and roentgenologically simulates pneumonia caused by other organisms. It is often designated *tuberculous bronchopneumonia*, *bronchopneumonia tuberculosis*, *tuberculous lobar pneumonia*, or *lobar pneumonia tuberculosis*, depending on its distribution.

vagus p. Pneumonia following section of the vagi in the lower animals; due to aspiration of food into the air passages.

virus p. See primary atypical p.

pneu mon'ic (new-mon'ick) [G *pneumonikos*, of the lungs]. 1. Pertaining to pneumonia. *Obs.* 2. Pertaining to the exudative form of pulmonary tuberculosis, when sufficiently extensive to simulate either lobar pneumonia or bronchopneumonia.

pneu"mo-ni'tis (new mo-nigh tis) [G *pneumōn*, lung -*itis*, inflammation]. Inflammation of the lung.

eosinophil p. See Loeffler's *syndrome*.

radiation p. That following large doses of radiation to the chest, characterized by edema, lymphectasis, injury to the epithelial elements and formation of well-defined hyaline membrane, and in the late stage, thickening of alveolar walls, patchy atelectasis, and endothelial swelling of capillaries. Respiratory function is usually significantly decreased the only symptom may be nonproductive cough.

pneu mo-no- (new mo-no- new-mo no-, new-mon o-) **pneumon-** [*pneumōn*]. A combining form meaning *lung*

pneu mo-no-cele" See *pneumatocele*.

pneu"mo-no-cen te'sis. See *pneumocentesis*.

pneu"mo-no-coc'ci types (-cock'sigh) Subdivisions f *Diplococcus pneumoniae*, based on their polysaccharide hapten or specific soluble substance (SSS) At present, over 70 such types have been distinguished.

pneu"mo-no-co ni o'sis. See *pneumoconiosis*.

pneu"mo-no-ko"ni-o sis. See *pneumoconiosis*.

pneu"mo·nol'y·sis [*pneumōn*, G. *lysis*, loosing]. The loosening of any portion of lung adherent to the chest wall; a form of collapse therapy used in the treatment of pulmonary tuberculosis.

extrapleural p. The separation of an area of parietal pleura from the chest wall. Also see *apicolysis*.

intrapleural p. The severance of adhesion bands between the visceral and parietal layers of pleura. May be closed when performed by the use of a thoracoscope, and open when an incision is made through the chest wall to permit direct vision.

pneu"mo·no·my·co'sis (·nigh·ko'sis) [*pneumōn*, G. *mykēs*, fungus; *-ōsis*, condition]. Any disease of the lungs due to infestation by a fungus.

pneu"mo·nop'a·thy [*pneumōn*, G. *pathos*, disease]. Any abnormality of the lungs.

pneu"mo·no·pex'y (new·mo·no·peck'see, new·mon·o·, new·mo·no·peck'see) [*pneumōn*, G. *pēxis*, a fixing]. Fixation of lung tissue to the chest wall.

pneu"mo·nor'rha·phy [*pneumōn*, G. *rhaphē*, suture]. Suture of a lung.

pneu"mo·no'sis [*pneumōn*; G. *-ōsis*, condition]. Any noninfective degenerative disease of the lungs. *Obs.*

traumatic p. In *aviation medicine*, acute noninflammatory pathologic changes produced in the lungs by large momentary deceleration. The principal changes are hemorrhage, emphysema, and laceration. These changes, in accordance with their location, type, and magnitude, may cause sudden death or variable clinical pulmonary signs and symptoms.

pneu"mo·not'o·my [*pneumōn*, G. *tomē*, a cutting]. Surgical incision of a lung.

pneu"mo·nop'a·thy [*pneumōn*; G. *pathos*, disease]. Any abnormality of the lungs.

pneu"mo·per"i·car·di'tis [*pneumōn*, G. *peri-kardios*, around the heart; *-itis*, inflammation]. Pericarditis with the formation of gas in the pericardial sac.

pneu"mo·per"i·car'di·um [*pneumōn*, *perikardios*]. The presence of air in the pericardial sac. It is due to traumatism or to communication between the pericardium and the esophagus, stomach, or lungs, and is marked by tympany over the precordial region and peculiar metallic heart sounds.

pneu"mo·per"i·to·ne'um [*pneumōn*; G. *peritonaion*, membrane which contains the lower viscera]. 1. The presence of gas in the peritoneal cavity. 2. Injection of a gas into the peritoneal cavity, as in special radiography of the abdomen.

transabdominal p. Injection of gas through the abdominal wall to outline pelvic organs and tumors in x-rays of the pelvic region.

pneu"mo·per"i·to·ni'tis [*pneumōn*, *peritonaion*, G. *-itis*, inflammation]. Peritonitis with the presence of gas in the peritoneal cavity.

pneu"mo·pex'y. See *pneumonopexy*.

pneu"mo·py·el'o·gram [*pneumōn*, G. *pyelos*, trough; *gramma*, letter]. A pyelogram in which air or oxygen is used as the contrast medium instead of an opaque solution.

pneu"mo·py"o·per"i·car'di·um [*pneumōn*; G. *pyon*, pus; *perikardios*, around the heart]. Air or gas and pus in the pericardial sac.

pneu"mo·ra·chis (new·mo·ray'kis, new·mor'a·kis) [*pneumōn*, G. *rhachis*, spine]. A collection of gas in the spinal canal, accidental or by injection of air for diagnostic purposes.

pneu"mo·ra"di·og'ra·phy [*pneumōn*, L. *radius*, ray; G. *graphein*, to write]. Radiography of a region, as of a joint or of the abdomen, following the injection of air into a cavity.

pneu"mo·roent"gen·og'ra·phy (new·mo·rent·ghun·og'ruh·fee). See *pneumoradiography*.

pneu"mo·scle·ro'sis [*pneumōn*, G. *sklērōsis*, hardening]. Fibrosis of the lungs.

pneu"mo·tax'ic cen'ter. See under *center*.

pneu"mo·tax'is. Pertaining to the control of respiration. —**pneumotax'ic**, *adj.*

pneu"mo·tho'rax [*pneumōn*; G. *thōrax*, thorax]. The presence of air or gas in a pleural cavity. May occur from perforating wounds of the chest, accidental or operative, by the rupture of an abscess or cavity of the lung, or the rupture of an air sac or bronchiole. Syn., *intrapleural pneumothorax*.

artificial p. The production of a pneumothorax by the introduction into a pleural cavity through a needle, of air or other gas to produce collapse and immobility of a lung, with obliteration of cavities. Used in the treatment of pulmonary tuberculosis.

closed p. One having no opening through the chest wall. It may be artificial or spontaneous, due to a rupture of an air passage, air sac, or bronchiole.

extrapleural p. One in which the parietal pleura is stripped from the thoracic wall, and the air or gas introduced within the space so formed, as in apicolysis.

idiopathic p. See spontaneous p.

open p. One with a penetrating wound of the thoracic wall.

spontaneous p. The pneumothorax occurring from causes other than the introduction of air or gas into a pleural cavity from without. Extreme physical exertion appears as the major cause. Also called *idiopathic p.*

valvular p. A type of open pneumothorax known as *sucking wound*, in which the margin of the wound acts as a valve. Air enters the pleural space with an inhalation, and is prevented by the valve from escaping during exhalation. Therefore, the air tension in the pleural space increases. Also called *tension p.*

pneu·mot'o·my. See *pneumonotomy*.

pneu"mo·tox'in [*pneumōn*, G. *toxikon*, poison]. A toxin of the pneumococcus; true exogenous toxins have not been found. The capsular polysaccharides may play a role in pathogenesis but cannot be considered as toxins. Parker described a necrotizing toxic factor; a capillary poison or spreading factor has also been reported to exist in these organisms by Jaharadis and Reimann.

pneu"mo·ty'phoid. See *pneumotyphus*.

pneu"mo·ty'phus [*pneumōn*; G. *typhos*, delusion]. 1. Typhoid fever beginning with pneumonia dependent upon the typhoid bacillus. 2. Pneumonia occurring in the course of typhoid fever.

pneu"mo·ven'tri·cle. A form of pneumocephalus in which air enters the ventricles of the brain through the accessory sinuses of the skull, sometimes seen as a complication of skull fracture.

pneu"mo·ven·tric"u·log'ra·phy [*pneumōn*, L. *ventriculus*, ventricle; G. *graphein*, to write]. A method of depicting the ventricular system of the brain by roentgenography after the fluid content has been removed and air has been injected. Also called *ventriculography*.

pnoe'sis (new·sis) [G. *pnoē*, breathing]. Respiration.

pnig'ma (nig'muh) [G., choking]. Strangulation. *Obs.*

pnig"o·pho'bi·a (nigh·go·fo'bee·uh) [G. *pnigein*, to choke; *phobos*, fear]. The fear of choking that sometimes accompanies angina pectoris.

Po Chemical symbol for polonium.

pock [AS. *pocc*]. A pustule of an eruptive fever especially of smallpox.

pocked [*pocc*]. Pitted, marked with pustules.

pock'et [AF. *pokete*]. 1. In *anatomy*, a blind sac, or

sac-shaped cavity. A diverticulum communicating with cavity.

gingival p. An abnormally deep gingival sulcus associated with gingivitis.

intraoral p. An artificially created pocket within the mouth, lined with grafted skin used to hold prosthetic appliance for the restoration of facial contours due to the loss of half or more of the mandible.

periodontal p. An abnormally deep gingival sulcus, associated with periodontosis, whose extension apically is at the expense of detached periodontal fibers and resorption of the alveolar crest; also called *intraosseous p.*

pyorrhea p. See *gingival p., periodontal p.*

pock'-marked" Pitted with the indentations of the smallpox pustule.

po-dag'ra, pod'ag-ra [G. gout]. Gout, especially of the great toe or the joints of the foot.

po-dal'gi-a [G. *pous*, foot; *algos*, pain]. Pain in the foot.

po-dal'ic [*pous*]. Pertaining to the feet, as podalic version, the operation of changing the position of the fetus in the uterus to bring the feet to the outlet.

pod"ar-thri'tis [*pous*; G. *arthron*, joint; *-itis*, inflammation]. Inflammation of the joints of the feet.

pod"ar-thro-ca'ce (pod-ahr-throck'uh-see) [*pous*; *arthron*, G. *kakos*, bad]. Caries of the articulations of the feet. Obs.

po-dar'thrum [*pous*; *arthron*]. In *biology*, the foot joint or metatarsophalangeal articulation. Obs.

pod"e-de'ma [*pous*; G. *oidema*, swelling]. Edema of the feet.

pod"el-co'ma [*pous*; G. *helkōma*, ulcer]. Madura foot. See *mycetoma*.

pod"en-ceph'a-lus [*pous*; G. *egkephalos*, brain]. A monster with partial acrania in the parietal region, with protrusion of the cranial contents from the top of the head.

po-di'a-try [*pous*; G. *iatreia*, medical treatment]. Treatment of disorders of the feet; chiropody. Unofficial synonym for chiropody. —**podi'atrist, podiat'rist,** *n.*

pod"o-brom"hi-dro'sis (pod"o-brohm"hi-dro'sis, high-dro'sis, pod"o-brom-) [*pous*; G. *brōmos*, stench; *hidrōs*, sweat; *-osis*, condition]. Offensive sweating of the feet.

pod"o-der'ma. The modified, highly vascular corium found under the horny layer of the hoof in ungulates. It furnishes nutrition to the hoof.

pod"o-dyn'i-a (pod-o-din'ee-uh, -dy'nee-uh) [*pous*; G. *odynē*, pain]. Pain in the foot, especially neuralgic pain in the heel unattended by swelling or redness.

po-dom'e-ter [*pous*; G. *metron*, measure]. An instrument which registers the number of footsteps in walking; preferably called *pedometer*.

pod"o-phyl'lin, pod-oph'yl-lin. See *podophyllum resin*.

pod"o-phyl"lo-res'in (-rez'in). See *podophyllum*.

pod"o-phyl"lo-tox'in. $C_{22}H_{22}O_8$, crystalline polycyclic substance obtained from the rhizome and roots of *Podophyllum peltatum*, mainly insoluble in water but soluble in alcohol. It has cathartic properties, but is probably not the principal cathartic constituent of the drug; applied topically it is active against certain wartlike neoplasms.

pod"o-phyl'lum [G. *pous*, foot; *phyllon*, leaf] (*podophyllum*). The dried rhizome and roots of *Podophyllum peltatum*, containing podophyllotoxin, α-peltatin, β-peltatin, and an amorphous resin called *podophylloresin*. A slow but active cathartic, rarely used in the crude state, podophyllum resin being the form most frequently used. Also called *mandrake*, *May apple*.

Indian p. The dried rhizome and roots of *Podophyllum emodi* (*P. hexandrum*) containing podophyllotoxin, demethylpodophyllotoxin, picropodophyllin glucoside, and resin; α-peltatin and β-peltatin have not been found in it. It is used like the podophyllum from *P. peltatum*.

p. resin (*resina podophylli*). A light brown to greenish yellow amorphous powder obtained by pouring an alcoholic extract of podophyllum into acidified cold water. It is an active cathartic, often used in combination with milder laxatives in chronic constipation. Applied locally it is active against many wartlike neoplasms.

poe- For words beginning with *poe-* see under *pe-*.

Poehl, Alexander Vasilyevich von (von Pel) [Russian chemist, 1850–98]. Remembered for his isolation of spermin from the testis (1891). Introduced his test for presence of cholera bacilli, using concentrated sulfuric acid.

po"go-ni'on [G. *pōgōnion*, little beard]. The most anterior point of the chin on the symphysis of the mandible.

Pohl method. See under *method*.

Pohl's test. See under *test*.

-poi-et'ic [G. *poiētikos*, productive]. A combining form denoting *making* or *producing*.

poi"ki-lo-blast" [G. *poikilos*, diversified; *blastos*, germ]. A nucleated red blood cell of irregular shape and size.

poi'ki-lo-cyte [*poikilos*; G. *kytos*, cell]. A large, red blood cell of irregular shape.

poi"ki-lo-cy-the'mi-a (poy"ki-lo-sigh-thee'mee-uh) [*poikilos*; *kytos*; G. *haima*, blood]. The presence of poikilocytes in the blood.

poi"ki-lo-cy-to'sis (poy"ki-lo-sigh-to'sis) [*poikilos*, *kytos*; G. *-osis*, condition]. Abnormality in shape of circulating red corpuscles.

poi"ki-lo-der'ma [*poikilos*; G. *derma*, skin]. A skin syndrome characterized by pigmentation, telangiectasia, and, usually, atrophy.

p. of Civatte. See reticulated pigmented *p.*

p. vasculare atrophicans. A widespread cutaneous disease with atrophy, telangiectasis, pigmentation, and purpura. It may occur in association with, or as an end result of, other cutaneous diseases.

reticulated pigmented p. A variety of Riehl' melanosis, located on the neck as symmetric, pigmented, telangiectatic, and trophic erythroderma with retiform arrangement; also called *p. reticularis of Civatte*, *p. of Civatte*, *Civatte's disease*.

poi"ki-lo-der"ma-to-my"o-si'tis [*poikilos*; *derma*; G. *mys*, muscle; *-itis*, inflammation]. Poikiloderma in association with muscular sclerosis.

poi"ki-lo-ther'mism, poi"ki-lo-ther'my (poy-ki-lo-thur'miz-um) [*poikilos*; *thermē*]. The condition of having a variable body temperature, usually slightly higher than that of the environment, as in all animals except birds and mammals. See *cold-blooded*. —**poikilother'mic, poikilother'mal, poikilother'mous,** *adj.*

poi"ki-lo-throm'bo-cyte [*poikilos*; G. *thrombos*, clot; *kytos*, cell]. A blood platelet of abnormal shape.

poi"ki-lo-zo-o-sper'mi-a. Variability in the shape of spermatozoa.

point [OF *point*, from L. *pungere*, to prick]. 1. The sharp end of an object, especially one used to pierce anything. 2. The limit at which anything occurs, as the melting point, freezing point. 3. A mark made by a sharp object; minute spot.

alveolar p. The midpoint on the anterior surface of the superior alveolar arch, used in craniometry.

anterior focal p. One of the conjugate foci.

auricular p. Central point of the external auditory meatus.

boiling p. The temperature at which liquid has apor pressure equal to the barometri pressure.
Bolton p. A point in the median line midway between the postcondylar notches on the occipital bone, the posterior termination of the Bolton plane. It is located as the most superior point in the profile of the postcondylar notches when viewed in the lateral roentgenogram.
Bolton registration p. The center of the Bolton cranial base, point midway on perpendicular from the Bolton plane to the center of sella turcica.
cardinal points. (a) *I obstetrics*, the four points of the pelvic inlet toward which the occiput of the fetus may be directed in ease of pregnancy with head presentation; the four points are the two sacroiliac articulations and the two iliopectineal eminences. (b) *I ophthalmology*, the six optical points that determine the direction of the rays entering or emerging from series of refracting mediums.
condenser points. Instruments used for packing gold foil or amalgam into prepared cavities in teeth.
contact points. The points on the proximal surfaces of teeth which touch neighboring teeth.
craniometric p. Any one of the points on the skull used in craniometry Among the more important are the following acanthion, asterion, basion, bregma, dacryon, glabella, gnathion, gonion, inion, jugal point, lambda, metopion, nasion, bolion, opisthion, ophryon, and spenthion. Also see *pterion*.
critical p. The temperature above which gas cannot be liquefied by pressure.
deaf points. See deaf *field*.
dew p. The temperature at which the atmospheric moisture is deposited as dew
disparate p. One of those points on the retina whence images are projected, not t the same, but to different points in space.
election p. *I surgery*, that point at which certain operation is done by preference.
Erb's p. A point from 2 to 3 cm. above the clavicle and in front of the transverse process of the sixth cervical vertebra. Electric stimulation t this point produces contraction of the various muscles involved in Erb paralysis.
far p. The remotest point of distinct vision.
fixation p. The point of sharpest vision in the retina; the point where the visual axis meets the retina.
flash p. Lowest temperature at which vapor of combustible liquid may be ignited.
focal p. See *focus*, 2.
freezing p. The temperature at which pure liquid is in equilibrium with its solid form, or at which the solid form of the solvent is in equilibrium with solution.
Gaussian points. Pair of axial points of lens system, one corresponding to each side of the system and its appropriate focal point, locating object and image planes for which the image is the same size as the object and erect. Also called *nodal points*.
homologous points. *I roentgenology*, the same points on the two films of stereogram.
hysterogenous p. See hysterogenic zone.
identical points. Corresponding points of the two retinas, upon which the rays from an object must be focused so that it may be seen as one.
infraorbital p. The lowest point on the anterior margin of the orbit.
isoelectric p. The pH at which the net electric charge on particle or surface is zero.
lacrimal points. The lacrimal puncta.
McBurney's p. A point halfway between the umbilicus and the anterior superior iliac spine. A point of extreme tenderness in appendicitis.
malar p. The most prominent point on the outer surface of the zygomatic bone.
maximum occipital p. The point on the squama of the occipital bone which is farthest from the glabella.
melti g p. The temperature at which fusible solid begins to melt. Abbreviated, m.p.
mental p. See *gnathion*.
motor p. A point on the skin over muscle at which electric stimulation will cause contraction of the muscle
nasal p. See *nasion*.
near p. The nearest point t which the eyes can accommodate to see distinctly
nodal p. See *Gaussian points* under *point*.
occipital p. The most posterior portion of the occiput in the sagittal plane.
painful p. Any point on the skin along the course of nerve upon which pressure will cause pain; seen in neuritis.
p. of convergence. A conjugate focus upon which the light rays converge.
p. of divergence. A conjugate focus from which the light rays proceed.
p. of maximal impulse (PMI) The small area of the chest wall against which the left ventricle proximal to the apex is thrust during systole, normally found by palpation or inspection in or about the fifth left intercostal space inside the midclavicular line. Used in physical examination, the location, force, and quality of the point of maximal impulse may give important indications of cardiac and pulmonary abnormalities. Less properly called *apex beat (ictus cordis)* See *heart beat*.
points douloureux. See painful p.
posterior focal p. One of the conjugate foci. See under *focus*.
pressure points. Points of marked sensibility to pressure or weight, arranged like the temperature spots, and showing specific end pparatus arranged in punctate manner and connected with the pressure sense
principal p. One of the two points in the optical axis of lens that are so related that lines drawn from these points to the corresponding points in the object and its image are parallel.
reflection p. The point from which ray of light is reflected.
refraction p. The point at which a ray of light is refracted.
spinous p. A sensitive point ver spinous process.
subnasal p. The middle point of the lower border of the nasal orifice.
supraclavicular p. That point stimulation of which causes contraction of the arm muscles.
triple p. The temperature and pressure at which the solid, liquid, and vapor phases of substance may coexist.
vaccine p. A needle coated at one end with vaccine lymph.
vital p. A spot in the medulla oblongata corresponding to the seat of the respiratory center puncture of which causes death.
Voillemier' p. A point on the linea alba 6–7 cm. below line drawn between the two anterior superior spines of the ilium; suprapubic puncture of the urinary bladder is made t this point in fat or edematous subjects.
point'ing [*point*]. The coming to point.
p. of an abscess. The process whereby pus forms or collects near the surface.
Poirier Paul [*French surgeon*, 1853–1907]. De-

scribed the nasolambdoid line used in cranial topography *Poirier' line* begins at the nasofrontal groove, extending around the base of the skull to point just above the lambda used as an aid in locating the lateral cerebral fissure and the left inferior frontal gyrus.

Pois, Guillaume le (Piso) [*Dutch naturalist*, 1611 78]. Remembered for his introduction of ipecacuanha into Europe (1648) Identified cases of yaws in Brazil.

poise [after Jean Léonard Marie *Poiseuille*, French physiologist, 1799–1869] The unit of viscosity The force in dynes necessary to be applied to an area of 1 sq. cm. between two parallel planes 1 sq. cm. in area and 1 cm. apart to produce difference in streaming velocity between the liquid planes of 1 cm. per second.

Poiseuille Jean Léonard Marie [*French physiologist*, 1799–1869]. Inventor of hemodynamometer Stated law that the rapidity of current in capillary tubes is proportional to the square of their diameter; called *Poiseuille' law*. Noted the existence of relatively slow-moving peripheral portion of the blood stream in minute vessels called *Poiseuille' layer space*.

poi'son [L. *potio*, drink]. A substance that, being in solution in the blood or acting chemically on the blood, either destroys life or impairs seriously the functions of one or more of the organs of the body Also see *poisoning*

blood and nerve p. In *military medicine*, war gas which is absorbed into the body by breathing, by ingestion, or through the skin, and which affects the nervous and respiratory systems and various body functions.

capillary poisons. Substances such as peptones and foreign proteins which increase the flow of lymph, presumably by an injurious effect on the capillaries.

cellular poisons. Cytolysins.

irritant p. One that causes irritation at the point of entrance or at the point of elimination.

muscle p. A substance that impairs or destroys the proper functions of muscles.

narcotic p. One affecting the cerebral centers, producing stupor

poi'son ing [*poison*] The condition caused by poison. For poisonings not listed here, see the specific causative compound or agent.

acetanilid p. Symptoms collapse, cyanosis. Treatment evacuation, warmth, stimulants, artificial respiration.

acetophenetidin p. Similar to acetanilid poisoning.

acetylsalicylic acid p. See p. from salicylates.

aconite p. Symptoms sudden collapse slow feeble, and irregular pulse and respirations, tingling in the mouth and extremities, giddiness, great muscular weakness, sometimes pain in the abdomen, marked anesthesia of skin, clear mind, convulsions at times Treatment tannic acid solution for washing out stomach, digitalis, stimulants, absolute quiet in recumbent position.

aconitum napellus p. See aconite p.

alcohol p. Symptoms confusion of thought, giddiness, tottering gait, slight cyanosis, narcosis from which patient can be aroused, full pulse, deep, stertorous breathing, injection of eyes, low temperature; convulsions may occur Treatment stomach evacuation, coffee, stimulants.

alkali p. Ammonia, lye, washing soda, and quicklime poisoning fall into this category Symptoms intense gastroenteritis, often with bloody vomiting and purging, swollen lips and tongue covered with detached epithelium, violent dyspnea, characteristic odor Treatment dilution, vegetable acids (lemon juice or diluted vinegar) demulcents.

aniline p. A poisoning occurring commonly in industry Symptoms methemoglobin formation, headache cyanosis, dyspnea, convulsions, and collapse. Treatment: warmth, stimulants, artificial respiration.

antimony p. Symptoms: metallic taste, violent vomiting which may become bloody feeble pulse, pain and burning in the stomach, violent serous purging which becomes bloody cramps in the extremities, thirst, great debility sometimes prostration, collapse, unconsciousness, and convulsions without vomiting or purging. Treatment. tannic acid, demulcent drinks, opium, alcohol, external heat.

antipyrine p. Symptoms: headache, nausea, vomiting, rash like that of measles, vertigo, drowsiness, deafness, confusion of ideas, cyanosis, collapse. Treatment: recumbent position, warmth, stimulants, oxygen, artificial respiration. Also called *phenazone p.*

apomorphine p. Symptoms violent vomiting, paralysis of motor and sensory nerves, delirium, depression of respiration and of heart. Treatment: cardiac and respiratory stimulants.

arsenic p. Symptoms violent, burning pain in the stomach, retching, thirst, purging of blood and mucus with flakes of epithelium, tenesmus, suppression of urine, sense of constriction in throat, small and frequent pulse. Treatment: gastric lavage, saline cathartics, colonic irrigation, enema, dimercaprol.

aspirin p. See p. from salicylates.

atropine p. Symptoms heat and dryness of the mouth and throat, widely dilated pupils, scarlet rash, noisy delirium, quick pulse (at first corded, later feeble) rapid respirations (early strong, late shallow and feeble) retention of urine, sometimes convulsions, coma, and paralysis. Treatment: tannic acid, stimulants, coffee pilocarpine, artificial respiration, stomach and urinary bladder evacuation. Also called *homatropine p.*

barbiturate p. See p. from barbiturates.

barium sulfide p. That occurring from the use of certain depilatories. Symptoms: violent intestinal colic, cardiac irregularity Treatment. gastric lavage, magnesium sulfate.

belladonna p. That caused by the deadly nightshade. See atropine p.

benzene p. If taken by mouth, symptoms: pyrexia, excitement followed by narcosis, paralysis, gastrointestinal irritation, aspiration pneumonia. Treatment dilution with oil, evacuation. If from the toxic fumes, symptoms: the initial stage resembles alcoholic intoxication followed by narcosis, convulsions, and paralysis. Treatment: stimulants, artificial respiration.

borax p. See boric acid p.

boric acid p. Symptoms profound depression, hepatitis. Treatment evacuation, fluid, dextrose intravenously

brucine p. See strychnine p.

caffeine p. Symptoms burning pain in the throat, giddiness, faintness, nausea, numbness, abdominal pain, great thirst, dry tongue, tremor of extremities, diuresis, weak pulse, cold skin, collapse. Treatment emetics, stimulants, warmth.

calabar-bean p. See physostigma venenosum p.

camphor p. Symptoms characteristic odor giddiness, disturbance of vision, delirium, epileptiform convulsions, clammy skin, smarting in the urinary organs, quick and weak pulse. Treatment. stomach evacuation.

cannabis indica p. Symptoms pleasurable intoxication, heavy sleep. Treatment stomach evacuation. Also called *Indian hemp p.*

cantharis vesicatoria p. See p. from cantharides.

carbolic acid p. See phenol p.

carbona p. See carbon tetrachloride p.

carbon disulfid p. Symptoms: vomiting, weakness, convulsions, coma. Treatment: evacuation, artificial respiration.

carbon monoxide p. Symptoms: headache, giddiness, loss of muscular power, unconsciousness, dilated pupils, labored breathing, coma, cherry-red skin color. Treatment: fresh air, artificial respiration, stimulants, oxygen, coffee, bleeding and replacement with healthy blood.

carbon tetrachloride p. Symptoms: unconsciousness, asphyxial convulsions, cardiac fibrillation, hepatitis. Treatment: evacuation, artificial respiration, dextrose intravenously.

chloral hydrate p. Symptoms: deep sleep, loss of muscular power, lividity, diminished reflexes, weak pulse, slowed respirations, contracted pupils during sleep, but dilated on waking, low temperature. Treatment: stomach evacuation, application of heat to the extremities, massage, coffee by rectum, strychnine, amyl nitrite, artificial respiration.

chlorinated lime p. That caused by the poisonous component of Labarraque's solution, Javelle water, or bleaching fluid. Symptoms: local irritation, gastrointestinal and pulmonary. Treatment: evacuation, sodium thiosulfate in water, milk and raw eggs.

chloroform p. Symptoms: excitement and intoxication followed by anesthesia and unconsciousness, later profound stertorous, progressively or suddenly failing pulse and respirations. Treatment: draw tongue forward, artificial respiration; if chloroform has been taken by mouth, evacuation of stomach.

chromic acid p. See chromium trioxide p.

chromium trioxide p. Symptoms: dark yellow stains, abdominal pain, vomiting and purging, collapse. Treatment: stomach evacuation, chalk, milk, or albumin, demulcent drinks.

coal gas p. See carbon monoxide p.

coal oil p. See benzene p.

coal tar p. See phenol p.

cocaine p. Symptoms: faintness, giddiness, nausea, small, rapid, and intermittent pulse, dilated pupils, severe prostration, slow and feeble respiration. Treatment: stimulants, amyl nitrite, artificial respiration.

codeine p. See opium p.

colchicum autumnale p. Symptoms: not unlike those of malignant cholera; griping pain in the stomach, vomiting and continuous purging of seromucous material, intense thirst, muscular cramps, great prostration, collapse, dilated pupils, pain in the extremities. Treatment: stomach evacuation, tannic acid, morphine.

conium maculatum p. Symptoms: weakness of the legs, gradual loss of all voluntary power, nausea, ptosis, dilatation of pupils, inability to speak or swallow. Treatment: stomach evacuation, tannic acid, stimulants, warmth, artificial respiration, atropine.

creosote p. See phenol p.

cresol p. See phenol p.

croton tiglium p. Symptoms: intense pain in abdomen, vomiting, purging, watery stools, pinched face, small and thready pulse, moist skin, collapse. Treatment: stomach evacuation, demulcent drinks, morphine, poultices to abdomen. Also called *croton oil p.*

cyanogen p. See hydrocyanic acid p.

Datura stramonium p. Symptoms and treatment similar to those of atropine poisoning.

depilatory p. See barium sulfide p.

digitalis p. Symptoms: purging, with severe pain, violent vomiting, vertigo, feeble pulse (although heart action is tumultuous), delirium, and asphyxial convulsions. Treatment: stomach evacuation, tannic acid, recumbent position.

food p. A type of poisoning due to food contaminated by bacterial toxins or by certain living bacteria, particularly those of the *Salmonella* group, and staphylococci. The term is also used to include symptoms due to foods naturally poisonous, such as fungi (see mushroom p.), botulism, mussel poisoning, and poisoning due to chemicals or allergens in food. Of the food poisonings, that due to bacterial contamination is the most frequent, but botulism is the most serious: two-thirds of the victims die. In food poisoning due to bacterial contamination of the food, the symptoms are violent diarrhea, retching, prostration, dizziness, and cramps in the abdomen; symptoms generally appear from two to six hours after the food is eaten. Treatment: evacuation of stomach, fasting for at least 24 hours, then liquid diet for two days, bed rest.

foxglove p. See digitalis p.

gasoline p. See benzene p.

gelsemium sempervirens p. Symptoms appear in about twenty minutes; great muscular weakness, diplopia, ptosis, squint, widely dilated pupils, dimness of vision, labored respiration, weak pulse. Treatment: evacuation of stomach, atropine, stimulants, artificial respiration.

green hellebore p. See veratrum p.

hellebore p. See veratrum p.

hemlock p. See conium maculatum p.

hydrochloric acid p. Symptoms: pain throughout digestive tract, vomiting, feeble pulse, clammy skin, collapse, eschars externally, yellow stains on clothing, but none on skin. Treatment: demulcent drinks, oil, stimulants (intravenous injection). Also called *muriatic acid p.*

hydrocyanic acid p. Symptoms: sudden unconsciousness, slow labored respirations, slow pulse, staring eyes, purple face, general convulsions, then relaxation and collapse, *odor of peach kernels*; death may be almost instantaneous. Treatment: stomach tube if possible, alternate cold and warm affusions, artificial respiration.

hyoscyamus p. See atropine p.

Indian tobacco p. See lobelia inflata p.

iodine p. Symptoms: pain in throat and stomach, vomiting, purging, vomit yellow from iodine, or blue if starch is present in stomach, giddiness, faintness, convulsive movements. Treatment: stomach evacuation, starch, morphine.

iodoform p. Symptoms: slight delirium, drowsiness, high temperature, rapid pulse. Treatment: gastric lavage.

jaborandi p. See pilocarpine p.

Jamestown weed p. Symptoms and treatment similar to those of atropine poisoning.

kerosene p. See benzene p.

laudanum p. See opium p.

lead p. Symptoms: sweet metallic taste, vomiting of white matter, great thirst, pain in abdomen, usually rigid abdominal muscles, constipation or diarrhea with black stools, cramps in the legs, paralysis of the extremities, convulsions; in the chronic forms, blue line at the margin of the gums, basophilic stippling of the red cells. Treatment: stomach evacuation, Epsom or Glauber salts, milk, morphine.

lobelia inflata p. Symptoms: severe vomiting, with intense depression and prostration, giddiness, tremors, convulsions, collapse. Treatment: stomach evacuation, tannic acid, warmth, recumbent position.

manganese p. That which results from the inha-

lation of manganese dust or fumes. Symptoms resemble paralysis agitans. Treatment preventive.

meadow-saffron p. See colchicum autumnale p.

mercury bichloride p. Symptoms acrid metallic taste, burning heat in throat and stomach, vomiting, diarrhea with bloody stools, white and shriveled lips and tongue, small and frequent pulse, nephrosis, and colitis, death in coma or convulsions. Secondary symptoms hectic fever coppery taste, fetid breath, gums swollen, salivation. Treatment albumin in some form, raw white of egg or flour immediate stomach evacuation reducing agents, sodium formaldehyde sulfoxylate, calcium sulfide, sodium hypophosphide or thiosulfate

mesothorium p. Biological damage to tissue as result of exposure to radiations of mesothorium.

metal p. That due to inhalation of fumes of molten brass zinc. Symptoms chill, sweating, nausea, thirst, fever leukocytosis. Treatment emetics, laxatives, milk, and sodium bicarbonate.

methyl alcohol p. See wood alcohol p.

methyl salicylate p. See p. from salicylates.

monkshood p. See aconite p.

morphine p. See opium p.

mushroom p. Symptoms with most poisonous species delayed gastroenteritis and hepatitis. Treatment evacuation, dextrose injection.

naphthalene p. That caused by overdoses of naphthalene for therapeutic purposes or by eating or sucking naphthalene moth balls. Symptoms listlessness and anorexia followed by emesis, fever abdominal pain, hemoglobinuria, and blood changes caused by acute hemolytic anemia. Treatment blood transfusion and alkali therapy

narceine p. See opium p.

nicotine p. See tobacco p.

nitric acid p. Symptoms: yellow stains on skin otherwise similar to sulfuric acid poisoning Treatment alkalies, soap, demulcents, stimulants.

nitrobenzene p. A type of poisoning important in industrial medicine with symptoms and treatment similar to aniline poisoning.

nitroglycerin p. Symptoms throbbing headache, pulsation over entire body dicrotic pulse, flushed face, mental confusion, anxiety sudden collapse. Treatment recumbent position.

nux vomica p. See strychnine p.

opium p. Symptoms preliminary mental excitement, followed soon by weariness, sensation of weight in the limbs, sleepiness, diminished sensibility pin-point pupils, slow and strong pulse and respiration patient can be roused with difficulty; later rousing becomes impossible slow irregular and stertorous respiration, rapid and feeble pulse. Treatment evacuate stomach with mustard or stomach tube, arouse patient to maintain respiration by exercise, with cold and hot ablutions alternately or stimulate by atropine or coffee if pulse fails, and apply external heat.

oxalic acid p. Symptoms hot, acrid taste, burning, vomiting, collapse, sometimes general paralysis, numbness, and stupor Treatment lime or chalk.

Paris green p. See arsenic p.

phenacetin p. Acetophenetidin poisoning; similar to acetanilid poisoning.

phenol p. Symptoms immediate burning pain from mouth to stomach, giddiness, loss of consciousness, collapse partial suppression of urine, which is smoky in color characteristic odor; white, corrugated patches in mouth. Treatment gastric lavage with dilute alcohol.

phosphorus p. Symptoms vomiting and pain vomit may be luminous in the dark characteristic odor after several days deep jaundice, coffee-colored vomit, hepatic tenderness, albuminuria, marked fall in temperature, coma, failure of pulse and respiration. Treatment copper sulfate as an emetic, then as an antidote in small doses with opium liquid paraffin.

physostigma venenosum p. Symptoms: giddiness, prostration, loss of power in the lower limbs, muscular twitching, contracted pupils, clear mind Treatment stomach evacuation, atropine.

pilocarpine p. Symptoms. copious sweating, dizziness, salivation, vomiting, diarrhea, myopia, pupils much contracted. Treatment. stomach evacuation, stimulants, atropine.

p. from antimony compounds. See antimony p.

p. from arsenic compounds. See arsenic p.

p. from barbiturates. Symptoms: narcosis, sometimes preceded by excitement; prolonged sleep, stupor or coma. Treatment: gastric lavage, picrotoxin or metrazol.

p. from bromides. Symptoms. vomiting, lethargy hebetude, profound sleep, cramps, acne, mania. Treatment sodium chloride.

p. from cantharides. Symptoms: burning in mouth and stomach, vomiting and purging, soon becoming bloody tenesmus, salivation, aching pains in the back, strangury priapism, unconsciousness only very late convulsions at times. Treatment: stomach evacuation, demulcent drinks, morphine, hot bath for the strangury; anesthetics may be necessary for the pain.

p. from cyanogen compounds. See hydrocyanic acid p.

p. from hypnotics. See p. from barbiturates.

p. from iodine compounds. See iodine p.

p. from lead salts. See lead p.

p. from salicylates. Symptoms. nausea and vomiting, deafness, delirium, confusion, dyspnea, coma, collapse. These are complicated with local irritation for salicylic acid, acetylsalicylic acid, and methylsalicylate. The acids also produce acidosis. Treatment evacuation, alkalies

p. from sulfonamides. Symptoms: nausea and vomiting, fever delirium, skin eruptions, hemolysis, nephritis, granulocytopenia, cyanosis. Treatment fluids.

prussic acid p. See hydrocyanic acid p.

ptomaine p. Incorrect term for food poisoning.

radiation p. Any illness which results when radioactive material gains access to the body where it acts as an internal poison producing localized or systemic effects or both.

roach poison p. See sodium fluoride p.

salicylic acid p. See p. from salicylates.

santonin p. Symptoms. disturbance of color vision objects first assume bluish tinge, then yellow tinnitus, dizziness, pain in the abdomen, failure of respiration, convulsions, stupor Treatment evacuate stomach, mitigate convulsions with ether

savin p. Symptoms pain, vomiting, bloody stools and tenesmus, disordered respirations, coma, convulsions, and collapse. Treatment evacuation of stomach, castor oil in large doses.

selenium p. A form of poisoning, seldom if ever acute in man, which is due to the ingestion of selenium in water and plant foods during long period of years and characterized by general debility with degenerative changes in the liver and kidneys. Also called *alkali disease, loco disease*

silver salts p. Symptoms pain, vomiting, and purging vomit white and cheesy rapidly turning black in the sunlight vertigo, coma, convulsions, paralysis, and marked disturbance of respiration. Treatment salt and water stomach evacuation, large amount of milk.

sodium fluoride p. That due to poison found

in roach powder. Symptoms: violent gastroenteritis. Treatment: gastric lavage, calcium salts.
Spanish fly p. See p. from cantharides.
stramoni m p. See atropine p.
strophanthus p. See digitalis p.
strychnine p. Symptoms: tetanic convulsions in paroxysms at intervals varying from five minutes to half an hour; opisthotonos during paroxysm; prominent eyeballs; pupils dilated. Impeded respiration, feeble and rapid pulse, anxiety. Treatment: evacuate stomach; tannic acid followed by an emetic; keep patient quiet; ether or barbiturates to control convulsions; artificial respiration if indicated.
sulfuric acid p. Symptoms: vomiting, often of tarry matter; black stains, pain throughout digestive tract, feeble pulse, clammy skin, profuse and bloody salivation. Treatment: chalk, magnesia, soap, demulcent drinks.
thorn-apple p. Symptoms and treatment similar to those of atropine poisoning.
tobacco p. Symptoms: nausea, vomiting, weakness, weak pulse, cold and clammy skin, collapse, contracted pupils, then dilated. Treatment: stomach evacuation, tannic acid, recumbent position, artificial respiration.
tung-nut p. That caused by the tung nut. Symptoms: gastroenteritis and fluid and electrolyte deficiencies; later cyanosis, paresthesia, mydriasis, irregular respirations, reflex changes; sometimes renal dysfunction may occur.
ver·trum p. That caused by both the white (album) and the green (viride) varieties of veratrum, which have the same effect. Symptoms: pain and burning in the alimentary tract, vomiting and diarrhea, slow weak pulse, labored respiration, sometimes convulsions. Treatment: stomach evacuation, opium, stimulants, coffee, warmth, recumbent position.
white hellebore p. See veratrum p.
wintergreen oil p. See p. from salicylates.
wood alcohol p. Symptoms: inebriation, gastroenteritis, prolonged coma, blindness. Treatment: gastric lavage, fluids, dextrose intravenously.
yellow jasmine p. See gelsemium sempervirens p.

poi·son i'vy. A climbing vine, *Toxicodendron radicans* (also called *Rhus toxicodendron* and *Rhus radicans*); contains an oleoresin (urushiol) which causes a form of dermatitis venenata.

poison-ivy extract. Trade name for a solution of a resin extracted from the fresh leaves of *Toxicodendron radicans*; used for the prevention or treatment of the symptoms of the dermatitis produced through contact with *Toxicodendron radicans*. See *ivyol*.

poi'son nut. Nux vomica.

poi'son oak. *Toxicodendron quercifolium* (also called *Rhus toxicodendron* Linné but not the *R. toxicodendron* of American authors, which is poison ivy); produces a contact dermatitis similar to that produced by poison ivy. **Western poison oak** is the *Toxicodendron diversilobum* (also known as *Rhus diversiloba*).

poison-oak extract. Trade name for a solution of a resin extracted from the fresh leaves of *Toxicodendron quercifolium*; used for the prevention or treatment of the symptoms of the dermatitis produced through contact with *Toxicodendron quercifolium*. See *ivyol*.

poi'son·ous. Having the properties of a poison.

poi'son su'mac. A smooth shrub, *Toxicodendron vernix* (also called *Rhus vernix* and *Rhus venenata*), contains an oil which makes the plant poisonous to the touch; produces eruptions resembling poison-ivy dermatitis.

poison-sumac extract. Trade name for a solution of a resin extracted from the fresh leaves of *Toxicodendron vernix*; used for the prevention or treatment of symptoms of dermatitis resulting from contact with *Toxicodendron vernix*.

Poisson distribution. *In statistics*, a discrete mathematical distribution, often called the Law of Small Numbers, that may be regarded as an approximation of the binomial distribution when *p* (probability) is small and *n* (number) large.

poke'ber"ry, poke root. See *phytolacca*.

po'ker back. Complete stiffness of the spine, usually due to ankylosing spondylitis or rheumatoid arthritis of the spine.

po'lar. Of, pertaining to, or having a pole. *In chemistry*, used to describe any compound whose molecules are composed of atoms which share their common electron pairs unequally and thereby effect a separation of positive and negative centers of electricity to form a dipole.

polar bod'ies. The two minute cells given off successively by the ovum during the maturation divisions. They mark the animal pole. Also called *polar cells, polocytes, polar globules*.

po"la·rim'e·ter [L. *polus*, pole, from G. *polos*; G. *metron*, measure]. An instrument for making quantitative studies on the rotation of polarized light by optically active substances.

po"lar·im'e·try. The use of the polarimeter.

po·lar'i·scope [*polus*; G. *skopein*, to examine]. An instrument for studying the polarization of light; polarimeter.

po·lar"i·stro·bom'e·ter [*polus*; G. *strobos*, whirling round; *metron*, measure]. A form of polarimeter or saccharimeter that furnishes a delicate means of fixing the plane of polarization as rotated by the sugar solution under examination.

po·lar'i·ty [*polus*]. 1. The state or quality of having poles or points of intensity with mutually opposite qualities. 2. The electrically positive or negative condition of a battery or other electric terminals. 3. Demonstration of sedation of a nerve sensation at or near the positive electrode, and of irritation at or near the negative electrode; of anelectrotonus of muscular contraction near the positive electrode and of catelectrotonus near the negative.

po"lar·i·za'tion [*polus*]. 1. The act of polarizing or the state of being polarized. 2. A condition produced in a ray of light by absorption, reflection, or refraction, by means of which the vibrations are restricted and take place in one plane only (plane polarization) or in curves (circular or elliptic polarization). The plane of polarization is altered or rotated when the light is passed through quartz crystal or solutions of certain substances (rotatory polarization). 3. The deposit of gas bubbles (hydrogen) on the electronegative plate of a galvanic battery whereby the flow of electric current is impeded. 4. Acquisition of electric charges of opposite sign, as across semipermeable membranes in polarization of cell membranes in living tissues.

p. of electrodes. Acquisition of charges on electrodes used to lead off from solutions or living tissues; due to migration of ions.

po'lar·ize [*polus*]. Endow with polarity; place in a state of polarization.

po'lar·i"zer [*polus*]. An object, such as a Nicol prism, by means of which light is polarized.

po·lar'o·gram. The current voltage curve obtained in polarographic analysis.

po·lar'o·graph [*polus*; G. *graphein*, to write]. An instrument used in polarography.

po"lar·og'ra·phy [*polus*; *graphein*]. A method of chemical analysis based on the interpretation of the current-voltage curve characteristic of a solution of an electrooxidizable or electroreducible

substance when it is electrolyzed with the dropping mercury electrode. —**polarograph'ic**, *adj.*

polaroid. Trade-mark for specially prepared cellulose film containing oriented iodoquinine sulfate crystals, mounted between two glass plates. Used as substitute for Nicol prisms, in polariscopes, and for microscopes, reading glasses, and windshields to void glare.

pole [*polus*]. 1 Either extremity of the axis of the body as of the fetus, the crystalline lens, etc 2. One of two points at which opposite physical qualities, for example, of electricity or of magnetism, are concentrated; specifically the electrodes of a galvanic battery or of other generators of electricity

animal p. (a) The formative pole of an ovum distinguished by having more cytoplasm, pigment, etc. (b) In the mammalian blastocyst, the pole containing the inner cell mass. Also called *apical p.*, *germinal p.*

frontal p. The tip of the frontal lobe of the cerebrum.

negative p. The active pole of battery the electropositive element. Also called *cathode*

occipital p. The tip of the occipital lobe of the cerebrum.

p. changer A switch or key for changing or reversing the direction of an electric current.

positive p. The inactive pole of source of electricity as battery consisting of an electronegative element. Also called *anode*.

temporal p. The tip f the temporal l be of the cerebrum. See Plate 17

vegetal p. The relatively inactive, yolk-laden pole of an ovum. Also called *vegetative p.*, *antigerminal p.*

po'li en-ceph"a-li'tis. See *polioencephalitis*.

pol"i het"er-ox' nous [G *polys* many *heteros* different; *xenos*, host]. Pertaining to parasites having more than one intermediate host.

po'li-o (po'lee-o) [G. *polios*, gray] Short for poliomyelitis.

po'li o- po'li- [*polios*] A combining form meaning *gray*; used to denote *relation to the gray matter of the brain*.

po'li-o-en-ceph" li'tis [*polios*; G *enkephalos*, brain; *-itis*, inflammation]. Inflammation of the gray matter of the brain.

anterior superior p. An inflammatory disease of the gray matter about the third ventricle, bout the anterior portion of th f urth, and of that about the cerebral aqueduct, characterized by ophthalmoplegia, chiefly external, and peculiar somnolent state.

inferior p. An inflammatory disease of the medulla oblongata.

p. acuta. An acute inflammation of the cerebral cortex in children it gives rise to infantile cerebral palsy

p. hemorrhagica. Inflammation of the gray matter with hemorrhage.

posterior p. Inflammation of the gray matter in the vicinity of the fourth ventricle

superior hemorrhagi p. An inflammatory disease of the gray matter around the third ventricle.

po'li o-en ceph le-me nin go my" li tis [*polios*; *enkephalos* G *meninx*, membrane *myelos*, marrow *-itis*]. Inflammation of the gray matter of the brain and spinal cord and of their meninges.

po'li-o-en-ceph"a lo-my"e-li ti [*polios*; *enkephalos*; *myelos*; *-itis*]. Any inflammation of the gray matter of the brain and spinal cord, more specifically anterior poliomyelitis with encephalitis.

po'li-o-en-ceph lop a-thy [*polios*; *enkephalos*; G *pathos*, disease]. Any disease of the gray matter of the brain.

po'li-o-my"e-len-ceph -li tis [*polios*; G. *myelos*, marrow *enkephalos*; *-itis*, inflammation]. Poliomyelitis and polioencephalitis existing together

po'li o my"e li'tis [*polios*; *myelos*; *-itis*]. 1 A common virus disease of man which usually runs mild or bortive course, characterized by upper respiratory and gastrointestinal symptoms, but which may progress to involve the central nervous system and result in a nonparalytic or paralytic form of the disease, the latter being the classical form of acute anterior poliomyelitis. It is endemic with epidemic flare-ups. 2. Formerly any inflammation of the gray matter of th spinal cord. —**poliomyelit'ic**, *adj*

abortive p. An early form, diagnosed by inference during an epidemic, characterized clinically only by relatively mild symptoms of upper respiratory infection, headache, gastrointestinal disturbances, nausea, and vomiting, but which does not progress to involvement of the central nervous system. Definite diagnosis rests upon isolation of the virus and serological reactions.

acute anterior p. An acute inflammation of the anterior horns of the gray matter of the spinal cord. It is most common in children, producing paralysis of certain muscle groups or of an entire limb. The onset is sudden, with fever gastrointestinal complaints, and pain in the affected muscles, and the paralysis is usually most extensive in the beginning, certain amount of improvement taking place subsequently The affected muscles atrophy rapidly the reflexes in them are lost, and reaction of degeneration develops. From contraction of antagonistic muscles, deformities occur later in life Also called *infantile paralysis*, *epidemic paralysis*, *acute wasting paralysis*, *Heine-Medin disease*.

anterior spinal p. Anterior poliomyelitis, acute or chronic.

ascending p. A type similar to Landry paralysis. The paralysis starts in the toes, rapidly extends to the legs, thighs, trunk, and finally to the muscles of respiration.

bulbar p. A form in which lesions are concentrated in the medulla of the brain motor cranial ucle and respiratory and circulatory centers may be affected.

bulbospinal p. A form involving the medulla and spinal cord.

chronic anterior p. See progressive muscular atrophy.

encephalitic p. That in which, in addition to bulbar and spinal lesions, there is more diffuse involvement of the brain. Principal symptoms include anxiety hyperexcitability signs of upper motor neuron lesion, muscular tremors, delirium, coma, and occasionally convulsions.

metallic p. A form of toxic neuritis due to metal poisoning where the paralysis is so severe that it simulates poliomyelitis.

myelitic p. A type characterized by pain in the back, abdomen, and sometimes the lower limbs, flaccid paraplegia, sensory loss extending to the trunk, and retention of urine. The end result is spastic paraplegia and sphincter disturbances

nonparalytic p. A form generally characterized by pain and stiffness in the muscles of the axial skeleton, especially of the neck and back, mild fever and often increased amounts of protein and number of leukocytes in the cerebrospinal fluid. This may be the clinical maximum of the disease. Definitive diagnosis rests upon isolation of the virus and serological reactions.

paralytic p. A form with variable combination of signs of damage to the central nervous system, including flaccid paralysis, weakness, incoordina-

tion, muscle spasms, muscle tenderness, hyperesthesia, and disturbance of consciousness; subdivided, on the basis of anatomical structures involved, into acute anterior or spinal, bulbospinal, bulbar and encephalitic types.

spinal p. See acute anterior p.

spinobulbar p. See bulbospinal p.

syphilitic p. See syphilitic myatrophia.

po'li-o-my"e-lop'a-thy [polios; myelos; G. pathos, disease]. Disease of the gray matter of the spinal cord and medulla oblongata.

po'li-o-plasm" (po'lee-o-plaz um) [polios; G. plasma, anything formed]. Granular cytoplasm.

po'li-o'sis [polios; G. -osis, condition]. A condition characterized by the absence of pigment in the hair. Syn., canities.

po'li-o-thrix. See canities.

Po'lish plait. See plica polonica.

Politzer, Adam [Austrian otologist, 1835-1920]. Described otosclerosis (1893). Introduced method of testing hearing. A tuning fork held in front of the nares will be heard only by an unaffected ear during swallowing: called Politzer test. See also Politzer bag.

po-litz"er-i-za'tion (po-lit-sur-i-zay'shun, -eye-zay'shun, po"lit-sur-, pol it-sur) [Politzer]. The production of sudden increased air pressure in the nasopharynx to inflate the middle ear by means of compression by a Politzer bag.

poll (pole) [ME. pol]. In veterinary medicine, that part of a horse's neck lying just posterior to the occiput.

Pollak's test. See von Jaksch-Pollak's test.

pol"la-ki-u'ri-a (pol"ah-kee-yoor'ee-uh, -kigh-yoor'ee-uh) [G. pollakis, often; ouron, urine]. Abnormally frequent micturition.

pol-len-an'tin [L. pollen, fine flour; G. anti, against]. A hay-fever antitoxin obtained from the blood of horses inoculated with pollen extract. Also called Dunbar's serum.

pol'len [L.]. The fecundating element produced in the anthers of flowering plants.

pol"le-no'sis [pollen; G. -osis, condition]. Hay fever or asthma caused by contact with pollen to which the patient is specifically sensitive.

pol'lex [L.]. The thumb. —**pol'li-cis,** adj.

p. valgus. A thumb abnormally bent toward the ulnar side.

p. varus. A thumb abnormally bent toward the radial side.

Pollister method. See Mirsky-Pollister method.

pol-lu'tion [L. pollutum, from polluere, to defile]. 1. The act of defiling or rendering impure, as pollution of drinking water. 2. The discharge of semen without sexual intercourse, as in nocturnal emission.

nocturnal p. A nocturnal, involuntary seminal discharge. Obs.

self-p. Masturbation. Obs.

po'lo-cyte [L. polus, pole; G. kytos, cell]. One of the small cells or bodies formed during the maturation divisions of the ovum. Syn., polar body.

po-lo'ni-um [ML. Polonia, Poland]. Po = 210. The first radioactive element isolated by Pierre and Marie Curie from pitchblende (1898); product of disintegration of radium. Syn., radium-F.

pol-toph'a-gy [G. poltos, porridge; phagein, to eat]. Complete chewing of the food before swallowing it.

po'lus [L.]. A pole.

pol'y- [G. polys, many]. 1. A combining form meaning much or many. 2. In medicine, a combining form denoting excessive, affecting many parts, or of diverse origin.

Pólya, Eugene [Hungarian surgeon, 1876-1944]. Distinguished for his important contributions to the technic of gastrointestinal surgery. His gastroenterostomy is accomplished by the use of small Payr clamps placed upon the duodenum after freeing it with the pyloric end of the stomach, the duodenum being divided, the stomach retracted, and the duodenum closed. The stomach is clamped at a point distal to the freed portion in which all vessels have been secured. A loop of jejunum is brought through an opening in the transverse mesocolon and united to the posterior wall of the stomach, forming a posterior gastroenterostomy. Called Pólya's method, Pólya's operation.

pol"y-ac'id (pol ee-ass'id) [G. polys, many; L. acidus, sour]. Applied to a base or basic radical capable of yielding two or more hydroxyl groups, as $Ba(OH)_2$, $Fe(OH)_3$.

pol"y-aes-the'si-a (pol ee-es-thee'zhuh, -zee-uh). See polyesthesia.

pol"y-am'ine (pol ee-am'in, pol ee-uh-meen'). Nonspecific term referring to compounds possessing two or more amino groups.

pol"y-am'ine-meth"yl-ene res'in. Generic name for a synthetic acid-binding resin obtained by the polymerization of an aromatic amine and formaldehyde or of a polyamine, phenol, and formaldehyde. Such a resin is useful clinically as a gastric antacid and to prevent acidosis when a carboxylic resin is used for its sodium-depleting effect. Also called polyamine-formaldehyde resin. See also carbacrylamine resins.

pol"y-an"dry [polys; G. aner, man]. A social state in which is recognized the marriage of one woman with more than one man at the same time.

polyansyn. Trade-mark for a sterile solution of the various anterior pituitary factors.

pol"y-ar"te-ri'tis [polys; G. arteria, artery; -itis, inflammation]. Inflammation of a number of arteries at the same time.

p. nodosa. An acute and sometimes recurrent disease of unknown cause, frequently fatal and occurring at any age. The characteristic lesion is an irregularly distributed segmental panarteritis resulting in nodules and hemorrhage along the involved arteries. Histologically necrosis, edema, and cellular exudate, frequently including eosinophils, make up the lesions. It has been regarded by some as a reaction of hypersensitivity and is grouped as a collagen disease. Also called periarteritis nodosa, disseminated necrotizing periarteritis.

pol"y-ar'thric [polys; G. arthron, joint]. Pertaining to many joints.

pol"y-ar-thri'tis [polys; G. arthritis, arthritis]. Inflammation of many joints, sometimes used to mean acute rheumatic fever.

epidemic tropical acute p. A self-limited syndrome of unknown cause first described among Australian soldiers (1942) characterized by acute polyarthritis, mild fever, lymphadenopathy and transient rash: also called five-day arthritis, Bougainville rheumatism.

pol"y-ar-tic'u-lar [polys; L. articulus, joint]. Affecting many joints.

pol"y-a-tom'ic [polys; G. atomos, uncut]. 1. Containing several atoms. 2. Having several hydrogen atoms replaceable by bases.

pol"y-ba'sic [polys; G. basis, base]. Applied to an acid having several hydrogen atoms replaceable by bases.

pol"y-ba'sic ac'id. Any acid which contains several replaceable hydrogen atoms.

pol'y-blast [polys; G. blastos, germ]. A free macrophage of inflamed connective tissue.

pol"y-bleph'a-ron [polys; G. blepharon, eyelid]. A supernumerary eyelid. Also called polyblepharia, polyblephary.

pol"y-cel'lu-lar [polys; L. cellula, small storeroom]. Having many cells.

pol"y-cen'tric [*polys*; G. *kentron*, center]. Having many centers or nuclear points.

pol"y-chei'ri-a (-kigh'ree-uh) [*polys*; G. *cheir*, hand]. The state of having a supernumerary hand. —**pol"y-chei'rous**, *adj.*

pol"y-cho'li-a (-ko'lee-uh) [*polys*; G. *cholē*, bile]. Excessive secretion of bile.

pol"y-chro'ism [*polys*; G. *chroia*, color]. A property possessed by certain crystals, under polarized light, of exhibiting different absorption colors which vary as the polarizing instrument is rotated.

pol"y-chro-ma'si-a, pol"y-chro-ma'ti-a. See *polychromatophilia*.

pol"y-chro-mat'ic [G. *polys*, many; *chrōmatikos*, of color]. Many-colored.

pol"y-chro-mat'o-phil". See polychromatophilic *erythrocyte*. See also *reticulocyte*, 1.

pol"y-chro-mat"o-phil'i-a [*polys*; *chrōma*; *philein*]. The presence in the blood of polychromatophilic cells. Also called *polychromasia*, *polychromophilia*.

pol"y-chro-mat"o-phil'ic [*polys*; *chrōma*, *philein*]. Susceptible to staining with more than one dye.

pol"y-chro'mi-a [*polys*, *chrōma*]. Increased or abnormal pigmentation.

pol"y-chro'mo-phil. See *polychromatophil*.

pol"y-chro"mo-phil'i-a. See *polychromatophilia*.

pol"y-chy'li-a (-kigh'lee-uh) [*polys*; G. *chylos*, juice]. Excessive formation of chyle. —**polychylic**, *adj.*

pol"y-clin'ic [*polys*; G. *klinikos*, of a bed]. A hospital in which many diseases are treated.

pol"y-clo'ni-a [*polys*; G. *klonos*, confused motion]. An affection said to be distinct from tic and chorea but marked by clonic spasms.

pol"y-co'ri-a [*polys*, G. *korē*, pupil]. The existence of more than one pupil in an iris.

pol"y-cy'clic (-sigh'click, -sick'lick) [*polys*; G. *kyklos*, cycle]. 1. Describing a molecule which contains two or more groupings of atoms in the form of rings or closed chains. 2. *In dermatology*, pertaining to cutaneous lesions exhibiting many confluent rings or arcs.

polycycline. Trade-mark for tetracycline, commonly supplied as the hydrochloride.

pol"y-cy-e'sis (-sigh-ee'sis) [*polys*; G. *kyēsis*, pregnancy]. Multiple pregnancy.

pol"y-cys'tic [*polys*; G. *kystis*, bladder]. Containing many cysts.

pol"y-cys'tic ovaries. See Stein-Leventhal *syndrome*.

pol"y-cy-the'mi-a (-sigh-thee'mee-uh) [*polys*, G. *kytos*, cell; *haima*, blood]. A condition characterized by an increased number of erythrocytes.

myelopathic p. See primary *p*.

p. hypertonica. That associated with hypertension but without splenomegaly; described by F. Gaisböck.

p. vera. See primary *p*.

primary p. A rare disease in which the red blood cells are greatly increased in number with an absolute increase in the total mass of red cells per kilogram of body weight. Characterized by a red cyanosis, disturbances of the central nervous system and gastrointestinal tract, epistaxis, and usually a marked splenomegaly. Also called *p. rubra*, *erythremia*, *Vaquez's disease*, *Osler's disease*, *erythrocytosis megalosplenica*, *myelopathic p.*

secondary p. That resulting from a physiologic response to oxygen unsaturation of arterial blood, as in the fetus, in certain forms of congenital and acquired heart disease, chronic pulmonary disease, etc. Syn., *anoxemic erythrocytosis*.

splenomegalic p. That associated with enlargement of the spleen. See primary *p*.

pol"y-dac'tyl-ism. See *polydactyly*.

pol"y-dac'ty-ly [G. *polys*, many; *daktylos*, finger]. The existence of supernumerary fingers or toes.

pol"y-de-fi'cien-cy [*polys*; L. *deficientia*, from *deficere*, to be wanting]. Deficiency of more than one vitamin or other food factor.

pol"y-dip'si-a [*polys*; G. *dipsa*, thirst]. Excessive thirst. Syn., *anadipsia*.

psychogenic p. Polydipsia due to psychological causes. It may be differentiated from organic polydipsia by the patient's ability to produce concentrated urine.

pol"y-e-lec'tro-lyte [*polys*; G. *ēlektron*, amber; *lytos*, soluble]. Any substance of high molecular weight which behaves as an electrolyte, such as proteins, polysaccharides, and synthetic rubber.

pol"y-em'bry-o-ny [*polys*; G. *embryon*, embryo]. *In biology*, the instance of a zygote giving rise to more than one embryo.

pol"y-e'mi-a [*polys*; G. *haima*, blood]. An excess of blood over the normal amount in the body.

pol"y-ene. A compound which contains three or more double bonds joining carbon atoms in the compound.

pol"y-es-the'si-a [*polys*, G. *aisthēsis*, perception]. An abnormality of sensation in which a single touch is felt in two or more places at the same time.

pol"y-es'trus. In animals, the existence of several estrus periods during each sexual season.

pol"y-eth'yl-ene. A long-chain plastic polymer containing 200 to 1000 or more ethylene units per molecule. In the form of flexible tubing and film, a pure form of the plastic is useful in surgical procedures. See *polythene*.

Po-lyg'a-la [*polys*, G. *gala*, milk]. A genus of herbaceous or shrubby plants of some 200 species. **P. senega**. A species of North America; therapeutically the most important. See *senega*.

pol"y-ga-lac'ti-a (-ga-lack'tee-uh, -shee-uh) [*polys*; *gala*]. Excessive secretion of milk.

pol"y-gal'ic ac'id. An active glycosidal principle from senega.

po-lyg'a-lin. A glycosidal saponin derived from senega. Polygalic acid.

po-lyg'a-mous [*polys*; G. *gamos*, marriage]. 1. Pertaining to the social state of having more than one wife or husband at one time, more particularly the former. 2. Having both unisexual and hermaphrodite flowers on one plant. —**polygamy**, *n.*

pol"y-gas'tri-a [*polys*; G. *gastēr*, belly]. Excessive production of gastric juice.

pol"y-gas'tric. 1. Having several bellies, as certain muscles. 2. Having more than one stomach.

pol"y-gen'ic [*polys*; G. *gennaein*, from *gignesthai*, to be produced]. Referring to hereditary characters which are determined by many genes.

pol"y-glan'du-lar [*polys*; L. *glans*, acorn]. Pluriglandular; applied to a condition in which two or more unrelated endocrine disorders coexist in a patient.

pol"y-glo-bu'li-a, pol"y-glob'u-lism. See *polycythemia*.

pol"y-gna'thus [*polys*; G. *gnathos*, jaw]. A monster in which a parasitic twin or part is attached to the jaws of the host.

po-lyg'o-nal [G. *polygōnon*, polygon]. Having many angles.

pol"y-gon'in, $C_{21}H_{20}O_{10}$. A glucoside from the root of *Polygonum cuspidatum* (Japanese fleeceflower), a plant having purgative properties. Syn., *cuspidatin*.

pol"y-graph. An instrument for recording pulsations simultaneously, such as the radial and jugular pulses. There are photographic registration and inkwriting models.

pol"y-gy'ri-a (pol"i-jye'ree-uh, -jirr'ee-uh) [*polys*; G. *gyros*, circle]. The existence of an excessive number of convolutions in the brain.

pol"y-he'dral [G. *polyedros*, with many seats]. Having many surfaces.

pol"y-he'mi-a (-hee'mee-uh, -hem'ee-uh). See *polyemia*.

pol"y-hi-dro'sis, pol"y-i-dro'sis. See *hyperhidrosis*.

pol"y-hy'brid [G. *polys*, many; L. *hybrida*, offspring of a tame sow and a wild boar]. An individual heterozygous for many pairs of genes.

pol"y-hy-dram'ni-os (-high-dram'nee-os) [*polys*; G. *hydōr*, water; *amnion*, inner membrane around the fetus]. An excessive production of amniotic fluid.

pol"y-hy-dru'ri-a (-high-droo'ree-uh) [*polys*; *hydōr*; G. *ouron*, urine]. A large increase in fluid content of the urine.

pol"y-in-fec'tion [*polys*; L. *infectio*, from *inficere*, to infect]. Infection resulting from the presence of more than one type of organism.

pol"y-lec'i-thal (-less'i-thul) [*polys*; G. *lekithos*, yolk]. Having much yolk. Syn., *megalecithal*, *telolecithal*.

pol"y-lep'tic [*polys*; G. *lēpsis*, from *lambanein*, to seize]. Characterized by numerous remissions and exacerbations.

pol"y-mas'ti-a, pol"y-ma'zi-a [*polys*; G. *mastos*, breast]. The presence of more than two breasts.

pol"y-mas'ti-gate, pol"y-mas'ti-gous [*polys*; G. *mastix*, whip]. Having several flagella.

pol"y-me'li-a [*polys*; G. *melos*, limb]. The presence of more than the normal number of limbs.

pol"y-me'lus, pol"y-me'li-us [*polys*; *melos*]. Having more than the normal number of limbs.

pol"y-me'ni-a (-mee'nee-uh, -men'ee-uh) [*polys*; G. *mēn*, month]. Menorrhagia.

pol"y-men"or-rhe'a. See *metrorrhagia*.

pol'y-mer [*polys*; G. *meros*, part]. The product resulting when two or more molecules of the same substance combine; the molecular weight of the product is a whole multiple of the molecular weight of the starting compound.

pol"y-me'ri-a [*polys*; *meros*]. The presence of extra or supernumerary parts of the body.

pol"y-mer'ic [*polys*; *meros*]. 1. Exhibiting polymerism. 2. Pertaining to muscles which are derived from two or more myotomes.

po-lym'er-ide [*polys*; *meros*]. One of a series of polymeric compounds. Syn., *polymer*.

po-lym'er-ism, pol'y-mer-ism [*polys*; *meros*]. 1. The existence of more than the normal number of parts. 2. A form of isomerism in which the molecular weights of certain substances, called polymers, are multiples of the molecular weights of simpler substances from which they are produced.

pol"y-mer-i-za'tion, po-lym"er-i-za'tion. General term for a reaction in which a complex molecule of relatively high molecular weight is formed by the union of a number of simpler molecules, which may or may not be alike; the reaction may or may not involve elimination of a by-product, as water or ammonia.

addition p. A type which does not involve elimination of a by-product.

condensation p. A type which does involve elimination of a by-product.

simple p. A type of addition polymerization which involves only a single molecular species. See *copolymerization*.

pol"y-mer-ize, po-lym'er-ize [*polys*; *meros*]. Form a compound from several single molecules of the same substance, the molecular weight of the new compound being a multiple of the molecular weight of single molecules which have combined.

pol"y-mi-cro'bic (-migh-kro'bick, -krob'ick) [*polys*; G. *mikros*, small; *bios*, life]. Containing many kinds of microorganisms.

pol'y-morph [*polys*; G. *morphē*, form]. A polymorphonuclear leukocyte.

pol"y-mor'phic, pol"y-mor'phous [*polys*; *morphē*]. 1. Having or occurring in several forms, as a substance crystallizing in several forms. 2. In clinical medicine, referring to the symptomatology of a disease process: polysymptomatic.

pol"y-mor'phism [*polys*; *morphē*]. The state of being polymorphic.

pol"y-mor"pho-cel'lu-lar [*polys*; *morphē*; L. *cellula*, small storeroom]. Having cells of many forms.

pol"y-mor'pho-cyte [*polys*; *morphē*; G. *kytos*, cell]. A cell having a polymorphic nucleus, especially a granular leukocyte.

pol"y-mor"pho-nu'cle-ar [*polys*; *morphē*; L. *nucleus*, kernel]. Having a nucleus which is lobated, the lobes being connected by more or less thin strands of nuclear substance; for example, the nucleus of a neutrophil leukocyte.

pol"y-my-oc'lo-nus (-migh-ock'lo-nus, -migh-o-klo'nus). See *paramyoclonus multiplex*.

pol"y-my"o-si'tis [*polys*; G. *mys*, muscle; *-itis*, inflammation]. Simultaneous inflammation of many muscles.

pol"y-myx'in. A generic term for a group of related polypeptide antibiotic substances derived from cultures of various strains of the spore-forming soil bacterium *Bacillus polymyxa* (*B. aerosporus*); the individual substances are differentiated by affixing A, B, C, D and E to the name *polymyxin*. Polymyxin B, the least toxic of the group, is bactericidal against most Gram-negative microorganisms; it is used clinically by intramuscular injection of the water-soluble sulfate salt, in treating pseudomonal (pyocyaneal) bacteremia, meningitis and urinary-tract infection, and meningitis caused by certain other Gram-negative bacilli. See *aerosporin*.

pol"y-ne'sic (-nee'sick, -ness'ick) [*polys*; G. *nēsos*, island]. Occurring in several foci, as polynesic sclerosis.

pol"y-neu'ral, pol"y-neu'ric [*polys*; G. *neuron*, nerve]. Pertaining to, or supplied by, several nerves.

pol"y-neu-ral'gi-a [*polys*; *neuron*; G. *algos*, pain]. Neuralgia in which many nerves are involved.

pol"y-neu-ri'tis [*polys*; *neuron*; G. *-itis*, inflammation]. Multiple neuritis. —**polyneurit'ic**, *adj.*

diabetic p. A slowly progressive polyneuritis occurring in diabetes. It first affects the legs, then the arms, with paresthesias, muscular weakness, and loss of deep reflexes accompanied by dryness and scaling of the skin. It is believed to be due to a metabolic disorder.

hematoporphyrinuric p. That associated with hematoporphyrinuria, caused by poisoning with barbiturates or sometimes by the therapeutic use of hematoporphyrin.

infectious p. Guillain-Barré syndrome.

Jamaica ginger p. Inflammation of the nerves of the extremities due to toxic effects of triorthocresylphosphate through ingestion of quantities of Jamaica ginger.

pol"y-neu"ro-my"o-si'tis [*polys*; *neuron*; G. *mys*, muscle; *-itis*]. A disease in which there is concurrent inflammation in several peripheral nerves and muscles.

pol"y-neu-rop'a-thy [*polys*; *neuron*; G. *pathos*, disease]. An affection of several nerves, as in alcoholism and thiamine deficiency; polyneuritis. See multiple neuritis.

pol"y-nu'cle-ar, pol"y-nu'cle-ate. 1. See *multinuclear*. 2. Polymorphonuclear: erroneous usage.

pol"y-nu'cle-ate. See *multinuclear*.

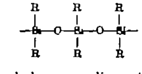
pol"y-nu"cle-ot'i-dase. An enzyme which depolymerizes nucleic acid to form mononucleotides.

pol"y·nu′cle·o·tide [*polys*; L. *nucleus*, kernel]. A nucleic acid composed of four mononucleotides.

pol"y·o·don′ti·a [*polys*; G. *odous*, tooth]. The presence of supernumerary teeth.

pol"y·o·nych′i·a (·o·nick′ee·uh) [*polys*; G. *onyx*, nail]. The occurrence of supernumerary nails on fingers or toes.

pol"y·o′pi·a, pol"y·op′si·a [*polys*; G. *ōps*, eye]. A condition in which more than one image of an object is formed upon the retina.



p. monophthalmica. The phenomenon of multiple vision with a single eye.

pol"y·or′chid·ism, pol"y·or′chism [*polys*; G. *orchis*, testis]. The presence of more than two testes in one person.

pol"y·or′chis (·or′kis) [*polys*; *orchis*]. One who has more than two testes.

pol"y·o·rex′i·a [*polys*; G. *orexis*, longing]. Excessive hunger or appetite; bulimia.

pol"y·or"ga·no·sil·ox′ane Any synthetic polymer consisting of a chain of alternate links of silicon atoms and oxygen atoms, the two other bonds of the tetravalent silicon atom generally being attached to an organic group. They are represented by the general formula:

Commonly known as *silicones*, these substances may be limpid or viscous fluids or semisolid to solid substances. The fluids impart to glass surfaces a water-repellent film, resulting in complete drainage of aqueous solutions, and serve as antifoam and skin-protective agents. A puttylike form, *silicone bouncing putty* has characteristics of deformability useful in ailments requiring therapeutic exercise of the fingers.

pol"y·or·rh"y·men"in·gi′tis. Polyorrhymenitis; erroneous usage. See *polyserositis*.

pol"y·or·rhy·men·i′tis. See *polyserositis*.

pol"y·os·tot′ic. Involving more than one bone.

pol"y·o′ti·a [*polys*; G. *ous*, ear]. A congenital defect in which there is more than one auricle on one or both sides of the head.

pol′yp [G. *polypous*, many-footed]. A pedunculated mass composed of neoplastic tissue or other structure, found especially on mucous membranes, as those of the nose, urinary bladder, stomach, large intestine, or uterus. —**polypous**, *adj.*

adenocarcinomatous p. One in which the nodule is an adenocarcinoma.

adenomatous p. One in which the nodule is an adenoma.

fibrinous p. One composed of fibrin or organized fibrin.

inflammatory polyps. See *pseudopolyposis*.

mucous p. A localized inflammatory proliferation of mucous membrane or of connective tissue, with mucoid degeneration.

nasal p. One in which pedunculated or sessile, edematous masses project from the nasal mucosa, with infiltration by cells of acute or chronic inflammation.

placental p. One composed of retained placental fragments, sometimes apparently proliferated.

pulp p. See hyperplastic *pulpitis*.

vascular p. A pedunculated angioma.

pol"y·pap"il·lo′ma. See *yaws*.

pol"y·pa·re′sis (·pa·ree′sis, ·par′i·sis) [G. *polys*, many; *paresis*, paralysis]. General progressive paralysis of the insane, or paralytic dementia.

pol"y·path′i·a [*polys*; G. *pathos*, disease]. The presence of several diseases at one time, or the frequent recurrence of disease.

pol"y·pep′ti·dase. One of the enzymes which hydrolyze proteins and molecular fragments of proteins.

pol"y·pep′tide [*polys*; G. *peptos*, cooked]. A compound containing two or more amino acids united through the peptide linkage —CO.NH—.

pol"y·pep·ti·de′mi·a [*polys*; *peptos*; *haima*, blood]. The presence of polypeptides in the blood.

pol"y·pep·ti·do·rrha′chi·a (·pep·tid·o·ray′kee·uh, ·rack′ee·uh) [*polys*; *peptos*; G. *rhachis*, spine]. 1. The presence of polypeptides in the cerebrospinal fluid. 2. Toxic meningitis caused by polypeptides in the cerebrospinal fluid.

pol"y·pep′tin. An antibiotic substance derived from a member of the *Bacillus circulans* group, *B. krzemieniewski*, originally known as *circulin*, a name now applied to another antibiotic. It is bactericidal as well as bacteriostatic against a number of species of bacteria.

pol"y·pha′gi·a [*polys*; G. *phagein*, to eat]. Excessive eating; increased intake of food; bulimia.

pol"y·pha·lan′gism [*polys*; G. *phalanx*, bone between two joints of the fingers and toes]. An extra phalanx in a finger or toe.

pol"y·phar′ma·cy [*polys*; G. *pharmakon*, drug]. The prescription of many drugs at one time; the excessive use of drugs.

pol"y·pho′bi·a [*polys*; G. *phobos*, fear]. Morbid fear of many things.

po·lyph′o·ny [*polys*; G. *phōnē*, voice]. The condition of multiple effects produced by a given gene. Syn., *pleiotropism*.

pol"y·phy·let′ic (·figh·let′ick) [*polys*; G. *phyletikos*, of a tribe]. Referring to origin from many lines of descent; opposed to *monophyletic*.

pol"y·phy′le·tism. See polyphyletic *theory* of hematopoiesis.

pol"y·phy·o·dont [G. *polyphyēs*, manifold; *odous*, tooth]. Having more than two successive sets of teeth at intervals throughout life.

pol"y·pif′er·ous [G. *polypous*, many-footed; L. *ferre*, to bear]. Bearing or originating polyps.

pol′y·plast [G. *polys*, many; *plassein*, to form]. 1. Formed of many different structures. 2. Having undergone many modifications during the process of development. *Rare*.

pol′y·ploid [*polys*; G. *-ploos*, -fold; *eidos*, form]. Denoting a condition in which the chromosome number is a multiple of the normal gametic number.

pol"yp·ne′a, pol"yp·noe′a [*polys*; G. *pnoē*, breath]. Very rapid respiration; panting.

pol"y·po′di·a [*polys*; G. *pous*, foot]. The condition of having supernumerary feet.

Pol"y·po′di·um [*polys*; *pous*]. A genus of ferns of several species said to have medicinal virtues.

P. vulgare. A species common in Europe and America. Contains in the rhizome a purgative fixed oil, an anthelmintic resin, and glycoside osmambain. Has also been used as an expectorant in chronic catarrh and asthma.

pol′yp·oid [G. *polypous*, many-footed; *eidos*, form]. Resembling a polyp.

pol"y·po′rin. An antibiotic substance derived from the polypore fungus *Polystictus sanguineus*. It is effective, by local application, against *Staphylococcus aureus*, *S. pyogenes*, and *S. viridans*.

po·lyp′o·rous [*polys*; G. *poros*, passage]. Having many small openings; cribriform.

pol"y·po′sis [G. *polypous*, many-footed; *-ōsis*, condition]. The condition of being affected with polyps.

acquired multiple p. Multiple pedunculated adenomas of the gastrointestinal tract, found most frequently in the rectum and sigmoid, which

have a marked tendency to malignant degeneration. Syn., *polypoid adenomatosis*.

hereditary multiple p. A rare form transmitted as a Mendelian dominant by both sexes and manifesting itself early in life. The polyps may cover the entire small intestine and colon or be limited to either; melanin spots of oral mucosa, lips, and digits may be associated when the lesions occur in the small intestine. Malignant degeneration is common.

p. coli. Multiple polyps of the large intestine.

p. ventriculi. Multiple polyps of gastric mucosa. When associated with chronic atrophic gastritis may be called *état mamelonné*.

pol″y·pty′chi·al (pol″i-tye″kee-ul) [G. *polys*, many; *ptychē*, fold]. Arranged in more than one layer, as the epithelial cells of some glands.

pol′y·pus (pl. *polypi*). See *polyp*.

pol″y·ra·dic″u·li′tis [G. *polys*, many; L. *radicula*, small root; G. *-itis*, inflammation]. Inflammation or degeneration of spinal ganglions, nerve roots, or peripheral nerves. Also called *polyneuroradiculitis*.

pol″y·ra·dic″u·lo·neu·ri′tis. See Guillain-Barré *syndrome*.

pol″y·sac′cha·ride (-sack′uh-ride, -rid) [*polys*; G. *sakchar*, sugar]. A carbohydrate which is formed by the condensation of two or more, usually many, monosaccharides. Examples are cellulose and starch. They do not go into true solution in water and usually form hydrophilic colloids.

bacterial p. A substance of polysaccharide nature elaborated by bacteria. Such substances are of particular importance in immunologic phenomena, since they usually possess antigenic properties.

capsular p. A polysaccharide found in the capsule of bacteria, for example, of pneumococcus, determining its type specificity. It may act as a hapten.

pol″y·sce′li·a (-see′lee-uh) [*polys*; G. *skelos*, leg]. Excess in the number of legs.

po·lys′ce·lus [*polys*; *skelos*]. A monster having supernumerary legs.

pol″y·se″ro·si′tis [*polys*; L. *serum*, whey; G. *-itis*, inflammation]. Widespread, chronic, fibrosing inflammation of serous membranes, especially in the upper abdomen. This may be associated with persistent ascites or chronic passive hyperemia. Also called *Pick's disease* (for Friedel Pick), *multiple serositis*, *Concato's disease*, *chronic hyperplastic perihepatitis*, *polyorrhymenitis*.

pol″y·si″nus·i′tis [*polys*; L. *sinus*, curve; *-itis*]. Simultaneous inflammation of several air sinuses.

pol″y·so′ma·tus (-so′muh-tus, -so·mah′tus) [*polys*, G. *sōma*, body]. Taruffi's descriptive term for monstrosities involving more than one body.

pol″y·so′my [*polys*; *sōma*]. A polysomatous condition.

pol″y·so′mic [*polys*; *sōma*]. 1. Referring to organisms with more than two of any given chromosome, or having more than two sets of chromosomes, as tetraploids, hexaploids, et cetera. 2. See *polyploid*.

pol″y·so′mus [*polys*; *sōma*]. A general term embracing all grades of duplicity, triplicity, etc. It includes monochorionic twins, conjoined twins, equal or unequal, placental parasitic twins, and all grades of double monsters. See *polysomatous*.

pol″y·sor′bate 80. The United States Pharmacopeia name for a complex mixture of polyoxyethylene ethers of mixed partial oleic esters of sorbitol anhydride, available under the trademarked name Tween 80.

pol″y·sper′mi·a, **pol″y·sper′mism** [*polys*, G. *sperma*, seed]. The secretion and discharge of an excessive quantity of seminal fluid.

pol′y·sper″my, **pol″y·sper′my** [*polys*; *sperma*]. Impregnation of an ovum by more than one spermatozoon.

pol″y·sphyg′mo·graph [*polys*; G. *sphygmos*, pulse; *graphein*, to write]. An instrument by means of which tracings can be taken simultaneously of the cardiac movements, the arterial pulse, and the respiration.

pol″y·stich′i·a (-stick′ee-uh) [*polys*; G. *stichos*, row]. A condition in which the eyelashes are arranged in more than the normal number of rows.

pol″y·stic′tin. An antibiotic substance derived from the fungus *Polystictus versicolor*. It is weakly bacteriostatic.

pol″y·stom′a·tous (-stom′uh-tus, -sto·mah′tus) [*polys*; G. *stoma*, mouth]. Having many mouths or apertures.

pol″y·sty′rene. A clear, lightweight plastic prepared by reaction and polymerization of ethylene and benzene and used particularly in the manufacture of containers and general laboratory ware such as beakers and funnels. Marketed as *styron*, *lustron*, *loalin*, *bakelite polystyrene*.

pol″y·sus·pen′soid. A colloid system in which there are several phases in different degrees of dispersion.

pol″y·symp″to·mat′ic. In clinical medicine, referring to a pathological process having manifold symptoms, which may not all occur simultaneously or in the same patient.

pol″y·ter′pene. See *terpene*.

pol″y·the′li·a, **pol″y·the′lism** (pol″i-theel′iz-um, pol′ith-i-liz-um) [G. *polys*, many; *thēlē*, nipple]. The presence of supernumerary nipples.

polythene. A trade-mark for polyethylene.

po·lyt′o·cous [*polys*; G. *tokos*, offspring]. Producing many young at a birth.

pol″y·trich′i·a (-trick′ee-uh), **pol″y·tri·cho′sis** (-tri-ko′sis) [*polys*; G. *thrix*, hair]. Excessive development of hair. Syn., *hypertrichosis*.

pol″y·tro′phi·a, **po·lyt′ro·phy** [*polys*; G. *trophē*, nourishment]. Abundant or excessive nutrition.

pol″y·trop′ic (-trop′ick, -tro′pick) [*polys*; G. *trepein*, to turn]. Having affinity for or affecting more than one type of cell; applied to viruses. Syn., *pantropic*.

pol″y·un′gui·a [*polys*; L. *unguis*, nail]. Polyonychia.

pol″y·u′ri·a [*polys*; G. *ouron*, urine]. The passage of an excessive quantity of urine. —**polyuric**, *adj.*, *n.*

pol″y·va′lent, **po·lyv′a·lent** [*polys*; L. *valere*, to be strong]. Multivalent; used especially in polyvalent serum, one obtained either by immunizing animals with different strains of the same bacterium, or by mixing serums derived from different animals immunized with various strains.

pol″y·vi′nyl al′co·hol (-vy′nil, -vin′il) $(CH_2CHOH)_n$. A cream-colored powder soluble in water and insoluble in most organic solvents. It is used as an adhesive, emulsifier, and sizing agent for paper.

pol″y·vi″nyl·pyr·rol′i·done. A synthetic polymer of high molecular weight formed by interactions of formaldehyde, ammonia, hydrogen, and acetylene. A faintly yellow solid, resembling albumin, soluble in water with formation of a colloidal solution; used as a nonantigenic plasma expander and in preparing repository forms of certain drugs with which it combines loosely. Abbreviated, PVP. See *periston*.

po·made (po-mayd′, po-mahd′) [F. *pommade*, from L. *pomum*, apple]. A perfumed ointment for applying to the scalp.

pome·gran·ate (pom′gran-it, pum′-, pom-gran′it, pum-). See *pelletierine tannate*.

pom″pho·ly·he′mi·a. Bubbles in the blood.

pom pho-lyx [G bubble] A skin disease characterized by vesicles and bullae on the palms of the hands and soles of the feet. Lesions recur in crops with tendency to chronicity and are usually deep-seated. The disease is not rare as formerly was taught its cause is unknown. Also called *chiropompholyx, dyshidrosis.*

pom'phus. See *wheal.*

po mum A da mi. Latin, pple of Adam old term for th prominence in front of the eck caused by the projection of the thyroid cartilage. Syn., *Adam apple.*

pon ceau 3R. $C_{18}H_{14}N_2Na_2O_7S_2$; sodium cumeneazo-β-naphthol disulfonate dark-red powder soluble in water A pure grad of it, when certified, is used as dye f foods, drugs, and cosmetics designated F D & C. Red No. 1.

Poncet, Anto in [*French surgeon*, 1849–1913] Described multiple tuberculous arthritis (1897); also called *Poncet' disease.* Introduced perineal urethrostomy and an operation for lengthening the Achilles tendon for the relief of talipes equinus both are called *Poncet' operation.*

Pond' xtract. A fluidextract of *Hamamelis virginiana.*

Ponder Eric [*American physiologist*, 1898–]. Described method of making differential neutrophil count; see Cooke-Ponder *method.* Introduced stain for diphtheria bacilli see Ponder Kinyoun *stain* Author of numerous studies of the red blood cell.

pon'der bie [L. *ponderabilis*, that can be weighed]. Having weight.

Ponfick, Emil [*German physician*, 1844–1913]. Known for his investigations in actinomycosis, especially of the role played by *Actinomyces* in its causation in human beings and animals (1880–82) Described achromacytes in the blood called *Ponfick' shadows* See also *achromocyte.*

pon' graph po no-graph [G *ponos*, toil, pain *graphein*, to write]. An apparatus for determining and registering sensitiveness to pain or fatigue.

pon p l m l (p pal m is, po) [*ponos*; G *palmos*, throbbing; *-osis*, condition]. Condition in which slight exertion produces palpitation of the heart.

pon os, po nos [G]. Th Mediterranean form of kala-azar

pons (ponz) (pl. *pontes*) [L bridge]. 1 A process or bridge of tissue connecting two parts of an rgan. 2. The pons, convex white eminence situated at the base of the brain. It consists of fibers and nuclei which receive impulses from the cerebral cortex, and send fibers to the contralateral side of the cerebellum by way of the brachium pontis. Also called *pons varolii.* See Plates 17 18. —**pon'tile, pon tine** (pon tyne) *adj*

pon'tic [*pons*] Portion of prosthetic bridge which is between the butments and serves as the artificial substitute for lost tooth, or teeth. Syn., *dummy*

pon"to bul'bar [*pons*; L. *bulbus*, bulb] Pertaining to the pons and to the medulla oblongata.

pontocaine hydrochloride. Trade-mark for brand of tetracaine hydrochloride.

Pool-Schlesinger' sign. See under *sign.*

pop'lar bud (*populi gemma*) The air-dried, closed, winter leaf bud of *Populus candicans*, known in commerce as balm of Gilead buds, or of *Populus tacamahacca* (*Populus balsamifera*) known in commerce as balsam poplar buds. It contains, in addition to small mount of the glycosides salicin and populin, an oleoresin allied in its composition to turpentine. Th therapeutic action of poplar bud is analogous to that of the turpentines. It has been used externally as mild counterirritant in muscular rheumatism and internally as stimulating expectorant in subacute or chroni bronchitis.

pop"li te al, pop-lit'e-al [L. *poples*, ham of the knee]. Pertaining to or situated in the ham, as popliteal artery popliteal nerve, popliteal space

pop"li te us, pop lit'e-us [*poples*]. 1 The ham or hinder part of the knee joint. 2. A muscle on the back of the knee joint. See Table of Muscles in the Appendix.

p. minor A rare variant of the popliteus muscle arising from the femur medial to the plantaris and inserted into the posterior ligament of the knee joint.

Popper Erwin [*German pathologist*, contemporary] With Karl Landsteiner transmitted poliomyelitis to the monkey (1909)

pop py [AS. *popig*]. See *opium.*

pop u lin. $C_{20}H_{22}O_8.2H_2O$; crystalline glycoside obtained from various species of *Populus* and also prepared by synthesis. Syn., *populoside, salicin benzoate.*

pop u lo-side Populin.

Pop u lus. See *poplar bud.*

pore [G *poros*, passage]. 1 A minute opening on surface. 2. Opening of the duct of sweat gland Also see *porus.*

alveolar p. One of the minute openings in the walls of the pulmonary alveoli, affording communication between neighboring alveoli also called *pore of Cohn.*

taste p. The minute opening through which project the gustatory bristles of taste bud. Also called *gustatory p.*

po-ren"ce-pha'li a, po"ren-ceph'a-ly [*poros*; G *enkephalos*, brain] Congenitally deficient development of the cerebral cortex and gray matter so that the lateral ventricles communicate with the brain surface and are lined by continuation of the piarachnoid. —**porencephalous, porencephal'ic,** *adj*

po ren ceph" li'tis [*poros*; *enkephalos*; G. *-itis*, inflammation]. Encephalitis with tendency to form cavities.

po ren ceph' lus [*poros*; *enkephalos*]. An individual exhibiting porencephalia.

Porges, Otto (1879–) Austrian physician who, with K. Spiro, discovered gamma globulin (1903). H first described hypoglycemia in Addison's disease.

Porges–Pollitzer reaction. See under *reaction*

po ri (po rye) Plural f porus.

po"ri ma'ni a [G *poreia*, journey; *mania*, madness]. Uncontrollable impulse to wander away from home fugue.

po ri-on (pl. *poria*) [G *poros*, passage] The point on the upper margin of the porus acusticus externus. The two poria and the left orbitale define the Frankfort horizontal plane.

por nog'ra phy [G *porné*, prostitute *graphein*, to write]. 1 A treatise on prostitution. 2. Obscene writing, painting, etc.

por" -ceph -sis [G *poros*, passage; *kephalé*, head; NL. *-iasis*, condition]. Infestation of the lungs, liver trachea, and nasal cavities of man with any of the varieties of *Porocephalus.*

Por"o-ceph'a-lus [*poros*; *kephalé*]. A genus of wormlike arthropods parasitic in man.

por"o-ker to sis. A genodermatosis characterized by collar of elevated hyperkeratosis about an irregular patch of depressed atrophic skin. microscopically horn plugs or cornoid lamella in the dermis are diagnostic, but are not necessarily located in the openings of sweat glands as the name *porokeratosis* implies. Syn., *hyperkeratosis eccentrica.*

po·ro'ma [G., hardened part]. A callosity.

po"ro·plas'tic [G. *poros*, passage; *plassein*, to form]. Porous and plastic, as poroplastic felt, a porous, readily molded felt, used in the preparation of splints and jackets.

po·ro'sis [*poros*; G. *-ōsis*, condition]. Rarefaction; increased roentgen translucency; formation of vacuoles or pores, cavity formation.

po·ros'i·ty [*porous*]. The condition or quality of being porous.

po'rous [*pore*]. Having pores.

por'phin. A heterocyclic ring consisting of four pyrrole rings linked by methine (—CH=) bridges: the basic structure of chlorophyll, hemoglobin, the cytochromes, and certain other related substances.

por"pho·bi'lin. A product derived from hemoglobin which may be excreted in urine.

por"pho·bi·lin'o·gen (por"fo-buy-lin'o-jen). One of the derivatives of hemoglobin which makes the urine Burgundy-red color.

por·phy'ri·a [G. *porphyra*, purple dye]. An inborn error of metabolism characterized by the presence of pathologic quantities of porphyrins in blood and other tissues, in feces and urine, and other clinical symptoms, including dark discoloration of urine.

acute intermittent p. The form appearing in young adults, usually not marked by cutaneous lesions but by such symptoms as abdominal colic, paresis, paralysis, and psychic disturbances.

congenital p. The form appearing in early childhood, characterized by vesicular and ulcerated dermatitis on skin directly exposed to the sun. These lesions may scar the skin. Teeth may be red at the gingival margin. Also called *erythropoietic p.*, *photosensitive p.*

p. cutanea tarda. The form appearing in late adulthood, characterized by photosensitivity, pigmentation of the skin, and hepatic dysfunction.

por'phy·rin. A heterocyclic ring derived from porphin by replacing the eight hydrogen atoms attached to the carbon atoms of the pyrrole rings of porphin by various organic groups. In the center of the ring a metal, e.g., iron (in heme) or magnesium (in chlorophyll) may or may not be present.

por"phy·ri·nu'ri·a (por"fi-ri-new'ree-uh, por-fih-ri-) [*porphyrin*; G. *ouron*, urine]. The excretion of an abnormal amount of a porphyrin, commonly believed to be uroporphyrin I, in the urine. Also called *porphyruria*.

por"phy·ri·za'tion [*porphyry*]. Pulverization; reduction to a fine powder, usually performed on a tablet of porphyry.

por"phy·rop'sin. A purple carotenoid protein that occurs in the rods of the retinas of certain fresh-water fish. It participates in a visual cycle identical in arrangement with that of rhodopsin or visual purple.

por"phy·rox'ine. $C_{19}H_{23}NO_4$. A carbonyl-dihydrorodeine: an alkaloid found in opium. Syn., *opin*.

por"phyr·u'ri·a. Porphyrinuria.

por'poise heart. A preponderance of the right ventricle seen in underwater swimmers, not evidence of disease.

por·ri'go [L., dandruff]. An old term applied to several diseases of the scalp. —**porrig'inous,** *adj.*

p. decalvans. Alopecia areata.

p. favosa. Favus.

Porro, Edoardo [*Italian obstetrician*, 1842–1902]. Remembered for his early employment of Cesarean section. He combined the operation with hysterectomy (1876): called *Porro's operation*.

por'ta (pl. *portae*) [L., gate]. The hilus of an organ through which the vessels enter.

p. hepatis. The transverse fissure of the liver through which the portal vein enters the organ.

p. vestibuli. A narrow orifice between the sinus venosus and the atrium in the embryonic heart.

por·ta·ca'val, por·to·ca'val [*porta*; L. *cavus*, hollow]. Pertaining to the portal vein and the inferior vena cava.

por'tal [*porta*]. The porta or hilus of an organ. —**por'tal,** *adj.*

intestinal p. The opening of the foregut or of the hindgut into the midgut or yolk sac.

porte"pol'ish·er [F.]. In *dentistry*, an instrument used for holding a polishing point, stick or brush.

Porter, William Henry [*Irish physician*, 1790–1861]. Described the tracheal tug as a finding in aortic aneurysm; called *Porter's sign*.

Portes, Louis [*French obstetrician*, contemporary]. Described Cesarean section followed by temporary exteriorization of the uterus and secondary reintegration (1924): called *Portes operation*.

por'ti·o (por'shee-o, por'tee-o) (pl. *portiones*) [L.]. 1. Portion. 2. Portio vaginalis uteri, the vaginal portion of the uterus.

p. pylorica ventriculi. The pyloric extremity of the stomach.

port'-wine mark. See port-wine nevus.

po'rus (pl. *pori*) [G. *poros*, passage]. A pore, foramen.

p. acusticus externus. The opening of the external auditory canal.

p. acusticus internus. The opening of the internal auditory canal into the cranial cavity.

p. crotaphitico-buccinatorius. A foramen formed in about 10% of skulls by a bar of bone developing between the base of the lateral pterygoid lamina and the under surface of the great wing of the sphenoid bone. Syn., *pterygoalar foramen*.

p. opticus. The opening in the center of the lamina cribrosa transmitting the central artery of the retina.

p. sudoriferus. A sweat pore.

Posadas, A. [*Argentinian physician*, contemporary]. Remembered for his descriptions of coccidioidomycosis, also called *valley fever*, *Posadas' disease*.

po·si·o·ma'ni·a (po-see-o-may'nee-uh, pos-ee-o-) [G. *posis*, drinking; *mania*, madness]. Dipsomania.

po·si'tion [L. *positio*, a putting]. Place, location, attitude, posture. Abbreviated, P.

anatomic p. Attitude of a person standing erect with arms at the sides and palms forward.

apparent p. In *ophthalmology*, the position in space to which the mind projects a visual image.

bronchoscopic p. Posture of the patient in which he lies supine with head hyperextended to bring larynx and trachea in a straight line so as to permit introduction of the bronchoscope.

dorsal p. Attitude of a person lying on his back.

dorsosacral p. The posture of a patient lying on the back with the legs flexed on the thighs and the thighs flexed on the abdomen and abducted.

Edebohls' p. See Simon's p.

flipper p. One representing the figure of a seal, the body stiff, the arms extended and rotated inward with the wrists flexed, the legs rigid, with pronated feet. The attitude is indicative of hemorrhage into the midbrain or brain stem following fracture of the bones of the middle or posterior cranial fossa.

Fowler's p. The posture which the recumbent patient assumes when the head of the bed is raised 18 to 20 inches, or a similar position achieved by the use of a back rest.

high pelvic p. See Trendelenburg p.

Jones's p. Hyperflexion of the forearm on the arm, in the treatment of elbow fractures involving the condyles.

knee-chest p. A position assumed by a patient resting on knees and chest as an exercise after childbirth, or for the purpose of examination and treatment.

knee-elbow p. Posture in which the patient lies upon the knees and elbows, the head resting upon the hands.

lateroabdominal p. See *Sims' p.*

lithotomy p. See *dorsosacral p.*

mentoanterior p. A presentation *of the fetus in utero* in which the head is sharply extended so that the occiput of the fetus is in contact with its back, and the face looks downward and anteriorly.

mentoposterior p. A face presentation of the *fetus in* which the head is sharply extended so that the occiput is in contact with the back, and the face looks downward and posteriorly.

physiologic rest p. *In dentistry* the relaxed position of th mandible.

p. effect. *In genetics*, the view that the expression of gene depends in part upon its relations to adjacent genes—i.e., upon its position in the chromosome.

p. of function. An essential primary position of the hand, of importance during prolonged immobilization following injury to the hand or digits. The hand is hyperextended at the wrist at an angle of 45 degrees, the fingers being flexed at 45 degrees at their metacarpophalangeal and interphalangeal joints. The thumb is rotated and adducted so that its flexor surface is opposite the flexor surface of the index finger.

p. of the fetus. The relation of the presenting part of the fetus to the cardinal points. For the vertex the face, and the breech there are four positions each right anterior right posterior left anterior and left posterior. For each of the shoulders there is an anterior and posterior position. In order to shorten and memorize these positions, the initials of the chief words are made use of as follows for vertex presentations the word *occiput* is abbreviated O and preceded by the letter R. or L. for right or left and followed by A. or P according to whether the presenting part is anterior or posterior. W thus have the initials L.O.A., left occipito-anterior to indicate that the presenting occiput is upon the anterior left side. In the same way are derived the terms L.O.P. R.O.A., R.O.P. For facial presentations we have in the same way *L.F.A.*, left frontoanterior L.F.P. R.F.A., R.F.P. For breech or sacral presentations, L.S.A., L.S.P. *R.S.A.*, R.S.P. and for shoulder or dorsal presentations, L.D.A., L.D.P. R.D.A., R.D.P.

protrusive p. *In dentistry*, that reached when the mandible is thrust forward bringing the upper and lower incisors into contact.

Simon's p. The dorsal posture with the legs and thighs flexed, the hips elevated, and the thighs bducted.

Sims' p. Posture of patient lying on the left side with the right knee *and* thigh drawn up, the left arm placed along the back, and the chest inclined forward. Also called *semiprone p.*

Trendelenburg's p. The posture of a patient lying on table which is tilted upward 45 degrees, with the legs and feet hanging over the upper end of it.

Walcher' p. Posture of patient lying on the back with the thighs and legs hanging over the edge of the table. Used during difficult delivery to lengthen the true conjugate.

pos'i tive [L. *positivus*, positive] *In mathematics* and *physiology*, denoting one of two quantities or conditions assumed as primary or fundamental opposed to one assumed as negative; denoting a quantity greater than zero. Symbol, +

pos'i tron (poz i-tron) [*positive* G. *elektron*, amber] An elementary particle having the mass of an electron but carrying unit positive charge. It is evanescent, dissipating itself as radiation as soon as it encounters an electron, which is annihilated with it.

pos"i tro ni um. A combination of positron and an electro (negatron) The mean lif of the combination is about 10^{-7} second, the particle being annihilated by conversion to one or more photons

po-sol o-gy [G *posos*, how much *logos*, word] That branch of medical science dealing with the dosage of medicines.

post [L.]. A prefix denoting *after* behind, or *subsequent*.

post'a fene. The dihydrochloride of *p*-chlorobenzylhydryl-4-*m*-methylbenzylpiperazine, compound effective in preventing motion sickness. See *bonamine*, *meclizine hydrochloride*.

post a nal. Situated behind the anus.

post ...-es thet'ic. Occurring after anesthesia.

post" ...p o-plec tic [*post*, G ... *plektos*, stricken with paralysis]. Coming on, or occurring, after stroke of ...poplexy as postapoplectic coma, the coma that often succeeds an apoplectic stroke.

post au'di to"ry [L. *post*, behind; *audire*, to hear] Situated behind the ...uditory nerve, or ear

post ax'i l [*post*, L. *axis*, axis]. Situated behind th axis; in the arm, behind the ulnar aspect; in the leg, behind the fibular aspect.

post bra chi al (pohst bray'kee ul, -brack ee ul) [*post*, L. *brachium*, arm]. Situated posterior to the arm.

post-cap'il-lar"y (pohst-cap'i lerr ee) [*post*; L. *capillaris*, from *capillus*, hair]. The terminal part of capillary network which opens into a venule. Syn., *venous capillary*.

post car'di nal [*post*; L. *cardinalis*, principal]. Pertaining to the pair of cardinal veins draining the posterior part of the embryo.

post ca'va [*post*, L. *cavus*, hollow]. The inferior or ascending vena cava. —**postcaval**, *adj.*

post-cen'tral [*post*; G *kentron*, center]. 1. Situated behind center 2. Situated behind the fissure of Rolando, or central fissure of the brain, as the postcentral gyrus.

post ci'bal [L. *post*, after; *cibus*, food]. Occurring after meals. *Obs.*

post"cla vic'u-lar [L. *post*, behind; *clavicula*, small key]. Situated behind the clavicle.

post-co'i tal [L. *post*, after; *coitus*, coition] After sexual intercourse.

post"con nu'bi-al [*post*; L. *connubium*, marriage]. Coming on, or occurring, after marriage.

post"con vul'sive [*post* L. *convulsio*, convulsion]. Coming on after convulsion.

post-car'di al [L. *post*, behind *cor* heart]. Situated behind the heart.

post"di crot'ic (-dye-krot ick) [L. *post* after; G *dikrotos*, double beating]. Coming after the dicrotic wave of the pulse, as postdicrotic wave, wave often following the dicrotic wave in the sphygmographic tracing.

post"di ges tive (-di jes'tiv -dye jes'tiv) [*post*; L. *digestio*, digestion]. Occurring after digestion.

post"diph the-rit'ic [*post*; G *diphthera*, leather -*itis*, inflammation] Occurring after an attack of diphtheria, as postdiphtheritic paralysis.

post em bry on'ic [*post*, G *embryon*, embryo] Occurring after the mbryonic stage] fetal.

post" ...n-ceph"a lit'ic [*post*; G. *enkephalos*, brain; -*itis*]. Occurring after and presumably as result of ...ncephalitis.

post"ep-i lep'tic [*post*; G *epileptikos*, epileptic]. Occurring after an epileptic attack.

pos·te′ri·ad [L. *posterior*, comp. from *posterus*, coming after; *ad*, to or toward]. Toward the posterior part of the body.

pos·te′ri·or [L.]. Situated behind or to the back of a part.

pos′ter·o- [L. *posterus*, coming after]. A combining form signifying *posterior*.

pos″ter·o·an·te′ri·or [*posterus*; L. *anterior*, foremost]. From the back to the front of the body, as in describing the direction of x-rays traversing the patient. Also see *dorsoventral*.

pos″ter·o·ex·ter′nal [*posterus*; L. *externus*, external]. Occupying the outer side of a back part, as the posteroexternal column of the spinal cord. —**posteroexternad**, *adv.*

pos″ter·o·in·ter′nal [*posterus*; L. *internus*, internal]. Occupying the inner side of a back part, as the posterointernal column of the spinal cord. —**posterointernad**, *adv.*

pos″ter·o·lat′er·al [*posterus*; L. *lateralis*, lateral]. Situated behind and at the side of a part. —**posterolaterad**, *adv.*

pos″ter·o·me′di·al [*posterus*; L. *medius*, middle]. Situated posteriorly and toward the midline. —**posteromediad**, *adv.*

pos″ter·o·me′di·an [*posterus*; *medius*]. Situated posteriorly and in the median.

pos″ter·o·su·pe′ri·or [*posterus*; L. *superior*, higher]. Situated behind and above a part.

post″e·rup′tive [L. *post*, after; *eruptio*, a bursting forth]. Following eruption.

post″e·so·phag′e·al (-ee-so-fadj′ee-al, -fay′jee-al) [L. *post*, behind; G. *oisophagos*, gullet]. Situated behind the esophagus.

post·fe′brile (-fee′bril, -feb′ril, -rile) [L. *post*, after; *febris*, fever]. Occurring after a fever.

post·gan·gli·on′ic (-gang-glee-on′ick, -gang-lee-) [L. *post*, behind; G. *ganglion*, encysted tumor on tendon]. Situated behind, or after, a ganglion.

post″gas·trec′to·my. After removal of part or all of the stomach, as postgastrectomy treatment.

post·gle′noid [*post*; G. *glēnoeidēs*, like a socket]. Situated behind the glenoid fossa of the temporal bone, as the postglenoid tubercle.

post″hem·i·ple′gic (-hem-i-pledj′ick, -plee′jick) [L. *post*, after; G. *hēmiplēgia*, half-stroke]. Occurring after or following an attack of hemiplegia.

post″hem·or·rhag′ic (-hem-o-radj′ick) [*post*; G. *haimorrhagia*, hemorrhage]. Occurring after a hemorrhage.

pos·thet′o·my [G. *posthē*, prepuce; *tomē*, a cutting]. Circumcision.

pos·thi′tis [*posthē*; G. -*itis*, inflammation]. Inflammation of the prepuce.

pos′tho·lith [*posthē*; G. *lithos*, stone]. A preputial calculus. *Obs.*

post′hu·mous (pos′tew-mus) [L. *postumus*, last]. 1. Occurring after death. 2. Born after the death of the father, or by Cesarean section after the death of the mother. 3. Published after the death of the writer.

post″hyp·not′ic [L. *post*, after; *hypnōsis*, inclined to sleep]. Succeeding the hypnotic state; acting after the hypnotic state has passed off, as posthypnotic suggestion.

post·ic·ter′ic [*post*; G. *ikteros*, jaundice]. Of, relating to, or designating the period or condition following jaundice.

pos·ti′cus [L.]. Old term for posterior.

post″in·flu·en′zal. Occurring after influenza.

post·ma·lar′i·al (pohst-ma-lair′ee-ul) [*post*; It. *malaria*, from *mal′ aria*, bad air]. Occurring as sequel of malaria.

post mortem. Latin, after death.

post″mor′tem, post″-mor′tem. Occurring after death.

post″mor′tem, post″-mor′tem. An examination of the body after death; an autopsy. —**post mortal**, *adj.*

post·na′ris [L. *post*, behind; *naris*, nostril]. The posterior naris; the choana.

post·na′sal [*post*; L. *nasus*, nose]. Situated behind the nose, or in the nasopharynx.

post·na′tal [L. *post*, after; *natalis*, natal]. Subsequent to birth, as a postnatal disease.

post·ne·crot′ic [*post*; G. *nekrōsis*, causing mortification]. 1. Occurring after death. 2. Occurring after the death of a tissue or a part.

post″ne·crot′ic scar′ring. See postnecrotic cirrhosis.

post″neu·rit′ic [*post*; G. *neuron*, nerve; -*itis*, inflammation]. Occurring after neuritis.

post·nod′u·lar [L. *post*, behind; *nodulus*, little knot]. Situated behind the nodulus of the cerebellum.

post·oc′u·lar [*post*; L. *oculus*, eye]. Behind the eye.

post·op·er·a″tive [L. *post*, after; *operari*, to operate]. Occurring after an operation, as (usually hernia) following closely upon an operation.

post·o′ral [L. *post*, behind; *os*, mouth]. Situated behind the mouth; posterior to the first visceral arch.

post·pal′a·tine (-pal′uh-tyne, -tin) [*post*; L. *palatum*, palate]. Behind the uvula.

post″pa·lu′dal (-pa-lew′dul, -pal′yoo-dul) [L. *post*, after; *palus*, swamp]. Postmalarial. *Obs.*

post″par·a·lyt′ic [*post*; G. *paralysis*, paralysis]. Following an attack of paralysis.

post·par′tum. Following childbirth, as post-partum hemorrhage.

post″pha·ryn′ge·al (-fa-rin′jul, -jee-ul, -far″in-jee′ul) [L. *post*, behind; G. *pharynx*, pharynx]. Situated behind the pharynx; old term for retropharyngeal.

post·pran′di·al [L. *post*, after; *prandium*, meal]. After a meal.

post·pu·bes′cent [*post*; L. *pubescere*, to reach the age of puberty]. Occurring subsequent to puberty.

post″py·ret′ic [*post*; G. *pyrexis*, feverishness]. Occurring subsequent to pyrexia.

post″py·ram′i·dal [L. *post*, behind; G. *pyramis*, pyramid]. Situated behind the pyramidal tract.

post·ro′ta·to·ry [L. *post*, after; *rotare*, to revolve]. After rotation, as postrotatory ocular nystagmus.

post″scar·la·ti′nal (pohst-skahr-luh-tee′nul, -ty′nul) [*post*; OF. *escarlate*]. Occurring after scarlet fever.

post·ste·not′ic. Referring to area distal to (beyond) the stenosis of a valve or aorta.

post″syph·i·lit′ic [*post*; NL. *syphilis*, syphilis]. Following syphilis.

post″trau·mat′ic [*post*; G. *trauma*, wound]. Pertaining to any process, such as inflammation, following traumatic injury to a part.

post″trau·mat′ic per″son·al′i·ty dis·or′der. A psychosis resulting from direct injury to the head or brain. Symptoms include headache, emotional instability, fatigability, sometimes convulsions.

post·ty′phoid [*post*; G. *typhōdēs*, delirious]. Following typhoid.

pos′tu·late [L. *postulare*, to demand]. 1. A proposition assumed without proof. 2. A condition which must be fulfilled, as Koch's postulate.

Koch's p. See law of specificity of bacteria.

pos′tur·al [L. *positura*, from *ponere*, to place]. Pertaining to posture or position; performed by means of a special posture, as postural treatment.

pos′ture [*positura*]. Position or bearing, especially of the body.

Sechhaffer p. One in which the patient reclines on his back with shoulders elevated, legs flexed on thighs, and thighs at right angles to abdomen;

the posture assumed when the upper and lower planes of the Gatch surgical bed are levated

post va cl nal (pohst-vack si-nul) [L. *post*, after; *vaccinus*, *l* cows]. Following vaccination.

po'ta ble [L. *potare*, to dri k]. Drinkable fit to drink.

Potain, Pierre Carl Edouard [*French physician*, 1825–1901]. Inventor of an air sphygmomanometer (1889) Described syndrome of dyspepsia with cardiac dilatation and accentuation of the second pulmoni sounds in gastrectasis called *Potain syndrome*. Described pleuropulmonary congestion, also called *Potai type of congestion*.

Pot a mon [G *potamos*, river]. A genus of freshwater crabs, species of which have been incriminated in the transmission of the fluke, *Paragonimus westermani*.

pot"a mo pho'bi (*potamos*; G *phobos*, fear]. Morbid fear of sheets of water

pot ash Potassium carbonat

caustic p. See *potassium* hydroxide.

p. lye. See *potassium* hydroxide

sulfurated p. (*potassa sulfurata*) A mixture composed chiefly of potassium polysulfides and potassium thiosulfat occurs in irregular pieces, liver-brown, when freshly made, changing t greenish yellow and has an odor of hydrogen sulfide 1 Gm. is sol ble in bout 2 cc. of water; alcohol dissolves only the sulfides. Used as parasiticide and t stimulat and soften the skin in chronic cutaneous diseases. It may be used either as lotion or an ointment. Also called *liver of sulfur*

po tas sa. Potassium carbonat

pot as se mi (pot-as see mee-ah) 1. Potassium in the blood. 2 Hyperpotassemia.

po tas si um [D *potasch*] (*kalium*) K = 39 100 Light, malleable, ductile lumps, rods, or spheres. Reacts violently with water A small amount of potassium in the blood is essential for proper function of the various organs of the body In sufficient quantity the potassium ion is universal depressant affecting especially the central nervous system and circulation. Salts of potassium are extensively used in medicine. See Tabl of Normal Values of Blood Constituents in the Appendix.

dibasi p. phosphate. K_2HPO Occurs as white granules very sol ble in water Also called *dipotassium phosphate*, *dipotassium hydrogen phosphate*, *p phosphate*.

effervescent p. citrate (*potassii citras effervescens*) Contains bout 20% potassium citrate, and is used similarly Dose, 4–8 Gm (1 2 dr)

monobasic p. phosphate KH_2PO Occurs as colorless crystals or white granular powder 1 Gm. dissolves in 4 5 cc. of water Also called *p. biphosphate*, *p. acid phosphate*, *p dihydrogen phosphate*, *monopotassium phosphate*

p. acetate (*potassii acetas*) CH_3COOK. Occurs as colorless crystals or white, crystalline powder; 1 Gm. dissolves in 0.5 cc. of water Used as saline diuretic, also as an expectorant and in rheumatism Dose, 1–4 Gm. (15–60 gr)

p. argenticyanide. Silver potassium cyanide.

p. arsenite solution (*liquor potassii arsenitis*) Represents 1% of arsenic trioxide Used in malarial affections and chorea and for the general action of the arsenical preparations. Dose, 0.2–0 3 cc. (3–5 min) Also called *Fowler solution*.

p. bicarbonate (*potassii bicarbonas*) KHCO Colorless crystals or whit granular powder 1 Gm. dissolves in 2.8 cc of water Rarely used, but fferent as gastric antacid Dose 0 65–2.0 Gm. (10–30 gr)

p. bichromate. See p. dichromate.

p. bifl oride. KHF potassium acid fluoride, occurring as colorless crystals, soluble in water used in etching glass and in metallurgy

p. bi oxalate. KHC_2O H_2O. White crystals, sol ble in water Used to remove ink stains, to scour metals, to clean wood, and as mordant in dyeing. Syn., *sal acetosella*.

p. bismuth tartrate. See *bismuth* and *p* tartrate.

p. bitartrate (*potassii bitartras*) $KHC_4H_4O_6$ Occurs as slightly opaque crystals or white, crystalline powder 1 Gm. dissolves in 16. cc. of water It is diuretic and perient. When given in full dose it has mild laxative action but is used mostly in conjunction with other laxatives. Dose, diuretic, 1–2 Gm. (15–45 gr) cathartic 8–25 Gm. (2–6 dr) Also called *cream of tartar* and *p. tartrate*.

p. bromide (*potassii bromidum*) KBr White cubical crystals or granular powder; 1 Gm. dissolves in 1.5 cc. of water Used as nerve sedative in epilepsy and to quiet nervous excitability in neurasthenia and hysteria Dose, 0 6–2 0 Gm. (10–30 gr)

p. car"bo cryl ate. The generic name for the potassium form of cross-linked polyacrylic polycarboxylic cation exchange resins. Such resins, used in combination with carbacrylic resin, is useful clinically for removal of sodium from intestinal fluid with minimum disturbance of potassium ion equilibrium. See also *carbacrylamine resins*.

p. carbonate (*potassii carbonas*) $K_2CO_3 \cdot 1\frac{1}{2}H_2O$ Whit granular powder; 1 Gm. dissolves in 1 cc. of water insoluble in alcohol. Rarely used internally; used chiefly in pharmaceutical and chemical manipulations.

p. chlorate (*potassii chloras*) $KClO_3$. Colorless, odorless, lustrous crystals or white, granular powder 1 Gm dissolves in 16.5 cc. of water insoluble in alcohol. Potassium chlorate may explode on heating or when in contact with organic substances. Internal use has been discontinued. Used chiefly in mouth washes and gargles.

p. chloride (*potassii chloridum*) KCl. Colorless crystals or white, granular powder 1 Gm. dissolves in 2.8 cc. of water insoluble in alcohol. used chiefly in correcting potassium deficiency states.

p. chloroplatinate. K_2PtCl_6 orange-yellow crystals or yellow powder slightly soluble in cold water insoluble in alcohol precipitation from for quantitative estimation of potassium also called *platinic potassium chloride*.

p. citrate (*potassii citras*) $K_3C_6H_5O_7 \cdot H_2O$ Transparent crystals or white, granular powder 1 Gm. dissolves in 1 cc. of water Used as systemic alkali, saline diuretic, and as an expectorant. Dose, 1.0–3.0 Gm. (15–45 gr.).

p. citrate solution (*liquor potassii citratis*. Contains 8 Gm. of potassium citrate per 100 cc Dose, 15 cc. (4 fluidrachms)

p. cyanide. KCN White, amorphous pieces or white, granular powder; 1 Gm. dissolves in 2 cc of water A violent poison. N longer used internally

p. dichromate $K_2Cr_2O_7$. Orange-red crystals, granules or powder; 1 Gm. dissolves 8 3 cc. of water Has many commercial and technical uses.

p. ferricya ide. $K_3Fe(CN)$ ruby-red crystals, slowly but freely soluble in water used industrially and as reagent. Syn., *red prussiate of potash*.

p. ferrocyanide $K_4Fe(CN)_6 \cdot 3H_2O$ yellow slightly efflorescent crystals, freely soluble in water used industrially and as reagent. Syn *yellow prussiate of potash*.

p. guaiacolsulfonate (*potassii guaiacolsulfonas*) $C_6H_3OH \cdot OCH_3 \cdot SO_3K$. White crystals or crystalline powder; 1 Gm. dissolves in 7.5 cc. of water. Used as an expectorant. Dose, 0.3–1.2 Gm. (5–20 gr.)

p. guaiacolsulfonate syrup (*syrupus potassii guaiacolsulfonatis*). Contains 7.5 Gm. of potassium guaiacolsulfonate per 100 cc. Dose, 4–8 cc. (1–2 fluidrachms)

p. hydroxide (*potassii hydroxidum*). KOH; occurs as white or nearly white lumps, small pellets or rods; 1 Gm. dissolves in 1 cc. of water; very caustic to tissues. Used externally as an escharotic. Syn., *caustic potash.*

p. hydroxide solution (*liquor potassii hydroxidi*). Contains 5% of potassium hydroxide. Used for pharmaceutical purposes.

p. hypophosphite (*potassii hypophosphis*) KH_2PO_2, white opaque plates or crystalline powder; 1 Gm. dissolves in 0.6 cc. of water. Formerly used as [illegible] nerve stimulant, but of doubtful value.

p. iodate. KIO_3 [illegible] white crystals or crystalline powder soluble in water; used as an oxidizing agent in analytical chemistry.

p. iodide (*potassii iodidum*). KI; transparent crystals or [illegible] white, granular powder; 1 Gm. dissolves in 0.7 cc. of water; variously used for the effect of iodide ion.

p. iodide ointment (*unguentum potassii iodidi*). Contains 10% of potassium iodide.

p. iodide solution (*liquor potassii iodidi*). Contains 100 Gm. of potassium iodide per 100 cc. Dose, *0.3–1.0 cc. (5–15 min.)*

p. mercuric iodide. K_2HgI_4; occurs as yellow crystals, deliquescent in air; soluble in alcohol and in potassium iodide solution and yields [illegible] clear solution with one part of water. Used externally for ski[illegible] disinfection, irrigations and disinfection of instruments and of excreta and discharges.

p. nitrate (*potassii nitras*). KNO_3; occurs as colorless prisms or [illegible] white, crystalline powder; 1 Gm. dissolves in 3 cc. of water. N[illegible] longer used internally. Used in conjunction with stramonium leaves in asthmatic powders. Syn., *saltpeter*

p. nitrite. KNO_2. A white or slightly yellow salt, sol[illegible]ble in water. Has been used for the same purposes, and in the same dose, as sodium nitrite.

p. percarbonate. $K_2C_2O_6 \cdot H_2O$ [illegible] white granular mass, sol[illegible]ble in water with liberation of oxygen, used for detecting tubercle bacilli stained with fuchsin, in photography to decompose traces of sodium thiosulfate, and in chemical analysis. See *oxidizer.*

p. permanganate (*potassii permanganas*). $KMnO_4$; occurs as dark purple crystals; 1 Gm. dissolves in 15 cc. of water. Used as [illegible] bactericide, oxidant, and astringent. For local use the strength of solution varies from 1 part in 4000 as [illegible] wash for mucous membranes, up to 3 or 4% in skin diseases.

p. quadroxalate. Potassium tetroxalate.

p. sodium tartrate (*potassii et sodii tartras*). Occurs as colorless crystals or white crystalline powder. 1 Gm. dissolves in 1 cc. of water. Used as saline cathartic. Dose, 4–15 Gm. (1–4 dr.) Syn., *Rochelle salt*

p. sulfate (*potassii sulfas*). K_2SO_4. Occurs as white granules or powder. 1 Gm. dissolves in 10 cc. of water. Used as [illegible] mild purgative. Dose, 1–8 Gm. (15 gr.–2 dr.)

p. tartrate. $(K_2C_4H_4O_6)_2 \cdot H_2O$. White crystals, very soluble in [illegible]ter. Used as [illegible] diuretic and laxative and as [illegible] refrigerant in fevers. Dose, 4–15 Gm. (1–4 drachms). S[illegible] n., *sal vegetabile*

p. tetroxalate. $KHC_2O_4 \cdot H_2C_2O_4 \cdot 2H_2O$; colorless or white crystals, sparingly soluble in water; used in analytical chemistry, in metal polishes, and for removing rust and ink stains. Improperly called *essential salt of lemons, potassium quadroxalate.*

p. thiocyanate (*potassii thiocyanas*). KSCN. Occurs as colorless, transparent crystals; 1 Gm. dissolves in 0.5 cc. of water. Used in arterial hypertension. Dose, 0.13–0.3 Gm. (2–5 gr.). Also called *potassium sulfocyanate, potassium rhodanate.*

tribasic p. phosphate. K_3PO_4. Occurs as white granular powder; very soluble in water. Also called *tripotassium phosphate.*

po·ta'to nose. See *rhinophyma.*

po'ten·cy [L. *potentia*, power]. 1. Power of the male to perform the sexual act. 2. *In homeopathy,* the degree of dilution of [illegible] drug.

po·ten'tial [*potentia*]. Capable of acting or doing work, as potential energy.

po·ten'tial. *1. In electricity,* [illegible] state of tension or of difference in energy capable of doing work. If two bodies of different potential are brought into contact, [illegible] current is established between them that is capable of producing electric effects.

action p. Changes in electric potential [illegible]t the surface of [illegible] nerve or muscle occurring at the moment of their excitation; consisting of [illegible] very brief period of negativity (spike potential) followed by secondary oscillations in potential (afterpotentials).

autochthonous potentials. Continuous potentials arising spontaneously from neurons in the absence of stimulation.

bio-electric p. The difference of electric potential between the inside and the outside of [illegible] cell.

biological p. *2. In psychoanalysis,* any latent physical or psychological ability not currently [illegible]ailabl[illegible] to the individual but capable of development by him.

biotic p. Soil yield in terms of living growth useful to man.

critical p. The point at which the electrokinetic or zeta potential between the immobile and mobile ionic layers is lowered by addition of electrolytes so that the double layers of colloidal particles collapse, and the particles aggregate and precipitate.

demarcation, demarkation p. See *injury potential.*

disease p. The sum of adverse health factors present in [illegible] community which have [illegible] bearing upon the probable incidence of disease to be anticipated.

electrochemical p. The potential drop across all of the ionic layers from the surface of the particle to the solution. Also called *epsilon p.*

electrocortical p. Potential differences observed from leads applied to the surface of the cerebral cortex. Also called *cortical p.*

electrokinetic p. A potential at the interface between the semipermeable membrane and [illegible] solution on either side. See bio-electric p. Also called *zeta p.*

electrotonic p. (a) Potential led off by electrometers on either side of bipolar electrodes when [illegible] nerve is being stimulated by direct current. (b) Potential developed by cells as [illegible] result of metabolic activity and circulated through surrounding tissue.

evoked p. The electric response of any neuron to stimulation.

ground p. Electric potential of the earth, arbitrarily used as [illegible] standard reference point for all electric measurements.

injury p. See *injury potential.*

ionization p. The lowest potential that removes an electron from an atom.

membrane p. See *membrane potential.*

Nernst p. The total drop of potential (at [illegible] stand-

ard state) across the interface, dependent solely on th activity f the ions in the external medium.

oxidation-reduction p. The relative emf exerted by onreacting electrode in solution at 25° C. as measured against that exerted by normal hydrogen electrode.

$$E = E_0 + \frac{RT}{nF} \log_e \frac{[\text{oxidant}]}{[\text{red otant}]}$$

spike p. See action *p*

Stern p. The potential between the immobile ion layer and the particle surface it is equal to the electrochemical potential minus the electrokinetic potential.

streaming potentials. Potentials which result from the streaming of fluids, such as occurs in the flow of blood through the vessels.

po-ten"ti a'tion. 1 The effect of substance, when added to another of making th latter more potent as drug. 2. I *homeopathic medicine* the process of making drug more effective by physical manipulation, as by high degree of subdivision f solid by thorough and prolonged trituration.

po tion [L. *potio*, drink] A drink or draught

po t -cy to sis (po to sigh to sis) [L. *potare*, to drink *kytos*, cell -*osis*, condition]. Submicroscopi sipping or engulfing of fluid by the cytoplasm f cells, as opposed to *pinocytosis*, or microscopically visible imbibition of water by cells.

po"to-ma ni [*potare*, G *mania*, madness] Delirium tremens. *Obs.* Also called *mania à potu*.

Pott, Percivall [*English surgeon*, 1714–88]. One of the most successful f the English surgeons of his time, his name is associated with number of pathologic conditions. Described chimney sweep cancer of the scrotum, an occupational disease (1775) Author of treatise on rupture (1756) and one on hydrocele (1762) Best known for his description of the spinal curvature or kyphosis of the spine resulting from tuberculosis (1779) called *Pott' disease*. The eponym has persisted to this day although Pott did not recognize the tuberculous nature of the disease. Described fracture of the fibula occurring three inches bove the ankle, sometimes accompanied by splitting of the medial malleolus (1765) called *Pott' fracture*. Described senile gangrene, also known as *Pott' gangrene*. See also Pott puffy *tumor*

pouch [OF *pouche*] A sac or pocket.

abdominovesical p. One formed by the reflection of the peritoneum from the anterior abdominal wall onto th distended urinary bladder it contains th lateral and medial inguinal fossae.

branchial p. See pharyngeal *p*

coelomic p. One of series of vaginations from the wall of the archentero of lower vertebrates that form the mesodermal somites of the embryo.

craniobuccal p. See Rathke *p*.

guttural p. One of pair of mucous sacs which are ventral diverticula of the auditory tube in Equidae located between the base of the cranium and the tlas dorsally and the pharynx ventrally

hepatorenal p. That portion of th peritoneal cavity situated behind the right lobe of the liver and in front f the right kidney and right portion of transverse mesocolon also called *pouch of Morison*.

laryngeal p. A blind pouch of mucosa opening into the lateral part of the ventricle of the larynx.

Pavlov p. See Ivan Petrovich *Pavlov*.

pharyngeal p. One of series of five paired lateral sacculations of the embryonic pharynx corresponding to the ectodermal grooves between the pharyngeal arches.

p. of Morison. Hepatorenal *p*.

Prussak's p. See recess of tympanic cavity (b) See also Alexander *Prussak*.

Rathke s p. A dorsal diverticulum of the stomodeum that develops into the oral or epithelial parts of th hypophysis also called *craniobuccal p*

rectouterine p. That part of the peritoneal cavity between the rectum and the posterior surface of the uterus. Also called *p. of Douglas*

rectovesical p. That part of the peritoneal cavity between the urinary bladder and the rectum in the male. Also called *rectovesical excavation*.

vesicouterine p. That part of the peritoneal cavity between the anterior surface of the uterus and the urinary bladder also called *vesicouterine p*

visceral p. See pharyngeal *p*.

Zenker's p. Diverticulum of the hypopharynx

pou drage' (poo-drazh') [F powdering]. The therapeutic introdu tion of an irritating powder (talcum) on serous surface to stimulate the f rmation of adhesions for the obliteration of the pleural space, as in **pleural p.** or for the development of corollary circulation, as in **epicardial p.**

Poulet, Alfred [*French physician*, 1848–88]. Described rheumatoid osteoperiostitis, also called *Poulet' disease*.

poul'tice (pole tiss) [L. *puls*, porridge]. A soft, semiliquid mass made of some cohesive substance mixed with water and used for application to the skin for the purpose of supplying heat and moisture or acting as local stimulant

mustard p. One containing mixture of dry mustard and flour in water to form paste and spread on cloth.

Poulton Edward Palmer [*English physiologist*, 1883–1939] Remembered for his useful investigations of CO_2 particularly the partition of CO_2 between plasma and corpuscles in oxygenated and in reduced blood (with J *Joffe*, 1920) Devised an oxygen tent, also called *Poulton tent*.

poul'try chiinch. *Haematosiphon inodora*.

pound [L. *pondo* pound]. A unit of measure of weight. The troy pound contains 12 ounces, or 5760 grains, or 372.96 grams. Symbol, lb. The avoirdupois pound contains 16 ounces, or 7000 grains, or 453.6 grams. Abbreviated, lb See T ble of Weights and Measures in the Appendix

foot-pound. The force necessary to raise one pound through the height of one foot.

Poupart François [*French surgeon*, 1616–1708] Celebrated surgeon to the court of Louis XIV Described the ligament extending from the anterior superior pine of the ilium to the spine of the pubis and pectineal line; called *inguinal ligament*, *Poupart' ligament*. Described vertical line drawn from the center f the clavicle to Poupart's ligament called *Poupart' line*.

Pourfoi See François Pourfoir du *Petit*.

pow'der [L. *pulvis*, dust] 1 A group of pharmaceutical preparations of definite formula, official in the United States Pharmacopeia or National Formulary and consisting of intimate mixtures of finely divided medicinal substances. 2 I *pharmacy* single dose of medicine placed in powder paper or may mean dusting powder douche powder or other bulk powder to be administered by the teaspoonful or used externally all being prepared extemporaneously

absorbable dusting p. A biologically absorbable powder prepared from cornstarch by introducing certain ether linkages, and containing also 2% of magnesium oxide used as surgeon's glove lubricant. Also called *starch-derivative dusting powder*

Dover's p. A powder prepared from ipecac 10% opium 10%, and lactose 80% used as diaphoretic.

dusting p. Any fine powder used to dust on the skin to absorb or diminish its secretions or allay irritation.

gray p. See mercury with chalk.

impalpable p. A powder so fine that its separate particles cannot be felt.

insect p. A powder employed to destroy or ward off insects, formerly consisting usually of the powdered flowers of species of *Chrysanthemum*, known commonly as pyrethrum. Newer preparations may contain DDT or gammexane as active ingredients.

Sippy p. 1. A mixture of precipitated calcium carbonate 23%, sodium bicarbonate 77%; known as Sippy powder No. 1; also called *sodium bicarbonate and calcium carbonate powder*. 2. A mixture of magnesium oxide 50%, sodium bicarbonate 50%; known as Sippy powder No. 2; also called *sodium bicarbonate and magnesium oxide powder*.

pow'dered stom'ach (*stomachus pulveratus*) Powdered stomach is the dried and powdered, defatted wall of the stomach of the hog, *Sus scrofa* var. *domesticus*; occurs as a granular substance with slight, not unpleasant, meaty odor and is practically insoluble in water. It contains factors which cause an increase in the number of red blood cells in the blood of persons suffering from pernicious anemia. The activity is readily destroyed when the preparation is suspended in hot liquid. It is used solely in the treatment of anemia, especially pernicious anemia. Dose, one U.S.P. unit daily administered in a half glassful of water, milk, or fruit juice. Also called *dried stomach*. See ventriculin.

Powell, Cecil F. (1903–) British physicist known for his research on the discharge of electricity in gases and on the development of the photographic method in nuclear physics; Nobel laureate in physics (1950) for studies on the structure of the atom.

pow'er [F. *pouvoir*, from L. *posse*, to be able]. 1. Ability to produce an effect. 2. In optics, the magnification given by a lens or prism.

p. breeder A nuclear reactor designed to produce both useful and powerful nuclear fuel.

p. reactor A nuclear reactor capable of producing useful mechanical power, as by generating heat of sufficient intensity to permit its reasonably efficient conversion into work.

refractive p. The measure of influence which a transparent body exercises on the velocity of light which passes through it.

Power test. See Cutler-Power-Wilder test.

pox [M.E. *pokkes*]. 1. Any vesicular or pustular disease. 2. Common term for syphilis. See *chickenpox*, *cowpox*, *horsepox*, *smallpox*, *whitepox*.

Amboyna p. The papules in yaws; old term.

fowl p. A disease of birds caused by a virus; characterized by wartlike nodules on the skin, particularly of the head.

kaffir p. Alastrim or mild variola.

milk p. A mild form of smallpox.

rickettsial p. Rickettsialpox.

sheep p. See *ovi*.

Spanish p. Early syphilis; old term, English usage.

swine p. A frequent disease of hogs characterized by pox lesions on the body and inner surfaces of the legs. It is a benign infection and usually occurs in young pigs.

Pozzi, Samuel Jean (French gynecologist, 1846–1918). Remembered for his description of backache and leukorrhea without enlargement of the uterus, found in some cases of endometritis; known as *Pozzi's syndrome*.

PP Pellagra preventive (factor).

P. p. *Punctum proximum*, near point.

P.P.D. Purified protein derivative; a form of tuberculin which is a dry powder, dry diluted with lactose, and is relatively constant in its activity.

P-P factor Goldberger's term for the pellagra preventive factor present in vitamin-B complex; identical with niacin (nicotinic acid).

PPLO Pleuropneumonialike organisms.

p.p.m. Parts per million.

ppt. Precipitate.

Pr Chemical symbol for praseodymium.

Pr Abbreviation for presbyopia.

P.r. *Punctum remotum*, far point.

prac'tice [G. *praktikos*, fit for action]. The routine application of the principles of medicine to the diagnosis and treatment of disease.

prac'tise. To perform the duties of a physician.

prae-. See *pre-*.

prae pu'ti-um (pree pew'shee-um) See *prepuce*.

prag"mat ag no'si a (prag"mat-ag-no'see-uh, -zee-uh) [G. *pragma*, thing; *agnosia*, lack of acquaintance]. Inability to recognize an object.

visual p. Object blindness.

prag"mat am ne'si a (-am-nee'zhuh, -zee-uh) [*pragma*; G. *amnēsia*, amnesia]. Loss of the ability to remember the appearance of an object.

visual p. A mental condition marked by a loss of ability to call up the visual image of an object.

Prague ma neu'ver See under *maneuver*.

pran'di-al (L. *prandium*, meal). Of or pertaining to a meal, especially dinner.

pranone. Trade-mark for anhydrohydroxyprogesterone or ethisterone.

prenturon. Trade-mark for the gonadotropic substance obtained from pregnancy urine.

pra"se-o-dym'i um (pray"zee-o-dim'ee-um, pray"see-o-, pras"ee-o-) [G. *prasios*, leek-green; *didymos*, twin]. Pr = 140.92. A rare earth metal. The principal valency is three, and its salts are generally green in color.

pra-tique (prah-teek', prat'ick. *See* Notes § 35) [F.]. The bill of health given to vessels by a health officer.

Prausnitz, Carl Willy See Carl Prausnitz *Giles*.

Pravaz, Charles Gabriel (French physician, 1791–1853). Inventor of a hypodermic syringe fitted with a long slender cannula and trocar (1853); called *Pravaz' syringe*. Invented modern galvanocautery (1853).

-prax'i [G. *praxis*, a doing]. A combining form meaning *action*, *doing*.

prax in o-scope [*praxis*; G. *skopein*, to examine]. A modified stroboscope adapted to laryngologic instruction.

prax"i-ol'o gy [*praxis*; G. *logos*, word]. The science of *conduct*.

pre- [L. *prae*, before]. A prefix signifying *before*.

pre-ag'o nal [*prae*; G. *agōn*, struggle]. Immediately preceding the death agony.

pre"al bu"mi nu'ri a [*prae*; L. *albus*, white; *ouron*, urine]. Occurring before the appearance of albuminuria.

pre-am"pul-lar-y Before an ampulla, as the sphincter of Boyden proximal to the ampulla of Vater.

pre a nal [*prae*; L. *anus*, anus]. Situated in front of the anus.

pre"an-es thet'ic [*prae*; G. *anaisthēsia*, lack of sensation]. Before anesthesia.

pre"an ti sep'tic [*prae*; G. *anti*, against; *sēpsis*, decay]. Pertaining to the time before the use of antisepsis in surgery.

pre"a-or'tic (pree"ay-or'tick) [*prae*; G. *aortē*, aorta]. Situated in front of the aorta.

pre a-sep'tic [*prae*; G. *a-*, not; *sēpsis*]. Pertaining to the period before the introduction of aseptic surgery.

pre"a tax'ic [*prae*; G. *ataxia*, confusion]. Occurring before ataxia.

pre au ric u la [*prae*; L. *auricula*, external ear]. Situated in front of the auricle

pre ax'i l [*prae*; L. *axis*, axis]. Situated in front of the axis of the body or of limb.

pre-can'cer-ous (pree-can sur-us) Pertaining to any pathological condition of tissue which is likely to develop into cancer

pre-cap'il lar"y (pree-cap'i lerr ee) [*prae*; L. *capillaris*, from *capillus*, hair]. An arteriole with weakly developed media preceding capillaries. Syn., *arterial capillary arteriocapillary, precapillary arteriole*

pre-car'di ac (pree-kahr dee-ack) [*prae*; G. *kardia*, heart]. Anterior to the heart.

pre car'di nal (pree-kahr di-nul) [*prae*; L. *cardinalis*, principal]. Pertaining to the pair of cardinal veins anterior to the common cardinal vein of the embryo draining the head and neck.

pre-car ti lage (pree-kahr ti lidj) [*prae*; L. *cartilago*, cartilage]. Compact, cellular embryonic connective tissue just before it differentiates into cartilage.

pre-ca va (pree-kay'vuh) [*prae*; L. *cavus*, hollow]. The superior or descending vena cava.

pre-cen tral (pree-sen trul) [*prae*; G. *kentron*, center]. Situated in front of the central fissure of the brain.

pre chor'dal (pree-kor'dul) [*prae*; G *chordē*, string]. Situated in front of the notochord.

pre-cip'i tant [L. *praecipitare*, to precipitate]. Any reagent causing precipitation.

pre-cip'i tate [*praecipitare*]. 1 An insoluble compound deposited in solution of substance on the addition of reagent which prod ces a chemical reaction or otherwise decreases solubility Abbreviated, ppt. 2. The product of the reaction between precipitinogen and precipitin.

red p Red mercuric oxide.

white p. Ammoniated mercury

yellow p. Yellow mercuric oxide.

pre-cip'i tate. T throw down in an insolubl form.

pre-cip'i tate. Headlong hasty as precipitate labor

pre-cip'i ta"ted chalk. See precipitated *calcium* carbonate.

pre-cip"i ta'tion [L. *praecipitatio*, from *praecipitare*]. The process of making substances insoluble by the addition of reagent, evaporation, freezing, or electrolysis.

co-precipitation. The simultaneous precipitation of more than one compound.

fractional p. The separation of substances by precipitating them in increasing order of solubility

pre-cip'i ta"tor [L., from *praecipitare*] A type of instrument used for determining the number of dust particles in the air In the **electric precipitator** high electri potential is created between two surfaces. When measured sample of air is passed through this field, the dust particles adhere to one of the surfaces. In the **thermal precipitator** heated wire is suspended in narrow slot between two cooled glass cover slips, and the dust particles from an air sample passed through the slot adhere to the cover slips. The collected particles are counted under microscope. Other instruments used for the same purpose are the konimeter impinger and jet dust counter Also see *dust count*.

pre-cip'i tin [*praecipitare*]. An antibody to sol ble antigen. A precipitate is formed when the sol ble antigen is layered over the antibody or mixed with it

pre-cip"i tin o-gen [*praecipitare*; G *gennaein*, from *gignesthai*, to be produced]. Any substance capable of causing the production of precipitin.

pre-cip'i tin-oid" [*praecipitare*; G. *eidos*, form] An inactive precipitin modified by heating to 60° C. The precipitinoid retains th capacity to combine with the precipitinogen, while ot causing it precipitation.

pre clin'i cal (pree-klin'i kul) [L. *prae*, before G *klinikos*, of a bed]. 1 Occurring prior to the period in which recognized symptoms or signs make diagnosis possible. 2. Referring to medical studies undertaken before the study of patients.

pre-co cious [L. *praecox*, ripe before its time]. Developing at an age earlier than usual.

pre-coc'i ty (pri kos'i-tee) [*praecox*]. Early development or maturity; pplied especially to great development of the mental faculties at an early age.

pre cog ni'tion. The foreknowledge, apart from rational forecasting or logical inference, of future events.

pre"col lag'e-nous (pree"ko-ladj'i-nus) [L. *prae*, before G *kolla*, glue *gennaein*, from *gignesthai*, to be produced]. Characterizing an incomplete stage in the formation of collagen.

pre-co ma di" bet'i cum (pree ko muh) [L.]. See *coma*, diabetic *acidosis*.

pre con scious (pree-kon shus) See *foreconscious*.

pre con vul'sant [L. *prae*, before *convulsio*, convulsion]. Relating to the stage of disease preceding convulsions.

pre con-vul'sive [*prae*; *convulsio*]. Referring to the period just prior to the occurrence of an epileptic seizure

pre-cor'di-um, pre-cor'di-a [*prae*; L. *cor* heart]. Th area of the chest overlying the heart. —**precor'dial,** *adj*

pre cos tal (pree-kos'tul) [*prae*; L. *costa*, rib] Situated in front of the ribs.

pre-cu'ne us [*prae*; L. *cuneus*, wedge]. A lobule of the parietal lobe, situated in front of the cuneus of the occipital lobe. —**precuneal** *adj*

pre-den'tin. Uncalcified dentinal matrix

pre di-crot'ic (pree dye-krot'ick) [*prae*; G. *dikrotos*, double beating]. Preceding the dicrotic wave or elevation of the sphygmographic tracing.

pre di gest'ed (pree'di jest id, -dye jest id) [*prae*; L. *digestum*, from *digerere*, to digest] Partly digested by artificial means before being taken into the stomach.

pre"di ges tion (pree di jes chun, -dye-jes chun) [*prae*; L. *digestio*, from *digerere*]. The partial digestion of food before it is eaten.

pre"dis po si g (pree dis-po zing) [*prae*; OF *disposer*]. Rendering the body susceptible to disease, as predisposing cause.

pre dis po-si'tion (pree dis po-zish un) [*prae*; L. *dispositio* arrangement]. The state of having special susceptibility to disease or condition.

pred nis o-lone. Generic name for Δ 1-pregnadiene-11β, 17α, 21-triol-3,20-dione synthetic steroid related to prednisone in the same way that hydrocortisone is related to cortisone, and having potent joint antiinflammatory activity Syn. *metacortandralone*. See *meticortelone*

pred'ni sone. Generic name for $\Delta^{1,4}$-pregnadiene-17α, 21-diol-3, 11, 20-trione synthetic steroid containing one more double bond than cortisone It is more potent than cortisone in suppressing inflammatory joint changes, without causing sodium and water retention. Syn., *metacortandracin*. See *deltra*, *meticorten*.

pre dor mi'tion (pree dor-mish un) [*prae*; L. *dormitio*, sleeping] Applied to th stage of unconsciousness immediately preceding actual sleep.

pre ec lamp'si-a [*prae*; G *eklampsis*, shining forth]. A disease, occurring in the latter half of pregnancy characterized by an acute elevation

of blood pressure and usually by edema and proteinuria, but without convulsions or coma. See *eclampsia*, 2.

pre-ep″i·glot′tic [prae; G. *epiglōttis*, epiglottis]. Anterior to the epiglottis.

pre″e·rup′tive [prae; L. *eruptio*, eruption]. Preceding eruption.

pre″for·ma′tion [prae; L. *formatio*, a shaping]. The theory which regards development as merely the unfolding or growth of the organism already fully formed in miniature, and contained in the germ cell (egg or sperm).

pre·fron′tal [prae; L. *frons*, forehead]. Situated in the anterior part of the frontal lobe of the brain.

pre·fron′tal leu·cot′o·my. See *prefrontal lobotomy*.

pre·fron′tal lo·bot′o·my. A method of treating mental disorders, particularly melancholia and psychasthenia, by severing the white fibers connecting the prefrontal and frontal lobes with the thalamus.

pre·gan″gli·on′ic (pree·gang·glee·on′ick, ·gang·lee·on′ick) [prae; G. *ganglion*, encysted tumor on a tendon]. Situated in front of, or preceding, a ganglion.

pre·glob′u·lin (pree·glob′yoo·lin) [prae; L. *globulus*, little ball]. A poorly defined protein found in cell protoplasm. Obs.

preg′nan·cy [L. *praegnans*, pregnant]. Being with child; the state of the woman from conception to childbirth. The duration of pregnancy in woman is approximately 280 days. To estimate the date of confinement, take the first day of the last menstrual period, count back three months, and add one year and seven days. See Dry′ Table of the Duration of Pregnancy in the Appendix. See Plate 41.

abdominal p. Gestation with the fetus lying within the peritoneal cavity.

ampullar p. Gestation in the outer portion of the uterine tube.

bigeminal p. Twin pregnancy.

cervical p. A rare condition in which, from atrophy of the decidual membranes, the impregnated ovum is implanted in the cervical canal, where it develops until the uterus expels it.

cornual p. Gestation occurring in one horn of a two-horned uterus.

ectopic p. Extrauterine gestation.

extrauterine p. Gestation outside of the cavity of the uterus.

false p. See phantom p.

heterotopic p. Double gestation, with one fetus inside and the other outside the uterine cavity.

hydatid p. Gestation in which the chorionic sac degenerates into a hydatidiform mole.

interstitial p. Gestation in the uterine part of a uterine tube. Also called *intramural p.*

intraligamentary p. Gestation within the broad ligament.

membranous p. Gestation in which there has been a rupture of the amniotic sac and the fetus is in direct contact with the wall of the uterus.

mesenteric p. The intraligamentary gestation.

molar p. Gestation in which the ovum has been converted into a fleshy tumor mass (mole).

multiple p. Gestation with two or more fetuses present within the uterus.

ovarian p. Gestation within the ovary.

parietal p. Interstitial gestation.

phantom p. Enlargement of the abdomen and often other symptoms simulating gestation, usually due to hysteria. Syn., *pseudocyesis*.

plural p. See multiple p.

p. test See under *test*.

sarcofetal p. Gestation with the presence of both a fetus and a mole.

sarcohysteric p. False pregnancy due to a mole.

signs of p. The three so-called absolute signs are ballottement, fetal movements, and fetal heart sounds.

tubal p. Gestation within an oviduct.

tuboabdominal p. Gestation which develops in the ampulla and extends into the peritoneal cavity.

tuboligamentary p. Gestation arising in an oviduct with extension into the broad ligament.

tubo-ovarian p. Gestation arising in an oviduct and extending into the ovary.

tubouterine p. See interstitial p.

twin p. Gestation with two fetuses.

uteroabdominal p. Gestation with one fetus in the uterus and another within the peritoneal cavity.

utero-ovarian p. Gestation with one fetus in the uterus and another in the ovary.

uterotubal p. Gestation with one fetus in the uterus and another in an oviduct.

preg′nan·cy rate. The number of pregnancies actually experienced in relation to the number of ova that theoretically might have been fertilized.

5-α-preg′nane. Allopregnane.

preg·nane·di·ol (preg·nan·dee·ole, ·dye·ole, ·ol, ·awl). $C_{21}H_{36}O_2$. A metabolite of progesterone, found in the urine during the progestational phase of the menstrual cycle and in pregnancy urine.

preg·nane·di′one. $C_{21}H_{32}O_2$. 3,20-pregnanedione; a steroid hormone occurring in pregnancy urine of mares; a dihydro derivative of progesterone.

preg′nant [L. *praegnans*, pregnant]. With child; gravid.

preg″nen·in·o·lone (preg·nen·in·o·lone, preg″neen·). Anhydrohydroxyprogesterone or ethisterone.

preg·nen′o·lone. $C_{21}H_{32}O_2$; Δ^5-pregnen-3β-ol-20-one. A steroid oxidation product of cholesterol and stigmasterol, apparently effective in reducing fatigue and formerly believed of value as an antiarthritic agent.

pregnyl. Trade-mark for a preparation of the chorionic gonadotropin of human pregnancy urine.

pre·hal′lux (pree·hal′ucks) [L. *prae*, before; *hallux*, great toe]. A supernumerary digit attached to the great toe on its medial aspect.

pre″hem·i·ple′gic (pree″hem·i·pledj′ick, ·plee′jick) [prae; G. *hēmiplēgia*, half-stroke]. Occurring before an attack of hemiplegia, as prehemiplegic chorea.

pre·hen′sile (pri·hen′sil, ·sile) [L. *prehensum*, from *prehendere*, to seize]. Adapted for grasping, as the tail of certain species of monkeys.

pre·hen′sion [L. *prehensio*, from *prehendere*]. The act of grasping or seizing.

Preiser, Georg Karl Felix [German orthopedic surgeon, 1879–1913]. Described traumatic osteoporosis of the navicular bone of the wrist; called *Preiser's disease*.

Preisz, Hugo von [Hungarian bacteriologist, 1860–1940]. Described a diphtheroid bacillus, pathogenic for sheep and horses. It produces a form of pseudotuberculosis. Called *Preisz-Nocard bacillus*.

pre″lo·co·mo′tion [L. *prae*, before; *locus*, place; *motum*, from *movere*, to move]. The movements of a child who has not yet learned to walk, which indicate the intention of moving from one place to another.

pre′lum [L.]. A press.

p. abdominale. The squeezing of the abdominal viscera between the diaphragm and the rigid abdominal wall, as in the processes of defecation, micturition, and parturition.

pre·ma·lig'nant. See *precancerous*.

pre·ma·ni·a·cal [L. *prae*, before; G. *mania*, madness]. Previous to, or preceding, an attack of insanity.

premarin. Trade-mark for a preparation of conjugated estrogens, chiefly in the form of sodium estrone sulfate, administered orally.

pre·ma·ture [L. *praematurus*, too early]. Occurring before the proper time, as premature labor.

pre·ma·ture beat. *In cardiology*, a beat occurring before the next expected impulse and followed usually by a pause which may or may not be compensatory.

pre"max·il'la [L. *prae*, before; *maxilla*, jaw]. The intermaxillary bone. —**premaxillary**, *adj.*

pre·med·i·ca'tion [*prae*; L. *medicare*, to heal]. The administration of drugs before an operation, primarily to quiet the patient and to facilitate the administration of the anesthetic.

pre·men·stru·al (pree-men'stroo-ul) [*prae*; L. *menstrualis*, monthly]. Preceding menstruation.

pre·mo'lar (pree-mo'lur) [*prae*; L. *molaris*, from *mola*, mill]. In each quadrant of the human dentition, one of the two teeth between the canine and the first molar; a bicuspid. The term is often used incorrectly to signify a deciduous molar. The premolars replace the deciduous molars.

pre·mo·ni'tion [L. *praemonitio*, forewarning]. A warning of some future experience or event, usually tragic; foreboding.

pre·mon'i·to·ry [L. *praemonitum*, from *praemonere*, to forewarn]. Giving previous warning or notice, as in premonitory symptoms, the nonspecific signs of impending illness before specific indications begin. Also called *prodromal*.

pre·mon'o·cyte. See *promonocyte*.

pre·mu·ni'tion (pree-mew-nish'un) [L. *praemunitio*, fortifying beforehand]. An immunity which depends upon a persistent latent infection, such as an immunity in malaria due to long-continued quiescent infection.

pre·my'e·lo·blast" (pree-migh'1-lo-blast") [L. *prae*, before; G. *myelos*, marrow; *blastos*, germ]. A young form of myeloblast.

pre·my'e·lo·cyte" (pree-migh'1-lo-sight") See *promyelocyte*.

pre"nar·co'sis [*prae*; G. *narkōsis*, benumbing]. Preliminary light narcosis produced prior to general anesthesia.

pre·na'tal (pree-nay'tul) [*prae*; L. *natalis*, natal]. Existing or occurring before birth.

prenderol. Trade-mark for 2,2-diethyl-1,3-propanediol, a skeletal muscle relaxant.

pre·ne·o·plas'tic [*prae*; G. *neos*, new; *plassein*, to form]. Before the development of a definite tumor. See *precancerous*.

pre·nid'a·to·ry (pree-nid'uh-tor-ee, -nigh'duh-tor-ee) [*prae*; L. *nidus*, nest]. Before nidation.

pre"oc·cip'i·tal (pree"ock-sip'i-tul) [*prae*; L. *occiput*, back part of the head]. Situated anterior to the occipital region, as the preoccipital notch, a notch indicating the division between the occipital and temporal lobes of the brain.

prep·a·ra'tion [L. *praeparatio*, from *praeparare*, to make ready beforehand]. 1. The act of making ready. 2. Anything made ready, especially in anatomy, any part of the body prepared or preserved for illustrative or other uses. 3. *In pharmacy*, any compound or mixture made after a formula.

corrosion p. See under *corrosion*.

cover glass p. One used in examining cells of blood or of any other fluid. A small drop of blood or other fluid is placed on a thin, square cover glass. A second cover glass is dropped on the first. As soon as the fluid has stopped spreading, the two cover glasses are pulled apart horizontally; after air drying, the material is stained with an appropriate stain and studied under the microscope.

hanging-drop p. A preparation using a special slide containing a circular concavity or a regular slide with a petroleum jelly ring, in which a drop of solution to be examined microscopically can be suspended without spreading over the slide.

heart-lung p. A set-up for the study of the effects of mechanical or physical factors upon cardiac behavior, consisting of an apparatus for establishing a temporary artificially controlled, circulatory system outside the body of the experimental animal while the lesser circulation remains undisturbed.

Klatsch p. A cover-glass preparation made by pressing the cover glass lightly on a bacterial colony in plate culture.

Langendorf p. An isolated mammalian heart preparation in which the coronary vessels are perfused in warm oxygenated Locke-Ringer or Tyrode solution.

Lawen-Trendelenburg p. A preparation used in perfusion of the hindleg of a toad.

pre·pa·tel'lar [L. *prae*, before; *patella*, kneepan]. Situated in front of the patella.

pre·pat·ent pe·ri·od (pree-pat'unt, -pay'tunt). The period in parasitic disease between the introduction of the organism and its demonstration in the body.

prephysin. Trade-mark for a preparation of chorionic gonadotropin.

pre·pol'lex [*prae*; L. *pollex*, thumb]. A supernumerary digit attached to the thumb on its radial aspect.

pre·pon·der·ance [L. *praeponderare*, to be of greater weight]. 1. The state of being greater in weight or force. 2. A term used in electrocardiography as either (a) **left preponderance**, designating the effect of left ventricular hypertrophy due to a variation in the normal $\frac{\text{Right}}{\text{Left}}$ ventricular weight ratio (normal 1.4–2.0): abnormal left axis deviation, increased duration of QRS, and sometimes inversion of T~1~ and T~2~ or (b) **right preponderance**, designating the effect of right ventricular hypertrophy: abnormal right axis deviation, deep S~1~, tall R~2~ and R~3~ > R~2~ and sometimes increased duration of QRS.

ventricular p. Relative increase in the weight of the muscle of one ventricle as compared to that of the other in hypertrophied hearts.

pre·po·ten·cy [L. *praepotentia*, superior power]. The ability of one parent to impress individual characteristics upon offspring to a marked degree. It has now been explained as Mendelian dominance. *Obs.*

pre·po'tent [L. *praepotens*, very powerful]. Having a marked tendency to transmit individual characters to offspring. *Obs.*

pre·psy·chot'ic (pree-sigh-kot'ick) [L. *prae*, before; G. *psychē*, soul]. Of or pertaining to the mental state that precedes or is potentially capable of preceding a psychosis.

pre·pu'ber·al (pree-pew'bur-ul) [*prae*; L. *puber*, adult]. Prior to puberty.

pre·pu·bes'cent [*prae*; L. *pubescere*, to reach the age of puberty]. Prepuberal.

pre'puce [L. *praeputium*, foreskin]. The foreskin of the penis, a fold of skin covering the glans penis; also, the similar fold over the glans clitoridis. —**prepu'tial**, *adj.*

pre·pu·cot'o·my [*praeputium*; G. *tomē*, a cutting]. An incision into the prepuce as an incomplete circumcision.

pre·py·lor'ic (pree·pye·lor'ick) [L. *prae*, before; G. *pylōros*, gatekeeper]. Placed in front of, or preceding, the pylorus.

pre·ra·chit'ic (pree·ra·kit'ick) [*prae*; G. *rhachis*, spine]. Pertaining to the interval previous to the time when rickets becomes obvious.

pre·rec'tal (pree·reck'tul) [*prae*; L. *rectus*, straight]. Situated in front of the rectum.

pre·re·nal (pree·ree'nul) [*prae*; L. *renes*, kidneys]. Situated in front of the kidney.

pre·re·pro·duc'tive [*prae*; L. *re-*, again; *producere*, to bring before]. Relating to the period of life preceding puberty.

pre·ret'i·nal (pree·ret'i·nul) [*prae*; L. *rete*, net]. Anterior to the internal limiting membrane of the retina, as preretinal hemorrhage.

pre·sa·cral. Lying in front of the sacrum, as a presacral nerve.

pres"by·a·cu'si·a (prez"bee·a·coo'shuh, ·a·koo'shuh) **pres"by·a·cu'si·a** (pres"bee·a·koo'shuh). See *presbycusis*.

pres"by·at'rics (prez"bee·at'ricks, press"bee·) [G. *presbys*, old man; *iatrikos*, skilled in the medical art]. That branch of medicine which deals with the diseases of old age. Syn., *geriatrics*.

pres"by·cu'sis (prez"bi·kew'sis, ·koo'sis, press"bi·) **pres"by·cou'sis** (prez"bi·koo'sis, press"bi·) [*presbys*; G. *akousis*, hearing]. The lessening of the acuteness of hearing that occurs with advancing age.

pres"by·der'ma. Senile skin.

pres·by·phre'ni·a (prez·bee·free'nee·uh, ·fren'ee·uh, press"bee·) [*presbys*; G. *phrēn*, mind]. Failure of the sense of location and memory in the aged, frequently the normal condition of old age; the general concomitant of senility. —**presbyophren'ic**, *adj*.

pres"by·o'pi·a (prez·bee·o'pee·uh, press"bee·) [*presbys*; G. *ōps*, eye]. The condition of vision in the aged, due to diminished power of accommodation, from impaired elasticity of the crystalline lens, whereby the near point of distinct vision is removed farther from the eye. Abbreviated, Pr. —**presbyop'ic**, *adj.*; **pres'byope**, *n.*

pres"by·o·sphac'e·lus (prez"bee·o·sfass'e·lus, press"bee·) [*presbys*; G. *sphakelos*, gangrene]. Senile gangrene.

pres·byt'i·a (prez·bish'uh, ·bit'ee·uh, press·) See *presbyopia*.

pres"by·ti·at'rics. See *presbyatrics*.

pres·byt'ic [G. *presbytēs*, old man]. Suffering from presbyopia.

pres'by·tism. See *presbyopia*.

pre·schiz"o·phren'ic (pree·skiz"o·fren'ick) [L. *prae*, before; G. *schizein*, to split; *phrēn*, mind]. Pertaining to symptoms and personality characteristics which usually precede schizophrenic psychosis.

pre"scle·ro'sis [*prae*; G. *sklērōsis*, hardening]. The vascular condition which precedes arteriosclerosis. —**presclerot'ic**, *adj*.

pre·scribe [L. *praescribere*, to write before]. Give instructions concerning the use of a remedy.

pre·scrip'tion [L. *praescriptio*, from *praescribere*]. Written instructions designating the preparation and use of substances to be administered. See Table of the More Common Latin or Greek Terms and Abbreviations Used in Prescription Writing in the Appendix.

shotgun p. Old term for a prescription containing many ingredients written with the expectation that some one of the ingredients might prove helpful. Such prescriptions are now seldom used.

pre"se·nil'i·ty [L. *prae*, before; *senilis*, aged]. Premature old age. —**presen'il**, *adj*.

pre·sent' [L. *praesentare*, to place before]. Appear first at the os uteri, applied to part of the fetus.

pres"en·ta'tion (pree"zen·tay'shun, prez"en·) [L. *praesentatio*, from *praesentare*]. That part of the fetus which is palpated through the cervix uteri at the beginning of labor. The relation of the part of the fetus to the birth canal determines the type of presentation.

breech p. The presentation of the buttocks and/or the feet first at the cervix; called double breech or complete breech if both buttocks and feet appear first; frank breech if the buttocks alone are the presenting part, the legs being bent so that the feet lie against the face.

brow p. That in which the brow of the child presents at the cervix.

cephalic p. That in which any part of the head is the presenting part.

compound p. Prolapse of an extremity of the fetus alongside the presenting part.

face p. The presentation of the face with the chin leading at the cervix during labor.

footling p. Presentation with the feet foremost.

p. of cord. Descent of the umbilical cord between the presenting part and the membranes at the beginning of labor.

transverse p. That in which the child is turned with its long axis across that of the birth canal; the presenting part may be the shoulder, back, or abdomen.

vertex p. The most usual type of presentation with the occiput the presenting part. See Plate 42.

pre·sent'ing com·plaints'. The symptoms of which the patient is aware and which bring him to the physician.

presidon. A trade-mark for pyrithyldione, a sedative and hypnotic no longer used because it may produce agranulocytosis.

pre·sphe'noid (pree·sfee'noyd) [L. *prae*, before; G. *sphēnoeidēs*, wedge-shaped]. The anterior portion of the body of the sphenoid, ossifying from a separate center.

pre·sphyg'mic (pree·sfig'mick) [*prae*; G. *sphygmos*, pulse]. Pertaining to the period preceding the pulse wave, the isometric phase of systole.

pres·som'e·ter. A manometer for measuring pressure in the uterus and kidneys after injection of radiopaque media in doing pyelography and uterosalpingography (hysterosalpingography).

pres'sor [L. *pressor*, from *premere*, to press]. Producing a rise in blood pressure.

pres"so·re·cep'tor [*pressure*; L. *receptor*, from *recipere*, to receive]. A nerve ending, located in the wall of the carotid sinus and aortic arch, sensitive to stretching induced by changes of blood pressure within the vessels or direct pressure from without. It sends afferent impulses to medullary centers to cause reflex vasodilatation and fall of blood pressure when stretched as by increase of systemic pressure and a reflex rise in systemic pressure when blood pressure within the carotid sinus and aortic arch is suddenly lowered. Syn., *baroceptor*, *baroreceptor*.

pres"so·sen'si·tive [*pressure*; L. *sentire*, to feel]. Stimulated by changes in blood pressure, as nerve endings in the carotid sinus.

pres'sure [L. *pressura*, a pressing]. Force, weight, or tension.

abdominal p. Pressure upon the viscera, as when the diaphragm is contracted while the belly-wall muscles are contracted, as in urination and defecation. Also called *strain*, *squeeze*, *bearing down*, *prelum abdominale*.

afterpressure. The sense of pressure that remains for a brief period after the removal of an object from the surface of the body.

alveolar p. The combined pressures of oxygen,

carbon dioxide, nitrogen, and water vapor in the alveoli. At body temperature, water vapor exerts pressure of bout 48 mm. Hg.

ambient p. *In aviation medicine*, th pressure which surrounds flier or his aircraft the tmospheric pressure to which he is exposed.

arterial p. The tension of the arterial wall due to the pressure of the blood within the arteries.

atmospheric p. The pressure of the tmosphere; it equals bout fifteen pounds to the square inch at sea level.

back p. effect. Pulmonary and venous engorgement occurring when the ventricles are unable to pump blood from the venous to the arterial system as fast as it is received damming back of the blood.

bipolar p. Pressure on the two ends of a bone. It is used in differentiating fractures from contusions, producing pain in the case of the former.

blood p. The pressure of the blood against the walls of the vessels or of the heart. It is measured by means of the manometer. Also see *blood pressure*.

colloid osmotic p. See oncotic p.

critical p. That pressure on gas or vapor which will, at the critical temperature, convert it into a liquid.

endocardial p. The pressure of the blood within the heart.

hydrostatic p. A pressure created in fluid system by the energy of muscular contraction not utilized in motion, as blood pressure created by the heart beat. A fluid system may also exert such pressure as result of the effect of gravity.

imbibition p. Pressure due to the increase in volume of gel as result of the imbibition of liquid.

intraabdominal p. The pressure exerted pon the walls by the bdominal viscera. See abdominal p.

intracranial p. The pressure of the contents of the cranium upon its walls.

intraesophageal p. Air pressure within the esophagus, closely reflecting intrapleural pressure.

intraocular p. See intraocular *tension*.

intrapleural p. Normally the negative pressure existing between the parietal and visceral pleura. In pneumothoraxes, this may be negative, tmospheric, or positive pressure.

intrathoracic p. The pressure of the intrathoracic organs upon the walls of the chest.

negative p. The force of suction also, absence of pressure.

oncotic p. The osmotic pressure exerted by colloids in solution which varies wing to the variation of colloidal molecules or aggregations of micelles.

osmotic p. The pressure developed when solution and its solvent component are separated by membrane permeable to the solvent only or when two solutions of different concentration of the same solute are similarly separated.

partial p. In mixture of gases, the pressure erted by one of the gases is said to be the partial pressure of that gas. In such mixture the partial pressures of the gases are exerted independently of each other.

p. breathing. *In aviation medicine*, breathing by introduction of suitable gas mixture into the lungs at pressure bove the ambient pressure exerted on the external surf ce of the chest.

pulse p. The difference between the systolic and diastolic blood pressure.

solution p. The tendency of the molecules or ions to leave the surface of solute and pass into the solvent. Varies in different solute-solvent combinations.

vapor p. The pressure of liquid, solid, or solution which is exerted by vapor when state of equilibrium has been reached between the liquid, solid, or solution and its vapor.

venous p. The tension of the blood within the veins.

pres sure cone. The bulging of the brain stem and neighboring cerebellum into the foramen magnum as result of sharp pressure gradient between intracranial and intraspinal pressures, as in brain edema.

pre-sta sis [L. *prae*, before; G. *stasis*, standing]. A term used by the pathologist Ricker to designate greater degree of dilatation of the precapillary arterioles, capillaries, and postcapillary venules than in peristasis. The blood flow is still more slowed but is not at a standstill. It is also characterized by the passage of red blood cells through the capillary walls (diapedesis) resulting hemorrhages in the surrounding tissues. There is constriction of the artery above. Syn. *prestatic hyperemia*.

pre-su bic u lum. The area of transition between hippocampus proper and the subiculum.

pre-sup pu ra″tive [*prae*; L. *suppurare*, to gather matter]. Pertaining to an early stage of inflammation, prior to suppuration.

pre-syl′vi-an fis sure. The anterior branch of the Sylvian fissure.

pre sys′to-le (pree-sis′to-lee) [*prae*; G. *systolē*, contraction]. The period of the heart pause preceding the systole.

pre″sys tol′ic [*prae*; *systolē*]. Preceding the systole of the heart, as the presystolic murmur, presystolic thrill; usually refers to the time immediately preceding the first heart sound.

pre thy rog′e-nous (pree thigh-rodj′ nus) [*prae*; G. *thyreos*, shield; *gennaein*, from *gignesthai*, to be prod ced]. Pertaining to an atypical variety of thyroid disease.

pre thy roid′ -an (pree thigh-roy dee-un) [*prae*; G *thyreoidēs*, shield-shaped]. In front of the thyroid cartilage.

pre″trans fer′ence. *In psychoanalysis*, the arousal of feelings in patient when he perceives the therapist as primordial parent or as part of himself.

pre-u″re-thri′tis [*prae*; G. *ourēthra*, urethra; -*itis*, inflammation]. Inflammation of the vestibule of the vagina, around the urethral orifice.

prev′ lence [L. *praevalere*, to prevail]. The number of cases of disease existing in population at any given time.

pre-ven tive med′i cine. See under *medicine*.

pre-ven tive med′i cine com′pa ny *In military medicine*, unit designed to control rodents and insect vectors and to supervise hygiene and sanitation in armies, divisions, and installations as deemed necessary by the surgeon. It consists of survey control, and sanitation platoons varying in number.

pre ven′tive med′i cine of′fi-cer *In military medicine*, medical officer attached to command to supervise the sanitary arrangements of the command and the measures taken to prevent the spread of disease; an assistant to the surgeon of the command formerly called *medical inspector*.

pre ven-to ri um [L. *praevenire*, to come before]. A sanatorium devoted to the care of children who are thought to be predisposed t tuberculosis because of positive tuberculin tests and poor home environment.

pre″ven tric″u lo sis [L. *prae*, before; *ventriculus*, ventricle G -*osis*, condition] Cardiospasm. *Rare*.

pre ver tig′i nous (pree vur tidj nus) [*prae*; L. *vertigo*, whirling around]. Dizzy with tendency to fall prone.

pre·ves'i·cal (pree-ves'i-kul) [*prae*; L. *vesica*, bladder]. Situated in front of the urinary bladder.

pre'vi·a [L. *praevius*, going before]. Coming before, or in front of, as placenta previa.

pre·vil'lous [L. *prae*, before; *villus*, shaggy hair]. Before the formation of villi; applied to the chorionic vesicle.

Prévost, Jean Louis [*French physician*, 1790–1850]. The first to observe segmentation in the frog's egg (1837) marking a great step in the knowledge of embryology. Known to have used defibrinated blood in animal transfusions (1821).

Preyer, Wilhelm Thierry [*German physiologist*, 1841–97]. Author of a history of hypnotism (1881). Described involuntary movement of the ears in auditory stimulation; called *Preyer's reflex*. Devised a test for carbon monoxide in the blood. See Preyer's *test*.

pre'zone. See *prozone*.

pre·zo·nu·lar (pre-zon'yoo-lar) [L. *prae*, before; *zonula*, little zone]. Pertaining to the posterior chamber of the eye.

pre·zyg·a·pop·h'y·sis (pree-zyg-uh-pof'i-sis, pree'zig-uh-) [*prae*; G. *zygon*, yoke; *apophysis*, process]. An anterior or superior zygapophysis; superior articular process of a vertebra.

pri'a·pism [G. *Priapos*, Priapus]. Persistent erection of the penis, usually unaccompanied by sexual desire.

Price-Jones, Cecil [*English hematologist*, 1863–1943]. Described a method for direct measurement of red blood cells, the recording being in the form of a graph of the distribution of the diameters of the red cells in a stained blood specimen (1910); called *Price-Jones method* or *curve*.

prick'ly heat. See *miliaria*.

Priessnitz, Vincenz [*German farmer*, 1799–1851]. Strong advocate of hydrotherapy. Author of a treatise on the cold-water cure (ca. 1835). His cold-water compress is called *Priessnitz's bandage*.

Priestley, Joseph [*English clergyman and chemist*, 1733–1804]. Isolated oxygen (1774) which he called dephlogisticated air. Is often credited with the discovery of oxygen. See also *Lavoisier* and *Scheele*.

pri'ma·quine phos'phate. $C_{15}H_{21}N_3O.2H_3PO_4$; 8-(4-amino-1-methylbutylamino)-6-methoxyquinoline diphosphate; an orange-red crystalline powder soluble in water used therapeutically for treatment of malaria, being effective in all races. Its action is on the exoerythrocytic stage of the parasite.

pri'ma·ry [L. *primarius*, of the first rank]. First, immediate, as primary union, healing by first intention.

Pri·ma'tes (pry-may'teez) [L. *primas*, principal, from *primus*, first]. The highest order of the vertebrate class Mammalia; includes man, apes, monkeys, and lemurs.

pri"me·ve·rin. $C_{20}H_{28}O_{13}$; 2-hydroxy-4-methoxymethyl benzoate-2-primeveroside, a glycoside occurring in several species of primrose (*Primula*). On enzymatic hydrolysis, it yields one molecule each of 2-hydroxy-4-methoxymethyl benzoate and primeverose.

pri"me·ve·rose. $C_{11}H_{20}O_{10}$; 6-(β-D-xylosido)-D-glucose, a disaccharide produced by enzymatic hydrolysis of primeverin, gaultherin, and certain other glycosides. Hydrolysis of it yields one molecule each of D-glucose and D-xylose.

pri"mi·grav'i·da [L. *primus*, first; *gravidus*, pregnant]. A woman who is pregnant for the first time.

pri·mip'a·ra (pry-mip'uh-ruh) [*primus*; L. *parere*, to bear]. A woman bearing, or giving birth to, her first child. —**primiparous**, *adj.*

pri"mi·par'i·ty. Condition of being a primipara.

pri·mi'ti·ae (pry-mish'ee-ee) [L., first things of their kind]. The part of the amniotic fluid discharged before the extrusion of the fetus at birth.

prim'i·tive [L. *primitivus*, primitive]. First-formed; original, as primitive groove.

pri·mor'di·al (pry-mor'dee-ul) [L. *primordialis*, original]. Existing in the beginning; first-formed; primitive; original; of the simplest character.

pri·mor'di·um (pry-mor'dee-um) [*primordius*]. The earliest discernible indication of an organ or part, as acousticofacial primordium, the mass of neural crest tissue that differentiates into the ganglions of the seventh and eighth cranial nerves. Syn., *anlage*.

prim'rose [L. *primus*, first]. A plant of the genus *Primula*, some species of which cause contact dermatitis.

prin'ceps [L., chief]. First; original; main, as the nucleus princeps, the main sensory nucleus of the trigeminal nerve.

prin'ci·ple [L. *principium*, beginning]. 1. A constituent of a compound representing its essential or characteristic properties. 2. A rule or basis of action.

anterior pituitarylike p. See anterior pituitarylike *substance*.

antianemia p. See antianemia *factor*.

Bernoulli's p. The lateral pressure of a fluid passing through a tube of varying diameter is least at the most constricted part where velocity is greatest, and is most at the widest part where velocity is least.

displacement p. One applying to the examination of certain accessory nasal sinuses, where failure of the testing solution to enter the sinus is pathognomonic of disease.

Fick p. See Adolf *Fick*.

Gillespie's bicolor p. Colorimetric determination of pH without the use of standard buffer solutions.

isopathic p. The apparently paradoxical rule that a feeling of guilt can be relieved by an exhibition of the cause of the guilt, namely hate. Formerly called *homeopathic p.*

melanophore-dilating p. See melanocyte-stimulating *hormone*.

phylogenetic p. The rehearsal in childhood of reminiscences of the prehistory of mankind.

pleasure p. The instinctive endeavor to escape from unpleasant situations; the desire to obtain the greatest possible gratification with the smallest possible effort.

posterior pituitary p. See posterior pituitary *substance*.

p. of Carnot and Clausius. Free energy always tends to diminish. The second law of thermodynamics is one of the forms of this principle.

p. of inertia. See repetition-compulsion *p.*

proximate p. The active constituent of a drug, as an alkaloid, glycoside, etc.

reality p. The modification of the pleasure principle brought about by the demands of reality or parental and social demands.

repetition-compulsion p. The instinct to repeat earlier experiences, irrespective of any advantage to be obtained.

Stewart p. A principle applied to the determination of total flow of blood by injection of a dye into an artery: $F = \frac{R}{V - A}$, where F = total flow through organ, R = constant rate of dye injection (mg./min.), V = concentration of dye in venous blood from organ, and A = concentration of dye in arterial blood by virtue of recirculation.

van't Hoff's p. of mobile equilibrium. Any change of the temperature of system in equilibrium is followed by reverse thermal change within the system.

Pringle, John James [*English dermatologist*, 1855–1922]. Described sebaceous adenoma (1890); also called *Pringle' disease*, *Pringle' type of adenoma*.

prin'ter s ac e tate. See basic aluminum acetate.

priodax. Trade-mark for *iodoalphionic acid*.

Pri"o nu'rus [G *prion*, saw; *oura*, tail] A genus of scorpions; species of this genus inflict stings which are painful and very poisonous

P australis. A well-known species of tropical scorpions found in North Africa. A antivenin has been prepared from members of this species which is effective against the stings of all North African scorpions.

Prior J [*German physician*, nineteenth century]. W th Finkler isolated *Vibrio proteus*, also called *Finkler-Prior spirillum* or *vibrio*.

priscoline Trade-mark for phenyl-substituted alkyl imidazoline, phenylmethyl imidazoline, or benzylimidazoline. The substance exerts dilator effect on minute arteries and arterioles.

pri sil'l dene hy dro-chl ride. Generic name for the synthetic analgesic *dl*-alpha-1,3-dimethyl-4-phenyl-4-propionoxypiperidine hydrochloride also called *alphaprodine hydrochloride*. See *nisentil hydrochloride*.

prism [G *prisma*, anything sawn] 1 A solid whose bases or ends are similar plane figures and whose sides are parallelograms. 2. *I optics*, transparent solid with triangular ends and two converging sides. It breaks up white light into its component colors, and bends the rays of light toward th side opposite the angle (the base of the prism) and is used to measure or correct imbalance of the ocular muscles.

enamel p. One of the prismatic columns of from four to six sides composing the enamel of the teeth, closely packed together and generally vertical to the surface of the underlying dentin. Syn., *enamel rod*.

Nicol p. One prepared from two obliquely bisected parts of rhombohedron of calcite; used for production and analysis of polarized light.

Risley's p. A pair of prisms of equal strength with the faces opposing, so that by rotation of one, the power is gradually increased from zero to th total of their values.

pris mat'ic (pris mat ik) [*prisma*]. Prism-shaped produced by the action of prism, as prismati colors.

pris'moid [*prisma*, G *eidos*, form] Resembling prism.

pris"mop tom ter (pris mop·tom'l ter) [*prisma*; G *optikos*, of sight *metron*, measure] An instrument for estimating refractive defects of the eye by means of two prisms placed base to base.

pris'm -sphere [*prisma*, G *sphaira*, ball] A combination of prism and globular lens.

priv'l leged com mu"ni ca tion. *I medical jurisprudence*, information furnished by patient to physician to assist the physician in diagnosis or therapy According to universal medical ethics, such information may not be disclosed without consent of the patient. Not all courts of l w recognize this privilege.

privine hydrochloride. Trade-mark for the vasoconstrictor substance *naphazoline hydrochloride*.

p. **r.n.** *Pro re nata*, according as circumstances may require.

pro- [G and L]. A prefix signifying *for before in front of*

pro ac-cel'er in. The precursor of accelerin. Syn., *factor V plasma accelerator globulin*,

pro ac"ti no my'cin [G. *pro*, before; *aktis*, ray; *mykēs*, fungus]. An antibiotic substance derived from *Nocardia* (*Proactinomyces*) *gardneri*, active in vitro, against number of bacteria. Proactinomycin A, B, and C have been described.

pro" g glu'ti-noid [L. *pro* in favor of, *agglutinare*, to glue *eidos*, form]. An agglutinoid having stronger affinity for the agglutinogen than is possessed by the agglutinin.

pro al [G *pro*, in front of]. Having forward direction or movement. *Rare*.

pro-am'ni on [*pro*, G *amnion*, inner membrane around the fetus]. That part of the embryonic area at the sides and in front of the head of the developing embryo, which remains without mesoderm for considerable period.

pro at'las [*pro*; G *atlas*, first of the neck vertebrae]. An accessory vertebral element occasionally present between the atlas and the occipital bone.

prob a ble er'ror A value which is 0 6745 times the standard error of any statistical constant.

pro-band' See *propositus*.

pro'bang. A rod of whalebone or other flexible material, used for making local pplications to the esophagus or larynx or for removing foreign bodies.

ball p. A probang having an ivory bulb attached to one end.

bristle p. One having on the end sheath of bristles or horsehair that can be made to spread like an umbrella as the instrument is drawn out. Also called *horsehair p.*

sponge p. One with small sponge at one end

pro-bar'bi tal cal'ci um. Generic name for calcium 5-ethyl-5-isopropyl barbiturate See *ipral calcium*.

pro-bar'bi tal so di um. Generic name for sodium 5-ethyl-5-isopropyl barbiturate. See *ipral sodium*

probe [L. *probare*, to test]. 1. A slender flexible rod, for exploring or dilating natural channel, as the lacrimal duct, or for following sinus or the course of wound. 2. A stiff rod, usually pointed at one end, used for separating tissues in dissection. 3. The act of using probe. —**probe**, *v.*

pro ben -cid. Generic name for *p*-(di-*n*-propylsulfamyl)-benzoic acid, $(CH_3CH_2CH_2)_2NSO_2C_6H_4COOH$, an agent that selectively and reversibly inhibits the transport mechanism responsible for tubular secretion of penicillin, para-aminosalicylic acid, para-aminohippuric acid, and phenol red. Premedication with probenecid results in increased blood levels of penicillin and para-aminosalicylic acid when these drugs are subsequently administered. It is also of therapeutic value in gout, presumably by blocking reabsorption of urate. See *benemid*.

pro'bit. In biological assay equal to the normal equivalent deviation increased by five used to make all normal equivalent deviation values positive.

pro-bos ci (pro-bos sis) [G., means of providing food]. The cylindrical projection from the face, above or below the orbit, with or without cavity, which represents the nose in various grades of cyclopia and ethmocephalus.

pro caine (pro cane, pro'kay-een, -in, pro-cane') 1 The base *p*-aminobenzoyl-diethylaminoethanol from which certain salts, such as the hydrochloride, are prepared. See *procaine hydrochloride*. 2. A synonym for procaine hydrochloride.

pro caine am'ide hy"dro-chlo ride. *p*-Amino-*N*-(2-diethylaminoethyl)benzamide hydrochloride $NH_2C_6H_4CONHCH_2CH_2N(C_2H_5)_2.HCl$, white to tan crystals, very soluble in water; useful in the treatment of ventricular arrhythmias and extrasystoles. Unlike procaine hydrochloride, it is only

slightly hydrolyzed by plasma enzymes, hence has prolonged action. See *procaine hydrochloride*.

pro·caine hy"dro·chlo'ride (*procainae hydrochloridum*) $H_2N.C_6H_4.CO.O.CH_2.CH_2.N(C_2H_5)_2.HCl$; p-aminobenzoyl-diethylaminoethanol hydrochloride occurs as small, white crystals, or as a white, crystalline powder; 1 Gm. dissolves in 1 cc. of water and in 30 cc. of alcohol. It is employed as a local anesthetic in solutions from 1% to 4%. Procaine exhibits no local vasoconstriction as does cocaine, and the anesthesia is more localized and increased in duration by the addition of solution of epinephrine hydrochloride in the proportion of 1:1000. It is also employed as a spinal anesthetic for relaxation of short duration, but is relatively ineffective when applied to intact mucous membranes. There are also available the following salts of the procaine base: procaine benzoate (*borocaine*), procaine borate, procaine butyrate, and procaine nitrate. These salts resemble procaine hydrochloride in their action and uses. Syn., *procaine*. Also see *novocain*.

pro·cal'lus [L. *pro*, before; *callus*, hardened skin]. *The organized blood clot which forms in an early stage of repair of a fractured bone.*

pro·coe'lous (pro-see'lus) [G. *pro*, in front of; *koilos*, hollow]. Concave in front and convex behind.

pro·ce·phal'ic [*pro*; G. *kephalē*, head]. In *biology*, pertaining to the front of the head.

pro·cer'coid (pro-sur'koyd) [*pro*; G. *kerkos*, tail; *eidos*, form]. The first larval stage in the first intermediate host of some cestodes.

pro·ce·rus. A muscle of facial expression. See Table of Muscles in the Appendix.

proc'ess, pro'cess [L. *processus*, process]. 1. A course of action; a group of phenomena, as an inflammatory process. 2. A prominence or outgrowth, as the spinous process of a vertebra, the axis cylinder process of a nerve. 3. In *chemistry*, a method of procedure; reaction; test.

accessory p. A small tubercle situated at the back part of the base of the transverse process of one of the lower thoracic and lumbar vertebrae.

acromion p. Acromion.

alar p. *One of a pair of processes arising from the* lower part of the anterior border of the cribriform plate of the ethmoid, articulating with the frontal bone and completing the cecal foramen of the frontal bone.

alveolar p. The border of the maxilla or mandible in which the alveoli, or bony sockets of the teeth, are embedded.

ameloblastic p. The cytoplasmic projection of an enamel-forming cell beyond the level of the terminal bar apparatus. Syn., *Tomes' p.*

anterior clinoid p. A prominent process that juts backward from the medial extremity of the lesser wing of the sphenoid bone behind the optic foramen.

anterior p. of the malleus. A long, delicate process that passes from the neck of the malleus forward to the petrotympanic fissure, to which it is connected by the anterior ligament of the malleus. Formerly called *long process*, *processus gracilis*.

articular p. See inferior articular *p.* and superior articular *p.*

auditory p. The lateral border of the tympanic part of the temporal bone; the area of attachment of the cartilage of the auricle.

axis cylinder p. Axon of a nerve cell.

basilar p. A strong, quadrilateral plate of bone forming the anterior portion of the occipital bone, in front of the foramen magnum.

birth p. The act of giving birth to young. See Plate 42.

caudate p. (a) The elevated portion of the liver extending from the caudate lobe to the under surface of the right lobe. (b) The lower end of one of the divisions of the antihelix of the external ear.

ciliary p. Circularly arranged choroid foldings continuous with the iris in front.

clinoid p. See anterior clinoid *p.*, posterior clinoid *p.*, and middle clinoid *p.*

cochleariform p. The curved terminal portion of the bony semicanal for the tensor tympani muscle forming a pulley over which the tendon of the muscle plays.

conchal p. See descending *p.*

condyloid p. The posterior process on the upper border of the ramus of the lower jaw.

conoid p. See conoid *tubercle*.

coracoid p. A beak-shaped process of the scapula.

coronoid p. (a) A thin, flattened process projecting from the anterior portion of the upper border of the ramus of the mandible and serving for the insertion of the temporal muscle. (b) A triangular projection from the upper end of the ulna, forming the lower part of the semilunar notch.

costal p. An embryonic rib primordium, the ventrolateral outgrowth of the caudal, denser half of a sclerotome.

deep p. A tonguelike extension of the submandibular gland which passes around the posterior border of the mylohyoid muscle and then extends forward along with the submandibular duct.

descending p. A downward prolongation of the inferior border of the lacrimal bone which articulates with the lacrimal process of the inferior nasal concha, and assists in forming the canal for the nasolacrimal duct.

ensiform p. Old term for xiphoid process, the cartilaginous tip at the lower end of the sternum.

ethmoid p. One of the projections from the superior border of the inferior nasal concha.

excitation p. The process underlying the action current.

facial p. of the parotid. A triangular portion of the parotid gland which extends forward, overlapping the masseter muscle.

falciform p. A thin extension of the sacrotuberous ligament to the ramus of the ischium.

freezing-drying p. Sudden cooling of tissue to very low temperatures and dehydration of the frozen material in a vacuum. The advantages of this method over use of fixing and dehydrating solutions are minimal chemical changes in tissue, a minimum of shifting of diffusible components, and a greater preservation of cytoplasmic inclusions.

frontal p. A prismatic extension from the body of the maxilla, forming part of the medial margin of the orbit and of the lateral side of the nasal cavity.

frontonasal p. The anterior region of the embryonic head that later develops into the frontal, median nasal, and lateral nasal processes. Also called *nasofrontal p.*

frontosphenoidal p. The thick, serrated, superior angle of the zygomatic bone which articulates with the zygomatic process of the frontal bone and with the great wing of the sphenoid.

funicular p. The portion of the tunica vaginalis that surrounds the spermatic cord. See Plate 29.

globular p. The inferior bilateral bulbous expansions of the median nasal process that fuse in the midline to form the philtrum of the upper lip and adjacent premaxilla. It is erroneously used as synonymous with median nasal process.

glossohyal p. A small vestigial process from the anterior surface of the hyoid bone, prominent in some mammals.

hamate p. See uncinate p. of the ethmoid bone
hamular p. ( ) A hooklike process of bone on the lower extremity of the medial pterygoid plate, around which the tendon of the tensor palati muscle bends. (b) The hooklike termination of the lacrimal crest.
head p. The otochord or notochordal plate formed as an axial outgrowth of the primitive node.
Hickman molecular distillation p. A commercially important process for the concentration of vitamin A from fish-liver oils by distillation under high vacuum with short path between the surface of the oil and the condenser
inferior articular p. One of pair of processes projecting downward from vertebral arch and articulating with superior articular process of the vertebra next below
inferior tegmental tympanic p. A narrow plate of bone which proceeds from the anterior margin of the anterior pyramidal surface of the temporal bone and forms part of the petrotympanic fissure.
infraorbital p. The anterior angle of the zygomatic bone sharp and pointed, which articulates with the maxill and occasionally forms the superior boundary of the infraorbital foramen.
infundibular p. The pars nervosa of the neurohypophysis.
intrajugular p. A curved process found in some skulls which projects from the floor of the jugular notch and partially or completely divides the jugular foramen.
jugular p. A rough process external to the condyle of the occipital bone.
lacrimal p. A short process of the inferior nasal concha that articulates with the descending process of the lacrimal bone.
lateral nasal p. The embryonic process or fold bounding the lateral margin of the olfactory pit that forms side and wing of the ose.
lateral palatine p. See palatal *p.*
lateral p. of the malleus. A slight projection from the root of the manubrium of the malleus, lying in contact with the tympanic membrane. Formerly called *short p.*
lateral p. of the talus. A process passing downward and laterally from the lateral surface of the talus bone.
lenticular p. The extremity of the long process of the incus, covered with cartilage and articulating with the stapes.
long p. of the incus. A slender process that descends vertically from the body of the incus and articulates with the head of the stapes.
long p. of the malleus. See anterior *p.* of the malleus.
lyophile p. A method for drying in vacuo plasma or serums from the frozen state.
mammillary p. One of the tubercles on the posterior part of the superior articular processes of the lumbar vertebrae.
mandibular p. The chief part of the embryonic mandibular arch that forms the lower jaw
marginal p. A prominence situated on the lateral margin of the frontosphenoidal process of the zygoma.
mastoid p. The protruding part of the temporal bone felt behind the ear See Plates 1 20.
maxillary palatal p. See maxillary *p.* of the palatine bone.
ma illary p. of the mbryo. An embryonic outgrowth from the dorsal part of the mandibular arch that forms the lateral part of the upper lip the upper cheek region, and the upper jaw except the premaxilla.
maxillary p. of the inferior nasal concha. A thin plate of bone descending from the ethmoid process of the inferior nasal concha, and hooking over the lower edge of the orifice of the antrum.
maxillary p. f the palatine bone. A variable projecting lamina of the anterior border of the palate bone which is directed forward and down in the lower and back part of the opening of the maxillary sinus. Syn., *maxillary palatal p.*
maxillary p. of the zygomatic bone. A rough, triangular process from the anterior surface of the zygomatic bone which articulates with the maxilla.
medial angular p. of the frontal bone. The medial end of the supraorbital margin.
median nasal p. The entire region between the olfactory sacs and below the frontonasal sulcus of the embryo. It forms the bridge, mobile septum, and anterior portion of the cartilaginous septum of the nose, the philtrum of the lip, and the premaxillary portion of the upper jaw
middle clinoid p. Usually small tubercle situated behind the lateral end of the tuberculum sellae. In some skulls it is not present and in others it is large and joins with the anterior clinoid process.
muscular p. A stout process from the lateral angle of the base of the arytenoid cartilage into which are inserted the cricoarytenoid muscles.
nasal p. of the frontal bone. The downward projection of the nasal part of the frontal bone which terminates as the nasal spine.
nasal p. of the maxilla. The frontal process of the maxilla.
nasofrontal p. See frontonasal *p.*
notochordal p. See head *p.*
odontoblastic p. The cytoplasmic process of an odontoblast which lies in dentinal tubule. Syn. *Tomes fiber*
odontoid p. The toothlike process of the axis which ascends and articulates with the atlas
olecranon p. A bony eminence on the upper end back part of the ulna. In extension of the forearm it fits into the olecranon fossa of the humerus.
opercular p. A caudal outgrowth of the hyoid arch that helps obliterate the cervical sinus
orbital p. of the palatine bone. A process directed upward and outward from the upper portion of the palatine bone.
orbital p. of the zygomatic bone. A thick plate projecting backward and medially from the orbital margin.
palatal p. (a) A ventromedial outgrowth of the embryonic maxillary process that develops into the definitive palate. Also called *palatine p.* *lateral palatine p.* (b) A thick process projecting horizontally medial from the medial aspect of the maxilla, forming part of the floor of the nasal cavity and part of the roof of the mouth. Also called *palatine p.* *f the maxilla.*
papillary p. A short, rounded process extending inferiorly from the caudate lobe of the liver behind the portal fissure. In the fetus it is large and in contact with the pancreas.
paramastoid p. In some kulls. downward projection from the lateral part of the jugular process which may articulate with the transverse process of the tlas also called *paraoccipital p.*
paraoccipital p. See paramastoid *p.*
petrosal p. A sharp process of the sphenoid bone located below the notch for the passage of the abducens nerve, which articulates with the apex of the petrous portion of the temporal bone and forms the medial boundary of the foramen lacerum.
phalangeal p. An outward prolongation of one

of the outer rods of the spiral organ, or organ of Corti.

plantar p. of the navicular bone. The most prominent point on the plantar surface of the navicular bone of the foot.

postauditory p. A pointed extension of the squamous temporal which forms the lateral wall of the tympanic antrum and helps form the posterior wall of the external auditory meatus.

posterior clinoid p. One of the two short bony extensions from the superior angles of the dorsum sellae which give attachment to the tentorium cerebelli.

posterior p. of the talus. A prominent tubercle on the posterior surface of the talus to which the posterior talofibular ligament is attached.

postglenoid p. A process of the temporal bone situated immediately in front of the petrotympanic fissure, separating the mandibular fossa from the external auditory meatus.

progressive processes. Those which continue after the requirements of the organism have been satisfied.

protoplasmic p. Any slender extension of cytoplasm from the body of a cell.

pterygoid p. of the sphenoid bone. One descending perpendicularly from the point of junction of the body with the greater wing of the sphenoid bone, and consisting of a lateral and a medial plate.

pterygospinous p. A spine from the posterior portion of the lateral pterygoid plate which gives attachment to the pterygospinous ligament.

pyramidal p. A tuberosity projecting backward and laterally from the junction of the horizontal and vertical parts of the palatine bone, fitting into a notch between the inferior extremities of the pterygoid plates and articulating anteriorly with the tuberosity of the maxilla. Syn., *tuberosity of the palatine bone.*

random p. See *stochastic p.*

retromandibular p. The medial, narrow portion of the parotid gland filling the fossa behind the mandible.

short p. of the incus. A conical process projecting almost horizontally backward from the body of the incus and attached by ligamentous fibers to the margin of the opening leading into the tympanic antrum.

short p. of the malleus. See *lateral p. of the malleus.*

sphenoidal p. A thin plate of bone directed upward and inward from the vertical plate of the palatine bone.

sphenoidal p. of the septal cartilage. The posterior extension, variable in size, of the septal cartilage between the vomer and perpendicular plate of the ethmoid.

sphenoidal turbinated p. A small, curved plate of bone which forms the anterior wall of each sphenoidal air sinus: also called *sphenoidal concha.*

sphenomaxillary p. An inconstant downward prolongation of the greater wing of the sphenoid.

spinous processes of the ilium. The spines of the ilium, anterior and posterior superior and anterior and posterior inferior.

spinous p. of a vertebra. The prominent backward projection from the middle of the posterior portion of the arch of a vertebra.

stochastic p. *In statistics,* random process, covering practically all the theory of probability from coin-tossing to harmonic analyses; used mostly when a time parameter is introduced.

styloid p. of the fibula. See *apex of the head of the fibula.*

styloid p. of the radius. A projection from lateral border of lower extremity of the radius.

styloid p. of the temporal bone. A sharp spine about an inch in length, descending downward, forward, and inward from the inferior surface of the petrous portion of the temporal bone. See Plates 1, 20.

styloid p. of the third metacarpal. A projection from the lateral side of the base of the third metacarpal.

styloid p. of the ulna. A projection from the inner and posterior portion of the lower extremity of the ulna.

subsella p. An inconstant process of the palatine bone connecting the orbital process with the sphenoidal process.

superior articular p. One of a pair of processes projecting upward from the side of the vertebral arch and articulating with an inferior articulating process of the vertebra above.

supracondylar p. A small projection, found in rare instances, about two inches above the medial epicondyle of the humerus, with which it connects by a fibrous band, and under which the median nerve and brachial vessels may pass.

temporal p. The posterior angle of the zygomatic bone by which it articulates with the zygomatic process of the temporal bone.

Tomes's p. See *ameloblastic p., odontoblastic p.*

transverse p. A process projecting outward from the side of a vertebra, at the junction of the pedicle and the lamina.

trochlear p. A variable process on the lateral surface of the calcaneus which separates the tendons of the peroneus longus and the peroneus brevis muscles.

tubal p. An occasional spur of bone projecting backward from the middle portion of the posterior border of the medial pterygoid plate.

unciform p. The hamulus of the hamate bone.

uncinate p. of the ethmoid bone. A hooklike projection from the inferior portion of either labyrinth; it articulates with the ethmoidal process of the inferior turbinate bone.

uncinate p. of the pancreas. An extension from the head of the pancreas to the left behind the superior mesenteric vessels.

vaginal p. of the peritoneum. A tube of peritoneum which evaginates through the inguinal canal into the scrotum (or labium majus) during embryonic life. In the male the distal portion persists as the tunica vaginalis testis. In the female a portion occasionally persists, forming the canal of Nuck.

vaginal p. of the sphenoid bone. A projection from the inferior surface of the body of the sphenoid bone, running horizontally inward from near the base of the medial pterygoid plate.

vaginal p. of the temporal bone. A sheathlike plate of bone extending backward from carotid canal to mastoid process. It separates behind into two laminae enclosing the styloid process.

vermiform p. A tubular diverticulum of the cecum. Also called *vermiform appendix.*

vertebral p. One of the processes projecting from a vertebra—e.g., transverse process, superior articular process, inferior articular process.

vocal p. The anterior process of the arytenoid cartilage.

xiphoid p. The elongated process projecting caudad from the lower end of the sternum between the cartilages of the seventh ribs. It usually becomes osseous after the age of 60.

zygomatic p. of the frontal bone. A strong, prominent lateral projection from the supraorbital margin of the frontal bone which articulates with the zygomatic bone.

zygomatic p. of the maxilla. A rough, triangu-

lar serrated eminence which articulates with the maxillary process of the zygomatic bone.

zygomatic p. of the temporal bone. A long projection from the lower part of the squamous portion of the temporal bone, articulating with the zygomatic bone.

pro·ces″so·ma′ni·a [processus; G. *mania*, madness]. A mania for litigation.

pro·ces′sus [L.]. A process.

p. gracilis. See anterior process of the malleus.

pro·chei′li·a. A condition in which a lip is farther forward than is normal. Cf. *retrocheilia*.

pro·chei′lon (pro-kigh′lon) [G. *pro*, in front of; *cheilos*, lip]. The prominence in the middle of the upper lip.

procholon. Trade-mark for dehydrocholic acid, an oxidation product of cholic acid derived from natural bile acids.

pro·chon′dral (pro-kon′drul) [G. *pro*, before; *chondros*, cartilage]. Prior to the formation of cartilage.

pro·chor′dal (pro-kor′dul) [G. *pro*, in front of; *chordē*, string]. Situated in front of the notochord.

pro·cho·re′sis (pro″kor-ee′sis) [G., a going forth]. The propulsion of food through the gastrointestinal tract. Obs.

Prochownick′ method. See under *artificial respiration*.

pro·chro′ma·tin [G. *pro*, before; *chrōma*, color]. Paranuclein, the substance composing the nucleolus of a cell.

pro″ci·den′ti·a (pros″i-den′shuh, -shee-uh, pro″si-) [L., a falling forward]. The falling or sinking down of a part. Prolapse, prolapsus.

pro·con″dy·lism. Forward deviation of the mandibular condyles.

pro″con·ver′tin. A precursor in normal blood of convertin or SPCA.

pro·con·ver′tin–con·ver′tin. See *convertin*.

pro′cre·ate [L. *procreare*, to beget]. Beget.

pro·cre·a′tion [L. *procreatio*, from *procreare*]. The act of begetting offspring. —**pro′creative,** *adj.*

proc″ta·gra (prock-tay′gruh, prock′tuh-gruh, prock-tag′ruh) [G. *prōktos*, anus; *agra*, a hunting]. Sudden pain in the anal region.

proc·tal′gi·a [*prōktos*; G. *algos*, pain]. Neuralgic pain in the anus or rectum.

p. fugax. Acute severe pain of coccyx and anorectal regions.

proc″ta·tre′si·a (prock″ta-tree′shuh, -see-uh, -zhuh, -zee-uh) [*prōktos*; G. *atrētos*, not perforated]. An imperforate condition of the anus or rectum.

proc″tec·ta′si·a (prock″teck-tay′shuh, -see-uh, -zhuh, -zee-uh), **proc·tec′ta·sis** [*prōktos*; G. *ektasis*, extension]. Dilatation of the anus or rectum.

proc·tec′to·my [*prōktos*; G. *ektomē*, excision]. Excision of the anus and rectum, usually through the perineal route.

proc·ten′cli·sis (prock-teng′kli-sis, prock″ten-kly′sis) [*prōktos*; G. *enklisis*, displacement]. Stricture of the rectum or anus.

proc″teu·ryn′ter (prock″tew-rin′tur) [*prōktos*; G. *eurynein*, to make wide]. An instrument for dilating the anus or rectum.

proc·ti′tis [*prōktos*; G. *-itis*, inflammation]. Inflammation of the anus or rectum.

circumscribed hypertrophic p. A well-demarcated annular lesion of the rectal mucosa confined to the region of the sphincteric ring, characteristically exhibiting thick folds and deep sulci and causing severe pain with bleeding on defecation.

gonorrheal p. A self-limited inflammatory disease of the rectum due to gonococcal infection, producing severe rectal burning and itching and usually subsiding within one month, regardless of treatment. It is seen in epidemics among infants with gonorrheal vaginitis, in adult females having venereal disease, and more rarely in male sexual perverts.

proc·to-, proct- [*prōktos*]. A combining form meaning *anus*; used to denote *the rectum*.

proc′to·cele [*prōktos*; G. *kēlē*, hernia]. The extroversion or prolapse of the mucous coat of the rectum.

vaginal p. A hernia of the rectum appearing in the vagina.

proc·toc′ly·sis [*prōktos*; G. *klysis*, a drenching]. The infusion of fluids by rectal tube.

proc″to·co·li′tis [*prōktos*; G. *kolon*, colon; *-itis*, inflammation]. Inflammation of the rectum and colon.

proc″to·co″lon·os′co·py [*prōktos*; *kolon*; G. *skopein*, to examine]. Inspection of the interior of the rectum and lower colon.

proc″to·col′po·plas″ty [*prōktos*; G. *kolpos*, vagina; *plassein*, to form]. Closure of a rectovaginal fistula.

proc″to·cys′to·plas″ty [*prōktos*; G. *kystis*, bladder; *plassein*]. A plastic operation on the rectum and the urinary bladder for repair of rectovesical fistula. Obs.

proc″to·de′um [*prōktos*; G. *hodaios*, on the way]. A pitlike, ectodermal depression formed by the growth of the anal hillocks surrounding the anal part of the cloacal membrane. Upon rupture of the latter it forms part of the anal canal. Also called *anal pit*, *primitive anus*.

proc″to·dyn′i·a [*prōktos*; G. *odynē*, pain]. Pain about the anus or in the rectum.

proc·tol′o·gist [*prōktos*; G. *logos*, word]. One versed in diseases of the anus and rectum.

proc·tol′o·gy [*prōktos*; *logos*]. The science of the anatomy, functions, and diseases of the rectum and anus. —**proctolog′ic,** *adj.*

proc″to·pa·ral′y·sis [*prōktos*; G. *paralysis*, paralysis]. Paralysis of the external anal sphincter muscle.

proc′to·pex″y [*prōktos*; G. *pēxis*, a fixing]. The fixation of the rectum by anchoring it into the hollow of the sacrum by means of sutures passing externally across the sacrum. Also called *rectopexy*.

proc″to·pho′bi·a [*prōktos*; G. *phobos*, fear]. A morbid dread or apprehension of pain, common in persons with diseases of the rectum.

proc′to·plas″ty [*prōktos*; G. *plassein*, to form]. Plastic surgery of the anus.

proc″to·ple′gi·a. Proctoparalysis.

proc″top·to′si·a (prock″top-to′shuh, -see-uh, -zhuh, -zee-uh) [*prōktos*; G. *ptōsis*, a falling]. Anal prolapse. Obs.

proc·tor′rha·phy [*prōktos*; G. *rhaphē*, suture]. The plaiting of the enlarged and prolapsed rectal wall by suture, to reduce the circumference.

proc″tor·rhe′a [*prōktos*; G. *rhoia*, flow]. Escape of mucus through the anus.

proc′to·scope [*prōktos*; G. *skopein*, to examine]. An instrument for inspecting the anal canal and rectum.

proc·tos′co·py [*prōktos*; *skopein*]. Ocular inspection of the anal canal and rectum with the aid of special instruments.

proc″to·sig″moid·ec′to·my [*prōktos*; G. *sigmoeidēs*, crescent-shaped; *ektomē*, excision]. The abdominoperineal excision of the anus and rectosigmoid, with the formation of an abdominal colostomy.

proc″to·sig″moid·i′tis. Inflammation of the rectum and sigmoid colon.

proc″to·sig″moid·os′co·py. See *sigmoidoscopy*.

proc′to·spasm [*prōktos*; G. *spasmos*, spasm]. Spasm or tenesmus of the rectum.

proc·tos′ta·sis [*prōktos*; G. *stasis*, a standing]

Constipation due to nonresponse of the rectum to the defecation stimulus.

proc"to-ste-no'sis. Stricture of the anus or rectum.

proc-tos'to-my [*proktos*; G. *stoma*, mouth]. The establishment of a permanent artificial opening into the rectum.

proc-tot'o-my. Incision into the rectum or anus, especially for stricture or imperforate anus. Described as external if the incision is below the external sphincter, and internal if above it.

pro-cum'bent [L. *procumbens*, leaning forward]. 1. Prone; lying face down. 2. *In dentistry*, said of a tooth whose long axis approaches horizontality. —**procum'bency**, *n.*

pro-cur'sive [L. *procurrere*, to rush forward]. Running forward, as procursive epilepsy, a form in which the patient runs during the epileptic attack.

pro-cur-va'tion [L. *procurvus*, curved forward]. Forward inclination of the body.

pro-cu'tin. A substance capable of specifically increasing the capacity of an excitant to produce reaction in the sensitive skin, or of increasing the capacity of the skin to react to an excitant.

pro-dig"i-o'sin (pro-didj"ee-o'sin). $C_{20}H_{25}N_3O$; an antibiotic substance derived from *Serratia marcescens* (*Bacillus prodigiosus*, *Chromobacterium prodigiosum*) inactive against two representative species of bacteria but bacteriostatic against *B. subtilis*, *C. diphtheriae*, and *S. aureus*.

prod'ro-mal, pro-dro'mal [G. *prodromos*, running before]. Relating to early manifestations or symptoms; premonitory.

pro'drome (pl. *prodromata*) [*prodromos*]. An early manifestation of impending disease, before the specific symptoms begin. —**prod'romal, prod'romous, prodrom'ic,** *adj.*

prod'uct [L. *productum*, from *producere*, to produce]. 1. Effect; result; that which is produced. 2. *In chemistry*, the compound formed by a reaction.

addition p. A compound resulting from the direct union of two substances.

solubility p. The product of the concentrations of the ions of a substance in a saturated solution of the substance, each concentration term being raised to the power equal to the number of ions represented in a molecule of the substance. Also called *precipitation value*.

split-product. A decomposition product, as of hydrolytic action.

pro-duc'tive [*producere*]. Forming or capable of forming new tissue.

pro-en-ceph'a-lus [G. *pro*, in front of; *enkephalos*, brain]. Partial acrania in the frontal region with encephalocele or hydrencephalocele.

pro-en'zyme. The substance in a living cell from which an enzyme is formed.

pro-e-ryth'ro-blast [*pro*; G. *erythros*, red; *blastos*, germ]. A basophilic erythroblast, the youngest and largest cell of the erythrocyte precursors. Nucleoli are present. In normal bone marrow these cells are rare. In some classifications, the proerythroblast is synonymous with the megaloblast. Also called *lymphoid hemoblast*, *macroblast*, *macronormoblast*, *promegaloblast*, *pronormoblast*, *rubriblast*.

pro-e-ryth'ro-cyte. See *reticulocyte*.

Proescher's oil-red-pyridine. See under *stain*.

pro-es'tro-gen. A substance in itself weakly estrogenic which is converted to a more active estrogen in the body.

pro-es'trus [*pro*; G. *oistros*, gadfly]. A phase of the estrous cycle in mammals preceding heat; characterized by growth of the endometrium and follicular development in the ovary.

Proetz, Arthur Walter [*American otolaryngologist*, 1888–]. Known for his employment of a special method of treating infections of the paranasal sinuses by filling them with fluid using negative pressure; called *Proetz' treatment*, *displacement method*.

pro-fen'a-mine hy"dro-chlo'ride. International Pharmacopoeia name for 10-(2-diethylamino-1-propyl)phenothiazine hydrochloride or N(2-diethylamino-1-propyl)dibenzoparathiazine, $C_{19}H_{24}N_2S.HCl$, a white, crystalline powder slightly soluble in cold water; used in the treatment of parkinsonism. Syn., *ethopropazine hydrochloride*, *phenopropazine hydrochloride*. See *lysivane hydrochloride*, *parsidol hydrochloride*.

pro-fer'ment. See *proenzyme*.

pro-fes'sion-al [L. *professio*, profession]. 1. Pertaining to a profession; in keeping with ethics. 2. Produced by the practice of a profession, as professional neuritis (writers' cramp, etc.)

pro-fes'sion-al serv'ice u'nit. A mobile unit of the U.S. Army Medical Service composed of professional teams and necessary service elements.

Profichet, Georges Charles [*French physician*, 1873–]. Described a group of symptoms associated with deposits of subcutaneous calcareous nodules, especially in the periarticular tissues, associated with a tendency to atrophy and atrophic and nervous symptoms; called *Profichet's disease* or *syndrome*.

pro-fla'vine (pro-flay'veen, -vin). $C_{13}H_{11}N_3$. 3,6-Diaminoacridine. Its salts are used for their antiseptic effect in the treatment of wounds, urethritis, vaginitis, gonorrheal conjunctivitis, and other conditions requiring the use of a germicide.

p. dihydrochloride. $C_{13}H_{11}N_3.2HCl.2H_2O$. Orange-red to brown-red crystals. 1 Gm. dissolves in about 10 cc. of water.

p. sulfate. $C_{13}H_{11}N_3.H_2SO_4.H_2O$. A reddish brown, crystalline powder; 1 Gm. dissolves in about 300 cc. of water.

pro-flu'vi-um [L., a flowing forth]. A flux or discharge.

p. alvi. Diarrhea.

p. lactis. Excessive flow of milk.

pro-fun'da [fem. of L. *profundus*, deep]. Deep-seated; a term applied to certain arteries and veins.

pro-fun'dus [L., deep]. Deep-seated; applied to certain muscles and nerves.

pro-gas'ter. See *archenteron*.

pro-gen'er-ate [L. *pro*, before; *degenerare*, to depart from its race or kind]. One endowed with superior faculties; a genius.

pro-gen'e-sis [G. *pro*, before; *genesis*, production]. The development and fate of the germ cells before fertilization or blastogenesis.

pro-gen'i-tor [L.]. An ancestor.

prog'e-ny (prodj'i-nee) [L. *progenies*, offspring]. Offspring; descendants.

pro-ge'ri-a [G. *progêrôs*, prematurely old]. Premature senility; a morbid state showing symptoms both of infantilism and senility. Also called *Hutchinson-Gilford disease*.

p. of adults. A familial and hereditary multiple tissue nevus characterized by stunting of growth. It involves the skin, producing tautness and thinning, and premature baldness. Other involvements include bilateral juvenile cataracts, pluriendocrine dysfunction, osteoporosis, and calcification in muscles, ligaments, and arteries, especially of the lower extremities. Also called *Werner's syndrome*.

p. of children. A nonfamilial disorder appearing several months after birth, characterized by cessation of growth, senilelike changes, large skull, birdlike features, atrophic skin, and usually severe mental defects.

pro ges ta tion-al. Old term for progravid.

pro ges ter-one (pro-jes tur-ohn) $C_{21}H_{30}O_2$. A diketone having the composition of pregnene-3-20-dione. Like other sex hormones, it is steroid. It is the hormone found in the corpus luteum; occurs as white, crystalline powder The hormone occurs in two crystalline forms of identical physiologi potency both forms are insol ble in water but soluble in alcohol, most organic solvents, and vegetable ils. The value of progesterone as a remedial agent is not well established. It has been used in recurrent abortions and in threatened abortion. It is also used in various disturbances of menstruation. Progesterone is effective only after parenteral administration. It is vailable, in oil solution, under various trade-marked names, including *lutosterone, lutocylin, progestin, progestone,* and *proluton* See Table f Hormones in the Appendix.

progestin. Trade-mark for brand of progesterone.

progestone. Trade-mark for brand of progesterone.

progesteral. Trade-mark for anhydrohydroxyprogesterone or ethisterone.

pro-glot'tid [G *pro* before; *glōtta*, tongue]. A segment of tapeworm.

pro-glot'tis. Proglottid.

pro-gnath'l [pro; G *gnathos*, j w]. *I craniometry* designating condition of the upper jaw in which it projects anteriorly with respect to the profile of the facial skeleton, when the skull is oriented on the Frankfort horizontal plane; having gnathi index of 103.0 or more.

prog'na thism [pro; *gnathos*]. The condition of having projecting j ws. —**prognath'ic, prog'nathous,** *adj*

alveolosubnasal p. The projection of the subnasal portion of the maxillary alveolus beyond the line of the facial profile.

prog nose' (prog noce nose') [G *prognōsis*, foreknowledge] Forecast the course and outcome of particular case of disease, illness, or injury *Rare.*

prog no sis [G]. A prediction of the duration, course, and termination of disease, based all information vailabl in the individual case and knowledge of how the disease behaves generally —**prognos'tic,** *adj*

prog nos'ti cate [*prognōsis*] Give prognosis.

prog"nos ti'cian (prog"nos-tish un) [G *prognōstikos*, foreknowing]. One who is versed in prognosis.

pro gon ma [G *pro* before *gonos*, seed *-ōma*, tumor]. A nodular or tumorlike mass due to mbryonal displacement, resulting in structures resembling those of primitive forms of the species, as exemplified in hairy moles.

pro gran'u lo-cyt See *promyelocyte, myelocyte.*

pro grav'id [pro- L. *gravidus*, pregnant] Referring to the lutein phase or second growth phase of the endometrium; the glands become tortuous and irregularly sacculated, and the secretion contains glycogen. In pregnancy the progravid changes progress for six to eight weeks in the nonpregnant uterus for about ten days. Syn., *progestational.*

pro-gres sion [L *progressio*, going forward] The act of advancing or moving forward.

backward p. A backward walking, rare symptom of certain nervous lesions, such as Parkinsonism.

crosslegged p. Walking with the legs almost crossing, condition sometimes observed in bilateral hip disease and in cerebral spasti palsy

pro-gres'sive [*progressio*]. Gradually extending.

progynon B. Trade-mark for alpha-estradiol benzoate in oil for intramuscular i jection.

progynon DH Trade-mark for estradiol in tablets, solution, ointment, suppositories, and nasal spray

progynon DP Trade-mark for estradiol dipropionate in oil fo intramuscular injection.

pro"in va sin I An enzyme which accompanies and protects the hyaluronidase of pathogenic bacteria and snake venoms. It acts by destroying antiinvasin I, an enzyme in blood plasma which is capable of destroying hyaluronidase, and thereby interferes with this defense mechanism of the host against the action f hyaluronidase.

pro"i o-sys'to le (pro ee-o-sis'to lee) [G. *prōi*, early in the day; *systolē*, contraction]. Premature heart beat. *Rare.*

pro"i o ti a (pro ee-o shee-uh) **pro"i-o'tes** (pro' ee-o tees) [*prōios*]. Sexual precocity

pro-jec tion [L. *projectio* throwing forward]. 1 The act of throwing forward. 2. A part extending beyond its surroundings. 3. The referring of impressions made on the organs of sense to the position of the bject producing them 4 *In psychopathology* mental dynamism whereby person overcomes his feeling of inadequacy or guilt by transferring to other persons or to objects the responsibility for such inadequacy The most prominent mental mechanism in paranoia.

pro kar'y o-cyte. See *erythroblast.*

pro-ki'nase (pro-kigh nace, -nase, pro kin ace, -ase) A proteolytic enzyme found in extracts of the pancreas and demonstrated to pass into the pancreati secretion.

prokliet. Trade-mark for brand of mamadose

pro-la'bi um [L. pro, in front of *labium*, lip] 1 Exposed part of the lip. 2. Central prominence of the lip.

pro-lac'tin. The adenohypophyseal hormone which stimulates lactation in the mammalian breast also called *galactin, mammary-stimulating hormone, mammogenic hormone, mammogen, mammotropin, luteotropin.* Syn., *lactogenic hormone.*

pro lam'ine (pro-lam'een, -in, pro'luh meen, -min) Gliadin. A vegetable protein, soluble in 80% alcohol, insolubl in water absolute alcohol, or neutral solvents. See American Classification of Proteins in the Appendix.

pro'lan-A. A follicle-stimulating hormone old term.

pro'lan—B. A luteinizing hormone which has been isolated from swine and sheep pituitaries

pro lapse [L. *prolapsus* falling]. The falling or sinking down of part.

frank p. Complete displacement downward of the uterus and inversion of the vagina, with both structures hanging outside the vulva.

internal p. Intussusception of the upper portion of th rectum and the rectosigmoid into the lower rectum concealed prolapse of the rectum

mucosal p. *I proctology,* protrusion of the mucous membrane of the rectum into the anal canal.

p. of the cord. Premature expulsion of the umbilical cord during parturition.

p. f the iris. Protrusion of the iris through corneal wound.

p. of the uterus. Displacement of the uterus downward, sometimes outside the vulva. Syn. *descensus or prolapsus uteri.*

pro-lap sus [L.]. Prolapse.

p. ani. Extrusion of the lower division of the intestinal tract through the external sphincter of the anus.

p. uteri. Prolapse of the uterus.

pro-lep sis [G anticipation]. In periodic disease, the return of an attack or paroxysm before the expected time or at progressively shorter intervals. —**proleptic,** *adj*

pro-leu'ko-cyte (pro-lew'ko-sight) Leukoblast

pro-lif'er-ate [L. *proles*, offspring; *ferre*, to bear]

Multiply; generate by increase in number. —**prolif'erative, prolif'erous,** *adj.*

pro·lif"er·a'tion [*proles; ferre*]. Multiplying, as by cellular division.

pro·lif'ic [*proles*]. Fruitful.

pro·lig'er·ous (pro·lidj'ur·us) [*proles*; L. *gerere*, to bear]. Germinating; producing offspring.

pro'lin·ase. The enzyme which hydrolyzes proline peptides to proline and simpler peptides.

pro'line (pro'leen, ·lin). $C_4H_8O_2N$. Alpha- or 2-pyrrolidine carboxylic acid, an amino acid resulting from the hydrolysis of proteins.

pro·lip'ase. Inactive form of steapsin found in pancreatic juice.

proluton. Trade-mark for a brand of progesterone.

pro'lyl. The univalent radical,

$$\overline{HN\ CH_2\ CH_2\ CH_2\ CHCO}—$$

of the amino acid proline.

pro·lym'pho·cyte [G. *pro*, before; L. *lympha*, water; G. *kytos*, cell]. A cell of the lymphocyte series intermediate in maturity between the lymphoblast and the lymphocyte. A peroxidase negative cell of the size of a large lymphocyte but with a larger nucleus, whose chromatin structure is finer than that of the large lymphocyte but coarser than that of the lymphoblast. It is rarely seen in normal adult blood but frequently in the blood of children and in blood in various infectious states.

promacetin. Trade-mark for sodium 4,4'-diaminodiphenylsulfone-2-N-acetylsulfonamide; $C_{14}H_{14}N_3NaO_5S_2$; used in treatment of leprosy.

promanide. Trade-mark for disodium *p,p'*-sulfonyldianiline-N,N'-diglucoside disulfonate, $C_{24}H_{34}N_2Na_2O_{18}S_3$; a drug used in the treatment of leprosy and accessible surface tuberculous lesions. See *promin*.

pro·meg"a·kar'y·o·cyte" [*pro*; G. *megas*, large; *karyon*, kernel; *kytos*]. The precursor of a megakaryocyte. It is smaller than the megakaryocyte, the nucleus becomes indented, cytoplasm is lightly basophilic, and contains fine granules. Also called *lymphoid megakaryocyte*.

pro·meg'a·lo·blast". See *pronormoblast*. Also see *megaloblast*.

pro·meg"a·lo·kar'y·o·cyte. See *promegakaryocyte*.

pro·mes·o·bil"i·fus'cin. A colorless precursor of mesobilifuscin, apparently identical with mesobileukan.

pro·meth'a·zine hy"dro·chlo'ride. $C_{17}H_{20}N_2S \cdot HCl$. N-(2'-dimethylamino-2'-methyl)ethylphenothiazine hydrochloride, a white to faint-yellow powder, very soluble in water; an antihistaminic substance. See *phenergan hydrochloride*.

pro·meth·es·trol di·pro'pi·o·nate. Generic name for 3,4-bis(m-methyl-p-propionoxyphenyl)hexane, or dimethylhexestrol dipropionate, a synthetic estrogen. See *meprane dipropionate*.

pro·me'thi·um. Pm. The name adopted for element 61, which has been called also *cyclonium*, *florentium*, and *illinium*.

promin. Trade-mark for disodium *p,p'*-sulfonyldianiline-N,N'-didextrose disulfonate, $C_{24}H_{34}N_2Na_2O_{18}S_3$; a drug used in the treatment of leprosy and accessible surface tuberculous lesions. See *promanide*.

prominal. Trade-mark for mephobarbital.

prom'i·nence [L. *prominentia*, jutting out]. 1. A projection, especially on a bone. 2. The state of projecting or standing out.

genital p. An accumulation of cells on the ventral aspect of the embryonic cloaca, from which the generative organs are developed.

laryngeal p. The tubercle of the thyroid cartilage often called *Adam's apple*.

prom'i·zole. Trade-mark for 2,4'-diamino-5-thiazolylphenyl sulfone. This compound is a sulfone, as distinguished from other sulfanilamide congeners, which are sulfonamides, used in the treatment of tuberculosis and leprosy, in the latter disease proving especially promising.

prom·na·si'a (prom·nay'zhuh). See *paramnesia*.

pro·mon'o·cyte, pro·mo·noc'y·cyte [G. *pro*; L. *pro*, before; G. *monos*, single; *kytos*, cell]. 1. An immature monocyte derived from a monoblast. The nucleus is spheroidal or moderately indented, and nucleolus may be visible. Also called *young monocyte*, *premonocyte*. 2. One of the transitional stages between the lymphocyte and monocyte.

prom'on·to·ry [L. *promunturium*, promontory]. A projecting prominence.

double p. An anomaly in which the body of the first sacral vertebra is displaced farther forward *than those below it, so that its lower margin* projects beyond the general surface.

false p. See double p.

p. of the middle ear. The outward protrusion on the inner wall of the middle ear formed by the basal turn of the cochlea.

p. of the sacrum. The prominence formed by the angle between the upper extremity of the sacrum and the last lumbar vertebra.

pro·my'e·lo·cyte [G. *pro*, before; *myelos*, marrow; *kytos*, cell]. The earliest myelocyte stage derived from the myeloblast; it contains a few granules, some of which may be nonspecific and azurophilic, while others may be characteristic of the type of granulocyte into which the myelocyte develops. In early forms the nucleus may be covered by the nonspecific granules and still contain small nucleoli. Also called *premyelocyte*, *progranulocyte A*. Syn., *myelocyte A* and *B progranulocyte*.

pro'nate [L. *pronare*, to bend forward]. 1. Turn the forearm so that the palm of the hand is down or toward the back. 2. In the foot, to turn the sole outward with the lateral margin of the foot elevated; to evert, the preferable term.

pro·na'tion [*pronare*]. 1. The condition of being prone; the act of placing in the prone position. 2. The turning of the palm of the hand downward.

pro·na'tor [*pronare*]. That which pronates, as pronator teres and pronator quadratus, muscles of the forearm attached to the ulna and radius. See Table of Muscles in the Appendix.

p. radii teres. The pronator teres muscle; old term.

prone [L. *pronus*, leaning forward]. Lying with the face downward; the opposite of *supine*.

prone pres'sure meth'od. See Schafer method under *artificial respiration*.

pro·neph'ros (pl. *pronephroi*) [G. *pro*, before; *nephros*, kidney]. The primitive or head kidney derived from the cranial part of the nephrogenic cord. Vestigial in mammalian embryos, its duct, the pronephric duct, is taken over by the mesonephros and called the mesonephric or Wolffian duct. —**pronephric,** *adj.*

pronestyl hydrochloride. A trade-marked name for *procaine amide hydrochloride*.

prong [M.E. *prange*]. The root of a tooth.

pro'no·grade [L. *pronus*, leaning forward; *gradi*, to walk]. Walking or standing on all fours, as the quadrupeds.

pro·nor'mo·blast [G. *pro*, before; L. *norma*, rule; G. *blastos*, germ]. A young normoblast. Also see *proerythroblast*.

pro·nor'mo·cyte. See *reticulocyte*.

pron'to·sil. $(NH_2)_2C_6H_3N{:}NC_6H_4SO_2NH_2$. 2,4-Diaminoazobenzene-4'-sulfonamide. A reddish

crystalline powder soluble in water This drug was the forerunner of the sulfanilamide group of drugs.

p. album See *sulfanilamide*.

p soluble. See *neoprontosil*.

prontylin. Trade-mark for brand of sulfanilamide.

pro nu cle-us [G *pro*, before; L. *nucleus*, kernel]. One of the two nuclear bodies of newly fertilized ovum, the male pronucleus and the female pronucleus, the fusion of which results in the formation of the germinal (cleavage) nucleus.

proof gal'lon. A gallon of proof spirit.

proof spir'it. A mixture of ethyl alcohol and water containing 50% by volume of C_2H_5OH.

pro-o tic (pro-o tick, -ot'ick) [G *pro* in front of; *ous*, ear]. In front of the ear

pro o-va'ri um. See *paophoron*.

pro pa di ene. The gaseous hydrocarbon $CH_2{:}C{:}CH_2$ Syn., *allene*.

propadrine hydrochloride. Trade-mark for the sympathomimetic amine *phenylpropanolamine hydrochloride*.

pro pae-deu'tics (pro pi-dew ticks) [G *pro*, before *paideutikos*, of teaching]. Preliminary instruction. —**propaedeutic,** *adj*

prop a-gate [L. *propagare*, to generate]. Produce offspring —**propaga'tion,** *n*.

pro pal'I nal [G *pro* in front of; *palin*, backward]. *In biology*, pertaining to the forward and backward action of the jaws of some animals.

prop al lyl' nal. Generic title for 5-isopropyl-5-β-bromallyl barbituric acid. See *nostal*.

pro-pam'I di e (pro-pam -deen, -din) p,p'-(Trimethylenedioxy)dibenzamidine. $NH{:}C(NH_2)C_6H_4O.(CH_2)_3O.C_6H_4C(NH_2){:}NH$. A diamidine derivative used as surgical antiseptic

p. isethionate. $C_{21}H_{32}N_4O_{10}S_2$ the isethionate salt of propamidine, occurring as hygroscopic crystals or granular powder soluble in water: used in treatment of early stages of African trypanosomiasis and of leishmaniasis.

pro'pan-al. Propionaldehyde.

pro pane. The gaseous hydrocarbon $CH_3CH_2CH_3$, occurring in natural gas and in solution in crude petroleum

1,2-pro pane-di'ol. Propylene glycol.

pro"pa no'ic ac'id. Propionic acid.

pro pa-none. Acetone.

pro pene Propylene.

pro"pent-dy'o-pent. Either of the two colorless compounds, each containing two pyrrole rings, obtained when heme, bilirubin, or any other pigment containing four pyrrole rings is oxidized with hydrogen peroxide in alkaline solution. On reduction with sodium dithionite, propentdyopent is converted to red pigment known by the generic name *pentdyopent*.

pro pe nyl prop e-nyl. 1 The monovalent radical $CH_3CH{:}CH—$ derived from propylene. 2. The trivalent glyceryl radical $—CH_2.CH.CH_2—$

p. thylether $CH_2CH.CH_2.O.C_2H_5$; an inhalation anesthetic which produces irritation of the upper respiratory tract.

pro-pep sin. The zymogen of pepsin, found in the cells of the gastric glands.

pro-pep'tone. Hemialbumose. See *peptone*.

pro"pep to-nu'ri (G *pro*, before *peptos*, cooked; *ouron*, urine]. The presence of propeptone in the urine.

pro-per'din [*pro*; L. *perdere*, to destroy -*in*, protein]. A euglobulin of molecular weight greater than 1,000,000, found in the serum of higher animals, including man, which appears to be nonspecific antibodylike substance, distinct from classical specific antibody It destroys certain bacteria and viruses, lyses certain red blood cells, and requires magnesium ion and serum factors resembling complement for its action. Highly purified from human and bovine serum, it represents less than 0.03% of total serum protein.

pro"per-i to ne al [G *pro* in front of; *peritonaion*, membrane which contains the lower viscera] Situated in front of the peritoneum.

pro phase (pro f yz) [G. *pro* before *phasis*, phase]. The first stage of mitosis, in which the chromosomes are organized from nuclear materials as elongate spiremes.

pro ph n py ld a min pro phe pyr'i-dam ine. 1 Phenyl 1 (2-pyridyl)-3-dimethylaminopropane, an antihistaminic substance. Syn., *pheniramine*. See *trimeton*.

pro phy lac'ti [G *prophylaktikos*, prophylactic]. Pertaining to prophylaxis.

pro phy lac'tic. A remedy or agent that prevents the development of disease.

p. kit. An individual tube or packet containing chemicals, for use in the prevention of venereal disease.

pro phy lax'is [G *prophylax*, advanced guard] 1 Prevention of disease; measures preventing the development or spread of disease. 2. *I military medicine*, measures taken to prevent or reduce the harmful effects of chemical agents

Credé p. A 0.1% solution of silver nitrate for the prevention of ophthalmia neonatorum.

dental p. The prevention of dental and oral diseases by preventive measures, especially the mechanical cleansing of the teeth.

pro"pi on al'de hyde. CH_3CH_2CHO methylacetaldehyde; liquid with suffocating odor soluble in water used in synthesis of various compounds and as an attractant for the codling moth Syn., *propanal*, *propyl aldehyde*.

pro pi-o-nate. A salt of propionic acid.

Pro"pi on"I bac te ri um (pro pee-on bak-teer ee-um, pro pee-o ni) [G *prôtos*, first *piôn*, fat; *baktêrion*, little staff]. A genus of bacteria of the family Lactobacteriaceae, which ferment lactose to predominantly propionic and acetic acids

pro pi-on'ic ac'id (pro'pee-on ik, -o nick). CH_3CH_2COOH. A liquid acid of pungent odor; in the form of its calcium and sodium salts, it is used as fungicide. Syn., *propanoic acid*.

pro"pi-on'o- (pro'pee-on o-, -o no-), **propion-** combining form [*prôtos*; *piôn*]. *I chemistry* signifying *propionic*.

pro-plas ma-cyte (pro-plaz'muh-sight) [G. *pro* before; *plasma*, anything formed; *kytos*, cell]. 1 The precursor of the plasmacyte (plasma cell), usually larger than the adult cell, with nucleus which has finer chromatin structure and which is not necessarily eccentrically placed frequently seen in multiple myeloma. Also called *lymphoblastic* or *myeloblastic plasma cell*. 2. Türk's irritation cell.

pro pos'I tus [L.]. The individual or index case who is the starting point of family pedigree or genealogical chart. Syn., *proband*.

propoxate. Trade-mark for *arsenic phenylpropionate*.

pro-pri'e-tar"y [L. *proprietarius*, owner]. Any chemical, drug, or similar preparation used in the treatment of diseases, if such an article is protected against free competition as to name, product, composition, or process of manufacture, by secrecy patent, copyright, or any other means.

pro pri e tar y Of or pertaining to proprietary or proprietor protected by copyright or patent, made, marketed, or operated by person or persons having the exclusive right to do so, as proprietary medicine, proprietary school

pro pri o-cep'tion [L. *proprius*, one own perceptio perception]. Appreciation of position, balance, and changes in equilibrium on the part of the muscular system, especially during locomotion.

pro pri-o-cep'tive im pul-ses. Afferent nerve impulses originating in receptors in muscles, tendons, joints, and vestibular apparatus of internal ear Their reflex functions are concerned with locomotion and maintenance of posture.

pro pri o-cep'tor [*proprius*, perception, from *percipere*, to perceive]. A receptor located in muscle, tendon, joint, or vestibular apparatus, whose reflex function is locomotor or postural.

pro'pri-us [L.]. Individual; special, as extensor indicis proprius muscle, the special extensor of the index finger

prop-tom' ter [G *proptôsis*, fall forward; *metron*, measure]. An instrument for measuring the amount of exophthalmos.

prop-t sis (prop-t sis, pro to sis) [G., fall forward]. 1 A falling downward. 2. Prolapse. 3. Exophthalmos.

pro pul'sion [L. *propulsus*, driving forth]. 1. Act of pushing or driving forward. 2. A falling forward in walking, as observed in paralysis agitans.

pro pyl. The univalent radical CH_3CH_2CH derived from propane.

pro pyl ac'e-tate. $CH_3COO.C_3H$; colorless liquid, having an odor of pears, sparingly soluble in water miscible with alcohol used in formulation of perfumes and flavors and as solvent.

pro"pyl a-ce'tic ac'id. The ormal valeric acid.

pro pyl al'co-hol. C_3H OH; n-propyl alcohol; colorless liquid synthetically produced, miscible with water alcohol, and ether Syn., *ethyl carbinol*, *propylic alcohol*.

pro pyl al'de-hyde. Propanaldehyde.

pro"pyl amine C_3H NH 1-aminopropane; colorless, alkaline liquid with strong odor of ammonia, miscible with water used as an antispasmodic, antirheumatic, etc.

pro pyl a-mi"no-ben zo-ate. H_2N C_6H CO OC_3-H white, crystalline powder slightly soluble in water freely soluble in alcohol used, like thyl aminobenzoate, as local anesthetic.

pro pyl bu'ty-rate. C_3H CO_2C_3H ; colorless liquid, slightly soluble in water miscible with alcohol and ether

pro pyl ene, prop yl-ene. 1 C_3H_6 the unsaturated hydrocarbon, $CH_3CH:CH$ homolog of ethylene and isomer of cyclopropane; colorless gas 2. Th monovalent radical, $CH_3CH:CH$— 3. The bivalent radical, —$CH(CH_3)CH_2$—

pro pyl-ene di-chlo'ride. CH_3 CHCl CH_2Cl; 1,2-dichloropropane flammable, mobile liquid with an odor of chloroform, slightly soluble in water miscible with organic solvents; used as an oil and f t solvent and in dry cleaning

pro pyl-ene gly'col. $CH_3CHOHCH_2OH$; 1,2 dihydroxypropane; occurs as colorless, practically odorless, viscous liquid completely miscible with water and many organic solvents. Used as solvent for many medicinals. Syn., *1,2-propanediol*.

pro pyl hex'e-drine. Generic name for the volatile sympathomimetic amine sold under the trademark *benzedrex*.

pro pyl par'a-ben (*propylparaben*) C_6H OH-$COOC_3H$ Propyl parahydroxybenzoate, white powder soluble in bout 2000 parts of water bacteriostatic to preserve medicinal preparations.

pro pyl pro pi-o-nate. CH CH COO.C H ; colorless liquid, slightly soluble in water miscible with most organic liquids. used as solvent.

pro pyl-thi"o-u'ra-cil. The 6-n-propyl derivative of thiouracil, used like the latter as an antithyroid drug, but more effective and less toxic in therapeutic doses.

pro pyne. Allylene.

pro re na'ta [L.]. According to the circumstances f the case. Abbreviated, p. n.

pro-ren'nin. The zymogen of rennin or chymosin

pro-ru'bri-cyte [G *pro*, before; L. *ruber* red; G *kytos*, cell]. A cell in the formative stages of red blood cells, in which the chromatin is clumped and nucleolus is present. See *erythroblast*, *proerythroblast*.

pro-se cre tin. The precursor of secretin; it is secreted by the epithelium of the small intestine.

pro-sect [L. *prosecare*, to cut way]. Dissect subject or part for purposes of anatomic teaching or demonstration.

pro-sec'tor [L., from *prosecare*] One who prepares subjects for anatomic dissection or to illustrate didactic lectures.

pros"en ceph' -lon [G *pros*, toward *enkephalos*, brain]. The forebrain or anterior brain vesicle of the embryo that subdivides into telencephalon and diencephalon. From it are derived the cerebral hemispheres, olfactory lobes, corpus striatum and various parts of the thalamus, as well as the third and the lateral ventricles.

pro-sep'to zine (pro-sep'tuh-zeen, -zin) C_6H_5CH $NH.C_6H_4.SO_2.NH$ Benzyl sulfanilamide; occurs as white powder slightly sol ble in water Used in streptococci and gonococci infections. Also called *chemodyn*, *septazine*.

pro se re-zyme. See *prothrombin*.

Proskauer Bernhard [*German bacteriologist*, 1851-1915]. Described qualitative test for the presence of acetylmethylcarbinol or more correctly for diacetyl. Used to differentiate the *Bacillus aerogenes* from the colon bacillus, the first forming acetylmethylcarbinol while the colon bacillus does not; called *Proskauer* or *Voges-Proskauer reaction*.

Prosk nd Watson's test. See under *test*.

pros'o-coele, pros'o-cele. The cavity of the prosencephalon.

pros"o-dem'ic [G *prosô*, onward; *dêmos*, people]. Pertaining to disease spread by individual contact, as opposed to one spread by general means such as the water or milk supply

pros'op-, pros o-po- [G *prosôpon*, face]. A combining form meaning *face*.

pros"op-ag no'si (*of Wolpert*) Simultagnosia characterized by inability to recognize human face though its separate details are perceived.

pro-sop a-gus. See *prosopopagus*.

pros" -pal'gi a [G *prosôpon*, face; *algos*, pain]. Neuralgic pain in the distribution of the trigeminal nerve. Also called *facial neuralgia*, *tic douloureux*. —**prosopalgic**, *adj*

pro-sop'ic [*prosôpon*]. 1. *I* craniometry, designating facial skeleton that is convex or projects anteriorly in the midline; having an orbitonasal index of 110.0 or more. 2. *I* somatometry, designating face that is convex or projects anteriorly in the midline; having an orbitonasal index of 113.0 or more.

pros o-po -nos'chi-sis (pros o-po nos'ki sis) [*prosôpon*; G. *anô*, pward; *schisis*, cleavage]. Oblique facial cleft, or frontomaxillary fissure.

pros po di ple gi-a (pros o-po"dye-plee'jee-uh, pros"o-pod) [*prosôpon*, G. *dis*, twice; *plêgê*, stroke]. Bilateral facial paralysis.

pros o-po-dyn'i-a [*prosôpon*; G. *odynê* pain]. Facial pain, or neuralgia.

pros o-po neu-ral'gi-a. See *prosopalgia*.

pros pop'a-gus [*prosôpon*; G *pagos*, that which is fixed]. Unequal conjoined twins in which the

parasitic twin, or parts of one, is attached to the face elsewhere than in the region of the jaws.

pros″o-po ple gi a [*prosōpon*, G. *plēgē*, stroke]. Facial palsy. It may be unilateral (monoplegia facialis) or bilateral (diplegia facialis). —**pros-opopleg′ic**, *adj.*

pros″ o pos chi·sis (prose o-pos′ki-sis) [*prosōpon*, G. *schisis*, cleavage]. Congenital facial cleft, from mouth to orbit (oblique facial cleft) or from the mouth to just in front of the auditory meatus (transverse facial cleft).

pros o-po spasm [*prosōpon*, G. *spasmos*, spasm]. Risus sardonicus.

pros″o-po-ster″no did′y mus. See *prosopothoracopagus*.

pros″ o po-ster″no dym′i a [*prosōpon*, G. *sternon*, chest; *didymos*, twin]. The condition exhibited by prosopothoracopagus.

pros o-po-thor″ a-cop a gus [*prosōpon*, G *thōrax*, thorax; *pagos*, that which is fixed]. Conjoined twins united by the upper abdomen, chest, and face. Syn., *hemipagus*.

pros″o-po to ci a [*prosōpon*, G *tokos*, childbirth]. Face presentation in parturition. Obs.

pros′o-pus va rus [L.]. Congenital hemiatrophy of the face and cranium, resulting in marked facial obliquity.

pros′tate [G *prostatēs* one who stands before]. The organ surrounding the neck of the urinary bladder and beginning of the urethra in the male (prostatic urethra). It consists of two lateral lobes and a middle lobe, and is composed of muscular and glandular tissue; a distinct capsule surrounds it. It often becomes enlarged in advanced life, and may then interfere with the emptying of the urinary bladder. See Plate 44. —**prostat′ic**, *adj.*

pros″ta tec to my [*prostatēs*; G *ektomē*, excision]. Excision of part or all of the prostate. It includes transurethral prostate resection of the median lobe or lateral lobes by electrocoagulation, by the use of various punches and resectoscopes (punch operation).

perineal p. The removal of the prostate by a U-shaped or V-shaped incision in the perineum, using a special prostatic retractor or a modification.

retropubic p. Removal of the prostate by an approach through the prevesical space.

suprapubic p. Removal of prostate by incision into urinary bladder through abdominal (suprapubic) route in a one- or two-stage operation.

transurethral p. Removal of the prostate by means of an operating cystoscope.

pros′ta tism [*prostatēs*]. The condition caused by chronic disorders of the prostate, especially chronic, nonmalignant prostatic enlargement.

pros′ta tism sa ns pros tate. A term for the obstructive phenomena that occur without prostatic enlargement. They are due to fibrosis and degenerative processes of the median bar (bar of the bladder). *Rare.*

pros″ta ti′tis [*prostatēs*; G -*itis*, inflammation]. Inflammation of the prostate gland. —**prostatit′ic**, *adj.*

gonococcic p. That due to gonococcal infection.

pros″ta to-cys ti′tis [*prostatēs*; G *kystis*, bladder; -*itis*]. Inflammation of the prostate and urinary bladder.

pros tat′ o gram [*prostatēs*; G. *gramma*, letter]. A radiograph of the prostate gland, made after injecting a radiopaque substance into the orifices of the tubuloalveolar units through the urethral route.

pros″ta tog′ra phy [*prostatēs*; G *graphein*, to write]. Radiography of the prostate gland after injecting a radiopaque substance into the orifices of the tubuloalveolar units through the urethral route.

pros tat o lith [*prostatēs*; G *lithos*, stone]. A prostatic calculus.

pros″ta to li thot′o-my (pros tah-toh li-thot′o-mee, pro stat o-) [*prostatēs*; *lithos*; G *tomē*, cutting]. Removal of a stone or calculus from the prostate gland.

pros″ta tor rhe a [*prostatēs*; G. *rhoia*, flow]. A thin urethral discharge coming from the prostate gland.

pros″ta tot o my [*prostatēs*; G *tomē*, cutting]. Incision into the prostate gland.

pros″ta to ve-sic u li′tis [*prostatēs*; L. *vesicula*, vesicle; G -*itis*, inflammation]. Inflammation of the seminal vesicles combined with prostatitis.

pro-ster′num. A cartilage bone ventral to the manubrium and attached to the clavicles of some amphibians and primitive mammals. In man, it is occasionally represented by an anomalous pair of suprasternal bones.

pros′the-sis (pl. *prostheses*) [G. addition]. 1. Replacement or substitution. 2. An artificial substitute for a missing part, as denture, hand, leg, eye. —**prosthet′ic**, *adj.*

dental p. An appliance to replace missing teeth, as a denture, crown, or bridgework.

maxillofacial p. A substitute for a jaw, nose, or cheek, when the loss is too extensive for surgical repair alone.

temporary p. An artificial limb used early following amputation and in preparation for the permanent apparatus.

pros thet′ic group. 1. The group formed by a substance that is combined with a simple protein to form a complex protein, as the chromophore group in chromoproteins. 2. The group formed by an organic radical not derived from an amino acid, that enters into the complex molecule of conjugated protein. 3. The nonprotein component, or coenzyme, of certain enzyme systems.

pros thet′ics [G *prosthetikos*, adding]. The branch of surgery which deals with prostheses.

pros′the tist [G *prosthesis*, addition]. One who makes artificial limbs, artificial dentures, or external organs or parts.

pros thi on [G *prosthios*, foremost]. That point on the alveolar border of the upper jaw which projects farthest anteriorly in the midsagittal plane, between the middle incisor teeth.

pros″tho don′ti a. That branch of dentistry which deals with the restoration of teeth by artificial means.

pros″tho-don tics. See prosthetic *dentistry*.

pros″tho don tist [G *prosthesis*, addition; *odous*, tooth]. A dentist who specializes in prosthetic dentistry.

prostigmine. Trade-mark for neostigmine, prostigmine bromide and prostigmine methylsulfate being available commercially.

pros″ti tu′tion [L. *prostitutio*, from *prostituere*, to expose publicly]. The condition or act of using the body for sexual intercourse for a monetary consideration.

pros′trate [L *prostratus*, from *prosternere*, to throw to the ground]. Lying at full length.

pros trate. To reduce to exhaustion.

pros trat-ed (pros tray-tid) [*prostratus*]. Exhausted; stricken down.

pros tra tion [*prostratus*]. 1. The condition of being prostrate. 2. Extreme exhaustion.

heat p. Exhaustion due to exposure to excessive heat, as from the sun or from heated rooms.

nervous p. Old term for neurasthenia.

pro tac ti′ni um [G *prō*, before; *aktis*, ray]. Pa = 231. A radioactive element occurring in pitch-

blende and yielding actinium on disintegration. Atomic number 91.

pro·tal'bu·mose. See albumose.

pro'ta·mine (pro'tuh-meen, -min, pro-tam'een, -in) 1. One of a group of simple proteins occurring in the sex cells of fishes, as salmine, sturine. See American Classification of Proteins in the Appendix. 2. An amine isolated from spermatozoa and fish spawn; $C_{16}H_{32}O_2N_9$.

p. insulin. A combination of insulin hydrochloride and protamine from the trout, exerting a more prolonged action than insulin alone.

p. sulfate. A water-soluble salt of protamine which combines with heparin to counteract the anticoagulant effect of the latter but has anticoagulant action of its own; intravenously administered it is used in treatment of heparin overdosage.

pro·ta·nom'a·ly. See partial protanopia.

pro"tan·o'pi·a [G. *prōtos*, first; *a-*, not; *ōps*, eye]. Defective red vision; green-sightedness. See *dichromatism*. —protanop'ic, *adj.*

partial p. Decreased ability to perceive red. Syn., *protanomaly*.

pro·tar'gin (pro-tahr'jin). See mild silver protein and strong silver protein.

protargol. Trade-mark for a strong silver protein.

pro'te·an (pro'tee-un, pro-tee'un) [G. *Prōteus*, sea god who assumed different shapes when seized]. Taking on many shapes, as a protean disease, protean eruption.

pro'te·ase. One of a group of derived proteins, insoluble products due to the action of water or enzymes. See American Classification of Proteins in the Appendix.

pro'te·ase (pro'tee-ace, -aze). An enzyme which digests proteins.

pro·tec'tive [L. *protectum*, from *protegere*, to cover over]. Affording defense or immunity.

pro·tec'tive. 1. A covering or shield which protects. 2. A specific dressing, as oiled silk or rubber, used to prevent ingress of water.

pro·te'ic [G. *prōteios*, of first rank]. Relating to protein.

pro'te·id [*proteios*]. Obsolete term for protein.

pro·te'i·form [G. *Prōteus*; L. *forma*, form]. Having various forms.

pro'te·in (pro'tee-in, pro'teen) [G. *prōteios*, of first rank]. One of a group of complex nitrogenous substances of high molecular weight which are found in various forms in animals and plants and are characteristic of living matter. On hydrolysis they yield amino acids. For proteins listed by name, see American Classification of Proteins in the Appendix. Also see Table of Normal Values of Blood Constituents in the Appendix.

adequate proteins. Those proteins which furnish the body with all nitrogenous compounds necessary for maintenance and growth.

autologous p. A protein found normally in the human body.

bacterial p. A toxic protein formed by bacterial action.

bearer p. See *spermarpone*.

Bence Jones p. A mixture of proteins in the urine, occurring most frequently in association with multiple myeloma, but occasionally with leukemia, lymphosarcoma, and Hodgkin's disease. Composed of a group of proteins which, when present in urine, have the characteristic property of being precipitated out of solution when warmed to 55° C., of redissolving at a much higher temperature, and reprecipitating on cooling.

coagulated proteins. A class of protein derivatives produced by heating solutions of various proteins. Coagulation of protein is believed to involve a preliminary denaturation which is followed by precipitation.

complete proteins. Adequate proteins.

conjugated p. A protein combined with a nonprotein group, other than a salt of a simple protein.

C-reactive p. An abnormal protein appearing in serum in the presence of any systemic inflammatory disease. Increases during active rheumatic fever are considered of value in establishing differential diagnosis.

defensive p. One of the proteins existing in the blood and rendering the system immune to infectious disease.

denatured p. A protein whose structure and properties have been altered, mainly by the action of physical agents.

derived p. A synthetic protein, a polypeptide, or any product obtained from proteins by the action of acids, alkalies, enzymes, or heat.

foreign p. A protein which differs from the proteins of the animal or person into whom it is introduced.

globular p. One of the supposed closed cyclic molecules of certain types in which an imaginary polyhedron surface holds a definite number of hexagonal configurations.

Hektoen, Kretschmer, and Welker p. A nonblood protein occasionally excreted by the kidneys. It is distinct from other proteins in its precipitin reactions, its behavior with heat and its crystalline form.

immune p. An antitoxin.

iron-porphyrin p. One of a large group of proteins which contain iron and porphyrin; these include hemoglobin, the cytochromes, cytochrome oxidase, catalase, peroxidase, etc.

native p. A protein in its original state; a protein which has not been altered in composition or properties.

plasma proteins. The proteins present in blood plasma consisting of fibrinogen, albumins, and globulins.

p. hydrolysate. An artificial digest of protein derived by acid, enzymatic, or other hydrolysis of casein, lactalbumin, fibrin, or other suitable proteins that supply the approximate nutritive equivalent of the source protein in the form of its constituent amino acids. They are required to have more than half of the total nitrogen present in the form of alpha amino nitrogen. See *amigen*, *aminonat*, *aminosol*, *hyprotigen*, *parenamine*, *protolysate*.

serum proteins. The proteins present in the serum from clotted blood, differing from plasma proteins only in the absence of fibrinogen. See Table of Normal Values of Blood Constituents in the Appendix.

silver p. See protein silver.

simple p. One of a group of proteins which, upon hydrolysis, yield exclusively amino acids; included are globulins, glutelins, histones, protamines, and prolamines.

specific p. One possessing capabilities of acting as an allergen.

tissue p. That part of the body protein present in the solid tissues as distinguished from the circulating protein of the blood.

pro·te·in·ase (pro'tee-in-ace, -aze). One of the subgroups of proteases or proteolytic enzymes which act directly on the native proteins in the first step of their conversion to simpler substances. See Table of Enzymes in the Appendix.

pro"te·in·e'mi·a (pro-tee-in-ee'mee-uh). 1. Protein in the blood. 2. Sometimes, hyperproteinemia.

pro″te·in″·chro·mo·gen. Obsolete term for tryptophan.

pro″te·in·o′sis [*proteios*]. The accumulation of protein in the tissues.

lipid p. A rare skin condition with hereditary tendency which is the result of disturbed fat metabolism. Yellow-colored plaques are seen about the joints and fibrous sclerosing process occurs about face and mouth, and may involve the larynx. Also called *lipoidosis cutis et mucosae*.

pro·te·in sil′ver. Any combination of silver and protein. Also called *silver protein*. See mild *silver* protein, strong *silver* protein.

pro″te·in·u′ri·a [*proteios*; G. *ouron*, urine]. The presence of protein in the urine.

proteolac. Trade-mark for solution of peptones and proteoses obtained from defatted milk and used in nonspecific protein therapy.

pro·te·ol′y·sis [*proteose*; G. *lysis*, a loosing]. The enzymatic or hydrolytic conversion of proteins into simpler substances. —**proteolyt′ic,** *adj.*

pro″te·o·me·tab′o·lism [*proteios*; G. *metabolē*, change]. The processes of digestion, absorption, and utilization of proteins. —**proteometabol′ic,** *adj.*

pro″te·o·pep′tic [*proteios*; G. *peptos*, cooked]. Pertaining to protein digestion.

pro′te·ose [*proteose*]. One of a group of derived proteins intermediate between food proteins and peptones. Soluble in water, not coagulable by heat, but precipitated by saturation with ammonium or zinc sulfate. See American Classification of Proteins in the Appendix.

pro″te·o·su′ri·a [*proteios*; G. *ouron*, urine]. The presence of proteoses in the urine.

Prot″er·og′ly·pha [G. *proteros*, earlier; *glyphein*, to carve]. One of the two principal groups of venomous snakes; includes the Elapidae (cobras and allies) and Hydrophiidae (sea snakes).

pro″te·u′ri·a. See *proteinuria*.

Pro′teus [G., sea god who assumed different shapes when seized]. A genus of the tribe Proteae belonging to the family Enterobacteriaceae. Species of this genus, **Pr. hydrophilus, Pr. mirabilis,** and **Pr. vulgaris,** have been associated with a variety of pathologic conditions, such as pleuritis, peritonitis, cystitis, and suppurative abscesses. *Pr. vulgaris* was formerly called *Bacillus proteus*. The species **Pr. morganii** has been isolated in cases of summer diarrhea of infants.

prothricin. Trade-mark for an isotonic buffered solution of tyrothricin and propadrine used in the symptomatic treatment of nasal congestion.

pro·throm′base. See *prothrombin*.

pro·throm′bin [G. *pro*, before; *thrombos*, clot]. The protein precursor in plasma of thrombin; also called *prothrombase*, *thrombinogen*, formerly called *prozyme*, *serozyme*, *thrombogen*. See *thromboplastin*. —**prothrom′bic,** *adj.*

fraction A p. That portion of prothrombin which disappears when citrated or oxalated plasma or blood stands in contact with air.

fraction B p. That portion of prothrombin which disappears in the animal body where there is vitamin-K deficiency.

p. time. (a) Time which elapses from the addition of thromboplastin and calcium to decalcified plasma until the appearance of a clot. Widely used is the one-stage method devised by Armand J. Quick. Prothrombin time is influenced by many variables besides the concentration of prothrombin. (b) The clotting time of a mixture of calcium and decalcified plasma. Obs.

pro·throm″bi·ne′mi·a [*pro*; *thrombos*; G. *haima*, blood]. An excess of prothrombin in the blood plasma.

pro·throm″bi·no·pe′ni·a [*pro*; *thrombos*; G. *penia*, want]. Decrease in the prothrombin content of the blood. Syn., *hypoprothrombinemia*.

pro·throm″bo·ki′nase. The inactive precursor form of thrombokinase. Its activation may be autocatalytic, with calcium ions serving as an accessory factor.

pro·thy′mi·a [G. *prothymos*, eager]. Intellectual alertness.

pro′tides [G. *prōteios*, of first rank]. Old term for simple proteins.

pro·ti′o·dide. A salt containing the least amount of iodine of the iodides of the same base.

Pro·tis′ta [G. *prōtistos*, very first]. A group of organisms which includes the unicellular plants and animals.

pro″tis·tol′o·gist [*prōtistos*; G. *logos*, word]. A specialist in the study of the unicellular plants and animals.

pro″tis·tol′o·gy [*prōtistos*; *logos*]. The study of unicellular plants and animals.

pro·ti·um. The predominant constituent of ordinary hydrogen; the atom consists of one proton and one electron and therefore has an *atomic weight* of approximately one. Symbol, H^1. Sometimes called *light hydrogen*.

pro′to-, prot- [G. *prōtos*, first]. 1. A combining form meaning *first*. 2. *In chemistry*, a combining form meaning *the lowest of a series of compounds of the same elements*.

pro″to·al′bu·mose. See *albumose*.

pro″to·a·nem′o·nin. $C_5H_4O_2$; 5-methylene-2-oxo-dihydrofuran; an antibacterial substance derived from *Anemone pulsatilla*; a yellow vesicant oil which polymerizes rapidly. In vitro it is active against a number of bacterial species.

pro″to·bi·ol′o·gy. See *bacteriophagology*.

Pro″to·bi·os bac·te″ri·oph′a·gus. D'Herelle's term for bacteriophage.

pro′to·blast [*prōtos*; G. *blastos*, germ]. A blastomere produced by mosaic cleavage which is destined to form a particular structure or organ in development. —**protoblas′tic,** *adj.*

pro″to·cat″e·chu′ic ac′id. $C_6H_3(OH)_2COOH$; 3,4-dihydroxybenzoic acid; white to brownish crystalline powder which discolors in air; sparingly soluble in water.

pro″to·chlo′ride. See *proto-*, 2.

pro′to·col [G. *prōtokollon*, first leaf of a papyrus roll]. 1. The original notes or records of an experiment, autopsy, or clinical examination. 2. The records from which a document is prepared.

pro′to·cone [G. *prōtos*, first; *kōnos*, cone]. 1. In the Cope-Osborn theory of origin of mammalian molar teeth, the primitive single cusp of reptilian molar teeth. 2. The mesiolingual cusp on an upper molar tooth.

pro″to·con′id, pro″to·co′nid [*prōtos*; *kōnos*]. The mesiobuccal cusp on a lower molar tooth of the lower jaw.

pro″to·cu·ra·rine (pro″to·cue·rah′reen, ·rin, ·cure′uh·reen, ·rin). A poisonous alkaloid said to be derived from curare.

pro′to·derm. See *blastoderm*, 2.

pro″to·di″as·tol′ic [*prōtos*; G. *diastolē*, drawing asunder]. The first diastolic action in an embryo.

pro″to·e·las′tose. A poorly defined product of the digestion of elastin.

pro″to·fi′bril. The fine filaments, seen under the electron microscope, of which fibrils are composed.

pro·tog′a·lin. See *colostrum*.

pro″to·gas′ter [*prōtos*; G. *gastēr*, belly]. The primitive intestinal cavity of a gastrula. Also called *archenteron*, *progaster*.

pro′to·gen. A multiple factor in liver which has been separated into protogen A and protogen B, essential for growth of certain protozoa. Protogen

A appears to be identical with α-lipoic acid, which is dithiooctanoic acid; protogen B is a thiosulfinyloctanoic acid.

pr"to-glob u lose. A poorly defined product of the digestion of globulin.

pro"to-i'o-dide. See protiodide.

pro"to-leu'ko-cyte (pro to leu'ko-sight) [prōtos; G leukos, white; kytos, cell]. One of the min te lymphoid cells found in the red bone marrow and also in the spleen.

protolysate. Trade-mark for protein hydrolysate for oral administration; casein hydrolysate prepared by digestion with fish ceca.

pro-tol'y-sis. Any reaction in which proton (hydrogen ion) is transferred, as $HCl + H_2O = H_3O^+ + Cl^-$

pro-to-me rite [prōtos; G. meros, part]. The anterior portion of cephaline gregarine.

pro-tom' ter See proptometer

pro"to-met're-cyte [prōtos, G mētēr mother; kytos, cell]. Mother cell of both white and red blood cells. Obs.

Pro"to mon" di'na [prōtos, G monas, unit] An order of the flagellate Protozoa; it contains many parasitic forms, notably the trypanosomes.

p t my in (pro"to-migh sin one -migh oss'in-eon, -migh sin-een) A poorly defined product of the digestion of myosin.

pro'ton [prōtos]. A subatomic particle identical with the nucleus of the hydrogen atom. It has positive electric charge numerically equal to the negative charge on the electron; its mass is equal to 1.6×10^{-24} Gm. The atomic number of an element is equivalent to, and defined by the number of protons in its nucleus.

pro"to-neu'ron [prōtos; G. neuron, nerve]. A term proposed by G H. Parker (1918) to characterize hypothetical unit of the nerve net of the lowest metazoa. Such unit transmits impulses indiscriminately in all directions, and has none of the polarization of the phylogenetically later synaptic system of neurons of animals in which there is central nervous system

pro"to path'ic [prōtos; G pathos, disease] Designating primitive sensibility as opposed to more discriminating, or epicritic, sensation.

pro"to-pep'si-a [prōtos; G pepsis, digestion] A primary process of digestion, as that of starches by the saliva. Obs.

pro"to-phile' A substance which has an affinity for and forms combinations with, protons (hydrogen ions)

pro"to-phyte [prōtos; G. phyton, plant] Any plant of the lowest and most primitive type The Schizomycetes, or bacteria, may be classed as protophytes, with other low vegetable forms. They have no visible reproductive organs

pro"to-pine (peen) See fumarine.

pro"to-pla sis [prōtos; G plasis, molding]. The primary formation of tissue.

pro to-plasm [prōtos, G plasma, anything formed]. The viscid material constituting the essential substance of living cells pon which all the vital functions of nutrition secretion, growth, reproduction, irritability and motility depend.

pro"to plas mic pro"to plas-mat'ic [prōtos; plasma] Pertaining to, or composed of, protoplasm.

pro to-plast [prōtos; G plassein, to form]. 1 A cell. 2 Protoplasm

pro"t por-phy'ri [prōtos; G porphyra, purple dye] The presence of protoporphyrin in red blood cells

pro"to-por'phy-rin. $C_{30}H_{30}N_4(COOH)_2$ Any of the 15 metal-free porphyrins having as substituents 4 methyl, 2 vinyl, and 2 propionic acid (—CH_2CH_2COOH) groups. The particular arrangement of these groups represented by protoporphyrin 9 is the one occurring in hemoglobin.

pro"to-pro'te-ose [prōtos; G prōteios, of first rank]. Primary proteose; further digestion changes i into deuteroproteose.

pro"to-spasm [prōtos; G spasmos, spasm]. A spasm beginning in one part and extending to others.

pro"to sul'f te. Of series of sulfates, that one which contains relatively the smallest amount of sulfuric acid.

pro"to-tox'in [prōtos; G toxikon, poison]. A dissociation product of toxins differing from deuterotoxins and tritotoxins in having stronger affinity than either for the antitoxins.

pro"to troph'ic (pro to-tref'ick, -tro'fick) [prōtos; G. trophē, nourishment]. Applied to organisms which do not require organi matter or have not the faculty of decomposing protein material.

pro"to tro py The migration of proton or hydrogen ion within compound to form an isomer of the compound type of change included within the broad scope of tautomerism.

pro"to-ver' trine. An ester alkaloid isolated from both veratrum viride and veratrum album and *subsequently found to consist of protoveratrines A* and protoveratrine B. Protoveratrine A is tetraester and yields, on hydrolysis, protoverine two moles of acetic acid, and one mole each of 2-methylbutyric acid and methylethylglycolic acid. Protoveratrine B is also tetraester; on hydrolysis, it yields protoverine, two moles of acetic acid, and one mole each of 2-methylbutyric acid and 2,3-dihydroxy 2-methylbutyric acid. It appears to be identical with neoprotoveratrine and veratetrine Both protoveratrines possess hypotensive activity

pro"to-ver'ine. $C_{27}H_{43}NO$ highly hydroxylated alkanolamine base, steroidal in haracter arious esters of which constitute certain of the alkaloids of veratrum viride and veratrum album It is isomeric with germine and cevine, which are also parent bases of other alkaloids in the veratrums.

pro"to-ver'te-bra [prōtos; L. vertebra, vertebra]. 1 Originally somite. 2 More correctly the condensed caudal half of sclerotome, from which most of vertebra is derived. Also called primitive vertebra. —protovertebral, adj

Pro"to-zo a [prōtos; G. zōon, living being]. The phylum of unicellular animals, subdivided into the subphylum Plasmodroma which contains the medically important classes Rhizopoda, Mastigophora, and Sporozoa, and into the subphylum Ciliophora which contains the class Ciliata. For list of the protozoa pathogenic to man, see Table in the Appendix. —protozo'an, adj

pro"to-zo'a-cide [prōtos; zōon, L. caedere, to kill] An agent that will kill protozoa. —protozoa' cidal adj.

pro"to-zo'al [prōtos; zōon]. See protozoan.

pro"to-zo an. A protozoon.

pro"to- o-i'a-sis [prōtos; zōon; NL. -iasis, condition]. Infection by protozoa.

pro"to-zo-ol'o-gist [prōtos; zōon, G logos, word]. One versed in protozoology

pro"to-zo-ol'o-gy [prōtos; zōon, logos]. The study of protozoa

pro"to-zo on (pl. protozoa) [prōtos; zōon]. Any member of the phylum Protozoa.

pro"to-zo o-phage, pro"to zo o-phag [prōtos; zōon, G phagein, to eat]. Cell which is phagocytic to protozoa.

pro-tract' 1 T extend in time; to prolong. 2. I anatomy to extend or protrude part of the body as the tongue or mandible to draw forward.

pro-trac tor 1 I surgery, an instrument formerly

used in debridement. 2. *In anatomy* an extensor old term.

pro·trude [L. *protrudere*, to thrust forward]. Project. Assume an abnormally prominent position, as tooth which is thrust forward out of line.

pro·tru·sion [L. *protrusus*, from *protrudere*] The condition of being thrust forward, as the protrusion of the incisor teeth —**protru'sive**, *adj*

pro·tryp·sin. See *trypsinogen*.

pro·tu'ber·ance [L. *protuberare*, to swell out] A knoblike projecting part

external occipital p. The central prominence on the outer surface of the flat portion of the occipital bone.

frontal p. The prominence of the frontal bone.

internal occipital p. A slight central prominence on the inner surface of the tabular portion of the occipital bone.

laryngeal p. Th subcutaneous bulging in the midline of the eck produced by the anterior margin f th thyroid cartilage.

mental p. The elevation of th body of the mandible.

parietal p. The eminence of the parietal bone situated near the sagittal suture.

pro·ty·ros'in·ase (pro tye-ross in-ace, ro sin-ace) An inactive precursor of the enzyme tyrosinase.

proud flesh. Exuberant granulation tissue.

Prout, William [*English physiologist*, 1785–1850]. Discovered that the gastr juice contains hydrochloric acid (1824) an important landmark in th history f physiological chemistry

prove [L. *probare*, to try] *In homeopathy* test the action of drug on normal healthy person, and not th effects, both subjective and objective.

pro·ver'te·bra. See *sclerotome*.

pro·vi'ta·min [L. *pro*, before *vita*, lif ammonia] A precursor of vitamin. That which assumes vitamin activity upon activation or chemical change within the body as ergosterol, which upon ultraviolet irradiation is converted in part to calciferol (D_2) or β-carotene, which in the liver is hydrolyzed to vitamin A.

pro·voc tive [L. *provocativus*, called forth]. Tending to rouse or provoke arousing signs, symptoms, or reactions, similar to those of disease phenomenon.

Prowazek–Halberstaedter bodies. See under *body*

prox'i mal [L. *proximus*, nearest] Nearest to the body or the median line of the body or to some other point considered as the center of system.

prox'i mal. *In dentistry* the proximal surface of tooth is that next to the adjacent tooth Syn., *approximal*, *interproximal*.

prox'i mate (prosk'si-mit) [L. *proximare*, to draw near]. Nearest immediate, as proximate cause.

prox"i mo-a-tax'i [L. *proximus*, nearest G *ataxia*, disorder]. Lack of coordination in the muscles of the proximal part of the limbs; i opposition to *acroataxia*.

prox"i mo buc'cal [*proximus*; L. *bucca*, cheek]. Pertaining to the proximal and buccal surfaces of tooth.

prox"i mo-la'bi al [*proximus*; L. *labium*, lip] Pertaining to the proximal and labial surf ces of tooth.

prox"i mo-lin'gual [*proximus*; L. *lingua*, tongue] Relating to the proximal and lingual surfaces of tooth.

prox. luc. [L.]. *Proxima luce* the day before

pro zone [G *pro*, before *zōnē*, girdle, zone] That portion of the low dilution range of bacteria in which the homologous serums fail to agglutinate the bacteria, the same serums agglutinating the bacteria in high dilution; more common and ex tensive with old or heated serums.

pro zy go sis. See *syncephalus*.

pro zy'mo gen [*pro*, G *zymē*, leaven; *genetic*, from *gignesthai*, to be produced]. An intracellular substance which becomes zymogen.

P R.U $\frac{1\ \text{mm. Hg}}{1\ \text{mL/min.}}$ A unit of peripheral resistance which is comparable to the ohm in electricity

pru'i nate [L. *pruina*, hoarfrost]. Appearing as if covered with hoarfrost.

pru ri'go [L., itching] A chronic inflammatory disease of the skin characterized by small, pale papules and severe itching. The papules are deeply seated and are most prominent on the extensor surfaces of the limbs. The disease begins in early lif There are two forms of the disease: *prurigo mitis*, comparatively mild, and *prurigo agria* or *ferox*, severe. —**prurig'inous**, *adj*

p. aestivalis. Hydroa vacciniforme

p. dermographia. A type seen at friction sites associated with dermographia Psychogenic disturbances are usually present and accentuate the itching

p. nodularis. A chronic skin disease which occurs chiefly in women and is characterized by pruritic, nodular and verrucous lesions. It is regarded an atypical nodular form of neurodermatitis circumscripta, unrelated to the prurigos. Syn., *lichen obtusus corneus*

summer p. Hydroa vacciniforme.

pru ri'tus [L., itching] Itching, an uncomfortable sensation due to irritation of peripheral sensory nerve symptom rather than disease —**prurit'ic**, *adj*.

bath p. A burning sensation varying from slight pricking to an intense itching experienced by some persons after bath.

p. l. A common itching condition in and about the anus, especially in men; may be due to several causes.

p. hi malis. A form affecting certain persons only in winter especially in dry climates. Syn *frost-itch*, *winter itch*.

p. senilis. The pruritus of the aged, probably caused by lack of oil in the skin accompanying the atrophy of the skin in old age.

p. vulvae. Intense or mild itching of the vulva and at times adjacent parts. M y lead to atrophy lichenification, and even malignancy Etiology is varied.

psychogenic p. Severe itching of skin on psychogenic basis.

punctate p. Patchy areas of itching with no cutaneous lesions occurs especially over bony prominences.

Prussak, Alexa der [*Russian otologist*, 1839–1897] Described fibers in the tympanic membrane running from the ends of the tympanic notch to the lateral process of the malleus, bounding the lower lateral aspect of the pars flaccida of the tympanum (Shrapnell's membrane); called *Prussak's fibers*. A membranous pouch in the attic of the middle ear between the neck of the malleus and the pars flaccida is called *Prussak's space* or *pouch*.

Prus'sian blue. $Fe_4[Fe(CN)_6]_3$ Ferric ferrocyanide occurs as dark blue powder or lumps; insoluble in water alcohol, and dilute acids. It was formerly used as tonic. Also called *Berlin blue*

prus'si·ate (prush ee-ate, prush prōō pr) Any salt of prussic or hydrocyanic acid a cyanide particularly ferricyanide or ferrocyanide.

red p. of potash. Potassium ferricyanide.

yellow p. of potash. Potassium ferrocyanide

prus'si 'id (pruss'ick, prōō sick) Hydrocyanic acid

diluted p. a. Diluted hydrocyanic acid.

psal·te·ri·um (sawl·teer'ee·um, sal-teer') 1. See *omasum*. 2. See hippocampal commissure.

psam'mism [G. *psammos*, sand]. The treatment of disease with sand baths. Syn., *ammism*, *ammotherapy*.

psam·mo'ma (sam·o'muh) [*psammos*; G. *-oma*, tumor]. A firm, fibrous tumor found in the membranes of the brain, the choroid plexus, and in other parts, characterized by the presence of concentrically laminated calcareous nodules.

p. of meninges. See *meningioma*.

psam·mo·sar·co·ma [*psammos*; G. *sarkoma*, fleshy excrescence]. A psammoma with sarcomatous features, or a sarcoma containing psammoma bodies.

psam·mous [*psammos*]. Sandy or sabulous.

psel"a·phe·sis (sel·uh·fee'sis) [G., touching]. The tactile sense. *Obs.*

psel'lism (sel'iz·um), psel·lis'mus [G. *psellismos*, stammering]. 1. Stuttering or stammering. 2. Defective speech due to harelip or to cleft palate. **psellismus mercurialis**. The unintelligible, hurried, jerking speech accompanying mercurial tremor.

pseud-. See *pseudo-*.

pseu"do·aco'ni·tine (sue"do·a·kon'i·teen, ·tin), pseu"do·a·con'i·tine. $C_{36}H_{49}NO_{11}$. An extremely poisonous alkaloid from *Aconitum ferox*.

pseu"do·acro·mea (sue"do·a·kro'mee·uh, ·kro'me·uh, ·krom'ee·uh). See *pseudacromion*.

pseu"do·ac"ro·meg'a·ly [G. *pseudes*, false; *akron*, extremity; *megas*, large]. Enlargement of the face and extremities without any involvement of the pituitary gland.

pseu"do·acu'sis (sue"do·a·cue'sis, ·koo'sis) [*pseudes*; G. *akousis*, hearing]. A disturbance of hearing in which the person's own voice sounds strange or peculiar, being altered in pitch and quality.

pseu·do·agraph'i·a (sue"do·graf'ee·uh, ·gray'fee·uh) [*pseudes*; G. *agraphos*, unwritten]. 1. Incomplete agraphia, in which the person can copy correctly but is unable to write independently of an original. 2. The form of agraphia in which meaningless words are written.

pseu·do·al·bu"mi·nu'ri·a [*pseudes*; L. *albus*, white; G. *ouron*, urine]. False albuminuria. See *pseudoalbuminuria*.

pseu"do·am·ne'si·a (sue"do·am·nee'zh uh, ·nee'zee·uh) [*pseudes*; G. *amnesia*, amnesia]. Spurious amnesia; a condition resembling amnesia, but of transient character, usually associated with organic brain disease.

pseu·do·an·gi·na. See *pseudangina*.

pseu"do·an·ky·lo'sis [*pseudes*; G. *ankylosis*, stiffening of the joints]. A false joint; also a fibrous ankylosis.

pseu'do·aph·e·sia (sue·dah·fee'zee) pseu·daph'i·a (sue·daf'ee·uh, sue·day'fee·uh). See *paraphasia*.

pseu"do·ar·thro'sis [*pseudes*; G. *arthrosis*, jointing]. A false joint; also spelled *pseudarthrosis*.

Pseu·dech'is (sue·dek'is, sue'dee·kis) [*pseudes*; G. *echis*, viper]. A genus of snakes of the Elapidae.

P. porphyriacus. Species of poisonous terrestrial snakes found in Australia, known as the black snake; possesses a hemolytic venom.

P. scutellatus. A species of snakes known as the giant brown snake or taipan found in Australia and New Guinea; attains a length of nine feet.

Pseu'do·laps (sue'do·laps) [*pseudes*; G. *elaps*, serpent]. A genus of snakes of the Elapidae.

P. muelleri. Species of venomous snakes found in New Guinea, the Bismarck Islands, and other islands of the southwest Pacific. Also called *Mueller's snake*.

pseu·del"min'thi·a (sue·del'minth) [*pseudes*; G. *helmins*, worm]. Any wormlike object mistaken for an endoparasitic worm.

pseu"do·en·ceph'a·lus [*pseudes*; G. *enkephalos*, brain]. A type of anencephaly in which the cranial vault is completely or nearly completely absent; the upper cervical vertebrae are cleft, and the brain is represented by a mass of membranes, blood vessels, connective and possibly nervous tissue at the base of the skull.

pseu"des·the'si·a (sue"des·thee'zhuh, ·zee·uh) [*pseudes*; G. *aisthesis*, sensation]. An imaginary sensation for which there is no corresponding object, as a sensation referred to parts of the body that have been removed by accident or surgical operation. Ghost or phantom sensations.

pseu"di·a'ter (sue"dee·ay'tur) [*pseudes*; G. *iatros*, physician]. A quack, or charlatan.

pseu·do- (sue·do-), pseud- [*pseudes*]. 1. A combining form meaning *false*, *deceptive resemblance to disease or condition*. 2. In *chemistry*, a combining form meaning *resemblance to or isomerism with compound*.

pseu"do·a·ceph'a·lus [*pseudes*; G. *akephalos*, headless]. A placental parasitic twin (omphalosite) which is apparently headless, but which has a rudimentary cranium and its contents buried in the superior part of the main mass.

pseu"do·a·con'i·tine. See *pseudaconitine*.

pseu"do·ag·glu"ti·na'tion. Rouleaux formation and clumping tendency of erythrocytes, occurring as a result of the increased concentration of plasma proteins, particularly fibrinogen.

pseu"do·a·graph'i·a. See *pseudagraphia*.

pseu"do·al·bu"mi·nu'ri·a [*pseudes*; L. *albus*, white; G. *ouron*, urine]. False albuminuria; the presence in the urine of protein derived from blood, pus, or special secretions and mixed with the urine during its transit through the urinary passages.

pseu"do·al·ve'o·lar [*pseudes*; L. *alveolus*, small hollow]. Simulating an alveolus or alveolar structure.

pseu"do·an"a·phy·lac'tic [*pseudes*; G. *anaphylaxis*, to guard]. Resembling anaphylactic action.

pseu"do·an"a·phy·lax'is. See *anaphylactoid reaction*.

pseu"do·a·ne'mi·a [*pseudes*; G. *anaimia*, want of blood]. Pallor and appearance of anemia without blood changes to support the diagnosis. Also called *apparent anemia*.

pseu"do·an·gi'na (sue"do·an·jy'nuh, ·an'ji·nuh) [*pseudes*; L. *angina*, quinsy]. A mental disorder characterized by pain in the chest at the apex of the heart and at times radiating down the left arm, with no evidence of organic disease. A psychosomatic complex in a neurotic person with precordial anxiety.

pseu"do·an·gi·o'ma [*pseudes*; G. *angeion*, vessel; *-oma*, tumor]. 1. Recanalized thrombus of the portal vein. 2. The formation of a temporary angioma, as is sometimes seen in healing stumps.

pseu"do·an·o·rex'i·a [*pseudes*; G. *anorexia*, want of appetite]. Rejection of food because of gastric distress.

pseu·do·ap·o·plex·y [*pseudes*; G. *apoplexia*, apoplexy]. A condition resembling apoplexy but unaccompanied by cerebral hemorrhage.

pseu"do·ap·pen"di·ci'tis [*pseudes*; L. *appendix*, appendage; G. *-itis*, inflammation]. A condition simulating appendicitis, but with no lesion of the vermiform process.

pseu"do·a·tax'i·a. See *pseudotabes*.

pseu·do·ath"er·o'ma [*pseudes*; G. *atheroma*, tumor full of gruellike matter]. Multiple sebaceous cysts; soft, painless tumors in or beneath the skin.

pseu"do·a·tro·pho·der'ma col'li. A rare skin disease characterized by depigmented areas surrounded by hyperpigmented skin. Often found

about the neck but may occur elsewhere. Skin in center of lesion appears atrophic.

pseu"do-blep'si-a, pseu"do-blep'si [*pseudēs*; G. *blepsis*, sight] A visual hallucination; distorted visual image.

pseu"do-bulb'ar [*pseudēs*; L. *bulbus*, bulb] Not really bulbar; that is, not concerned with the medulla oblongata, as pseudobulbar paralysis.

pseu"do-car'ti-lage [*pseudēs*; L. *cartilago*, cartilage]. An embryonic type of cartilage in which but little matrix is formed, as that of the notochord. Also called *fibrohyaline tissue*, *vesicular supporting tissue*, *chondroid tissue*, *notochordal tissue*.

pseu"do-cast [*pseudēs*; ME. *casten*]. Structures such as mucous threads, epithelial cells, vegetable fibers, masses of bacteria, or debris which morphologically resemble tubular casts.

pseu"do-cele [*pseudēs*; G. *koilia*, cavity] Old term for the cavity of the septum pellucidum of the brain. Formerly called *fifth ventricle*, *pseudoventricle*.

pseu"do-chan'cre (sue"do-shang'kur) [*pseudēs*; F. *chancre*]. An indurated sore simulating chancre.

pseu"do-chel"e-ryth'rine Sanguinarine.

pseu"do-chol'es-tane. Coprostane.

pseu"do-cho-les"te-a-to'ma (-ko-les"tee-uh-to'muh) [*pseudēs*; G. *cholē*, bile; *stear*, fat; *-ōma*, tumor]. An aggregation of epithelial-cell debris resembling cholesteatoma.

pseu"do-cho"lin-es'ter-ase (-ko"lin-ess'tur-ace, -aze) An enzyme which catalyzes the hydrolysis of acetylcholine but which differs from cholinesterase in that it is nonspecific and hydrolyzes esters other than choline esters

pseu"do-cho-re'a (sue"do-ko-ree'uh) [*pseudēs*; G. *choreia*, dance] Spurious chorea, usually hysterical in origin.

pseu"do-chrom"es-the'si-a (sue"do-krohm"essthee'zhuh, -zee-uh) [*pseudēs*; G. *chrōma*, color; *aisthēsis*, perception] A condition in which each of the vowels of a word (whether seen, heard, or remembered) seems to have a distinct visual tint. See *photism*, *phonism*.

pseu"do-chrom"hi-dro'sis (sue"do-krohm"hi-dro'sis, high-dro'sis) [*pseudēs*, *chrōma*; G. *hidrōsis*, sweating]. A form of colored sweat in which the color changes occur after the sweat is excreted, possibly as a result of action by chromatogenous microorganisms.

pseu"do-chro'mi-a [*pseudēs*; *chrōma*] A false or incorrect perception of color

pseu"do-chro'mo-some [*pseudēs*; *chrōma*; G. *sōma*, body] Old term for one of the filamentous types of mitochondria.

pseu"do-cir-rho'sis (sue"do-si-ro'sis) [*pseudēs*; G. *kirros*, orange-colored; *-ōsis*, condition]. A condition characterized by enlargement of the liver due to obstruction of the hepatic vein, inferior vena cava, or adhesive pericarditis. Also called *Pick's syndrome*.

pseu"do-co-caine $C_{17}H_{21}NO_4$, dextrorotatory stereoisomer of cocaine; a narcotic which causes true addiction. A tartrate salt, known as *psicaine*, has been used as a surface anesthetic. Syn., *d-cocaine*, *isococaine*.

pseu"do-co'de-ine. $C_{18}H_{21}NO_3$ An isomer of codeine produced synthetically; less effective as an analgesic agent than codeine. Syn. *isoneocodeine*.

pseu"do-col'loid [*pseudēs*; G. *kolla*, glue; *eidos*, form] A mucoid material, found particularly in ovarian cysts.

p. of the lips. A condition of yellow-orange tumors in the lips and mucosa of the mouth.

pseu"do-col"o-bo'ma [*pseudēs*; G. *kolobōma*, mutilation]. A scarcely noticeable fissure of the iris, the remains of the embryonic ocular fissure, which has almost, but not perfectly, closed.

pseu"do-con-hy'drine. $C_8H_{17}NO$; 5-hydroxy-2-propylpiperidine; an alkaloid from conium.

pseu"do-cox-al'gi-a. See *osteochondritis deformans juvenilis*.

pseu"do-cri'sis [*pseudēs*; G. *krisis*, turning point] A false crisis; a sudden fall of temperature resembling the crisis of a disease, but subsequently followed by a rise of temperature and continuation of the fever. It is common in pneumonia.

pseu"do-croup. False croup; laryngismus stridulus.

pseu"do-cy-e'sis (sue"do-sigh-ee'sis) [*pseudēs*; G. *kyēsis*, pregnancy]. Phantom pregnancy; the belief, on the part of a woman, in the existence of pregnancy when none exists; a condition due to disorder of metabolism, growth, nutrition, or psychic factor

pseu"do-cyl'in-droid [*pseudēs*; G. *kylindros*, rolling stone; *eidos*, form] A band of mucus or any substance in the urine simulating a renal cast.

pseu"do-cyst" [*pseudēs*; G. *kystis*, bladder] A saclike space containing liquid, semiliquid, or gas but without a definite lining membrane.

pseu"do-de-men'ti-a [*pseudēs*; L. *dementia*, madness] A condition of apathy resembling dementia, but without the mental degenerative changes.

pseu"do-diph-the'ri-a. See *diphtheroid*.

pseu"do-di"ver-tic'u-lum. A pouch, formed by healing of a peptic ulcer, which may have the appearance of a diverticulum.

pseu"do-e-de'ma [*pseudēs*; G. *oidēma*, swelling] A condition simulating edema.

pseu"do-en"do-me-tri'tis [*pseudēs*; G. *endon*, within; *mētra*, womb; *-itis*, inflammation]. A condition resembling endometritis marked by changes in the blood vessels, hyperplasia of the glands, and atrophy

pseu"do-e"o-sin'o-phil. The polymorphonuclear leukocyte of avian blood which contains elongated red granules; also called *heterophil*.

pseu"do-e-phed'rine (sue"do-eh-fed'rin, -ef'i-dreen, -drin) $C_{10}H_{15}ON.HCOH(CH_3NH)CHCH_3$; *d-ψ*-ephedrine or *d*-isoephedrine; an alkaloid from the leaves of *Ephedra distachya*; a stereoisomer of ephedrine.

pseu"do-ep'i-lep"sy [*pseudēs*; G. *epilēpsis*, epileptic fit] A disorder simulating epilepsy

pseu"do-ep"i-the-li-o'ma"tous hy"per-pla'si-a. An irregular penetrating acanthosis accompanied by chronic inflammation in the dermis, found in chronic ulcers of the skin and chronic granulomatous infections. The reaction simulates squamous-cell carcinoma.

pseu"do-es"the'si-a (sue"do-ess-thee'zhuh, -zee-uh) See *pseudesthesia*.

pseu"do-fluc"tu-a'tion [*pseudēs*; L. *fluctuatio*, wavering motion] A tremor simulating fluctuation, sometimes observed on tapping lipomas.

pseu"do-gan"gli-on. An enlargement on a nerve trunk which resembles a ganglion in form but which does not contain ganglion cells.

pseu"do-ger'mine. An isomeric form of germine obtained from the latter under certain conditions of chemical treatment. See also *isogermine*.

pseu"do-geu"es-the'si-a (sue"do-gew"ess-thee'zhuh, -zee-uh, sue"do-jew"...) [*pseudēs*; G. *geusis*, taste; *aisthēsis*, perception]. A condition in which color sensations accompany the sense of taste.

pseu"do-geu'si-a (sue"do-gew'see-uh, jew'see-uh) [*pseudēs*; *geusis*]. A false perception, or hallucination, of taste, which may often be an aura in some types of focal epilepsy

pseu"do-gli-o'ma (sue"do-glye-o'muh) [*pseudēs*; G. *glia*, glue; *-ōma*, tumor] A name given to inflammatory changes of the vitreous body due

to iridochoroiditis, and resembling glioma of the retina.

pseu″do-glob′u-lin [pseudo-; L. *globulus*, little ball]. A protein, one of the class of globulins; distinguished from the euglobulins by its solubility in distilled water, as well as in dilute salt solutions.

pseu″do-glu-co′sa-zone (sue″do-gloo-ko′sah-zone, -kose′ah-zone, -gloo″ko-say′zone) A crystalline substance sometimes in normal urine which gives the phenylhydrazine test for sugar.

pseu″do-gon″or-rhe′a [pseudo-; G. *gonorrhoia*, gonorrhea]. A simple nonspecific urethritis.

pseu″do-gyn″e-co-mas′ti-a. See under *gynecomastia*.

Pseu″do-ha′je (sue″do-hah′jee) [pseudo-; Ar. *hayyah*, snake]. A genus of arboreal cobras of the family Elapidae whose species possess neurotoxic venom; found in the forests of central and west Africa.

pseu″do-hal-lu″ci-na′tion. A vivid perception without external stimulus (hallucination) recognized by the individual as an hallucinatory, hypnagogic, or hypnopompic experience.

pseu″do-hem″i-a-car′di-us [pseudo-; G. *hēmi-*, half; *a-*, not; *kardia*, heart]. A placental parasitic twin (omphalosite) which has no apparent thorax; also called *pseudothorax*, *acephalus athorus*.

pseu″do-he″mo-phil′i-a (sue″do-hee″mo-fil′ee-uh, -hem″o-fil′ee-uh) [pseudo-; G. *haima*, blood; *philein*, to love]. A condition characterized by prolonged bleeding time but without the delayed coagulation time of true hemophilia. The platelets are normal in number but impaired in quality.

hereditary p. See hereditary hemorrhagic diathesis.

pseu″do-her-maph′ro-dite [pseudo-; G. *Hermaphroditos*, Hermaphrodite]. An individual with congenitally malformed external genitalia resembling one sex while the gonads are those of the opposite sex. —**pseudohermaphrodit′ic**, *adj.*

pseu″do-her-maph′ro-dit-ism. The condition of being a pseudohermaphrodite.

female p. Gynandry; a condition simulating hermaphroditism in which the external sexual characteristics are in part or wholly of male aspect, but internal female genitalia are present. Syn., *pseudohermaphroditismus femininus*.

male p. Androgyny; a condition simulating hermaphroditism in which the individual has external sexual characteristics of female aspect, but has testes (usually undescended). Syn., *pseudohermaphroditismus masculinus*.

pseu″do-hy″dro-ne-phro′sis [pseudo-; G. *hydōr*, water; *nephros*, kidney; -*ōsis*, condition]. The presence of a cyst near the kidney which resembles hydronephrosis.

pseu″do-hy″dro-pho′bi-a [pseudo-; *hydōr*; G. *phobos*, fear]. A dread of hydrophobia, often producing a condition resembling the disease. Syn., *cynophobia*, *lyssophobia*.

pseu″do-hy-per′tro-phy (sue″do-high-pur′tro-fee) [pseudo-; G. *hyper*, over; *trophē*, nourishment]. False hypertrophy; increase in the size of an organ on account of overgrowth of an unimportant tissue. It is accompanied by diminution in function. —**pseudohypertroph′ic**, *adj.*

pseu″do-hy-po-par″a-thy′roid-ism. A condition exhibiting essentially the signs, symptomatology and chemical findings of hypoparathyroidism, but due to an inability of the body to respond to parathyroid hormone, and not to a deficiency thereof. Administration of the hormone is not followed by a phosphate diuresis. Pathologically the parathyroid glands are normal or hyperplastic. Patients with the condition frequently exhibit round faces with short heavy-set figures, premature epiphyseal closure of the metacarpal and metatarsal joints resulting in shortening of digits, and subcutaneous foci of ectopic ossification. First described by F. Albright and coworkers (1942).

pseu″do-il′e-us [pseudo-; G. *eileos*, intestinal obstruction]. 1. An acute attack of severe abdominal pain with distention, resembling obstructive ileus but without apparent morphologic change. 2. Acute dilatation of the stomach.

pseu″do-i″so-chro-mat′ic [pseudo-; G. *isos*, equal; *chrōma*, color]. Pertaining to the different colors which appear alike to the colorblind. See color threshold test, Ishihara test.

pseu″do-jaun′dice (sue″do-jawn′dis, -jahn′dis) [pseudo-; OF. *jaunisse*, from L. *galbus*, yellow]. Yellow discoloration of the skin from causes other than hepatic disease.

pseu″do-jer′vine. An alkaloidal constituent, being an alkamine, of veratrum viride and veratrum album; it is practically inert physiologically.

pseu″do-ker′a-tin. A keratin that is partly digested by the common proteolytic enzymes, as distinguished from those keratins, classified as eukeratins, which are not digested.

pseu″do-leu″ke-moid r. See leukemoid reaction.

infantile p. See infantile pseudoleukemic anemia.

pseu″do-li-thi′a-sis [pseudo-; G. *lithos*, stone; NL. -*iasis*, condition]. A condition in which the symptoms point to the existence of a calculus in the biliary or urinary passages but where no stone can be demonstrated.

pseu″do-lo-gi-a fan-tas′ti-ca. A syndrome marked by a single elaborate phantasy of which the patient gives full details. The phantasy includes real occurrences added to a fantastic basis.

pseu″do-lys′sa. Lyssophobia.

pseu″do-mal′a-dy [pseudo-; OF. *maladie*]. An imaginary or simulated illness.

pseu″do-ma-lar′i-a [pseudo-; It. *malaria*, malaria]. A toxemic disease simulating malaria. *Rare.*

pseu″do-mam′ma [pseudo-; G. *mammē*, breast]. A structure resembling a mammary gland sometimes occurring in dermoid cysts.

pseu″do-ma′ni-a [pseudo-; G. *mania*, madness]. 1. A mental disorder in which the patient accuses himself of crimes of which he is innocent. 2. A mania characterized by lying. 3. An excited mental state in hysteria which simulates true mania.

pseu″do-mel″a-no′sis [pseudo-; G. *melas*, black; -*ōsis*, condition]. The staining of tissues, usually after death, by dark brown or black pigments commonly derived from hemoglobin.

pseu″do-mem′brane [pseudo-; L. *membrana*, membrane]. A false membrane as in diphtheria. —**pseudomembranous**, *adj.*

pseu″do-men″in-gi′tis [pseudo-; G. *mēninx*, membrane; -*itis*, inflammation]. A group of symptoms resembling those produced by meningitis, but with absence of the lesions of meningeal inflammation; meningism.

pseu″do-me′ninx [pseudo-; *mēninx*]. A false membrane.

pseu″do-men″stru-a′tion [pseudo-; L. *menstruare*, to menstruate]. Bloody vaginal discharge in newborn infants, coming after a few days.

pseu″do-me-ta-mer′ism [pseudo-; G. *meta*, beyond; *meros*, part]. False metamerism, as seen especially in the linear series of segments of the Cestoda. Each segment, or proglottid, contains a complete set of both male and female reproductive organs.

pseu″do-met-he″mo-glo′bin (sue″do-met-hee″mo-glo′bin, -hem″o-glo′bin). See methemalbumin.

pseu"do-mi"cro-ceph'a-lus [*pseudēs*; G. *mikros*, small; *kephalē*, head]. Abnormally small brain due to partial atrophy of one cerebral hemisphere, or to changes in the cerebrum ascribable to fetal encephalitis or fetal hydrocephaly.

Pseu"do-mo'nas [*pseudēs*; G. *monas*, unit]. A genus of bacteria of the family Pseudomonadaceae; members are small, motile, aerobic, and Gram negative.

Ps. aeruginosa. A species of bacteria pathogenic to man; it is the causative agent of various suppurative infections in man. In the multiplication of *Ps. aeruginosa*, pigments are liberated which give pus a blue-green color. Also called *Ps. pyocyanea*, *Bacillus pyocyaneus*, *blue-pus microbe*.

Ps. cyanogenes. Motile rods which form a blue pigment. Formerly called *Bacillus lactis cyanogenes*.

Ps. jaegeri. A species pathogenic to chickens.

Ps. pyocyanea. Synonym for *Ps. aeruginosa*.

pseu"do-mor'phine. $C_{34}H_{36}N_2O_6.3H_2O$. dehydromorphine; a dimolecular base formed by the oxidation of morphine in alkaline solution occurring as a crystalline powder insoluble in cold water and in alcohol.

pseu"do-mu'cin [G. *pseudes*, false; L. *mucus*, mucus]. A substance allied to mucin, found in proliferative cysts. —**pseudomucinous**, *adj.*

pseu"do-myx-o'ma [*pseudēs*; G. *myxa*, mucus; -*ōma*, tumor]. An epithelial tumor which contains much mucus, but so interspersed with tissue that grossly it suggests myxoma.

p. peritonei. A widespread implantation in the peritoneal cavity of nodules secondary to pseudomucinous tumors of the ovary or rupture of a mucocele of the appendix. Also called *gelatinous ascites* or *peritonitis*, *Werth's tumor*.

pseu"do-nar'co-tism [*pseudēs*; G. *narkōtikos*, benumbing]. A hysterical simulation of narcotism.

pseu"do-ne'o-plasm [*pseudēs*; G. *neos*, new; *plasma*, anything formed]. 1. A phantom tumor. 2. A temporary swelling, generally of inflammatory origin. —**pseudoneoplas'tic**, *adj.*

pseu"do-neu-ri'tis [*pseudēs*; G. *neuron*, nerve; -*itis*, inflammation]. A disease simulating neuritis.

pseu"do-neu-ro'ma [*pseudēs*; *neuron*; G. -*ōma*, tumor]. A massed proliferation of Schwann cells with mesodermal elements and neurites developing at the proximal end of an injured nerve, such as occurs in amputation stumps; not a neoplasm. Also called *amputation* or *traumatic neuroma*.

pseu"do-nu'cle-in. See *paranuclein*.

pseu"do-nu-cle'o-lus [*pseudēs*; L. *nucleolus*, little nut]. A false nucleolus, or karyosome.

pseu"do-nys-tag'mus [*pseudēs*; G. *nystagmos*, drowsiness]. Symptoms resembling nystagmus but without the regular rhythmic movements of true nystagmus.

pseu"do-oph-thal"mo-ple'gi-a. A rare disorder in which the patient cannot move his eyes on command or fix his eyes on an object in the peripheral field of vision, but is able to follow slowly moving objects to some extent.

pseu"do-os"te-o-ma-la'ci-a (sue"do-os"tee-o-ma-lay'shee-uh, -see-uh) [*pseudēs*; G. *osteon*, bone; *malakia*, softening]. Rachitis in which the pelvic bones is distorted so as to resemble in form that of osteomalacia.

pseu"do-pa-ral'y-sis [*pseudēs*; G. *paralysis*, paralysis]. An apparent motor paralysis which is caused by voluntary inhibition of motor impulses because of pain, incoordination, or other causes.

pseu"do-par"a-ple'gi-a [*pseudēs*; G. *paraplēgia*, hemiplegia]. Spurious paraplegia.

pseu"do-par'a-site [*pseudēs*; G. *parasitos*, parasite]. 1. Any object resembling a parasite. 2. A commensal.

pseu"do-pa-re'sis (sue"do-pa-ree'sis, -par'e-sis) [*pseudēs*; G. *paresis*, paralysis]. An affection resembling paresis, but regarded as distinct from the ordinary forms; a form of chronic alcoholic brain disease. *Obs.*

pseu"do-pe-lade' (sue"do-pi-lahd', -pi-lad'). See *alopecia cicatrisata*.

pseu"do-pep'tone. See *hemialbumose*, *propeptone*.

pseu"do-pho"tes-the'si-a (sue"do-fo"tes-thee'zhuh, -zee-uh) [*pseudēs*; G. *phōs*, light; *aisthēsis*, perception]. Ability to experience photisms.

Pseu"do-phyl-lid'e-a [*pseudēs*; G. *phyllon*, leaf]. Order of the class Cestoda or tapeworms.

pseu"do-ple'gi-a [*pseudēs*; G. *plēgē*, stroke]. Simulated or hysterical paralysis.

pseu"do-po'di-o-spore [*pseudēs*; G. *podion*, from *pous*, foot; *spora*, seed]. An ameboid swarm spore; an ameboid.

pseu"do-po'di-um, pseu'do-pod [*pseudēs*; *pous*]. 1. A temporary protrusion of a portion of the cytoplasm of an ameboid cell, as an aid to locomotion or for engulfing particulate matter. 2. In *allergy*, an irregular projection of the margin of a wheal.

pseu"do-pol"y-po'sis. An acquired form of polyposis of the colon, secondary to ulcerative colitis or amebic dysentery, in which tufts of mucosa have a pedunculated appearance due to adjacent ulcers or scars. Malignant degeneration may be secondary to the associated chronic ulceration. Also called *inflammatory polyps*.

pseu"do-preg'nan-cy. See phantom pregnancy.

pseu"do-pseu"do-hy"po-par"a-thy'roid-ism. A rare condition, described by F. Albright (1952), similar to pseudohypoparathyroidism, but with normal serum phosphorus and calcium levels.

pseu-dop'si-a [*pseudēs*; G. *opsis*, vision]. Visual hallucination, or error of visual perception.

pseu"do-pte-ryg'i-um (sue"do-ti-rij'ee-um, -teh-rij'ee-um) [*pseudēs*; G. *pterygion*, little wing]. False, or cicatricial, pterygium.

pseu"dop-to'sis, pseu"do-pto'sis [*pseudēs*; G. *ptōsis*, falling]. A condition resembling ptosis, caused by a fold of skin and fat descending below the edge of the eyelid.

pseu'do-pus" [*pseudēs*; L. *pus*, pus]. A liquid that resembles pus in appearance only.

pseu"do-pyr"i-dox'ine (-pirr"i-dock'seen, -sin). A pyridoxine derivative believed to be widely distributed in natural products, which has a biologic activity for *Streptococcus lactis* much greater than pyridoxine. See *pyridoxine*.

pseu"do-ra'bies. 1. Hydrophobophobia. 2. Infectious bulbar paralysis. See Aujeszky's disease.

pseu"do-re-ac'tion [*pseudēs*; cf. F. *réaction*]. A nonspecific reaction. A localized reaction following the intracutaneous inoculation of a test substance, due to impurities contained in the material. The reaction may be of an allergic nature and is frequently observed in the Schick test for immunity to diphtheria.

pseu"do-rick'ets. See renal *rickets*.

pseu"do-rhon'chus [*pseudēs*; G. *rhonchos*, wheezing]. A false or spurious rhonchus; deceptive auscultatory sound.

pseu"do-sar-co'ma (*of breast*). See *cystosarcoma phylloides*.

pseu"do-scar"la-ti'na (sue"do-skahr"luh-tee'nuh) [*pseudēs*; ME. *scarlat*]. A febrile disease associated with a rash like that of scarlatina.

pseu"do-scle-ro'sis [*pseudēs*; G. *sklērōsis*, hardening]. An affection similar in symptoms to multiple sclerosis of the nervous system. A familial degenerative disease, poorly defined but characterized by

gradual development of tremors, rigidity and mental deterioration. A greenish ring at the outer edge of the cornea is considered pathognomonic. Closely allied to progressive lenticular degeneration. Also called *Creutzfeldt-Jakob disease*.

pseu"do-sil"i-cot'i-cum. See talcum-powder granuloma.

pseu"do-small'pox. An epidemic disease of South America and Africa. It resembles smallpox and may be a mild form of variola. Also called *alastrim, amaas, Kaffir milk pox*.

pseu-dos mi-a (sue-dos mee-uh, sue-dos) [*pseudo*; G. *osmē*, smell]. Perversion of the sense of smell; an olfactory hallucination. A disorder frequently observed in the uncinate type of epilepsy.

pseu"do-sto'ma [*pseudo*; G. *stoma*, mouth]. An apparent aperture between endothelial cells that have been stained with silver nitrate.

pseu do-strat'i-fied [*pseudo*; L. *stratum*, covering; *facere*, to make]. Characterizing an epithelium in which the cells all reach the basement membrane, but are of different lengths, with their nuclei lying at different levels, thus producing the appearance of several layers of cells.

pseu"do-ta'bes (sue do-tay'beez) [*pseudo*; L. *tabes*, wasting away]. 1. A disease simulating tabes dorsalis or tabes mesenterica. 2. The ataxic form of alcoholic multiple neuritis.

pupillotonic p. See Adie syndrome.

pseu"do-tet a-nus [*pseudo*; G. *tetanos*, stretched]. Symptoms simulating tetanus without the presence of *Clostridium tetani*.

Pseu do-thel phu'sa [*pseudo*; NL.]. A genus of crayfish, species of which may act as intermediate hosts of the fluke, *Paragonimus westermani*.

pseu do-tho'rax [*pseudo*; G. *thōrax*, thorax]. A placental parasitic twin (omphalosite) in which there is no apparent thorax.

pseu"do-tin ni'tus. Objective tinnitus.

pseu"do-trich"i no'sis. See *dermatomyositis*.

pseu"do-tre pine (sue do-tre peen, -pin) An optically inactive isomer of trepine.

pseu"do-trun'cus ar te"ri-o'sus. A congenital malformation of the heart in which there is a high ventricular septal defect with overriding aorta and absent or rudimentary pulmonary artery. Circulation to the lungs is by way of the bronchial arteries.

pseu do-tu-ber"cu lo'sis [*pseudo*; L. *tuberculum*, small swelling; G. *-ōsis*, condition]. A general term for a pulmonary infection caused by a variety of fungi or bacteria other than the tubercle bacillus; found in man and lower animals.

pseu do-tu'mor. A pseudoneoplasm.

inflammatory p. of the orbit. A self-limiting disease in which inflammation and degeneration of orbital fat and extraocular muscles result in proptosis.

p. cerebri. A condition characterized by increased intracranial pressure of unknown origin. In some cases it may be the result of occlusion of the large intracranial venous sinuses.

pseu"do-ty'phoid [*pseudo*; G. *typhōdēs*, delirious]. Spurious typhoid. A disease simulating typhoid fever but in which the true lesions of this disease as well as the typhoid bacilli are absent.

pseu do-vac'u-oles [*pseudo*; L. *vacuus*, empty]. Transparent bodies containing pigment found by Laveran in blood of malarial patients.

pseu do-ven'tri-cle [*pseudo*; L. *ventriculus*, ventricle]. The so-called fifth ventricle of the brain; the cavity of the septum pellucidum. O.T.

pseu do-vom'it ing [*pseudo*; L. *vomitus*, vomiting]. Passive regurgitation of material from the stomach, without expulsive effort.

pseu do-xan tho-ma e las'ti-cum (-zan-tho-muh) A chronic disease of the skin, characterized by an eruption of yellowish plaques, slightly elevated, with an especial predilection for certain parts of the skin, as the lower abdomen, axilla, sides of neck, in which it differs from true xanthoma. Commonly associated with angioid streaks of the retina. At times it shows a familial tendency but is apt to be recessive in character. It is histologically a degeneration of the elastic tissue of the skin. Also called *Groenblad-Strandberg syndrome*.

pseu dy'drops [*pseudo*; G. *hydrōps*, dropsy]. False dropsy.

psi'caine (sigh'kane, sigh'kay-een, -in) (COOH-COOH)$_2$NC$_8$H$_{12}$C$_7$H$_{10}$(COOCH$_3$)O COC$_6$H$_5$ *d*-ψ-Cocaine bitartrate; occurs as white crystals; soluble in water. Used as a local anesthetic.

psi cose. CH$_2$OH.CO.HOCH.HOCH.HOCH.CH$_2$OH; L-psicose; ketose sugar.

psi-lo'sis (sigh lo sis) [G. stripping bare]. 1. Old term for sprue. 2. Falling out of the hair. —**psilot'ic**, *adj*.

psi phe-nom'e-non. See under *phenomenon*.

psit"ta-co sis (sit uh-ko'sis) [G. *psittakos*, parrot; *-ōsis*, condition]. An acute febrile disease caused by a polytropic virus. Characterized in man by pneumonia and in parrots and related species by enteritis.

pso'as (so us) [G. *psoa*, muscles of the loins]. One of two muscles, **psoas major** and **psoas minor**. Psoas major arises from the bodies and transverse processes of the lumbar vertebrae and is inserted into the lesser trochanter of the femur. Psoas minor has a similar origin and is inserted on the pubis. See Table of Muscles in the Appendix.

p. magnus. Old name for the psoas major.

p. parvus. Old name for the psoas minor muscle.

psod'y mus (sod'i-mus) [*psoas*; G. *didymos*, twin]. A monster with two heads and chests and conjoined abdominal and pelvic cavities. Also called *dorphalus tetrabrachius, iliopagus*.

pso-i'tis (so-eye tis) [*psoas*; G. *-itis*, inflammation]. Inflammation of the psoas major muscle.

pso mo-pha gi a (so'mo-fay'juh, -jee-uh) **pso-moph'a gy** (so-mof'uh-jee) [G. *psōmos*, bit; *phagein*, to eat]. The swallowing of food without thorough chewing. —**psomophag'ic**, *adj*.

pso ra. Psoriasis.

pso ra lene (sor uh leen, -lin) See *caffeine*.

pso ri-as'i form (sor eye-as i form) [G. *psōriasis*, itch; L. *forma*, form]. Like psoriasis.

pso-ri' a sis (so-rye uh sis) [G.]. A chronic inflammatory skin disease characterized by the development of reddish patches covered with silvery-white imbricated scales. The disease affects especially the extensor surfaces of the body and the scalp.

arthropathic p. See psoriatic *arthropathy*.

p. buccalis. See *leukoplakia* buccalis.

p. circinata. Psoriasis in which the central part of the lesion disappears and leaves a ring-shaped patch. Also called *p. orbicularis*.

p. diffusa. A form in which there is coalescence of large contiguous lesions affecting large areas of the body.

p. discoidea. A form in which the patches are the size of small coins. Also called *p. nummularis*.

p. follicularis. A form in which scaly lesions are located at the openings of sweat and sebaceous glands.

p. guttata. See *p. punctata*.

p. gyrata. Psoriasis with a serpentine arrangement of the patches.

p. inveterata. One with persistent infiltrated lesions which often fissure and become covered with heavy scales.

p. palmaris. A form affecting the palms of the hands.

p. punctata. A form in which the lesions consist of minute red papules which rapidly become surmounted by pearly scales.

p. rupioides. A variety in which large conical crusts marked by concentric rings occur.

p. universalis. A form in which the lesions are all over the body.

pustular p. 1. An acute reaction in chronic psoriasis. The pustules are sterile and probably are macroscopic forms of Munro microabscesses. 2. Pustulosis palmaris et plantaris; this latter may be a limited form of psoriasis or a bacterid.

pso"ri·at'ic (sor"ee·at'ick) [G. *psôriatikos*, of the itch]. Pertaining to or affected with psoriasis.

pso"roph·thal'mi·a (sor"off·thal'mee·uh) [G. *psôra*, itching; *ophthalmia*, ophthalmia]. Blepharitis ciliaris.

pso"ro·sper'mia. See *corpus renale*.

P. S. P. Phenolsulfonphthalein test.

psy'cha·go·gy, psy"cha·go'gi·a [G. *psychê*, soul; *agôgos*, leading]. A reeducational, psychotherapeutic procedure which stresses the proper socialization of the individual. —**psychagog'ic,** *adj.*

psy·chal'gi·a (sigh·kal'jee·uh) [*psychê*; G. *algos*, pain]. Pains in the head, ascribed by depressed patients to anxiety or to some psychic rather than physical cause; also spelled *psychalgia*.

psy·cha'li·a (sigh·kay'lee·uh) [*psychê*]. A morbid state attended by auditory and visual hallucinations. *Obs.*

psy"chas·the'ni·a (sigh"kass·thee'nee·uh, ·thi·nigh'uh) [*psychê*; G. *asthenia*, want of strength]. A term coined by Janet which applies to all psychoneuroses containing compulsive, obsessive, and phobic tensions. A nervous state characterized by an urge to think, feel, or do something which at the same time is recognized by the patient as being senseless, silly, or irrational. *Rare.* —**psychasthen'ic,** *adj.*

psy"cha·tax'i·a [*psychê*; G. *ataxia*, confusion]. Impaired power of mental concentration; mental confusion or groping.

psych·au'di·to"ry (sykc·aw'di·to·ree) [*psychê*; L. *auditorius*, of hearing]. Pertaining to the conscious or intellectual interpretation of sounds.

psy'che (sigh'kee) [G.]. The mind as a functional entity serving to adjust the total organism to the needs or demands of the environment.

psy'che·ism (sigh'kee·iz·um) [*psychê*]. Mesmerism; animal magnetism.

psy"chen·to'ni·a (sigh"ken·to'nee·uh) [*psychê*; G. *entasis*, from *entenes*, intense]. Mental strain or overwork.

psy·chi'a·ter (sigh·kigh'uh·tur) [*psychê*; G. *iatêr* physician]. An alienist; psychiatrist.

psy"chi·at'ric (sigh"kee·at'rick, sick"ee·at'rick) [*psychê*; G. *iatrikos*, skilled in the medical art]. Pertaining to psychiatry.

psy"chi·at'rics [*psychê*; *iatrikos*]. The theory or practice of psychiatry.

psy·chi'a·trist [*psychê*; G. *iatros*, physician]. A specialist in psychiatry.

psy·chi'a·try (si·kigh'uh·tree) [*psychê*; G. *iatreia*, medical treatment]. The treatment of diseases of the mind.

psy'chic, psy'chi·cal [G. *psychikos*, of the soul]. 1. Pertaining to the mind or psyche. 2. Sensitive to nonphysical forces.

psy'chics [*psychikos*]. Psychology.

psy"chi·no'sis (sigh"ki·no'sis). Any disease of the mind. *Obs.*

psy·chi·lamp'si·a (sigh·ci·lamp'see·uh) [G. *psychê*, soul; *lampsis*, shining]. Mania, viewed as a discharging phenomenon of perverted cerebral activity. *Obs.*

psy'cho- (sigh'ko-), **psych-** [*psychê*]. A combining form denoting *mind*, *mental processes*, *psychologic methods*.

psy"cho·an"al·ge'si·a. The relief of pain by psychological means, principally by assurance of and explanations to the patient, suggestion, and therapeutic measures as music.

psy"cho·a·nal'y·sis (sigh"ko·a·nal'i·sis) [*psychê*; G. *analysis*, a loosing]. 1. The method developed by Sigmund Freud for the exploration and synthesis of patterns in emotional thinking and development; technic used in the treatment of a wide variety of emotional disorders, particularly the neuroses. Relies essentially upon the free associations of the patient to produce valuable information of which the patient was formerly unaware, by bringing to conscious manipulation ideas and experiences from the unconscious divisions of the psyche. 2. The body of data and theory based on the discoveries of this method, concerned chiefly with the conflict between infantile instinctual striving and parental or social demand, and the manner in which this conflict affects emotional growth, character development, and the formation of mental and emotional disorders.

psy"cho·an'a·lyst (sigh"ko·an'uh·list) [*psychê*; *analysis*]. One who practices psychoanalysis.

psy"cho·au'di·to·ry. See *psychauditory*.

psy"cho·bi·ol'o·gist (sigh"ko·bye·ol'o·jist) [*psychê*; G. *bios*, life; *logos*, word]. One who specializes in psychobiology.

psy"cho·bi·ol'o·gy [*psychê*; *bios*; *logos*]. An approach to the study of personality introduced in the United States and emphasized by Adolf Meyer, in which the individual is considered as a whole within his whole situation, that is, not only as a physical organism but as the sum of and reacting to his environment. As a school of psychiatry, psychobiology stresses that mental disorders, like normal behavioral processes, are dynamic adaptive reactions of the individual to stress or conflict, and are the understandable results of the psychobiological development of the individual. —**psychobiolog'ic, psychobiolog'ical,** *adj.*

psy"cho·cl·ne'si·a (sigh"ko·si·nee'zhuh, ·zee·uh, ·shuh, ·see·uh). See *psychokinesis*.

psy"cho·co'ma [*psychê*; G. *kôma*, deep sleep]. Mental stupor. *Obs.*

psy"cho·cor'ti·cal [*psychê*; L. *cortex*, bark]. Pertaining to that part of the cerebral cortex concerned in the perception of sensations.

psy"cho·di"ag·nos'tics [*psychê*; G. *diagnôstikos*, able to distinguish]. The evaluation of the personality as furnished by the Rorschach method.

Psy·chod'i·dae (sigh·kod'i·dee) [G. *psychê*, butterfly; *eidos*, form]. A family of the Diptera, which includes the moth flies, moth midges, and sand flies. The most important genus is *Phlebotomus*.

psy"cho·dom'e·ter [G. *psychê*, soul; *hodos*, way; *metron*, measure]. An instrument for measuring the rapidity of psychic processes.

psy"cho·dom'e·try [*psychê*; *hodos*; *metron*]. The measurement of the rapidity of psychic processes.

psy"cho·dra'ma [*psychê*; G. *drama*, deed or act]. In psychotherapy, the reenactment of events from the patient's life, with the patient as either spectator or actor; a technique for obtaining cathartic relief.

psy"cho·dy·nam'ics (sigh"ko·dye·nam'icks, ·di·nam'icks) [*psychê*; G. *dynamikos*, powerful]. The study of psychology from the point of view of the causative factors in mental activity. —**psychodynam'ic,** *adj.*

psy″cho-ep′i-lep″sy See idiopathic *epilepsy*.

psy″cho-gal″va-nom′e-ter [*psychē*; Luigi *Galvani*; G. *metron*, measure]. A device for recording electrodermal responses to various mental stimuli which provoke emotional reactions. Its practical application is the lie detector which indicates the emotional reactions of one who is suppressing the truth.

psy″cho-gen′i-c o-ver-lay Exaggeration of symptoms beyond what one would expect from the organic cause, and therefore presumed to be of functional origin.

psy″cho-gen′e-sis [*psychē*; G. *genesis*, production] 1. The development of mental characteristics. 2. The process by which activities or ideas originate in the mind, or psyche. 3. The origin of psychic activity contributing to psychosis. —**psychogen′ic, psychogenet′ic,** *adj*

psy-chog′e-ny (sigh kodj′i-nee) [*psychē*; G. *gene-thai*, from *gignesthai*, to be produced]. 1. See *psychogenesis*. 2. The development of the mind. *Obs.*

psy″cho-geu′sic (sigh″ko-gew′sick, -jew′sick) [*psychē*; G. *geusis*, taste]. Pertaining to perception of taste.

psy-chog′no-sis (sigh-og no-sis, sigh cog-no′sis) [*psychē*; G. *gnōsis*, knowledge]. Diagnosis or recognition of mental and psychic conditions. *Rare.* —**psychognos′tic,** *adj*

psy′cho-gram [*psychē*; G. *gramma*, letter]. A chart or table of personality traits.

psy″cho-graph′ic [*psychē*; G. *graphein*, to write]. 1. Relating to a chart of the personality traits of an individual. 2. *In psychiatry*, relating to the natural history of the mind.

psy″cho-ki-ne′si-a (sigh″ko-ki-nee′shah, -see-uh, -zhah, -zee-uh, sigh″ko-kigh-) **psy″cho-ki-ne′sis** (sigh ko-ki-nee′sis, kigh-nee′sis) [*psychē*; G. *kinēsis*, motion]. Explosive or impulsive maniacal action; lack of inhibition of primitive instincts leading to violent and hasty actions.

psy″cho-ki-ne′sis. 1. See *psychokinesia*. 2. The direct action of mind on matter.

psy″cho-lag′ny [*psychē*; G. *lagneia*, coition]. Sexual excitement induced by mental concepts.

psy′cho-lep sy [*psychē*; G. *lēpsis*, seizure]. A sudden intense psychic depression, lasting for a short time. —**psycholep′tic,** *adj*

psy″cho-log′ic screen′ing. The use of psychologic tests, usually for large groups, as a means of determining general fitness for any specific duty such as army service.

psy-chol′o-gist [*psychē*; G. *logos*, word]. One who specializes in psychology.

psy-chol′o-gy [*psychē*; *logos*]. The science which studies the functions of the mind, such as sensation, perception, memory, thought, and, more broadly, the behavior of an organism in relation to its environment. —**psycholog′ic, psycholog′ical,** *adj*

abnormal p. The study of the irregular and pathologic mental phenomena, such as hallucinations and delusions, which occur in mental illnesses.

analytic p. See *analytic psychology*.

animal p. That branch of psychology which investigates the behavior of animals.

applied p. That branch of psychology which emphasizes practical rather than theoretical objectives. It includes medical, industrial, educational, clinical, and similar branches of psychology. Refers also to the interpretation of data in history, literature, and such fields according to psychologic principles.

depth p. That relating to all unconscious mental activity.

dynamic p. 1. *In psychiatry*, specifically the Freudian concepts which ascribe to the energy of the libido a potent role in mental symptoms. 2. *In psychology*, an approach which emphasizes the cause-and-effect relations between conscious and unconscious phenomena and stresses the process nature of personality.

experimental p. The study of psychologic phenomena by experimental methods.

gestalt, Gestalt p. A system or theory of psychology which emphasizes the wholeness and organized structure of every experience. It maintains that psychologic processes and behavior cannot be described adequately by analyzing the elements of experience alone, and emphasizes sudden learning by insight rather than by trial and error or association.

individual p. A system developed by Alfred Adler. The individual is regarded as an indivisible unit of human society; his individual traits are compared, in terms of a striving for superiority which is assumed to exist in everyone, and then restated to provide a composite picture of a single tendency expressed in many ways.

industrial p. Psychology applied to problems in industry dealing chiefly with the selection and mental health of personnel.

physiologic p. That branch of psychology which investigates the structure and functions of the nervous system and bodily organs in their relationship to behavior.

psy-cho′ma (sigh-ko muh) [*psychē*; G. -*ōma*, morbid affection]. Psychic *forms* based on a general sensation of substances. *Obs.*

psy″cho-math″e-mat′ics [*psychē*; G. *mathēmatikos*, fond of learning]. Mathematics associated with or applied to psychology; the application of mathematical formulas to designate variations in mental capacities.

psy-chom′e-try (sigh kom′i-tree) **psy″cho-met′rics** [*psychē*; G. *metron*, measure]. The measurement of the duration and intensity of psychic processes. Frequently applied to mean the measurement of intelligence. —**psychomet′ric,** *adj*

psy″cho-mo′tor [*psychē*; L. *motor*, from *movere*, to move]. Pertaining to voluntary movement, as the psychomotor area, disposed chiefly along each side of the central fissure of the cerebral hemisphere.

psy″cho-neu″ro-log′ic (sigh″ko-new ro lodj′ik) [*psychē*; G. *neuron*, nerve; *logikos*, possessed of reason]. Pertaining to a condition characterized by both psychic and organic neural components.

psy″cho-neu-ro′si [*psychē*; *neuron*; G. -*ōsis*, condition]. A group of reactions now classified as psychoneurotic disorders.

psy″cho-neu-rot′ic [*psychē*; *neuron*]. Relating to, or affected by a psychoneurosis.

psy″cho-neu-rot′ic dis-or′ders. *In psychiatry*, a group of reactions characterized chiefly by anxiety which may be directly felt and expressed or unconsciously controlled by means of defense mechanisms, the recognition of which becomes the basis for the specific diagnostic term applied. In contrast to psychotic disorders, there is no gross disorganization of personality in relation to external reality. Individuals suffering from psychoneurotic disorders usually present a history of unusual difficulties in development related to special stresses or deprivations in early life, which influence the form of the disorder in terms of symptoms and susceptibilities.

psy″cho-nom′ics [*psychē*; G. *nomikos*, relating to laws]. That science dealing with the laws of the mind; psychology. —**psychonom′ic,** *adj*

psy-chon′o-my (sigh kon′o-mee) [*psychē*; G. *nomos*, law]. Psychonomics.

psy″cho-no-se′ma [*psychē*; G. *nosēma*, disease]. Any mental disease. *Obs.*

psy″cho·pa·re′sis (sigh″ko-pa-ree′sis, -par′i-sis) [*psychē*; G. *paresis*, slackening]. Enfeeblement of the mind. *Rare.*

psy′cho·path [*psychē*; G. *pathos*, disease]. A morally irresponsible person; one who continually comes in conflict with accepted behavior and the law. See *sociopathic personality* disturbance.

psy″cho·path′i·a [*psychē*; *pathos*]. Psychopathy.

p. chirurgicalis. A mania for being operated upon.

p. sexualis. See *sexual deviation.*

psy·chop′a·thist (sigh-cop′uth-ist) [*psychē*; *pathos*]. Old term for psychiatrist.

psy″cho·pa·thol′o·gist [*psychē*; *pathos*; G. *logos*, word]. One who specializes in the pathology of mental diseases.

psy″cho·pa·thol′o·gy [*psychē*; *pathos*; *logos*]. The pathology of mental diseases.

psy·chop′a·thy (sigh-cop′uth-ee) [*psychē*; *pathos*]. Any disease of the mind. —**psychopath′ic**, *adj.*

psy″cho·pho·nas·the′ni·a [*psychē*; G. *phōnē*, voice; *astheneia*, want of strength]. A speech difficulty of mental origin.

psy″cho·phys′ics [*psychē*; G. *physikos*, natural]. 1. The study of mental processes by physical methods. 2. The study of the relation of stimuli to the sensations which they produce, especially the determination of the differences of stimulus required to produce recognizable differences of sensation; experimental psychology. —**psychophysical**, *adj.*

psy″cho·phys″i·o·log′ic. Pertaining to the mind and its relation to the physiology of the body.

psy″cho·phys″i·o·log′ic au″to·nom′ic and vis′cer·al dis·or′ders. Symptoms arising from chronic and exaggerated forms of the normal physiologic organic components of emotion but with the subjective awareness of the emotion repressed. If long continued, may lead to structural changes in the affected organs, e.g., peptic ulcer. These disorders differ from conversion (hysterical) reactions in that they involve over- or underactivity of organs and viscera innervated by the autonomic nervous system, fail to alleviate anxiety, are physiologic rather than symbolic in origin. Diagnosis, based on the principal symptomatic manifestations of the organ system involved, is specified as *psychophysiologic skin reaction*, *musculoskeletal reaction* (to be differentiated from conversion reaction), *respiratory reaction*, *cardiovascular reaction* (cardiac neurosis), *hemic and lymphatic reaction*, *gastrointestinal reaction* (gastric neurosis), *genitourinary reaction*, *endocrine reaction*, *nervous system reaction* (including neurasthenia), and some *reactions of organs of special sense*. It covers the former diagnoses of organ neuroses and anxiety states.

psy″cho·phys″i·ol′o·gy [*psychē*; G. *physis*, nature; *logos*, word]. Physiologic psychology; mental physiology.

psy″cho·ple′gi·a [*psychē*; G. *plēgē*, stroke]. Mental impairment of sudden onset. *Rare.* —**psychoplegic**, *adj.*

psy″cho·ple′gic [*psychē*; *plēgē*]. A drug which lessens excitability and suppresses receptivity.

psy″cho·rhyth′mi·a (sigh″ko-rith′mee-uh, -rith′mee-uh) [*psychē*; G. *rhythmos*, any regular recurring motion]. A mental condition in which there is involuntary repetition of previous volitional behavior.

psy″chor·rha′gi·a (sigh″ko-ray′juh, -jee-uh) [*psychē*; G. *rhēgnynai*, to burst forth]. The death agony. *Obs.*

psy″cho·sen·so′ri·al. Psychosensory.

psy″cho·sen′so·ry [*psychē*; L. *sensus*, from *sentire*, to feel]. Pertaining to perception of sensory impulses at conscious levels.

psy″cho·sex′u·al [*psychē*; L. *sexualis*, sexual]. Relating to the mental and emotional aspects of sexuality as contrasted to the strictly physical or endocrine manifestations.

psy·cho·sin (sigh-ko-sin). A cerebroside derivative obtained by boiling with barium hydroxide. Psychosin consists of a combination of sphingosine and galactose.

psy·cho′sis (sigh-ko′sis) [G., giving soul to]. A mental disorder characterized by disintegration of the personality and its break with reality. See *psychotic disorder.* —**psychot′ic**, *adj.*

affective-reaction p. See manic-depressive reaction, affective reaction.

alcoholic p. Psychosis caused by alcoholism; chronic alcoholic delirium.

arteriosclerotic p. Psychic disturbance in which arteriosclerosis is the exciting cause.

climacteric p. A psychic reaction associated with menopause.

degenerative p. A psychosis in which position is exhibited.

exhaustive p. Essentially the same as collapse delirium, but a more severe mental disorder.

famine p. See p. induced by starvation.

gestational p. One arising during pregnancy.

involutional p. See involutional psychotic reaction.

manic-depressive p. See manic-depressive reaction.

organic p. A psychosis associated with demonstrable organic disease. See *organic brain disorder.*

postinfectious p. Mental disturbance following acute disease, such as pneumonia or typhoid fever.

p. induced by starvation. A psychosis seen in war-torn countries when starvation is severe and widespread.

puerperal p. Any psychotic reaction in women during childbirth or the postpartum period.

reactive p. A psychosis which is supposed to be precipitated by an environmental condition. Also called *situational p.*

senile p. A psychosis occurring in old age.

therapeutic p. In *psychoanalysis*, temporary regression during therapy accompanied by primitive means of dealing with drives which provide the basis for massive resynthesis of personality.

toxic p. Psychic disorders caused by toxins or toxic agents, such as opium or alcohol.

psy″cho·so·mat′ic [G. *psychē*, soul; *sōma*, body]. Of or pertaining to the mind and body, as in afflictions with an emotional background having both mental and bodily components. Especially relating to a system of medicine which emphasizes the interdependence of mental processes and physical or somatic functions. See *psychophysiologic autonomic and visceral disorders.*

psy″cho·sur′ger·y [*psychē*; G. *cheirourgia*, working by hand]. Frontal lobotomy or operative section of the frontothalamic fibers of the brain, used in the treatment of certain mental disorders.

psy″cho·tech′nics [*psychē*; G. *technikos*, skilled]. The application of psychologic principles to economics and social sciences.

psy″cho·ther″a·peu′tics. See *psychotherapy.*

psy″cho·ther′a·py [*psychē*; G. *therapeia*, treatment]. 1. The treatment of disease by suggestion. 2. The treatment of mental diseases.

psy·chot′ic de·pres′sive re·ac′tion. See under *reaction.*

psy·chot′ic dis·or′der. In *psychiatry*, the reaction of an individual to external or internal stress or injury characterized generally by severe affective disturbance, profound introspection, and withdrawal from reality with failure to test and evaluate external reality adequately; formation of

delusions or hallucinations, and regression presenting the appearance of personality disintegration. In contrast to organic brain syndromes, there is no impairment of orientation, memory or intellect, though these may be difficult to examine readily but differentiation from the psychoneurotic disorders may require long and acute observations. Included in this grouping are the affective, paranoid, and schizophrenic reactions. A psychotic reaction may also accompany symptomatic clinical picture, as in chronic brain syndromes associated with senile changes or alcohol intoxication. Formerly called *psychosis*

psy'cho·trine, $(CH_3O)_2C_{25}H_{26}N\ OH$; an alkaloid found in ipecac.

psy·chral'gi·a (sigh-kral'jee-uh) **psy"chro·al'gi·a** [G. *psychros*, cold; *algos*, pain]. A condition characterized by painful subjective sense of cold.

psy'chro- [*psychros*]. A combining form meaning *cold*.

psy"chro·es·the'si·a (sigh"kro-ees-thee'zhuh, -zee-uh) [*psychros*; G. *aisthēsis*, perception]. Subjective sensation of cold.

psy"chro·lu'si·a [*psychros*; G. *lousis*, bathing]. Cold bathing.

psy·chrom'e·ter (sigh-krom'i-tur) [*psychros*; G. *metron*, measure]. A hygrometer for determining the atmospheric moisture by observing the difference in the indication of two identical thermometers, the bulb of one being kept dry and the other wet, with water-soaked wick; both are swung through the air to facilitate evaporation from the wet bulb.

psy"chro·phil'ic [*psychros*; G. *philein*, to love]. Pertaining to cold-loving organisms; applied to microorganisms which develop best from 15° 20° C. Syn., *cryophilic*.

psy"chro·pho'bi·a [*psychros*; G. *phobos*, fear]. 1. Morbid fear of cold. 2. Morbid sensibility to cold.

psy'chro·phore [*psychros*; G. *phoros*, bearing]. An instrument for applying cold to deeply seated parts, as double-current catheter for applying cold to the posterior part of the urethra.

psy"chro·ther'a·py [*psychros*; G. *therapeia*, treatment]. The treatment of disease by the use of cold.

psy'co·sin, psy·co·sin. The galactoside of sphingol.

psyl'li·um seed (sil'ee-um). See *plantago seed*.

Pt Chemical symbol for platinum.

pt. Pint.

PTA Plasma thromboplastin antecedent.

PTA de·fi'ci·en·cy Hemorrhagic disorder due to deficiency of plasma thromboplastin antecedent.

ptar'mic (tahr'mick) [G. *ptarmikos*, causing to sneeze]. Pertaining to the act of sneezing; sternutative.

ptar'mic. A substance that produces sneezing.

ptar'mus (tahr'mus) [G. *ptarmos*, sneezing]. Sneezing.

PTC Abbreviation for phenylthiocarbamide, plasma thromboplastin component.

PTC de·fi'ci·en·cy Deficiency of plasma thromboplastin component; Christmas disease.

ptel"e·or·rhine (tel'ee-o-ryne, -rin) [G. *ptelea*, elm; *rhis*, nose]. Pertaining to facial type in which the nostrils are asymmetric.

pter'i·dine. Any compound characterized by the presence of ring system composed of fused pyrimidine and pyrazine rings. Folic acid, the pterins, and many other substances contain such ring system.

pter'i·do·phyte **pter·id'o·phyte** [G. *pteris*, from *pteris*, fern; *phyton*, growth]. One of division of the plant kingdom, which includes the ferns and their allies.

pter'in (terr'in). Any pigment, containing pteridine ring system, occurring in the wings of butterflies and, by extension, in mammalian tissues

pter'i·on (terr'ee-on, teer'ee-on) [G. *pteron*, wing]. The region (not point) surrounding the sphenoparietal suture where the frontal bone, parietal bone, squama temporalis, and greater wing of the sphenoid bone come together most closely

pter'o- (terr'o-) [*pteron*]. A combining form meaning *feather wing*.

pter·o'ic ac'id. $C_{14}H_{12}N_6O_3$; *p*-[(2-amino-4-hydroxy-6-pteridylmethyl)amino]benzoic acid, being folic acid (pteroylglutamic acid) without its glutamic acid component. The formyl derivative of pteroic acid (rhizopterin) appears to be precursor of folic acid.

pter"o·yl·glu·tam'ic ac'id. Folic acid. See Table of Vitamins in the Appendix.

pte·ryg'i·um (teh-ridj'ee-um, ti-ridj') [G. *pterygion*, anything like wing; disease of the eye when membrane grows over it from the inner corner]. 1. A triangular patch of mucous membrane growing on the conjunctiva, usually on the nasal side of the eye. The apex of the patch points toward the pupil, the fan-shaped base toward the canthus. 2. See *eponychium*, 2. 3. Any fold of skin extending abnormally from one part of the body to another —**pterygial** *adj*

pter'y·go- (terr'i-go-) [G. *pteryx*, wing]. A combining form denoting *connection with*, or *relation to the pterygoid process*.

pter'y·goid (terr'i-goyd) [*pteryx*; G. *eidos*, form]. 1. Wing-shaped, as the pterygoid process of the sphenoid bone. 2. Pertaining to the pterygoid canal, pterygoid process, pterygoid plexus, etc.

pter"y·go·man·dib'u·lar [*pteryx*; L. *mandibula*, jaw]. Pertaining to the pterygoid process and the mandible.

pter"y·go·max'il·lar"y (terr"i-go-mack'si-lerr-ee) [*pteryx*; L. *maxilla*, jaw]. Pertaining to the pterygoid process and the maxilla.

pter"y·go·pal'a·tine (terr"i-go-pal'uh-tyne, -tin) [*pteryx*; L. *palatum*, palate]. Situated between the pterygoid process of the sphenoid bone and the palatine bone, as the pterygopalatine canal.

pter"y·go·pha·ryn'ge·us [*pteryx*; G. *pharynx*, pharynx]. The part of the superior constrictor of the pharynx which arises from the medial pterygoid process.

pter"y·go·sper'min. An antibiotic substance derived from the root of *Moringa pterygosperma*, active, in vitro, against several bacterial species.

pter"y·go·spi·no'sus [*pteryx*; L. *spina*, thorn]. Pertaining to pterygoid process and to the angular spine of the sphenoid bone.

ptil·o'sis (ti-lo'sis) [G. disease of the eyelids]. Falling out of the eyelashes.

P. T. O. Perlsucht tuberculin original; tuberculin prepared from bovine tubercle bacilli, in the same manner as Koch original tuberculin. Also called *Klemperer's tuberculin*.

pto'maine (to'mayn, to-mayn', to-may'een, -in) [G. *ptōma*, fallen body]. An amino compound which results from the decomposition of proteins or dead animal matter by microorganisms, should not be confused with those bacterial products which cause food poisoning.

pto·mat"i·nu'ri·a [*ptōma*; G. *ouron*, urine]. The presence of ptomaines in the urine.

pto'sis (to'sis) [G. falling]. Prolapse, abnormal depression, or falling down of an organ, applied especially to drooping of the upper eyelid, due to paralysis or atrophy of the levator palpebrae superioris. —**ptosed, ptot'ic,** *adj*

abdominal p. Enteroptosis.

congenital p. An anomaly of drooping upper eye-

lids due to absent or incomplete innervation of the levatores palpebrarum muscles.

p. iridis. Prolapse of the iris.

p. sympathetica. See Horner syndrome.

-pto sis [G.]. A combining form meaning *a lowered portion of an organ.*

P T R. Perlsucht tuberculin rest; a tuberculin prepared from bovine tubercle bacilli.

pty al'a gogue (tye al uh-gog) [G. *ptyalon*, saliva; *agōgos*, leading]. A medicine producing flow of saliva. Syn., *ptyalagogue.*

pty"a lec'ta-sis (tye uh-leck'tuh-sis) [*ptyalon*; G. *ektasis*, stretching]. Dilatation of the duct of a salivary gland, either spontaneous or produced surgically.

pty'a lin [*ptyalon*]. A diastatic enzyme found in saliva, having the property of hydrolyzing starch to dextrin, maltose, and glucose and hydrolyzing sucrose to glucose and fructose. Also called *ptyalase, salivary diastase.*

pty"a lin'o gen [*ptyalon*, G. *gennaein*, from *gignesthai*, to be produced]. The zymogen of ptyalin.

pty'a lism [*ptyalon*]. Salivation.

pty'a lo-cele (tye uh lo seel, tye al'o-seel) [*ptyalon*, G. *kēlē*, tumor]. A cyst containing saliva usually due to obstruction of the duct of a salivary gland. sublingual p. Ranula.

pty"a lo gen'ic [*ptyalon*, G. *gennaein*, from *gignesthai*, to be produced]. Of salivary origin.

pty al'o-gogue (tye-al'o-gog) [*ptyalon*, G. *agōgos* leading]. A medicine causing flow of saliva. Syn., *ptyalagogue.*

pty"a log'ra phy (tye uh log'ruh-fee) [*ptyalon*, G. *graphein*, to write]. Roentgenography of the salivary glands or their ducts.

pty'a lo lith [*ptyalon*, G. *lithos*, stone]. A salivary calculus; also spelled *ptyolith.*

pty"a lo li thi a sis (tye uh-lo li thigh uh-sis) [*ptyalon*, *lithos*; NL. *-iasis*, condition]. The formation, or presence, of salivary calculus.

pty"a lor rhe'a [*ptyalon*, G. *rhoia*, flow]. Excessive flow of saliva.

pty' lose (tye uh-lose) [*ptyalon*]. A sugar found in saliva. Syn., *maltose.*

pty"a lo sis [*ptyalon*, G. *-ōsis*, condition]. Salivation. Also called *ptyalism.*

pty'o-crine (tye'o-kryne, krin, kreen). See apocrine.

pty-oc'ri-nous (tye-ock ri nus) [G. *ptyon*, fan; *krinein*, to separate]. Obsolete term for apocrine.

pty'sis (tye sis) [G. spitting]. The act of spitting.

ptys'ma (tiz'muh) [G. sputum]. Saliva.

ptys'ma gogue (tiz'muh-gog) [*ptysma*; G. *agōgos*, leading]. A drug that promotes the secretion of saliva.

P U. Pregnancy urine, signifying the chorionic gonadotropic hormone found in such urine.

Pu Chemical symbol for plutonium.

pu'ber [L., adult]. One who has arrived at the age of puberty.

pu'ber-tas, pu ber'tas [L.]. Puberty.

p. plena. Complete puberty.

p. praecox. Puberty at a very early age.

pu'ber-ty [*pubertas*]. The period at which the generative organs become capable of exercising the function of reproduction; signalized in the boy by change of voice and discharge of semen, in the girl by the appearance of the menses. —**puberal,** *adj.*

precocious p. That occurring before eight years of age.

premature p. That occurring between the ages of eight and ten.

pu ber"u lic ac'id. $C_8H_6O_6$. A antibiotic from *Penicillium puberulum*; occurs as almost colorless crystals. It is active largely against Gram-positive bacteria.

pu ber"u lon'ic ac'id. $C_8H_4O_6$. An antibiotic from *Penicillium puberulum*, occurs in bright yellow prisms. It is a weak antibiotic agent active largely against Gram-positive bacteria.

pu'bes (pew'beez) [L., pubic hair; the private parts]. 1. The hairy region covering the pubic bone. 2. The two pubic bones considered together; that portion of the hipbones forming the front of the pelvis.

pu bes cence [L. *pubescere*, to become pubescent]. 1. Hairiness; the presence of fine, soft hairs. 2. Puberty, or the coming on of puberty. —**pubescent,** *adj.*

pu"bi otomy [L. *pubes*, the private parts; G. *gastēr*, abdomen; *tomē*, cutting]. Pelvic section through the pubes. *Obs.*

pu'bic [*pubes*]. Pertaining to the pubes.

pu"bi ot' omy [*pubes*; G. *tomē*, cutting]. The operation of dividing the pubic bone to facilitate delivery in cases of pelvic malformation. *Obs.*

pu'bis [NL., from *pubes*]. Os pubis; the pubic bone, that portion of the hipbone forming the front of the pelvis. See Table of Bones in the Appendix. See Plates 1, 2.

pub'lic health. 1. The health of a population or community. 2. Specifically, the health of a community in terms of organized effort on the part of the community to carry out such preventive medicine measures which the individual cannot perform for himself; e.g., large-scale sanitation, control of communicable diseases, advancement of hygiene, medical and nursing services, and general development of such means and methods as will best maintain and promote the health and efficiency of the population. See social medicine.

Pub'lic Health Serv'ice. See *United States Public Health Service.*

pu"bo- [*pubes*]. In *anatomy*, a combining form denoting *relation to the pubes or pubis.*

pu"bo-cap'su lar [*pubes*; L. *capsula*, little box]. Pertaining to the os pubis and the capsule of the hip joint. Used to denote a collateral ligament of the hip joint.

pu"bo-cav"er no'sus. A variable part of the ischiocavernosus muscle.

pu bo co cyg' al (pew"bo-cock-sidj'ee-ul) [*pubes*; G. *kokkyx*, cuckoo]. 1. Pertaining to the pubic bone and the coccyx. 2. A muscle, part of the levator ani.

pu"bo-coc-cyg'e-us. A part of the levator ani muscle.

pu"bo fem o-ral [*pubes*; L. *femur*, upper part of the thigh]. Pertaining to the os pubis and the femur, as the pubofemoral ligament, a collateral ligament of the hip joint capsule.

pu"bo-per"i to-ne-al'is. A variant of the transverse abdominal muscle.

pu"bo-pro-stat'ic [*pubes*; G. *prostatēs*, one who stands before]. Pertaining to the pubic bone and the prostate gland.

pu"bo rec tal'is. A part of the levator ani muscle.

pu"bo trans ver sal'is. A variant of the transverse abdominal muscle.

pu"bo ves'i-cal [*pubes*; L. *vesica*, bladder]. Pertaining to the pubic bone and the urinary bladder.

pu"bo ves-i-cal'is. A portion of the levator ani muscle.

pu'chi-in. An antibiotic substance derived from the Chinese water chestnut *Eleocharis tuberosa*, active, in vitro, against several bacterial species.

pu"den dag'ra (pew"den dag'ruh, -day'gruh) [L. *pudendus*, that of which one ought to be ashamed; G. *agra*, seizure]. Pain in the genital organs.

pu den'dum (pl. *pudenda*) [*pudendus*]. The external genital organs, especially of the female. —**pudendal,** *adj.*

p. muliebre. The vulva.

pu'dic [L. *pudicus*, shameful, modest]. Old term for pudendal.

Puente's disease. Simple glandular cheilitis.

pu'er-i-cul"ture (pew'ur-i-kul'chur, pew-err'i-) [L. *puer*, boy; *cultura*, cultivation]. The specialty of child training.

pu'er-il-ism [L. *puerilis*, boyish]. Childishness. —**puerile**, *adj.*

pu"er-i'ti-a (pew"ur-ish'ee-uh) [L., boyhood]. Second childhood.

pu-er'per-a (pew-ur'pur-uh) [L. *puerperus*, bringing forth children]. A woman who is in labor or has recently been delivered.

pu-er'per-al (pew-ur'pur-ul) [*puerperus*]. Pertaining to, caused by, or following childbirth, as puerperal convulsions, puerperal eclampsia.

pu-er'per-al-ism [*puerperus*]. The state brought about by pathologic conditions of pregnancy.

pu-er'per-ant [*puerperus*]. A woman who has been recently delivered.

pu"er-pe'ri-um (pew"ur-peer'ee-um) [L., childbirth]. 1. The state of a woman in labor or of one who has just been delivered. 2. The period from delivery to the time when the uterus has regained its normal size, which is about six weeks.

puff'ball" [ME. *puf*; *bal*]. Any of the fungi Lycoperdaceae which discharge their ripe spores like dust when struck. Many are edible when unripe.

Pugh test. See under *test*.

pu-gil'lus. Handful. Abbreviated, P.

pu'le-gone. $C_{10}H_{16}O$; 1-methyl-4-isopropylidene-3-cyclohexanone; a liquid constituent of many volatile oils from plants of the Labiatae family.

Pu'lex [L., flea]. A genus of fleas.

P. irritans. The human flea; a species which is the intermediate host and transmitter of *Dipylidium caninum* and *Hymenolepis diminuta*, and may spread plague. It is parasitic on the skin of man and also infests hogs, dogs, and other mammals.

Pulfrich photometer. An instrument used to determine the concentration of a solution by matching its color to a solution of known concentration, observed at the same time.

pu"li-car'is (pew"li-kair'is) [L. *pulicaris*, of fleas]. Marked with little spots like flea bites.

PULHES. See *physical profile serial*.

pu"li-ca'ti-o (pew"li-kay'shee-o) [L. *pulicare*, to produce fleas]. The state of being infested with fleas.

Pu-lic'i-dae (pew-lis'i-dee) [L. *pulex*, flea]. A family of fleas or Siphonaptera of which the most important to man are the genera *Pulex*, *Xenopsylla*, and Ctenocephalides.

pu'li-cide [*pulex*; L. *caedere*, to kill]. An agent capable of killing fleas.

Pul-lu-lar'i-a. A genus of thick-walled black fungi with budding spores, common as laboratory contaminants. Syn., *Dematium*.

pul'lu-late [L. *pullulare*, to put forth]. Germinate; bud.

pul"lu-la'tion [*pullulare*]. The act of sprouting or budding; a mode of reproduction seen in the yeast plant.

pul'mo- [L., lung]. A combining form meaning *lung*.

pul'mo-nar"y (pul'mo-nerr ee, pōōl'mo-) [L. *pulmonarius*, of the lungs]. Pertaining to, or affecting, the lungs or any anatomic component of the lungs. Syn., *pulmonic*.

pul"mo-nec'to-my. See *pneumonectomy*.

pul-mon'ic. See *pulmonary*.

pul"mo-ni'tis. See *pneumonia*.

pul'mo"tor (pul'mo-tur, pōōl'mo-tur) [L. *pulmo*, lung; *motor*, from *movere*, to move]. An apparatus for resuscitating persons who have been asphyxiated. It expels the gas from the lungs, introduces oxygen, and automatically establishes artificial respiration.

pulp [L. *pulpa*, solid flesh]. 1. The soft, fleshy part of fruit. 2. The soft part in the interior of an organ, as the pulp of the spleen, the pulp of a tooth. —**pulp'al**, **pulp'ar**, *adj.*

dental p. The soft vascular tissue which fills the pulp chamber and the root canals of a tooth and is responsible for its vitality. It consists of connective tissue, blood vessels, and nerves. A superficial layer of cells, the odontoblasts, supplies branching processes which occupy tubules in the dentin. Also called *tooth p.*

digital p. The sensitive, elastic, convex prominence on the palmar or plantar surface of the terminal phalanx of a finger or toe.

enamel p. The cells between the outer and inner enamel epithelium of the enamel organ. They include the stellate reticulum and the stratum intermedium.

p. of the finger. See digital p.

p. of the intervertebral disk. The soft substance in the center of the intervertebral disks, the remains of the notochord.

red p. See *spleen*, red pulp cords.

splenic p. The proper substance of the spleen.

white p. See *spleen*.

pul'pa. See *pulp*. *Obs.*

pul-pal'gi-a [*pulpa*; G. *algos*, pain]. Pain in the dental pulp.

pul-pa'tion [*pulpa*]. The act or process of reducing to a pulp.

pulp-ec'to-my [*pulpa*; G. *ektomē*, excision]. Excision or extirpation of a dental pulp.

pulp"i-fac'tion [*pulpa*, L. *facere*, to make]. Conversion into a pulpy substance.

pulp'i-form [*pulpa*; L. *forma*, form]. Similar to, or resembling, pulp.

pulp'i-fy [*pulpa*; L. *facere*, to make]. Reduce to a pulpy condition.

pulp-i'tis [*pulpa*; G. *-itis*, inflammation]. An inflammation of the dental pulp.

hyperplastic p. A chronic inflammatory response characterized by protrusion of the pulp of a tooth through an opening in the pulp chamber, usually seen in young individuals with a deep carious lesion that exposes the pulp. Syn., *hypertrophic pulp*, *pulp polyp*.

pulp-ot'o-my [*pulpa*; G. *tomē*, a cutting]. The surgical removal of part of the pulp of a tooth.

pulp stone" See *denticle*, 2.

pulp'y [*pulpa*]. Resembling pulp; characterized by the formation of a substance resembling pulp.

pulque. See *agamoid*.

pul'sate [L. *pulsare*, to beat]. Beat or throb.

pul'sa-tile (pul'sah-til) [*pulsare*]. Pulsating; throbbing.

pul"sa-til'la (*pulsatilla*). The dried herb of *Anemone pulsatilla*, *A. pratensis*, or *A. patens*. The drug yields a volatile oil from which can be separated a crystallizable, intensely acrid substance known as pulsatilla camphor or anemonin. It is a powerful local irritant, and when taken in sufficient amount produces gastroenteritis with vomiting and purging, and often with evidence of kidney irritation. In large doses it is a powerful depressant to the central nervous system and to the heart. There is no evidence that it possesses any therapeutic virtues not ascribable to its local irritating effect. Also called *pasqueflower*.

pul-sa'tion [L. *pulsatio*, from *pulsare*]. A beating or throbbing.

suprasternal p. Pulsation at the suprasternal notch. It may be due to aneurysm, a dilated aortic arch, or the presence of an anomalous artery.

pul-sa'tor [L., from *pulsare*]. A mechanical device

which produces pulsations used in physical therapy.

pulse [L. *pulsus*, striking, from *pellere*, to strike]. The intermittent change in the shape of an artery due to an increase in the tension of its walls following the contraction of the heart. The pulse is usually counted at the wrist (radial pulse) but may be taken over any artery that is palpable, as the temporal, brachial, femoral, dorsalis pedis, etc.

alternating p. A variety in which there are alternations in amplitude of pulse waves, that is, large pulsations alternating with small ones in cycles of equal length. It occurs in normal hearts with excessive tachycardia, and may occur with a slow rate if the myocardium is impaired. Also called *pulsus alternans*.

anacrotic p. One with a notch in the ascending limb, palpable and seen on sphygmograms, especially in aortic stenosis.

anatricrotic p. A pulse wave with three breaks on the ascending curve.

angry p. Wiry pulse.

ardent p. One with a quick, full wave which seems to strike the finger at a single point.

bigeminal p. See *bigeminy*.

capillary p. An intermittent filling and emptying of the capillaries of the skin. It is common in aortic regurgitation, and is seen under the finger nail or on the forehead.

collapsing p. See water-hammer p.

contracted p. A small pulse with high tension.

Corrigan's p. See water-hammer p.

decurtat p. A progressively decreasing pulse.

dicrotic p. One in which the dicrotic wave or recoil wave is exaggerated. It is observed when the arterial tension is low and gives to the finger the impression of two beats.

entoptic p. The subjective illumination of a dark visual field with each heart beat, a condition sometimes noted after violent exercise, and due to the mechanical irritation of the rods by the pulsating retinal arteries.

febrile p. That characteristic of fever: full, soft, and frequent, and exhibiting a well-marked dicrotism.

filiform p. A small, thready, almost imperceptible pulse.

formicant p. A small, feeble pulse likened to the movements of ants.

frequent p. One recurring at short intervals.

full p. One in which the artery is filled with a large volume of blood and conveys a feeling of being distended.

funic p. The arterial tide in the umbilical cord.

gaseous p. A full, compressible pulse.

goat-leap p. A pulse marked by a weak pulsation succeeding a strong one.

guttural p. One felt in the throat.

hard p. One characterized by high tension and rigidity.

high-tension p. One due to increase of the peripheral resistance, together with a corresponding increase in the force of the ventricular systole. It is gradual in its impulse, long in duration, slow in subsiding, with difficulty compressible, and the artery between the beats feels like a firm round cord.

hyperdicrotic p. A pulse in which the dicrotic wave is abnormally palpable.

incisura p. One showing a sharp fall in pulse pressure.

infrequent p. One which has a slower rate than normal.

intermittent p. One in which one or more beats are dropped.

intricate p. A pulse that is irregular, small, and infrequent.

irregular p. One in which the beats occur at irregular intervals, or in which the force, or both rhythm and force, varies.

jerky p. A pulse in which the artery is suddenly and markedly distended, as in aortic regurgitation.

jugular p. Pulsation of the jugular veins.

low-tension p. One sudden in its onset, short, and quickly declining. It is easily obliterated by pressure.

monocrotic p. One in which dicrotism is absent.

paradoxic p. One that is weaker during inspiration, a condition sometimes observed in acute and chronic cardiac compression. Syn., *pulsus paradoxus*.

pistol-shot p. The pulse produced by rapid distention and collapse of an artery as seen classically in aortic regurgitation. This produces an auscultatory phenomenon resembling a pistol shot.

plateau p. The prolonged pulse, usually with an anacrotic interruption, seen in aortic stenosis.

pressure p. The recorded pressure variations in a given heart chamber or blood vessel during the cardiac cycle; pressure curve.

quadrigeminal p. A pulse in which a pause occurs after every fourth beat.

quick p. One that strikes the finger rapidly but also leaves it rapidly.

Quincke's p. A capillary pulse due to high pulse pressure, seen classically in aortic regurgitation and elicited clinically by applying light pressure to a fingernail. See capillary p.

respiratory p. The modification in the pulse produced by respiration.

running p. A very weak, frequent pulse with low tension in the arteries, one pulse wave running into the next with no apparent interval. It is observed after hemorrhage.

soft p. A pulse that is readily compressed.

supradicrotic p. A pulse in which the preceding dicrotic wave falls on the ascending limb of the next pulse wave (in tachycardia).

thready p. One that is scarcely perceptible, feeling like a thread under the finger.

tricrotic p. A pulse in which the three waves normally present are abnormally distinct.

trigeminal p. A pulse in which a pause occurs every third beat.

ultrasonic p. A pulse of ultrasonic energy. See also *ultrasonoscope*.

unequal p. A pulse unequal in symmetrical arteries.

vagus p. A slow pulse due to the inhibitory action of the vagus on the heart.

venous p. A pulse observed in a vein.

vermicular p. A pulse imitating the movement of worms.

vibrating p. A hard pulse with a wave arising quickly, giving the impression under the finger of the vibrations of a piece of tense catgut.

water-hammer p. The pulse observed in aortic regurgitation, characterized by a rapid rise and fall, combined with large amplitude.

wiry p. A small, rapid, tense pulse, which feels like a cord. Observed in acute peritonitis.

pulse breath. A peculiar audible pulsation of the breath corresponding to the heart beats, observed in cases of dry cavities of the lungs, with thick walls not separated from the heart by permeable lung tissue.

pulse clock. A sphygmograph.

pulse curve. The tracing of the pulse, called a sphygmogram and made by the sphygmograph.

pulse cy′cle. The period between the beginning and end of a pulse wave.

pulse def'i-cit. The difference between the auscultatory heart rate and the rate of the peripheral pulse determined palpably.

pulse'less [L. *pulsus*, striking, from *pellere*, to strike; AS. *-lēas*, free from]. Devoid of pulse or pulsation.

pulse pres'sure. See under *pressure*.

pulse wave. See under *wave*.

pul·sim'e·ter [*pulsus*; G. *metron*, a measure]. An instrument for determining the rate or force of the pulse.

pul'sion [L. *pulsio*, a striking]. The act of pushing forward.

p. diverticulum. That caused by pressure from within.

pul·som'e·ter. See *pulsimeter*.

pul'sus [L.]. The pulse.

p. bisferiens. A pulse wave surmounted by two peaks.

p. celer. A quick, short pulse.

p. celer et altus. A quick, full pulse, seen especially in aortic regurgitation.

p. debilis. A weak pulse.

p. duplex. A dicrotic pulse.

p. durus. A hard, incompressible pulse.

p. irregularis perpetuus. The pulse of atrial fibrillation which is perpetually irregular in rate and amplitude.

p. paradoxus. See paradoxic *pulse*.

p. parvus. A pulse small in amplitude.

p. parvus et tardus. The small, slowly rising pulse characteristic of aortic stenosis.

p. tardus. A pulse with a gradual ascent to the peak.

pul·ta'ceous [L. *puls*, porridge]. Having the consistence of pulp; mushy; soft.

pulv. *Pulvis*; powder.

pul'ver·ize [L. *pulvis*, dust, powder]. Reduce a substance to a powder. —**pulveriza'tion,** *n.*

pul·vi'nar [L., couch]. A nuclear mass forming the posterior tubercle of the thalamus.

pul'vis. Abbreviated, pulv. See *powder*.

pulvule. Trade-mark for a capsule containing a powdered drug.

pu'mex. See *pumice*.

pum'ice (pum'iss) [L. *pumex*, pumice stone]. A substance of volcanic origin, consisting chiefly of complex silicates of aluminum, potassium, and sodium; occurs as a very light, hard, rough, porous gray mass, or as a gritty gray-colored powder. It is used in the arts as an abrasive, either in the original form, or in the powdered form as a basis for metal polish. In pharmacy it is used to assist in distributing the particles of extracts, tar, and resins to facilitate solution.

pump [ME. *pumpe*, probably imitative in origin]. An apparatus which draws up a fluid into a hollow chamber, or after sucking up the fluid, forcibly ejects it from one end.

air p. One used to exhaust the air from a chamber or to force more air into a chamber already containing air.

blood p. A device capable of pumping blood rapidly into an artery or vein of a severely exsanguinated patient.

breast p. A pump for removing milk from the breast.

dental p. See saliva *ejector*.

stomach p. One for removing the contents of the stomach in cases of poisoning.

pump'kin seed. The dried, ripe seed of several varieties of *Cucurbita pepo*. The active constituents are resinous in character. It is used as an anthelmintic and taeniafuge. Dose 30-60 Gm. (1-2 oz.) shelled and bruised, stirred in a thick syrup and flavored. It should be followed by a cathartic.

punch [ME. *punchen*]. A surgical instrument for perforating or cutting out a disk or segment of resistant tissue, as cartilage or bone.

cervical p. See under *clamp*.

punch drunk. A postconcussional syndrome occurring in prize fighters.

punc'tate, punc'tat·ed (punk'tay-tid) [L. *punctum*, point]. Dotted; full of minute points.

punc·tic'u·lum [dim. from *punctum*]. A small point.

punc'ti·form [*punctum*; L. *forma*, form]. 1. Having the nature or qualities of a point; seeming to be located at a point, as punctiform sensation. 2. In *bacteriology*, denoting very minute colonies.

punc'to·graph [L. *punctum*, point; *graphein*, to write]. A radiographic instrument for the surgical localization of foreign bodies, as bullets embedded in the tissues.

punc'tum (pl. *puncta*) [L.]. Point.

puncta lacrimalia. The orifices of the lacrimal ducts in the eyelids near the inner canthus.

puncta vasculosa. Minute red spots studding the cut surface of the white central mass of the fresh brain. They are produced by the blood escaping from divided blood vessels.

puncta dolorosa. Tender or painful points at the exit or in the course of nerves; the seat of neuralgia.

p. proximum. Near point. Abbreviated, P. P., p.p.

p. remotum. Far point. Abbreviated, P.r.

punc'ture [L. *punctura*, puncture]. 1. A hole made by the piercing of a pointed instrument. 2. The procedure of making a puncture.

cisternal p. Puncture of the cisterna magna with a hollow needle for diagnostic or therapeutic purposes; also called *cranial puncture*.

diabetic p. Puncture on the floor of the fourth ventricle, which produces glycosuria.

exploratory p. The puncture of a cyst or cavity for removal of a portion of the contents for examination.

lumbar p. Puncture of the spinal canal, usually between the third and fourth lumbar vertebrae for the removal of fluid or the introduction of drugs or serums.

spinal p. See lumbar *p.*

splenic p. Needle biopsy of the spleen.

sternal p. Puncture of the manubrium with a hollow needle to obtain bone marrow specimens in disease of the hematopoietic system.

tibial p. A puncture method used in children to secure smears of marrow cells. A sternal puncture needle is used in the middle of the shaft of the tibia.

ventricular p. Puncture into one of the lateral ventricles of the brain to introduce air in ventriculography.

punc'tured [*punctura*]. Produced by a prick, or piercing instrument, weapon, or missile, as punctured wound.

pun'gent [L. *pungere*, to pierce into]. Acrid; penetrating; producing a painful sensation.

Pu'ni·ca [L. *Punicum malum*, pomegranate]. A genus of polypetalous plants.

P. granatum. See under *pelletierine tannate*.

pu·ni'cine (pew-ni'seen, -sin). See *pelletierine*.

punk'to·graph. See *punctograph*.

pu'ru·dos (poo-roo'dos, pew-roo'dos). A disease resembling leprosy found in Guatemala.

P. U. O. Pyrexia of unknown origin.

pu'pa [L., girl]. The stage, usually quiescent, in the life history of some insects, which follows the larval period and precedes the adult imago. —**pupal,** *adj.*

pu'pil [L. *pupilla*, pupil of the eye]. The aperture in the iris of the eye for the passage of light. See Plate 19. —**pupillary,** *adj.*

Adie's p. An anomaly of the pupil which includes abnormality in the size of the pupil (usually eccentrically dilated) and delay in, but not loss of the reaction of the pupil either to light or in accommodation. Sometimes called *tonic pupil*. See Adi *syndrome*.

Argyll Robertson p. One that constricts on accommodation, but not to light; it is seen in tabes dorsalis, and occasionally in other diseases. Also called *Argyll Robertson sign*.

artificial p. An aperture made by iridectomy when the normal pupil is occluded.

cat's-eye p. An elongated, slitlike pupil.

Hutchinson's p. A widely dilated, inactive pupil which demonstrates no reflex activity seen in severe concussion injuries to the head, usually ipsilateral to the side of injury.

multiple p. The presence of bands dividing the pupil into several portions, due to persistence of portions of the fetal pupillary membrane.

pinhole p. Contraction of the iris until the pupil is scarcely larger than a pin head. It is seen in opium poisoning, after the use of miotics, in certain cerebral diseases, and in locomotor ataxia. Also called *pinpoint p.*

pseudo Argyll Robertson p. One reacting neither directly nor consensually to ordinary light but which may constrict slightly to bright light; convergence-accommodation response is delayed, but there is a normal response to homatropine and eserine. The cause is unknown. Also called *Adie's pupil*.

tonic p. See Adie's p.

pu pil'la [L.]. The pupil of the eye.

pu"pil lom e-ter [*pupilla*; G. *metron*, measure]. An instrument for measuring the pupil of the eye.

pu"pil lo-sta tom e-ter (pew"pi lo-sta-tom'i-tur pew-pill"o-) [*pupilla*; G. *statos*, standing; *metron*, measure]. An instrument for measuring the exact distance between the centers of the two pupils.

pu"pil lo-ton'ic pseu"do-ta'bes. Adie's syndrome.

Purcell, Edward Mills (1912–) American physicist, known for his extensive research in electron ballistics, cyclotron development, microwave radar and nuclear magnetism. In 1952 he shared the Nobel prize with Felix Bloch for work in the exploration of the atomic nucleus.

Purdy, Charles Wesley [*American physician*, 1846–1901]. Known for his contributions to methods of urinalysis. Introduced a modification of Fehling's solution for quantitative estimation of glucose, called *Purdy's solution*. Introduced a test for albumin in the urine. See Purdy's *test*.

pure [L. *purus*, free from dirt]. 1. Free from mixture or contact with that which weakens or pollutes; containing no foreign or extraneous material. 2. Chaste.

pure line. All the progeny of a single completely homozygous individual, reproducing by self-fertilization. By extension, applied also to organisms with biparental reproduction where the condition of complete homozygosis is realized, and to the progeny of a single individual reproducing asexually. See *clone*.

pur'ga tin. See *anthrapurpurin* acetate.

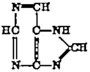
pur ga tion [L. *purgatio*, cleansing]. 1. The evacuation of the bowels by means of purgatives. 2. Cleansing.

pur'ga tive [L. *purgativus*, purgative]. Producing purgation.

pur'ga tive. A purge.

pur'ga tol. See *anthrapurpurin* acetate.

purge [L. *purgare*, to cleanse]. To cause free evacuation of the bowel.



purge. A drug that causes free evacuation of the bowel.

purg'ing [*purgare*]. A condition in which there is rapid and continuous evacuation of the bowels.

pu'ri fied [L. *purificare*, to make clean]. Cleansed; freed from extraneous matter.

pu'ri form [L. *pus*, pus; *forma*, form]. In the form of or resembling pus.

pu'rine (pure een, -in). The synthetic substance $C_5H_4N_4$, having the following structure:

Various derivatives of this structure, generically called *purines* and including the xanthines and uric acid, are widely distributed in nature.

endogenous purines. Those originating from nuclein cleavage during metabolic processes.

exogenous purines. Those derived from the purine bodies of foodstuffs.

pu'ri ty. *In optics*, the percentage contribution to luminous intensity by the dominant wavelength in a beam of light.

Purkinje, Johannes Evangelista von [*Bohemian physiologist*, 1787–1869]. One of the early users of the microtome. Pointed out the importance of fingerprints (1823). Studied ciliary epithelial motion (1835). First to use the term protoplasm (1839). Images on the retina from shadows of blood vessels are called *Purkinje's images*. Observed that fields of different color and equal brightness become unequally bright when illumination is decreased in brightness, called *Purkinje's phenomenon*. See also *Purkinje cells* under *cell*, *Purkinje fibers* under *fiber*, *germinal vesicle*, *Purkinje-Sanson images* under *image*.

Purmann, Matthaeus Gottfried [*German military surgeon*, 1648–1721]. One of the most famous of the army surgeons of his time. His methods of treatment were largely empirical. He is said to have extirpated the aneurysmal sac as a cure for aneurysm, called *Purmann's method* (1699).

purodigin. A trade-mark for digitoxin.

pu"ro-hep"a ti'tis [L. *pus*, pus; G. *hēpar*, liver; *-itis*, inflammation]. Suppurative inflammation of the liver.

pu"ro-mu'cous [pus; L. *mucus*, mucus]. Consisting of mucus mixed with pus; mucopurulent.

pu"ro thi'o nin. An antibiotic substance derived from wheat flour, effective in inhibiting the growth, in vitro, of *Streptococcus viridans*.

pur'pu ra [L., purple]. A condition in which hemorrhages occur in the skin, mucous membranes, serous membranes, and elsewhere. The two general types of lesion seen in the skin are petechiae and ecchymoses. —**purpu'ric**, *adj.*

allergic p. 1. Any purpura, thrombocytopenic or nonthrombocytopenic, which results from an allergic reaction. 2. Henoch-Schönlein purpura. In this disorder the cutaneous manifestations include erythematous and urticarial exanthems. Also called *anaphylactoid p.*

essential p. See idiopathic thrombocytopenic p.

hemorrhagic p. See idiopathic thrombocytopenic p.

Henoch's p. A nonthrombocytopenic purpura associated with gastrointestinal pain and bleeding and with erythematous or urticarial exanthems. The distinction between this disorder, Schönlein's p., and allergic p. is not clear.

idiopathic thrombocytopenic p. Thrombocytopenic purpura of unknown cause. In some

mass agglutinins of blood platelets have been demonstrated. Also called *essential p.*, *primary p.*, *thrombopenic p.*, *land scurvy*, *morbus maculosis Werlhofi*, *Werlhof' disease*.

mechanical p. That due to violent muscular contractions or application of tourniquet, not associated with any other blood or vascular defects.

orthostatic p. Purpura, probably due to weakness of capillary walls, which sometimes develops in the lower extremities after long standing.

primary p. See idiopathic thrombocytopenic p.

p. annularis telangiectodes. An eruption of purpuric spots, grouped in ring form and accompanied by telangiectasis; described by D. Majocchi.

p. fulminans. A grave form, occurring principally in children with acute infectious disease, of short duration, and usually fatal.

p. hyperglobulinemia. Hemorrhagic diathesis attributed to elevation of the concentration of globulin in the serum.

p. necrotica. A condition characterized by enormous ecchymotic skin lesions which in later stages become necrotic and gangrenous.

p. rheumatica. See Schönlein's p.

p. senilis. One in which capillary resistance is low in old persons, thus creating marked tendency to bruises.

p. simplex. A mild form not associated with well-defined defects of blood-clotting mechanisms or mucous-membrane bleeding; often familial and particularly prone to occur in females.

p. urticans. That associated with urticaria. See *urticaria hemorrhagica*.

quinidine p. Purpura following the use of quinidine, often associated with thrombocytopenia.

rheumatic p. See Schönlein p.

Schönlein's p. A nonthrombocytopenic form marked by tenderness and pain of the joints or limbs, associated with periarticular effusions, and mild fever and with erythematous or urticarial exanthems; also called *peliosis rheumatica* or *rheumatic purpura*. The distinction between this disorder Henoch's p., and allergic p. is not clear.

senile p. Purpura occurring in elderly persons of both sexes, chiefly characterized by the large (1–4 cm) irregular but well-defined ecchymoses localized on the extensor surfaces of the forearm, the back of the hand but not fingers, and the face. The condition is not linked to any recognizable systemic disorder or dietary deficiency histologically. It is constantly associated with extreme thinning and other degenerative changes of the exposed skin, and the lesions are thought to be due to minor trauma affecting inadequately supported superficial vessels.

symptomatic p. That which may accompany acute infectious diseases or chronic diseases such as malignant tumors, nephritis, and blood dyscrasias, and following administration of certain drugs. Also called *secondary p.*

thrombocytolytic p. See idiopathic thrombocytopenic p.

thrombocytopathic p. That associated with normal number of qualitatively defective platelets.

thrombocytopenic p. That associated with thrombocytopenia.

thrombotic thrombocytopenic p. A rare, highly fatal disorder characterized by acute thrombocytopenic purpura and diffuse formation of thrombi in the capillaries. Hemolytic anemia and transitory focal neurological signs often accompany the clinical picture. The thrombi are thought by many to be the result of action of agglutinins of platelets. Also called *Moschcowitz syndrome*.

toxic p. That caused by various poisons such as arsenic, phosphorus, phenolphthalein, heparin.

pur'pu-rin. $C_{14}H_8O_5$. 1. A dye present with alizarin in madder-root, but also prepared artificially. 2. Uroerythrin, red pigment sometimes present in urinary deposits.

pur"pu-ri-nu'ri-a [*purpura*; G. *ouron*, urine]. The presence of purpurin in the urine; porphyruria.

pur"pu-ro-gal'lin. $C_{11}H_4(OH)_4O$. dicyclic tropolone derivative, having red color formed by oxidation of pyrogallol, and also found in various galls in glycosidal combination.

purr [imitative in origin]. A low-pitched murmur.

pur'ring thrill. A fine, trembling vibration like the purring of cat, perceived by palpation over the precordia. It may be due to aneurysm or to mitral stenosis.

Purtscher, Otmar [*German ophthalmologist*, 1852–1927]. Described traumatic angiopathy of the retina (1912); also called *lymphorrhagia retinalis*, *Purtscher disease*.

pu ru lence (pure'yoo-lunss) [L. *purulentia*, purulent mass]. The quality or state of containing pus. Also called *purulency*.

pu'ru lent (pure'yoo-lunt) [L. *purulentus*, purulent]. Containing, consisting of, or forming pus.

pu'ru loid (pure'yoo-loyd) [*purulentus*; G. *eidos*, form]. Resembling pus; puriform.

pu-ru"pu ru' Pinta.

pus [L.]. A semifluid, creamy yellow or greenish yellow product of inflammation composed mainly of leukocytes and serum. The color varies with the causative organism.

blue p. Pus having blue-green color because of the pigments liberated by the multiplication of *Pseudomonas aeruginosa*.

pus-tube. Lay term for pyosalpinx.

pus'tu lant [L. *pustula*, blister]. 1. Causing the formation of pustules. 2. An irritant substance giving rise to the formation of pustules.

pus"tu-la'tion [*pustula*]. The formation of pustules.

pus'tule [*pustula*]. A small, circumscribed elevation of the skin containing pus. —**pustular**, **pustulous**, **pustulous**, *adj*

malignant p. Anthrax. See Plate 21.

pus'tu-li form" [*pustula*; L. *forma*, form]. Resembling pustule.

pus"tu-lo-der'ma [*pustula*; G. *derma*, skin]. Any skin disease characterized by the formation of pustules.

pus"tu lo sis pal mar'is et plan-tar'is. Any chronic resistant noninfectious dermatitis chiefly of palms and soles. The pustules are sterile, deep-seated, and appear in continuous crops. It includes several entities: pustular bacterid, and what has been pustular psoriasis (Barber). Syn., *pustular acrodermatoses*.

pu ta men [L., that which falls off in pruning]. The outer darker part of the lenticular nucleus of the brain.

Putnam, James Jackson [*American neurologist*, 1846–1918]. Remembered for his contributions to the knowledge of pathologic anatomy and the physiology of the nervous system. Described pernicious anemia with dorsolateral sclerosis, called *Putnam type of spinal sclerosis*, *Putnam-Dana syndrome*.

pu"tre-fac'tion [L. *putrefactio*, from *putrefacere*, to become rotten]. The decomposition of organic matter under the influence of microorganisms, accompanied by the development of disagreeable odors. The products include gases, as ammonia, hydrogen sulfide, methane and others; acids, as acetic, lactic, butyric, and others; and toxic substances, as indole, skatole, phenol and others.

Cadaverine and putrescine are toxic products known as ptomaines.

pu"tre fac'tive [*putrefacere*]. Pertaining to or causing putrefaction.

pu'tre fy [*putrefacere*]. Render putrid.

pu tres'cent. Undergoing putrefaction. —**putres'cence,** *n.*

pu tres'cine (pew tress'een, -in). $NH_2(CH_2)_4NH_2$; tetramethylenediamine, a product of decarboxylation of ornithine and also found in putrefying flesh; formerly believed to be responsible for food poisoning, and referred to as a ptomaine.

pu'trid [L. *putridus*, rotten]. Rotten; characterized by putrefaction.

pu'tro-maine. A ptomaine developed in putrefactive processes.

PVP Abbreviation for poly-vinyl pyrrolidone.

py ae mi a. See *pyemia*.

py"ar thro'sis [G. *pyon*, pus; *arthron*, joint; *-ōsis*, condition]. Suppuration of a joint.

pyc"no-ep"i lep"sy. See *pyknolepsy*.

pyc nom'e ter [G. *pyknos*, compact, thick; *metron*, measure]. An instrument for the determination of the specific gravity of fluids.

pyc"no-mor'phous, pyk"no mor'phous [*pyknos*; G. *morphē*, form]. Applied to nerve cells in which the chromophil substance of the cytoplasm is compactly arranged.

pyc"no phra'si a (pick"no-fray'zhuh, -zee-uh) [*pyknos*; G. *phrasis*, speech]. Thickness of speech.

pyc no'sis [G. *pyknōsis*, dense mass]. 1. Thickening; inspissation. 2. A degenerative change in cells whereby the nucleus is condensed and shrinks to a dense, structureless mass of chromatin. —**pycnot'ic,** *adj.*

py-ec'chy-sis (pye-eck'i-sis) [G. *pyon*, pus; *ekchysis*, outflow]. Effusion of pus.

py"e lec ta'si a (pye"eh-leck-tay'zhuh, -zee-uh, -shuh, -see-uh) [G. *pyelos*, trough; *ektasis*, extension]. Dilatation of a renal pelvis.

py"e li'tis. Inflammation of the pelvis of a kidney. —**pyelit'ic,** *adj.*

calculous p. That due to calculi.

p. cystica. A type of nonspecific chronic inflammatory reaction of the kidney pelvis, characterized by the presence of numerous minute translucent cysts scattered over the surface of the pelvic mucosa. The cysts are apparently due to metaplasia of the epithelial cells resulting in the formation of glandular acini or cysts.

py'e lo- [*pyelos*]. A combining form denoting *relation to the pelvis of the kidney.*

py"e lo-cys ti'tis [*pyelos*; G. *kystis*, bladder; *-itis*, inflammation]. Pyelitis with cystitis.

py'e lo-gram" [*pyelos*; G. *gramma*, letter]. A roentgenogram of the renal pelvis and ureter.

pseudospider p. See *pseudospider pelvis*.

py"e-log'ra phy [*pyelos*; G. *graphein*, to write]. Roentgenography of the renal pelvis and ureter which have been filled with an opaque solution. Also see *urography*.

retrograde p. That following ureteral catheterization and the filling of the upper urinary tract with a contrast medium as part of a cystographic procedure. Syn. *retrograde urography*.

py"e lo-li thot'o-my [*pyelos*; G. *lithos*, stone; *tomē*, a cutting]. Removal of a renal calculus through an incision into the pelvis of a kidney.

py"e lo ne-phri'tis [*pyelos*; G. *nephros*, kidney; *-itis*, inflammation]. Interstitial inflammation of one or both kidneys, usually involving both parenchyma and pelvis, due to bacterial invasion from the middle and lower urinary tracts or the periureteral lymphatics (**ascending p.**) or from the blood stream (**descending p., hematogenous p.**). —**pyelonephrit'ic,** *adj.*

py'e-lo-plas"ty [*pyelos*; G. *plassein*, to form]. Plastic repair of the renal pelvis.

py"e-lo pli ca'tion (pye"eh-lo-pli-kay'shun, -ply-kay'shun) [*pyelos*; L. *plicare*, to fold]. Reducing an enlarged renal pelvis by pleating or suturing the infolded walls.

py"e los'co-py [*pyelos*; G. *skopein*, to examine]. Fluoroscopic examination of the pelvis of a kidney.

py"e los'to my [*pyelos*; G. *stoma*, mouth]. Incision into the renal pelvis.

py"e lot'o-my [*pyelos*; G. *tomē*, a cutting]. Incision of the renal pelvis.

py"e lo-u-re ter-og'ra phy. See *pyelography*.

py"e lo-ve'nous back'flow". The phenomenon of drainage from the renal veins into the inferior vena cava, due to back pressure.

py-em'e-sis (pye-em'i-sis) [G. *pyon*, pus; *emesis*, vomiting]. Vomiting of pus.

py-e mi a (pye-ee'mee-uh) [*pyon*; G. *haima*, blood]. A disease due to the presence of pyogenic microorganisms in the blood and the formation, wherever these organisms lodge, of embolic or metastatic abscesses. —**pyemic,** *adj.*

arterial p. That produced by disorganization of cardiac thrombus and the dissemination of emboli through the arterial circulation.

cryptogenic p. A condition in which the primary suppuration occurs in the deeper tissues of the body.

otogenous p. Pyemia originating in the ear.

py"en ceph a lus [*pyon*; G. *enkephalos*, brain]. Suppuration within the brain.

py gal'gi a (pye-gal'juh, -jee-uh) [G. *pygē*, rump; *algos*, pain]. Pain in the buttocks.

pyg ma'li-on ism [G. *Pygmalion*, sculptor who fell in love with a statue he carved]. The psychopathic condition in which an individual falls in love with a creation of his own.

pyg'my [G. *pygmaios*, dwarfish, from *pygmē*, measure of length]. A small person or dwarf.

py"go-a mor'phus [G. *pygē*, rump; *a-*, not; *morphē*, form]. A monster with a teratoma in the sacral region.

py"go did'y mus [*pygē*; G. *didymos*, twin]. Conjoined twins united by the buttocks. Syn. *pygopagus*.

py gom'e lus (pye-gom'i-lus) [*pygē*; G. *melos*, limb]. A monster with an accessory limb or limbs attached to the buttock.

py gop a gus (pye-gop'uh-gus) [*pygē*; G. *pagos*, that which is fixed]. Conjoined twins united in the sacral region. See Plate 25.

py"go-par"a-si'tus [*pygē*; G. *parasitos*, parasite]. A monster consisting of unequal conjoined twins with the parasite attached to the sacrum of the autosite. Special monsters of this general type were called by Taruffi pygomelus, pygoamorphus, and pygoteratoides.

py"go ter"a-toi'des (pye"go-terr-uh-toy'deez) [*pygē*; G. *teras*, monster; *eidos*, form]. A monster with teratoid tumors in the region of the sacrum.

py'ic [G. *pyon*, pus]. Purulent. *Obs.*

py'in [*pyon*]. An albuminous substance of complex constitution occurring in pus. It may be separated by adding sodium chloride and filtering.

pyk nic [G. *pyknos*, thick, compact]. Referring to a constitutional body type marked by roundness of contour, amplitude of body cavities, and considerable subcutaneous fat.

pyk'no-. For words beginning *pykno-* not found here, see words beginning *pycno-*.

pyk'no lep"sy [*pyknos*; G. *lēpsis*, seizure]. A very mild form of epileptic variant, resembling petit mal. It appears as a fleeting mental blankness associated with a momentary stare. There are no

tonic seizures, no falls, and no convulsions or true losses of consciousness. Electroencephalogram shows large, slow delta waves.

Pylarino, James [*Italian physician*, 1659–1715]. One of the earliest immunologists to employ inoculation with smallpox virus (1701).

py"le·em·phrax'is [G. *pylē*, gate; *emphraxis*, stoppage]. Obstruction of the portal circulation. Rare.

py"le·phle·bec'ta·sis, py"le·phleb"ec·ta'si·a (pye"lee·fleb"eck·tay'sis, ·tay'zhuh, ·shuh, ·see·ah) [*pylē*; G. *phleps*, vein; *ektasis*, extension]. Dilatation of the portal vein, usually caused by some obstruction in the liver but it may be due to relaxation of the vessel walls from some disturbance of innervation.

py"le·phle·bi'tis [*pylē*; *phleps*; G. *-itis*, inflammation]. Inflammation of the portal vein. The condition is usually secondary to disease of the intestine, is generally suppurative in character and gives rise to the symptoms of pyemia.

py"le·throm"bo·phle·bi'tis [*pylē*; G. *thrombos*, clot; *phleps*; *-itis*]. Inflammation and thrombosis of the portal vein.

py"le·throm·bo'sis [*pylē*; *thrombos*; G. *-ōsis*, condition]. Thrombosis of the portal vein.

py"lo·ral'gi·a [G. *pylōros*, gate-keeper; *algos*, pain]. Pain in the region of the pylorus.

py"lo·rec'to·my [*pylōros*; G. *ektomē*, excision]. Excision of the pylorus, partial gastrectomy.

py·lor"i·ste·no'sis (pye·lor"i·ste·no'sis, pi·lor"i·) [*pylōros*; G. *stenōsis*, being straitened]. Constriction of the pylorus.

py"lo·ri'tis [*pylōros*; G. *-itis*, inflammation]. Inflammation of the pylorus.

py·lor'o- (pye·lor'o-, pi·lor'o-), **pylor-** [*pylōros*]. A combining form meaning *relating to the pylorus*.

py·lor"o·co'lic [*pylōros*; G. *kolon*, colon]. Pertaining to or connecting the pyloric end of the stomach with the transverse colon.

py·lor"o·di'la·tor (pye·lor"o·dye'lay·tur, ·dye·lay'tur, ·di·lay'tur, pi·lor"o-) [*pylōros*; L. *dilator*, from *dilatare*, to dilate]. An appliance for dilating the pyloric orifice of the stomach.

py·lor"o·di·o'sis (pye·lor"o·dye·o'sis, pi·lor"o-) [*pylōros*; G. *diōsis*, pushing asunder]. Dilatation of the pylorus by the finger or an instrument, as a bougie. Obs.

py·lor"o·gas·trec'to·my [*pylōros*; G. *gastēr*, belly; *ektomē*, excision]. Resection of the pyloric end of the stomach; pylorectomy.

py·lor"o·my·ot'o·my (pye·lor"o·migh·ot'o·mee, pi·lor") [*pylōros*; G. *mys*, muscle; *tomē*, cutting]. The division, externally, of the pyloric muscle, without incision through the mucosa, for congenital pyloric stenosis in infants; also called *Ramstedt's operation*, *Fredet-Ramstedt operation*.

py·lor'o·plas"ty [*pylōros*; G. *plassein*, to form]. An operation upon the pylorus, usually for stenosis due to ulcer, which may involve removal of a portion of the pylorus but which, in principle, divides the pylorus on the gastric and duodenal sides transversely, the wound being closed by sutures which convert it into a transverse incision. It provides a larger opening from stomach to duodenum. Also see *pylorotomy*.

py·lor"op·to'sis, py·lor"op·to'si·a [*pylōros*; G. *ptōsis*, falling]. Downward displacement of the pylorus.

py·lor"o·schi'sis (pye·lor"o·skee'sis, pi·lor"o-, pye"lo·ros'ki·sis) [*pylōros*; G. *schesis*, checking]. Obstruction of the pylorus.

py·lor"o·scop·y [*pylōros*; G. *skopein*, to examine]. Inspection of the pylorus.

py·lor'o·spasm" [*pylōros*; G. *spasmos*, spasm]. Spasm of the pylorus.

py·lor"o·ste·no'sis [*pylōros*; G. *stenōsis*, being straitened]. Stenosis, or stricture, of the pylorus.

py"lo·ros'to·my [*pylōros*; G. *stoma*, mouth]. Incision into the pylorus, as in the formation of gastric fistula.

py"lor·ot'o·my [*pylōros*; G. *tomē*, cutting]. An incision into or through the pylorus in the axis of the canal, converting it by sutures from a longitudinal to a transverse wound. Also called *pyloroplasty*, *Finney operation*, *Heineke-Mikulicz operation*, *gastroduodenostomy*.

py·lo'rus (pye·lor'us, pi·lor'us) [*pylōros*]. 1. The circular opening of the stomach into the duodenum. 2. The fold of mucous membrane and muscular tissue surrounding the aperture between the stomach and the duodenum. 3. The final portion of the stomach, preceding the duodenum. —**py·lor'ic**, *adj.*

py'o-, **py-** [G. *pyon*, pus]. A combining form meaning *suppuration, accumulation of pus or related to pus formation*.

py"ar·thro'sis. See *pyarthrosis*.

py'o·cele [*pyon*; G. *kēlē*, tumor]. Accumulation of pus in the tunica vaginalis testis.

py"o·ceph'a·lus [*pyon*; G. *kephalē*, head]. Pus within the cranium, especially in the cerebral ventricles.

py"o·che'zi·a (pye"o·kee'zee·uh) [*pyon*; G. *chezein*, to ease oneself]. Discharge of pus with or in the stool.

py"o·coc'cus [*pyon*; G. *kokkos*, berry]. Any pus-producing coccus.

py"o·col'po·cele [*pyon*; G. *kolpos*, womb; *kēlē*, hollow]. A suppurating cyst of the vagina.

py"o·col'pos [*pyon*; *kolpos*]. An accumulation of pus within the vagina.

py'o·com·pounds. A group of antibiotically active substances derived from *Pseudomonas aeruginosa*. They are designated as *pyocyanase*, *α-oxyphenazine* or *hemipyocyanin*, *pyocyanin* (q.v.), *pyo I*, *pyo II*, *pyo III*, *pyo IV*, *pyo Ib* and *pyo Ic*. They are active, in vitro, against a number of bacterial species.

py"o·cy'a·nase (pye"o·sigh'uh·nace, ·naze). An antibiotic from *Pseudomonas aeruginosa*; soluble in ether and alcohol. Activity is due largely to unsaturated fatty acids. It has a lytic action on many Gram-positive and Gram-negative bacteria; it is active in vivo and has a low toxicity.

py"o·cy·an'ic (pye"o·sigh·an'ick) [*pyon*; G. *kyanos*, dark blue]. Pertaining to blue pus, or to pyocyanin.

py"o·cy'a·nin. An antibiotic from *Pseudomonas aeruginosa*; soluble in chloroform. It is active largely against Gram-positive bacteria. It has limited toxicity.

py"o·cy"a·nol'y·sin (py"o·sigh·uh·nol'i·sin, ·sigh·uh·nuh·lye'sin) [*pyon*; *kyanos*; G. *lysis*, loosing]. A hemolysin produced in broth cultures by *Pseudomonas aeruginosa*.

py'o·cyst" [*pyon*; G. *kystis*, bladder]. A cyst containing pus.

py"o·der'ma [*pyon*; G. *derma*, skin]. Any pus-producing skin lesion or lesions, used in referring to groups of furuncles, pustules, or even carbuncles.

p. faciale. An intensely red or cyanotic erythema of the face with superficial and deep abscesses and cystic lesions.

p. gangrenosum. A pyogenic ulceration, usually of the trunk, often with large irregular ulcers usually associated with ulcerative colitis.

py"o·der"ma·ti'tis [*pyon*; *derma*; G. *-itis*, inflammation]. A skin disease produced by infection with pyogenic organisms.

p. vegetans. See *dermatitis vegetans*.

py"o·der"ma·to'sis [*pyon*; *derma*; G. *-ōsis*, condi-

tion]. An inflammation of the skin in which pus formation occurs.

py-og′ nous (pye od′j'i-ness) [pyon, G. gennasthai, from gignesthai, to be produced]. Pus-producing.

py″o-gen sis [pyon, G genesis, production]. The formation of pus. —**pyogenic, pyogenet′ic, pyog′enous,** *adj*

py″o he mo tho rax (pye o-hee mo thor′acks, hem o-thor acks) [pyon; G haima, blood thorax, thorax]. Pus and blood in the pleural cavity

py′oid [G pyoeides like purulent matter]. Resembling pus.

pyoktanin. Trade-mark for methylrosaniline chloride.

py″ok ta ni num au′re-um. Auramine O.

py″ k tan′in yel′low Auramine O

py″ lab″y rin thi tis [G pyon, pus; labyrinthos, labyrinth -itis, inflammation]. Suppurative inflammation of the labyrinth of the ear

py o lip′ l ac′id. An antibiotic substance derived from *Pseudomonas aeruginosa* (pyocyanea) active, in vitro, against *Mycobacterium tuberculosis*.

py″o-me tra [pyon, G metra uterus]. A collection of pus in the uterus.

py″ my″o-si′tis [pyon, G mys, muscle; -itis, inflammation]. Suppurative myositis.

py″o-ne phri′tis [pyon, G nephros, kidney -itis]. Suppurative inflammation of kidney

py″o-neph ro li thi′a sis [pyon, nephros; G lithos, stone NL. -iasis, condition] The presence of pus and calculi in kidney

py″ ne phro′sis [pyon, nephros; G -osis condition]. An accumulation of pus in the pelvis and calyces of kidney —**pyonephrot′ic,** *adj*

py″o-o-va ri um. Ovarian abscess.

py″ per″i car-di′tis [pyon, G perikardios, around the heart -itis, inflammation]. Suppurative pericarditis.

py″o-per″i-car′di um [pyon, perikardios]. The presence of pus in the pericardium.

py″o per″i t ne um [pyon, G peritonaion, membrane which contains the lower viscera]. The presence of pus in the peritoneal cavity

py″o-per″i t ni′tis [pyon, peritonaion, G -itis, inflammation]. Suppurative inflammation of the peritoneum.

py″o-pha′gi a [pyon, G phagein, to eat]. The swallowing of pus.

py″oph thal′mi a [pyon, G ophthalmia, ophthalmia]. Purulent ophthalmia.

py″o-phy lac′tic [pyon, G phylaktikos, preservative]. A defense against pus or pus formation.

py″o-phy″so-me′tra [pyon, G physa, wind metra, uterus]. The presence of pus and gas in the uterus.

py″ pneu″mo-per″i-car di′tis (pye o-new″mo-perr -car-dye′tis, pye op) [pyon, G pneuma, breath perikardios, around the heart -itis, inflammation] Pericarditis complicated by the presence of pus and gas in the pericardium.

py″o-pneu″mo-per″i car′di um [pyon, pneuma; perikardios] Pus and air or gas i the pericardium.

py″o-pneu″mo-per″i to-ne′um [pyon, pneuma; G peritonaion, membrane which contains the lower viscera] Pus and gas in the peritoneal cavity

py″o-pneu″mo-per″i t ni′tis [pyon, pneuma; peritonaion, G -itis, inflammation]. Suppurative inflammation of the peritoneum associated with gas in the bdominal cavity

py″o pneu″mo tho rax (pye new″mo thor′acks, pye″op-) [pyon, pneuma, G thorax, thorax]. An accumulation of air and pus in the pleural cavity

py″o-poi e′sis [pyon, G poiesis, production] Pus formation —**pyopoiet′ic,** *adj*

py-op′ty-sis (pye-op ti-sis) [pyon, G ptysis, spitting]. The expectoration of pus.

py″or rhe a py″or rhee′a [G pyorroia, discharge of matter]. A purulent discharge

alveolar p Periodontal disease in which a purulent exudate is feature. *Obs.*

py″o-sal″pin gi tis [pyon, G salpinx, trumpet; -itis, inflammation]. Purulent inflammation of the uterine or auditory tube.

py″o sal pin″go-o″ pho-ri′tis. Combined suppurative inflammation of an ovary and oviduct.

py″o-sal′pinx [pyon, salpinx]. An accumulation of pus in an oviduct.

py o sis (pye-o sis) [pyon; G. -osis, condition]. Suppuration pus formation.

Castellani's p. See *jungle rot*.

Corlett s p. A bullous staphylodermatitis.

tropical p. Ecthyma.

py″o-sper′mi a. Leukocytes in the seminal fluid.

py″ stat′ic [pyon, G. statikos, causing to stand]. Preventing the formation of pus.

py″o-stat′ic. An agent arresting the formation of pus.

py″o ther′a py [pyon, G therapeia, treatment]. The use of pus in the treatment of disease *Obs*

py″o-tho′rax [pyon, G thorax, thorax]. An accumulation of pus in the pleural cavity Syn., empyema.

py″o-u′ra-chus (pye o-yoo ra kus) [pyon; G ourachos, urachus]. The presence of pus in or about the urachus.

py″o u re t r (pye o-yoo-ree ter -yoor′i ter) [pyon; G oureter ureter]. An accumulation of pus in ureter

py″o xan′thin (pye zan′thin) **py″o-xan′those** (pye zan those) [pyon, G xanthos, yellow]. A yellow pigment sometimes found in pus, and resulting from the oxidation of pyocyanin.

pyr′a-cin. Either of two substances, α-pyracin (2-m thyl-3-hydroxy-4-hydroxymethyl-5-carboxypyridine) and β-pyracin (2-methyl-3-hydroxy 4- arboxy 5-hydroxymethylpyridine) both are metabolit analogs of pyridoxine.

py″ra hex′yl. Synhexyl.

pyr′ mid [G pyramis, pyramid]. Any conical eminence of an organ; especially body of longitudinal nerve fibers on each side of the anterior median fissure of the medulla oblongata —**pyram′idal,** *adj*

malpighian, Malpighian p. See renal p.

petrous p. The petrous portion of the temporal bone. See petrous.

p. of the stapedius muscle. See p. of the tympanum.

p. of the tympanum. A hollow conical process on posterior wall of the tympanum; the stapedius muscle passes through an aperture at its apex

p. of the vermis. Pyramid of the cerebellum, subdivision of the cerebellar vermis between the uvula and the tuber

p. of the vestibule. The anterior end of the vestibular crest of the osseous labyrinth.

renal p. One of the conical masses composing the medullary substance of the kidney

py-ram″i da′lis (pi-ram″i dah′lis, -day′lis) [pyramis]. 1 A small muscle, enclosed in the sheath of the rectus abdominis, arising from the pubic crest, and inserted into the linea alba. See T ble of Muscles in the Appendix. 2. Old name for triquetrum. See T ble of Bones in the Appendix

p. nasi. Old name for procerus muscle.

pyramidon. Trade-mark for brand of aminopyrine.

pyr″ mid ot′o-my Sectioning of the lateral corticospinal (pyramidal) tract.

spinal p. Pyramidotomy at the level of the second cervical vertebra, for alternating tremor

pyr′a mine. 2 Methyl-4-amino-5-hydroxymethyl-pyrimidine a hydrolytic cleavage product of

thiamine excreted in the urine and also obtained in the presence of the enzyme thiaminase.

py'ran. The six-membered heterocyclic compound C_5H_6O, of which three isomers are possible. Certain natural compounds are often characterized as derivatives of a pyran and the pyranose form of certain sugars indicates structural relationship of the latter to a pyran.

py"ra-nis'a-mine. An earlier designation for the antihistaminic substance pyrilamine.

py'ra-nose. That isomeric form of certain sugars and glycosides having a structural analogy to a pyran. See also *furanose*.

pyr"a-zin-am'ide, pyr"a-zin'-amide. Generic name for pyrazine-carboxylic acid amide; $C_4H_3N_2CONH_2$, a drug under clinical investigation as a therapeutic agent in human tuberculosis. See *aldinamide*.

pyr'a-zine. 1. The 1,4-isomer of diazine, $C_4H_4N_2$, in which the nitrogen atoms are separated by two carbon atoms; a white crystalline substance, freely soluble in water. 2. Any derivative of 1.

pyr'a-zole. $\overline{CH:CH.NH.N:}CH$; a heterocyclic compound, isomeric with imidazole, being the ultimate parent compound of certain therapeutically useful analgesic drugs. See also *pyrazolone*.

py-raz'o-lone. $C_3H_4N_2O$; one of three isomeric derivatives of pyrazole, differentiated as 3-pyrazolone, 4-pyrazolone, and 5-pyrazolone. They differ from pyrazole in containing two additional hydrogen atoms and a keto group. Certain derivatives of 5-pyrazolone, notably aminopyrine and antipyrine, possess analgesic activity.

py-rec'tic (pye-reck'tick) [G. *pyrektikos*, feverish]. Pyretic, feverish.

py'rene. $C_{16}H_{10}$; a tetracyclic hydrocarbon in coal tar occurring in colorless crystals, insoluble in water.

py're-nin (pye'ri-nin, pye-ree'nin) [G. *pyrēn*, stone of a fruit]. The substance of the plasmosome. Syn., *paranuclein*.

py-reth'rin I. $C_{21}H_{28}O_3$; the pyrethrolone ester of chrysanthemum-monocarboxylic acid, a viscous liquid, insoluble in water but soluble in alcohol. It is an insecticidal constituent of pyrethrum flowers and is itself used as an insecticide.

py-reth'rin II. $C_{22}H_{28}O_5$; the pyrethrolone ester of chrysanthemum-dicarboxylic acid monomethyl ester, a viscous liquid, insoluble in water but soluble in alcohol. It is an insecticidal constituent of pyrethrum flowers and is itself used as an insecticide.

py-re'thrum (pye-reeth'rum) [G. *pyrethron*]. Pellitory, the root of *Anacyclus pyrethrum*; formerly used as a sialagogue and masticatory in headache, toothache, and neuralgic affections of the face.

py-re'thrum flow'ers. The flower heads of *Chrysanthemum cinerariaefolium*, *C. coccineum* (*C. roseum*) and *C. Marschallii*. Should not be confused with pyrethrum, the root. Pyrethrum flowers are highly toxic to lower forms of life, especially insects and worms, and are used as insect powder under the names Dalmatian insect powder and Persian insect powder. The insecticidal power is probably due to two related compounds, pyrethrin I and pyrethrin II. While it is chiefly used as an insecticide, it has been used as a medicinal agent by protecting human beings from infection by disease-carrying insects, such as mosquitoes, fleas, and lice. It is also used as a local application in the treatment of pediculosis. An ointment containing an extract from powdered pyrethrum flowers (*C. cinerariaefolium*), pyrethrum ointment, is used in the treatment of scabies. The ointment is applied to the entire body following a thorough cleansing with soap and water.

py-ret'ic (pye-ret'ick) [G. *pyretikos*, feverish]. Pertaining to or affected with fever.

pyr'e-to- (pirr'i-to-, pye'ri-to-) [G. *pyretos*, burning heat]. A combining form meaning *fever*.

py-ret'o-gen (pye-ret'o-jin) [*pyreto-*; G. *gennethai*, from *gignesthai*, to be produced]. Any agent which induces fever.

pyr"e-to-ge-ne'si-a (pirr"i-to-ji-nee'see-uh, -zee-uh, pye"ri-to-), **pyr"e-to-gen'e-sis** [*pyreto-*; G. *genesis*, production]. The origin and process of fever.

pyr"e-to-gen'ic, pyr"e-tog'e-nous (pirr"i-todj'i-nus, pye"ri-) [*pyreto-*; G. *gennethai*, from *gignesthai*, to be produced]. Causing or producing fever.

pyr"e-tog'ra-phy [*pyreto-*; G. *graphein*, to write]. A treatise on fevers.

pyr"e-tol'o-gist [*pyreto-*; G. *logos*, word]. A specialist in fevers.

pyr"e-tol'o-gy (pirr"i-tol'o-jee, pye"ri-) [*pyreto-*; *logos*]. The science of the nature of fevers.

pyr"e-tol'y-sis [*pyreto-*; G. *lysis*, a loosing]. Reduction of a fever.

pyr"e-to-ther'a-py [*pyreto-*; G. *therapeia*, treatment]. Treatment of disease by the induction of fever in the patient.

pyr"e-to-ty-pho'sis (pirr"i-to-tye-fo'sis, pye"ri-to-) [*pyreto-*; G. *typhos*, smoke; *-osis*, condition]. Old term for delirium in fever.

py-rex"e-o-pho'bi-a (pye-reck"see-o-fo'bee-uh) [G. *pyrexis*, to be feverish; *phobos*, fear]. A morbid fear of fever; febriphobia.

py-rex'i-a (pye-reck'see-uh) [*pyrexia*]. Elevation of temperature above the normal; fever. —**pyrex'ial**, *adj.*

pyr"go-ceph'a-ly. See *oxycephaly*. —**pyrgocephal'ic, pyrgocephalous**, *adj.*

pyr-he"li-om'e-ter (pyre-hee"lee-om'i-tur, pirr-hee"-) [G. *pyr*, fire; *hēlios*, sun; *metron*, measure]. An instrument for measuring the total intensity of solar radiation.

pyribenzamine. Trade-mark for the antihistaminic substance N,N-dimethyl-N'-benzyl-N'-(alpha-pyridyl) ethylenediamine, available as the hydrochloride salt. See *tripelennamine hydrochloride*.

pyricidin. Trade-mark for a brand of *isoniazid*.

py-rid'a-zine. 1. The 1,2-isomer of diazine; $C_4H_4N_2$, a liquid in which the two nitrogen atoms are adjacent to each other. 2. Any derivative of 1.

pyr'i-dine (pirr'i-deen, -din). C_5H_5N. A heterocyclic compound, first of a series of homologous bases, occurring as a colorless liquid with a persistent odor; miscible with water in all proportions; miscible with alcohol. Used as a solvent in industry; has been used as an antiseptic and germicide.

2-pyr"i-dine-car"box-yl'ic ac'id. Picolinic acid.

3-pyr"i-dine-car"box-yl'ic ac'id. Nicotinic acid.

pyr-i-din"o-pro'te-in en'zyme. A dehydrogenase-type enzyme which functions with diphosphopyridine nucleotide (coenzyme I) or triphosphopyridine nucleotide (coenzyme II) as the coenzyme.

pyridium. Trade-mark for phenylazo-α,α-diaminopyridine monohydrochloride used in acute and chronic urogenital infections.

pyr"i-dox'al. The 4-aldehyde of pyridoxine, an essential component of enzymes concerned with amino-acid decarboxylation and with transamination, and therefore with amino-acid synthesis.

pyr"i-dox'a-mine. The amine of pyridoxine in which NH_2 replaces the OH group in position 4; obtained in transamination of pyridoxal.

pyr"i-dox'ic ac'id. 2-Methyl-3-hydroxy-4-carboxy-5-hydroxymethyl pyridine, a decomposition product occurring in urine following ingestion of pyridoxine by man.

pyr"i dox'ine (pirr"i dock seen, -sin) $C_8H_{11}O_3N$. 2-Methyl-3-hydroxy-4,5-di(hydroxymethyl)-pyridine; the term pyridoxine is synonymous with vitamin B_6; the hydrochloride occurs as white, crystalline powder with saline taste; 1 Gm. is soluble in 4.5 cc. of water and in about 91 cc. of alcohol; it is reasonably stable in solutions having pH below 5. The importance of pyridoxin in human nutrition is not yet definitely established; in rats it is an antidermatitis factor. Convulsions and hypochromic anemia have been observed to develop in pyridoxine-deficient infants. **Pyridoxine hydrochloride**, intravenously administered, provides relief from the nausea and vomiting of pregnancy but is not effective in all cases. It has value in treatment of irradiation sickness.

pyr'i dyl. The monovalent radical C_5H_4N from pyridine.

pyr'i form. See *piriform*.

py ril'a mine, pyr il a mine. Generic name for the antihistaminic base N-p-methoxybenzyl-N',N'-dimethyl-N-α-pyridylethylenediamine, $C_{17}H_{23}N_3O$, originally called *pyranisamine*. It is most commonly used in the form of the maleate salt. Syn., *mepyramine*. See *neo-antergan*.

pyr"i meth a mine. Generic name for 2,4-diamino-5-p-chlorophenyl-6-ethylpyrimidine, an antimalarial agent. See *daraprim*.

py rim'i dine (pye rim'i-deen, -din, pi rim'i-) 1. Any six-membered cyclic compound containing four carbon and two nitrogen atoms in the ring, the nitrogen atoms being separated by one carbon atom. To this group belong barbituric acid and its derivatives, the nucleic acid hydrolysis products thymine, uracil, and cytosine, and many other compounds of physiologic or therapeutic importance. 2. $C_4H_4N_2$. 1,3-Diazine, solid melting between 20° and 22° C.; soluble in water.

pyr"i thi a mine. A mixture of compounds, originally believed to be a single compound representing a structural analog of thiamine in which the thiazole ring is replaced by pyridine. The pure substance is now called *neopyrithiamine*.

pyr"i thyl di'one. Generic name for 3,3-diethyl-2,4-dioxotetrahydropyridine, a sedative and hypnotic substance no longer used because it may produce agranulocytosis. See *presidon*.

pyr'o- (pye'ro-, pirr'o-), **pyr-** [G. *pyr*, fire]. 1. A combining form signifying *fire* or *heat*. 2. In *chemistry*, a combining form denoting *substances derived by the action of heat*. 3. In *medicine*, a combining form denoting *fever*.

py"ro bo'ric ac'id. $H_2B_4O_7$. An acid obtained from boric acid by heating. Also called *tetraboric acid*.

py"ro cat'e-chase. An enzyme catalyzing oxidative breakdown of pyrocatechol.

py"ro cat'e-chin. See *pyrocatechol*.

py"ro cat"e chin mon"o ac'e tate. Guaiacetin.

py"ro cat"e chin u ri a (pye ro cat"e-kin new'ree uh, pirr o-) [pyr-; Malay *kachu*; G. *ouron*, urine]. The presence of pyrocatechol in the urine.

py"ro cat'e chol (pye ro cat'e-kole, -coal, -kol, -kawl, pirr"o-) $C_6H_4(OH)_2$. o-Dihydroxybenzene; occurs as colorless leaflets soluble in water and alcohol. Used in solution or ointment as an antiseptic. It is also used in photography as a developer. Also called *pyrocatechin*, *catechol*, *oxyphenic acid*.

py"ro cit ric ac'id. Citraconic acid.

py"ro din. $C_6H_5(NH)NHCOCH_3$. Acetylphenylhydrazine; occurs as white crystals, slightly soluble in cold water but soluble in hot water and alcohol. It is a powerful antipyretic but has a destructive action on red blood cells. It has been employed in skin diseases. See *hydracetin*.

py"ro gal'lic ac'id. Pyrogallol.

py"ro gal'lol (pye ro-gal'ole, -ol, -awl, -gal'ole, pirr o-) $C_6H_3(OH)_3$. 1,2,3-Trihydroxybenzene; occurs as light, white, or nearly white odorless leaflets or fine needles; on exposure to air and light it acquires a grayish tint. 1 Gm. is soluble in 2 cc. of water and about 1.5 cc. of alcohol. Pyrogallol is an active irritant and in concentrated solution, caustic. It is somewhat germicidal, but inferior to phenol. Internally it is extremely poisonous. Used solely as an application in various skin diseases, especially psoriasis; it is generally applied in the form of an ointment in strengths of from 2 to 10%. Also called *pyrogallic acid*.

p. monoacetate. $(OH)_2C_6H_3O.CO.CH_3$; available only in the form of a 67% solution in acetone, a reddish brown syrupy liquid. It is very vigorous in action and is to be used only in the most obstinate cases of psoriasis. Applied by painting once daily, followed in half an hour by zinc oxide powder or paste. See *eugallol*.

p. triacetate. $C_6H_3(OOCCH_3)_3$; occurs as white, crystalline powder; soluble in water and alcohol. It is used in psoriasis, lupus, acute and subacute eczema of children, and other skin diseases. It is applied in the form of a paste containing from 5 to 10% of the drug, usually with zinc oxide. Also called *triacetyl pyrogallol*. See *lenigallol*.

py"ro gal'lol phthal'ein. $C_{20}H_{12}O_7$. A brownish red powder obtained by the interaction of pyrogallol and phthalic acid. It is used as an indicator. Syn., *gallein*.

py"ro gen [G. *pyr*, fire; *gennaein*, from *gignesthai*, to be produced]. The protein organic matter or complex polysaccharide of a fever-producing nature which is found frequently in sterile water. It is produced by a certain group of bacteria which enter and develop in the water during distillation and subsequent storage and are killed during sterilization, thus leaving their bodies and products of decomposition in the solution. They are said to be responsible for the majority of reactions following intravenous injections.

py"ro-gen'ic [pyr-; *gennaein*]. Producing fever.

py"ro-glob u lin. A globulin, abnormally present in blood serum, which coagulates on heating.

py"ro-glob"u li ne mi a. The abnormal condition in which blood serum contains heat-coagulable globulin (pyroglobulin); high correlation of this condition with multiple myeloma has been observed.

py"ro-glos'si a [G. *pyr*, fire; *glōssa*, tongue]. A burning sensation of the tongue.

py"ro-guai a-cin (pye ro gwye'uh sin, pirr o) [pyr-; Sp. *guayacán*]. A component of guaiac.

py"ro-lag'ni a [pyr-; G. *lagneia*, coition]. Sexual gratification attained by the sight of fires or sexual excitement accompanying pyromania.

py"ro-lig'ne-ous [pyr-; L. *ligneus*, wooden]. Pertaining to the destructive distillation of wood.

py"ro-lig'ne-ous ac'id. The crude acid obtained by the destructive distillation of wood; it contains acetic acid.

py"ro-lu'site (pye ro-lew'sight, pye-rol'yoo sight). MnO_2. A native manganese dioxide.

py-rol'y sis (pye-rol'i-sis) [pyr-; G. *lysis*, loosing]. The decomposition of organic substances by heat. —**pyrolyt'ic**, *adj.*

py"ro ma'ni a [pyr-; G. *mania*, madness]. A monomania for incendiarism. —**pyromaniac**, *n.*

pyromen. See *piromen*.

py-rom'e-ter (pye-rom'i-tur) [pyr-; G. *metron*, measure]. An instrument for measuring temperatures too high to be estimated by the ordinary thermometer.

py"ro-mu'cic ac'id. Furoic acid.

py'rone. Any derivative of two of the three possible pyrans in which one or, less frequently, two oxygen atoms are attached to the same number of carbon atoms in the ring; also, certain derivatives of such pyrones, some of which are of medicinal importance.

py'ro-nin (C.C.). Tetraethyldiaminoxanthene; used as a histologic stain. Includes pyronin B and pyronin G.

py"ro-pho'bi-a [pyr-; G. phobos, fear]. Morbid dread of fire.

py"ro-phos'pha-tase. An enzyme catalyzing hydrolysis of esters containing two or more molecules of phosphoric acid to form a simpler phosphate ester.

py"ro-phos'phate. A salt of pyrophosphoric acid.

py"ro-phos-phor'ic ac'id. $H_4P_2O_7$. A crystalline acid, certain salts of which, notably iron, have been used medicinally.

py-rop"to-thy-mi'a (pye-rop"to-thigh-mee'uh) [pyr-; G. ptoein, to frighten; thymos, mind]. A form of mental disorder in which the person imagines himself enveloped in flame.

py"ro-punc'ture [pyr-; L. punctura, puncture]. Puncturing with hot needles; ignipuncture.

py"ro-ra-ce'mic ac'id. Pyruvic acid.

py"ro-ra-ce-mic al'co-hol. See acetyl carbinol.

py'ro-scope [pyr-; G. skopein, to examine]. Instrument used in determining high temperatures.

py-ro'sis (pye-ro'sis) [G. pyrōsis, firing]. An affection of the stomach characterized by a burning sensation, accompanied by eructations of an acrid, irritating fluid; heartburn.

py-rot'ic [G. pyrōtikos, heating]. 1. Pertaining to pyrosis. 2. Caustic.

py"ro-tox'in [G. pyr, fire; toxikon, poison]. A toxic agent generated in the course of the febrile process.

py-rox'y-lin (pye-rock'si-lin, pye-rock-sil'in) (pyroxylinum). A product obtained by the action of a mixture of nitric and sulfuric acids on cotton; consists chiefly of cellulose tetranitrate ($C_{12}H_{16}O_6(NO_3)_4$); occurs as a yellowish white, matted mass of filaments, resembling raw cotton in appearance but harsh to the touch. It is exceedingly inflammable; dissolves slowly in 25 parts of a mixture of 3 volumes of ether and 1 volume of alcohol. It is used as a protective covering in the form of collodion. Also called soluble guncotton.

pyr'role (pi-role', pirr'ole) [G. pyrros, fiery; L. oleum, oil]. NH.CH:CH.CH:CH. A colorless liquid occurring in bone oil and to a slight extent in coal tar. Many complex natural compounds, such as hemoglobin and chlorophyll, contain pyrrole components in their structure. See also porphin ring, porphyrin.

pyr-rol'i-dine. C_4H_9N; tetrahydropyrrole; an almost colorless, liquid base found in tobacco and carrot leaves.

pyr-rol"i-done-car"box-yl'ic ac'id. $C_5H_7NO_3$; 2-pyrrolidone-5-carboxylic acid; a urinary excretion form of unnatural D-glutamic acid, the latter losing a molecule of water and undergoing cyclization in the metabolic process.

pyr-ro'line. C_4H_7N; 2,5-dihydropyrrole; an almost colorless, liquid base prepared synthetically.

py-ru'vate. A salt or ester of pyruvic acid.

py-ru'vic ac'id (pye-roo'vick, pi-roo'vick). $CH_3CO.COOH$. An organic acid which is a normal intermediate in carbohydrate and protein metabolism. Excess quantities of pyruvic acid accumulate in blood and tissues in thiamine deficiency. Syn., ketopropionic acid.

py-u'ri-a (pye-yoor'ee-uh) [G. pyon, pus; ouron, urine]. The presence of pus in the urine. —**pyu'ric,** adj.

abacterial p., amicrobic p. Presence of a large number of leukocytes in the urine when no causative agent can be demonstrated, frequently associated with marked inflammation of the urinary bladder.

Q

Q_{CO_2}. The rate of evolution of carbon dioxide, in microliters given off in 1 hour by 1 mg. (dry weight) of tissue.

Q_{O_2}. The oxygen consumption in terms of the number of microliters consumed in 1 hour by 1 mg. (dry weight) of tissue; by convention, the consumption of oxygen is given a negative value.

Q_{10}. The increase in the rate of a chemical reaction for an increase in temperature of 10° C.

q electron. See under electron.

Q enzyme. See under enzyme.

Q fe'ver. See under fever.

q. h. Quaque hora; every hour.

q. 2 h. Quaque secunda hora; every second hour.

q. 3 h. Quaque tertia hora; every third hour.

q. i. d. Quater in die; 4 times a day.

q. l. Quantum libet; as much as is desired.

q. p. Quantum placet, as much as you please.

QRS. See QRS complex of electrocardiography; QRS interval.

q. s. Quantum sufficit; as much as suffices.

qt. Quart.

quack [D. kwakzalven, to boast of one's salves]. A pretender to medical skill; a medical charlatan.

quack'er-y [kwakzalvers]. The practice of medicine by a quack.

quack'sal-ver [D. kwakzalver]. A quack or mountebank; a peddler of his own medicines and salves.

quad-ran'gu-lar (kwod-rang'gew-lur) [L. quadrangulum, quadrangle]. Having four angles, as the quadrangular lobe, the square lobe of the cerebellum.

quad'rant (kwod'runt) [L. quadrans, a fourth part]. 1. The fourth part of a circle, subtending an angle of 90°. 2. One of the four regions into which the abdomen may be divided for purposes of physical diagnosis. 3. A sector of one-fourth of the field of vision of one or both eyes. —**quadran'tic,** adj.

quad"ran-ta-no'pi-a (kwod"ran-tuh-no'pee-uh), **quad"ran-ta-nop'si-a** [quadrans; G. a-, not; ōps, eye]. Loss of vision in about one-quarter of the visual field.

quad'rate [L. quadratus, from quadrare, to make square]. Square, four-sided, as quadrate cartilages, small, quadrangular cartilaginous plates often found in the alae of the nose.

quad-ra'tus [quadrare]. A squared figure; a muscle having four sides, as the quadratus lumborum of the back, attached to the crest of the ilium and the twelfth rib. See Table of Muscles in the Appendix.

q. menti. The quadratus labii inferioris muscle.

quad'ri- [cf. L. *quattuor*, four]. A combining form meaning *four*.

quad'ri·ceps [*quattuor*; L. *caput*, head]. Four-headed, as quadriceps muscle.

quad'ri·ceps. The large extensor muscle of the thigh. See Table of Muscles in the Appendix.

q. surae. The muscle mass comprising the gastrocnemius, soleus, and plantaris. *Obs.*

quad"ri·cus'pid. Having four cusps.

quad"ri·gem'i·na. The corpora quadrigemina.

quad"ri·gem'i·nal [*quattuor*; L. *geminus*, twin]. Fourfold; consisting of four parts, as the corpora quadrigemina.

qua"d·rip'a·ra [*quattuor*; L. *parere*, to bring forth]. A woman who is bearing, or has borne, her fourth child. —**quadriparous**, *adj.*

quad"ri·par'i·ty [*quattuor*; *parere*]. The state of having borne four children.

quad"ri·ple'gi·a [*quattuor*; G. *plēgē*, stroke]. Paralysis affecting the four extremities of the body.

quad"ri·tu·ber'cu·lar [*quattuor*; L. *tuberculum*, swelling]. Having four tubercles or cusps.

quad"ri·u'rate. A mixture of a urate with uric acid obtained from urine or blood, formerly believed to be a compound.

quad"ri·va'lent (kwod-ri-vay'lunt, kwod-riv'uh-lunt) [*quattuor*; L. *valere*, to be strong]. In *chemistry*, having a combining power equivalent to that of four hydrogen atoms. —**quadrivalence**, *n.*

quad·roon' [Sp. *cuarterón*, from L. *quartus*, fourth]. The offspring of a white person and a mulatto.

quad'ru·ped [L. *quattuor*, four; *pes*, foot]. A four-footed animal. —**quadru'pedal**, *adj.*

quad'ru·plet (kwod'roo-plet, kwod-rōō'plet) [L. *quadruplus*, fourfold]. Any one of four children born at one birth.

Quain, Richard [English physician, 1816–98]. Described fatty degeneration of the heart; called *Quain's fatty degeneration*.

qua'ker but'tons. Nux vomica.

qua·lim'e·ter (kwol-im'i-tur) [L. *qualis*, of what kind; G. *metron*, measure]. An instrument for measuring degree of penetration of roentgen rays.

qual'i·ta"tive [L. *qualitas*, quality]. Pertaining to quality.

qual'i·ty. In *radiobiology*, the approximate characterization of radiation with respect to its penetrating power.

quan'ta. Plural of quantum.

quan'tal sum·ma'tion (kwon'tul). Excitatory effects produced by the quantity or number of impulses reaching specific structures.

quan·tim'e·ter (kwon-tim'i-tur) [L. *quantus*, how much; G. *metron*, measure]. An instrument for measuring the quantity of roentgen rays. Also see *dosimeter*.

quan'ti·ta"tive [L. *quantitas*, quantity]. Pertaining to quantity.

quan'tum [L., how much]. As much as.

q. libet. As much as is desired. Abbreviated, q.l.

q. placet. As much as you please. Abbreviated, q.p.

q. sufficit. As much as suffices. Abbreviated, q.s.

q. vis. As much as you wish. Abbreviated, q.v.

quan'tum (pl. *quanta*). 1. Quantity or amount. 2. A discrete portion of energy of definite amount. See *quantum constant*.

quar'an·tine [It. *quarantina*, from L. *quadraginta*, forty]. 1. The limitation of freedom of movement of such susceptible persons or animals as have been exposed to communicable disease, for a period of time equal to the longest usual incubation period of the disease to which they have been exposed. 2. The place of detention of such persons. 3. The act of detaining vessels or travelers from suspected ports or places for purposes of inspection or disinfection.

absolute q. In *military medicine*, a quarantine in which normal duties are suspended and all contacts are avoided.

shotgun q. The extemporized and unauthorized establishment of a cordon against a place suspected of being the seat of an epidemic of a communicable disease.

working q. In *military medicine*, limitation of freedom of movement of such susceptible persons or animals as have been exposed to a communicable disease, for a period of time equal to the longest usual incubation periods of the disease to which they have been exposed. Regular duties are performed but measures are taken to prevent the spread of disease.

quart [L. *quartus*, fourth]. In the U.S.A., the fourth part of a gallon: 0.9463 liter. Abbreviated, qt. An imperial quart contains about 20% more than the U. S. quart.

quar'tan (kwor'tun) [*quartus*]. Recurring on the fourth day.

quar'tan. A form of intermittent malarial fever in which the paroxysms occur approximately every 72 hours, that is, on the first, fourth, seventh days, etc.

double q. A form of intermittent malarial fever in which there are two concurrent cycles of quartan fever not synchronous with each other, ordinarily resulting in fever on two successive days.

triple q. A form of intermittent malarial fever in which there are three concurrent cycles of quartan fever not synchronous with each other, ordinarily resulting in fever every day.

quar'ter [L. *quartarius*, fourth part]. 1. In *veterinary anatomy*, that part of the horse's hoof between the heel and the toe. 2. The fourth part of a slaughtered animal.

quar'ter crack. In *veterinary medicine*, a fissure of the inner or outer aspect of the wall of the hoof in the horse.

quar'ter e'vil. Obsolete term for blackleg.

quar·tip'a·ra (kwor-tip'uh-ruh) [L. *quartus*, fourth; *parere*, to bring forth]. A woman who has borne four children. —**quartiparous**, *adj.*

quartz. A crystalline silicon dioxide, SiO_2; when pure, in colorless hexagonal crystals. Used in chemical apparatus and for optical and electric instruments.

quartz rod. See quartz rod method.

quas'si·a (kwosh'ee-uh, kwosh'uh) [NL., from *Quassi*, a Surinam Negro who first used it about 1730]. The wood of *Picrasma excelsa*, known as Jamaica quassia, or of *Quassia amara*, known as Surinam quassia. A simple bitter used in dyspepsia. An infusion is used as an enema against seatworms. Also called *bitter wood*.

quas'sin (kwos'in, kwass'in) [*Quassi*]. A bitter substance from quassia; a molecular complex of isoquassin and neoquassin in approximately equal amounts. It has been used as a bitter tonic.

qua·ter'na·ry [L. *quaternarius*, consisting of four each]. 1. Consisting of four elements or substances, as quaternary solutions. 2. Fourth in order or stage, as quaternary syphilis. 3. Referring to compounds in which four similar atoms of a radical or the hydrogen atoms in the ammonium radical have been replaced by organic radicals. See *quaternary ammonium compounds* under *compound*.

Quatref'ages de Bréau, Jean Louis Armand de [French anthropologist, 1810–92]. One of the most eminent in his field. Published important work on craniology and on pygmies and their descent (1857). Described the parietal angle; also called *angle of Quatrefages*.

quat'tu·or [L.]. Four.

que"bra bun da (kee"brah-boon dah, kay"brah-bōōn dah) A tropical disease of horses and swine simulating beriberi of humans.

que·brach'·amine. $C_{19}H_{26}N_2$; an alkaloid of quebracho.

que bra chine (kay-brah cheen -chin, kee-brah cheen, -chin, keen, kin) An alkaloid of quebracho found to be identical with yohimbine.

que·bra cho (kay-brah cho, kee-brah cho, -ko) [Sp.]. The name of several hard-wooded trees of South America. The white quebracho is *Aspidosperma quebracho-blanco*, of the family Apocynaceae. It contains aspidospermine, quebrachamine, quebrachine (yohimbine) and possibly other alkaloids.

Queckenstedt, Hans Heinrich Georg (1876–1918) German neurologist, known for his studies of cerebrospinal fluid. See Queckenstedt *sign*.

Queckenstedt Stookey test. See under *test*.

queen's -de-light See *stillingia*.

queen's root" See *stillingia*.

quelicin chloride Trade-marked name for *succinylcholine chloride*.

Quénu, Edouard André Victor Alfred [French surgeon, 1852–1933]. Developed method of thoracoplasty involving division of the ribs to promote retraction, for the treatment of empyema; called *Quénu operation*, *parasthoracoplasty*.

quer'ce tin (kwur si tin) $C_{15}H_{10}O_7$. 3,3',4',5,7-pentahydroxyflavone, the aglycone of quercitrin, rutin, and other glycosides, found especially in various rinds and barks, but widely distributed in the plant kingdom. It occurs as yellow crystalline powder practically insoluble in water. It has been suggested to be the active component of rutin in decreasing capillary fragility and is used similarly. Syn., *flavin*, *meletin*. See *quertine*.

quer'ci- (kwur si-) [L. *quercus*, oak]. A combining form meaning an oak.

quer'cin. A bitter crystallizable carbohydrate $C_6H_{12}O_6$, from acorns and oak bark.

quer ci tan nic ac'id. The tannic acid from oak bark.

quer ci tan nin. Quercitannic acid.

quer'cite. $C_6H_7(OH)_5$. Pentahydroxycyclohexane. White sweet crystals; found in acorns. Also called *quercitol*, *acorn sugar*.

quer'ci·tol. See *quercite*.

quer'ci trin. $C_{21}H_{20}O_{11}.2H_2O$. A glycoside found in the bark of *Quercus tinctoria* and in many other plants.

quer cus [L.]. The dried inner bark of *Quercus alba*. See *oak*.

quertine A trade-mark for quercetin.

Quervain, Fritz de [Swiss surgeon, 1868–1940]. Described tenosynovitis of the extensor and abductor muscles of the thumb, called *Quervain's disease*, *tendovaginitis stenosans*.

Quéry, Leon Camille [French physician, 1868–]. Introduced an antiserum obtained from monkeys who had been infected with *Treponema pallidum*, called *Quéry's serum*.

Quévenne's iron. See *reduced iron*.

Queyrat' erythroplasia. See *erythroplasia of Queyrat*.

quick [AS. *cwic*]. A vital, tender part, as the bed of a nail.

quick. Manifesting life and activity, as a fetus.

Quick and Csonka method. See under *method*.

quick en ing [*cwic*]. The first feeling on the part of the pregnant woman of fetal movements, occurring between the fourth and fifth months of pregnancy.

quick'lime [*cwic*, AS. *lim*]. Calcium oxide; unslaked lime.

Quick's hippuric acid synthesis test. See *hippuric acid test*.

quick sil"ver. Mercury.

Quick test (*for prothrombin*). See *one-stage method*.

Quil·la'ja (kwi lay yah, -jah) Quil la'ia [Sp. *quillai*]. A genus of trees of the family Rosaceae.

quil la'ja [*quillai*]. The dried inner bark of *Quillaja saponaria*. It contains saponin, quillain (quillaic acid) which is very toxic. Rarely used as a nauseating expectorant. Externally it is stimulant and detergent. Also called *soapbark*, *Panama bark*.

Quimby, Edith H. (1891–) American radiological physicist, known for her research in the standardization of x-rays and radium dosage and in the biological effects of radiation, in the application of x-rays, radium, and radioactive isotopes to medicine, and in the comparison of different types of radiations.

quin-, **quin o-** [Sp. *quina*, from Quechua *quinaquina*, cinchona bark]. A combining form denoting quina (cinchona bark) or quinine.

quin a·crine hy"dro·chlo'ride (kwin ah kreen, krin) (*quinacrinae hydrochloridum*). $C_{23}H_{30}ClN_3O.2HCl.2H_2O$. A bright yellow crystalline powder, odorless, of bitter taste; 1 Gm. dissolves in about 35 cc. of water. Aqueous solutions are yellow and show a greenish fluorescence. An acridine derivative which destroys the asexual forms (trophozoites) of the malarial organism, completely suppressing the disease but usually with recurrence when the administration is discontinued. It has the same scope and approximately the same effectiveness as quinine. Dosage for suppression, 0.1 Gm. daily; for treatment of attack, 0.2 Gm. every six hours for five doses, then 0.1 Gm. t.i.d. for six days. It may cause nausea and is best taken as tablets of 0.1 Gm. with meals. It is also used as an anthelmintic, in a single dose of 0.8 Gm. with 0.8 Gm. of sodium bicarbonate. It gives a yellow color to the urine and sometimes to the skin. Syn., *mepacrine hydrochloride*. See *atabrine dihydrochloride*, *chinacrin hydrochloride*.

quin a·crine meth ane-sul'fon·ate. A salt used like quinacrine hydrochloride but preferred over the latter for parenteral administration because of its greater solubility in water. See *mepacrine methanesulfonate*.

quin al'bar'bi tone se dl um. British generic name for the barbiturate introduced under the trade-marked name seconal sodium. Syn., *secobarbital sodium*.

quin nal'dine (kwi-nal'deen, -din) $C_{10}H_9N$. Methylquinoline. An antipyretic similar to quinoline.

quin al·din'ic ac'id. $C_{10}H_7NO_2.2H_2O$. quinoline-2-carboxylic acid; crystalline powder moderately soluble in water; used for quantitative estimation of copper, zinc, and uranium.

quin al gen. See *analgen*.

quin"iz' rin. $C_{14}H_8O_4$; an organic compound which turns blue in the presence of magnesium; used to detect magnesium in tissues.

qui nam'i-dine (kwi nam i-deen, -din) $C_{19}H_{24}N_2O_2$. An alkaloid from various species of *Cinchona*.

qui nam'ine (kwi nam een, -in, kwin ah-meen, -min) $C_{19}H_{24}N_2O_2$. An alkaloid of the cinchonas.

quince seed. See *cydonium*.

Quincke, Heinrich Irenaeus [German physician, 1842–1922]. Widely known for his description of angioneurotic edema (1882), previously described by John Laws Milton (1876); called *Quincke's disease*. He introduced the method of spinal

puncture (1891) one of the chief clinical procedures in the diagnosis of disorders affecting the central nervous system. With Ernst Roos (1903) distinguished *Endamoeba histolytica* from *E. coli*. See also Quincke's pulse.

qui"ne·tum. Totaquine.

quin·hy′drone (kwin-high′drone, kwin″hi-drone). A substance representing equimolecular concentrations of quinone and hydroquinone; green prisms with pungent taste, soluble in hot water, alcohol, ether. Employed to prepare an electrode in pH determinations.

quin′ic ac′id. $C_7H_{12}O_6$. Hexahydrotetrahydroxybenzoic acid, found in cinchona bark and in several other plants.

quin′i·cine (kwin′i-seen, -sin). A cinchona alkaloid, isomeric with quinine.

quin′i·dine (kwin′i-deen, -din). $C_{20}H_{24}N_2O_2$. An alkaloid of cinchona bark isomeric with quinine. Like quinine, it is useful as an antimalarial although rarely employed. Used chiefly to restore normal rhythm in atrial fibrillation.

q. sulfate (*quinidinae sulfas*). $(C_{20}H_{24}N_2O_2)_2.H_2SO_4.2H_2O$. Fine, needlelike, white crystals which darken on exposure to light; odorless, of bitter taste. 1 Gm. dissolves in 100 cc. of water or in 10 cc. of alcohol. Used chiefly in atrial fibrillation. To determine possible hypersensitivity evidenced by headache, increased palpitation, nausea, vomiting, etc., a test dose of 0.2 Gm. (3 gr.) is given and repeated in 2 hours. In the absence of untoward symptoms, therapeutic dosage is begun. Dose, 0.2–0.4 Gm. (3–6 gr.) at intervals to provide a total dose of 1–2 Gm. (15–30 gr.) in 24 hours.

qui′nine (kwye′nyne, kwi-neen′, kwin′een) [Sp. *quina*, from Quechua *quinaquina*, cinchona bark] (*quinina*). $C_{20}H_{24}N_2O_2.3H_2O$. An alkaloid obtained from cinchona. A white, odorless, microcrystalline powder of intensely bitter taste. It is somewhat efflorescent in dry air. Quinine kills the asexual forms (trophozoites) of the malarial organisms, and effectively arrests the malarial attacks, although there are usually recurrences which may again be suppressed by quinine. It is also analgesic and antipyretic and is used as such in colds and other fevers. Also employed as a bitter tonic in convalescence, and as a stimulant to the parturient uterus. The larger doses produce cinchonism. Quinine alkaloid is but slightly soluble, and usually administered as quinine sulfate in capsules, tablets, or pills, or suspended in chocolate syrup; also given as the hydrochloride or acid sulfate in solution, which, however, have a very bitter taste. The quinine hydrochloride or quinine and urea hydrochloride solution may be injected by vein in emergencies, but may produce sudden cardiac arrest. Intramuscular or hypodermic injection is inadvisable as it may produce gangrene. The oral dosage of quinine salts in malarial attacks is 1 Gm. (15 gr.) t.i.d. for two days, followed by 0.6 Gm. (10 gr.) t.i.d. for five days. It is best given before meals. Dose, in colds, 0.1–0.2 Gm. (1½–3 gr.) every two or three hours.

q. acetylsalicylate. Used as an antipyretic and analgesic. Dose, 0.06–0.3 Gm. (1–5 gr.)

q. acid sulfate. See q. bisulfate.

q. and urea hydrochloride (*quininae et ureae hydrochloridum*). A double salt, $C_{20}H_{24}N_2O_2.HCl.CO(NH_2)_2.HCl.5H_2O$. Contains 58–65% of anhydrous quinine. White, crystalline powder soluble in 1 part of water or 3 parts of alcohol. Used hypodermically in severe malaria. A sclerosing agent for varicose veins. Dose, 0.13–0.65 Gm. (2–10 gr.)

q. and urethan injection. A sterile solution in water for injection of approximately 2 parts of quinine hydrochloride and 1 part of urethan, used principally as a sclerosing agent in treatment of varicose veins.

q. bisalicylosalicylate. See *quinisal*.

q. bismuth iodide. Contains 18.0–20.1% of bismuth, 48.7–53.5% of iodine, and about 23% of anhydrous quinine. Used for the systemic effect of bismuth in the treatment of syphilis.

q. bisulfate (*quininae bisulfas*). $C_{20}H_{24}N_2O_2.H_2SO_4.7H_2O$. White, crystalline powder soluble in 10 parts of water. Dose, 0.13–1.0 Gm. (2–15 gr.) Syn., *q. acid sulfate*.

q. dihydrochloride (*quininae dihydrochloridum*). $C_{20}H_{24}N_2O_2.2HCl$. White, odorless powder; 1 Gm. dissolves in 0.6 cc. of water. Dose, 0.13–0.65 Gm. (2–10 gr.)

q. ethylcarbonate (*quininae aethylcarbonas*). $C_{23}H_{28}N_2O_4$. Fine, white, odorless needles, only slightly soluble in water; soluble in 2 parts of alcohol. Dose, 1–2 Gm. (15–30 gr.) Also called *euquinine*.

q. formate. $C_{20}H_{24}N_2O_2.HCOOH$. Dose, subcutaneous, 0.1–0.2 Gm. (1½–3 gr.) Syn., *quiniform*.

q. hydrobromide (*quininae hydrobromidum*). $C_{20}H_{24}N_2O_2.HBr.H_2O$. Small, white needles or scale-like crystals; odorless, efflorescent. Soluble in 40 parts of water or 1 part of alcohol. Used as antimalarial and in exophthalmic goiter. Dose, 0.13–0.65 Gm. (2–10 gr.)

q. hydrochloride (*quininae hydrochloridum*). $C_{20}H_{24}N_2O_2.HCl.2H_2O$. White, silky, glistening needles; odorless, efflorescent. Soluble in 18 parts of water or 1 part of alcohol. Dose, 0.13–0.65 Gm. (2–10 gr.)

q. lactate. $C_{20}H_{24}N_2O_2.CH_3CHOH.COOH$. White, odorless, crystalline powder soluble in 3 parts of water. The aqueous solution is practically neutral and useful for subcutaneous administration of quinine. Dose, 0.06–0.3 Gm. (1–5 gr.)

q. phosphate (*quininae phosphas*). Approximately $(C_{20}H_{24}N_2O_2)_3.2H_3PO_4.8H_2O$. White, crystalline powder soluble in 800 parts of water. Dose, 0.13–0.65 Gm. (2–10 gr.)

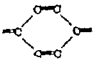
q. salicylate (*quininae salicylas*). $C_{20}H_{24}N_2O_2.C_6H_4.OH.COOH.H_2O$. White needles or powder; odorless. Becomes pink on standing. Intended for use in rheumatism, myalgia, etc. Dose, 0.33–1.0 Gm. (5–15 gr.)

q. sulfate (*quininae sulfas*). $(C_{20}H_{24}N_2O_2)_2.H_2SO_4.2H_2O$. Fine white needles; odorless; acquires a brown tint on exposure to light. One Gm. dissolves in 810 cc. of water or in 120 cc. of alcohol. The most popular salt of quinine. Dose, 0.13–0.65 Gm. (2–10 gr.)

q. tannate (*quininae tannas*). Contains 30–35% of anhydrous quinine. A pale yellow amorphous powder. Dose, 0.2–1.0 Gm. (3–15 gr.)

qui′nin·ism (kwye′nyne-iz-um, kwi-neen′-, kwin′een-), **qui′nism** [*quina*]. Cinchonism.

quin″in·o·der′ma. A drug dermatitis following the ingestion of quinine or its derivatives.



quinisal. Trade-mark for quinine bisalicylosalicylate, representing approximately 33% of anhydrous quinine. The substance is used as antirheumatic and febrifuge.

quin″i·zar′in. $C_{14}H_8O_4$. 1,4-dihydroxyanthraquinone; orange to red crystals, soluble in water. It has been used in experimental studies of vitamin K antagonists.

quin′o·chromes. Blue, fluorescent products formed by the oxidation of vitamin B. Also see *thiochrome*.

quin′i·form. Quinine formate.

quin′oid. Referring to the molecular structure

characteristic of quinones and believed to be responsible for the color of certain benzene derivatives.

qui-noi'dine (kwi noy'deen, -din) See *chinoidine*.

quin ol. See *hydroquinone*.

quin o-line (kwin' leen, -lin) A tertiary amine, C_9H_7N occurring in coal tar. The cinchona alkaloids may be considered as derivatives of this compound. A colorless liquid which becomes brown on exposure to air. It is antiseptic. Used chiefly as solvent and in the synthesis of derivatives. Various salts have been used as antipyretics and antirheumatics.

q.-2-carboxylic acid. Quinaldinic acid.

qui none (kwi nohn kwin ohn) 1. $C_6H_4O_2$ either of two isomeric derivatives of benzene, characterized by the presence of two oxygen atoms in place of two hydrogen atoms and containing one less double bond in the ring. Orthoquinone, also called o-benzoquinone, contains the oxygen atoms in 1,2-position; para-quinone, also called p-benzoquinone, contains the oxygen atoms in 1,4-position. 2. Any derivative of either of the compounds defined in 1.

quin o-vin. A glycoside from cinchona.

quin"o-tan'nic ac'id. See *cinchotannic*.

quin"o-tox'ine (kwin tock'seen, -sin). Quinicine.

qui no va tine (kwi-no'vuh-teen, -tin) An alkaloid, $C_{23}H_{26}N_2O$ occurring in the bark of *Cinchona cordifolia* var. *Pelletieriana*. Also called aricine.

qui no vic ac'id. $C_{30}H_{46}O$ A complex acid occurring in cinchona bark.

quin'o-vin, qui no vin [quina]. $C_{30}H_{48}O_{11}$ Kinovin, bitter glycoside found in the bark of cinchona and other Rubiaceae.

quin-nu-cli-dine. $C_7H_{13}N$ the bicyclic compound 1,4-benzodiazine colorless, crystalline powder, slightly soluble in water used in many syntheses, including those of medicinals.

quinoxyl. Trade-mark for brand of chiniofon.

Quinquaud, Charles Eugène (French physician, 1841–94). Described method of measuring blood volume by means of CO (1880); called Quinquaud-Gréhant method. Described folliculitis decalvans, an inflammation about the hair follicles attended with patchy baldness (1888); also called Quinquaud's disease. See also Quinquaud's phenomenon.

quin"que-tu-ber'cu-lar [L. quinque, five; tuberculum, swelling]. Having five tubercles or cusps.

quin sy (kwin zee) [G. kynanchē, dog-quinsy]. Acute inflammation of the tonsil and peritonsillar tissues, usually tending to suppuration. Also called *peritonsillar abscess*.

lingual q. Quinsy originating in the lingual tonsil and involving the tongue.

quin'tan [L. quintus, fifth]. Recurring on the fifth day.

quin tan. An intermittent fever the paroxysms of which recur every 96 hours; that is, on the fifth, ninth, thirteenth days, etc.

quin tip' ra [quintus; L. parere, to bring forth]. A woman who has borne five children, or who is in labor for the fifth time.

quin'tu-plet, quin tu plet [L. quintuplex, fivefold]. One of five children who have been born at one birth.

qui nu cli-dine. $C_7H_{13}N$ 1-azabicyclo[2.2.2]octane or 1,4-ethylenepiperidine bicyclic, crystalline base, very soluble in water representing one of the two principal structural units of quinine and other cinchona alkaloids, the other unit being quinoline.

Quitiqua. Pinta.

Quittenbaum, Carl Friedrich [German surgeon, 1793–1852]. Credited with being the first to establish extirpation of the spleen (1826).

quit'tor, quit'ter [ME. quiture]. In veterinary medicine, disease of the lateral cartilages of the foot caused by injury and infection, resulting in the formation of fistulous tract in the region of the coronet over the quarter.

quotane. Trade-mark for 1-(β-dimethylaminoethoxy)-3-n-butylisoquinoline hydrochloride $C_{17}H_{24}N_2O \cdot HCl$; potent topical anesthetic useful in the treatment of dermatological diseases.

quo-tid'i an [L. quotidianus, daily]. Recurring every day.

quo-tid'i an. An intermittent fever the paroxysms of which recur daily.

double q. A fever having two paroxysms day usually differing in character.

quo'tient [L. quotiens, how often]. The result of the process of division.

accomplishment q. In psychology the ratio of achievement age to mental age. Also called *achievement q.* Abbreviated, AQ.

achievement q. Accomplishment q.

blood q. The result obtained by dividing the quantity of hemoglobin in the blood by the number of erythrocytes, expressed in each case as percentage of the normal amount.

developmental q. The mathematical expression of the relation between developmental age and actual or chronologic age. To keep the related factors clear for easy reference, it is often expressed as fraction,

$$\frac{\text{developmental age}}{\text{actual (chronologic) age}}$$

rather than worked out as quotient. Developmental age may be determined by serial x-ray pictures leading to standards for epiphyseal development, body measurement (height, weight, etc.), mental and motor tests, or the grid method (Wetzel).

D/N q. The ratio of glucose to nitrogen in the urine.

economy q. The ratio of total gain of intake of water over total output of water at any one load. It measures the relative role of gain and of loss during attempts at recovery of water balance.

intelligence q. See *intelligence quotient*.

nonprotein respiratory quotients. The ratio of the volume of carbon dioxide given off to the volume of oxygen consumed after the subtraction from these gas volumes of the amounts utilized in protein metabolism.

protein q. The result of dividing the amount of globulin in the blood plasma by the amount of albumin in it.

respiratory q. Abbreviated, R. Q. (a) The ratio of the volume of carbon dioxide evolved by respiring cells or tissues to the volume of oxygen consumed in the same time. (b) The result obtained by dividing the carbon dioxide expired by the oxygen absorbed. This is normally

$$\frac{4.5}{5} = 0.9$$

velocity q. The volume of water restored or removed, relative to the increment to be restored or removed, per interval of time.

q.v. 1. Quantum vis; as much as you wish. 2. Quod vide; which see.

R

R Symbol for electrical resistance.

R. Réaumur; right.

® Symbol indicative of registered trade-mark status for a name.

r Symbol for roentgen.

℞ *Recipe*, take; used in prescription writing.

−℞ Rinne's test negative. See Rinne's test.

+℞ Rinne's test positive. See Rinne's test.

Rf In chromatography, the ratio of the distance traveled by a substance undergoing diffusion to the distance traveled by the solvent; the ratio is characteristic of the substance.

Ra Chemical symbol for radium.

rab'bit fever. See *tularemia*.

rab"e-la'l·ine. A glycoside from *Lophopetalum toxicum*, its action is similar to that of digitalis.

rabellon. Trade-mark for a tablet containing belladonna alkaloids.

ra'bi·ate [L. *rabiatus*, from *rabiere*, to be mad]. Rabid.

rab'ic, ra'bic [L. *rabies*, madness]. Pertaining to rabies.

rab'id [L. *rabidus*, mad]. Affected with rabies; pertaining to rabies.

ra'bies (raybees, ray'bee·eez) [L.]. An acute infectious disease of animals caused by a filtrable virus transmitted to other animals and man by the bite of infected animals. Many animals are subject to the disease, but it occurs most frequently in the wolf, the cat, and the dog, and is chiefly propagated by the last. The virus has a special affinity for the nervous system, and is found in secretions, particularly in the saliva. In man there are usually three stages of the disease: the first or preliminary, marked by restlessness, apprehension, and obvious ill health; the second or furious stage, in which the patient is hyperactive and has spasms of the muscles of swallowing and respiration; and the third or paralytic stage, which is marked in the beginning by drooling saliva, due to poor muscular control, and terminates fatally with general paralysis ascending the spinal column. See also *pseudorabies*. —**rabiet'ic**, *adj.*

r. fixed virus. A term applied by Pasteur to virus that is so high in virulence for rabbits by successive intracerebral transfers that it will kill the animals in a period of six or seven days.

prophylaxis. The daily inoculation of an exposed person with emulsions of spinal cord from infected rabbits. The first injection is made with cord which has been dried for 14 days, successive inoculations being from progressively fresher cord. Other methods have been employed to inactivate the vaccine, such as chloroform and phenol. Also called *Pasteur treatment*.

r. vaccine. An emulsion made from the spinal cords of rabbits infected with rabies. Also see prophylaxis, Flury *strain*.

Rabinowitch, Israel Mordecai [Canadian physician, 1891–]. Known for his studies in the dietetic treatment of diabetes mellitus. Advocated diet of low caloric value with relatively low fat and high carbohydrate content.

race [F., from It. *razza*]. A poorly defined minor subdivision of a species. —**ra'cial**, *adj.*

ra·ce'mic (ra·see'mick, ·sem'ick) [L. *racemus*, bunch of grapes]. Composed of equal parts of dextrorotatory and levorotatory forms of optical isomers and, therefore, optically inactive.

ra·ce'mic ac'id. An optically inactive mixture of dextrorotatory and levorotatory forms of tartaric acid.

rac"e·mi·za'tion. Conversion of the optically active form of a compound to its racemic form, commonly by heating.

rac·e·mor'phan hy"dro·bro'mide. Generic name for racemic 3-hydroxy-N-methylmorphinan hydrobromide, $C_{17}H_{23}NO.HBr$; formerly known as *methorphinan hydrobromide*; a potent synthetic analgesic related chemically and pharmacologically to morphine. The levorotatory component of the base, designated by the generic name *levorphan*, is approximately twice as potent as the mixture; levorphan tartrate is the available salt. See *dromoran hydrobromide*, *levo-dromoran tartrate*.

rac'e·mose (rass'i·moce) [L. *racemosus*, full of clusters]. Resembling a bunch of grapes.

racephedrine. Trade name for racemic ephedrine. The substance is readily soluble in water or alcohol and is used like ephedrine. Dose, 30–50 mg. (½–¾ gr.). Also called *dl-ephedrine*.

r. hydrochloride. The corresponding hydrochloride, soluble in 4 parts of water or 24 parts of alcohol.

race su'i·cide. The gradual extinction of a human population through the voluntary widespread limitation of family size.

ra·chi-. See *rachio-*.

ra"chi·an"al·ge'si·a (ray"kee·an·al·jee'zee·uh, ·see·uh) [G. *rhachis*, spine; *analgēsia*, want of feeling]. Spinal anesthesia. *Obs.*

ra"chi·an"es·the'si·a (ray"kee·an·es·thee'zhuh, ·zee·uh) [*rhachis*; G. *anaisthēsia*, lack of sensation]. Spinal anesthesia. *Obs.*

ra"chi·al'gi·a [*rhachis*; G. *algos*, pain]. Spasm of the muscles of the back of the neck, as seen in the early part of many epileptic attacks. *Rare.*

ra'chi·cele (ray'ki·seel) [*rhachis*; G. *kēlē*, hernia]. Hernial protrusion of the contents of the spinal canal in spina bifida. It includes spinal meningocele, myelomeningocele, and myelocystocele (syringomyelocele).

ra"chi·cen·te'sis [*rhachis*; G. *kentēsis*, a pricking]. Puncture into the subarachnoid space; lumbar puncture.

ra·chil'y·sis (ra·kil'i·sis) [*rhachis*; G. *lysis*, loosing]. A method of treating lateral curvature of the spine by mechanical counteraction of the abnormal curves.

ra'chi·o- (ray'kee·o-), **ra·chi-** [*rhachis*]. A combining form meaning *the spine*.

ra"chi·o·camp'sis [*rhachis*; G. *kampsis*, bending]. Curvature of the spine.

ra"chi·o·cen·te'sis. See lumbar puncture.

ra"chi·o·dyn'i·a (ray"kee·o·din'ee·uh, ·dye'nee·uh) [*rhachis*; G. *odynē*, pain]. Spasmodic pain in the spinal column.

ra"chi·om'e·ter [*rhachis*; G. *metron*, a measure]. An instrument used to measure the degree of spinal deformities.

ra"chi·op'a·thy [*rhachis*; G. *pathos*, disease]. Any disease of the spine. *Obs.*

ra chi-o ple gi-a [rhachis; G. plēgē, stroke]. Spinal paralysis.

ra" hi o sco"li is (ray kee-o-sko"lee-o sis, -skol"ee-o sis) [rhachis; G. skoliōsis, obliquity]. Lateral curvature of the spine.

ra'chi o-tome [rhachis; G. tomos, cutting]. A cutting instrument used in operations upon the vertebrae.

ra chi-ot o-my [rhachis; G. tomē, cutting]. The operation of cutting into the vertebral column.

ra-chip' gus (ra-kip uh-gus) [rhachis; G. pagos, that which is fixed]. Conjoined twins (diplopagi) united back to back by any portion of the vertebral column.

ra chi-re-sis'ta nce. Resistance of the spinal nerves to specific local anesthetic agent, related possibly to excessive myelinization of axons or thick perineural sheath or acid pH, seen in acidosis and infections.

ra'chis (ray'kis) [rhachis]. The vertebral column. —rachid'ial, rachid'ian, adj.

ra-chis chi sis (ra kis'ki-sis) [rhachis; G. schisis, cleavage]. Synonym for spina bifida.

ra-chit' min (ra-kit'uh-min) Vitamin D. Obs.

ra chi ter'a ta [rhachis; G. teras, monster]. A collective term for all anomalies involving the spine.

ra-chit'ic [rhachis; G. -itis, inflammation]. Affected with, resembling, or produced by rickets.

ra-chit'ic ro'sa-ry. The row of nodules appearing on the ribs t the junctions with their cartilages; often seen in rachitic children. Also called beading of the ribs, rachitic beads.

ra-chi tis (ra-kye'tis) Rickets.

ra chi tism (ray'ki-tiz-um, rack'i-) [rhachis; -itis]. Tendency to rickets.

rach"i to-gen'ic (rack"i to-jen'ick) [rhachis; -itis; G. genesthai, from gignesthai, to be produced]. Producing rickets, as vitamin-D deficient diet.

ra clage' (rah-klahzh') [F.]. The destruction of soft growth by rubbing, as with brush or harsh sponge.

ra-cle ment' (rah-klub-mahng See Notes § 35) Raclage.

rad. Radix, root.

ra-dec'to-my [L. radix, root; G. ektomē, excision]. Resection of the root of tooth, in whole or in part.

ra'di al [L. radius, spoke, ray exterior bone of the forearm]. 1. Radiating; diverging from common center. 2. Pertaining to, or in relation to, the radius or bone of the forearm, as the radial artery. See Table of Arteries in the Appendix.

ra di-a'lis (ray"dee-ah'lis, -ay'lis) [radius]. Pertaining to the radius; term applied to various arteries, nerves, and muscles, as flexor carpi radialis.

ra'di-an (radius). An arc whose length is equal to the radius of the circle of which it is part.

ra di-ant [L. radiare, to furnish with beams]. Emitting rays, as radiant energy energy traveling in the form of electromagnetic waves.

ra di a'tion [L. radiatio shining]. 1. The act of radiating or diverging from central point, as radiation of light; divergence from center having the appearance of rays. 2. The emission and propagation of energy through space or through material medium in form having certain characteristics of waves, including the energy commonly described as electromagnetic and that of sound; usually electromagnetic radiation, classified, according to frequency as Hertzian, infrared, visible ultraviolet, -ray and gamma ray; also, by extension, such corpuscular emissions as alpha and beta particles and cosmic rays. 3. In neurology, certain groups of fibers that diverge after leaving their place of origin. —ra di ate n., adj.

acoustic r. Old term for auditory radiation.

annihilation r. The production of two photons when an electron and positron unite and are annihilated.

auditory r. A large bundle of fibers in the posterior part of the internal capsule running from the medial geniculate body to the superior and transverse temporal gyri. Also called geniculotemporal or tract, acoustic.

corpus callosum r. A radiation of the corpus callosum fibers in the medullary center of each cerebral hemisphere.

corpuscular r. Subatomic particles such as electrons, protons, or neutrons, or combinations of these particles such as deuterons, alpha rays, traveling at high velocities.

corticostriate r. Fibers running between the corpus striatum and the equatorial zone of the cortex.

electromagnetic r. Radiation which is propagated through space or matter in the form of electromagnetic waves.

fluorescent r. Radiation that is emitted by fluorescent bodies.

fractionation r. Method of administration of roentgen rays or radium in fractions of the total dose spread over period of days.

geniculotemporal r. See auditory.

heterogeneous Radiation containing more than one wavelength.

homogeneous Radiation containing only one wavelength.

interstitial Radiation by inserting radium or radon directly into the tissue.

ionizing radiations. Radiations which directly or indirectly produce ionization.

irritative Ultraviolet radiation to the point of producing erythema.

mitogenetic r. A kind of radiation said to be produced in cells and tissues, which induces or is induced by the process of mitosis. Also called Gurwitsch.

monochromatic Electromagnetic radiation which has either one wavelength or photons of the same energy level.

monoenergetic r. Radiation in which the particles or photons all have equal energy.

optic r. The geniculocalcarine tract, connecting the lateral geniculate body with the calcarine occipital area of the cortex; also called optic r. of Gratiolet.

photochemical Radiation which is part of the spectrum that produces chemical reactions.

protraction Decrease of the rate of application of given dose of roentgen rays or radium rays.

 injury. See under injury.

 pneumonitis. See under pneumonitis.

r. poisoning. See under poisoning.

relative biological effectiveness of r. The inverse ratio of those doses of two different types of radiation that produce particular biologic response under identical conditions.

secondary In nuclear science, particles or photons produced by the interaction with matter of a radiation that is regarded as primary.

sensory See thalamic.

solar Radiation from the sun.

stem r. In radiology, roentgen rays emitted from areas of the roentgen-ray tube other than the target, especially from the target support.

striothalamic A system of fibers connecting the corpus striatum with the thalamus and the subthalamic region.

supervoltage r. *In radiology,* roentgen radiation produced by voltages of 500–2000 kilovolts.

thalamic radiations. Nerve fibers running from the thalamus to the cerebral cortex (*thalamocortical tract*) and from the cortex to the thalamus (*corticothalamic tract*).

ultraviolet r. Radiation comprising ultraviolet wavelengths.

ra·di·a·tion sick·ness. See under *sickness*.

ra·di·a'tion ther'a·py. See under *therapy*.

rad'i·cal [L. *radix*, root]. Belonging to a root; going to the root, or attacking the cause, of a disease; the opposite of conservative.

rad'i·cal. 1. A group of atoms that acts as a unit, but commonly does not exist in the free state, as NH_4, ammonium, or C_6H_5, phenyl. 2. The haptophore group of an antibody.

rad'i·cle [L. *radicula*, small root]. 1. A little root, as the radicle of a nerve, one of the ultimate fibrils of which a nerve is composed, or radicle of a vein, one of the minute vessels uniting to form a vein. 2. See radical, 1, 2.

rad"i·cot'o·my. See *rhizotomy*.

ra·dic'u·lar [*radicula*]. Pertaining to a root or to a radicle; specifically, pertaining to the roots of the spinal nerves or to those of teeth.

ra·dic"u·lec'to·my [*radicula*; G. *ektomē*, excision]. Excision or resection of a spinal nerve root.

ra·dic·u·li'tis [*radicula*; G. *-itis*, inflammation]. Inflammation of a nerve root.

acute brachial r. See shoulder girdle syndrome.

ra·dic"u·lo·my"e·lop'a·thy [*radicula*; G. *myelos*, marrow; *pathos*, disease]. Disease of the spinal cord and roots of the spinal nerves.

ra·dic"u·lo·neu·ri'tis [*radicula*; G. *neuron*, nerve; *-itis*, inflammation]. Inflammation of a spinal nerve root.

ra·dic"u·lo·neu·rop'a·thy [*radicula*, *neuron*; G. *pathos*, disease]. Disease of the peripheral spinal nerves and their roots.

ra·dic"u·lop'a·thy [*radicula*; *pathos*]. Disease of the roots of spinal nerves.

ra·di·o- [L. *radius*, ray]. 1. A combining form meaning *pertaining to radiant energy or to radium*. 2. A combining form meaning *relating to the radius*.

ra"di·o·ac·tin'i·um [*radius*; G. *aktis*, ray]. A radioactive product of actinium. It gives off alpha rays and disintegrates into actinium x.

ra·di·o·ac'tive [*radius*; L. *activus*, active]. Emitting radiant energy.

ra·di·o·ac·tiv'i·ty [*radius*; *activus*]. A property of certain substances of spontaneously emitting alpha particles, beta particles, or gamma rays from the nucleus of the atom. —**radioac'tive**, *adj.*

artificial r. That produced artificially by bombardment with high-velocity particles, as in a cyclotron or betatron or by other means. Also called *induced r.*

ra"di·o·au'to·graph [*radius*; G. *autos*, self; *graphein*, to write]. A direct photographic record of the distribution of a radioactive substance in an organism or tissue section; often used to detect diseased tissue, such as a tumor or hyperactive endocrine gland. Also called *autoradiograph*, *autoradiogram*, *radioautogram*.

ra·di·o·au·tog'ra·phy. The process of making a radioautograph.

ra·di·o·be [*radius*]. A peculiar microscopic formation that is produced in sterilized bouillon by radium radiation, and that has the appearance of bacteria.

ra"di·o·bi·ol'o·gy [*radius*; G. *bios*, life; *logos*, word]. That branch of science devoted to the study of the results of radiation upon the body.

ra·di·o·car'pe·us. The flexor carpi radialis brevis muscle.

ra·di·o·chem'is·try [*radius*; G. *chymos*, juice]. That branch of chemistry which deals with radioactive phenomena.

ra·di·o·cir"cu·log'ra·phy. A technique for measuring and registering radioactivity of blood as it circulates through blood vessels.

ra·di·o·co'balt. Any radioactive isotope of cobalt, especially that having a mass number of 60 (Co^{60}), which has a half-life of 5.3 years and emits a negative beta particle and two gamma rays for each atom of cobalt that decays. In the form of metallic cobalt its radiation is used in the therapy of malignancies.

ra·di·o·col'loid. Any colloidal aggregate of radioactive substances.

ra"di·o·cur·a·bil'i·ty. The condition of being susceptible to cure or elimination by irradiation; said of cancer cells.

ra"di·o·cys·ti'tis [*radius*; G. *kystis*, bladder; *-itis*, inflammation]. Cystitis following x-ray or radium therapy.

ra·di·ode [*radius*; G. *hodos*, way]. An electric attachment for the application of radium.

ra"di·o·der"ma·ti'tis. See roentgen *dermatitis*.

ra·di·o·di"ag·no'sis [*radius*; G. *diagnōsis*, distinguishing]. The diagnosis of disease by means of radiography or radioscopy.

ra·di·o·don'ti·a [*radius*; G. *odous*, tooth]. Radiography of the teeth and adjacent tissues.

ra·di·o·don'tist [*radius*; *odous*]. A specialist in radiography of the teeth and adjacent tissues.

ra"di·o·el'e·ment [*radius*; L. *elementum*, element]. An element with radioactive properties.

ra·di·o·gen'ic. Referring to a substance or state resulting from a radioactive transformation, as radiogenic lead resulting from disintegration of radium, or radiogenic heat produced within the earth by disintegration of radioactive substances.

ra·di·o·gold'. Any radioactive isotope of gold, especially that having a mass number of 198 (Au^{198}), which has a half-life of 2.69 days and emits a negative beta particle and a gamma ray for each atom of gold that decays. In the form of a colloidal dispersion of the metal it is used, by injection, in the therapy and palliation of neoplastic disease and in the treatment of neoplastic effusions, also as a tracer in various studies involving gold.

ra'di·o·graph" [*radius*; G. *graphein*, to write]. To make a photograph on a sensitive film by projection of roentgen rays through a part of the body.

ra·di·o·graph". A roentgen-ray photograph. Also called *sciagram*, *roentgenogram*.

ra·di·og'ra·pher [*radius*; *graphein*]. One skilled in radiography; an x-ray technician.

ra·di·og'ra·phy [*radius*; *graphein*]. The practice or art of making radiographs. —**radiograph'ic**, *adj.*

sectional r. The technic of making radiographs of plane sections of solid objects. Its purpose is to show detail in a predetermined plane of the body while blurring the images of structures in other planes. The methods used differ slightly and have been designated stratigraphy, tomography, planigraphy, x-ray focusing, vertigraphy, laminagraphy, and body-section roentgenography. In all, the radiographs are produced by movement of the film during exposure in a direction reciprocal and proportional to the simultaneous movement of the tube.

ra·di·o·hu'mer·al [L. *radius*, exterior bone of the forearm; *humerus*, upper part of the arm]. Pertaining to the radius and the humerus.

ra·di·o·i'o·dine (ray"dee-o-eye'o-dyne, -deen, -din) [L. *radius*, ray; G. *iōeidēs*, violetlike]. Any radioactive isotope of iodine, especially that having a mass number of 131 (I^{131}), which has a half-life

of 8 days and emits two negative beta particles and several gamma rays for each atom of iodine that decays. In the form of sodium iodide it is used, by intravenous or oral administration, in the treatment of hyperthyroidism and cancer of the thyroid, also for various diagnostic purposes. In the form of diiodofluorescein, in the diagnosis and localization of brain tumors, in the form of iodinated serum albumin, for determination of plasma volume, peripheral vascular flow, circulation time, etc. It has many uses as a tracer in reactions involving iodine.

ra″di-o-i′ron [radius; AS. iren]. Any radioactive isotope of iron, especially that having a mass number of 59 (Fe^{59}) which has a half-life of 46 days and emits two negative beta particles and two gamma rays for each atom of iron that decays. In the form of ferric ammonium citrate it has been used in the study of iron metabolism, in determination of blood volume with red cells labeled with the radioisotope, and in various studies on blood transfusion.

ra″di-o-i′so-tope. A radioactive isotope, very commonly of an element which is stable. While certain isotopes of normally stable elements exist naturally in radioactive form, many are prepared only artificially, as by bombarding an element with neutrons, protons, deuterons, or alpha particles in a nuclear reactor or in an accelerating device such as the cyclotron or cosmotron; the bombarded element may form a radioactive isotope of the same element or of another element. By virtue of its radioactivity a radioisotope is used either for the effect of its radiations, such use often being diagnostic or therapeutic, or as a tracer added to the stable form of a compound to follow the course of the latter in a particular sequence of reactions in living organisms or even in an inanimate system.

ra″di-o-ky-mog′ra-phy (ray″dee-o-kigh-mog′ruh-fee) [radius; G. kyma, wave; graphein, to write]. A method of obtaining a graphic record of movement of the silhouette of an organ or tissue on a single film.

Ra″di-o-la′ri-a [dim. from radius]. A subclass of Rhizopoda, which have a chitinous capsule between the endoplasm and the ectoplasm.

ra″di-ol′o-gist [radius; G. logos, word]. A physician specializing in radiology.

ra″di-ol′o-gy [radius; logos]. That branch of medicine which deals with radioactive substances, x-rays, and other ionizing radiations and with their utilization in the diagnosis and treatment of disease. —**radiolog′ic**, *adj.*

ra″di-o-lu′cent [radius; L. lucere, to shine]. Partly or wholly transparent to roentgen rays or other forms of radiation. —**radiolucency**, *n.*

ra″di-o-lu″mi-nes′cence [radius; L. lumen, light]. That luminescence brought about by radioactive rays striking an obstacle or screen treated with a suitable substance.

ra″di-o-mag-ne′si-um. Radioactive isotope of magnesium, produced artificially by bombardment with high energy positively charged atomic particles or with neutrons.

ra″di-o-ma-nom′e-try. The measurement of pressures due to the incidence of radiation on matter.

ra″di-om′e-ter [radius; G. metron, a measure]. 1. An instrument for measuring the intensity of thermal radiation. 2. An instrument for measuring the quality or penetration of x-rays.

ra″di-o-mi″cro-me′ter. A sensitive thermopile used for detection of very small changes of radiant energy.

ra″di-o-mi-met′ic. Capable of producing in tissues biological effects similar to those of ionizing radiation.

ra′di-on [radius]. A particle thrown off by a radioactive substance.

ra″di-o-ne-cro′sis [radius; G. nekrōsis, mortification]. Destruction or ulceration of tissues caused by radiation.

ra″di-o-neu-ri′tis [radius; G. neuron, nerve; -itis, inflammation]. A form of neuritis due to exposure to x-rays or radium rays.

ra″di-o-ni′tro-gen [radius; G. nitron, sodium carbonate; genesthai, from gignesthai, to be produced]. The radioactive isotope of nitrogen, having a mass number of 13 (N^{13}) which has a half-life of 10.1 minutes and emits a positive beta particle for each atom of nitrogen that decays.

ra″di-o-paque′ (ray″dee-o-payk′) [radius; L. opacus, shady]. Not transparent to the x-ray; not permitting the passage of radiant energy. —**radiopac′ity**, *n.*

ra″di-o-par′ent [radius; L. parere, to appear]. Transparent to the x-ray; permitting the passage of radiant energy. —**radioparency**, *n.*

ra″di-o-pa-thol′o-gy [radius; G. pathos, disease; logos, word]. Study of tissue changes brought about by radiation.

ra″di-o-pel-vim′e-try [radius; L. pelvis, basin; metron, a measure]. Radiographic procedure for making accurate measurements of the maternal pelvis and fetal skull. Also called *pelvicephalometry*.

ra″di-o-phos′pho-rus. The radioactive isotope of phosphorus, having a mass number of 32 (P^{32}) which has a half-life of 14.3 days and emits a negative beta particle for each atom of phosphorus that decays. In the form of disodium hydrogen phosphate it is used, by intravenous or oral administration, in the treatment of polycythemia vera and in various ways as a diagnostic agent, as in the determination of blood volume, and also as a tracer in various studies involving phosphorus.

ra″di-o-po-tas′si-um. Any radioactive isotope of potassium, especially that having a mass number of 42 (K^{42}) which has a half-life of 12.5 hours and emits two negative beta particles and a gamma ray for each atom of potassium that decays. In the form of various potassium salts, administered intravenously or orally, it has been used in studies of potassium metabolism, in localization of brain tumors, and in other tracer studies involving potassium.

ra″di-o-prax′is [radius; G. praxis, a doing]. The use of radiant energy either in therapy or for other purposes.

ra″di-o-re-sist′ance. Relative resistance of tissues or organisms to the injurious effects of radiation.

ra″di-os′co-py [radius; G. skopein, to examine]. The process of securing an image of an object upon a fluorescent screen by means of radiant energy.

ra″di-o-sen″si-tiv′i-ty [radius; L. sentire, to feel]. Sensitivity of tissues or organisms to various types of radiations, such as x-rays or rays from radioactive materials. —**radiosen′sitive**, *adj.*

ra″di-o-sil′i-con [radius; L. silex, flint]. Radioactive isotope of silicon, produced artificially by bombardment with high energy positively charged atomic particles or with neutrons.

ra″di-o-so′di-um. Any radioactive isotope of sodium, especially that having a mass number of 24 (Na^{24}) which has a half-life of 14.9 hours and emits a negative beta particle and two gamma rays for each atom of sodium that decays. In the form of sodium chloride it is used, by intravenous administration, in various diagnostic studies, as of peripheral vascular disease, circulation time, sodium metabolism, etc.

ra″di-o-ster″e-os′co-py [*radius*; G. *stereos*, solid; *skopein*, to examine]. The application of the principle of the stereoscope, obtaining a viewpoint for the left eye and one for the right by corresponding displacement of the x-ray tube along the plane of the film and duplication of these geometric conditions in viewing the two radiographs in a properly constructed stereoscopic view box.

ra″di-o-stron′ti-um. Any radioactive isotope of strontium. That of mass number 89 (Sr^{89}) which has a half-life of 54 days and emits a negative beta particle for each atom of strontium that decays, has been used in treatment of bone tumors; that of mass number 90 (Sr^{90}) which has a half-life of 25 years and also emits a negative beta particle for each atom of strontium that decays, has been used for radiation therapy of benign conditions of the eye.

ra″di-o-sul′fur. Any radioactive isotope of sulfur, especially that having a mass number of 35 (S^{35}) which has a half-life of 87.1 days and emits a gamma ray for each atom of sulfur that decays. It has been incorporated in various compounds as a tracer element to study the metabolism of these and related compounds.

ra″di-o-sur′ger-y [*radius*; G. *cheirourgia*, a working by hand]. The use of radium in surgical therapy.

ra″di-o-tel-lu′ri-um [*radius*; L. *tellus*, earth]. Any of a group of radioactive isotopes of tellurium, ranging in mass number from 118 to 133 and with a range of half-life from about 25 minutes to about 143 days.

ra″di-o-ther″a-peu′tic. Of or pertaining to therapeutic use of radiant energy.

ra″di-o-ther″a-peu′tic (ray″dee-o-therr″uh-pew′tick) [*radius*; G. *therapeutikos*, inclined to serve]. Referring to therapeutic use of radiant energy.

ra″di-o-ther″a-peu′tics. See *radiotherapy*.

ra″di-o-ther′a-py [*radius*; G. *therapeia*, treatment]. The treatment of disease by means of x-rays, radium rays, and other radioactive substances.

ra″di-o-ther′my [*radius*; G. *thermē*, heat]. 1. Treatment by radiant heat. 2. Short-wave diathermy.

ra″di-o-tho′ri-um. Any of a group of radioactive isotopes of thorium, ranging in mass number from 226 to 234 and with a range of half-life from about 31 minutes to about 10^{1} years.

ra″di-o-tox-e′mi-a [*radius*; G. *toxikon*, poison; *haima*, blood]. Toxemia induced from overexposure to any radioactive substance.

ra″di-o-trans-par′ent [*radius*; L. *trans*, across; *parere*, to appear]. Permitting the passage of radiations; used notably in connection with x-rays. The opposite of radiopaque.

ra″di-o-ul′nar [L. *radius*, exterior bone of the forearm; *ulna*, arm]. Pertaining to the radius and ulna.

ra′di-um [L. *radius*, ray]. Ra = 226.05. A highly radioactive metallic element. Discovered in 1898 by Pierre and Marie Curie, who separated it from pitchblende by a tedious process. The chloride or bromide of radium is usually used. Radium salts emit continuously heat, light, and three other distinct kinds of radiation (alpha particles, beta particles, and gamma rays).

ra′di-um can′non. In *radiology*, a tube resembling a gun barrel, allowing radiation only in a straight line; used in deep therapy.

ra′di-um-F. Ra-F. Polonium.

ra″di-um-i-za′tion [*radius*]. Exposure to radium rays.

ra′di-us [L., exterior bone of the forearm]. The outer of the two bones of the forearm. See Table of Bones in the Appendix. See Plate 1.

r. fixus. A line drawn from the hormion to the inion.

ra′dix (pl. *radices*) [L., root]. A root. For special terms, see under *root*. Abbreviated, rad.

r. arcus vertebrae. A root or pedicle of the vertebral arch.

radolatum. Trade-mark for an ultraviolet-irradiated liquid petrolatum used as a bactericide.

ra′don [L. *radius*, ray]. Rn = 222. A decay product of radium; a colorless, gaseous, radioactive element. Also called *radium emanation*.

ra′don seed. A small capillary tube, of glass, containing radon, suitable for implantation in tissues; the tube may be placed inside a small gold or platinum tube.

raf″fin-ase. An enzyme which hydrolyzes raffinose with the splitting-off of fructose. Probably identical with saccharase.

raf′fin-ose. $C_{18}H_{32}O_{16}.5H_2O$. A trisaccharide found in sugar beets, cottonseed meal, and molasses. On hydrolysis, it yields glucose, fructose, and galactose.

ra′fle (ray′ful, rah′ful) [F.]. An eruptive pustular disease of cattle in northern France.

rag′pick″er′s dis-ease′. Anthrax occurring in ragpickers.

rag′weed″ [AS. *ragu*; weed]. Any of several species of the genus *Ambrosia*; its pollen is the most important allergen in the central and eastern United States. Its pollinating period is from the middle of August to the time of frost.

Rail″li-e-ti′na (rye″lee-i-tye′nuh, -tee′nuh). A genus of tapeworms.

R. celebensis. A species of tapeworm; infestations of man reported in Tokyo and in Formosa.

R. madagascariensis. A species which infests man.

R. quitensis. A species which infests man; reported from Ecuador.

rail′way″ fe′ver. See *shipping fever*.

rail′way″ sick′ness. Car sickness; a form of motion sickness occurring as a result of the movement of a train. See *airsickness*.

rail′way″ spine. See under *spine*.

rale (rahl) [F.]. An abnormal sound arising within the lungs or air passages and heard on auscultation over the chest. There is no agreement among authorities concerning a classification of these sounds. A very large number of descriptive terms have been used in the past, many of these based on fanciful considerations of the physical conditions held responsible for their production. The modern tendency is to discard most of the qualifying adjectives formerly used and to characterize rales by such simple and self-explanatory terms as coarse, medium (moderately coarse), and fine. The adjectives moist and dry are also widely used, but in a descriptive sense only. They are not intended to imply that the sound has originated in a moist or dry physical environment. Some authors hold that all rales originate in the presence of abnormal moisture. No type of rale is pathognomonic of a specific disease, such as pneumonia, tuberculosis, bronchiectasis, etc., or of a physical condition such as pulmonary cavity or consolidation. There is fairly general, though not complete, agreement regarding the significance of the following terms.

amphoric r. Coarse, tinkling sounds accompanying bronchiectasis and lung cavitation, caused by fluid splashing in a cavity which connects with a bronchus.

atelectatic r. See *crepitant r.*

cavernous r. A hollow metallic sound accompanying far-advanced tuberculosis, caused by the expansion and contraction of a pulmonary cavity during respiration.

clicking r. A weak, sticky sound heard during

inspiration, accompanying the early stages of pulmonary tuberculosis, and caused by air passing through soft material in the smaller bronchi.

consonating A moderately coarse rale which sounds unusually loud and close to the ear, as though it were reinforced by transmission through the area of consolidated lung with which it is usually associated.

crepitant r A fine, dry crackling sound, simulated by the rubbing together of hairs, or by the sprinkling of salt on a hot stove; often heard as a transient phenomenon around the inferior margins of normal lungs during the first few forced inspirations.

Hirtz' r A moist, metallic sound accompanying tuberculous softening.

latent r See post-tussive.

marginal See crepitant.

mucous A sound similar to one heard when blowing through a pipe into soapy water heard in patients with emphysema, and caused by viscid bubbles bursting in the bronchial tubes.

post-tussive That form not heard during either natural or forced breathing, but elicited only by the use of a short cough delivered at the end of a forced expiration.

rhonchus An extremely coarse type of rale which originates only in the larger air passages and sets up vibrations which usually can be palpated on the surface of the chest in addition to being heard with a stethoscope.

sibilant A dry high-pitched, hissing or whistling sound heard most often in cases of bronchiolar spasm.

sonorous A dry low-pitched, resonant, snoring sound heard most often in cases of bronchiolar spasm.

subcrepitant A crackling sound similar to crepitant rale, but coarser and lower pitched.

vesicular Crepitant rale.

R. A. M. C. Royal Army Medical Corps.

ram-e-nin. An antibiotic produced by the fungus *Streptomyces ramosus*; a yellow viscous oil.

ra·mi (ray'migh) Plural of ramus.

ram"i-fi-ca'tion [L. *ramus*, branch; *facere*, to make]. 1 The act or state of branching. 2 A branch.

ram'i·fy (ram'i-figh) [*ramus*; *facere*]. Form branches; branch.

ram"i·sec'tion, ram"i·sec"tion [*ramus*; L. *sectio*, from *secare*, to cut]. Surgical division of the rami communicantes of the sympathetic nervous system.

ram"i·sec'to·my See ramisection.

Ramon, Gaston [French bacteriologist, 1885–]. Known for his quantitative in vitro test for the determination of the potency in flocculation units of diphtheria toxins and antitoxins called Ramon flocculation test. He is the discoverer of toxoids (1923).

Ramón y Cajal, Santiago [Spanish neurologist, 1852–1934]. Generally considered the greatest Spanish medical scientist, he was the founder of the Spanish school of neurologists, and a Nobel laureate with Golgi in 1906. In 1909 he published "Histologie du système nerveux," which is still the great classic in this field. Celebrated for his many innovations in staining nervous tissue. See *Cajal's silver methods* and *Cajal's gold-sublimate method*, under stain. Astrocytes are also called *Cajal's cells*.

Ramon-Zoeller's reaction. See under G. Zoeller.

ra·mose [L. *ramosus*, full of branches]. Having many branches; branching.

ra·mous [L. *ramus*, branch]. Having many branches; branching.

Ramsden, Jesse [English optician, 1735–1800]. Inventor of the Ramsden ocular.

Ramstedt, Conrad [German surgeon, 1867–]. Widely known for his work in developing the operation for relief of congenital pyloric stenosis, called *Ramstedt's operation*, *Fredet-Ramstedt operation*. See *pyloromyotomy*.

ram·u·lus (pl. *ramuli*) [L., little branch]. A small branch, or ramus.

ra'mus (pl. *rami*) [L.]. 1 A branch, especially of vein, artery, or nerve. 2 A slender process of bone projecting like a branch or twig from a large bone, as the ramus of the lower jaw or the superior or inferior ramus of the pubis. —**ramal**, *adj.*

conjoined r In the adult pelvis, the united inferior ramus of the pubis and ramus of the ischium.

gray communicans. A communicating branch of the sympathetic trunk connecting it with a peripheral nerve. Also called *postganglionic*.

anastomoticus. A branch of a nerve which communicates with a neighboring nerve or with a plexus. Also, a communicating artery between two neighboring arteries.

cardiacus. A cardiac branch of the vagus nerve.

caroticus. A branch of the glossopharyngeal nerve to the carotid sinus.

communicans. An anastomotic branch of a nerve applied especially to the white and gray rami communicantes.

r. descendens cervicis. A branch of the cervical plexus entering into the formation of the ansa hypoglossi.

descendens nervi hypoglossi. See *descendens hypoglossi*.

inferior ossis ischii. The bar of bone extending from the ischial tuberosity to the inferior ramus of the pubis. In some descriptions called *ramus of the ischium*.

r. inferior ossis pubis. The bar of bone extending from the symphyseal portion of the pubis to the ramus of the ischium.

r. mandibulae. The heavy flat sheet of bone extending upward from each extremity of the body of the mandible.

muscularis. Any unnamed branch of an artery to a muscle.

r. superior ossis ischii. The bar of bone extending upward from the ischial tuberosity toward the acetabulum. In some descriptions called *body of the ischium*.

superior ossis pubis. The bar of bone extending from the symphyseal portion of the pubis toward the acetabular portion.

white communicans. A communicating nerve connecting the sympathetic trunk with the dorsal and ventral roots of a spinal nerve. Also called *preganglionic*.

ran·cid [L. *rancidus*, stinking]. Having the characteristic odor and taste of fat which has undergone oxidative and/or hydrolytic decomposition.

ran·cid'i·ty [*rancidus*]. The state of being rancid.

Ran·di·a [NL., after Isaac Rand, English botanist of the eighteenth century]. A genus of shrubs of the Rubiaceae.

R. aculeata. A species of West India; its berry indigo plant. The juice of the fruit has been used as dye and astringent.

R. dumetorum. A species of India; the fruit has been used as a native fish poison. Has been used as an antispasmodic and emetic.

R. terniflora. A species of Bengal, of which the bark has been used in intermittent fever.

Randolph, Jacob [American surgeon, 1796–1848]. Said to have introduced litholapaxy in America (1831).

range [OF.] The difference between the lowest and the highest values in a series of observations.

ra'nine (ray'nyne, -nin) [L. *rana*, frog]. Pertaining to ranula or to the region in which ranula occurs.

Ranke, Hans Rudolph [*Dutch anatomist*, 1849-87]. Known for his description of an angle formed by line drawn from the midline of the maxillary alveolar process to the midpoint of the frontonasal suture, and the horizontal plane of the skull called *Ranke's angle*.

Ranke, Karl Ernst [*German physician*, 1870-1926]. Formulated hypothesis stating that tuberculosis exhibits three stages (1) primary lesion, usually the pulmonary focus, established ordinarily in childhood (2) subsequent generalization as result of sensitization, commonly followed by healing, occasionally by death from miliary tuberculosis and (3) localization or organ tuberculosis, the result of the development of chronic form. Called *Ranke's hypothesis*.

Rankin, Fred Wharton (1886-1954) American surgeon known for his contributions to abdominal surgery especially his abdominoperineal resection of the rectum for carcinoma, called *Rankin operation*.

Ransohoff, Joseph [*American surgeon*, 1853-1921]. A leader in surgery in his day. Described discission of the pulmonary pleura in treatment of chronic empyema called *Ransohoff operation*.

Ranson, Stephen Walter (1880-1942) American neuroanatomist, one of the foremost teachers of neurology in America, who studied amyelinated afferent fibers in peripheral nerves, pointed out their importance in the conduction of painful stimuli, and carried on important studies on the hypothalamus. See Ranson pyridine silver stain.

ran'u-la [L., little frog]. A retention cyst of salivary gland, situated beneath the tongue. —**ran'ular**, *adj.*

Ra-nun'cu-lus [L. crowfoot]. A genus of acrid herbs. Many species are both poisonous and irritating —**ranunculaceous**, *adj.*

Ranvier, Louis Antoine [*French histologist and pathologist*, 1835-1922]. Described regular local constrictions of myelinated nerve fibers of the peripheral nerves, called *nodes of Ranvier*. See also *Ranvier's gold chloride method* under *stain*.

Raoult, François Marie [*French physicist*, 1830-99]. Proposed law relating the freezing point of solution and the vapor pressure to molecular concentration called *Raoult's law*.

rape [L. *rapere*, to seize]. 1. *In legal medicine*, intimate sexual contact by male with female, not his wife, without her consent, by compulsion through violence, threats, stealth, or deceit. Laws vary as to whether contact with or penetration of the female genitalia is required to constitute rape. In some laws without consent means psychologically or physically incapable of resisting the male. Also called *rape of the first degree*. 2. *In veterinary medicine*, the forcible sexual intercourse of the male while the female is not in heat.

statutory r. The violation of female under the age of consent as fixed in the state or country in which the attack occurs. Also called *rape of the second degree*.

rape oil. The semidrying oil from the seeds of *Brassica campestris*, *B. napus*, and other species. Used as food and for industrial purposes. Syn., *colza oil*.

ra-pha'ni-a [G. *rhaphanos*, radish]. A disease characterized by spasms of the limbs. Has been attributed to poisonous principle in the seeds of the wild radish, which become mixed with grain. *Obs.*

raph'a-nin. $C_{17}H_{26}N_2O_3S_3$ or $C_{17}H_{26}N_2O_4S_4$; liquid antibiotic principle obtained from the seeds of the radish, *Raphanus sativus*, freely soluble in water and active, in vitro, against several species of bacteria.

ra'phe (ray'fee) [G. *rhaphē*, seam]. A seam or ridge, especially one indicating the line of junction of two symmetrical halves.

amniotic r. The point of fusion of the amniotic folds over the embryo in sauropsidans and certain mammals.

buccal r. The scarlike vestige of the union of the parts of the cheek derived respectively from the maxillary and mandibular processes.

horizontal r. of the eye. That portion of the meridian of the eye at which the area of nerve fibers from the upper and lower temporal quadrants meet functionally sharp line in certain optic nerve fiber lesions. Also called *median*.

palatine r. The narrow ridge of mucosa in the median line of the palate.

perineal r. The ridge of skin in the median line of the perineum.

r. exterior. The stria longitudinalis medialis.

r. inferior corporis callosi. The raphe on the inferior surface of the corpus callosum.

r. of the ampulla. The longitudinal ridge on the roof of the ampulla of the semicircular canal.

r. of the penis. A continuation of the raphe of the scrotum upon the penis.

r. of the pharynx. A fibrous band in the median line of the posterior wall of the pharynx.

r. of the pons. The intersection of the fibers at the midline as seen in transection.

r. of the scrotum. A median ridge dividing the scrotum into two lateral halves. It is continuous posteriorly with the raphe of the perineum, anteriorly with the raphe of the penis.

r. of the tongue. A median furrow on the dorsal surface of the tongue corresponding to the fibrous septum which divides it into symmetrical halves.

r. palati duri. See palatine r.

r. postoblongata. The posterior median fissure of the medulla oblongata.

r. superior corporis callosi. The longitudinal raphe in the middle of the superior surface of the corpus callosum.

Stilling's r. A narrow band connecting the pyramids of the medulla oblongata.

rap'tus [L. from *rapere*, to seize]. Any sudden attack or seizure. rape. *Obs.*

r. haemorrhagicus. A sudden hemorrhage. *Obs.*

r. maniacus. Transient frenzy. *Obs.*

r. melancholicus. Sudden and vehement melancholy. *Obs.*

r. nervorum. Cramp or spasm. *Obs.*

rar"e-fac'tion (rair"i-fack'shun, rar"-fack'shun) [L. *rarefactum*, from *rarefacere*, to make thin]. The act of rarefying or of decreasing the density of substance, especially the air.

r. of bone. The process of rendering bone more radiolucent by decrease in the mineral content.

rar'e-fy (rair'i-figh, rar'i-figh) [*rarefacere*]. Make less dense or more porous.

rar'i-tas [L., rarity]. Rarity.

r. dentium. Fewness of teeth; less than the usual number of teeth, with or without interspaces between them.

ra-sce'ta (ra-see'tuh). Old term for the transverse lines or creases on the palmar surface of the wrist.

Rasch, Hermann [*German obstetrician*, 1873-]. Described sign of early pregnancy in which fluctuation of the amniotic fluid is obtained as in ballottement; called *Rasch's sign*.

rash [OF. *rasche*, from L. *radere*, to scrape]. A lay term used for nearly any skin eruption but more commonly for acute inflammatory dermatoses.

brown-tail r A common form of caterpillar dermatitis caused by the brown-tail moth, *Euproctis chrysorrhea.*
cable An eruption of acneform lesions caused by contact with chlorinated waxes used to coat electric cables. A type of chloracne.
canker Scarlet fever
caterpillar See caterpillar *dermatitis.*
diaper See *erythema* gluteale.
drug See *dermatitis* medicamentosa.
heat Miliaria.
nettle Urticaria.
serum A dermatosis coincident with serum sickness result of injection of antitoxin.
vaccination A rash which sometimes follows vaccination. It is usually transitory but sometimes assumes an eczematous or erythematous form.
wandering r Transitory benign plaques of the tongue.
wildfire See *miliaria.*

ra sion [L. *rasio*, from *radere*]. The scraping of drugs with file.

Rasmussen, Fritz Waldemar [*Danish physician* 1834–77]. Remembered for his description of tuberculous aneurysm of the terminal pulmonary arteries; also called Rasmussen aneurysm. This frequently results in rupture into tuberculous cavity and serious hemorrhage.

Rasori Giovanni [*Italian physician*, 1766–1837] Known for his theory of counter stimuli, substances which diminish excitability by producing an opposite effect from that of the stimulant; called *Rasorianism, doctrine of Rasori.* Advocated repeated bleeding, known as *Rasori' method, Rasorian method.*

Ra-so'ri-an (ray-sor ee-un) [Rasori]. Following the teachings of Rasori contrastimulant.

ra sor ite. A native hydrate of borax, $Na_2B_4O_7 \cdot 4H_2O$; an important source of this chemical.

ras pa-to ry [ML. *raspatorium*]. A rasp or file for trimming rough surfaces or margins of bone or for removing the periosteum.

rasp'ber"ry The fruit of *Rubus idaeus,* plant of the Rosaceae. A syrup is used as vehicle and as drink in fevers.

rat [AS. *raet*]. A rodent which lives in close proximity to man, in homes, barns, wharves, ships, garbage d mps, etc. Rats are notorious disease carriers, harboring many varieties of intestinal parasites and being responsible especially for the transmission of bubonic plague, as well as distinct septic disease, rat-bite fever

rat ny *ra tan'hi-a,* See *krameria.*

rat-bite fe ver See rat-bite *fever*

rate [L. *ratum*, from *reri*, to calculate]. Measurement against standard.
basal metabolic The amount of energy expended per unit of time under basal conditions, usually expressed as large calories per square meter of body surface (or kilograms of body weight) per hour
case fatality The number of deaths from specific disease per 100 persons suffering from the same disease
cerebral metabolic r The rate at which oxygen is consumed in the brain, calculated by multiplying the rate of cerebral blood flow by the difference in oxygen content between the arterial blood and the blood in the jugular vein.
decay *I radiobiology* the rate of decay of a radioactive substance, usually expressed as disintegrations per gram per unit time.
disintegration See decay
dose *I radiology,* the amount of radiation administered per unit time. Syn dosage
infant mortality The number of deaths reported among infants under one year of age in calendar year per 1000 live births reported in the same year and place.
maternal mortality The number of deaths reported as due to puerperal causes in calendar year per 1000 live births reported in the same year and place.
morbidity The number of cases of disease per year for certain number of the population
pregnancy The number of pregnancies actually xperienced in relation to the number of ova that theoretically might have been fertilized.
prevalence The umber of cases of disease occurring per unit of population at any given time
pulse The number of pulsations of an artery per minute.
reproduction The number of total births t women of reproductive age (15 to 49 years) divided by the number of women of the same age in the population.
sedimentation r The rate at which red cells settle out of citrated blood; the rate is somewhat more rapid in females than in males. Increases in sedimentation rate occur during menstruation, pregnancy and in number of pathologic states. ESR is the abbreviation for erythrocyte sedimentation rate.

Rathke, Martin Heinrich (1793–1860) German anatomist known for his early description of the pituitary gland. He described persistent part of paramesonephric duct opening into the prostatic utricle, called *Rathke' duct* The cystic form of craniopharyngioma is called *Rathke' pouch.*

rat'in [AS. *raet*]. A preparation of bacteria of the genus *Salmonella,* used in food-poisoning outbreaks to destroy the rat population (which may act as vectors) by starting an epidemi disease in rats. However the use of such preparations may be dangerous, for some of the rats may survive and become healthy carriers.

ra'tio [L.]. A proportion.
absorption A quantitative analysis by means of colorimeter The ratio between the amount of light-absorbing substance in solution and the coefficient of light extinction (the amount of light of specific wavelength bsorbed by 1% solution of substance in layer 1 cm. thick) in that solution.
albumin-globulin (A/G). The ratio of the albumin to the globulin concentration in blood serum. Normal value = 1.3–1.8. Values below 1.0 are said to be inverted nd are associated with various pathologic processes.
birth-death The number of births per 100 deaths reported in the same population during the same calendar year
body-weight Body weight in grams divided by height in centimeters.
cell-color The ratio between the percentage of erythrocytes in blood and the percentage of hemoglobin.
concentration r The ratio of the concentration of substance in the urine to its concentration in *the blood* or *blood serum.*
critical The ratio between an obtained difference and the standard error of that difference.
curative See therapeutic
differential absorption *I radiobiology,* the ratio of the concentration of radioactive substance in given organ or tissue to the concentration that would be obtained if the same amount of radioactive material were administered and uniformly distributed throughout the body
D:N r (*dextrose-nitrogen*). The ratio of the dextrose to the nitrogen in the urine. In the totally diabetic animal, the verage value is 3.65, which is

pproached in severe human diabetes. It is considered as measure of the conversion of protein to carbohydrate in the absence of carbohydrate intake.

G N r See D.N

human blood r In malarial investigations, the percentage of freshly fed mosquitoes which contain human blood.

innervation r The proportion of skeletal muscle fibers innervated by nerve fiber in motor unit.

I'so-phane r The proportion in which insulin and protamine combine in preparations containing both. See isophane insulin.

karyoplasmic See nucleocytoplasmic

ketogenic-antiketogenic The ratio between those substances in the diet which give rise to ketone bodies and those which prevent or minimize this process. It may be calculated from the formula:

$$\text{Ratio} = \frac{2.4P + 2.43F}{3.3P + 0.75F + 5.56G}$$

where P F and G represent respectively the grams of protein, fat, and glucose metabolized. Ketonuria occurs when the ratio exceeds *1.0* and becomes severe when the ratio exceeds 2.0.

M:E r Myeloid erythroid ratio.

Mendelian The approximate numerical relation between various types of progeny in crosses involving sharply contrasted characters that conform to Mendel law of heredity the typical ratios for the F generation are 3 1 for one pair of characters, 9:3:3 1 for two pairs.

monocyte-lymphocyte The ratio between monocytes and lymphocytes in the blood; has been used as diagnostic criterion in the study of tuberculosis.

myeloid erythroid The ratio of leukocytes of th granulocytic series to nucleated erythrocyte precursors in an aspirated sample of bone marrow The limits of normal are 0.6 1 to 2.7 1. I most anemias the ratio is below unity In severe infection or granulocytic leukemia the ratio may be markedly increased.

nucleocytoplasmic The ratio between the measured cross-sectional area or the estimated volume of the ucleus of cell to its cytoplasm.

nucleoplasmic r See ucleocytoplasmic

photosynthetic r The ratio of oxygen evolved to the carbon dioxide assimilated during the process of photosynthesis.

sex The relative number of males and females in the population, usually stated as the umber of males per 100 females.

therapeutic r The ratio of the therapeutically effective dose to the lethal dose per kilogram of body weight as determined on experime tal animals, usually expressed by dividing the effective dose by the lethal dose. The curative tio is corresponding fraction of the curative dose divided by the lethal dose. These ratios measure the margins of safety

ra'tion (rash un, ray'shun) [*ratio*] A daily allowance of food or drink In the armed services, the term usually means the complete subsistence for one man for one day

A See field

B The overseas hospital ration.

C An emergency ration of canned goods.

D An emergency ration of chocolate bars. *Obs.*

emergency One of concentrated foods of little bulk which can be carried when troops are separated from field kitchens.

field A complete ration corresponding t the garrison ration, and served to troops in wartime.

Filipino That formerly prescribed for Philippine scouts.

five-in-one A ration for five men for one day or one for five days.

garrison The peacetime ration with fixed monetary value based upon the cost of specified list of food items.

jungle A ration for use in tropical warfare.

K r A complete emergency ration for three meals put up in pocket size.

mountain r A ration for use in mountain warfare. See five-in-one

travel r A ration designed for troops separated from cooking facilities while traveling otherwise than by marching.

ra'tion al (rash un-ul) [L. *rationalis*, reasonable] 1. Based upon reason reasonable. 2. *I therapeutics*, opposed to empirical.

ra"tion al i za'tion [*rationalis*]. A mode of adjustment to difficult and unpleasant situations characterized by an attempt to justify or defend an unacceptable ttitude or trait, its mode of expression, or its consequences or sequelae by withholding, misrepresenting, or falsifying essential facts, by blaming an incidental cause, or by comparing oneself with others in such manner as to excuse oneself

rats'bane" [AS. *raet*; *bana*]. 1 Arsenic trioxide. 2 A name given to any rat poison containing arsenic.

rat'tle [M.E. *ratelen*, probably imitative]. A rale.

rat'tle-snake" [*ratelen*, AS. *snaca*] Any species of poisonous snake of the genera *Crotalus* and *Sistrurus*.

Rau, J hannes Jacobus [*Dutch anatomist*, 1668–1719]. Described the anterior process of the malleus see under *process*. Also called *Folian process*, *Ravian process*, *process of Rau*.

Rauber August Antinous [*German anatomist*, 1845–1917]. Remembered for his description of the most external of the three layers of cells which form the blastodisk of the embryo called *Rauber's layer* See also Ra ber's *cell*.

rausch'brand (roush'brahnt) See *blackleg*

Rau wol'fi a (raw-wol'fee-uh) [L., after Leonhard *Rauwolf*, German botanist, 16th century]. A genus of tropical trees and shrubs, mostly poisonous of the Apocynaceae family The dried root of *R. serpentina* has been used in India for centuries as purgative, anthelmintic, and antidote for snake and insect bites. It has recently been advocated as hypotensive agent and sedative It contains the alkaloids]maline,]malicine, and serpen]malicine, reserpine, serpentine, and serpentinine under certain climatic conditions it may also contain iso]maline, neo]maline, and other bases.

rau wol'fine (raw-wol'feen, -fin) An alkaloid sometimes called *ajmaline*, from *Rauwolfia serpentina*.

rau wols'cine. $C_{21}H_{26}N_2O_3$; an active principle of *Rauwolfia canescens*.

Raveton Hugues [*French military surgeon*, eighteenth century]. Described an external disarticulation of the hip through racket incision, called *Raveton amputation or method*.

Rawlinson, Christopher [*English physician*, eighteenth century]. Wrote an early report on probable case of perforating ulcer (1727).

Rawson, Arthur Joy [*American scientist*, 190-]. With W O. Abbott, developed double-barreled gastroenterostomy tube.

Ray Isaac [*American physician*, 1807–81]. Early student of the medicolegal implications of insanity Pioneer in legal medicine. Described moral insanity; known as *Ray' mania*.

ray [L. *radius*, ray]. 1 A beam of light or other radiant energy 2. A stream of discrete particles, such as alpha rays or beta rays. 3. Radial streak

of different color in an organ, as medullary rays of the kidney

actinic rays. See *chemical rays* under *ray*.

alpha rays. Positively charged helium nuclei emitted from radioactive substances.

astral rays. See *aster*

Becquerel rays. Rays emitted from uranium.

beta rays. Electrons with high velocities emitted from radioactive substances.

cathode r. The stream of electrons emanating from the cathode of a Crookes tube and passing in straight lines regardless of the anode. They are capable of deflection with a magnet, and produce fluorescence and heat wherever they impinge.

chemical rays. Solar rays that produce chemical change.

cortical rays. See *medullary rays* under *ray*.

cosmic r. A very penetrating radiation originating outside the earth's atmosphere, capable of producing ionization in passing through air or other matter. Primary cosmic rays probably consist of atomic nuclei, mainly protons, having energies up to 10^{14} electron volts; they are absorbed in the upper atmosphere. *Secondary cosmic rays* are produced when primary rays interact with nuclei and electrons in the earth's atmosphere; these consist mainly of mesons, protons, neutrons, electrons, and photons.

gamma r. Electromagnetic radiation emitted by the nucleus of an atom when it has excess energy; also called *photon*.

grenz rays. Electromagnetic radiations of about two angstrom units, useful in roentgen-ray therapy of the skin because of their limited power of penetration. They are on the borderline or limit of utilizable and chemically employable roentgen wavelengths.

hard rays. Roentgen rays from a tube operated on a high potential. They have short wavelengths and high penetrating powers. Also see *soft rays*.

Hertzian rays. Radiant energy having longer wavelengths than infrared, used for radio transmissions.

homocentric rays. Light rays that have a common focus or are parallel.

incident r. The ray of light which forms the angle of incidence.

infrared rays. Radiant heat with wavelengths between visible light and Hertzian waves.

infraroentgen rays. See *grenz rays* under *ray*.

Lenard rays. Cathode rays outside the vacuum tube secured by means of an aluminum window.

medullary rays. Raylike extensions of medullary substance of the kidney projected from the base of the medullary pyramid into the cortex; also called *cortical*.

Millikan rays. Cosmic rays, composed of high-energy photons and electrons.

monochromatic r. Radiation of a single sharply defined wavelength.

neutron r. A stream of neutrons obtained by bombardment in a cyclotron.

Niewenglowski's rays. Certain luminous rays emitted from phosphorescent substances which have been exposed to sunlight.

n-rays. Those named after the initial letter of the town Nancy; reportedly a form of ether waves discovered by Blondlot.

photographic rays. See *ultraviolet rays* under *ray*.

primary r. The roentgen ray as it emerges from the roentgen-ray tube.

rays of Sagnac. Secondary rays emanating from metal on which roentgen rays fall.

roentgen rays. The radiant energy of short wavelengths discovered by Röntgen, and named x-rays by him. A vacuum tube of glass (called a Geissler tube, Hittorf, a Crookes, or a Coolidge tube) is used with two wires sealed through the glass. These wires are connected with the two poles of a high-voltage generator and Röntgen found that the rays had peculiar penetrative powers through matter opaque to other ether rays, and that by means of these rays photographs (shadowgrams) may be taken of bones, metallic substances, etc., situated in the tissues; they readily traverse living tissues; they have no appreciable effect on the vitality of bacteria, but are effective in certain diseases.

scattered r. The roentgen ray which has been scattered by a reflecting collision from its original path.

secondary r. See *secondary electron*.

soft rays. Rays coming from a tube operated on relatively low voltage; they are readily absorbed. Also see *hard rays* under *ray*.

ultraviolet rays. Light waves too short to affect the retina. They can be reflected, refracted, and polarized; they will not traverse many bodies that are pervious to the rays of the visible spectrum; they produce photographic and photochemical effects, and destroy rapidly the vitality of bacteria.

uranium rays. See *Becquerel rays* under *ray*.

x-rays. See *roentgen rays* under *ray*.

Raybin, Harry W. [*American chemist*, contemporary]. Described a reaction for vitamin B. When dibromoquinone-chlorimide is added to borax solution, an orange color results. The color can be extracted with chloroform and its intensity measured; called *Raybin's reaction*.

Rayer, Pierre François Olive [*French dermatologist*, 1793–1867]. Described pituitary obesity (1823). Described xanthoma (1835); also called *Rayer's disease*. Made observations on glanders (1837).

ray-formecil. Trade-mark for a buffered aqueous solution of formic and silicic acids used intramuscularly in the treatment of arthritis and rheumatism.

Raygat's test. See hydrostatic *test*.

Rayleigh, John William Strutt, Baron (1842–1919). English physicist who discovered, with William Ramsay, the element argon (1894). He was a pioneer in physical optics and acoustics and devised a test for red-green colorblindness, called *Rayleigh test*. Nobel laureate (1904).

Raymond, Fulgence [*French neurologist*, 1844–1910]. Widely known in his time as the successor to Charcot in his clinic. Made many contributions to the knowledge of spinal sclerosis, pseudotabes, and psychasthenia. Described a type of apoplexy marked by premonitory hemiparesthesia, called *Raymond's type of paralysis*.

Raynaud, Maurice [*French physician*, 1834–81]. Famous for his description and observation (1862) of a syndrome of vascular spasm in digital arteries; see Raynaud's phenomenon, syndrome.

Rb Chemical symbol for rubidium.

RBC, Rbc Red blood cell.

RBE In *radiobiology*, relative biological effectiveness (*of radiation*).

R. C. P. Royal College of Physicians.

R. C. S. Royal College of Surgeons.

R. D. Reaction of degeneration.

rd Rutherford.

R. D. A. The right dorsoanterior position of the fetus.

R. D. P. The right dorsoposterior position of the fetus.

R. E. Right eye.

Re Chemical symbol for rhenium.

re-. A prefix signifying back or again.

re·ac·quired' [L. *re-*, again; *acquirere*, to acquire]. Acquired a second time.

re·ac'tion [*re-* + L. *actio*, from *agere*, to do]. 1. A response to stimulus. 2. In *chemistry*, the interaction of two or more chemical substances; or the result of a test of the hydrogen-ion concentration of a solution by means of an indicator classified as neutral, acid, or alkaline. For reactions not listed here, see under *test*, *method*, *reflex*, or the qualifying adjective; see also under the proper name.

abortin r. See brucellergen.

Adamkiewicz r. One given by a protein containing tryptophan, being a violet color produced at the *junction* of a *glacial acetic acid solution of the* protein superimposed on concentrated sulfuric acid. The reaction is attributed to the presence of glyoxylic acid in the acetic acid.

addition r. The direct union of two or more molecules to form a new molecule.

adjustment r. Transient situational personality disorder occurring in reaction to some significant person, *immediate situation*, or *internal* emotional conflict: in infancy frequently manifested by undue apathy or excitement and by feeding and sleeping difficulties; in childhood, by such habit disturbances as nail-biting, enuresis, thumb-sucking, or tantrums, by disturbance of social conduct as truancy or sexual offenses, or by neurotic traits, such as tics; in adolescence, frequently characterized by vacillations with reference to impulses and emotional tendencies. Adjustment reactions of middle or old age usually accentuate previous disturbances or precipitate latent disorders.

adult situational r. In *psychiatry*, transient situational personality disorder characterized by superficial maladjustment to a new or difficult environmental situation, and manifested by temporary anxiety, alcoholism, poor efficiency, or unconventional behavior.

affective r. In *psychiatry*, a disorder characterized by primary and severe disturbance of mood, with resultant and consonant mental and behavioral disturbances.

agglutination r. The clumping of cellular antigens, as bacteria, upon mixture with immune serum.

alarm r. The sum of all nonspecific phenomena elicited by sudden exposure to stimuli, which affect large portions of the body and to which the organism is quantitatively or qualitatively not adapted; the first stage of the general adaptation syndrome; a term introduced by Hans Selye.

allergic r. A reaction based on hypersensitivity to an antigen.

amphoteric r. The reaction of a compound as an acid or base depending upon the substrate.

anamnestic r. The prompt and efficient production of antibodies following the second injection of a specific antigen.

anaphylactic r. Antigen-antibody reaction in a hypersensitive host. See *anaphylaxis*.

anaphylactoid r. A reaction similar to anaphylaxis elicited by introduction into the host of a substance which has not been used to produce a hypersensitive state. The reaction is not so severe nor so generalized as true anaphylaxis.

antigen-antibody r. A combination of an antigen with its specific antibody.

antisocial r. In *psychiatry*, a sociopathic personality disorder characteristic of chronically antisocial individuals who are always in trouble, profiting neither from experience nor punishment and maintaining no real loyalties to any person, group, or code. They are frequently callous, hedonistic, emotionally immature, and irresponsible and exhibit a marked ability to rationalize their behavior so that it appears warranted and reasonable. This includes some individuals formerly classified as *psychopaths*.

anxiety r. In *psychiatry*, a psychoneurotic disorder characterized by diffuse anxious expectation not restricted to definite situations, persons, or objects, and frequently associated with somatic symptoms; formerly called *anxiety state*.

argentaffin r. Reduction of ammoniacal silver hydroxide by polyphenols, polyamines, and aminophenols.

arousal r. The electrical change from rhythms characteristic of the cerebral cortex of a sleeping or anesthetized animal to rhythms more nearly resembling those recorded during the waking condition, produced by stimulation of parts of the reticular activating system, and leading to signs of arousal in the animal.

Aschheim-Zondek r. Follicular growth and luteinization produced by substances in the urine of pregnant women, while the urine following oophorectomy and the menopause contains only the follicle growth-stimulating substance. Also see Aschheim-Zondek *test*.

axon r. See primary *degeneration*.

azo r. Conversion to an azo compound.

biuret r. One given by compounds which contain acid amide groups in close proximity, as by biuret (when formed from urea and certain of its derivatives), by certain proteins, etc. A red-violet to blue-violet color is produced on adding copper sulfate solution to an alkaline solution of the specimen.

Bloch's dopa r. See under *stain*.

brucellergen r. A skin reaction produced by the intradermal injection of *Brucella* antigen.

bufo r. A biologic pregnancy *test* when urine containing chorionic gonadotropic hormone from a pregnant woman is injected into a male toad, spermatozoa migrate from the testes to the urinary bladder and can be demonstrated in the toad urine.

cadaveric r. Total loss of electrical response in the affected muscles, as in the acute stage of familial periodic paralysis.

Cannizzaro r. A reaction of certain aldehydes when treated with a strong base, such that one molecule is oxidized to the corresponding acid while another is reduced to the corresponding alcohol.

carbylamine r. One for primary amines, in which a characteristic unpleasant odor of an isocyanide is evolved on heating the amine with chloroform and an alcohol solution of potassium hydroxide.

cholera red r. A nonspecific test for the cholera vibrio in which a pink color develops upon the addition of 8 drops of sulfuric acid to a 24-hour growth of the organism in 10 cc of peptone broth.

complement-fixation r. An antigen-antibody combination with complement. Also see *fixation* of complement, complement-fixation *test*.

conjunctival r. See conjunctival *test*.

consensual r. (a) A reaction which is independent of the will. (b) A crossed reflex.

constitutional r. An immediate or delayed reaction following the administration of an allergen and occurring at sites other than that of its administration (local reaction) and other than that of the original symptoms (focal reaction). Usually associated with local or focal reactions or both.

conversion r. In *psychiatry*, a psychoneurotic disorder in which the impulse arousing anxiety is converted into functional symptoms in organs or parts of the body, usually those under mainly

voluntary nervous control and thus different from psychophysiologic autonomic and visceral disorders. The symptoms seem to lessen felt anxiety and ordinarily are symbolic of the underlying mental conflict. Conversion reactions may include anesthesia (anosmia, blindness, or deafness) paralysis (paresis, aphonia, monoplegia, or hemiplegia) or dyskinesia (tic, tremor posturing, or catalepsy) Formerly classified as *conversion hysteria*.

cross A reaction between an antibody and an antigen which is closely related to but not identical with, the specific antigen.

cutaneous ( ) A specific allergic cutaneous reaction of the skin resulting from the application of specific antigen to the skin. If an irritative reaction can be eliminated, it demonstrates specific circulating antibodies. (b) When bacterial antigen is used for skin test, it will give positive reaction in 24 to 48 hours (tuberculin type) Also called *dermal*

decidual The reaction of tissues, especially the endometrium, to pregnancy; marked by the development of characteristic decidual cells from fibroblasts.

dehydroisoandrosterone color A test helpful in determining the presence of adrenal tumor

delayed An inflammatory lesion of the skin or other phenomenon occurring hours or days after contact between allergen or atopen and hypersensitive tissue cells. Such reaction may be either local at the site of contact or systemic or constitutional.

depressive r *I psychiatry*, psychoneurotic disorder in which the anxiety is partially relieved by depression and self-depreciation, frequently precipitated by an immediate and definite situation, such as the loss of person or object, and associated with guilt feelings. Syn., *reactive depression*

dermoplastic See *desmoplasia*.

diazo A color test using Ehrlich's diazo reagent See van den Bergh test.

Diels–Alder The condensation of 1,3-butadiene and similarly constituted dienes with variety of unsaturated aldehydes, ketones, esters, and quinones to give six-membered rings also called *diene reaction*.

dissociative *I psychiatry*, neurotic disorder leading to gross disorganization of the personality which may tak the form of depersonalization, dissociation, stupor fugue, amnesia, dream state, somnambulism, or of aimless running or freezing formerly classified as form of conversion hysteria.

distant A specific response to an allergen occurring at site remote from that of its introduction or application.

dopa (*for melanoblasts*) A reaction as olving 3,4-dihydroxyphenylalanine, which stains melanoblasts black when used under special conditions. See also Bloch method.

dyssocial *I psychiatry*, sociopathic personality disorder characteristic of individuals who manifest disregard for the usual social codes and who often come in conflict with them as the result of having lived all their lives in an abnormal moral environment. These deviations may be the result of adherence to the values and norms of their own predatory criminal, or other social group, toward which they exhibit strong loyalties.

arly A response becoming clinically manifest and reaching its maximum within several minutes after sensitive tissue is exposed to an excitant. It usually refers to wheal and flare reactions, to scratch or intracutaneous tests, or to an anaphylactic or anaphylactoid reaction. Syn., *immediate*

eczematoid See *eczematoid reaction*.

epiblastotropic One affecting the ectoderm. That reaction in yaws which produces lesions in the epidermis, as differentiated from *panblastotropic*, affecting three embryonic layers, which occurs in syphilis.

false-negative An erroneous or deceptive negative reaction.

false-positive An erroneous or deceptive positive reaction.

Feulgen A reaction specific for aldehydes based on formation of purple-colored compound when aldehydes react with fuchsin-sulfuric acid. Desoxyribonucleic acid, but not ribonucleic acid, gives this reaction after the removal of its purine bases by acid hydrolysis.

first-order See unimolecular

focal A response (exacerbation or recurrence) t the site of an active, quiescent, or healed lesion distant from the place of introduction or the point of origin of the exciting agent.

galvanic skin ( ) The psychogalvanic reflex. See under *reflex*. (b) A local galvanic skin reaction t moderately intense mechanical, thermal, electrical, or chemical stimuli, occurring in the area of stimulation as well as surrounding area, due to the development of a current within the tissues. It is independent of the psychogalvanic reflex, which may be superimposed.

Georgi–Sachs See Georgi-Sachs *test*.

gross stress *I psychiatry*, transient personality disorder in which, under conditions of great or unusual stress, normal personality utilizes neurotic mechanisms to deal with overwhelming danger differing from neurosis and psychosis with respect to *clinical history* reversibility of reaction, and transient character The stress, either physical or emotional, may occur in combat or civilian catastrophe.

Hanke and Koessler's p-diazobenzenesulfonic acid reactions. Reactions used for the detection and quantitative determination of histidine, histamine, and other imidazoles (giving pink color) phenol, o- and m-cresol (yellow color) p-cresol, p-hydroxyphenylpropionic, p-hydroxy-phenylacetic, and p-hydroxyphenyllactic acids (red color) and tyrosine and tyramine (bluish red on adding hydroxylamine)

Hopkins–Cole See glyoxylic acid *test*.

id See *-id*.

immediate Early

immune A reaction which demonstrates the presence of an antibody

indo A reaction based on formation of green or blue indamine when phenol or an aromatic monoamine acts on an aromatic paradiamine.

indophenin A reaction, shown by indole and other five-membered heterocyclic compounds, based on employment of isatin and sulfuric acid to give reddish-violet color

infusion An acute febrile response to the infusion of pyrogenic agents present as contaminants in parenteral fluids.

interplasmic reactions. Reactions taking place in interspaces between the protoplasmic micelles or molecules of cytoplasm.

inverse of drugs. *I homeopathy*, the effect of *similimum*, i.e., of drug which restores to normal in the ill the set of symptoms and signs it produces in healthy persons.

involutional psychotic A psychotic reaction occurring in the involutional period, usually in individuals of compulsive personality without previous disability due to manic-depressive reac-

tion, characterized most commonly by depression and sometimes by paranoid ideas. It tends to be prolonged; there are excessive worry, intractable insomnia, guilt, anxiety, agitation, delusional ideas, and somatic concerns.

isomorphous provocative The appearance of cutaneous lesions at sites of trauma, originally observed in psoriasis, now applied equally to diseases such as lichen planus, atopic dermatitis, necrobiosis lipoidica. Described by Heinrich Koebner. Syn., *isomorphous irritation effect, Koebner's phenomenon.*

isotope exchange See under *isotope.*

Ito-Reenstierna r. See under *test.*

Jaffé See Jaffé *test.*

Jarisch-Herxheimer An acute systemic reaction following initial dose of a therapeutic agent, characterized by fever, chill, and malaise, with exacerbations of the clinical signs of the infection being treated, most commonly seen in the treatment of syphilis; thought to be due to rapid release of large amounts of the antigen.

Johnin A diagnostic skin test for paratuberculosis in cattle.

Kober The property of estrogenic steroids to develop a pink color with phenol in sulfuric acid, which permits their quantitative assay.

Lepra r. An acute inflammatory phase of leprosy, possibly a manifestation of hypersensitivity, sometimes ascribed to overtreatment.

lengthening Sudden inhibition of the stretch reflex when extensor muscles are subjected to an excessive degree of stretching by forceful flexion of a limb. Also see stretch *reflex.*

leukemoid See *leukemoid reaction.*

Liebermann Proteins containing tryptophane give a violet or bluish color in the presence of hydrochloric acid if the protein has been previously treated with alcohol and ether.

local The phenomena or lesions occurring at the site of application of an exciting agent.

local static r. A postural reflex in which only one part of the body, such as a limb, is involved.

Loeb's decidual See Leo *Loeb.*

Lohmann The transference of a phosphate radical from adenosinetriphosphate (ATP) to creatine, or to adenosinediphosphate (ADP) from creatine phosphate.

longitudinal Distal displacement of cutaneous points for electric stimulation of muscles due to degeneration of motor neurons.

Lücke ... **for hippuric acid.** Nitrobenzene is formed upon the addition of concentrated nitric acid to hippuric acid.

Machado-Guerreiro A complement-fixation test which employs antigen from cultures of *Trypanosoma cruzi* and usually is not positive before the thirtieth day for Chagas' disease and kala-azar.

magnet Reflex extension of the leg initiated by pressure of the foot against a surface.

Mandelbaum's See *filamentation.*

manic-depressive One of a group of psychotic reactions, fundamentally marked by severe mood swings and a tendency to remission and recurrence. Illusions, delusions, and hallucinations are often associated with the change of affect. The manic type of this reaction is characterized by elation or irritability, overtalkativeness, flight of ideas, and increased motor activity; the depressive type exhibits outstanding depression of mood, mental and motor retardation, and inhibition. Marked mixture of these phases is the mixed type; continuous alternation of phases is the circular type.

Mantoux See Mantoux *test.*

M... nodal r. See Mantoux *test.*

Millon r. See Millon *reagent.*

Mitsuda r. Lepromin test.

monomolecular See unimolecular.

Moro's r. See Moro *reflex,* Moro *test.*

myasthenic r. That in which the normal tetanic contraction of a muscle under direct current stimulation becomes less intense and of shorter duration with every consecutive stimulus and finally ceases, the muscle being exhausted.

myeloid r. See *myeloid reaction.*

myotonic r. Increase in irritability seen in the myotonias.

Naegeli See Naegeli *test.*

Nagler's The opalescence produced in human serum when alpha toxin of *Clostridium welchii* is added, due to the splitting of free lecithin into phosphocholine and a diglyceride.

α-naphthol See Molisch *test* (a).

nasal mucosa Chemical reactions in the nasal mucosa. Normally the pH value of the nasal mucosa is on the acid side; in disease it may change toward the alkaline side.

neutralization r. The loss of poisonous properties of a toxin upon mixture with its corresponding antitoxin. Also see *neutralization.*

neutral r. That occurring at pH 7.

Nickerson-Kveim r. See under *test.*

ninhydrin r. A reaction given by all proteins and typical amino acids and by all compounds containing at least one free amino group and one free carboxyl group. A positive result is a blue color which develops on boiling. The color is intensified by the presence of pyridine. Proline and hydroxyproline do not give the test and histidine after some delay develops a red color. The reaction is highly sensitive.

Nissl See primary *degeneration.*

nitro r. A reaction which differentiates between indoles and pyrroles, based on treatment with equal parts of sulfuric and nitric acids. Benzene ring compounds including indoles give a yellow color; pyrroles remain colorless.

nitrosamine A reaction in which the imino groups of indoles and pyrroles are changed by nitrous acid to nitrosamine which, on addition of Liebermann reagent, results in a green color.

nuclear A process in which an atomic nucleus reacts with another nucleus, an elementary particle, or a photon to produce one or more other nuclei and possibly neutrons or photons.

obsessive compulsive A psychoneurotic disorder in which anxiety relates to unwanted thoughts and repetitive impulses to perform acts against which the individual usually fights and which he may consider abnormal, inappropriate, or absurd, but which he cannot control and by which he is dominated. The acts often become organized into rituals, and include such forms as touching, counting, hand-washing, and excessive neatness.

ophthalmic r. See conjunctival *test.*

oxidation-reduction A chemical reaction in which an ion loses electrons and another ion gains an equal number of electrons.

panblastotropic One which affects three embryonic layers, as in syphilis.

papulosquamous A skin reaction characterized clinically by discrete lesions, scaling, and, usually, erythema, and microscopically acanthosis and parakeratosis, seen most commonly in psoriasis, pityriasis rosea, early syphilis, and lichen planus; often called the erythematosquamous disease.

paradoxical pupillary Dilatation of the pupil by epinephrine following removal of the superior cervical ganglion.

paranoid reactions. Psychotic reactions in which the patients exhibit persistent delusions, usually of persecution or grandeur but ordinarily do not have hallucinations. Affective responses and behavior are consistent with the delusional thinking. It should be differentiated from the paranoid type of *schizophrenic reaction.*

peroxidase Any reaction indicating the presence of peroxidase in the cytoplasm of cells; usually the enzyme oxidizes the reagent to deeply colored precipitate manifested as granulations.

Pfaundler's r See thread

phloroglucinol-hydrochloric acid Bial' test for pentoses. See under *test.*

phobic A psychoneurotic disorder in which the patient's anxiety is fixed to some symbolic idea, object, or situation, so that the anxiety may be controlled by avoiding the feared object or situation. The subject may be unconscious of the origin of the anxiety Formerly called *phobia*, inclusive of some forms of anxiety hysteria. Ex ample *syphilophobia* as *defense* against th anxiety caused by sexual temptation.

photonuclear A nuclear reaction induced by photon.

photosynthetic r In general, the synthesis of chemical compounds effected by means of radiant energy especially light in particular the synthesis of carbohydrate and related substances from carbon dioxide and water in tissues containing chlorophyll.

Porges-Pollatschek A test for pregnancy in which an intracutaneous injection of posterior pituitary secretion causes red area to ppear about the injection site if the woman is not pregnant; in pregnant woman no reaction is observed.

Prausnitz-Küstner A reaction of local hyper sensitivity produced by intradermal injection of blood serum from hypersensitive person; method of passive transfer of hypersensitivity The reaction forms the basis of the passive transfer *test.*

precipitin The precipitation of soluble antigen upon mixture with the specific immune serum.

pregnant! moccasin venom An intradermal reaction employing moccasin venom as test substance. A positive test indicates purpuric state, usually associated with thrombocytopenia. Also used for prognosis; positive which becomes negative is favorable.

pseudolepra A mild lepra reaction in which there are cutaneous hypersensitivity responses, but the patient's general condition is not affected. The skin lesions may resemble histologically both the tuberculoid and lepromatous forms of leprosy

psychosomati See *somatization.*

psychotic depressive An affective reaction in which the patient is severely depressed and manifests evidence of grossly misinterpreting reality with occasional hallucinations and delusions. It differs from the depressive type of the manic-depressive reactions by absence of previous history of depressions or cyclothymia, and the frequent incidence of situational precipitating factors.

quellung Swelling of the capsule of bacterium when in contact with its antigen.

of degeneration. The reaction of degenerated muscle to direct current in which the anodal closing contraction becomes first equal to the cathodal closing contraction and, later greater than it Abbreviated, R. D.

velocity Velocity directly proportional to the active masses of reactants (raised to the power equal to the umber of molecules of reactant) present at time, *t.*

recurrent Reappearance or exacerbation of local reaction.

Reinhold and Shiels See Reinhold and Shiels *method.*

Rh The result of Rh testing; namely either Rh positive or Rh negative.

Romieu A test for tryptophan in proteins. Fixed tissue is treated with drop of phosphoric acid to give red or violet color

Sakaguchi A reaction, shown by arginine, based on its action on alphanaphthol and hypobromite or hypochlorite, to give an orange-red color

Schardinger The reaction demonstrates the presence of oxidase in milk by anaerobic oxidation in the presence of hydrogen acceptor (methylene blue)

schizophrenic See *schizophrenic reaction.*

Schoenheimer and Sperry's See Schoenheimer and Sperry *method.*

Schultz-Dale See Schultz-Dale *test.*

scratch See scratch *test.*

scrotal Inflammation of the scrotum and tunica vaginalis in male guinea pigs, due to infection with spotted fever rickettsiae. Necrosis of the skin frequently occurs.

semicarbazide A reaction used for detection of aldehydes and ketones based on conversion of semicarbazide to semicarbazones which is yellow compound.

shortening Reflex contraction of extensor muscles when flexed limb is extended by some external agent, acting to maintain the joints of the limb under certain degree of tension.

Shwartzman r See under *phenomenon.*

skin Exposure of the skin to an excitant. Typical examples are (a) the scratch test, (b) the intracutaneous test, and (c) the patch test.

Solera (*for thiocyanate in saliva*) This test depends upon the liberation of iodine through the action of thiocyanate upon iodic acid.

somatization reactions. See *psychophysiologic autonomic and visceral disorders.*

specific r In allergy phenomena produced by an agent which is identical with or immunologically related to one that previously produced alteration in capacity to react.

Straus Painful swelling of the testes of rat two days after the intraperitoneal injection of *Pfeifferella whitmori*, the causative organism of melioidosis.

symptomatic r A reaction following testing or therapeutic injection of an allergen or atopen and characterized by the occurrence or reproduction of the original symptoms under investigation or treatment.

systemic r A reaction involving the entire body; usually reaction against an injurious agent.

T kata A reaction to show the presence of neurosyphilis.

thalleioquin r A characteristic green color is produced when quinine is treated with solution of bromine or chlorine followed by ammonia. Addition of acid causes blue, then red color

therapeutic See therapeutic *test.*

thread The formation of long chains of bacillary forms of bacteria when grown in immune serum after agglutination. Syn., *Mandelbaum Pfaundler'*

thrombocytobarin See adhesion *phenomenon.*

toxin-antitoxin r See neutralization

transfusion The complex of sympton ing from transfusion of incompatible

consequent intravenous agglutination of red blood cells and hemolysis of the agglutinated cells.

tuberculin r A localized inflammation of tissues when subjected to contact with tuberculin. It consists usually of hyperemia and induration. In severe reactions, known as the Koch phenomenon, necrosis and sloughing occur. A positive tuberculin reaction indicates that the body has been sensitized by the presence of tubercle bacilli.

tunica Enlargement of the scrotum of male guinea pigs, with reddening of the scrotal skin and adhesions between testes and tunica vaginalis, due to infection with epidemic or murine typhus.

unimolecular r A reaction in which only one *molecule is concerned, such as the decomposition* of N_2O. Also called *monomolecular*, *first-order*.

van den Bergh r See van den Bergh *test*.

vestibular The response of the labyrinth to sound vibrations.

Voges-Proskauer One used to detect the presence of acetylmethylcarbinol in bacterial cultures.

Voisenet Rhode Tryptophan gives color reactions in the presence of aromatic aldehydes. With p-dimethylaminobenzaldehyde in sulfuric acid it gives red-violet color.

von Pirquet See von Pirquet *test*.

Weidel (*for xanthine*) A small amount of the substance to be tested is brought into solution in bromine water. It is evaporated to dryness, and ammonia fumes are allowed to come into contact with the dry residue. The presence of xanthine is shown by development of red color.

W II-F II The agglutination of certain strains of *Proteus vulgaris* (OX 19, OX 2, OX 1C) by the serums of patients with certain rickettsial infections, probably due to the presence of similar antigens in both *Proteus* and *Rickettsia*.

Wernicke hemianopic pupillary See Wernicke *sign*.

wheal The occurrence of a wheal at the site of cutaneous test.

Wilkinson and Peters benzidine peroxidase To 10 ml of the milk to be tested add 2 ml. of a 4% alcoholic solution of benzidine, sufficient acetic acid to coagulate the milk, and finally 2 ml of 3% solution of hydrogen peroxidase. Raw milk yields an immediate blue color.

xanthoprotein A test for proteins based on treatment with concentrated nitric acid. The yellow color which develops changes to deep orange on alkalization with ammonia.

Zimmermann A colorimetric procedure for the estimation of 17-ketosteroids. It involves treatment with m-dinitrobenzene and potassium hydroxide in an alcoholic solution.

re ac'tion for ma tion. In *psychoanalysis*, the development of conscious, socially acceptable activity which is the antithesis of repressed or rejected unconscious desires.

re-ac'tion time. The interval between the application of a stimulus and the beginning of the response.

re-ac'ti vate [re-; L. activus, active]. 1. To make active again, as by the addition of fresh normal serum containing complement to an immune serum which has lost its complement through age, heat, etc. 2. To restore complementary activity to a serum, deprived of one or several of its C' components, by the addition of these components.

re'ac ti-va'tion [re-; activus]. Rendering active again by the addition of complement or one or several of its components to a serum which has become inactive.

multiplicity The reactivation of bacteriophage inactivated by ultraviolet light, when such particles are adsorbed onto a single sensitive bacterial cell. It may also occur between two compatible pairs of viruses.

re a'gent [re-; L. agere, to do]. 1. Any substance involved in a chemical reaction. 2. A substance used for the detection or determination of another substance by chemical or microscopical means.

acid molybdate r A solution of 40 Gm. of sodium molybdate, 100 cc. of distilled water, 25 cc. of 85% phosphoric acid, 40 cc. of cool 75% sulfuric acid, and 20 cc. of 99% acetic acid used for the colorimetric estimation of cuprous oxide.

Almén's r Dissolve 5 Gm. of tannic acid in 240 ml. of 50% alcohol and add 10 ml. of 25% acetic acid; used for detection in urine of nucleoprotein, with which it produces a precipitate.

antimony trichloride See Planca.

arsenophosphotungstic A solution of sodium tungstate 100 Gm., arsenic acid 50 Gm., 25 cc. of 85% phosphoric acid, and 20 cc. of concentrated hydrochloric acid in distilled water to make 1000 cc. Used in the determination of blood uric acid.

Barfoed's A solution of 4.5 Gm. of crystallized copper acetate and 1.2 cc. of 50% acetic acid in 100 cc. of water used in the detection of monosaccharides.

Benedict' qualitative A solution containing 17.3 Gm. of crystallized copper sulfate, 173 Gm. of sodium or potassium citrate, 200 Gm. of crystallized sodium carbonate, and distilled water to make 1000 cc., used for qualitative urine sugar determination.

Benedict' quantitative r A solution containing 18 Gm. of copper sulfate, 200 Gm. of crystallized sodium carbonate, 200 Gm. of sodium or potassium citrate, 125 Gm. of potassium sulfocyanate, 5 cc. of 5% potassium ferrocyanide, and distilled water to make 1000 cc. used for the quantitative determination of urine sugar.

Benedict's uric acid A solution of 100 Gm. of sodium tungstate, 50 Gm. of pure arsenic acid, 25 cc. of 85% phosphoric acid, 20 cc. of concentrated hydrochloric acid, and 600 cc. of distilled water used in blood uric acid determination.

Benedict and Hitchcock' uric acid A solution of 9 Gm. of crystalline disodium hydrogen phosphate and 1 Gm. of sodium dihydrogen phosphate in 500 cc. of *hot* distilled water used in blood uric acid determination.

benzidine and nitroprusside Dissolve 100 mg. of benzidine in 0.5 cc. of glacial acetic acid. Add 20 cc. of distilled water. Dissolve 100 mg of sodium nitroprusside in 10 cc. of distilled water. Mix the two solutions and add 70 cc of distilled water: used in testing for the presence of hemoglobin in urine.

benzidine A mixture of equal parts of a saturated solution of benzidine and 3% hydrogen peroxide used in testing for occult blood.

Bial' A solution of 500 cc. of 30% hydrochloric acid, 25 drops of 10% ferric chloride solution, and 1 Gm. of orcinol, used in the detection of pentose.

biuret $C_2H_5O_2N_3 \cdot H_2O$. A condensation product of urea used as a reagent.

Boas A solution of 5 Gm. of resublimed resorcinol and 3 Gm. of cane sugar in 100 cc. of alcohol used in testing for free hydrochloric acid.

Castel A solution of 0.25 Gm. brucine sulfate, 2–3 drops concentrated sulfuric acid, 5 Gm. potassium iodide in 100 ml. of distilled water used for localization of bismuth.

diazo See Ehrlich diazo.

Ehrlich diazo Solution A contains 0.5 Gm. of sodium nitrite and 100 cc. of water. Solution B contains 1 Gm. of sulfanilic acid, 10 cc. of concentrated hydrochloric acid, and 200 cc. of water. For use, mix one part of A with 100 parts of B.

Urine containing certain aromatic compounds produces pink color when added to the reagent.
Ehrlich's A solution containing 10 Gm. of para-dimethyl-amino-benzaldehyde 75 cc. of concentrated hydrochloric acid, and 75 cc. of water used in testing for urine urobilinogen, phenols, aryl amines, and heterocyclic compounds.
Esbach A solution of 1 Gm. of picric acid, 2 Gm. of citric acid, and distilled water to make 100 cc., used in the quantitative determination of urine albumin.
Exton quantitative A solution of 50 Gm. of sulfosalicylic acid, 10 Gm. of sodium sulfate, 25 cc. of 0.4% aqueous solution of bromphenol blue, and distilled water to make 100 cc., used in the quantitative determination of urine albumin.
Exton's A solution of 200 Gm. of sodium sulfate, 50 Gm. of sulfosalicylic acid, and distilled water to make 1000 cc., used to detect urine albumin.
Fehling's r Two solutions, one containing 34.64 Gm. of crystalline copper sulfate in 500 cc. of water the other containing 173 Gm. of Rochelle salt and 100 Gm. of potassium hydroxide in 500 cc. of water used as qualitative test for urine dextrose
Florence' r A solution of 2.54 Gm. of iodine, 1.65 Gm. of potassium iodide, and 30 cc. of distilled water used to test for semen.
Folin's 1. A solution of 100 Gm. of sodium tungstate and 80 cc. of 85% orthophosphoric acid in 750 cc. of water used in blood-sugar determinations. 2. A mixture of 5 volumes of saturated picric acid and 1 volume of 10% sodium hydroxide used in creatinine determination.
Folin-Ciocalteu' A solution of 100 Gm. of sodium tungstate, 25 Gm. of sodium molybdate 50 cc. of 85% phosphoric acid, and 100 cc. of concentrated hydrochloric acid in 700 cc. of water used for blood alkaline phosphatase determination.
Fouchet's A solution of 25 Gm trichloracetic acid in 100 ml of distilled water to which is added 10 ml. of an aqueous solution of ferric chloride (10 Gm./100 ml) used in the Harrison spot test for bilirubin.
Frohde's A 0.1% solution of sodium molybdate in concentrated sulfuric acid used for the detection of alkaloids.
group A reagent hich identifies group of substances of similar chemical nature.
Günzberg' Dissolve 2 Gm of phloroglucinol and 1 Gm. of vanillin in 100 ml. of 95% alcohol.
Haines's A solution containing 2 Gm. of pure copper sulfate 16 cc of distilled water 16 cc. of pure glycerin, nd 150 cc of 5% potassium hydroxide used to test for urine sugar
Kober A mi ture of sulfuric acid and phenol (of betanaphthol) used for the colorimetric determination of estrogens
Lieberman Concentrated sulfuric acid and 5% phenol used in nitrosamine reaction.
Lehmann Add 25 ml of concentrated nitric acid t 100 Gm of mercuric nitrate octahydrate, followed by 25 ml. of water Warm to dissolve.
Millon A solution of mercuric nitrate and nitrite in mixture of the corresponding acids prepared by dissolving metallic mercury in concentrated nitric acid On heating, it gives a red color with proteins containing the tyrosine group and with substances, other than proteins, contain in the hydroxy-phenyl group.
Morner' A solu ion of 1 cc of formalin, 55 cc. of concentrated sulfuric acid, and 45 cc. of distilled water ed to test for tyrosine
Nadi (naphthol, dimethyl) A mixture of *β*-naphthol with dimethyl-para-phenylene diamine, used as test for indophenol oxidase.
Nessler's An aqueous solution of 5% potassium iodide, 2.5% mercuric chloride, and 16% potassium hydroxide, used in testing for ammonia.
Nylander Digest 2 Gm. of bismuth subnitrate and 4 Gm. of Rochelle salt in 100 ml. of 10% solution of potassium hydroxide. Cool and filter
Obermeyer' A solution of 3 Gm. of ferric chloride in 1 liter of strong hydrochloric acid, used in testing for urine indican.
Pandy' A saturated solution of 10 Gm. of phenol crystals in 100 cc. of water used in testing for *spinal-fluid* protein.
Pauly diazo One used in paper chromatog raphy to demonstrate the presence of histidine and tyrosine.
Pincus A solution of antimony trichloride which gives blue color with most 17-ketosteroids, but not with dehydroisoandrosterone useful in the determination of excessive amounts of this steroid.
pyrogallate (alkaline) Prepare solution of potassium hydroxide by dissolving 160 Gm. in 130 ml. of water In 200 ml. of this solution dissolve 10 Gm. of pyrogallic acid.
Roberts A solution of one part of pure nitric acid to five parts of saturated solution of magnesium sulfate, used to test for urine albumin.
Schiff's A solution of 0.25 Gm. of acid fuchsin in 1000 cc. of water decolorized by sulfur dioxide used in testing for aldehydes the presence of which causes blue color
Schweitzer r T 10 parts of ammonium hydroxide (sp. gr 0.9) add three parts of distilled water T this mixture, add slight excess of copper carbonate, shake vigorously and allow to stand overnight. Siphon off the clear supernatant liquid.
silver iodate Ammoniacal silver iodate added to plasma to precipitate the silver chloride used in the determination of serum chlorides.
sodium cyanide-urea An aqueous solution of 1 part sodium cyanide and 4 parts urea used to determine blood uric acid, which, hen added to protein-free filtrate, produces blue color in the presence of uric acid
sodium cobaltinitrite A complex aqueous solution of cobaltous nitrate and sodium nitrite, used for the determination of potassium.
specific A reagent which identifies single chemical substance.
Stokes' A reagent containing 2 Gm. of ferrous sulfate, 3 Gm of tartaric acid, and 100 cc. of water ed in testing for blood.
Sulkowitch A solution containing 2 5 Gm. of oxalic acid, 2 5 Gm of ammonium oxalate, 5 cc. of glacial acetic acid, and water to make 150 cc., used to test for urine calcium.
Tanret Dissolve 1.35 Gm. of mercuric chloride in 25 ml of wate add to this solution 3.32 Gm. of potassium iodide dissolved in 25 ml. of water then make the total solution up to 60 ml. with distilled water and add 20 ml. of glacial acetic acid to the mixture.
Töpfer's A 0 5% solution of dimethylaminoazobenzene in 95% alcohol, most commonly used as an indicator to detect free hydrochloric acid in the gastric contents.
Tsuchiya's A reagent containing 1.5 Gm. of phosphotungstic acid, 95 cc. of 96% alcohol, and 5 cc. of concentrated hydrochloric acid, used to test for urine albumin.
uric acid r of Folin and Denis. An aqueous solution of sodium tungstate, phosphoric acid, and alcohol added to solution of lithium car

bonate and phosphoric acid, used in the determination of uric acid in the blood.

Winkler r Cuprous chloride 40 Gm., ammonium chloride 50 Gm., distilled water to 150 ml. Mix the solution with ammonium hydroxide (sp. gr 0 9) in the proportion of 3 1 for use.

zinc uranyl acetate An aqueous solutio containing uranyl acetat and zinc acetate (in the proportion of 1 part of the former to 3 parts of the latter) also acetic acid used in th determination of sodium. The sodium is precipitated as sodium zinc ranyl acetate.

re a gin [re-; ager]. 1 One of group of antibodies in serum characterized in part by interacting with allergens or topens (atopl reagin) and responsible for such manifestations of hypersensitivity in man as hay fever and asthma. 2. The antibodylike substance in serum and cerebrospinal fluid concerned with the flocculation of th alcohol-soluble lipids of normal tissue in the complement-fixation and flocculation reactions in syphilis.

re al' gar Arsenic disulfide, As_2S_2, pigment.

ream' er [cf ME. *remen*, to make room]. A surgical instrument used for gouging out holes or enlarging those already made, especially in bone operations.

re" m i na tion. The introduction of an amino group int compound from which an amino group had previously been removed.

re" am pu ta'tion [L. *re-* again *amputatio* from *amputare*, to cut way]. An amputation upon member on which the operation has already been performed.

re an'i mate [e- L. *animare*, to animate]. Revive; resuscitate restore to life, as a person apparently dead.

Réaumur René Antoine Ferchault de [*French physiologist*, 1683–1757] Renowned for his knowledge of natural history and his studies in gastric digestion. Made many contributions to knowledge of the insects. Best remembered for his thermometer (1731) called *Réaumur thermometer Réaumur' scale.* Isolated gastric juice (1752)

re bound' [OF *rebondir* to spring back]. In reflex activity sudden contraction of muscle following its relaxation associated with variety of forms of reflex activity. Seen most typically following the cessation of an inhibitory reflex.

re-cal" ci fi ca'tion (ree-kal si fi kay'shun) [L. *re-*, again *calx*, lime *facere*, to make]. The supposed restoration of lime salts to bone matrix.

re-cal'ci fied clot'ting time Th clotting time of decalcified blood or plasma upon the readdition of calcium ions also called *recalcification time.*

Récamier Joseph Claude Anthelme [*French gynecologist and obstetrician*, 1774–1852]. One of the first to study the spread of cancer he coined the ame metastasis (1829) Is said to have employed uterine curettage, called *Récamier's operation.* Developed vaginal speculum (1842) called *Récamier speculum.*

re ca pit u l 'tion [L. *re-* again; *capitulum*, chapter]. The summarizing of the main points of subject the repetition of the steps of process, as recapitulation theory

re-ceiv'er [L. *recipere*, to receive]. 1 The vessel receiving the products of distillation. 2. In an air pump, the jar in which the vacuum is produced.

rec"ep tac u lum (ree ep-tack'yoo-lum, ree sep-) [L.]. A receptacle small container

chyli. The saclike beginning of the thoracic duct opposite the last thoracic ertebra.

re-cep tive [L. *receptum*, from ecipere, to receive]. Having the quality of, or capacity for receiving.

re-cep tor [L. receiver from *recipere*]. 1 A peripheral nerve ending in the skin and special sense organ 2 A name given by Ehrlich to the atomic lateral chain or haptophorous group, which, existing each cell in addition to its nucleus, combines with intermediary bodies such as toxins, food molecules, and foreign substances. Also see side-chain theory.

deflation r Vagal nerve fibers which are stimulated by deflation of the lung and reflexly induce inspiration.

free r An antibody agglutinin, lysin, etc.

inflation See stretch

r of the first order One with single anchoring or haptophore group.

r of the second order One containing haptophore and a functional, fermentative, or zymophore group.

r of the third order One possessing two haptophore groups and zymophore group.

stretch One responding to mechanical deformation brought about by the stretching of the tissue in which the receptor is embedded. e.g the stretch receptors stimulated by inflation of the lung which, via ascending vagal nerve fibers, reflexly inhibit the respiratory center. See Hering-Breuer *reflex.*

re-cess' re cess [L. *recessus*, from *recedere*, to withdraw]. A fossa, ventricle, or ampulla, an anatomic depression.

chiasmal See optic

cochlear r An elliptic pit below the oval window of the vestibule, forming part of the cochlea. It contains small foramens for the passage of nerves from the duct of the cochlea.

costodiaphragmatic r A potential space formed by apposition of the costal and diaphragmatic layers of the parietal pleura.

costomediastinal r A potential space formed by contact of the costal layer with the mediastinal layer of the parietal pleura.

duodenojejunal r An occasional pouch of the mesentery on the right side of the jejunum and near its union with the duodenum also called *duodenojejunal fossa.*

elliptical An oval depression in the roof and medial wall of the vestibule lodging the utricle It contains small foramens for the passage of branches of the acoustic nerve to the utricle and to the ampulla of the superior and lateral semicircular ducts. Also called *utricular r*

epitympa i The attic of the tympanic cavity

hepatorenal That formed by the hepatorenal ligament.

ileocecal The ileocecal fossa.

incisive A depression on the nasal septum immediately above the incisive canal.

infundibular A recess in the anterior part of the floor of the third ventricle extending through the tuber cinereum into the infundibulum. See Plate 18.

intersigmoid The subsigmoid fossa.

labyrinthine A diverticulum of the otic vesicle which finally becomes the endolymphatic d ct and sac.

laryngopharyngeal r The lower pyramidal part of the pharynx from which open the esophagus and the larynx.

lateral The lateral xtension of the fourth ventricle in the angle between the cerebellum and the medulla oblongata.

lienal An extension of the omental bursa behind the gastrosplenic ligament.

mesenteric r A recess in the primitive gastric mesentery formed by an invagination of the peritoneum on the right side, that separates the definitive gastri mesentery from the caval

mesentery and gives rise to the omental bursa, its vestibule and the infracardiac bursa.

nasopalatine A depression near the lower margin of the nasal septum above the incisive canal.

omental recesses. Portions of the omental bursa called respectively the superior recess behind the liver the inferior recess, and the lienal recess in the region of the spleen.

optic A recess in front of the infundibular recess which extends downward and forward above the optic chiasma. See Plate 18.

paraduodenal r An occasional small pouch of peritoneum situated to the left of the last part of the duodenum.

peritoneal recesses. Pockets behind or around organs in the peritoneal cavity as paraduodenal recesses.

pharyngeal r A lateral mucosal diverticulum of the pharynx situated behind the opening of the auditory tube. Also called *Rosenmueller'*

pineal A recess in the roof of the third ventricle extending posteriorly int the stalk of the pineal body

piriform r A small space lateral to the laryngeal orifice, bounded laterally by the thyroid cartilage and thyrohyoid membrane and medially by the aryepiglottic f ld. Also spelled *pyriform* Syn., *piriform sinus*.

pneumoenteric In certain mammals, peritoneal recess between the left lung bud and the esophagus; on the right side it is comparable to the infracardiac bursa.

preoptic See optic

pyriform See piriform

of pelvic mesocolon. A small peritoneal pouch found beneath the sigmoid mesocolon on the posterior abdominal wall. Also called *intersigmoid*

r of tympanic cavity (a) Anterior and posterior pouches of the mucous membrane covering the lateral wall of the tympanic cavity and found on either side of the manubrium of the malleus. Also called *of Tröltsch*. (b) A superior recess situated between the flaccid part of the tympanic membrane and the neck of the malleus. Also called *Prussak' space*, or *pouch*.

retrocecal r An occasional pouch of peritoneum extending upward between the cecum and posterior abdominal wall.

retroduodenal r An occasional small pouch of peritoneum situated behind the transverse portion of the duodenum extending upward from below

sacciform r of the wrist. An elongation of synovial membrane xtending between the radius and ulna at their distal articulation.

sphenoethmoidal A small space between the sphenoid bone and the superior nasal concha.

spherical A depression in the medial wall of the vestibule which lodges the saccule. Small foramens in the recess transmit branches of the acoustic nerve to the saccule.

suprapineal A posterior recess of the third ventricle extending backward as diverticulum from the ependyma of the roof.

tubotympanic The dorsal wing of the first pharyngeal pouch and possibly part of the second, which forms the tympanic cavity of the middle ear and the auditory tube.

umbilical r A dilated portion of the left branch of the adult portal vein, marking the position of the left umbilical vein.

utricular See elliptical

re·ces sion [L. *recessus*, from *recedere*]. The gradual withdrawal of part from it normal position, as recession of the gums from the necks of teeth.

re ces sive [*recedere*]. *I biology*, characteristic of one of the parents of hybrid which is found in the minority of the offspring, in contrast to the dominant characteristic of the other parent. See *recessive character dominant*, *Mendel' law* under Gregor Johann *Mendel*. —**reces'sive**, *adj*

re·ces'sus. See recess.

re·cid"i va tion [L. *recidivatus*, from *recidivus*, falling back]. 1. The relapse of patient recovering from disease. 2. *In criminology*, relapsing into crime.

re cid"i vism [*recidivus*]. The repetition of criminal or delinquent acts; bad behavior

re·cid'i·vist [*recidivus*]. 1 A patient who returns to hospital for treatment, especially an insane person who so returns. 2 *In criminology* confirmed, relapsed, or habitual criminal.

rec"i·div'i ty (ress"i·div'i·tee) [*recidivus*]. Tendency to return or to relapse.

rec'i pe (ress -pee) [L., imperative of *recipere*, to receive]. 1 The heading of physician prescription, signifying *take*. Symbol, ℞. 2. The prescription itself.

Reckli ghausen, Friedrich Daniel von [German *pathologist*, 1833–1910]. Greatly distinguished in his field described neurofibromatosis, also called *von Recklinghausen disease*. Described hemochromatosis (1889) Generalized osteitis fibrosa cystica is called *von Recklinghausen disease of bone*; see under *osteitis*. Described minute lymph channels present in connective tissue, called *von Recklinghausen' canals*.

rec"li na'ti·o (reck"li·nay shee·o) See *reclination*.

palpebrarum. Ectropion.

rec"li na'tion [L. *reclinare*, to bend back]. An operation for cataract, in which the lens was pushed back into the vitreous chamber *Obs.* Also called *couching*

Reclus, Paul (1847 1914) French surgeon who described bilateral polycystic disease of the female breast (1883) also called *Reclus disease*. See *cystic disease of breast*.

re·com"bi na'tion. *In radiobiology* the coming together of two or more ionized or activated atoms, radicals, or molecules.

re"com·pe·si'tion [L. *recompositus*, from *recomponere*, to put together again]. Reunion of parts or constituents after temporary dissolution.

re"com·pres'sion [L. *re-* again *compressio*, pressing together]. Resubjection to increased atmospheric pressure; procedure used in treating caisson workers or divers who develop symptoms of caisson disease on returning to normal pressures.

re con·stit'u·ent [re- L. *constituere*, to set up]. A medicine which promotes continuous repair of tissue waste or makes compensation for its loss.

re·con sti tu'tion (ree·kon sti·tew'shun) [re- L. *constitutio*, from *constituere*]. Continuous repair of progressive destruction of tissues.

re"con struc'tion. 1 *I medical-history taking* and *psychoanalysis*, the integration into significant whole of facts which are presented first without consciousness of their relationship. 2. Reproduction, usually with enlargement of the form, of an embryo, organ system, or part by assemblage of properly spaced and oriented outlines of serial sections. Common methods are **graphic reconstruction**, resulting in two-dimensional drawing, and **Born wax-plate reconstruction**, by which three-dimensional model is obtained.

re·cov'er y [L. *recuperare*, to recover]. Restoration from illness.

rec're·ment [L. *recrementum*, refuse]. A substance secreted from part of the body as gland, and again absorbed by the body —**recreme 'tal recrementi'tial, recrementi'tious**, *adj.*

re cru·des cence [L. *recrudescere*, to become raw

again]. An increase in the symptoms of disease after remission or a short intermission.

re-cruit'ment (ri kroot mint) [F *recrutement* from *recroître* to grow again]. A serial discharge of the neurons which innervate groups of muscle fibers.

re-cruit'ment test. See under *test*.

rec tal'gi a [L. *rectus*, straight; G. *algos*, pain]. Pain in the rectum; proctalgia.

rec'tal shelf. See *Blumer's shelf*.

rec tec'to-my. See *proctectomy*.

rec"ti fi ca tion [L. *rectificatio* from *rectus*, *facere*, to make]. 1. A straightening, as rectification of a crooked limb. 2. The redistillation or fractional distillation of liquids to obtain a product of higher purity or greater concentration of the desired constituent.

rec ti'tis. See *proctitis*.

rec'to- [L. *rectus*]. A combining form denoting *the rectum* or *rectal*.

rec"to-ab-dom'i nal [*rectus*; L. *abdomen*, belly]. Relating to the rectum and the abdomen.

rec'to-cele [*rectus*; G. *kēlē*, hernia]. Prolapse of the rectum into the vagina.

rec toc'ly sis [*rectus*; G. *klysis*, drenching]. The slow instillation of liquid into the rectum.

rec"to-coc-cyg'e al (rek to-cock-sidj'ee-ul) [*rectus*; G. *kokkyx*, cuckoo]. Pertaining to the rectum and the coccyx.

rec"to-coc cyg'e us. A band of mixed smooth and striate muscle fibers extending from front of coccyx to back of rectum.

rec"to-co li'tis [*rectus*; G. *kolon*, colon; *-itis*, inflammation]. Inflammation of the mucosa of the rectum and colon combined.

rec"to co-lon'ic [*rectus*; *kolon*]. Pertaining to the rectum and the colon.

rec"to cys-tot'o my [*rectus*; G. *kystis*, bladder; *tomē*, cutting]. Incision of the urinary bladder through the rectum. Obs.

rec"to-fis'tu la [*rectus*; L. *fistula*, tube]. Fistula of the rectum.

rec"to-gen'i tal [*rectus*; L. *genitalis*, genital]. Pertaining to the rectum and the genital organs.

rec"to la'bi al [*rectus*; L. *labium*, lip]. Relating to the rectum and the labia pudenda.

rec'to pex"y, rec"to-pex'y [*rectus*; G. *pēxis*, fixing]. Fixation of the rectum to the pelvic wall by suturing.

rec"to-pho'bi a. See *proctophobia*.

rec'to-plas"ty. See *proctoplasty*.

rec"to rec tos'to-my [*rectus*; *rectus*; G. *stoma*, mouth]. Surgical anastomosis between two parts of the rectum.

rec"to-ro-man'o-scope [*rectus*; L. *Romanus*, Roman; G. *skopein*, to examine]. A speculum used in examining the rectum and the sigmoid flexure.

rec'to-scope [*rectus*; *skopein*]. A rectal speculum. —**rec tos'copy**, *n.*

rec"to-sig'moid [*rectus*; G. *sigmoeidēs*, crescent shaped]. The rectum and sigmoid portion of the colon considered together.

rec"to sig"moid ec'to my. Surgical excision of the rectum and sigmoid colon.

rec"to-sig"moid os'co py [*rectus*; *sigmoeidēs*; G. *skopein*, to examine]. Ocular inspection of the rectum and sigmoid flexure of the colon with the aid of special instruments.

rec"to ste no'sis [*rectus*; G. *stenōsis*, a being straitened]. Stenosis of the rectum.

rec tos'to my. See *proctostomy*.

rec tot'o my. See *proctotomy*.

rec"to u re'thral [*rectus*; G. *ourēthra*, urethra]. Pertaining to the rectum and the urethra.

rec"to-u re-thra'lis. A small band of smooth muscle fibers running from the rectum to the membranous part of the urethra in the male.

rec"to-u'ter ine [*rectus*; L. *uterus*, womb]. Pertaining to the rectum and uterus, as a small band of smooth muscle fibers running from front of the rectum to the uterus, corresponding to the rectovesicalis in the male.

rec"to vag'i nal (-vadj' inul, -va jye' nl) [*rectus*; L. *vagina*, sheath]. Pertaining to the rectum and the vagina.

rec"t vag"i no ab d om'i nal (-vadj' no ab-dom'i nul) [*rectus*; *vagina*; L. *abdomen*, belly]. Pertaining to a method of combined examination in the female.

rec"to-ves'i-cal [*rectus*; L. *vesica*, bladder]. Pertaining to the rectum and the urinary bladder.

rec"to ves-i-ca'lis. Smooth muscle fibers running between the rectum and the base of the urinary bladder.

rec'tum [*rectus*]. The lower part of the large intestine, extending from the sigmoid flexure to the anal canal. It begins opposite the third sacral vertebra and passes downward to terminate at the anal canal. See Plates 8, 10, 13, 14. —**rectal**, *adj.*

rec'tus [L.]. Straight; applied to anything having a straight course, as rectus abdominis muscle. See Table of Muscles in the Appendix.

r. accessorius. A rare variant of the rectus femoris muscle in which a few fibers arise from the rim of the acetabulum.

re-cum'ben cy [L. *recumbere*, to recline]. The reclining position.

re cum'bent [*recumbere*]. Leaning back; reclining.

re cu'per ate [L. *recuperare*, to recover]. Regain strength or health.

re-cu"per a tion [L. *recuperatio* from *recuperare*]. Convalescence; restoration to health.

re-cu'per a"tive (ri-coo per-ay"tiv, ri coo per ah-tiv) [*recuperare*]. Pertaining to, or tending to, recovery of health or strength.

re-cur'rence [L. *recurrere*, to run back]. 1. The return of symptoms or disease. 2. Reappearance of neoplasm after apparently complete removal.

re-cur'rent [*recurrere*]. 1. Returning. 2. In anatomy, turning back in its course, as recurrent laryngeal nerve.

re cur va'tion [L. *recurvare*, to curve backward]. The act or process of bending backward.

red [AS. *read*]. The least refractive of the spectral colors. For other terms containing red, see under noun.

Chinese r. Mercuric sulfide.

Red Cross So-ci e-ty. An international organization whose primary purpose is to care for the wounded, the sick, and prisoners in wartime. A more recent function is the relief of human suffering from catastrophe or any other cause.

Redi, Francesco [Italian naturalist, 1626–97]. Author of the first scientific treatise on poisoning by venomous snakes (1664), in which he showed that the poison must be injected to be effective. In his study of insects, dealt the first serious blow to the theory of spontaneous generation.

re di a (pl. *rediae*) [NL. after *Redi*]. In parasitology, the second larval stage of certain trematodes, which results from the development of parthenogenetic eggs of the first larval stage.

re"dif fer-en"ti-a'tion [L. *re-*, again; *differentia*, difference]. The return to a position of greater differences. The return to actual and potential functions, specialization in actual and potential functions, reduced to ...

red, in gain. *Rodedus in pulvere*, reduced to powder.

red in"te-gra'tion [L. *redintegratio*, from *redintegrare*, to make whole again]. 1. The complete restoration of a part that has been injured or destroyed. 2. See *reintegration*.

red'out [AS. *read*; *út*]. A condition met with by

flyers, in which acceleration is centripetal and the blood is driven toward the head. There is bursting headache, and vision is blurred as by red mist.

re'dox. A reduction-oxidation reaction, state, or system.

redoxon. A brand of ascorbic acid.

re dox po ten tial. The electrical potential developed when suitable inert electrode is in contact with a solution containing both the oxidized and the reduced forms of one or more substances. The potential is function of the ratio of the activities (concentrations) of oxidant and reductant, and also provides measure of the relative oxidizing (or reducing) power of the system.

re-dress'ment [F]. 1. A second dressing of wound 2. Correction of deformity

red'root [*red*; AS. *rōt*]. A perennial herb of the genus Lachnanthes, the root of which is sometimes used as dye.

re duce [L. *reducere*, to lead back]. 1 Restore part to its normal relations, as to reduce a hernia or fracture. See Plate 33. 2. *I chemistry*, bring back to the metallic form; deprive of oxygen. 3. Lose weight by dietetic regimen.

re-duced' [*reducere*]. 1 Restored to the proper place. 2. *I chemistry*, having undergone reduction, i.e., accepted electrons. 3. Diminished in size.

-**du'ci-ble** [*reducere*]. Capable of being reduced.

re duc'tant [*reducere*]. A reducing agent.

re-duc tase (ri-duck tace, -taze) An enzyme causing reduction. Obs.

cytochrome C A flavoprotein enzyme system isolated from yeast, also, smaller one from liver: the reduced form of flavoprotein is highly active in oxidizing reduced coenzyme II, while the reduced form of the flavoprotein readily reduces oxidized cytochrome C.

re-duc tion. 1. *I chemistry*, (a) an increase in the negative valence of an element (or decrease in positive valence) occurring as result of the gain of electrons. Each electron so gained is taken from some other element, thus accomplishing an oxidation of that element; (b) originally the process of separation from oxygen, or the combining with hydrogen. 2 *I medicine*, the restoration by surgical or manipulative procedures of dislocated joint or fractured bone to normal anatomic relationships.

closed That performed without making surgical incision.

open That performed by making surgical incision through the soft parts to the site of the fracture or dislocation.

re-duc tion di vi sion. See meiosis.

re-duc'tone. A substance, probably HOCH C(OH)CHO the enolic form of hydroxymalonic dialdehyde. It is a strong reducing agent

re-du pli-ca"ted [L. *reduplicatus*, redoubled]. Doubled, as reduplicated heart sounds.

re-du"pli ca'tion [L. *reduplicatio*, repetition]. A doubling

of the heart sounds. A doubling of either the first or the second sound of the heart. It occurs in hypertension, increased pulmonary pressure, and myocardial disease, but may also occur without clinical significance.

Red"u vi'i-dae (red"yoo vye'i dee, ree dew) [L. *reduvia*, hangnail] A family of the Heteroptera, commonly called assassin bugs and kissing bugs. They normally prey on other insects and only occasionally attack man. Their bite may be extremely painful and toxic. They are sometimes confused with the related bloodsucking Triatomidae.

Re-du vi-us [*reduvia*]. A genus of bugs of the family Reduviidae

R. personatus. The reduviid or kissing bug which is an avid bloodsucker and has a potent salivary toxin; attacks the face, particularly the lips, often causing pain.

Reed Dorothy (Mendenhall) [*American pathologist*, 1874–]. Described the giant polynuclear cells which are the most constant feature of the lesions of Hodgkin's disease (1902) called *Dorothy Reed cells*, *Reed-Sternberg cells*.

Reed, Walter [*American Army surgeon*, 1851 1902]. Chairman of the celebrated United States Army Yellow Fever Board. His *Experimental Yellow Fever* (1901) published the proof that yellow fever is caused by a filtrable virus transmitted to man by mosquito, Aëdes aegypti.

re ed u-ca tion [L. *re-*, again *educatio*, from *educare*, to rear]. The development of the processes of adjustment in an individual who has acquired these processes and then lost them.

reef'ing. See plication.

Reenstierna reaction. See Ito-Reenstierna test.

Reenstierna test. See Ito-Reenstierna test.

re"ev-o-lu'tion [L. *re-*, again *evolutio*, from *evolvere*, to unroll]. Hughlings Jackson term for symptom following an epileptic attack, which consists of three stages suspension of power to understand speech (word deafness) perception of words and echolalia without comprehension; return to conscious perception of speech with continued lack of comprehension.

re ex-ci ta tion [*re-* L. *excitatio*, from *excitare* to rouse up]. Reentrance of the excitation wave into tissue that has recovered from refractory state.

re-fec'tion [L. *refectio*, restoring]. The phenomena of vitamin-B-complex synthesis by the bacterial flora of the intestine. With diets of certain composition, the amount of bacterial synthesis of vitamins is sufficiently increased that rats can grow and reproduce on diet devoid of vitamin-B complex. Man dietary requirement for certain vitamins and other nutrients may be controlled to considerable extent by the nature and extent of refection.

re-fine [L. *re-* again *finire*, to finish]. Purify a substance, extract it from raw material, or remove impurities from it.

re-flect'ed [L. *reflectere*, to bend back]. 1 Cast or thrown back. 2. *In anatomy*, turned back upon itself, as visceral peritoneum from the surface of an organ to become parietal peritoneum.

re flec tion [*flectere*]. 1. A bending or turning back specifically the turning back of ray of light from surface upon which it impinges without penetrating. 2. I membranes, as the peritoneum, the folds which are made in passing from the wall of the cavity over an organ and back again to the wall which bounds such cavity

re-flec'tor [*reflectere*]. A device for reflecting light or sound.

re'flex [L. *reflexus*, from *reflectere*]. An involuntary invariable, adaptive response to stimulus.

abdominal r Contraction of the abdominal muscles, induced by friction on the corresponding side of the abdominal wall.

acceleratory Any reflex originating in the vestibular organ in response to change in the rate of movement. In linear acceleration, the response is placing reflex independent of proprioceptive sensations In angular acceleration, the response is the vestibulo-ocular reflex.

accommodation The occurrence of constriction of the pupils, convergence of the eyes, and increased convexity of the lens when the eyes adjust for near vision.

Achilles tendon r Plantar flexion of the foot, produced by contraction of the calf muscles when the Achilles tendon receives sharp blow

acoustic See auditory
acquired r Conditioned reflex.
acromial r Flexion of the forearm induced by sharp blow upon the acromion.
adductor r Contraction of the adductors of the thigh, produced by tapping the medial condyle of the femur or any point along the inner sid of the leg
allied reflexes. Those elicited from different regions, producing common or reinforced protagonistic actions.
anal Contraction of the external anal sphincter in response to a scratch upon the skin in the perianal region.
ankle clonus r Clonic contractions of the calf muscles in response to pressure against the sole of the foot.
antagonistic reflexes. Reflexes in response to different stimuli which elicit opposing effects, as the flexion and extension of limb with resulting dominance of the stronger reflex. The nociceptive (pain) reflexes usually predominate.
anticus r Dorsal flexion and inversion of the foot, induced by percussio of the tibialis anticus (tibialis anterior) muscle
antigravity reflexes. Reflexes which, through contraction of the extensor muscles, support the body against the effect of gravity
Argyll Robertson See Argyll Robertson pupil
attitudinal reflexes. Reflex adjustments of the skeletal muscles to keep the trunk and limbs in proper relationship to the position of the head
audito-oculogyric r Movement of the eyes toward the source of sudden sound.
auditory Brief closure of the yes, resulting from eighth nerve stimulation by the sudden production of sound also called acoustic cochlear
aural Any reflex which involves the auditory mechanism.
auriculopalpebral r Closure of the eyelids in response to noxious stimuli when intracranial pressure is increased also called *Kisch* *Kehrer*
auriculopressor A reflex rise in the heart rate due to rise of pressure in the right trium See Bainbridge
auropalpebral See cochleopalpebral
axon One occurring without involvement of nerve cell body; results from stimulus applied to terminal branch of sensory nerve, and gives rise to an impulse that ascends to collateral branch down which it is conducted to an effector organ; believed to be important in the local egulation of blood vessels.
Babinski An abnormal reflex characterized by extension of the great toe upon stroking of the sole of the foot also called *Babinski sign.*
Bainbridge A reflex acceleration of the heart and rise of arterial pressure due to rise of pressure in the right atrium and roots of great veins. Also called *cardiovascular* *right heart*
behavior Conditioned reflex.
Bekhterev's (a) Facial contraction on the same side as irritation of the nasal mucosa. Syn., *nasal* (b) Dilatation of the pupil on exposure to light, occasionally seen in tabes and dementia paralytica. Syn. *paradoxic pupillary* (c) Dorsal flexion of the foot with flexion of the knee and hip on the same side upon release of foot passively bent in plantar direction, seen in pyramidal tract disease (d) A normal response characterized by contraction of the lower abdominal muscles on stroking of th skin of the inner surface of the thigh. Syn. *hypogastric*
Bekhterev-Mendel Extension of the second to fifth toes induced by percussion of the dorsum of the foot in normal individuals flexion occurs in the presence of pyramidal tract disease Syn., *Mendel' dorsal of the foot, dorsocuboidal cuboidodigital tarsophalangeal*
Bezold A depressor and cardiac-decelerating reflex which ha its afferent origin in receptors located in the heart, particularly the left ventricle, and lungs. The efferent pathway is from medullary centers over the vagus and sympathetic nervous systems. The reflex is activated by veratrum alkaloids and, possibly by the changes f myocardial infarction.
biceps Contraction of the biceps brachii muscle induced by percussion of its tendon.
body-righting r A righting reflex initiated by asymmetrical stimulation of pressure receptors on the surface of the body It may be body-righting reflex acting on the head, which tends to keep the head orientated in relation to the surface with which the body is in contact, or it may be acting on the body which ensures orientation of the body in reaction to the surface with which it is in contact.
bone A reflex presumed to be elicited by stimulus applied to bone, but really muscle stretch reflex.
Brain's Extension of the paralyzed flexed arm when patient with hemiplegia assumes the quadrupedal position. See quadrupedal extensor
Brissaud's r Contraction of the tensor of the fascia lata on stimulation of the sole of the foot
Brudzinski's See *Brudzinski's signs* under sign
bulbocavernosus See penile
Cappo pleural r Shock induced by mechanical irritation, as with trocar, of an inflamed pleura.
cardiovascular r See Bainbridge
carotid body One arising in the epithelioid of the carotid body and affecting respiration and blood pressure. See *chemoreceptor*
carotid sinus That arising in the carotid sinus and affecting blood pressure, heart rate, and respiration. See *pressoreceptor*
cerebral cortex Contraction of the pupil when, in a darkened room, the patient's attention is directed to light that is visible to his peripheral retina. Also called *Haab*
Chaddock's (a) Extension of the great toe on stimulation around the lateral malleolus, seen in pyramidal tract lesions. (b) Flexion of the wrist and extension and fanning of the fingers caused by irritation of the ulnar aspect of the lower forearm in hemiplegia.
chain A series of consecutive reflexes, each of which is initiated by the preceding one, resulting in an integrated action.
chemical One initiated by hormones or other chemical substances in the blood, as carotid sinus reflex. Also called *humoral*
chin See j w-jerk
Churchill-Cope Rapid, shallow respirations due to engorgement of the pulmonary vessels.
ciliary The normal constriction of the pupil in accommodation of the eye
ciliospinal Dilatation of the ipsilateral pupil on pinching the skin on one side of the neck. Syn., *cutaneous pupillary*
cochlear r See uditory
cochleo-orbicular See cochleopalpebral
cochleopalpebral Contraction of the orbicularis oculi muscle after hearing sudden, unexpected sound. Syn., *Gault* *cochleo-orbicular* *auropalpebral*
conditioned r A reflex acquired as result of repeated association and training, as opposed to natural reflex.

conjunctival r Closure of the eyelids induced by touching the conjunctiva. Syn., *lid*
consensual light See crossed
consensual See crossed
contact A reflex flexion and elevation of limb resulting from gentle stimulation of the dorsum of the foot.
contralateral r An overflow response on the opposite side when reflex is elicited on one side of the body
convulsive Incoordinated convulsive muscular contractions.
coordinated r A coordinated reaction of several muscles in orderly progression.
corneal See conjunctival
corneomandibular Deflection of the lower jaw to the opposite side when the cornea of one eye is irritated, the mouth being open.
coronary See intercoronary r
cough r A cough caused by irritation of the laryngeal mucosa.
cranial Any reflex whose paths are connected directly with the brain by cranial nerves.
cremasteric r Retraction of the testis on the same side induced by stimulation of the skin on the front and inner surface of one thigh.
crossed extension The extension of the limb opposite to that in which flexor reflex is induced.
crossed A response on one side of the body induced by stimulation of the other side. Syn., *consensual*, *indirect*
cuboidodigital r See Bekhterev Mendel
cutaneous pupillary See ciliospinal
cutaneous Wrinkling or gooseflesh in response to irritation of the skin.
dartos muscle See scrotal r
deep Any muscle stretch reflex, including the so-called tendon reflexes and periosteal reflexes.
deep of Bekhterev See Bekhterev (a)
defecation r See rectum
defense Protective reflex.
deglutition See swallowing
delayed r A reflex occurring an abnormally long while after the stimulus.
depressor A reflex fall in blood pressure or vasodilatation, which may be evoked by variety of stimuli, as increased pressure in the carotid sinus.
determinate r One referred back to the region of stimulation.
digital Sudden flexion of the terminal phalanx *of the thumb and of the second and third phalanges* of some other finger elicited by snapping the terminal phalanx of the patient middle or index finger Also called *Hoffmann sign*.
direct light r Contraction of the sphincter pupillae induced by ray of light thrown upon the retina. Also called *direct pupillary*
direct A reflex response on the same side as that of the stimulus.
dorsal See lumbar
dorsocuboidal See Bekhterev-Mendel
elbow See triceps r
Erben Slowing of the pulse, presumed to be due to vagus irritability when the head and trunk are bent strongly forward.
erector spinae See lumbar
esophagosalivary r Salivation induced by stimulation of the distal portion of the cut esophagus, the vagi being intact. See Roger's
extensor thrust See extensor thrust.
external auditory meatus r See auriculopalpebral
exteroceptive Any reflex elicited by stimulation of an exteroceptor The reflex are is multineuron arc.
eyeball compression Slowing of the heart caused by pressure on the eyeball. Syn., oculocardiac
eye closure r (a) Closure of the eyelids on tapping the supraorbital nerve. (b) Closure of the eyelids on stimulation of the external ear canal. Syn., *Kisch*
fascial A deep muscle stretch reflex elicited by sudden tap over fascia.
faucial r Gagging or vomiting produced by irritation of the fauces.
femoral Extension of the knee and flexion of the toes induced by irritation of the skin over the upper anterior surface of the thigh.
finger-thumb Apposition and adduction of the thumb, associated with flexion at the metacarpophalangeal joint on firm passive flexion of the third to the fifth finger at the proximal joints.
fixation A reflex manifested by fixation of the eyes so that the image is kept on the fovea of both.
flexion Flexion or withdrawal of limb in response to noxious stimulus.
fontanel See Grünfelder'
foveolar The bright reflection of light seen with the ophthalmoscope when it is directed upon the fovea.
front-tap Contraction of the calf muscles induced by percussion over the stretched muscles of the extended leg.
gag See pharyngeal
gastrocolic Peristalsis of the colon induced by the entrance of food into the empty stomach.
gastroileac Physiologic relaxation of the ileocecal valve, resulting from food in the stomach.
gastrosalivary Salivation following the introduction of food into the stomach.
Gault's See cochleopalpebral
Geigel' See inguinal
general static A postural reflex involving various segments of the body
genital Any reflex irritability due to disorder of the genital organs.
Gifford's Constriction of the pupil when the orbicularis oculi is contracted, the eyelids being held open.
gluteal Contraction of the gluteal muscles induced by stimulation of the overlying skin.
Gonda Extension of the great toe when the last two toes are snapped between the examiner fingers; indicative of pyramidal tract lesion
Gordon's 1. A paradoxical flexor reflex in disease of the pyramidal tract, in which there is extension of the great toe or of all the toes on compression of the deep flexor muscles of the leg. Syn., *paradoxic flexor* 2. Flexion of the fingers, or thumb and index finger on squeezing the muscles of the forearm, seen in pyramidal tract disease.
grasp r A grasping motion of the fingers or of the toes, induced by stimulation of the palm of the hand or the sole of the foot.
great-toe A comprehensive term, signifying extension of the great toe, and including the Babinski, Chaddock, Gordon, and Oppenheim reflexes.
Grünfelder's r Extension of the great toe with fan-type spreading of the other toes, produced by pressure on the posterior fontanel. Syn., *fontanel*
Hanh See cerebral cortex
head retraction r A test for bilateral pyramidal tract lesions above the cervical cord The patient relaxes with his head slightly forward. The test is positive if the head is quickly retracted when the middle part of the upper lip is tapped with

the reflex hammer stretching the flexors and producing an abnormally intense contraction in these latter muscle groups.
Hering-Breuer The nervous mechanism which controls respiration by impulses mediated through the pulmonary fibers of the vagus nerves.
Hirschberg's r Inversion of the foot induced by stimulation of the sole of the foot at the base of the great toe.
Hoffmann's finger r See Hoffmann *sign*, digital
humeral r See chemical
hypochondrial Sudden inspiration produced by unexpected pressure below the costal border
hypogastric Contraction of the muscles of the lower abdomen induced by stroking of the skin of the inner surface of the thigh.
hypothenar r Contraction of the palmaris brevis muscle upon stimulation over the pisiform bone.
indirect r See crossed
infraspinatus r Extension of the elbow and lateral rotation of the arm induced by a sudden sharp tap over the infraspinatus muscle.
inguinal Contraction of muscle fibers above the inguinal ligament, induced by stimulation of the skin over the upper and inner aspect of the thigh in the female. Syn., *Geigel*'
instinctive A precise invariable response to stimulus, inherited and not acquired by association also called *natural* *unconditioned* *inherited response*. See also conditioned
intercoronary r Any reflex arising in vessels of one area of the myocardium and transmitted to those of another
interscapular See scapular
intersegmental Any reflex involving more than one segment of the spinal cord for the completion of its arc.
intestinal See myenteric
intrasegmental Any reflex involving only one segment of the spinal cord.
inverted oculocardiac Acceleration of the heart rate in response to compression of the eyeballs.
inverted radial Flexion of the fingers without flexion of the forearm when the lower end of the radius is tapped; presumed to indicate a lesion involving the fifth cervical segment of the spinal cord.
iris contraction Pupillary contraction induced by exposure to light. Syn., *pupillary* ( )
Jacobsohn Flexion of the fingers induced by a mild tap on the lower end of the radius or in its neighborhood on the dorsal side of the forearm, formerly considered to indicate pyramidal tract disease but now considered to be essentially normal, although more distinct in cases of reflex hyperirritability of functional or organic nature
jaw-jerk r Clonic contraction of the muscles of mastication and elevation of the mandible, tested by striking the relaxed and dependent jaw with a percussion hammer the mouth being open. Observed in disease of the upper motor neurons.
Jeffrey' Twitching of the gluteal muscles when pressure is made against the nates observed in spastic paralysis.
Juster's Extension of the fingers instead of flexion when the palm of the hand is irritated or stimulated.
Kehrer' See auriculopalpebral
kinetic Any reflex which results in movement.
Kisch' See auriculopalpebral
knee-jerk See patellar
Kocher' See testicular compression
labyrinthine Reflex initiated by stimulation of the vestibular apparatus of the inner ear
lacrimal r Secretion of tears induced by irritation of the corneal conjunctiva.
laryngeal A cough resulting from irritation of the larynx.
laughter Uncontrollable laughter in response to tickling.
lid r Conjunctival reflex.
light r (a) Of the membrana tympani: cone of light on the anterior and inferior part of the tympanic membrane, with its apex directed toward the umbo. (b) Of the retina: circular area of light reflected from the retina during retinoscopic examination. (c) Of the pupil: contraction of the pupil in response to light. Also called *Whytt*'
lip A reflex movement of the lips of sleeping babies, induced by a sudden tap over the angle of the mouth.
long circuit r A reflex which involves the higher centers in the medulla, midbrain, basal ganglions, or cerebral cortex, as opposed to the segmental reflex.
Lovén's Vasodilatation in an organ in response to stimulation of its afferent nerve.
lumbar Contraction of the muscles of the back caused by stimulation of the skin over the sacrospinalis muscle. Syn *dorsal* *erector spinae*
lung Old term for Hering-Breuer reflex
Lust's r Dorsal flexion and eversion of the foot in response to percussion over the common peroneal nerve.
McCarthy's r See supraorbital
McCormac' r Adduction of the opposite leg in response to percussion of one patellar tendon (ligamentum patellae)
Magnus-de Kleyn reflexes. The tonic neck and tonic labyrinthine reflexes.
mandibular Jaw-jerk reflex.
Marey See Etienne Jules *Marey*.
mark-time r Rhythmic alternate flexor and extensor reflexes resembling those used in marking
mass r A complex reflex phenomenon induced by stimulation below the level of a complete transverse lesion of the spinal cord and characterized by simultaneous flexor spasms of the legs, involuntary evacuation of the urinary bladder, defecatory evacuation, and sweating below the level of the lesion, described by G Riddoch.
membrana tympani See light (a)
Mendel's dorsal of foot. See Bekhterev-Mendel
middle ear disease A reflex phenomenon used to explain the temperature variations which both adults and children occasionally exhibit with mild grades of tympanic inflammation, probably depending on the individual differences in stability of central nervous control.
monosynaptic Any reflex involving only one synapse and no internuncial neurons, as the patellar reflex is postulated to be, on the basis of experimental data.
Moro A concussion reaction normally observed only in newborn infants, elicited by a sudden sharp noise, such as slapping the hands, or by upsetting the equilibrium, as jarring the surface on which the infant lies. Used to test the integrity of the neonate responses. In the normal response both legs are drawn up and the arms brought up as in an embrace, in contrast to the asymmetric response seen in unilateral brachial palsy
mucosal Contraction of subjacent muscles when mucous membranes are stroked.
myenteric Contraction of the intestine above and relaxation below a portion of the intestine that is stimulated through the influence of the

myenteric nerve plexus. This action occurs in peristalsis. Syn., *intestinal*

myotatic See stretch

nasal r Sneezing induced by stimulation of the nasal mucosa.

nasomental Contraction of the mentalis muscle with consequent elevation of the low lip and wrinkling of the skin of the skin in response to light tap on the side of the nose with percussion hammer

neck-righting r Any tonic labyrinthine reflex arising in the neck which tends to keep the body orientated in relation to the head.

negative supporting A proprioceptive reflex causing active inhibition of the muscles involved in positive supporting reflex, elicited by flexion of the finger or the hand, or plantar flexion of the toes bserved in the decerebrate animal.

nociceptive r A reflex initiated by a painful stimulus.

obliquus Contraction of the external oblique muscle in response to any stimulus applied to the skin of the thigh below the inguinal ligament. Syn., *hypogastric*

oculocardiac Slowing of the heart rate in response to pressure upon the eyeballs, normal reaction when the rate is decreased by 5 to 13 beats per minute.

oculocephalogyric The associated movements of the eye, head, and body in the process of focusing visual attention pon an object.

oculopharyngeal r Rapid movements of deglutition and spontaneous closing of the eyes without apparent contraction of the orbicularis muscle, in response to stimulation of the bulbar conjunctiva.

Onanoff's Contraction of the bulbocavernosus muscle in response to compression of the glans penis.

Oppenheim's Extension of the great toe upon stroking downward along the medial side of the tibia, a sign of corticospinal-tract lesion.

optical righting r Righting reflex initiated by the visual perception of an improper orientation of the body in reference to the horizon or to familiar objects.

opticofacial A defensive reaction characterized by sudden closure of the eyelids when an object is brought suddenly into the field of vision. Syn., *winking*

orbicularis oculi r See supraorbital

pain Nociceptive

palatal (a) Elevation of the soft palate in response to touch. (b) Swallowing produced by irritation of the palate.

palmar Flexion of the fingers when the palm of the hand is irritated.

palm-chin Contraction of the muscles of the chin in response to irritation of the thenar eminence of the hand. Also called *palmomental*

paradoxic ankle A nkle reflex in which percussion over the flexor surface induces an extensor response and vice versa.

paradoxic flexor r See Gordon

paradoxic patellar Contraction of the hamstring muscles in response to tapping of the patellar tendon (ligamentum patellae); sometimes observed in tabes, poliomyelitis, lesions of the femoral nerve, and other lesions affecting the arc of the patellar reflex.

paradoxic pupillary r Dilatation of the pupil in response to stimulation of the retina by light.

patellar clonus r Clonic contraction and relaxation of the quadriceps muscle in response to sharp firm pressure against the upper margin of the patella observed in lesions of the pyramidal tract.

patellar r Contraction of the quadriceps muscle with extension of the leg at the knee in response to quick tap against the patellar tendon (ligamentum patellae) Also called *knee-jerk, knee-kick, quadriceps patellar tendon*

patellar tendon Patellar reflex.

patello-adductor Crossed adduction of the thigh in response to percussion of the patellar tendon (ligamentum patellae)

pathologic Any bnormal reflex indicative of diseased state.

pectoral Adduction and slight internal rotation of the arm in response to sharp blow against the humeral insertion of the tendon of the pectoralis major muscle.

penile Contraction of the bulbocavernosus muscle in response to moderat tap against the dorsum of the penis. Syn., *bulbocavernosus*

periosteal Originally considered to be muscular contraction in response to blow against the periosteum, but now considered to be muscle stretch reflex.

peroneal Contraction of peroneal muscle in response to blow applied to it while it is stretched.

pharyngeal r Contraction of the constrictor muscles of the pharynx in response to stimulation of the posterior pharyngeal wall or neighboring structures. Syn., *gag*

Philippson's Extension of the limb opposite to that in which lengthening reaction is induced.

Piltz's r See pupillary ( )

pilomotor Erection of the hairs of the skin (goose flesh) in response to chilling or irritation of the skin or to an emotional stimulus.

placing A reaction which organizes postural muscle contractions in anticipation of contact with solid object.

plantar r Flexion of the toes in response to irritation of the sole

plasticity The reflex property of maintaining spastic limb in the position of flexion or extension in which it has been placed; resistance to change, either lengthening or shortening.

pneocardiac A change in the cardiac rhythm or the blood pressure, due to the inhalation of an irritating vapor

pneopneic r A change in the respiratory rhythm, due to the inhalation of an irritating vapor

positive supporting Contraction of extensor muscles to support posture, observed in decerebrate animal

postural r *Any one of many reflexes which are associated in establishing posture of the individual.*

prepotent The reflex elicited first when two antagonistic stimuli impinge simultaneously pon an organism.

pressor A reflex increase in arterial pressure due to nervous stimulation of the vasomotor center

proprioceptive Any reflex elicited by stimulation of proprioceptor The reflex arc is probably two-neuron arc. Also see proprioceptive *impulses*.

protective Any response to defend the body from harm, as winking caused by an object rapidly pproaching the eye.

psychocardiac r Increase in the heart rate induced by recollection of previous emotional experience

psychogalvanic r A variation in the electric conductivity of the skin in response to emotional stimuli. Due to changes in blood circulation, secretion of sweat, and skin temperature changes.

pulmonary *Old term for* Hering Breuer reflex.

pupillary r (a) Contraction of the pupil in response to stimulation of the retina by light; also

called *Whytt's* (b) Contraction of the pupil on accommodation for close vision and dilatation of the pupil on accommodation for distant vision. Syn., **accommodation** ( ) Reflex contraction of th pupil of one eye in response to stimulation of the other eye by light. Syn *consensual light* (d) Contraction of th pupil on attempted closure of the eye. Syn., *Westphal' pupillary* Also called *Westphal-Piltz*

purposive reflexes. Those which provide the mechanism for the preservation of the individual.

qu driceps See patellar

quadrupedal extensor r An associated movement of extension of th flexed arm in hemiplegia which is sometimes evoked by causing the patient, when standing or kneeling, to lean forward and throw his weight on to the observer supporting hand placed beneath his chest. See Brain

radial r A muscle stretch reflex characterized by flexion of the forearm and occasionally by flexion of the fingers in response to light blow against the lower end of the radius.

rectum The mechanism by which the accumulated feces are vacuated from the rectum, characterized by peristaltic contraction of the rectal musculature and relaxation of the internal and external sphincters of the anus also called *defecation*

red The red glow of light seen to emerge from the pupil when the interior of the eye is illuminated, due to the reflected light having passed through the choroid.

renorenal The mechanism by which disease or injury of one kidney may produce pain in, or impair the function of, the opposite kidney

retinal A round light area reflected from the retina when the retinoscope is employed.

Riddoch's mass See mass

righting r Any of chain of reflexes which operate to bring, or to maintain, an animal right side up; included are labyrinthine righting reflexes, body righting reflexes acting pon the head, body righting reflexes acting pon the body neck righting reflexes, and optical righting reflexes.

Roger' r Salivation on irritation of the esophagus. See esophagosalivary

Rossolimo's A stretch reflex of the plantar muscles of the foot, characterized by flexion of the second to fifth toes in response to tapping of the plantar surfaces of the toes its intensity varies with the degree of muscle tonus.

scapular Contraction of the scapular muscles in response to stimulus pplied between the scapulae. Syn., *interscapular*

scapulohumeral Contractions of various muscles of the shoulder girdle and arm in response to tapping the vertebral border of the scapula. Syn., *scapuloperiosteal*

scapuloperiosteal r See scapulohumeral

Schäffer's Extension of the great toe in response to pinching of the Achilles tendon.

scratch Reflex scratching movements designed to remove an irritating agent from the surface of the skin the ease with which this reflex may be initiated in experimental animals has made it one of the most commonly studied forms of reflex activity

scrotal r Slow vermicular contraction of the dartos muscle in response to stimulation of the perineum by stroking or by cold pplication Syn., *dartos muscle*

segmental See intrasegmental

segmental static A postural reflex in olving whole segme t of the body as both forelimbs or the neck muscles.

sexual r Erection and ejaculation in response to direct or psychic stimulation of the genitals.

shivering A reflex, occurring in response to cold, causing rhythmic contraction of muscles.

simple An uncomplicated reflex, as one acting on single muscle.

sneezing r See nasal

Snellen's r Congestion of the ear on the same side in response to stimulation of the distal end of the divided auriculotemporal nerve.

spinal Any reflex whose ar connects with center in the spinal cord.

static r Any one of series of reflexes which are involved in the establishment of muscular tone for postural purposes.

Stookey's r Flexion of the leg in response to tapping the tendons of the semimembranosus and semitendinosus muscles while the leg is semiflexed at the knee.

stretch Contraction of muscle in response to sudden brisk longitudinal stretching of the same muscle. Syn., *myotatic*

Strümpell's r See Strümpell's sign.

sucking Sucking movements of the lips, tongue, and jaw in infants in response to contact of an bject with the lips.

superficial Any reflex occurring in response to superficial stimulation, as of the skin.

supinator jerk r Contraction of the supinator muscle when the styloid process of the radius is struck blow; stretch reflex.

supinator longus Flexion of the forearm in response to brisk tap on the tendon of the brachioradialis muscle (O.T supinator longus muscle)

supraorbital Contraction of the orbicularis oculi muscle in response to tap over the frontal region. Syn., *McCarthy'* orbicularis oculi

suprapatellar r A sudden upward movement of the patella produced by contraction of the quadriceps muscle in response to sharp blow upon finger which is placed against the upper border of the patella, with the leg extended.

suprapubic r Deflection of the linea alba toward the stroked side when the abdomen is stroked above the inguinal ligament.

swallowing The chain of reflexes involved in the mechanism of deglutition which may be evoked by stimulation of the palate or pharynx. See palatal

tactile reflexes. Reflex movements from stimulation of the tactile end organs.

tarsophalangeal See Bekhterev Mendel

tendo Achillis See Achilles tendon

tendon r Contraction of muscle in response to sudden stretching of the muscle by brisk tap against its tendon. Syn., *deep*

testicular compression Contraction of the abdominal muscles in response to compression or squeezing of testis. Syn., *Kocher'*

tonic labyrinthine reflexes. The accelerating and righting reflexes.

tonic neck reflexes. Rotation or deviation of the head causes extension of the limbs on the sam side as the chin, and flexion of the opposite extremities. Dorsiflexion of the head produces increased extensor tonus of upper extremities and relaxation of the lower limbs, and ventroflexion of the head the reverse. Seen in incomplete form in the young infant, and thereafter in cases where there is lesion t midbrain level or above.

tonic r Any refle involved in the establishment and maintenance of posture or attitude of the individual.

trace-conditioned reflexes. Reflex responses

occurring at considerable interval after the time that the conditioned stimulus was given.

triceps Extension of the forearm in response to brisk tap against the triceps tendon, with the forearm at right angles to the arm. Syn., *elbow*

unconditioned See instinctive

urinary See vesical

vasopressor Reflex rise in blood pressure resulting from the stimulation of afferent fibers of the vagus nerve. *The afferents probably include* nerve fibers that are normally stimulated by changes in distention of the great veins.

vasomotor r See vasomotor

vasomotor Constriction or dilatation of a blood vessel in response to psychic or physical stimulation. Syn., *vascular*

vasovagal Reflex vagal stimulation from peripheral blood vessels.

vertebra prominens r Relaxation of all four limbs produced by pressure on the lower cervical spinal column.

vesical The reflex or automatic response of the urinary bladder to empty itself, induced by distension of the organ to certain capacity or degree, normally controlled by voluntary inhibition and release also called *urinary* *vesicourethral*

vesicourethral r Vesical

vestibular reflexes. The responses of the autonomic nervous system to strong stimulation of the vestibular nucleus: pallor nausea, vomiting, and quasi-shock symptoms.

vestibulo-ocular A statokinetic reflex, observed as rotation of the eyes in the opposite direction when the head is quickly rotated.

virile r (a) See penile (b) A sudden downward movement of the penis when the prepuce or glans of the relaxed organ is pulled upward. Also called *Hughes*

visceral Any reflex induced by some irritation of an internal organ.

viscerocardiac Alteration in the activity of the heart in response to stimulation of an internal organ.

visceromotor Tenseness of skeletal muscles evoked by painful stimuli originating in the viscera.

viscerosensory A form of referred pain in which irritating stimuli within the viscera give rise to painful sensation in some superficial region of the body

vomiting r Vomiting induced by tickling the fauces or pharynx

Wernicke's hemianopic pupillary r See Wernicke *sign*.

Westphal's pupillary See pupillary ( )

Whytt's See light (a); pupillary ( )

winking Sudden closure of the eyelids in response to the unexpected appearance of any object within the field of vision.

wrist Flexion of the fingers induced by percussion of the wrist tendons.

zygomatic Movement of the lower jaw toward the percussed side when the zygoma is tapped with percussion hammer

re-flex'i o. *See reflection.*

palpebrarum. See *ectropion.*

re flex'o-gen'ic [L. *reflexus*, from *reflectere* G *gennaō*, from *gignesthai*, to be produced]. Causing or increasing tendency to reflex action; producing reflexes.

re-flex'o-graph [*reflexus*; G. *graphein*, to write]. An *instrument for graphically recording reflex.*

re"flex om ter [*reflexus*; G. *metron*, measure]. An instrument used to measure the force required t produce myotatic movement.

re-flex" ther'a-py [*reflexus*; G *therapeia*, treatment]. A form of therapeutics based on stimulation by manipulation, anesthetization, or cauterization of areas more or less distant from the affected lesion. Also called *zone therapy spinal therapeutics.*

re flux [L. *refluxus*, from *refluere*, to flow back]. A return flow as in reflux condenser which returns the condensate to the original field.

pancreatic The flow of pancreatic fluid in reverse direction through the common duct so that pancreatic fluid is present in the biliary tract. Also called *biliary-pancreatic*

re-fract [L. *refractus*, from *refringere*, to break up]. 1. Bend back. 2. Change direction by refraction. 3. Estimate the degree of ametropia, heterophoria, and strabismus present in an ye.

re-frac'ta do si (*ri-frack'tah do sigh, do see*) [L.]. In broken or divided doses.

re-frac'tion [L. *refractio*, from *refringere*, to break up]. 1. The act of refracting or bending back. 2. The deviation of ray of light from straight line in passing obliquely from one transparent medium to another of different density 3. The state of refractive power especially of the eye; the ametropia, emmetropia, or muscle imbalance present. 4. The act or process of correcting errors of ocular refraction.

angle of r The angle formed by refracted ray of light with the perpendicular at the point of refraction.

coefficient of The quotient of the sine of the angle of refraction into the sine of the angle of incidence.

double Birefringence. The property of having more than one refractive index, according to the direction of the traversing light. It is possessed by all except isometric crystals; by transparent substances which have undergone internal strains (g., glass) and by substances which have different structures in different directions (e.g. fibers)

dynamic The static refraction of the eye, plus that secured by the action of the accommodative pparatus.

equivalent See *specific refractive power*

errors of Departures from the power of producing normal or well-defined image upon the retina, because of ametropia.

r of the eye. The influence of the ocular media upon cone or beam of light, whereby normal or emmetropic eye produces proper image of the object upon the retina.

static That of the eye when accommodation is at rest.

re-frac'tion-ist [*refraction*]. One who corrects errors of ocular refraction.

re-frac tive [*refractus*]. Refracting; capable of refracting or bending back; pertaining to refraction.

re"frac-tiv'i ty [*refractus*]. *Power of refraction; bility to refract.*

re"frac-tom ter [*refractus*; G. *metron*, measure]. 1. An instrument for measuring the refraction of the eye 2. An instrument for the determination of the refractive index of liquid.

re frac to-ry [*refractarius*]. 1 Resisting treatment. 2. *Resisting the action of heat; slow to melt.* 3. Resisting stimulation, said of muscle or nerve immediately after responding to stimulation.

re frac'ture (*ree frack chur*) [*refractus*]. The breaking again of fractured bones that have united by fault union.

re-fran gi bil'i ty [L. *refringere*, to break up]. *Capability of undergoing refraction.* —**refran' gible,** *adj.*

re-fresh [OF *refreschier*]. *I surgery*, give to an old lesion the character of fresh wound. Also see *débridement.*

re·frig′er·ant (ri frij′ur·unt) [L. *refrigerare*, to make cold]. Cooling; lessening fever.

re·frig′er·ant. A medicine or agent having cooling properties or lowering body temperature.

re·frig″er·a′tion [L. *refrigeratio* from *refrigerare*]. The act of lowering the temperature of a body by conducting away its heat to a surrounding cooler substance.

re·frin′gent. See *refractive*.

ref′use [L. *refusum*, from *refundere*, to pour back]. Waste from manufacturing or other establishments, or any discarded matter.

re·fu′sion [*refundere*]. Injection of blood into the circulation after its removal from the same patient.

Regaud, Claude [French surgeon, 1870–1940]. Introduced a fixing fluid called Regaud's fixing fluid. See also *Regaud's theory* under electrosome *theory* and Regaud's *stain*.

re·gen′er·ate [L. *regenerare*, to bring forth again]. Form anew; reproduce, after loss.

re·gen″er·a′tion [L. *regeneratio*, from *regenerare*]. 1. The new growth or repair of structures or tissues lost by disease or by injury. 2. In chemistry, the process of obtaining from the by-products or end products of an operation a substance which was employed in the earlier part of the operation.
Wolffian r. The regeneration of a new lens from the upper margin of the iris after removal of the original lens in amphibians.

reg′i·men (redj′i·men) [L., rule]. A systematic course or plan including food, sanitary arrangements, and medication, to maintain or improve health. For specific regimens, see under *diet*.
stir-up r. Encouragement of the patient to breathe deeply and cough frequently to prevent postanesthetic pulmonary atelectasis.

re′gion [L. *regio*, region]. One of the divisions of the body possessing either natural or arbitrary boundaries. —**regional**, *adj.*
abdominal r. One of the nine regions of the abdomen artificially formed by two horizontal and two parasagittal lines. The horizontal lines are tangent to the cartilages of the ninth ribs and iliac crests, respectively, while the parasagittal lines are drawn vertically on each side from the middle of the inguinal ligament. The regions are, from above, the right hypochondriac region, the epigastric region, the left hypochondriac region, the right lumbar region, the umbilical region, the left lumbar region, the right inguinal region, the hypogastric region, and the left inguinal region.
anterior cubital r. The triangular area distal to the elbow bounded above by a line joining the two humeral epicondyles, medially by the pronator teres muscle, and laterally by the brachioradialis muscle; the antecubital fossa.
axillary r. A region upon the lateral aspect of the thorax, extending from the axilla to a line drawn from the lower border of the mammary region to that of the scapular region.
ciliary r. The zone around the cornea of the eye, corresponding to the position of the ciliary body.
deltoid r. The proximal part of the lateral aspect of the upper arm.
epigastric r. See abdominal r.
femoral r. That portion of the lower extremity associated with the femur. See Plate 4.
foveal r. of the retina. The fovea.
gluteal r. The region over the gluteal muscles.
gustatory r. The tip, margins, and root of the tongue in the neighborhood of the vallate papillae; also the lateral parts of the soft palate and the anterior surface of the glossopalatine arches.
hypochondriac r. See abdominal r.
hypogastric r. See abdominal r.
iliac r. The region of the ilium. Also see inguinal r.
inferior sternal r. That part of the sternal region lying below the margins of the third costal cartilages.
infra-axillary r. The space between the anterior and posterior axillary lines.
infraclavicular r. The area bounded superiorly by the lower border of the clavicle, inferiorly by the lower border of the third rib, on one side by a line extending from the acromion to the pubic spine, and on the other side by the edge of the sternum.
infrahyoid r. The space below the hyoid bone, between the sternocleidomastoid muscles and the sternum.
inframammary r. The area immediately below each breast and above the costal margin.
infrascapular r. A region on either side of the vertebral column below a horizontal line drawn through the inferior angle of each scapula. Also called *subscapular r.*
infraspinous r. The region corresponding to the infraspinous fossa of the scapula.
infratemporal r. The area below the temporal fossa and deep to the ramus of the mandible.
inguinal r. The right and left inguinal or iliac regions are two of the nine abdominal regions. The right includes the abdominal surface covering the cecum and the vermiform process, the ureter, and the spermatic vessels; the left, that covering the sigmoid flexure of the colon, the ureter, and the spermatic vessels. Also called *iliac r.* See Plate 4.
interscapular r. The space between the scapulas.
ischiorectal r. The region corresponding to the posterior part of the pelvic outlet, between the ischium and the rectum.
lumbar r. See abdominal r.
mammary r. The space on the anterior surface of the chest between a line drawn through the lower border of the third rib, and one drawn through the upper border of the xiphoid cartilage.
olfactory r. The area on and above the superior conchae and on the adjoining nasal septum where the mucous membrane has olfactory epithelium and olfactory (Bowman's) glands; also called *pars olfactoria*.
parasternal r. The region between the sternal margin and the parasternal line.
parotid r. The area of the face anterior to the ear lying over the parotid gland.
pelvic r. The region within the true pelvis.
perineal r. The region of the perineum. See *perineum*, 2.
popliteal r. See popliteal *space*.
precordial r. The surface of the chest covering the heart.
preoptic r. Small region of the hypothalamus anterior to the optic lobes, the stimulation of which causes contraction of the urinary bladder and occasionally other evidences of parasympathetic activity; also called *preoptic area*.
pretectal r. A zone of transition between the thalamus and tectum, rostral to the superior colliculi. The optic fibers entering it subserve the pupillary reflex, which is abolished by bilateral lesions of the region.
pulmocardiac r. The region of the left thorax in which the left lung overlaps the heart.
pulmogastric r. The portion of the left thorax in which the lung overlaps the stomach.
pulmohepatic r. The portion of the right thorax in which the lung overlaps the liver.
pulmovascular r. The part of the thorax in which the lung overlaps the origins of the larger vessels.
respiratory r. of the nose. The portion of the

nasal passages having to do with the act of respiration.

retromaxillary r The space behind the maxilla.

scapular r The region of the back corresponding to the position of the scapula, the spine of which divides it into supraspinous and an infraspinous region.

sensitive See sensitive volume.

sternal The region overlying the sternum.

strip r Area 4S of Brodmann areas.

sublingual That part of the floor of the mouth lying below the tongue.

submaxillary The region between the mandible and the anterior and posterior bellies of the digastric muscle. The triangle so bounded contains the submaxillary or submandibular gland. Also called *submandibular triangle*.

submental The region just beneath the chin.

subthalamic The ventral or motor part of the thalamus concerned largely with extrapyramidal pathways.

superior sternal r That portion of the sternal region lying bove the lower margins of the third costal cartilages.

supraclavicular The space between the upper margin of the clavicle and the lower borders of the omohyoid and sternocleidomastoid muscles.

suprahyoid The region between the mandible and the hyoid bone.

supra-inguinal That bounded by the rectus abdominis muscle, the inguinal ligament, and horizontal line through the iliac crest.

supraspinous The region corresponding to the supraspinous fossa of the scapula.

suprasternal See suprasternal notch.

thyrohyoid r The region around the thyroid cartilage and the hyoid bone.

umbilical See bdominal.

vertebral Relating to the region over the vertebral column.

reg'is-ter [ML. *registrum*, from L. *regerere*, to carry back]. The compass of voice; also subdivision of its compass, consisting in series of tones produced in the same way and of like character.

reg'is trar [*regerere*]. 1 An official custodian of records. 2. An officer in charge of hospital registry office.

reg"is tra'tion [*regerere*]. The act of recording, as of deaths, births, etc.

reg'is try [*regerere*]. Office listing nurses vailable for general or special services.

regitine. Trade-mark for *phentolamine*.

reg"le men ta'tion [F *réglementation*, from L. *regula*, rule]. The legal restriction or regulation of prostitution.

re gres sion [L. *regressio*, from *regredi*, to turn back]. 1 A turning back. 2. The tendency for children to deviate less from the verage of the population than their parents. Also called *filial*. 3. *I psychology*, mental state and mode of adjustment to difficult and unpleasant situations, characterized by behavior of type that had been satisfying and ppropriate at an earlier stage of development but which no longer befits the age and social status of the individual. A terminal state in some forms of schizophrenia. 4 *I mathematics*, the tendency for group equated in one trait to have mean value closer to the general mean in related trait. 5. See *retrogression*.

re-gres sive [*regredi*]. Going back t former stat ; subsiding said of symptoms.

reg'u-lar [L. *regularis*, from *regula*, rule]. 1 According to rule or custom. 2. Colloquial term for menstruating at normal time.

reg"u-la'tion [*regula*]. The bility of developing organism to continue normal development in spite of experimental interference, such as blation, implantation, or transplantation.

bathmotropic Regulation of the excitability of the atrial and ventricular myocardium by sympathetic and parasympathetic stimulation.

dromotropic r The regulation of the rate of conduction and duration of the refractory period of the heart, by sympathetic and parasympathetic influences.

reg'u la tive [*regula*]. *I embryology* descriptive of development of eggs in which the cells of the early stages can be affected by inducing agents from the surrounding parts opposed to mosaic development. See *mosaic*, 2.

regulin. Trade-mark of preparation of agar and psyllium, used in the treatment of constipation.

reg'u lus [L., petty king]. A metal reduced from its ore to the metallic state.

re-gur'gi tant [L. *re-* back, *gurgitare*, to flood]. Flowing backward.

re gur"gi ta tion [*re-*; *gurgitare*]. 1 A backflow of blood through heart valve that is defective. 2. The return of food from the stomach to the mouth soon after eating, without the ordinary efforts at vomiting.

aortic That of the blood through the aortic orifice, due to incompetence of the aortic valve.

duodenal The return of chyme from the duodenum into the stomach.

functional A form f mitral or tricuspid regurgitation, due to dilatation of the muscular rings surrounding the respective valves.

mitral Imperfect closure of the mitral valve during the cardiac systole, permitting blood to be forced back into the left atrium.

re"ha bil"i ta'tion [L. *re-* again; *habilitas*, ability]. The restoration to disabled individual of maximum independence commensurate with his limitations by developing his residual capacities. *I medicine*, it implies prescribed training and employment of many different methods and professional workers.

re"ha la tion [*re-*; L. *halare*, to breathe]. Rebreathing; the inhalation of air which has been inspired previously; sometimes used in anesthesia.

Rehberg, Poul Brandt (1895–) Danish physiologist who devised test for renal function based on the excretion of creatinine, called *Rehberg test*.

Rehfuss, Martin Emil [*American physician*, 1887]. Introduced the fractional method of test meal examination. A test meal of two slices of toast (35 gm.) and 8 ounces (250 cc) of weak tea is called *Rehfuss test meal*. A narrow flexible t be fitted with perforated tip at the lower end and syringe at the upper end is called the *Rehfuss tube*. The tube is passed into the stomach after the meal. At 15-minute intervals, small quantities of gastric content are withdrawn by means of the syringe and examined, called the *Rehfuss method*.

Rehn, Ludwig [*German surgeon*, 1849-1930]. First performed thyroidectomy for exophthalmic goiter (1880). Introduced an operation for rectal prolapse, in which he resected the protruding mucous membrane with infolding of the muscularis by suture; called *Rehn operation*, *Rehn-Delorme operation*.

Reichel's duct. See *cloacal duct*.

Reichert, Karl Bogislaus (1811 1883) German anatomist who described the skeletal elements of the embryo which become the styloid processes, the stylohyoid ligaments, and the lesser cornua of the hyoid bone, called *Reichert' cartilages*. He was noted also for his contributions to the knowledge of amphibian cranium. Also see Reichert membrane.

re·sect' [L. *resectum*, from *resecare*, to cut off]. 1. Cut out portion of a tissue or organ. 2. Cut away the end of one or more of the bones entering into joint.

re·sec'tion [L. *resectio*, from *resecare*]. The operation of cutting out, as the removal of section or segment of an organ.
window r Submucous resection of part of the nasal septum.

re·sec't ·scope [*resecare*; G. *skopein*, to examine]. A tubelike instrument by means of which small structures may be divided within body cavity without an opening other than that made by the instrument itself.

re·ser'pine. $C_{33}H_{40}N_2O$; an alkaloid, from *Rauwolfia serpentina* and other species of *Rauwolfia*, which reduces blood pressure in hypertensive states, slows pulse rate, and possesses sedative and tranquilizing properties. See *serpasil*.

re·serve (ri·zurv') [L. *reservare*, to save up]. A remainder; capacity or potentiality retained as an additional store.
alkali The components of the blood which are capable of neutralizing acids. These include sodium bicarbonate, dipotassium phosphate, and proteins.
cardiac r Ability of the heart to do more work in pumping larger mounts of blood per beat.
diminished cardiac Condition in which cardiac patient develops dyspnea on performing ordinary muscular effort but has none at rest.

res'i·dent phy·si'cian. A physician living in the hospital for further training after an internship. Also called *resident*.

re·sid'u·al [L. *residuus*, that is left behind]. Pertaining to that which cannot be evacuated or discharged, as residual air in the lungs, residual urine in the bladder.

re·sid'u·al. A remainder.

res'i·due [*residuus*]. That which remains after part has been removed remainder.

res'i·dues [*residuus*]. 1. The amino acids or polypeptides resulting from hydrolysis of protein. 2. The amino-acid building blocks of protein. The term is also used for the acid after deamination.

e·sil'i·ence [L. *resilire* to spring back]. The quality of being elastic or resilient.

re·sil'i·ent [*resilir*]. Rebounding elastic.

res'in (rez'in) [L. *resina*, resin]. 1. One of class of vegetable substances exuding from various plants generally soluble in alcohol, in ether and in the volatile oils, and insoluble in water; readily fusible and inflammable. They may represent oxidation products of terpenes, and are composed largely of esters and ethers of organic acids with complex alcohols known as resinols, along with acids and acid anhydrides. 2. A class of pharmaceutical preparations (*resinae*) made by extracting resin-containing drugs with alcohol, concentrating the liquid and adding it to water whereby the resin and other water-insol ble principles precipitate and may be collected and dried. —**resinous**, *adj*
acrylic A synthetic resin, usually polymer of methyl methacrylate. Used in dentistry and medicine for the manufacture of artificial dentures, artificial eyes, or splints. See *acrylics*.
anion exchange A highly polymerized synthetic organic compound containing amine groups the base form has the property of withdrawing acid from liquid medium in which the resin is placed, and for this reason is utilized patients antacid to control symptoms in simple hyperacidity and in peptic ulcer. See *polyamine-methylene resin*.
cation exchange A highly polymerized synthetic organic compound consisting of large nondiffusible anion and simple diffusible cation, which latter can be exchanged for cation in the medium in which the resin is placed. *I* sodium such resin, often modified to avoid disturbance in th balance of other physiologically important ions, is used to remove sodium ions from the body in treating conditions resulting from abnormal retention of sodium. See *carboxylic cation resins*, *carbacrylic resin*, *potassium carbacrylate*.
ion exchange r A synthetic polymer containing fixed ionizable groups which exchange ions of the opposite charge.
ipomea (*resina ipomoeae*) A powerful cathartic with tendency toward griping. Dose, 0.13–0.32 Gm. (2–5 gr) Also called *Mexican scammony*.
jalap (*resina jalapae*) A drastic cathartic. Dose, 0.13–0.32 Gm. (2–5 gr)
podophyllum See *podophyllum resin*.

res'in·oid (rez noyd) [*resina*, G. *eidos*, form]. A substance which has some of the properties of resi —**res'inoid**, *adj*

resinol. 1 A proprietary ointment used to allay itching in minor skin disorders. 2. General term for the complex alcohols found in resins.

re·sist'ance [L. *resistere* to withstand]. 1. Opposition to force or external impression. 2. *I* electricity the opposition offered by conductor to the passage of the current. Abbreviated, R. 3 *I* *psychoanalysis*, the reluctance of the subject to give up habitual patterns of thinking, feeling, and acting to take on less neurotic and newer modes of adaptation.
essential r The resistance to conduction within the battery itself. Also called *internal*.
extraordinary The resistance to conduction in the circuit outside of the battery. Also called *external*.
natural See native *immunity*.

re sis to my'cin. $C_{23}H_{18}O_6$ weakly acid antibiotic substance, prepared from *Streptomyces resistomycificus*, active against *Staphylococcus aureus*, *Bacillus subtilis*, and *Mycobacterium tuberculosis*.

res"o·lu'tion [L. *resolutio*, from *resolvere*, to loosen]. 1. The subsidence of inflammation; as in pneumonia, the stage of dissolving the exudate due to proteolytic enzymes. 2. The ability of the eye or lens to register small detail, the resolution of the human eye being 1 minute of arc. 3. The separation of an optically inactive mixture of isomers into its optically active components. *Sy* *mesotomy*.

re·solve (ri·zolv ") [*resolvere*]. 1. Return to the normal state after some pathologic process. 2. Separate anything into its component parts.

re·sol vent (ri·zol vunt) [*resolvere*]. Causing solution or dissipation of tissue.

re sol'vent. An agent causing resolution.

e·solv'ing pow'er The capability of lens to make clear the finest details of an object.

res nance (rez'o·nuns) [L. *resonare*, to resound]. 1 The attribute of relatively long duration possessed by certain sounds. 2. Normal resonance in physical diagnosis, the prolonged, nonmusical, composite sound which results from vibration of the normal chest. It consists of mixture of fundamental tones, most of which are within the range of 90 to 130 vibrations per second, and hence varies but little in pitch. 3. *I* chemistry, the phenomenon of compound simultaneously having the characteristics of two structural forms of the compound, i.e., resonating between the two structures, thereby conferring greater stability upon it than if it possessed either of the two structures involved. Benzene represents such

resonance hybrid of two forms differing only in the alternation of double bonds in the ring.
amphoric A tympanitic percussion note containing overtones which give it the sound of air blown across the mouth of an empty bottle or jar
bandbox See tympanitic
cracked-pot A characteristic clinking sound which can be elicited occasionally by percussion over tuberculous cavities, especially when the percussion is forcible and the patient mouth is open. Also called *cracked-pot sound*.
skodaic Tympanitic resonance in the area bove the region of lung compressed by pleural effusion.
tympanitic ( ) The prolonged musical sound heard on percussion over the stomach, colon, or other air-containing cavity with flexible walls. In contrast with normal resonance, its sounds vary widely in pitch. (b) A percussion note which exhibits in varying proportion the characteristics of both resonance and tympany Also called bandbox hyperresonance, *Skoda*
vesicular r That which is contingent upon the existence of air-containing lung vesicles. Also called *normal*
vocal The vibrations of the spoken voice transmitted through the lungs and the chest wall and detected by auscultation. Abbreviated, V R.

res'o-nant [resonare]. Possessing, or capable of producing, resonance.

res'o-na"tor (rez o-nay"tur) [resonare]. Any physical body capable of being set into vibration in unison with another vibrating body The thoracic cage, lung, and other human structures possess this capacity in limited degree.

re-sorb ent [L. resorbere, to suck back]. Absorbing.

re-sorb'ent. A drug which aids in the process of resorption.

re-sor'cin (ri-sor'sin) Resorcinol.

re-sor'ci -ol (n sor sin-ole, -ol, -awl) [L. resina, resin It. orcello archil] $C_6H_4(OH)$; meta-dihydroxybenzene; white needle-shaped crystals or powder very soluble in water; used in treatment of skin diseases for its antiseptic, keratolytic, exfoliative, and antifungal properties, and also as reagent.
blue. Lacmoid.
monoacetate. $C_6H_4.OH.OCOCH_3$; viscous, pale-yellow or amber liquid, sparingly soluble in water soluble in alcohol, which slowly liberates resorcinol by hydrolysis. used in treating various diseases of the skin and scalp. See euresol.

re-sor"ci -ol phthal'ein. Fluorescein.

re-sorp'tion [L. resorbere, to suck back]. The removal by absorption.

re-spir'a-ble (ri-spy'ruh-bul, res'pi ruh-bul) [L. respirare, to breathe back]. Capable of being inspired and expired; capable of furnishing the gaseous interchange in the lungs necessary for life. —**respirabil'ity** n.

res"pi ra'tion [L. respiratio, from respirare]. 1. The interchange of gases of the living and the gases of the medium in hich they live, through any channel, as cutaneous respiration. 2. The act of breathing with the lungs; the taking of air into, and its expulsion from, the lungs. It consists of two acts inspiration, or the taking in of the atmospheric air nd expiration, or the expelling of the modified air Expired air contains less oxygen and more carbon dioxide than inspired air The volume of air taken into the lungs and given out during an ordinary respiration (tidal air) is 500 cc.; the volume that can be inspired in addition by forcible inspiration (complemental air) is 1500 cc.; that which can be exhaled after normal expiration (reserve or supplemental air) is 1500 cc. the amount remaining in the chest after the most complete expiration (residual air) is from 1200 to 1600 cc. The volume of air that can be forcibly expelled after the most forcible inspiration is termed vital or respiratory capacity and is equal to the tidal air complemental air and reserve air or about 3400 cc. —**respi atory** *adj*
abdominal A type of respiration caused by the contraction of the diaphragm and the elasticity of the abdominal walls and viscera.
absent r Suppression of respiratory sounds.
amphoric A blowing respiration engendered in large cavities with firm walls. Its peculiar character is due to an echo from the walls of the cavity
apneustic Breathing characterized by prolonged deep inspirations.
artificial See *artificial respiration*.
Biot's Respiration associated with abruptly alternating periods of apnea and hyperpnea, in contrast to the gradually alternating phases of Cheyne-Stokes respirations. Seen in meningitis and medullary disease.
blowing See bronchial
bronchial Respiration as heard over the trachea or bronchial tubes in health; it is high in pitch, equal in inspiration and expiration, blowing in character (especially the expiratory element) and marked by brief pause between inspiration and expiration. It is also heard over other parts of the lungs which are the seat of consolidation.
bronchocavernous A form intermediate in character between bronchial and cavernous respiration.
bronchovesicular Respiration having the characters of both bronchial and vesicular respiration. It is heard over areas of consolidation surrounded by patches of healthy lung tissue.
cavernous A blowing respiration of low pitch, circumscribed, alternating with gurgling, and deriving its chief character from the nature of the cavity in which it is generated.
cerebral A shallow blowing respiration seen often in the presence of fever
Cheyne-Stokes Periods of stertorous respiration interrupted by periods of apnea seen in cerebral arteriosclerosis, senility heart disease, and few other similar conditions.
cogwheel See interrupted
collateral Passage of air between lobules within the same lobe of lung, allowing ventilation of lobule whose bronchiole is obstructed
costal Respiration in which the chest movement predominates over the diaphragmatic.
diaphragmatic See bdominal
direct Respiration in which the living substance of an organism, as an ameba, takes oxygen directly from the surrounding medium, and returns carbon dioxide directly to it, no respiratory blood being present.
dyspneal See dyspnea.
electrophrenic Respiration induced, increased, or controlled temporarily by electrical stimulation of one phrenic nerve.
exaggerated An increase in intensity without alteration in character or rhythm of the respiratory movements.
external The interchange of gases between the atmosphere and air in lungs and between the air in lungs and pulmonary capillaries.
feeble Diminution in the intensity without alteration in the character or rhythm of the respiratory movements
fetal The interchange of gases between the fetal and the maternal blood through the medium of the placenta.
forced Respiration induced by blowing air into

the lungs by means of bellows, or in some other way as in physiologic experiments.
harsh See bronch vesicular
hissing r An increased vesicular murmur causing hissing sound.
hollow r See amphoric
indirect r Respiration in which th living substance of the organism, as in all the higher mammals, gets rid of carbon dioxide and obtains oxygen by means of circulating respiratory blood.
internal r The exchange of gases between the systemic blood and tissues.
interrupted Respiration in which either inspiration or expiration is divided into two or more parts. It is most often heard at the apex of the right lung, anteriorly
intrauterine Respiration by the fetus before delivery
jerking r See interrupted
Kussmaul' The deep gasping respiration characteristic of severe cidosis.
labored Respiration in which, owing to lack of bility on the part of the ordinary muscles of respiration to aerate the blood sufficiently the auxiliary muscles of respiration are called into play
laryngeal r The widening of the glottis during inspiration and its narrowing during expiration.
nasal Nose breathing.
nervous r See cerebral
normal Respiration as it occurs in normal individual in state of rest or moderat action.
paradoxical In open pneumothorax, condition in which the lung on the side of the pleural opening fills on exhalation and empties on inhalation.
pharyngeal r Rhythmic expansions and contractions of th pharynx in connection with other movements of respiration. The expansion is preinspiratory and the contraction inspiratory
placental See fetal
pneumotoxic Breathing characterized by complete irregularity in rate and amplitude.
prenatal r See fetal
puerile r Exaggerated expiratory breath sounds, prolonged and high pitched, heard in healthy children.
pulmonary Respiration in which the interchange of gas between the blood and air occurs in the lungs.
stertorous r The sound produced by breathing through the nose and mouth at th same time, causing vibration of the soft palate between the two currents of air
sibilant A dull, whistling sound heard over the bronchi, and due to obstruction by mucus.
tracheal The respiratory murmur heard in normal individual by placing stethoscope over the suprasternal fossa.
wave See Cheyne-Stokes
vesicular A soft, gradual, low-pitched inspiration immediately followed by shorter and less distinct expiration sound heard over the normal lung during respiration
vesiculobronchial See bronchovesicular
vesiculocavernous Respiration that is both vesicular and cavernous.
wavy See interrupted

res'pi ra tor [*respirare*] A device for producing artificial respiration. Except for the head, the body is hermetically enclosed in cabinet and respiratory movements are produced by introducing alternately pressure and suction.
Both A cabinet of wood enclosing the body except for the head, with rubber collar about the patient's neck. A small motor drives bellows connected with the chamber by flexible pipe. By means of valve th bellows acts as sucker extracting and letting in air alternately
Drinker r A power-driven breathing apparatus similar in type to the Both respirator the cabinet being of metal.

re spire [*respirare*]. Breathe.

res pi rom e-ter [*respirare*; G *metron*, measure]. A device to determine the character of respiration

res"pi rom e-try The quantitative study of respiration.
capillary r A method to determine changes in the volume of gases in a capillary tube which leads from a chamber filled with respiring sample to chamber containing only media and reagents. The capillary tube contains an index droplet, the displacement of which serves to determine the changes in gas volume.

re-sponse [L. *responsum*, from *respondere*, to reply] The reaction or movement of muscle or other part due to the application of stimulus See also *reflex*.
antichromatic responses. Nervous mechanisms postulated to deal with fringe colors which are seen as black and white if they subtend small visual angles.
conditioned See conditioned *reflex*.
inherited See instinctive *reflex*.
triple r See *triple response*.

re spon si bil'i ty [*respondere*]. 1 *I legal medicine*, the accountability for professional acts 2 The capacity to differentiate right from wrong

rest [AS]. 1 Cessation of labor or action repose 2. An epithelial remnant persisting after its developmental activity has ceased. Also called *epithelial debris*. See fetal
bed r ( ) A device to support patients in bed (b) The keeping of patient in bed continually
caudal medullary A remnant of the medullary coccygeal vesicle that ormally disappears about the sixth fetal month, but may give rise to sacrococcygeal cysts or fistulas.
cell See fetal
epithelial r One of the cords of cells in the periodontal membrane representing remnants of the epithelial sheath of the enamel organ also called *epithelial cord*, *epithelial debris* (of Malassez), *epithelial remnant*.
fetal A portion of embryonic tissue, or cells, which is misplaced in another tissue during development.

res ti form [L. *restis*, cord; *forma*, form]. Cordlike or cordlike.

rest'ing [AS. *restan*]. Ceasing from motion at rest.

res"ti tu'ti o ad in'te grum (res"ti tew shee'o ad in ti-grum) [L.]. Complete restoration to healthy condition.

res"ti tu'tion [L. *restitutio*, from *restituere*, to restore]. 1. The act of restoring. 2. *I obstetrics*, rotation of the fetal head immediately after its birth. See Plate 42. 3 *I psychiatry*, the psychic mechanism whereby the individual seeks to relieve himself of unconscious guilt by benevolent acts which undo, make good, or repair some harm

res"to ra tion [L. *restauratio*, from *restaurare*, to restore]. The return to state of health or normal condition. —**restor'ative** *adj*

re-stor a tive [*restaurare*]. A remedy that is efficacious in restoring health and strength

re-strai t' [OF *restrainte*, from L. *restringere* to draw back tightly] 1 Hindrance of any action, physical, moral, or mental. 2. The state of being controlled confinement.
mechanical Restraining the insane by mechanical means.

medicinal r. The use of narcotics and sedatives in quieting the mentally deranged.

re·stric'tion of ego. *In psychology,* a defense mechanism for escaping anxiety by avoiding those situations consciously perceived as dangerous or uncomfortable, as in the many phobias of childhood and in those adults whose sphere of movement is severely limited by their need to avoid anxiety.

re·strin'gent [*restringere*]. An astringent or styptic.

restrol. A trade-mark for the synthetic estrogen dienestrol.

re·sub·li·ma'tion [L. *re-*, again; *sublimatio*, from *sublimare*, to raise]. The process of sublimating a drug for the second time.

re·sul'tant. That which results; specifically, any product of a chemical reaction.

re·su'pi·nate [*re-*; L. *supinare*, to bend backward]. Turned in a direction opposite to normal.

res"ur·rec'tion·ist [L. *resurrectio*, from *resurgere*, to raise oneself again]. One who steals dead bodies from the grave as subjects for dissection. *Obs.*

re·sus"ci·ta'tion [L. *resuscitatio*, from *resuscitare*, to revive]. The prevention of asphyxial death by artificial respiration. —**resus'citate,** *v.*

Drinker-Collins r. The use of a negative pressure cabinet where respiration is to be maintained over a long period.

Flagg r. The use of controlled suction and insufflation through a laryngoscope using the Flagg machine.

re·sus"ci·ta'tion cage. An electrically heated metal cage or cradle which covers at least three-quarters of the patient; used in surgical shock.

re·sus'ci·ta"tor [L., from *resuscitare*]. A device for forcing oxygen or oxygen-carbon dioxide mixtures into the lungs for resuscitation.

re·su'ture (ree-soo'chur) [L. *re-*, again; *sutura*, suture]. Secondary suture; suture of a wound some time after the first suture has been made.

resyl. Trade name for a syrup containing guaiacol glyceryl ester.

re·tain'er [L. *retinere*, to hold back]. A dental appliance for holding in position teeth which have been moved.

re·tard'er. A negative catalyst, i.e., one acting to retard a reaction.

retch [AS. *reccan*]. Strain, as in vomiting. —**retch'ing,** *n.*

re'te (ree'tee) (pl. *retia*) [L., net]. Any network or decussation and interlacing, especially of capillary blood vessels.

dorsal carpal r. An arterial network on the back of the wrist formed by branches of the dorsal interosseous and the volar anterosseous arteries and terminal branches of the ulnar and radial arteries.

articulare genus. One formed by the anastomosis of the arteries over the anterior and lateral surfaces of the knee. See Plate 7.

calcaneum. An arterial anastomosis over the calcaneus.

cutaneum. The network of vessels at the boundary between corium and superficial fascia.

dorsale pedis. An arterial network on the dorsum of the foot, formed by branches of the tarsal and metatarsal arteries joined by perforating plantar branches.

mirabile. A capillary plexus intercalated in the path of an artery.

mucosum. Old term for the germinative layer of the epidermis.

olecrani. The network of vessels around the olecranon and at the back of the elbow, formed by the divisions of the profunda brachii and other arteries.

ovarii. Vestigial tubules or cords of cells near the hilus of the ovary corresponding with the rete testis, but not connected with the mesonephric duct.

r. patellae. Plexus of vessels surrounding patella.

peg. Prolongation of the epidermis between the papillae of the corium; interpapillary epithelium.

r. subpapillare. The network of vessels between the papillary and reticular layers of the corium.

r. testis. The network of anastomosing tubules in the mediastinum testis.

re'tene, ret'een. $C_{18}H_{18}$. 1-Methyl-7-isopropylphenanthrene. Occurs in the higher boiling fractions of wood tar.

re·ten'tion [L. *retentio*, from *retinere*, to hold back]. 1. The act of retaining or holding back, as the holding of urine in the bladder due to some hindrance to urination. 2. *In dentistry,* holding moved teeth in their new positions until stability of their investing tissues is established.

nitrogen r. Azotemia.

re·tic'u·la. Plural of reticulum.

re·tic'u·lar [L. *reticulum*, little net]. Resembling a net; formed by a network, as reticular tissue.

re·tic'u·la"ted [L. *reticulatus*, made like a net]. Having netlike meshes or formed like a web. —**reticula'tion,** *n.*

re·tic'u·lin [L. *reticulum*, little net]. A protein isolated from the fibers of reticular tissue.

re·tic'u·lo·cyte" [*reticulum*; G. *kytos*, cell]. 1. An immature or young erythrocyte containing ribonucleoprotein demonstrable on supravital staining, usually with brilliant cresyl blue, as a granular or filamentous network. It is larger than a normal erythrocyte and usually constitutes less than 1% (range 0.5–2.5%) of the total. There is an increase during active erythrocytopoiesis. In Wright-Giemsa stained blood films these cells appear as polychromatophilic erythrocytes. Also called *reticulated erythrocyte, proerythrocyte, pronormocyte, granule cell, granulophil, skein cells.* 2. A cell of reticular tissue. Syn., *reticular cell.*

re·tic"u·lo·cy"to·pe'ni·a [*reticulum*; *kytos*; G. *penia*, poverty]. Decrease of reticulocytes in the circulating blood.

re·tic"u·lo·cy·to'sis (ri-tick"yoo-lo-sigh-to'sis) [*reticulum*; *kytos*; G. *-osis*, condition]. Condition in which reticulocytes are present in excess in the peripheral blood.

re·tic"u·lo·en"do·the'li·al [*reticulum*; G. *endon*, within; *thēlē*, nipple]. Pertaining to cells which are grouped under the reticuloendothelial system.

re·tic"u·lo·en"do·the"li·o'ma. See reticulum-cell sarcoma.

re·tic"u·lo·en"do·the"li·o'sis [*reticulum*; *endon*; *thēlē*; G. *-osis*, condition]. A disease of the reticuloendothelial system characterized by an extensive, irreversible, and systematized proliferation of histiocytes. Diagnosis rests on biopsy of involved organs (liver, spleen, and bone marrow), but the blood picture does not show the atypical cells until late or fulminating stages, when the condition is called *Schilling type of monocytic leukemia.* Clinically the manifestations are protean, but in general either visceral or cutaneous involvement predominates. A form seen in infancy and early childhood is called *Letterer-Siwe disease.* Syn., *malignant histiocytic, histiomonocytic,* or *malignant reticulosis.*

nonlipid r. See Letterer-Siwe disease.

reticulogen. Trade-mark for a brand of purified liver extract.

re·tic"u·lo·pe'ni·a. See *reticulocytopenia.*

re·tic"u·lo·sar·co'ma. See reticulum-cell sarcoma.

re·tic"u·lo'sis. Reticuloendotheliosis.

lipomelanotic r. A form of lymph-node hyperplasia characterized by preservation of the architectural structure, inflammatory exudate, and hyperplasia of the reticulum cells which show phagocytosis of hemosiderin, melanin, and occasionally fat. It is often secondary to an extensive dermatitis. Syn., *lipomelanotic reticular hyperplasia, dermatopathic lymphadenitis.*

re·tic"u·lo·the"li·o'ma. See *retothelioma.*

re·tic'u·lum (pl. *reticula*) [L.]. 1. A fine network. 2. *In veterinary medicine,* the second division of the ruminant stomach. —**reticulose,** *adj.*

nuclear r. The network of linin and chromatin of a nucleus.

stellate r. That portion of the pulp of the enamel organ in which the cells form a network with large, fluid-filled spaces between them.

re·ti·fism. A sexual perversion in which a shoe or foot possesses the same value as the genital organs.

re·ti·form, ret'i·form [L. *rete,* net; *forma,* form]. Net-shaped; reticular.

ret'i·na [*rete*]. The light-receptive layer and terminal expansion of the optic nerve in the eye. It extends from the point of exit of the nerve forward to the ora serrata. It consists of the following layers, named from behind forward: the pigment layer; the neuroepithelial layer, comprising the layer of rods and cones (bacillary layer), the outer limiting membrane, and the outer nuclear layer; the outer reticular layer (outer granular layer); the inner nuclear layer; the inner reticular layer (inner granular layer); the ganglionic layer; the nerve fiber layer. These layers are united and supported by neuroglial elements, most prominent of which are the radial fibers of Müller. See Plate 19. —**retinal,** *adj.*

coarctate r. The condition caused by an effusion of liquid between the retina and the choroid; it gives the retina a funnel shape.

cortical r. The projection of retinal points upon the striate area, the visual center in the cerebral cortex. Of particular interest is the large cortical area representing the macula compared with the small part representing the periphery. This area is at the calcarine fissure.

detachment of r. Separation of the retina from the choroid.

shot silk r. A retina with the appearance of changeable, glistening reflections; seen sometimes in young persons.

tigroid r. The spotted retina of retinitis pigmentosa.

ret"i·nac'u·lum (pl. *retinacula*) [L., that which holds back]. A special fascial thickening which holds back an organ or part. Also called *tendinum.*

extensor r. A thickening of deep fascia on the dorsum of the wrist and forearm attached to the radius laterally and the ulna, carpus, and medial ligament of the wrist medially. It overlies the compartments which transmit the extensor tendons of the wrist and fingers.

flexor r. of the ankle. The fibrous band that stretches between the medial malleolus and medial tubercle of the calcaneus, binding down the tendons of the tibialis posterior, the flexor digitorum longus, and the flexor hallucis longus.

flexor r. of the wrist. A thickened band of deep fascia on the volar surface of the hand and forearm, attached laterally to the navicular and greater multangular bones and medially to the pisiform and hamate bones. It binds down the tendon of the flexor pollicis longus and the flexor tendons of the fingers. Also called *transverse carpal ligament.*

inferior extensor r. A thickened band of deep fascia which binds down the tendons as they enter the dorsum of the foot.

inferior peroneal r. The band of fascia in the ankle which by its attachment to the peroneal tubercle holds the tendons of the peroneus longus and peroneus brevis to the lateral surface of the calcaneus.

patellar r. Either of the tendinous expansions from the vastus muscles and fascia lata which pass from the patella to the condyles of the tibia. Depending upon the side to which they pass, they are called medial or lateral patellar retinacula. See Plate 2.

r. cutis. A fibrous band connecting the corium with the underlying fascial structure.

r. of the hip joint. Any one of three deep longitudinal bands of the articular capsule which reflect upward along the neck of the femur from the femoral attachment toward the articular margin.

superior extensor r. The broad fibrous band which stretches across the front of the leg between the distal parts of the tibia and fibula. It binds the tendons of the tibialis anterior and extensor muscles of the toe.

superior peroneal r. The retinaculum of the ankle which binds down the tendons of the peroneus longus and the peroneus brevis.

ret"i·nal cor"re·spond'ence. The relation in the two eyes of the retinal areas at which associated retinal images are formed.

abnormal r. c. A condition found in concomitant strabismus, in which the retinal image formed at the macula of the fixing eye is associated with the image formed at an extramacular area of the retina of the squinting eye. Also called *binocular false projection, retinal incongruity.*

normal r. c. The normal condition in which the retinal image formed at the macula of one eye is associated with that formed at the macula of the other eye.

ret'i·nal pur'ple. See *rhodopsin.*

ret'i·nene [L. *rete,* net]. A pigment of the rods of the retina, chemically vitamin A aldehyde. Two forms are known, retinene₁ and retinene₂, corresponding to vitamin A₁ and vitamin A₂. On illumination with white light, rhodopsin (visual purple) is converted to retinene₁ and the protein opsin; the retinene₁ is then reduced to vitamin A₁. In the dark vitamin A₁ reacts with opsin to form rhodopsin. In freshwater vertebrates, retinene₂ undergoes similar reactions with porphyropsin.

ret"i·nene re·duc'tase. The enzyme responsible for the reduction of retinene to vitamin A; it may be identical with alcohol dehydrogenase.

ret"i·ni'tis [*rete;* G. *-itis,* inflammation]. Retinal inflammation.

arteriospastic r. A form due to persistent contraction of the retinal arteries, usually associated with nephritis.

central punctate r. That seen most often in the aged. A great number of striae or white spots are visible in the fundus.

chorioidoretinitis. A form of retinitis with cellular infiltration, exudation, atrophy and proliferation of the pigment epithelium in the choroid, between the choroid and retina, and in the retinal layers.

diabetic r. See under *retinopathy.*

diffuse r. See *r. serosa.*

leukemic r. A form characterized by pallor of the retinal vessels and optic disk, the boundary of the latter being indistinct. Hemorrhages appear at various points of the membrane, while numerous white patches and round bodies are visible about the disk in the retina.

punctate r. A form in which there are small circumscribed white spots near the papilla and in the macular region.
renal r. See vascular *retinopathy*.
albuminurica. See vascular retinopathy.
r. apoplectica Retinal apoplexy.
r. circinata. Retinitis in which there is a wreath of white spots around the macula, degeneration due to deep hemorrhages.
r. circumpapillaris. A form in which there is proliferation of the outer layers of the retina around the disk.
disciformis. A degeneration of the macula consisting of a slightly raised, irregularly pigmented, circular or oval lesion.
r. exudativa. The response of histiocytes and fixed tissues to any subretinal hemorrhage, resulting in the production of pigmented fibrous nodule containing fat-laden histiocytes. It is not a specific disease; also called Coats' *disease*.
gravidarum. See vascular retinopathy.
hemorrhagica. A form in which there is swelling of the papilla and opaque infiltration of the surrounding retina; there are distended, dark, and tortuous veins, and the arteries are small; there are hemorrhages, linear or irregular and round.
nephritica. See vascular *retinopathy*.
nyctalopia. A diffused, streaked opacity of the retina and swelling of the disk, with central scotoma or color scotoma, and more or less marked amblyopia. It indicates retrobulbar neuritis.
paralytica. Retinitis caused by paralysis affecting the optic nerve.
pigmentosa. An affection involving all the layers of the retina, and consisting of a slowly progressing connective-tissue and pigment-cell proliferation of the entire membrane, with wasting of its nerve elements.
proliferans. A development of connective tissue with the formation of dense bluish-white masses within the retina, and extending into the vitreous body.
punctata albescens. See central punctate.
serosa. A form characterized by an infiltration, most marked in the nerve fiber and ganglionic layer of the retina, creating opacity, edema, and hyperemia.
simplex. See serosa.
sympathetica. Retinitis of sympathetic origin, attended with retinal hyperemia, redness of the disk, engorgement of the veins, and great disturbance of vision.
septic. See purulent.
simple syphilitic. A form of syphilitic retinitis in which the ophthalmoscope shows a gray opacity surrounding the papilla, which is discolored and cloudy and the veins darker than normal.
solar. Retinal change from the effect of sunlight.
syphilitic. The form occurring in syphilis. It is chronic, diffuse, and a late manifestation of the systemic disease.

ret"i-no-blas-to'ma [retina; G. *blastos*, shoot; -*oma*, tumor]. Neuroepithelioma of the retina.
ret"i-no-cho-roid-i'tis (ret"i-no-kor-oy-dye'tis) [retina; G. *choroeides*, choroid; -*itis*, inflammation]. Inflammation of the retina and choroid.
juxtapapillaris. See under Edmund *Jensen*.
ret"i-no-cy-to'ma. Neuroepithelioma of the retina.
ret'i-nol [retin] $C_{32}H_{16}$. A liquid hydrocarbon obtained in the destructive distillation of resin. It is used as a solvent and was formerly employed in gonorrhea.
ret"i-no-pap"il-li'tis [retina; L. *papilla*, nipple; G. -*itis*, inflammation]. Inflammation of the retina and the optic disk.

ret"i-nop'a-thy [retina; G. *pathos*, disease]. Any morbid condition of the retina.
diabetic. Retinal manifestations of diabetes mellitus characterized by small punctate hemorrhages generally acknowledged to be associated with characteristic microaneurysms (capillary dilatations) and sharply defined punctate exudates, located in the external plexiform layer of the retina; formerly called *diabetic retinitis*.
hypertensive. A vascular.
vascular. Retinal manifestations of such diseases as arterial hypertension, chronic nephritis, eclampsia, and advanced arteriosclerosis, characterized by various combinations and degrees of hemorrhages, exudates, vascular sclerosis, and sometimes by papilledema (malignant hypertension); formerly called *renal retinitis*, *retinitis albuminurica*, *gravidarum*, *nephritica*.
ret"i-nos'co-py [retina; G. *skopein*, to examine]. An objective method of determining the refraction of the eye by observation of the movements of the shadow phenomena produced and observed by means of an instrument called the *retinoscope* (also called the skiascope). The principle is that of conjugate foci, whereby the image-point is conjugate with the object-point. If rotation of the illuminated mirror of the retinoscope causes the shadow in the illuminated pupil to move with the retinoscope, the patient's retina is conjugate with a point beyond the instrument (the emergent rays are divergent) and the eye is hyperopic, and the dioptric strength of the lens selected to abolish motion of the shadow is the amount of the hyperopia. If the reflex moves against (opposite to direction to) the mirror, the conjugate focus is between the retinoscope and the patient's eye (the emergent rays are convergent) and the eye is myopic, and the dioptric strength of the lens selected to abolish motion of the shadow is the amount of the myopia. Also called *skiascopy*.
ret"i-no-ski-as'co-py (ret"i-no-sky-as'ko-pee). Retinoscopy.
re-tir'ing board. In the Armed Forces of the United States (Army, Navy, and Air Force), a board of not less than five commissioned officers, of whom two are required to be medical officers. It is the function of the board to determine whether or not officers ordered before it for presumed physical or mental unfitness to perform duty shall be retired from the service for disability. The findings of a retiring board are practically binding under *appropriate statutes*. At the present writing, retiring boards are composed of Army, Navy or Air Force officers for the particular department concerned.
re-tort' [L. *retortus*, from *retorquere*, to twist back]. A distilling vessel consisting of an expanded globular portion and a long neck.
ret"e-the"li-o'ma. See reticulum-cell sarcoma.
ret"e-the"li-o-sar-co'ma. See reticulum-cell sarcoma.
re-tract' [L. *retractus*, from *retrahere*, to draw back]. Draw back; contract; shorten.
re"trac-til'i-ty [retract]. The power of retracting or drawing back. —**retrac'tile**, *adj*.
re-trac'tion [L. *retractio*, from *retrahere*]. The act of retracting or drawing back, as retraction of the muscles after amputation.
re-trac'tor [retract]. 1. A surgical instrument for holding back the edges of a wound to give access to deeper parts or regions. 2. [illegible] of a handle with a right-angle flange. [illegible] *fixator*.
abdominal. A large, heavy instrument with a curved flange, to give greater [illegible] power.

block tin A flexible instrument which can be bent to desired shape

nerve r A delicate instrument adapted to isolating nerves during operations.

periosteal A toothed instrument for holding periosteum.

self-retaining A special instrument having two retractor arms clamped to a bar and adjusted by means of setscrews. Some are equipped with a third arm for retraction of the pubic portion of the urinary bladder during bladder and prostatic operations.

toothed A retractor having sharp or blunt teeth.

re tra'hens au'rem (ri-tray'hens aw'rem, ret'ruh-hens) [L.]. Old term for posterior auricular muscle.

ret're-, re'tro- [L., back]. A combining form meaning back, backward, or behind.

ret"re-ac'tion [L. *retroactum*, from *retroagere*, to drive back]. Reverse action.

ret"re-an"ter-o-am-ne'si-a (ret ro-an tur-o-am-nee'zhuh, -zee-uh, ree'tro-). See retroanterograde *amnesia*.

ret"re-an'ter-o-grade [L. *retro*, back; *anterior* that is before; *gradi*, to go]. Reversing the usual order of succession.

ret"re-bul'bar [L. *retro*, behind; *bulbus*, bulb]. 1. Situated or occurring behind the eyeball. 2. Behind the medulla oblongata.

ret"re-car'di-ac [*retro*; G. *kardia*, heart]. Posterior to the heart.

ret"re-ce'cal [*retro*; L. *caecus*, blind]. Pertaining to the back of the cecum.

ret"re-cele [*retro*; G. *kēlē*, tumor]. Persistence of the postanal part of the embryonic hindgut. Also called *congenital retrocele*.

ret"re-chei'li-a. A condition in which the lip is farther posterior than is normal. Cf. *procheilia*.

ret"re-col'ic [*retro*; G. *kolon*, colon]. Behind the colon.

ret"re-col'lic [*retro*; L. *collum*, neck]. Pertaining to the muscles at the back of the neck.

ret"re-col'lis. Torticollis.

ret"re-con'dy-lism [*retro*; G. *kondylos*, knuckle]. Posterior deviation of the mandibular condyles.

ret"re-cop"u-la'tion [*retro*; L. *copulatio*, from *copulare*, to unite]. The act of copulating from behind or aversely.

ret"re-de"vi-a'tion [L. *retro*, back; *devius*, out of the way]. Any backward displacement, as retroflexion or retroversion.

ret"re-dis-place'ment [*retro*; F. *déplacement*, displacement]. Backward displacement of a part or organ, especially uterine displacement. See *retroversion*.

ret"re-e-soph'a-ge'al (ret ro-ee so-faj'ee-ul, -fay jee ul, ree tro-) [L. *retro*, behind; G. *oisophagos*, gullet]. Located behind the esophagus.

ret're-flex [L. *retroflexus*, from *retroflectere*, to bend back]. Turn back abruptly.

ret're-flexed" [*retroflexus*]. Bent backward; in permanent, backward malposition, as in retroflexion of the uterus.

ret"re-flex'ion [*retroflexus*]. The state of being bent backward.

of the uterus. A condition in which the uterus is bent backward upon itself, producing a sharp angle in its axis.

ret"re-gas-se'ri-an. Behind the semilunar or gasserian ganglion.

ret"re-gnath'i-sm [*retro*; G. *gnathos*, jaw]. Posterior deviation of the mandible.

ret're-grade [L. *retrogradi*, to go backward]. Going backward; undoing.

re trog'ra phy [L. *retro* back; G. *graphein*, to write]. Backward writing; mirror writing.

ret"re-gres'sion [L. *retrogressus*, retrogression]. 1. In *biology*, the passing from a higher to a lower type of structure in the development of an animal. 2. In *medicine*, going backward; degeneration, involution, or atrophy as of tissue. 3. The subsidence of a disease or its symptoms.

ret"re-jec'tion [*retro*; L. *iacere*, to throw]. The washing out of a cavity from within outward.

ret re jec'tor, ret're-jec"tor [*retro*; *iacere*]. An instrument for washing out the uterus.

ret"re-len'tal [*retro*; L. *lens*, lentil]. Behind the lens of the eye.

ret"re-lin'gual [*retro*; L. *lingua*, tongue]. Relating to that part of the pharynx behind the tongue.

ret"re-mor'pho-sis (ret'ro-mor'fo-sis, -mor fo'sis, ree"tro-) [*retro*; G. *morphōsis*, shaping]. Catabolism; retrograde metamorphosis; catabolic change.

ret"re-na'sal (ret ro-nay'zul, ree"tro-) [L. *retro*, behind; *nasus*, nose]. Situated behind the nose or nasal cavities; postnasal.

ret"re-per"i-to-ne'al [*retro*; G. *peritonaion*, membrane which contains the lower viscera]. Situated behind the peritoneum.

ret"re-per"i-to-ni'tis [*retro*; *peritonaion*; G. *-itis*, inflammation]. Inflammation of the retroperitoneal structures.

ret"re-pha-ryn'ge-al (-fa-rin'jul, -jee ul, -far in-jee'ul) [*retro*; G. *pharynx*, pharynx]. Situated behind the pharynx, as retropharyngeal abscess.

ret"re-phar"yn gi'tis [*retro*; *pharynx*; G. *-itis*, inflammation]. Inflammation of the retropharyngeal tissues.

ret"re phar'ynx [*retro*; *pharynx*]. The posterior portion of the pharynx.

ret"re-pla cen'tal [*retro*; L. *placenta*, cake]. Behind the placenta.

ret"re pla si-a (ret ro-play'zhuh, -zee uh, ree"tro) [L. *retro* back; G. *plassein*, to form]. Retrograde change in a tissue; degeneration.

ret're posed (ret ro pozed, ree"tro-) [*retro*; OF *poser* to place]. Displaced backward.

ret"re-po si'tion [*retro*; L. *positio*, from *ponere*, to place]. Backward displacement of the uterus without flexion or version.

ret"re-pul'sion [*retro*; L. *pulsio*, from *pellere*, to drive]. 1. A driving or turning back, as of the fetal head. 2. A running backward; a form of walking sometimes seen in parkinsonism.

ret"re-stal'sis [*retro*; G. *stalsis*, checking]. Reversed peristalsis; peristaltic action that tends to drive the intestinal contents cephalad instead of caudad.

ret"re tar'sal [L. *retro* behind; G. *tarsos*, edge of the eyelid]. Situated behind the tarsus, as the retrotarsal fold of the conjunctiva.

ret"re-tra che-al (ret ro tray'kee ul, -tra kee'ul, ree tro-) [*retro*; G. *tracheia*, rough]. Situated or occurring behind the trachea.

ret"re-vac"ci na'tion [L. *retro*, back; *vaccinus*, of cows]. Vaccination with virus from a cow that has been inoculated with the virus of smallpox from a human subject.

ret re ver"si flex'i (-vur" se-flek'shee, -vur see-o flek shus) [*retro*; L. *versum*, from *vertere* to turn; *flexio* from *flectere*, to bend]. Combined retroversion and retroflexion.

ret"re-ver'sion [*retro*; *vertere*]. A turning back.

r of uterus. A condition in which the uterus is tilted backward without curvature of its axis.

ret"re vert ed [*retro*; *vertere*]. Tilted or turned backward, as a retroverted uterus.

re trude [L. *retrudere* to thrust back]. Force inward or backward, as to correct protruding teeth.

re-tru'sion [L. *retrusus*, from *retrudere*]. 1. In *dentistry* the act or process of pressing teeth back-

ward. 2. That condition which is characterized by backward or retroposed teeth, particularly the anterior teeth.

Retterer's stain. See under *stain*.

Retzius, Anders Adolf [*Swedish anatomist*, 1796–1860]. Universally known for his description of the prevesical space, also called *space of Retzius*. Described the veins forming anastomoses with the mesenteric veins and the inferior vena cava, called *Retzius' veins, retroperitoneal veins*. See also *gyri Andreae Retzii* under *gyrus*.

Retzius, Magnus Gustaf [*Swedish histologist*, 1842–1919]. Described brownish concentric lines in tooth enamel (1837); the *lines of Retzius* are thought to indicate the contour of the enamel at different stages of its development. With E. A. H. Key described sensory nerve endings, resembling Herbst's corpuscles, seen in the skin of the beaks of certain birds; called *corpuscles of Key and Retzius*. With Key described the lateral apertures of the fourth ventricle; called *foramens of Key and Retzius, foramens of Luschka*. See under *aperture*.

re-un'ion [L. *re-*, again; *unire*, to unite]. In fractures, the securing of union following its interruption by violence or disease.

Reuss, August Ritter von [*Austrian ophthalmologist*, 1841–1924]. Introduced charts for testing color vision; *Reuss' color tables* consist of colored letters on colored backgrounds.

Reuss test. A test for atropine in which the substance to be tested is heated with sulfuric acid and an oxidizing agent. In the presence of atropine an odor of roses and orange flowers is given off.

re"vac-ci-na'tion [L. *re-*, again; *vaccinus*, of cows]. Renewed or repeated vaccination.

re-vel'lent. See *revulsive*.

re-ver"ber-a'tion [L. *reverberare*, to strike back]. A repetitive discharge of impulses due to the *development of transient automaticity of ventral* horn cells. The impulses pass in circuits from cell to cell.

Reverdin, Albert [*Swiss surgeon*, 1881–1929]. Son of J. L. Reverdin. Originator of the carrier or aneurysm needle with an eye near the point. *Reverdin needle* is mounted on a handle and opened and closed by means of a lever.

Reverdin, Jacques Louis [*Swiss surgeon*, 1842–1908]. Widely known for his extensive work in skin grafting. Originated the method of free grafting by means of small points of skin transferred to a clean, granulating surface. These become the starting points of new skin areas, known as *Reverdin method*. Made studies of myxedema, producing the disease by removal of the thyroid gland (1882).

rev'er-ie [F.]. A state of dreamy abstraction; visionary mental or ideational movement, the mind itself, at least so far as volition is concerned, being passive.

re-ver'sal [L. *reversus*, from *revertī*, to turn back]. 1. *In psychoanalysis*, the change from a love instinct to one of hate; a change of the content of an instinct. 2. The change of the aim of an instinct into its opposite, as from sadism to masochism.

re-verse [*reversus*]. In bandaging, a half-turn employed to change the direction of a bandage.

re-ver'sion (ri-vur'zhun, -shun) [L. *reversio*, from *revertī*, to turn back]. The reappearance of long-lost ancestral traits; a throwback.

Revilliod, Léon [*Swiss physician*, 1835–1919]. Described a sign indicative of facial nerve paralysis, consisting of inability of the person affected to close the eye on the paralyzed side alone; called *Revilliod's sign*.

re-vi"tal-i-za'tion (ree-vye"tal-i-zay'shun, -vye-zay'shun, ree-vye"tal-) [L. *re-*, again; *vitalis*, from *vita*, life]. The act or process of refreshing.

re-vive [L. *revivere*, to live again]. Return to life after seeming death; return to consciousness or strength.

re-viv"i-fi-ca'tion [*revive*; L. *facere*, to make]. Restoration of life after apparent death.

rev'o-lute [L. *revolutus*, from *revolvere*, to roll back]. Turned backward or downward.

re-vul'sant [L. *revulsum*, from *revellere*, to tear away]. Revulsive.

re-vul'sant. A medicine or agent that, by irritation, draws the blood from a distant part of the body.

re-vul'sive [*revellere*]. Causing revulsion.

re-vul'sive. An agent that causes revulsion.

Reymond. See *Du Bois-Reymond*.

R. F. A. Right frontoanterior position of the fetus.

R. F. P. Right frontoposterior position of the fetus.

Rh Chemical symbol for rhodium.

Rh Pertaining to or denoting an agglutinogen first found in the red blood cells of the *rhesus* monkey by K. Landsteiner and A. Wiener (1937). See *blood groups, Rh factors, Rh genes, Rh sensitization, Rh testing, Rh typing*.

Rhab-di'tis [G. *rhabdos*, rod; *-itis*, inflammation]. A genus of nematode worms, a few species of which are parasitic in man but of doubtful pathogenicity.

Rhab"di-toi'de-a [*rhabdos*, *-itis*; G. *eidos*, form]. The name given a superfamily of the Nematoda, of which *Strongyloides stercoralis* is the most important species which infests man.

rhab'do-cyte. See *band cell*.

rhab'doid [*rhabdos*; G. *eidos*, form]. Rodlike.

rhab"do-my-o-blas-to'ma. Rhabdomyosarcoma.

embryonal 1. A granular-cell myoblastoma. 2. A malignant mesenchymoma.

rhab"do-my-o'ma (rab"do-migh-o'muh) [*rhabdos*; G. *mys*, muscle; *-oma*, tumor]. A rare tumor of *striated muscle, considered by some authorities to* be benign, but usually classified as malignant; also called *myoma striocellulare*. See *rhabdomyosarcoma*.

congenital r. of the heart. A developmental anomaly and not a tumor. Myocardial lesions show characteristic large vacuolated cells containing glycogen and often showing radial or transverse striation of their peripheral cytoplasm. It is often accompanied by other congenital abnormalities.

embryonal r. A mesenchymoma.

r. uteri. A malignant polypoid tumor of the vagina in children, and of the cervix in adults. A mesodermal mixed tumor in which the striated muscle may represent metaplasia of connective-tissue cells. Also called *sarcoma botryoides*.

rhab"do-my"o-sar-co'ma [*rhabdos*; *mys*; G. *sarkōma*, fleshy excrescence]. A rare malignant tumor of skeletal muscle usually involving the muscles of the extremities or torso, microscopically composed of myoblasts which may vary greatly in appearance and differentiation. Occasionally transverse striations may be seen in their cytoplasm. Also called *malignant rhabdomyoma, rhabdomyoblastoma*.

embryonal r. A malignant mesenchymoma.

Rhab"do-ne'ma [*rhabdos*; G. *nēma*, thread]. A genus of parasitic roundworms.

rhab"do-pho'bi-a [*rhabdos*; G. *phobos*, fear]. A morbid dread of being beaten; unreasoning fear aroused by the sight of a stick.

rha-chi-o- (ray'kee-o-), **rha'chi-.** See *rachio-*.

rha-cous [G. *rhakos*, tattered]. Wrinkled; lacerated; fissured.

rhag'a-des (rag'uh-deez) [G. *rhagas*, fissure]. *Linear* cracks or fissures occurring in skin that has lost its elasticity through infiltration and thickening

observed in syphilis, intertrigo, keratoderma, and other affections.

rha g di a. See *hagades*

rha gad'i form [*rhagas*; L. *forma*, shape]. Fissured.

-rha'gi a. See *-rrhagia*.

rhag'i-o-crin, rhag'i -crine (radj ee-o-krin) [G *rhagion*, dim. of *hax*, grape *krisein*, t separate]. A term applied to colloid-filled vacuoles in the cytoplasm of secretory cells representing stage in the development of secretory granules.

cell. See *histiocyte*.

rhag'oid [*rhax*; G *eidos*, form]. Resembling grape

rham'ne gin. A glycoside, $C_{34}H_{42}O_{20}$, found in buckthorn berries. Also called *hamnocanthin*, *xanthorhamnin*.

ham ne tin. $C_{16}H_{12}O_7$ 3,3',4',5-tetrahydroxy 7 methoxyflavone or 7-methylquercetin, the aglycone of xanthorhamnin yellow crystalline powder slightly soluble in hot water has been used as dye.

rham'ni nose. A reducing trisaccharide obtained by hydrolysis of xanthorhamnin hydrolysis of rhamninose yields one molecule of galactose and two molecules of rhamnose.

rham ni tol. $CH_3(CHOH)_4CH_2OH$ An alcohol resulting from the reduction of the sugar rhamnose. See *isodulcitol*.

rham"no ca thar'tin. A glycoside, $C_{27}H_{30}O_{14}$ $\frac{1}{2}H_2O$ found in buckthorn berries.

rham"no ga lac t side. A glycoside, such as xanthorhamnin, which yields th sugars rhamnose and galactose on hydrolysis.

rham"no glu co side. A glycoside, such as rutin, which yields the sugars rhamnose and D-glucose on hydrolysis.

rham'nose (ram nose) CHO HCOH HCOH.HOCH.HOCH.CH₃; L-rhamnose, or 6-deoxy-L-mannose deoxysugar occurring free in poison sumac and in glycoside combination in many plants. It occurs in α- and β-forms. Syn., *isodulcitol*.

rham'no-side. A glycoside, such as quercetin, which yields the sugar rhamnose on hydrolysis.

rham"no xan thin. See *frangulin*.

Rham nus [L., from G *rhamnos*, prickly shrub]. A genus of trees and shrubs which yield cascara (**R. purshiana**) buckthorn bark (**R. frangula**) and buckthorn berries (**R. cathartica**)

rhan'ter The inner canthus.

rha-pha'ni a. See *raphania*.

ha phid'i o-spore. Sporozoite.

ha pon'tic [NL. *haponticum*, rh barb] Pertaining to rhubarb.

rhat' ny See *krameria*.

Rhazes (Abū Bakr Muhammed ibn Zakariyā al-Rāzī) [*Arabian medical writer* 850–923]. Said to be the first to distinguish measles from smallpox. One of the earliest writers on nervous diseases. Introduced the use of mercurial ointment. His *Opuscula* is one of the earliest printed medical books.

rhe The unit of fluidity being the reciprocal of th centipoise or one-hundredth of poise

rhe -dine (ree uh-deen, -din) $C_{21}H_{21}NO$ An alkaloid from opium.

rhe"bo-cra ni Torticollis. *Obs.*

rhe"bo-sce'li (ree"bo see'lee-uh) [G *rhaibos*, crooked *skelos*, leg]. The condition of being bow legged. —**rhe"bo-sce'lic**, *adj*

rheg'ma [G breakage] A rupture of the walls of vessel or of the containing membrane of an organ or region as the coats f the eye, the walls of the peritoneum. Also, the bursting of an abscess. *Rare.*

rhe'in. A dihydroxyanthraquinone-carboxylic acid, $C_{15}H_8O_6$ present in senna leaves and rh barb. It has been stated to lack purgative action.

rhem bas'mus (rem bas mus) [G. *rhembasmos*, roaming bout]. Mental distraction Indecision.

rhe ni-um [L. *Rhenus*, the Rhine]. Re = 186.31. An element of the manganese group occurs as minor constituent in many ores

rhe'o- [G *rheos*, anything flowing]. A combining form denoting *pertaining to current*.

rhe o base [*rheos*; G. *basis*, base]. The minimum electric potential necessary for stimulation.

rhe car"di-og'ra phy The recording of differences in electrical conductivity of the body synchronous with the cardiac cycle. The patient connected so that he f rms one arm of Wheatstone bridge. Variations in voltage due to alterations in conductivity are amplified after rectification and recorded by an electrocardiograph

rhe o-cord [*rheos*; G *chordē*, cord]. A rheostat.

he-ol gy [G *rheos*, flow *logos*, study of]. The cience of deformation and flow of matter in such tate that it exhibits tendency to be deformed by the pplication of stress, g., the flow of blood through the heart and vessels or the deformation of the aorta during systole.

rhe-om ter [*rheos*; G *metron*, measure] 1. A galvanometer 2. An pparatus for measuring the velocity of the blood current.

rhe o-nome [*rheos*; G *nomos*, law] An instrument for the pplication to excitable tissues of electric currents of different intensity

rhe o-pex"y [*heos*; G *pēxis*, fixing] A special kind of thixotropy consisting of internal-phase particles of lamellar or fibrillar shape, the gelation being greatly hastened by slow but pronounced elliptical stirring.

rhe'o-phore [*rheos*; G. *phoros*, bearing]. An electrode.

rhe -scope [*rheos*; G *skopein*, to examine] An instrument for demonstrating the existence of an electri current.

rhe o-stat [*rheos*; G *statos*, standing]. An instrument introduced into an electric circuit and offering known resistance, for the purpose of altering the intensity of the current.

rhe os to sis. See *osteopetrosis*.

rhe"o-ta-chyg'ra phy (ree o-ta kig ruh-fee) [*rheos*, G. *tachys*, swift *graphein*, to write]. The registration of th curve of variation in electromotive action of muscles.

rhe o-tax'is [*rheos*; G *taxis*, arrangement] The reaction of body to mechanical stimulation by current of fluid, whereby that body is induced to move either with or against the current of the fluid.

rhe o-tome [*rheos*; G *tomos*, cutting]. An instrument used for breaking and making galvanic circuit.

differential One for indicating the negative variation in muscle currents.

rhe trope [*rheos*; G *tropein*, to turn] An apparatus for reversing the direction of an electric current. Also called *commutator*

rhe-ot're pism. Rheotaxis.

rhe um. See *rhubarb*

rheu mat'ic [G *rheumatikos*, subject to flux] Pertaining to, of the nature of, or affected with, heumatism.

heu mat'ic fe'ver A acute or chronic inflammatory process initiated by preceding Group A hemolytic streptococcus infection. The inflammation is disseminated in the connective tissues of many organs and, when pronounced, is manifested by myocarditis, valvulitis, arthritis, serositis, subcutaneous nodules, or rashes, and by generalized and nonspecific manifestations such as fever and elevated erythrocyte sedimentation rate (ESR) It occurs most commonly in children

hood and tends to multiple recurrences. Formerly called *Bouillaud's syndrome*.

rheu'ma-tism [G. *rheumatismos*, that which flows]. 1. A general term indicating diseases of muscle, tendon, joint, bone, or nerve, resulting in discomfort and disability. It is often used to include rheumatoid arthritis, degenerative joint disease, spondylitis, bursitis, fibrositis, myositis, neuritis, lumbago, sciatica, and gout. 2. Acute rheumatic fever.

acute articular Acute rheumatic fever.

acute Acute rheumatic fever.

Bougainville See epidemic tropical acute polyarthritis.

chronic Chronic form of any of the above-mentioned types, but usually one of those leading to joint deformity such as rheumatoid arthritis, degenerative joint disease, or chronic gout.

gonorrheal Arthritis due to the gonococcus.

nonarticular See *fibrositis* (b).

palindromic An acute arthritis and periarthritis occurring in multiple, afebrile, irregularly spaced attacks lasting only few hours or days and disappearing completely. There are pain, swelling, redness, and disability of usually only one joint. It attacks adults of either sex. The cause is not known.

psychogenic Aches and pains, stiffness and soreness in different parts of the body without demonstrable organic change, arising as result of psychic stimuli.

tuberculous Tuberculous arthritis.

rheu'ma-toid [G. *rheuma*, that which flows; *eidos*, form]. Resembling rheumatism.

rheu"ma-tol'o-gy The study of rheumatism. —**rheumatolog'ic**, *adj.* **rheumatol'ogist**, *n.*

rheu"ma-to-crin-ol'o-gy. A study of the endocrine aspects of rheumatic disease, particularly rheumatoid arthritis.

rhex'is [G., breaking]. Rupture of blood vessel or of an organ.

Rh fac'tors. Structures on the surface of the erythrocyte responsible for the reactions with animal or human anti-Rh serums. Of the three factors, Rho, rh and rh the Rho factor which corresponds to the original one discovered in the rhesus monkey is the most potent antigen and its presence or absence in blood is referred to as *Rh positive* and *Rh negative*. Syn., *Rh agglutinogens* or *antigens*. Also see *blood groups*.

Rh genes. The series of allelic genes which determine the various sorts of Rh agglutinogens and Rh blood types. Eight standard genes have been identified (Wiener) Rho, Rh₁, Rh Rh₁Rh₂ (Rh positive) and rh, rh rh rh'rh (Rh negative). See *blood groups*.

rhi"a-no'sis [G. *rhiknosis*, shriveling]. A wrinkling of the skin, the result of muscular or subdermal elastic tissue atrophy.

rhin-. See *rhino-*.

rhi'nal [G. *rhis*, nose]. Pertaining to the nose.

rhi nal'gi-a (rye nal'juh, -jee-uh) [*rhis*; G. *algos*, pain]. Pain in the nose.

rhi"nan tral'gi [*rhis*; G. *antron*, cave; *algos*]. Pain in, or referred to, the walls of the cavities of the nose.

rhi nel'cos (rye-nel'kos) [*rhis*; G. *helkos*, ulcer]. A nasal ulcer.

rhi"nen-ceph'a-lon [*rhis*; G. *enkephalos*, brain]. That portion of the cerebrum concerned with reception and integration of olfactory impulses, and with regulation of appropriate motor activities in response to such impulses. It comprises the archipallium (hippocampal formation) and paleopallium (olfactory lobe and pyriform lobe). —**rhinencephal'ic**, *adj.*

rhi"nen-chy'sis (rye neng-kigh sis, rye-neng'ki-sis) [*rhis*; G. *enchysis*, pouring in]. Douching of the nasal passages. *Obs.*

rhi"neu ryn'ter [*rhis*; G. *eurynein*, to make broad]. A distensible bag or sac which is inflated after insertion into nostril.

rhin-he"ma to ma (rin-hee muh-to muh, -hem uh to muh) [*rhis*; G. *haima*, blood; *-oma*, tumor]. An effusion of blood around the nasal cartilages.

rhi ni'a try (rye nigh uh-tree). See *rhinology*.

rhin'i-on [*rhis*]. The point at the distal end of the internasal suture.

rhi'nism, rhi nis mus (rye-nis mus) [*rhis*]. A nasal quality of the voice.

rhi ni'tis (rye-nigh tis) [*rhis*; G. *-itis*, inflammation]. Inflammation of the nasal mucous membrane.

acute Coryza; cold in the head; the common cold.

allergic Rhinitis which may be caused by any allergen, but which is frequently called hay *fever*.

atrophic That followed by atrophy of the mucous membrane. It may also occur in swine; clinically also called *ozena*.

chronic A form usually due to repeated attacks of acute rhinitis, and producing in the early stages hypertrophy of the mucous membrane (hypertrophic rhinitis) and in the later stages atrophy (atrophic rhinitis) and the presence of dark, offensive-smelling crusts (ozena).

fibrinous A rare form characterized by the development of false membrane in the nose.

hypertrophic That marked by hypertrophy of the nasal mucous membrane.

perennial See allergic hay *fever*.

periodic Allergic rhinitis.

polypoid See nasal *polyp*.

pseudomembranous See fibrinous.

ulcerative. See ozena.

syphilitic A chronic form due to syphilis, and usually attended by ulceration and caries of the bones and an offensive discharge (ozena).

tuberculous That due to the tubercle bacillus; it is usually associated with ulceration and caries of the bones.

vasomotor (a) Allergic rhinitis. (b) Hay fever. Also called *vasomotor catarrh*, *perennial*.

rhi'no-, rhin- [*rhis*]. A combining form meaning *the nose*.

rhi"no-an-tri'tis [*rhis*; G. *antron*, cave; *-itis*, inflammation]. Inflammation of the nasal mucous membrane and of the maxillary sinus.

rhi"no-by'on (rye no-buy'on, rye no'bee-on) [*rhis*; G. *byein*, to plug with]. A nasal plug or tampon.

rhi"no-ce-pha'li-a. See *rhinocephaly*.

rhi"no-ceph'a-lus [*rhis*; G. *kephalē*, head]. A monster exhibiting rhinocephaly.

rhi"no-ceph a-ly rhi"no-ce-pha'li [*rhis*; *kephalē*]. A form of cyclopia in which the nose is tubular proboscis situated above the fused orbits.

rhi"no-chei'lo plas"ty (rye no-kigh'lo-plas tee) [*rhis*; G. *cheilos*, lip; *plassein*, to form]. Plastic surgery of the nose and upper lip.

rhi"no-clei'sis (rye no klye'sis) [*rhis*; G. *kleisis*, closing]. Nasal obstruction.

rhi"noc nes mus (ry nock-nes mus) [*rhis*; G. *knēsmos*, itching]. Itching of the nose.

rhi"no-dac ry o-lith [*rhis*; G. *dakryon*, tear; *lithos*, stone]. A calculus in the nasolacrimal duct.

rhi"no-der ma. See *keratosis pilaris*.

rhi"no-dym'i [*rhis*; G. *didymos*, twin]. A mild form of diprosopia in which, although there is doubling of the lateral parts of both nose and upper jaw the face appears only unusually wide with broad space between the eyes and thick, wide nose.

rhi nod'y mus (rye-nod'i-mus) [*rhis*; *didymos*]. An individual exhibiting rhinodymia.

rhi"no-dyn'i-a (rye no-din'ee-uh, -dye nee-uh) [*rhis*; G. *odynē*, pain]. Any pain in the nose.

Rhi noes'trus (rye-nes trus) [*rhis*; G. *oistros*, gadfly]. A genus of flies of the Oestridae; species of this genus deposit hatched larvae in the nares, on the conjunctiva, and occasionally in the mouths of mammals. The species **R. purpureus**, the Russian gadfly, frequently invades the nasopharyngeal region of horses and cattle and occasionally causes human ophthalmomyiasis.

rhi nog'e-nous (rye-nodj' -nus) [*rhis*; G. *genesthai*, from *gignesthai*, to be produced]. Having its origin in the nose.

rhi"no-ky pho sis (rye no-kigh f sis) [*rhis*; G. *kyphōsis*, being humpbacked]. The condition of having a nose with a prominent bridge.

rhi"no la'li [*rhis*; G. *lalia*, talk]. A nasal tone in the voice due to undue closure (**rhinolalia clausa**) or to undue patulousness (**rhinolalia aperta**) of the choanae.

rhi"no lar"yn gi'tis [*rhis*; G. *larynx*, larynx; *-itis*, inflammation]. Simultaneous inflammation of the mucosa of the nose and larynx.

rhi"no lar"yn gol' gy [*rhis*; *larynx*; G. *logos*, word]. The science of the anatomy, physiology and pathology of the nose and larynx.

rhi"no-lite. See *rhinolith*.

rhi"no-lith [*rhis*; G. *lithos*, stone]. A nasal calculus.

rhi"n li thi'a-sis [*rhis*; G. *lithiasis*, disease of the stone]. The formation of nasal calculi.

rhi nol'o gist (rye-nol' jist) [*rhis*; G. *logos*, word]. A specialist in the treatment of diseases of the nose.

rhi nol gy (rye nol'o-jee) [*rhis*, *logos*]. The science of the anatomy, functions, and diseases of the nose. —**rhinolog'ic**, *adj.*

rhi"no ma nom' ter [*rhis*, G. *manos*, rare; *metron*, measure]. A manometer used for measuring the amount of nasal obstruction.

rhi nom' ter (rye-nom'i-tur) [*rhis*; *metron*]. An instrument for measuring the nose.

rhi"no mi-o sis (rye no-migh sis) [*rhis*; G. *meiōsis*, diminution]. Operative shortening of the nose.

rhi"nom mec'to-my [*rhis*; G. *omma*, eye; *ektomē*, excision]. Excision of the inner canthus of the eye.

rhi"no-my-co sis (rye no-migh ko sis) [*rhis*; G. *mykēs*, fungus; *-ōsis*, condition]. The presence of fungi in the mucous membrane and secretion of the nose.

rhi"n ne-cro sis [*rhis*; G. *nekrōsis*, mortification]. Necrosis of the nasal bones.

rhi nop' thy (rye-nop uth ee) [*rhis*; G. *pathos*, disease]. Any disease of the nose.

rhi"no-pha ryn'ge al (rye no-f rin'jul, -fee-ul, -far"in jee ul) [*rhis*; G. *pharynx*, pharynx]. Pertaining to the nose and pharynx, or to the nasopharynx.

rhi"no-phar"yn gi'tis [*rhis*; *pharynx*; G. *-itis*, inflammation]. Inflammation of the nose and pharynx, or of the nasopharynx.

mutilans. See *gangosa*.

rhi"no-pha-ryn'go-lith [*rhis*; *pharynx*; G. *lithos*, stone]. A nasopharyngeal calculus.

rhi"no-phar'ynx [*rhis*; *pharynx*]. See *nasopharynx*.

rhi"no-pho'ni-a [*rhis*; G. *phōnē*, sound]. A nasal tone in the speaking voice.

rhi"no phy'ma [*rhis*; G. *phyma*, tumor]. A form of acne rosacea of the nose characterized by marked hypertrophy of the blood vessels, sebaceous glands, and connective tissue, producing a lobulated appearance of the end of the nose. It may be markedly disfiguring. Also called *toper's nose*, *whisky nose*.

rhi"no-plas"ty [*rhis*; G. *plassein*, to form]. A plastic operation upon the nose. This may be accomplished in a variety of ways, such as the so-called Italian method of rotating bone and skin-bearing pedicle flap from the forehead, by flaps from the cheeks, by the transplantation of costal cartilage, etc. —**rhinoplas tic**, *adj.*

rhi"no pol'yp, rhi"no-pol'y pus [*rhis*; G. *polypous*, many-footed]. Polyp of the nose.

rhi nop si-a (rye-nop see-uh) [*rhis*; G. *opsis*, vision]. Convergent strabismus.

rhi"nor rha gi a [*rhis*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the nose. Syn. *epistaxis*.

rhi nor'rha phy (rye-nor'uh-fee) [*rhis*; G. *rhaphē*, suture]. A plastic reduction in the size of the nose, in which redundant nasal tissue is removed by section, followed by approximation and suture of the wound edges.

rhi"nor rhe a [*rhis*; G. *rhoia*, flow]. 1. A mucous discharge from the nose. 2. Escape of cerebrospinal fluid through the nose.

rhi nos'chi-sis (rye-nos'ki sis) [*rhis*; G. *schisis*, cleavage]. Congenital cleft nose.

rhi"no-scle-ro ma [*rhis*; G. *sklērōma*, induration]. A new growth of almost stony hardness, affecting the anterior nares and adjacent parts. The disease commences in the skin of the nasal vestibule and about the nares, the lesions consisting of flat, isolated, or coalescent nodules.

rhi"no-scope [*rhis*; G. *skopein*, to examine]. An instrument for examining nasal cavities.

rhi nos'co-py (rye-nos'ko-pee) [*rhis*; *skopein*]. Examination of the nasal cavities by means of the rhinoscope; that of the nares is termed *anterior rhinoscopy*; that of the choanae, *posterior rhinoscopy*. —**rhinoscop'ic**, *adj.*

rhi"no-si"nus-o path'i a [*rhis*; L. *sinus*, hollow; G. *pathos*, disease]. The diseases of the nose and paranasal sinuses.

rhi"no-spo rid"i sis [*rhis*; dim. from G. *spora*, seed; *-iasis*, condition]. An infection caused by *Rhinosporidium seeberi*. The causative agent has not been cultured but, because of similar morphology in tissue, is thought to be a fungus.

Rhi"no-spo-rid'i um [*rhis*; *spora*]. A pathogen to man not yet precisely classified but thought to be a fungus.

R. kinealyi. Synonym for *R. seeberi*.

R. seeberi. That species which is the causative agent of rhinosporidiosis.

rhi"no ste-no sis [*rhis*; G. *stenos*, narrow]. Permanent constriction of the nose or nasal cavity.

rhi"no-thrix [*rhis*; G. *thrix*, hair]. A hair growing in the nostril.

rhi not'o-my (rye-not o-mee) [*rhis*; G. *tomē*, cutting]. Incision of the nose.

Rhi"pi ceph'a lus (rye pi-sef'uh lus, rip"i) [G. *rhipis*, fan; *kephalē*, head]. A genus of ticks of the superfamily Ixodoidea. Many species act as vectors of such diseases as spotted fever, Q fever, and tularemia to man and lower animals.

R. sanguineus. The most common species incriminated in the transmission of disease.

rhip-tas mus (rip-taz mus) See *ballism*.

rhit"i do si [G. *rhytidōsis*, wrinkling]. See *hytidosis*.

rhi zag'ra (ri-zag ruh, -zay'gruh, rye) [G. *rhiza*, root; *agra*, seizing]. An obsolete instrument for extracting the roots of teeth.

rhi"zo-, rhiz [*rhiza*]. A combining form meaning *root*.

rhi"zo-don'tro py [*rhiza*; G. *odous*, tooth; *tropis*, to turn]. The pivoting of an artificial crown upon the root of a tooth.

rhi"zo-don'try-py [*rhiza*; *odous*; G. *trypē*, hole]. Surgical puncture of the root of a tooth.

Rhi″zo-gly′phus. A genus of mites causing coolie itch.

rhi′zoid [*rhiza*; G. *eidos*, form]. 1. Slender rootlike filaments, the organs of attachment in many cryptogams. 2. A bacterial plate culture of an irregular branched or rootlike character. —**rhi′zoid,** *adj.*

rhi′zome (rye′zohm, rye-zohm′) [G. *rhizōma*, mass of roots of a tree]. An underground stem, or rootstock.

rhi″zo-mel′ic [G. *rhiza*, root; *melos*, limb]. Affecting or relating to the roots of the extremities; pertaining to the hip or shoulder joints.

rhi″zo-mor′phoid [*rhiza*; G. *morphoeidēs*, in form and proportion]. Having the form of a root.

rhi″zo-neure [*rhiza*; G. *neuron*, nerve]. One of the cells that form nerve roots.

rhi″zo-nych′i-a (rye″zo-nick′ee-uh), **rhi″zo-nych′i-um** (rye″zo-nick′ee-um) [*rhiza*; G. *onyx*, nail]. The root of a nail. *Obs.*

rhi′zo-pod [*rhiza*; G. *pous*, foot]. A member of the Rhizopoda, a division of Protozoa.

Rhi-zop′o-da (rye-zop′o-duh) [*rhiza*; *pous*]. A class of the Protozoa which includes those amebas, characterized by the possession of pseudopodia, which parasitize man.

rhi-zop″ter-in. $C_{15}H_{12}N_6O_4$; the formyl derivative (at the nitrogen atom of the *p*-aminobenzoic acid component) of pteroic acid. It appears to be a precursor in the biogenesis of folic acid or of compounds having folic acid activity, possibly by conversion to formylfolic acid through conjugation with glutamic acid. Syn., *formylpteroic acid.*

Rhi′zo-pus (rye′zo-pus, rye-zo′pus) [*rhiza*; *pous*]. A genus of the Phycomycetes whose species may act as common allergens and as laboratory contaminants.

R. nigricans. A species of fungus which causes rots of various fruits and is commonly found as a saprophyte on dung.

rhi-zot′o-my (rye-zot′o-mee) [*rhiza*; G. *tomē*, a cutting]. Surgical division of any root, as of a nerve or tooth. Also called *radicotomy.*

anterior r. Surgical division of the anterior motor nerve roots within the dura.

posterior r. Surgical division of the posterior sensory roots of the spinal nerves within the dura.

Rh negative. See *Rh factors, blood groups.*

rho-dal′line (ro′duh-leen, -lin, ro-dal′een, -in). See *thiosinamine.*

rho′da-mine. Any of a group of red dyes of the xanthene type, closely related to fluoresceín.

r. B. $C_{28}H_{31}ClN_2O_3$; tetraethylrhodamine; a dye producing a bluish-red solution; used as a dye, also as a reagent for many metals.

rho′da-nate. A thiocyanate.

rho-dan′ic ac′id. See *rhodanine.*

rho′da-nine. $C_3H_3ONS_2$, an organic compound; rhodanic acid.

Rhode reaction. See Voisenet-Rhode reaction.

rho-de-o-re′tin. See *convolvulin.*

rho′de-ose. D-Fucose, 6-deoxy-D-galactose, a naturally occurring monosaccharide obtained from the glycosides convolvulin and jalapin.

rho′di-um [G. *rhodon*, rose]. Rh = 102.91. A rare metal of the platinum group.

Rhod′ni-us. A genus of bugs whose species are capable of transmitting *Trypanosoma cruzi.*

rho-do-ci′din. A violet antibiotic pigment produced by *Streptomyces phoenix;* it inhibits Gram-positive and Gram-negative bacteria.

rho-do-gen′e-sis [*rhodon*; G. *genesis*, production]. The regeneration of visual purple which has been bleached by light.

rho-do-my-ce′tin. An antibiotic substance elaborated by a red-pigmented mutant of *Streptomyces griseus;* dark-red powder, red in acid solution, blue in alkaline solution. It appears to have no activity in vivo.

rho-do-my′cin. A red antibiotic substance obtained from cultures of *Streptomyces purpurascens.*

rho-do-phane [*rhodon*; G. *phainein*, to appear]. Red pigment in the retinal cones.

rho″do-phy-lax′is (ro″do-fi-lack′sis, -figh-lack′sis) [*rhodon*; G. *phylaxis*, a watching]. The property possessed by the retinal epithelium of producing rhodogenesis. —**rhodophylac′tic,** *adj.*

rho-do-pin. $C_{40}H_{58}O$ or $C_{40}H_{60}O$; a red pigment from *Rhodovibrio* and *Thiocystis* bacteria.

rho-dop′sin [*rhodon*; G. *opsis*, vision]. Visual purple; a retinal substance the color of which is preserved by darkness, but bleached by daylight; it is contained in the retinal rods.

rho-do-vi″o-las′cin. $C_{42}H_{60}O_2$; dark red carotenoid pigment from *Rhodovibrio* and *Thiocystis* bacteria.

rho-do-xan′thin. $C_{40}H_{50}O_2$; deep-purple, carotenoid pigment widely distributed in nature, conveniently isolated from arils of the English yew *Taxus baccata.*

rhoe′a-dine (ree′uh-deen, -din). $C_{21}H_{21}NO_6$. A crystallizable alkaloid obtained from *Papaver rhoeas* (corn poppy).

rhoeb-de-sis (rub-dee′sis) [G. *rhoibdēsis*, a whistling, piping, from *rhoibdein*, to move with a rushing sound, to suck down]. Absorption, resorption. *Obs.*

rhom″be-en-ceph′a-lon [G. *rhombos*, magic wheel; *enkephalos*, brain]. The caudalmost of the three primary brain vesicles of the embryo. It divides into myelencephalon and metencephalon. Syn., *hindbrain.*

rhom′bo-coele. Cavity of the rhombencephalon.

rhom′boid [*rhombos*; G. *eidos*, form]. Having a shape similar to that of a rhomb, a quadrilateral figure with opposite sides equal and parallel and oblique angles; said of the rhomboid ligament and rhomboid muscle.

rhom-boi′de-us [*rhombos*, *eides*]. Either of the rhomboid muscles, arising from the spines of the lower cervical and upper thoracic vertebrae and inserted on the vertebral margin of the scapula. See Table of Muscles in the Appendix.

r. occipitalis. A variant of the rhomboideus minor muscle extending from the occipital bone to the scapula.

rhom′bo-mere″ [*rhombos*; G. *meros*, part]. A neuromere of the rhombencephalon. *Obs.*

rhon′chus (rong′kus) (pl. *rhonchi*) [G. *rhonchos*, wheezing]. A coarse, snoring type of rale, caused by secretions in the larger bronchi or in the trachea, sometimes palpable, as fremitus. —**rhonchial, rhonchal,** *adj.*

rho′ta-cism [G. *rhōtakizein*, to make overmuch or wrong use of the letter *rho*]. Mispronunciation, or overuse, of the letter r.

Rh pos′i-tive. See *Rh factors, blood groups.*

Rh sen″si-ti-za′tion. The act of becoming sensitive to the D (Rh_0) antigen specifically and generally also to C (rh′) and E (rh″) antigens.

Rh test′ing. Examination of blood for the main Rh factor using either anti-Rhesus serum or anti-Rh_0 serum alone.

Rh typ′ing. Classification of individuals within one of the eight Rh types with the aid of anti-Rh_0, anti-rh′ and anti-rh″ serums.

rhu′barb [ML. *rhabarbarum*, barbarian rhubarb, from G. *rha*, rhubarb] (*rheum*). The dried rhizome and roots of *Rheum officinale, R. palmatum,* or other species growing in China and Tibet, deprived of periderm tissue. It owes its purgative

properties to certain derivatives of anthraquinone. Dose, laxative and stomachic 0.3–0.6 Gm. (5–10 gr) purgative, 1.3–2.0 Gm. (20–30 gr)

aromatic syrup (*syrupus rhei aromaticus*) One prepared from rhubarb, cinnamon, clove, and myristic. Dose, 4–12 cc. (1–3 fluidrachms)

aromatic tincture (*tinctura rhei aromatica*) Dose, 2–4 cc (½–1 fluidrachm)

compound powder (*pulvis rhei compositus*) A laxative antacid composed of rhubarb, magnesium oxide, and ginger Dose, child, 0.3–0.6 Gm. (5–10 gr) adult, 2–4 Gm. (½–1 dr) Also called *Gregory powder*

and soda mixture (*mistura rhei et sodae*) Prepared from rhubarb fluidextract, ipecac fluidextract, sodium bicarbonate, peppermint spirit, and water A mild laxative used especially for infantile colic. Dose, infants, 2–4 cc. (½ 1 fluidrachm)

torrefied Rhubarb which has had its purgative powers diminished by roasting: its astringency is not so affected

rhulitol. A proprietary liquid containing chiefly tannic acid for use in the relief of local symptoms of poison ivy dermatitis.

Rhus [G *rhous*, sumac]. Sumac, a genus of shrubs or small trees of the Anacardiaceae. Poison ivy poison oak, and poison sumac were formerly classified under this genus. See *Toxicodendron*.

R. toxicodendron. Old name for poison ivy

rhyn choph'yl line, rhyn"cho phyl'line. $C_{21}H_{21}N_2O(OCH_3)(OCOCH_3)$ an alkaloid obtained from various *Mitragyna* and *Ourouparia* species, including *O rynchophylla* (*Nauclea rynchophylla*) It lowers blood pressure and paralyzes sympathetic nerve endings

rhy poph gy (rye pof'uh jee) [G *hypos*, filth; *phagein*, to eat]. The eating of filth or excrement.

rhy po pho'bi [*rhypos*; G. *phobos*, fear]. A morbid dread of filth.

rhy ss'ma (rye-see muh) [G wrinkle]. A wrinkle or corrugation.

-rhy'sis [G., flow]. A combining form meaning *flowing out*.

rhythm [G *rhythmos*, any regular recurring motion]. 1 Action recurring at regular intervals. 2. A method of contraception, in which continence is practiced during the ovulatory phase of the menstrual cycle.

alpha r *In electroencephalography*, the dominant rhythm from the adult cortex. The oscillations are smooth, regular and occur at rate of 8–12 per second they are best btained from the occipital region with the subject t rest. The discharges tend to disappear when the subject concentrates. Syn., *Berger Berger wave*, *alpha wave*.

atrial The heart rhythm in which an ectopic focus in the trial muscle is the pacemaker also called *auricular*

atrioventricular See nodal

Berger See alpha

beta *I electroencephalography*, low potential fast waves, 18 to 35 cycles per second, that are more constant in the frontal lobes of the brain, related t the sensory-motor system.

bigeminal r Bigeminy

cardiac The normal regularity in the recurrence of heart sounds; also, recognized abnormalities of this regularity

delta r *I electroencephalography*, succession of slow waves with frequency of six or less per second Observed frequently during normal sleep.

ectopi Rhythmic series of beats originating from ectopic impulses. See ectopic beat.

gallop r The cadence produced when three loud sounds recur in successive cardiac cycles. The extra heart sound may occur in systole or diastole (if early protodiastolic if late, presystolic). The protodiastolic third sound is usually of greater significance. Syn., *triple heart*

gamma r *I electroencephalography*, very fast waves whose functional significance is unknown; 40 to 50 per second recorded from the anterior head regions.

heterogeneti r Cardiac rhythm caused by an impulse arising in the heart outside the specialized tissues.

homogenetic Cardiac rhythm caused by an impulse arising in the heart in the specialized tissues.

idioventricular The heart rhythm in which an ectopic focus below the atrioventricular node is the pacemaker

nodal r A succession of systoles arising from the atrioventricular node at rate normally between 50 and 60 per minute. The *P* wave of the electrocardiogram is inverted in leads 2 and 3, and may occur before, during, or after the QRS deflection, depending upon whether the excitation reaches the tria before, during, or after it has reached the ventricles.

parasystoli A regular sequence of extrasystoles (atrial or ventricular) representing the rhythm of an ectopic center protected by some of unidirectional block.

quadruple r A cardiac cadence in which four sounds recur in successive cycles.

reciprocal *I electrocardiography*, retrograde trial excitation in A V nodal rhythm, followed by ventricular excitation when the R-P interval is sufficiently long.

sinus r The heart rhythm in which the sinoatrial node is the pacemaker

theta *I electroencephalography*, rhythm best recorded from the temporal region, having frequency of 4–7 cycles per second.

triple heart See gallop

triple A cardiac cadence in which three sounds recur in successive cycles: it may be normal or abnormal.

ventricular See idioventricular

rhyth mic [G *rhythmikos*, rhythmical]. Pertaining to or having the quality of rhythm, as rhythmic segmentations, Cannon term for repetitive localized contractions occurring in the small intestine during digestion.

rhyth mic'i ty (rith-miss i tee, rith) [rhythmic] The property of rhythmic recurrence, as of symptoms in undulant fever or malaria.

rhyt"i do plas'ty [G *rhytidos*, wrinkle; *plassein*, to form]. A plastic operation for the removal of skin wrinkles, particularly those of the face and neck.

rhyt"i do sis [G wrinkling]. A wrinkling particularly of the cornea. Syn., *rhitidosis*.

riasol. A proprietary liquid containing mercury soap, phenol, and cresol, used in the treatment of psoriasis.

rib [AS.]. One of the 24 long, flat, curved bones forming the wall of the thorax. See Table of Bones in the Appendix. See Plate 1

abdominal ribs. (a) The floating ribs (b) Ossifications of the inscriptiones tendineae.

asternal ribs. The false ribs.

cervical ribs. Occasional riblike processes extending ventrally from the cervical vertebrae.

false One of the five lower ribs on each side not attached to the sternum directly

floating One of the last two ribs which have the anterior end free.

rocker A first rib which is abnormally bent downward at the subclavian sulcus.

slipping Excessive mobility of the lower intercostal joints.

sternal ribs. The true ribs.

true One of the seven upper ribs on each side that are attached to the sternum.

vertebrochondral ribs. The highest three false ribs on each side; they are united in front by their costal cartilages.

ri'ba zole. α-Ribazole. 1-α-D-ribofuranoside-5,6-dimethylbenzimidazole, obtained as one of the products of acid hydrolysis of vitamin B_{12} (cyanocobalamin).

Ribera y Sans, José [*Spanish surgeon*, 1853–1912]. Introduced an artificial anemia of the lower limbs by means of elastic bandages; called *Ribera' method.*

Ribes. See *Champetier de Ribes.*

Ribes, François [*French physician*, 1800–67]. Described the alleged upper termination of the sympathetic nerve which surrounds the anterior communicating artery of the brain; called *Ribes ganglion.*

ribex. A proprietary vitamin-B complex tablet.

ri'bi tol. D-Ribitol. $CH_2OH.HCOH.HCOH.HCOH.CH_2OH$; reduction product of D-ribose; a component of the molecule of riboflavin.

ri"bo-des oxe. Desoxyribose; pentose sugar present in thymonucleic acid.

ri"bo-fla vin (rye"bo flay'vin, -flav'in, rib o) (*riboflavinum*). Constituent of the vitamin-B complex. 6,7-dimethyl-9-(D-1'-ribityl)-isoalloxazine ($C_{17}H_{20}N_4O_6$); constituent of flavoproteins, and thus essential for cellular oxidations; orange yellow crystalline powder soluble to the extent of 1 mg. in 10 cc. of water; affected by light, especially when in solution and in the presence of alkalies. Riboflavin deficiency in man produces cheilosis, scaly seborrheic desquamation at the alae nasi, in the ears, and around the eyes; glossitis, photophobia, corneal opacities, and proliferation of the corneal vessels. Principal dietary sources: liver, kidney, heart, milk, cheese, eggs, spinach. Dose, prophylactic, 1 mg. ($\frac{1}{60}$ gr.); therapeutic, 5–15 mg. ($\frac{1}{12}$–$\frac{1}{4}$ gr.) daily. 1 mg. is equivalent to 400 Sherman-Bourquin units. Syn., vitamin B_2, *lactoflavin*, *vitamin G.* See Table of Vitamins in the Appendix.

adenine dinucleotide. Flavin adenine dinucleotide.

ri"bo fla vin-5'-phos phate. $C_{17}H_{21}N_4O_9P$; the phosphoric acid ester of riboflavin in which linkage is effected through the CH_2OH group of riboflavin; the prosthetic group of a number of flavoproteins, including Warburg's old yellow enzyme. It functions by being reversibly reduced to a dihydro derivative; its sodium and monodiethanolamine salts are relatively soluble in water and are sometimes used to prepare water-soluble injectable forms of riboflavin. Syn., *flavin phosphate*, *flavin mononucleotide*, *isoalloxazine mononucleotide*, *vitamin-B*$_2$ *phosphate.*

ri"bo-nu'cle-ase. An enzyme present in various body tissues which depolymerizes ribonucleic acid (yeast nucleic acid) to give mononucleotides.

ri"bo nu cle'ic ac'id. Nucleic acid occurring in cell cytoplasm and the nucleolus, first isolated from plants but later found also in animal cells, containing phosphoric acid, D-ribose, adenine, guanine, cytosine, and uracil; also called *ribose nucleic acid*, *yeast nucleic acid*, *plasmonucleic acid.* Formerly erroneously called *plant nucleic acid.* Abbreviated, RNA.

ri'bose. $CHO.HCOH.HCOH.HCOH.CH_2OH$; D-ribose; a pentose sugar occurring as a structural component of riboflavin, ribonucleic acid, diphosphopyridine nucleotide, and other nucleotides.

r. nucleic acid. Ribonucleic acid.

ri"bo-side. Any glycoside containing ribose as the sugar component.

ribothiron. Trade-mark for a combination of ferrous sulfate, thiamine hydrochloride, and riboflavin, available as elixir or tablets.

ribranex elixir. Trade-mark for an elixir of vitamin-B complex containing rice bran extract.

rice [It. *riso*, from G. *oryza*, rice]. A plant, *Oryza sativa*, of the Gramineae; also its seed. Used as a food and, occasionally, as a demulcent.

r. bran. Rice polishings.

r. polishings (*perpolitiones oryzae*). The fine, flaky pericarp and spermoderm fragments, the embryo, aleurone layer, and outer adhering cells of the starchy endosperm of rice. Used in the manufacture of the extract.

r. polishings extract (*extractum perpolitionum oryzae*). A hydroalcoholic extract prepared from rice polishings; a dark brown liquid containing not less than 0.08 mg. of vitamin B_1 per cubic centimeter; widely used in certain countries for treatment of beriberi and other forms of vitamin-B deficiency.

Richet, Charles Robert [*French physiologist*, 1850–1935]. In his description, with P. J. Portier, of the phenomenon, he originated the term anaphylaxis for the state of increased susceptibility in an animal following parenteral injection of an antigen (1902). Nobel laureate (1913).

Richet, Didier Dominique Alfred [*French surgeon*, 1816–91]. Described an operation for relief of ectropion, in which the cicatrix at the outer side of the lower lid is excised; after the lids have been sutured, the gap is filled by raising two tongue-shaped flaps; called *Richet' operation.*

Richter, August Gottlieb (1742–1812). German surgeon who described a strangulated partial enterocele, called *Richter' hernia.*

ri'cin (rye'sin, ris'in) [L. *ricinus*, castor oil plant]. A highly toxic albumin in the seed of *Ricinus communis.*

ric'i nine (ris'i-neen, -nin). A toxic alkaloid, $C_8H_8N_2O_2$, in the seeds and leaves of the castor plant, *Ricinus communis.*

ric"in-ism (ris'in-iz-um) [*ricinus*]. Poisoning from the seeds of *Ricinus communis.* It is marked by hemorrhagic gastroenteritis and icterus.

ric"in-o'le ic ac'id (ris"i-no'lee-ick, ris"in-o lee'ick). $CH_3(CH_2)_5CHOH.CH_2CH:CH(CH_2)_7COOH$. The characteristic acid of the glycerides of castor oil.

ric"in-o'le-in (ris"i-no'lee in). Glyceryl ricinoleate, the chief constituent of castor oil.

Ric'i nus (ris'i nus) [L.]. A genus of the Euphorbiaceae. *R. communis* is the source of castor oil.

rick ets [apparently from G. *rhachis*, spine]. A deficiency disease occurring during skeletal growth, due to concurrent lack of vitamin D and insufficient exposure to ultraviolet radiation (sunshine), resulting in altered calcium and phosphorus metabolism, which is reflected in defective bone growth. Syn., *infantile rachitis.*

adult See *osteomalacia.*

celiac Rickets resulting from lack of absorption of vitamin D and loss of calcium in the stool, associated with the celiac syndrome; sometimes called *pancreatic.* Also see *osteomalacia.*

fetal See *achondroplasia.*

late See *resistant.*

pancreatic See *celiac.*

refractory See *resistant.*

renal Rickets resulting from the failure of the kidney to maintain a normal ratio of calcium to phosphate in the blood. It may be of the glomerular (high phosphate) or tubular (low phosphate)

type, or the entire nephron may be involved. Also called *renal osteodystrophy pseudorickets*.

resistant Rickets which fails to respond to administration of ordinary therapeutic doses of vitamin D but which responds to very large amounts. A hereditary factor appears to be involved. Syn. *vitamin-D-refractory*

scurvy See infantile scurvy

Ricketts, Howard Taylor [*American pathologist*, 1871 1910] Remembered for his researches in the field of immunity and serum therapy With John F Anderson, studied Rocky Mountain spotted fever and demonstrated the wood tick to be vector (1906)

Rick-ett'si a [*Ricketts*]. A generic name applied to group of microorganisms smaller than bacteria but larger than the filtrable viruses; usually found in the arthropods, ticks, fleas, and lice. —**rickett sial** *adj*

R. akamushi. Synonym for *R. tsutsugamushi*.

R. akari. That species which is the causative agent of rickettsialpox.

R. burnetii. A species which is the etiologic agent of Q fever Synonym for *Coxiella burnetii*.

R. conorii. Synonym for *Coxiella conorii*.

R. diaporica. Synonym for *Rickettsia burnetii*.

R. melophagi. A nonpathogenic species found in the sheep tick *Melophagus ovinus*.

R. mooseri. The tiological agent f murine, flea-borne typhus.

R. muricola. Synonym for *R prowazekii mooseri*

R. nipponica. Synonym for *R. tsutsugamushi*.

R. ri ntalis. The etiolog agent of tsutsugamushi disease Syn. *R. tsutsugamushi*.

R. pediculi. Synonym for *Rickettsia quintana*.

R. prowazeki. The etiological agent of louse-borne typhus and Brill disease.

R. prowazeki mooseri. Old term for *R. mooseri*.

R. prowazeki prowazeki Old term for *R. prowazeki*.

R. psittaci. Name proposed by Lillie for the causative organism of psittacosis, but which has not been accepted because no arthropod host has been demonstrated.

R. quintana. That species which is the causative agent of trench fever

R. rickettsii. That species which is the causative agent of Rocky Mountain spotted fever See *Dermacentroxenus*.

R. ruminantium. The causative organism of heartwater disease.

R. tsutsugamushi. The etiologic agent of tsutsugamushi disease. Also called *R. orientalis*.

R. wolhynica. Synonym for *Rickettsia quintana*.

rick ett si al pox" [*Ricketts*; ME *pokkes*]. A disease caused by *Rickettsia akari* characterized by regional lymphadenopathy fever chills, headache, secondary rash, and leukopenia following an initial papul at the locale of the bit of the mite *Allodermanyssus sanguineus*, which is the vector The reservoir is *Mus musculus*, the house mouse N deaths or sequels have been recorded.

rick ett"si sea. Diseases caused by Rickettsia.

rick et y [G *rhachis*, spine]. Affected with or distorted by rickets rachitic.

Ricord Philippe [*French urologist and dermatologist*, 1800–89]. Celebrated for his contributions in the fields of urology and syphilology Described chancre and divided syphilis into three stages (1838) Demonstrated that yphilis and gonorrhea are separate diseases. The initial sore of syphilis is sometimes called *Ricord' chancre*. His operation for circumcision is called *Ricord' method*

Riddoch, George (1889–1947) English neurologist known for his investigation of the reflex functions of the completely transected spinal cord (1917); see mass reflex. He described the automatic bladder (1918)

Rideal, Samuel [*English chemist*, 1863-1929]. Devised method of standardization of disinfectants, with J T A. Walker (1903) The *Rideal-Walker method* consists of checking the amount of the unknown disinfectant required to kill an organism against the amount of carbolic acid necessary to accomplish the same thing in the same time. The resulting value is called the *Rideal-Walker coefficient* or *phenol coefficient*.

rid'er' bone. An osseous deposit in the adductor muscles of the leg, from long-continued pressure of the leg against the saddle.

ridge [AS. *hrycg*]. An extended elevation or crest.

alveolar The ridge left after resorption of the alveolar process in an edentulous jaw

basal Cingulum, 4.

bicipital Either one of the crests of bone delimiting the bicipital groove of the humerus.

carotid The sharp ridge between the inferior aperture of the carotid canal and the jugular fossa.

dental r An elevation which forms cusp or margin of tooth.

endocardial One of pair of internal spiral ridges in the embryonic bulbus cordis whose fusion initiates the division of the bulbus into aortic and pulmonary trunks as well as forming part of the septum membranaceum.

epipericardial r Paired areas of loose subpharyngeal mesenchyme above the embryonic pericardial cavity: said to form the pathway for migration of occipital premuscle masses and the hypoglossal nerve to the tongue.

ganglion Neural crest.

genital r A medial ridge or fold on the ventromedial surface of the mesonephros in the embryo produced by growth of the peritoneum the primordium of the gonads and their ligaments.

germ Genital ridge.

gluteal The bony ridge on the linea aspera for the attachment of the gluteus maximus.

interosseous The sharp ridge along the shaft of bone such as the ulna or fibula, for the attachment of the interosseous ligament. Also called *interosseous crest*.

interureteric r See bar of bladder

mammary A longitudinal elevation of thickened ectoderm between the bases of the limb buds in the embryo from which develop the mammary glands. Syn., *milk*

marginal ridges. The elevations forming the mesial and distal margins of occlusal surfaces of premolars and molars, and of lingual surfaces of upper incisors and canines.

mastoid The bony ridge on the mastoid process for the attachment of the sternocleidomastoid muscle.

mesonephric A ridge or fold of the dorsal coelomic wall in the embryo lateral to the mesentery produced by growth of the mesonephros

milk See mammary

oblique (a) A ridge on the grinding surface of an upper molar tooth. (b) See trapezoid

palatine ridges. The central ridge (raphe) together with the lateral corrugations of the mucosa (rugae) of the hard palate; in man they are especially prominent in the fetus.

primitive ridges. Those bounding the primitive groove. Syn *primitive folds*.

pronator The bony ridge on the lower anterior surface of the ulna for the attachment of the pronator teres muscle

pulmonary A minor ridge in the embryo on the coelomic surface of the bulging fold formed

by the growth of the common cardinal veins that develops into the pleuropericardial membrane.
supercilliary Supraorbital ridge.
supracondylar Either of the two ridges, lateral or medial, above the condyles of the humerus, which serve for muscular attachment.
supraorbital The curved prominential margin forming the upper boundary of the orbit.
temporal That extending from the external angular process of the frontal bone, across the frontal and parietal bones, and terminating in the posterior root of the zygomatic process.
trapezoid r A bony ridge on the clavicle for the attachment of the trapezoid ligament. Also called *oblique* (b)
urogenital The longitudinal peritoneal fold in the embryo produced by growth of the mesonephros and gonad. Syn., *Wolffian r*
Wolffian See urogenital *r*

ridge'ling (*ĭrjŭŋ*). A common term applied to cryptorchism in domestic animals.

rī'ding of bones. *I* *surgery*, the displacement of the fractured ends of bones which are forced past each other by muscular contraction, instead of remaining in end-to-end apposition.

Riedel, Bernhard Moritz Carl Ludwig [*German surgeon*, 1846–1916]. Described tongue-shaped process of the liver extending downward, occurring infrequently called *congenital abnormal lobulation of the liver Riedel' process* or *lobe*. Described chronic thyroiditis (1896); also called *ligneous thyroiditis, Riedel' disease* or *struma*.

Rieder Hermann [*German pathologist*, 1858–1932]. Remembered for his description of an undifferentiated leukocyte having an indented nucleus, found in acute leukemia and considered by some hematologists as pathologic myeloblast, and by some an abnormal lymphoblast, called *Rieder' cell*.

Riegel's test. See under *test*.

Riehl, Gustav [*Austrian dermatologist*, 1855–1943]. Described pigmentary disturbance (1917) usually seen upon the face and neck. See Riehl' *melanosis*. Advocated the use of blood transfusions to prevent shock after severe burns (1925)

Ries-Clark operation. A type of radical hysterectomy similar to that of Ernst Wertheim, for carcinoma of the uterus.

Riesman, David [*American physician*, 1867 1940]. Well-known clinician and medical historian. Author of *History of Medicine in the Middle Ages* (1935) Described degenerative noninflammatory fibrotic disease of the myocardium; also called *Riesman myocardosis*

Rieux, Léon [*French surgeon*, nineteenth century]. Described retrocecal hernia (1853) also called *Rieux hernia*.

Riga, Antonio [*Italian physician*, contemporary]. Described an oral disease of infancy occurring during dentition, in which the frenulum of the tongue becomes indurated; called *Fede-Riga disease*. See cachetic aphthae.

Riggs, John M [*American dentist*, 1810–85]. Introduced (1876) method of treating alveolar pyorrhea, called *Riggs disease*.

Riggs and Stadie method. See under *method*.

right [AS. *riht*]. Dextral. Abbreviated, R.

rig'id [L. *rigidus*, stiff]. Stiff, hard.

ri gid'i tas [L.] Stiffness; rigidity
articulorum. Spurious ankylosis.
r cadaverica. Rigor mortis.

ri-gid'i ty [*rigiditas*]. Stiffness inflexibility; immobility; tonic contraction of muscles.
anatomic of the cervi uteri. Rigidity in which the cervix, though neither edematous nor tender is not wholly effaced in labor but retains its length and dilates only to certain extent, beyond which the contractions of the uterus are without effect.
cadaveric r Rigor mortis.
cerebellar Rigidity of the spinal muscles, due to lesion of the middle lobe of the cerebellum. The head is drawn backward, the spine curved, and the arms and legs made rigid.
clasp-knife Lengthening reaction, especially that observed in the hemiplegic patient.
cogwheel r The rigidity or rhythmic contractions noted on passive stretching of the muscles in paralysis agitans.
decerebrate Exaggerated postural tonus in the antigravity muscles resulting from interruption of extrapyramidal axons from the motor and premotor areas of the cerebral cortex, or from destruction of cortical neurons in those areas.
hemiplegic Spastic rigidity of the paralyzed limbs in hemiplegia.
muscular r See myotonia congenita.
pathologic of the cervix uteri. Rigidity due to organic disease or cicatricial contraction.
postmortem Rigor mortis.
spasmodic of the cervix uteri. Rigidity due to spasmodic contraction of the cervix.

rig'or [L., stiffness]. Chill.
mortis. Stiffening and rigidity of muscle, particularly skeletal and cardiac, which occurs after death. Cessation of circulation in the muscle determines increase in content of acids, especially sarcolactic, with resultant swelling of muscle colloid and precipitation of insoluble myosin in the substance of the muscle.

ri'ma (rye'muh) (pl. *rimae*) [L., cleft]. A chink or cleft. —**rimal** *adj*
glottidis. The cleft between the true vocal folds the glottis.
oris. The line formed by the junction of the lips.
palpebrarum. The palpebral fissure.
pudendi. The fissure between the labia majora.
vulvae. See pudendi.

rimifon. Trade-mark for brand of isoniazid.

ri"mo-ci'din. An antibiotic substance isolated from cultures of *Streptomyces rimosus*; it possesses fungistatic properties.

ri'mose (rye'moce, rye-moce') [L. *rimosus*, full of cracks]. *I* *biology*, marked by many crevices or furrows.

rin der pest [Ger cattle plague]. A contagious, epidemic disease of cattle, sometimes affecting sheep and goats; caused by filtrable virus and characterized by fever and ulcerative, diphtheritic lesions *of the intestinal tract*.

ring [AS. *hring*]. A circular opening or the structure surrounding it. Also see *annulus*.
abdominal I guinal Annulus inguinalis abdominalis [BNA]; the abdominal opening of the inguinal canal, bounded below by the inguinal ligament, medially by the inferior epigastric vessels, and laterally and bove by the lower border of the transversus abdominis muscle. Syn., *deep inguinal* [BR]. Formerly called *internal abdominal* See Plate 4.
amniotic The ring formed by the attached margin of the amnion at the umbilicus.
anal A ring-shaped ridge about the embryonic anal orifice produced by growth and fusion of the anal tubercles.
Bandl's See retraction 1
Cabot's rings. See *ring bodies* under *body*.
benzene *I* *chemistry* tetracyclic, saturated ring system.
ciliary Boundary between the iris and the choroid of the eye
conjunctival Annulus conjunctivae [BNA] ring of denser tissue marking the attachment of

the bulbar conjunctiva to the corneoscleral limbus.

constriction r See retraction 1.

contraction r Retraction ring

crural See femoral

deep inguinal Synonym for abdominal inguinal ring, the upper and lateral opening of the inguinal canal.

external abdominal Subcutaneous inguinal

femoral r Annulus femoralis [BNA]; the abdominal opening of the femoral canal. Formerly called *annulus cruralis, crural*

fibrous Annulus fibrosus.

greater r of the iris. Annulus iridis major [BNA] the outer of two concentric zones of the iris separated by the circulus arteriosus minor

hemorrhoidal r A circular swelling of the wall of the anal canal at the level of the external sphincter muscle. It contains the internal hemorrhoidal plexus. When enlarged, it forms hemorrhoids (piles) Also called *annulus haemorrhoidalis.*

internal abdominal See abdominal inguinal

Kayser-Fleischer A ring of golden brown or brownish green pigment behind the limbic border of the cornea, observed in hepatolenticular degeneration (Wilson disease) and the pseudosclerosis of Westphal.

Landolt *I ophthalmology* an incomplete ring used as test object for visual acuity

lesser r of the iris. Annulus iridis minor [BNA] the inner of two concentric zones of the iris separated by the circulus arteriosus minor

lymphatic r Ring of lymphatic tissue, including the tonsils, surrounding the pharynx. Also called *Waldeyer' tonsillar*

pathologic See retraction 2.

physiologi r See retraction 1

retraction 1 When physiologic, the ridge on the inner uterine surface which constitutes the boundary line between the upper and lower uterine segments. It results from the process of normal labor which causes thinning of the lower uterine segment and concomitant thickening of the upper uterine segment. Syn *constriction Braune* 2. When pathologic, the abnormally thickened ridge of uterine musculature lying between the upper and lower uterine segments, resulting from mechanically obstructed labor and associated with extreme thinning of the lower uterine segment also called *contraction of Bandl, Lusk, Schroeder* or *White*

rings of the heart valves. See *annulus fibrosus* (b) *skeleton of the heart.*

subchorial closing The remnant of the cytotrophoblast of the chorionic plate found between Langhans' stria and the chorionic connective tissue. Once incorrectly called the *decidua subchorialis.*

subcutaneous inguinal Annulus inguinalis subcutaneus [BNA] external opening of the inguinal canal an obliquely placed, triangular opening in the aponeurosis of the external oblique muscle giving passage to the ilioinguinal nerve and to the spermatic cord in the male or the round ligament of the uterus in the female See Plate 4.

tracheal One of the C-shaped cartilages in the framework of the trachea.

tympanic r Annulus tympanicus [BNA] at the time of birth, an incomplete osseous ring; it develops into the tympanic part of the temporal bone.

umbilical Annulus umbilicalis [BNA] margin of the opening in the ventral body wall of the fetus line of attachment of the umbilical cord It gives passage to the umbilical vessels.

urethral Annulus urethralis [BNA]; mass of smooth muscle around the internal urethral orifice of the urinary bladder; the internal sphincter of the urinary bladder

ring'bone [*hring*; AS. *bān*]. A chronic, hypertrophic osteitis of the pastern or first and second phalanges of the foot in the horse. It is caused by inflammatory changes of long duration.

ring com'pound. A compound in which the atoms form ring or closed chain.

ringed hair A rare form of canities, due to the alternate formation of medulla and no medulla, in which the hairs appear silvery gray and dark in alternating bands. Usually seen in several members of family Also called *pili annulati.*

Ringer's solution. See under *solution.* See also Locke-Ringer's *solution.*

ring'hals [S. Afr D]. A South African cobra of the genus *Hemachatus,* family Elapidae.

ring'worm [AS. *hring*; *wyrm*]. An infestation of the skin, hair or nails, with various fungi. Also called *dermatomycosis, tinea, trichophytosis*

Burmese Tinea imbricata.

Rinne' test. See under *test.*

ri'no-lite. See *kinolith.*

riodine. Trade-mark for 66% solution in oil of an iodine addition product of castor oil, representing about 17% of iodine. The solution is used as substitute for inorganic iodides.

Río Hortega Pío del (1882–1945) Spanish neuroanatomist who introduced silver sodium carbonate method for staining nerve cells (1918) and proposed the names *microglia* and *oligodendroglia.* He did fundamental research in the histology of tumors of the nervous system. See *Hortega silver method* under *stain.*

Riolan, Jean (1580–1657) French anatomist and physiologist who described an arterial arcade, called *Riolan arc.* The ossicles sometimes found in the suture between the inferior border of the occipital bone and the mastoid portion of the temporal bone are called *Riolan bones,* ossicles. He is remembered for his description of the ciliary portion of the orbicularis oculi, called *ciliary muscle, Riolan muscle.*

riona. A proprietary capsule containing propadrine hydrochloride, acetophenetidin, and aspirin.

Ripault, Louis Henri Antoine [*French physician,* 1807–56]. Described change in the shape of the pupil on pressure upon the eye, transitory during life but permanent after death; called *Ripault' sign*

ripe [AS. *ripe*] Mature, completed.

Risley' rotary prism. See under *prism.*

ri so ri-us (ri-sor ee us, rye-) [L. *risum,* from *ridere,* to laugh]. A muscle of the cheek inserted into the angle of the mouth. See Table of Muscles in the Appendix.

ri sus [L., laughter]. A grin or laugh.

ca ninus. See sardonicus.

sardonicus. The sardonic grin, peculiar grinning distortion of the face produced by spasm of the muscles about the mouth, seen in tetanus

Ritchie, William Thomas [*Scottish physician,* 1873–1945]. Described heart block and was one of the first to recognize atrial flutter (1905).

Ritchie-Smeeth stim u la-tor An apparatus used for testing the electrical conducting power of muscle or for therapeutic muscle stimulation.

Ritgen, Ferdinand August Marie Franz [*German gynecologist,* 1787–1867]. Advocated symphysiotomy as surgical procedure in obstetric surgery Introduced technic in obstetric delivery in which he pressed upward upon the fetal head through the posterior portion of the perineum; called *Ritgen maneuver*

Ritter Jacob. Nineteenth-century Swiss physician who described psittacosis in man (1879)

Ritter, Johann Wilhelm [German physicist, 1776–1810]. With Eusebio Valli, elaborated law that section of living nerve is followed first by increased irritability then by loss of irritability the response traveling toward the periphery. Called *Ritter-Valli law*. See also Ritter' tetanus.

Ritter von Rittershain, Gottfried [Austrian dermatologist, 1820–83]. The first to describe dermatitis exfoliativa in the newborn (1870); also called *Ritter' disease*.

Riva-Rocci, Scipione [Italian physician, 1863–1943]. Widely known for his invention of practical type of sphygmomanometer (1896). Called *Riva-Rocci' method*.

ri'val·ry [L. *rivalis*, competitor]. A struggle for supremacy.

binocular r. See retinal.

retinal r. The continuous physiological process of alternation in consciousness between stimuli falling on the two eyes. When this process is studied by artificially presenting different stimuli to each eye, the alternation is found to be unpredictable in timing and areas involved and dependent on the strength of stimulus to each eye. Also called *r. of visual fields*, *strife*, *complementary or reciprocal replacement*.

r. colors. Retinal rivalry where colors are the stimuli.

r. of contours. Retinal rivalry where the contours of two objects are the stimuli.

r. of visual fields. See retinal.

strife See retinal.

Rivalta, Sebastiano [Italian veterinary surgeon, 1852–93]. Introduced method for differentiating exudate from transudate, in which one allows drop of the fluid to fall into solution of distilled water to which one drop of 50% acetic acid has been added. If the drop sinks and leaves turbidity the test is positive for exudate. Called *Rivalta test*.

rivanol. Trade-mark for brand of ethodin, chemically ethoxydiamino-acridine lactate: yellow crystalline powder soluble in about 15 parts of water bactericide in strengths of 0.1–0.2%.

Rivinus, Augustus Quirinus (1652–1723). German anatomist and botanist who described the minor sublingual ducts, called *Rivinian ducts*. He is known for his description of the notch at the upper border of the tympanic sulcus, also called *incisura tympanica, Rivinus' notch*. The sublingual gland was once known as *Rivinus' gland*.

riz'i·form [F. *riz*, rice; L. *forma*, form]. Resembling grains of rice.

ri'zine (rye·seen) [*riz*]. Rice that has been acted upon by superheated steam.

R. M. A. Right mentoanterior position of the fetus.

R. M. P. Right mentoposterior position of the fetus.

R. N. Registered Nurse.

Rn Chemical symbol for radon.

RNA Ribonucleic acid.

R. O. A. Right occipitoanterior position of the fetus.

roar'ing [AS. *rārian*]. A disease of horses characterized by respiratory distress and roaring noise due to paralysis of the intrinsic muscles of the larynx.

robalate. A trade-mark for the gastric antacid substance dihydroxy aluminum aminoacetate.

Robbins, Frederick Chapman (1916–). American pediatrician, who with J. F. Enders and T. H. Weller shared the Nobel prize (1954) in physiology and medicine for their discovery of the ability of the poliomyelitis virus to grow in cultures of different tissues. He is also known for his work on Q fever.

Robert pelvis. See under *pelvis*.

Roberts' reagent. See under *reagent*.

Roberts' test. See under *test*.

Robertson. See *Argyll Robertson*.

Robin, Charles Philippe [French physician, 1821–85]. Described osteoclasts, also called *Robin myeloplaxes*. Described the perivascular spaces, called *Robin spaces, spaces of Virchow-Robin*.

ro'bin [after Jean Robin, French botanist, 1550–1629]. A toxic albuminoid from the bark of the locust tree, *Robinia pseudoacacia*; its action is similar to that of ricin and abrin.

ro'bin·in. A glucoside from the flowers of the locust tree, *Robinia pseudoacacia*.

ro'bin·ose. A trisaccharide obtained from the glycoside robinin, yielding upon hydrolysis one mole of galactose and two of rhamnose.

Robinson, Andrew Rose [American dermatologist, 1845–1924]. Gave the first description of hidrocystoma (1884); also called *Robinson' disease*.

Robinson, Byron [American surgeon and anatomist 1857–1910]. Described circle formed by the uterine, ovarian, hypogastric, and common iliac arteries. Called *Robinson' circle*.

Robinson, Robert (1886–). English chemist noted for his research on certain vegetable products of great biological importance, particularly alkaloids. Nobel laureate in chemistry (1947).

Robinson, Victor [American physician and medical historian, 1886–1947]. Remembered for his devotion to historical medicine.

Robiquet, Pierre Jean [French physician, 1780–1840]. Isolated codeine (1832).

rob'o·rant (rob'o-runt, ro'bo-runt) [L. *roborare*, to strengthen]. Tonic, strengthening. —**rob'orant**, *n.*

Robson. See *Mayo-Robson*.

Roc·cel'la (rock·sel'uh) [NL., from It. *rocca*, rock]. A genus of lichens of the Parmeliaceae. Several species yield coloring principles used in litmus and cudbear.

roc·cel'lic ac'id. $C_{17}H_{32}O_4$. α-dodecyl-β-methylsuccinic acid; an antibiotic substance occurring in lichens, including *Lecanora sordida*. It occurs in crystals, is insoluble in water and forms water soluble sodium salt.

Ro·chelle' salt (ro·shell'). Potassium sodium tartrate.

Rockey' sign. See under *sign*.

rock'ing meth od. See *Eve' method* under *artificial respiration*.

Rock'y Moun·tain spot'ted fe'ver A form of fever with characteristic rash occurring throughout the Western Hemisphere formerly thought to be limited to the Rocky Mountain area. The causative organism is *Dermacentroxenus rickettsi*, and it is transmitted to man by several varieties of ticks, principally *Dermacentor andersoni* and *D. variabilis* in the United States.

rod [AS. *rodd*]. One of numerous, slender bacillary structures, as in the retina.

enamel r. See enamel prism.

nuclear cell. See band cell.

rods of Corti. The columnar cells lining the tunnel of Corti. See *organ of Corti*.

rods of the retina. One of the two types of photosensitive cells in the retina. Also called *rod cells*.

ro·den'ti·cide [L. *rodere*, to gnaw; *caedere*, to kill]. A preparation that is poisonous to, or destroys, rodents used as an agent against rats or mice.

ro dent ul'cer See rodent ulcer.

rodilone. Trade name for 4,4'-di(acetylamino)-diphenylsulfone, $C_{16}H_{16}N_2O_4S$, drug of the sulfonamide group especially active against streptococci. It has cured experimental toxoplasmosis in mice.

Rodman, William Louis [*American surgeon*, 1858–1916]. Celebrated surgeon, best remembered for his description of his incision for radical amputation of the breast in cancer. This was described as pear-shaped skin cut encircling the breast, extending upward to point in the axilla; called *Rodman incision*.

re"do nal'gi a [G. *rhodon*, rose; *algos*, pain]. Erythromelalgia.

Roe-Kahn method. See under *method*.

Roederer, Johann Georg [*German obstetrician*, 1727–63]. Remembered for his description of pleural and pericardial hemorrhage from the capillaries of the newborn who have attempted to breathe in utero; called *Roederer's ecchymoses*. Described flexion of the chin when the head is engaged at the superior pelvic strait during labor; called *Roederer's obliquity*.

Roenne's nasal step. A visual field defect typical of glaucoma, caused by asymmetrical nerve fiber damage on either side of the horizontal raphe of the eye.

roent'gen (rent'ghun, runt'ghin, runt'yin. *See* NOTES §§ 1, 19, 35) [after *Röntgen*]. Roentgen unit. Symbol, r.

gamma r. That amount of radium which will produce in air the same amount of ionization as would one roentgen of gamma rays. Syn., *gamma-ray roentgen*.

r. e-quiv'alent man. That quantity of radiation which, when absorbed by man, produces an effect equivalent to the absorption by man of 1 roentgen of x- or gamma-radiation. Abbreviated, REM, rem.

r. e-quiv'a lent phys'i cal. The amount of ionizing radiation which is capable of producing 1.615×10^{12} ion pairs per gram of tissue or that will suffer an absorption in tissue of 93 ergs per gram. This unit is employed primarily to measure beta-radiation. Abbreviated, REP, rep.

roent'gen cin e ma tog'ra phy. Cinematography of shadows as they appear on the fluoroscopic screen.

roent"gen i za'tion (rent"ghun-i-zay'shun, -eye-zay'shun) [*Röntgen*]. Exposure or subjection to the action of roentgen rays. Obs. —**roent'genize**, *v.*

roent"gen-o-der'ma. See roentgen *dermatitis*.

roent'gen-o-gram. A roentgen-ray photograph.

roent'gen-o-graph" [*Röntgen*; G. *graphein*, to write]. Make a roentgenogram.

roent"gen-og'ra phy [*Röntgen*, *graphein*]. Radiography. —**roentgenograph'ic**, *adj.*

roent"gen-o-ky'mo gram. A radiographic record of the changes in the size of the heart.

roent"gen o-ky mog'ra phy [*Röntgen*, G. *kyma*, wave; *graphein*, to write]. A roentgenographic procedure for recording changes in the size of the heart by interposing an impermeable sheet of metal with slits, between the patient and the film moving at right angles to the slits during exposure.

roent"gen ol'o-gist [*Röntgen*, G. *logos*, word]. A physician specializing in the practice of roentgenology.

roent"gen ol'o gy [*Röntgen*; *logos*]. The branch of medical science which deals with the diagnostic and therapeutic application of roentgen rays. Also called *radiology*. —**roentgenolog'ic**, *adj.*

roent gen o lu'cent. Allowing the passage of roentgen rays, as roentgenolucent material.

roent"gen-om'e try [*Röntgen*, G. *metron*, measure]. Measurement of the quality and quantity of roentgen rays.

roent gen-o-paque. Not permitting the passage of roentgen rays, as roentgenopaque material.

roent"gen-os'co-py [*Röntgen*; G. *skopein*, to examine]. Examination with roentgen rays by means of a fluorescent screen. —**roent'genoscope**, *n.*

roent gen rays. See under *ray*.

roent"gen ther'a py [*Röntgen*, G. *therapeia*, treatment]. The treatment of disease by means of roentgen rays.

Roese-Gottlieb method. See under *method*.

roe theln, rö'teln (ret'eln. *See* NOTES § 35). See *rubella*.

Roger, Henri Louis [*French physician*, 1809–91]. Known for his description of congenital abnormal communication between the ventricles of the heart; called *Roger's disease*, *maladie de Roger*.

Roger of Palermo [*Italian surgeon*, late twelfth century]. Author of a practice of surgery (1180), in which end-to-end intestinal anastomosis is described. He is known to have used mercury by inunction; also used seaweed in the preoperative treatment of goiter.

Roger's reflex. See under *reflex*.

Rogers, Leonard [*English physician*, 1868–]. Advocated treatment of amebic dysentery by hypodermic injection of salts of emetine. Demonstrated Leishman-Donovan bodies in kala-azar (1904). See also Rogers' *treatment* for cholera and leprosy.

Rohr, Karl [*German anatomist*, 1863–]. Described a fibrinoid formed on the maternal surface of the intervillous spaces and on the villi, called *stria of Rohr*.

Rokitansky, Carl von [*Austrian pathologic anatomist*, 1804–78]. One of the greatest pathologists. Described spondylolisthesis (1839). Described postnecrotic cirrhosis of the liver (1842), sometimes called *Rokitansky's disease*. See Rokitansky-Aschoff *sinuses* under *sinus*.

Rolando, Luigi [*Italian anatomist*, 1773–1831]. Remembered for his investigations of the anatomy of the central nervous system. Described the external arcuate fibers of the medulla oblongata, called *Rolando's fibers*. Described the longitudinal prominences on either side of the lower part of the medulla oblongata, called *Rolando's funiculus*. *Rolando's area* is the motor area in the cerebral cortex comprising pre- and postcentral gyri. See also central *sulcus*; formerly called *fissure of Rolando*, *Rolando's sulcus*. See also *substantia gelatinosa Rolandi*, also called *Rolando's gelatinous substance*.

rol'ler (ro'lur). See roller *bandage*.

Roller's nucleus. See *nucleus* of Roller.

Rolleston, Humphrey Davy (1862–1944). English physician, famous in English historical medicine, who made many important studies in the history of development of knowledge in hematology and cardiovascular diseases.

Rollet, Alexander [*Austrian physiologist*, 1834–1903]. Described large acidophil cells of the fundic glands of the gastric mucous membrane, called *Rollet's cells*, *acid cells*, *parietal cells*. These are thought to secrete hydrochloric acid. Described an insoluble spongy network forming the structure of an erythrocyte within whose interstices is embedded the hemoglobin; called *Rollet's stroma*, *stromatin*.

Rollett, Joseph Pierre [*French physician*, 1824–94]. Well known expert on venereal diseases and one of the first to recognize mixed lesions of chancre and other lesions. The mixed chancre is called *Rollet's disease*.

Rollier, Auguste [*Swiss physician*, 1874–]. Introduced the method of treatment of extrapulmonary tuberculosis by sunlight (1903); called *Rollier's method*.

Romaña's sign. See under *sign*.

ro·man'o·scope (ro-man'o-scope, ro'man-o-) [L. *Romanus*, Roman; G. *skopein*, to examine]. A speculum for examining the sigmoid flexure. *Obs.*

Romanovsky, Dmitri Leonidovich [*Russian physician*, 1861–1921]. Remembered for his important studies on the malarial parasite (1891). Introduced methylene blue-eosin blood cell stain used for malarial and other organisms. See Romanovsky stain. Described chromatin stain (1891) modified later (1898) by Nocht; see Nocht-Romanovsky stain.

Romberg, Moritz Heinrich [*German physician and neurologist*, 1795–1873]. Noted for his extensive study of the physiology and pathology of diseases of the nervous system. Described achondroplasia (1817). He described progressive facial hemiatrophy or trophoneurosis along the distribution of the fifth cranial nerve (1846) also called *Romberg's disease*. See also Romberg's sign, Howship-Romberg syndrome.

ron·geur' (rawn-zhur'. See Notes §§ 21, 35) [F.]. A bone-cutting forceps.

ron'ge·lite. See *formaldehyde*.

roniacol. Trade-mark for 3-pyridinemethanol; $C_5H_4NCH_2OH$; the alcohol corresponding to nicotinic acid; it has vasodilating action resembling that of nicotinic acid and is used in treating various peripheral vascular disorders.

ronone. A proprietary product consisting of 2% of rotenone in mucilage base, intended for external application in the treatment of scabies.

Röntgen, Wilhelm Konrad [*German physicist*, 1845–1923]. Discovered x-rays (1895) and laid the foundation for the sciences of roentgenology and radiology. See also roentgen rays. Nobel laureate (1901).

Roonhuyze, Hendrik van [*Dutch surgeon and gynecologist*, 1622–72]. Author of one of the earliest works on operative gynecology and obstetrics. He is known to have performed Cesarean section and to have operated successfully on vesicovaginal fistulas.

root [AS. *rōt*]. 1. The descending axis of plant. 2. The part of an organ embedded in the tissues, as the root of tooth. 3. The beginning or proximal portion of structure, especially one of two bundles of nerve fibers, the posterior and anterior emerging from the central nervous system and joining to form nerve trunk.

anatomic of tooth. The part of human tooth covered by cementum.

anterior r. A bundle of efferent nerve fibers emerging from the anterior part of the spinal cord to form spinal nerve. Syn., *motor*, *ventral*.

clinical. The part of tooth apically from the gingival sulcus.

descending vestibular. See descending vestibular *tract*.

dorsal. See posterior.

motor. See anterior.

posterior. A bundle of afferent nerve fibers arising from the nerve cells in spinal ganglion and passing to the central nervous system. Syn., *dorsal*, *sensory*.

of the lung. The axis formed by the bronchus, pulmonary vessels, lymphatics, and nerves in the hilus, connecting the lung with the heart and trachea. Also called *radix pulmonis*.

of the mesentery. The parietal attachment of the mesentery extending from the duodenojejunal flexure to the ileocecal junction. Also called *radix mesenterii*.

of the nail. The small proximal region of the nail plate covered entirely by the nail wall. Also called *radix unguis*.

r. of the nose. The part at the forehead between the eyes, from which emerges the dorsum of the nose. Also called *radix nasi*.

of the tongue. The pharyngeal, fixed part of the tongue, posterior to the sulcus terminalis. Syn., *basis linguae*.

sensory. See posterior.

spinal vestibular. See descending vestibular *tract*.

ventral. See anterior.

root ca·nal'. A small channel running from the pulp chamber to the apex of the tooth, normally filled with pulp tissue.

root feet. Fine digitations of basal cells of the epidermis into the underlying connective tissue of the corium at the dermoepidermal junction. Syn., *basal-cell* *attachm*.

R. O. P. Right occipitoposterior position of the fetus.

Roque's sign. See under *sign*.

Rorschach, Hermann [*Swiss psychiatrist*, 1884–1922]. Described test which measures the more qualitative, nonintellectual traits of personality based on the subject interpretation of 10 ink blots of varying designs and colors. See Rorschach test.

ro·sa'ce·a (ro-zay'see-uh). See acne rosacea.

ro·sa·ce·i·form' [L. *rosaceus*, made of roses; *forma*, form]. Resembling acne rosacea. Having dusky red, telangiectatic appearance.

ro·sa'li·a (ro-zay'lee-uh) [L. *rosa*, rose]. 1. Scarlet fever. 2. Measles. 3. Erythema.

ros·an'i·line (ro-zan'i-leen, -lin, -lyne). $C_{20}H_{21}N_3O$. Brownish red crystals, slightly soluble in water; soluble in acids, alcohol. Used as stain and in the manufacture of dyes.

hydrochloride. Red crystals, soluble in water. See *fuchsin*.

Rose, Anton Richard [*American biochemist*, 1877–1946]. With W. G. Exton, developed glucose tolerance test, called *Exton and Rose's test*.

Rose, Edmund [*German physician*, 1836–1914]. Known for his description of position taken by the patient on the operating table in which he is dorsally recumbent, the head being over the end of the table in full extension; the object is to prevent body fluids from entering the trachea during operation upon the mouth and fauces, called *Rose's position*.

Rose, William [*English surgeon*, 1847–1910]. Devised various operations for harelip, called *Rose operations*.

rose [L. *rosa*]. Any plant or flower of the genus *Rosa*.

attar of. Rose oil.

cabbage. See pale.

cottage. *R. alba*, source of rose oil.

damask. *R. damascena*; source of rose oil.

dog. *R. canina*. See rose *hips*.

French. *R. gallica* or red rose.

pale. *R. centifolia*, whose fragrant petals are used in cosmetics and as a flavoring agent.

red. *R. gallica*. The dried petals are used as flavoring agent and perfume.

oil (*oleum rosae*). The volatile oil distilled with steam from the fresh flowers of *R. gallica*, *R. damascena*, *R. alba*, and *R. centifolia*, and varieties of these species. A perfume and flavoring agent. Also called *otto of*, *attar of*.

water (*aqua rosae*). A freshly prepared mixture of equal parts of stronger rose water and distilled water used as vehicle.

water ointment (*unguentum aquae rosae*). A popular emollient and vehicle sometimes referred to as cold cream; it contains spermaceti, white wax, expressed almond or persic oil, sodium borate, rose oil, rose water and water.

stronger water (*aqua rosae fortior*) A saturated solution of the odorous principles of *R. centifolia* flowers prepared by distillation.

rose ben gal (beng gawl, ben gawl) (C.C.) Dichlortetraiodofluorescein, or tetrachlortetraiodofluorescein, used as bacterial stain. The rate of disappearance of the dy from th blood stream following ts intravenous administration is test of liver function.

rose cold. An allergic manifestation due to sensitivity to rose pollens. It is form of hay fever

rose fe'ver A form of hay fever

rose hips. The ripe fruit of the dog rose, *Rosa canina*; contains invert sugar combined with citric and malic acids, salts of these acids, considerable amount of ascorbic acid and trace f tannin used for making pill masses. A syrup of rose hips has been used in vitamin-C therapy

ro se-in (ro see in, roz'ee in) **ro se ine** (ro zee-een, -in, roz'ee) Fuchsin.

ro-sel'la (ro sell uh) See *rubella*.

rose mar"y [L. *rosmarinus* rosemary]. *Rosmarinus officinalis*, plant of the Labiatae.

oil. The volatile oil distilled with steam from the fresh flowering tops of rosemary Contains at least 1.5% of esters calculated as bornyl acetate and 10% of total borneol, free and as esters. Used as carminative and in rubefacient liniments. Dose, 0.3–0.4 cc. (3–6 min.)

Rosenau Milton Joseph [*American pathologist and hygienist*, 1869–1946]. Known for his many contributions to the knowledge of epidemiology and publi health.

Rosenbach, Anton Julius Friedrich [*German physician and bacteriologist*, 1842–1923]. Noted for his studies in wound infection (1884) in which he isolated causative organisms. Erysipeloid is sometimes known as *Rosenbach disease*.

Rosenbach, Ottomar [*German physician*, 1851 1907]. Heberden disease, or nodes, are also called *Rosenbach disease* or *nodes*. Enunciated law that, in lesions of the nerve centers or trunks, paralysis starts in the extensor before t starts in the flexor muscles; called *Rosenbach law*. Described number of signs found in neurasthenia and goiter See also Rosenbach test.

Rosenheim bismuth test. See under *test*.

Rosenheim iodopotassium iodide solution. See under *solution*.

Rosenmueller Johann Christian [*German anatomist*, 1771 1820]. Described the parovarium, also called *organ of Rosenmueller* and the palpebral portion of the lacrimal gland, called *Rosenmueller' gland*. A lymph node in the femoral ring is also called *Rosenmueller' gland*. See also lateral pharyngeal *fossa*, called *Rosenmueller fossa* or *recess*.

Rosenow Edward Carl [*American bacteriologist*, 1875–]. Introduced staining technic for demonstrating bacterial capsules, consisting of successive applications of tannic acid solution, gentian violet, Lugol solution, alcohol and eosin solution. Called *Rosenow' method*.

Rosenthal, Friedrich Christian [*German anatomist*, 1780–1829]. Described the basal cerebral vein, also called *Rosenthal' vein*.

Rosenthal, Isidor [*German physiologist* 1836–1915]. Described the spiral canal of the cochlea, also called *Rosenthal' canal*.

Rosenthal–Rowntree test. See under *test*.

ro-se ta (ro-zee o-luh) [L. *roseus*, rosy] 1 A name given to any rose-colored eruption. 2. See *rubella*.

epidemic Rubella.

cholerica. An eruption sometimes appearing in cholera.

infantum. See *exanthema subitum*.

r scarlatiniforme. See *erythema scarlatiniforme*.

r syphilitica. An eruption of rose-colored spots appearing early in secondary syphilis

r typhosa. The eruption of typhoid or typhus fever

r vaccinia. A general rose-colored eruption occurring about ten days after vaccination. It is of short duration.

ro-se'o-lous (ro-zee lus) [roseola]. Having the character of roseola.

ro se- thri'cin. An antibiotic substance, similar to streptothricin, btained from *Streptomyces roseochromogenus*.

Roser Wilhelm [*German surgeon*, 1817–88]. Described a sign indicative of cerebral lesion or tumor in which pulsation of the dura mater is absent; called *Roser'* or *Roser-Braun sign*.

ro-sette' (ro-zet') [F]. 1 Groups of cells from the neuroepithelial layer of the retina described by Wintersteiner as characteristic of gliomas of the retina. They correspond to the external limiting membrane of the retina, with rudimentary rods and cones projecting into the central cavity 2. A spherical group of fine red vacuoles surrounding the cytocentrum of monocytes, which can be seen after supravital staining.

ros'in (roz'in) [L. *resina*, resin] (*resina*) The residue left after the volatile oil is distilled from turpentine. It consists chiefly of various modifications of anhydrides of abietic acid with varying quantities of hydrocarbons. Also called *colophony*

compound cerate (*ceratum resinae compositum*) Consists of 23% of rosin and 13% of turpentine in base of yellow wax, prepared suet, and linseed oil. Also called *Deshler' salve*.

r cerate (*ceratum resinae*) Consists of 35% of rosin in base of yellow wax and lard. Also called *resin cerate*, *basilicon ointment*.

ro sol'ic ac'id (ro-zol'ick, -sol' ick) A mixture of triphenylmethane derivatives occurring as reddish brown powder with green luster Insoluble in water soluble in alcohol. An acid-base indicator. Also called *aurin*, *corallin*.

Ross, Edward Halford [*English pathologist*, 1875–1928]. Described *Lymphocytozoon pallidum*, small, round bodies found in the blood and tissue fluids in syphilis. They are copper colored, with dark granules, and sometimes exhibit ameboid movements. Called *Ross bodies*.

Ross, Hugh Campbell [*English pathologist*, 1875–1926] Introduced test for syphilis using an agar solution, Unna polychrome blue, sodium bicarbonate, and sterile water When thin film of this is spread on slide and allowed to solidify the material under question is dropped gently on to it. If the test is positive, the spirochetes will stain. Called *Ross test*.

Ross, Philip Hedgeland [*English physician*, 1876–1929]. With A. D Milne, discovered the cause of African tick (relapsing) fever (1904)

Ross, Ronald [*English pathologist and parasitologist*, 1857–1932]. First demonstrated that the mosquito is responsible for the transmission of malaria. Studied the life cycle of the malarial parasite see *exogenous cycle*. Nobel laureate (1902).

Ross's in vitro method. A method of microscopical study of phenomena of living cells, on glass slides covered with nutrient jelly

Ross–Jones test. See under *test*.

Rossbach, Michael Joseph [*German physician*, 1842–94]. Described neurosis of the stomach attended by hyperchlorhydria formerly called *Rossbach disease*, *gastroxynsis*.

Rossman, Isadore [*American physician*, 1913–]. Developed fixative consisting of one part neutral formalin in nine parts of saturated picric

and in absolute alcohol, used for the fixation of glycogen in tissues. Called *Rossman's fluid.*

Rossolimo's reflex. See under *reflex.*

Rostan, Léon [*French physician,* 1790–1866]. Remembered for his early description of cardiac asthma (1817); also called *Rostan's asthma.*

ros tel'lum [L., little beak]. A little beak, especially the hook-bearing portion of the head of certain worms.

ros'tra. Plural of rostrum.

ros'tral [L. *rostrum,* beak]. 1. Pertaining to, or resembling, a rostrum. 2. Cephalic.

ros'trum (pl. *rostra*) [L.]. A beak; a projection or ridge.

r. corporis callosi. The anterior tapering portion of the corpus callosum.

r. sphenoidale. The vertical ridge on the inferior aspect of the body of the sphenoid bone, which is received in the upper grooved border of the vomer.

rot [AS. *rotian*]. 1. Putrefactive fermentation; decay; decomposition. 2. A disease of the feet of sheep in which the hoofs are destroyed. —**rot,** *v.*

grinders' r. Fibrosis of the lungs occurring in grinders, especially knife grinders. Also called *grinders' asthma.*

jungle r. See *jungle rot.*

liver r. See *fascioliasis.*

ro"ta-me"ter [L. *rota,* wheel; *metron,* measure]. A device for the measurement of mean blood flow in arteries or veins.

ro'tate [L. *rotare,* to swing around]. Wheel-shaped.

ro'ta ting (ro'tay-ting) [*rotare*]. Revolving, as rotating devices, appliances for correcting torsion of teeth.

ro-ta'tion [L. *rotatio,* from *rotare*]. 1. The act of turning about an axis passing through the center of a body, as rotation of the eye, rotation of the head. 2. In dentistry, the operation by which a malturned tooth is turned or twisted into its normal position. 3. The phenomenon whereby every third or fourth impulse is carried over the cochlear nerve when the exciting impulse is above 1800 cycles. See *alternation,* 2. 4. In obstetrics, one of the stages of labor consisting in rotary movement of the fetal head or other presenting part, whereby it is accommodated to the birth canal. It may be internal, occurring before the birth of the presenting part, or external, occurring afterward. See Plate 42.

optical r. (a) Optical activity. (b) The number of degrees of rotation of the plane of vibration of polarized light produced by the substance under examination.

specific r. The optical rotation, expressed in angular degrees, of a solution representing 1 Gm. of solute in 1 cc. of solution, and referred to a tube 1 decimeter in length.

wheel r. In Helmholtz's method, the tilting of the vertical meridians of the eye.

ro ta'tion ther'apy. Radiation therapy during which either the patient is rotated before the source of radiation or the source is revolved around the patient, thereby providing a larger dose of radiation at the center of rotation than on any area of the skin.

ro-ta to'res. Small deep muscles of the back which extend and rotate the vertebrae, sometimes divided into rotatores breves and longi, depending on their length.

r. spinae. The rotatores muscles.

ro-ta to'ri-a. See *cursive epilepsy.*

Rotch, Thomas Morgan [*American pediatrician,* 1849–1914]. Widely known in his time for his introduction of percentage modification of milk (protein, fat, and carbohydrate) for individual infant feeding; called *Rotch's method.* See also *Rotch's sign.*

ro'te-none (ro'ti-nohn, rot'i-nohn). $C_{23}H_{22}O_6$. An insecticidal principle derived from derris root and other plant roots; insoluble in water, soluble in ether. Harmless to birds and mammals.

Roth, Moritz [*Swiss physician,* 1839–1914]. Described an inconstant diverticulum of the middle portion of the rete testis; called *Roth's vas aberrans.* Also described white spots on the retina seen in septic retinitis; called *Roth's spots.*

Roth's disease. See *meralgia paresthetica,* also called *Roth-Bernhardt disease.*

Roth's method. See under *method.*

Rothberg-Evans sugar tube. A tube similar to the Folin sugar tube, used in sugar determinations.

Rothera's test. See under *test.*

Rotter, H. [*Hungarian physician,* contemporary]. Introduced a rapid clinical test for vitamin-C deficiency in man, using dichlorophenol-indophenol sodium injected intradermally. If decolorization does not occur within ten minutes, deficiency may be assumed. Called *Rotter's test.*

rot tler-a (rot'lur-uh). See *kamala.*

rot'tler-in. A bitter principle from kamala; used as an anthelmintic.

Rouelle, Hilaire Marie [*French pharmacologist,* 1718–79]. Discovered urea (1773).

Rouget, Charles Marie Benjamin [*French physiologist,* 1824–1904]. Described contractile cells on the walls of the capillaries of the frog and salamander; called *Rouget cells.*

rough' ge [AS. *rūh*]. Food residue in the colon, usually composed for the most part of cellulose.

Rougnon de Magny, Nicolas François [*French physician,* 1727–99]. Described what appears to have been angina pectoris (1768). Heberden reported and described the disease at the same time, giving it the name, but published only in 1772. Angina pectoris was formerly called *Rougnon-Heberden's disease.*

rou leau' (roo lo') [F.]. A roll of red blood cells resembling a roll of coins.

round shoul'ders. Faulty posture in which dropping of the shoulders and increased convexity of the thoracic spine are conspicuous, the postural abnormalities not being limited to the shoulder girdle and chest.

round'worm [L. *rotundus;* AS. *wyrm*]. A worm of the order Nematoda.

roup (rōōp) [probably imitative in origin]. An infectious disease of fowls characterized by inflammation of the upper air passages and sinusitis.

Rous, Francis Peyton [*American physician,* 1879–]. Known for his experimental work on the virus causation of tumors; a chicken sarcoma is called *Rous tumor* or *sarcoma.*

Roussy, Gustave [*French pathologist,* 1874–1948]. Known for his description, with J. J. Dejerine, of the thalamic syndrome (1906). He also described dermatofibrosarcoma, a tumor of the skin occurring singly or as multiple nodules, with a wide variation in malignancy; called *Darier-Roussy sarcoid.* See also *Lévy-Roussy syndrome.*

Roux, César [*Swiss surgeon,* 1857–1926]. Developed an operation for excision of the esophagus for carcinoma, in which he performed esophagojejunogastroanastomosis in stages; called *Roux's operation.* Introduced an operation for gastroenterostomy en Y, the jejunum being divided, the distal end anastomosed to the side of the stomach, and the proximal end to the side of the jejunum at a lower level; called *Roux's gastroenterostomy.*

Roux, Jules [*French surgeon,* 1807–77]. Devised an operation for exstrophy of the bladder in which he made a closure by means of flaps, one dissected

from the abdomen bove and another from the scrotum below called *Roux peration*.

Roux, Pierre Paul Emile [*French bacteriologist*, 1853-1933]. Co-worker with Pasteur in many of his studies of the bacterial cause of disease. With Pasteur and Chamberland, demonstrated the rabies virus in the blood (1884) W th Yersin, proved th existence of sol ble diphtheria toxin by passing the culture through porcelain filter (1888) Developed an antitetanic serum known as *Roux' serum*. With Nocard, published an early study filtrable viruses (1898) Also see Elie *Metchnikoff*

Rovsing, Niels Thorkild [*Danish surgeon*, 1862-1927]. Described sign said to be of value in the diagnosis of acute ppendicitis pressure on the ascending colon on level with M Burney' point elicits pain at the point called *Rovsing' sign*.

Rowe, Albert Holmes (1889-) American physician and uthor of books on allergy particularly food allergy; he instituted regimen of elimination diets for the study of food allergy called *Rowe elimination diets*.

row'ing meth od. See under *artificial respiration*.

Rowntree Leonard George [*American internist*, 1883-]. With J T Geraghty introduced the phenolsulfonphthalein test for kidney function (1910) called *Rowntree-Geraghty test*. See also *Rosenthal-Rowntree test* (*for liver function*) under *test*. With Geraghty and N M Keith, introduced method of estimating the blood and plasma volume (1915)

roxenol. A trade-mark for the British Pharmacopoeia solution f chloroxylenol.

R. Q Respiratory quotient.

-rrha'gi a [G *rhēgnynai*, to burst forth] *I medicine*, combining form signifying *abnormal or excessive discharge*.

-rrha phy *In surgery* combining form meaning sewing or suturing, usually of an immediate or recent injury or laceration.

R. S. A. Right sacroanterior position of the fetus.

R. S. P Right sacroposterior position of the fetus.

R. T Registered technician certificate warded to qualified x-ray technicians by the American Registry of X Ray Technicians.

Ru Chemical symbol for ruthenium.

rub'ber [ME. *rubben*]. The *elastica* of the U.S.P The prepared milk juice of several species of *Hevea*. Also called *caoutchouc*, *India rubber Pará rubber*

ru be do [L., redness]. Any diffuse redness of the kin.

ru"be-fa cient (rōō"bi f y shunt) [L. *rubefacere*, t make red]. Causing redness of the kin. —**rubefa cient**, *n*.

ru"be-fac'tion [*rubefacere*]. 1 Redness of the skin due to the action of an irritant. 2. The act of causing redness of the skin.

ru bel'la [L. *rubellus*, reddish]. German measles. An acute contagious, eruptive disease, of short duration and mild character After period of incubation varying from one to three weeks, the disease sets in abruptly with sore throat and slight fever The eruption appears at the end of the first day, and consists of red maculopapular lesions, and disappears usually without desquamatio in bout three days. The disease is associated with enlargement of the superficial cervical and posterior auricular lymph nodes Also called *epidemic roseola*, *French measles*, *German measles*, *rötheln*.

ru be la, ru"be-o'la. See *measles*.

ru be o-lin. A name given to so-called pecific toxin of measles.

ru"be-o sis i rid is. Increased vascularization of the iris, seen most often in diabetes mellitus. Such an iris appears grossly pink to reddish.

ru'ber [L.] Red.

ru be-ryth ric ac'id. $C_{26}H_{28}O_{14}$ a glycosidal constituent of the root of madder which yields on hydrolysis alizarin and dextrose. Syn., *rubeseries acid*.

ru bes'cence [L. *rubescere*, to grow red]. The state or quality of redness flushed or blushing countenance. —**rubescent**, *adj*

ru'bi a [L., madder]. The *Rubia tinctorum* or dyers' madder containing the coloring principles alizarin and purpurin; used as a dye.

ru"bi an'ic ac'id. Ruberythric acid.

ru bid'i um [L. *rubidus*, red]. Rb = 85.48. An alkali metal resembling potassium in appearance. It reacts violently with water and is kept under liquid hydrocarbon. Used in photoelectric cells.
r bromide. RbBr A colorless, crystalline, soluble powder has been used like potassium bromide.
r iodide. RbI. White, crystalline, very soluble powder; has been used like potassium iodide.

ru big'i nous (rōō bidj'i-nus) [L. *rubigo*, rust]. Rust-colored.

ru"bi jer'vine. An alkaloidal constituent, being an alkanolamine, of veratrum viride and veratrum album it is practically inert physiologically

Rubin Isidor Clinton (1883-) American gynecologist, known for his test for the patency of the uterine tubes (1919) See tubal *insufflation*.

ru'bin. Basic fuchsin.

Rubner Max [*German physiologist*, 1854-1932]. Known for his investigations on the metabolism of foods (1902) With O J L. Heubner, determined th caloric requirements of infants Introduced test for lactose in the urine called *Rubner test*. Enunciated two laws, each called *Rubner's law*. ( ) The law of constant energy consumption states that the rapidity of growth is proportional to the intensity of the metabolic process (b) The law of constant growth quotient states that the same fractional part of the entire energy is used for growth most young mammals use approximately 34% and an adult man about 4 .- Found that metabolism is proportional to body area.

ru'bor [L.]. Redness due to inflammation.

ru bres'e-rine (rōō-bres er-een, -in, rōō"bri-seer een, -in) A red decomposition product of physostigmine; it accounts for part of the color which develops in physostigmine solutions on aging and indicates decrease in potency

ru'bri blast [L. *ruber* red G *blastos*, germ]. A cell, in the earliest stage of formation of red blood cells, in which the chromatin is fin and stippled. Nucleoli are usually present. See *pronormoblast*, *erythroblast*.

ru'bri cyte [*ruber*; G. *kytos*, cell]. A cell, in the formative stages of red blood cells, with definite chromatin pattern, but no nucleolus. See *erythroblast*, *normoblast*.

ru"bro-spi'nal. See under *peristasis*.

ru'brum scar"la ti'num [L.]. Scarlet red.

ruc-ta tion [L. *ructatio*, belching]. Eructation belching.

ruc'tus [L., belching]. A belching of gas from the stomach.
hystericus. Hysteric belching, the gas escaping with loud, sobbing, gurgling noise.

R dbeck, Olof [*Swedish anatomist*, 1630-1702]. Discovered the intestinal lymphatics and their connection with the thoracic duct (1653). Prior discovery was also claimed by Thomas Bartholin who was certainly the first to appreciate the significance of the lymph system as whole.

ru'di ment [L. *rudimentum*, first trial]. That which is but partially developed. —**rudimen'tary** *adj*

amnioembryonic The inner cell mass of the early blastocyst from which the amnion and the blastoderm differentiate. Also called *intrachorionic*.

ru"di men'ta ry [*rudimentum*]. Undeveloped; unfinished, incomplete.

ru"di men'tum (pl. *rudimenta*) [L.]. A rudiment.

rue [L. *ruta*, rue]. A plant, *Ruta graveolens*, of the family Rutaceae, yielding a volatile oil consisting chiefly of methyl-nonyl-ketone, $CH_3.CO.C_9H_{19}$, and acting as a potent local irritant.

Ruffini, Angelo [*Italian anatomist*, 1864–1929]. Author of important studies on gastrulation. Described nerve endings in the subcutaneous tissue of the fingers, made up of terminal arborization of one or more nerve fibers within a fibrous framework, called *Ruffini's corpuscle, end organ, cell*.

ru'fous [L. *rufus*, red]. Reddish; ruddy.

Rufus' pill. A pill of aloes and myrrh.

ru'ga (pl. *rugae*) [L.]. A wrinkle, fold, elevation, or ridge, as in the mucosa of the stomach, vagina, and palate.

rugar Trade-mark for a radiopaque medium containing chiefly barium sulfate.

Ruggi, Giuseppe [*Italian surgeon*, 1844–1925]. Described an operation for radical cure of femoral hernia using the inguinal approach (1893). Used sympathectomy for cure of pelvic pain.

ru gi'tus (rōō-jye'tus, rōō'ji tus) [L., rumbling]. Rumbling of the intestines.

ru gose ru gous [L. *rugosus*, wrinkled]. Characterized by many folds.

ru gos'i ty [L. *rugositas*, the state of being wrinkled]. A condition exhibiting many folds in a tissue or integument.

ru'gous. See *rugose*.

Ruhmkorff, Heinrich Daniel [*German physicist*, 1803–77]. Invented an induction coil in which the secondary coil is fixed at the point of maximum intensity; called *Ruhmkorff coil*.

rule [L. *regula*, a model]. An established guide for action or procedure.

Goodsall In *proctology*, fistulas with external openings in the posterior half of the perianal area have their primary opening in the posterior half of the anus, usually at or near the posterior commissure; fistulas with external openings in the anterior perineum usually have their primary opening in the anterior quadrant of the anus.

Haase's A clinical rule for the approximation of crown-heel length of the fetus in centimeters by the use of the lunar month of gestation, and vice versa. *Calculated by squaring the lunar month through 5 months* (e.g., 5 × 5 = 25 cm) or taking the square root of length up to 25 cm ($\sqrt{25}$ = 5 lunar mo.) and thereafter multiplying the lunar month by 5 (e.g. 7 × 5 = 35 cm) or dividing length by 5 (35 cm ÷ 5 = 7 lunar mo.)

Hardy-Schulze r The higher the valence the greater the coagulating effect of added ions of charge opposite to that of the suspended particles of a colloidal system.

of nines. A rule for the estimate of the percentage of body surface according to which the head and upper extremities each represent 9%, the trunk, anterior and posterior and the lower extremities, each 18%, and the perineum 1%. It is of particular usefulness in judging the severity and extent of burns. In second or third degree burns, involvement of 15% of body surface may produce shock in adults, or of 10% in children.

Traube's The extent to which members of homologous series are adsorbed from aqueous solution increases as the number of CH_2 groups in the molecule increases or as the molecular weight increases.

Young's Child's dose (for children over 2 years of age) = $\frac{\text{age}}{\text{age} + 12}$ × adult dose. See also Thomas *Young*.

[As printed: of age) = (lbs. body weight × adult dose) / (age + 12). See also Thomas *Young*.]

rum'bling. See *borborygmus*.

ru'men [L., gullet]. First compartment of the stomach of the ruminant, where food is temporarily stored while undergoing fermentation prior to regurgitation and remastication. Also called *paunch*.

ru"men-ot'o-my [*rumen*, G *tomē*, a cutting]. A laparotomy operation in which the rumen is exposed and incised for the correction of certain diseases of the organ.

Ru'mex [L., sorrel]. A genus of plants of the Polygonaceae. Yellow dock, the root of *R. crispus*, is a mild laxative and astringent.

ru'mi nant [L. *ruminare*, to chew over again]. One of an order of animals possessing an arrangement of the fore-stomach whereby food is regurgitated and remasticated. An animal which chews the cud.

ru"mi na'tion [L. *ruminatio*, from *ruminare*]. 1. A characteristic of ruminants in which food is regurgitated and remasticated in preparation for true digestion. Syn., *merycism*. 2. In *psychiatry*, an obsessional preoccupation with a single idea or system of ideas which dominates the mind despite all efforts to dislodge it. Observed in anxiety states and in psychasthenia.

Rummo, Gaetano [*Italian physician*, 1853–1917]. Described cardioptosis or drop heart (1898); also called *Rummo's disease*.

rump [M.E. *rumpe*]. The region near the end of the backbone; the buttocks or nates.

Rumpel, Theodor [*German physician*, 1862–1923]. Described a sign observed in scarlet fever and some other exanthemas, consisting of petechiae following the application of constriction applied to the arm. Called *Rumpel-Leede sign, phenomenon*.

run [AS. *rinnan*]. To discharge, as pus or purulent matter from a diseased part.

run-a-round" A paronychia extending completely around a nail.

Rusetta's operation. Venoperitoneostomy.

ru'pi a [G. *rhypos*, filth]. A form of eruption characterized by the formation of large, dirty-brown, stratified, conic crusts, that resemble oyster shell; commonly a type of eruption seen in syphilis. —**rupial,** *adj.*

ru"po pho'bi a. See *rhypophobia*.

rup'ti-o (rup shee-o) [L., a breaking]. Rupture of a vessel or organ.

rup'ture [L. *ruptura*, a break]. 1. A forcible tearing of a part, as rupture of the uterus, rupture of the urinary bladder. 2. Hernia.

rup'tured [*rupture*]. Burst; broken; forcibly torn; affected with hernia.

Rush, Benjamin [*American physician*, 1745–1813]. Surgeon of the Continental Army. Described dengue (1780), yellow fever, cholera infantum, and rheumatism. Author of the first American book on psychiatry (1812).

Russell, Frederick Fuller [*American bacteriologist*, 1870–]. Widely known for his work, while a member of the United States Army Medical Corps, in the control of typhoid fever and syphilis. With P. H. Hiss, reported a type of *Shigella paradysenteriae* (1903). See Hiss and Russell's Y bacillus.

Russell, Patrick [*Irish physician of the East India Company*, 1727–1805]. Author of a comprehensive work on the venomous serpents of India. See *Russell's viper* under *Viperidae*; also see *Vipera russellii*.

Russell, William (1852–1940). Scottish pathologist who described small, spherical, fuchsinophil bodies found in carcinomatous and other conditions, by some considered to be of etiologic

sac cha ro bi'ose. $C_{12}H_{22}O_{11}$. A disaccharide.

sac cha ro ga lac"tor rhe a [*sakchar*; G. *gala*, milk; *rhoia*, flow]. The secretion of milk which contains an excess of sugar.

sac cha roids [*sakchar*; G. *eidos*, form]. Sugarlike substances. The term is generally applied to polysaccharides of high molecular weight which do not ferment, but which yield fermentable sugars on hydrolysis.

sac"cha ro me tab o lism [*sakchar*; G. *metabolē*, change]. The metabolism of sugar. —**saccharometabol'ic,** *adj.*

sac cha rom'e ter. See *saccharimeter.*

Sac cha ro my'ces (sack"uh ro-migh seez) [*sakchar*; G. *mykēs*, fungus]. A genus of yeasts which includes bakers' and brewers' yeasts.

S. hominis. Synonym for *Cryptococcus histolyticus.*

sac"cha ro my ce tic (-migh see tick, -migh set'ick) [*sakchar*; *mykēs*]. Pertaining to, or caused by *Saccharomyces.*

sac" ha ro my ce sis (sack uh ro migh ko sis) [*sakchar*; *mykēs*; G. *-ōsis*, condition]. A pathologic condition due to yeasts or Saccharomyces.

sac"cha ror rhe a [*sakchar*; G. *rhoia*, flow]. Glycosuria.

sac'cha rose (sack uh roce, -roze) [*sakchar*]. 1. Sucrose, cane sugar, $C_{12}H_{22}O_{11}$. A crystalline carbohydrate occurring in the juice of many plants, chiefly in sugar cane, sugar beets, and some varieties of maple. It is not fermentable without preliminary hydrolysis and does not reduce alkaline copper solutions. 2. A term used in the classification of carbohydrates as **monosaccharose,** simple carbohydrate of formula $C_6H_{12}O_6$; **disaccharose,** carbohydrate of formula $C_{12}H_{22}O_{11}$ formed from two monosaccharose units with the elimination of a molecule of water.

sac"cha ro su'ri a [*sakchar*; G. *ouron*, urine]. The presence of saccharose in the urine.

sac cha rum [*sakchar*]. See *sucrose.*

sac ci form (sack si form) [L. *saccus*, from G. *sakkos*, sack; L. *forma*, form]. Resembling a sac.

sac'cu lar [L. *sacculus*, little sac]. Sac-shaped.

sac cu lat"ed [*sacculus*]. Divided into small sacs.

sac"cu la'tion [*sacculus*]. 1. The state of being sacculated. 2. The formation of small sacs.

sac'cule [*sacculus*]. 1. A small sac. 2. The smaller of two vestibular sacs of the membranous labyrinth of the ear. Also called *sacculus labyrinthi.*

s. of the larynx. A blindly ending diverticulum of mucous membrane extending from the laryngeal ventricle upward between the ventricular fold and the inner surface of the thyroid cartilage. Syn., *appendix of the laryngeal ventricle.*

sac"cu lo-coch'le ar (sack yoo lo cock'lee-ur) [*sacculus*; L. *cochlea*, snail]. Relating to the saccule of the vestibule and the cochlea.

sac cu lus [L.]. 1. A saccule. 2. The saccule of the vestibule.

sac cus (pl. *sacci*) [L.]. Sac.

s. endolymphaticus. See endolymphatic sac.

s. omphaloentericus. The yolk sac.

s. vaginalis. Vaginal process of the peritoneum.

Sacher-Masoch. See *masochism.*

Sachs, Bernard Parney [*American neurologist,* 1858–1944]. Known for his description of amaurotic familial idiocy (1887).

Sachs, Hans [*German bacteriologist,* 1877–1945]. With Walter Georgi, introduced a variation on the Wassermann test used in the diagnosis of syphilis, known as *Georgi-Sachs reaction* or *test.*

Sacks, Benjamin [*American physician,* 1896–]. With Libman, described a form of nonrheumatic, nonbacterial endocarditis, called *Osler-Libman-Sacks disease* or *syndrome.* See atypical verrucous *endocarditis.*

sa'cra. Plural of sacrum.

sa cral'gi a. Pain in the region of the sacrum.

sa cral i za'tion [L. *sacer*, sacred]. Fusion of the sacrum to the fifth lumbar vertebra, leading to proneness to rupture of the disk between the fourth and fifth lumbar vertebrae; formerly called *Bertolotti's syndrome.*

sa crec'to my [*sacer*; G. *ektomē*, excision]. Excision of part of the sacrum.

sa cro- (say'kro-) [*sacer*]. A combining form meaning *relating to the sacrum.*

sa cro an te ri or [*sacer*; L. *anterior*, foremost]. A fetal position, with the sacrum directed forward.

sa cro coc cyg'e al (say"kro cock sidj'ee ul) [*sacer*; G. *kokkyx*, cuckoo]. Pertaining to the sacrum and the coccyx.

sa cro coc cyg'e us (-cock sidj ee us) [*sacer*; *kokkyx*]. One of two inconstant thin muscles extending from the lower sacral vertebrae to the coccyx.

s. anterior. That on the anterior surfaces of the sacrum and coccyx, inserted into the anterior sacrococcygeal ligament.

s. posterior. That on the posterior surfaces of the sacrum and coccyx, lying beneath the superficial layer of the sacrotuberous ligament.

sa cro cox al'gi a. See sacrocoxitis disease.

sa cro cox i'tis. See sacrocoxitis disease.

sa cro dyn'i a (say"kro-din ee-uh, -dye nee uh) [*sacer*; G. *odynē*, pain]. Pain in the sacrum.

sa"cro il'i-ac (say kro il'ee-ack) [*sacer*; L. *ilia*, flank]. Pertaining to the sacrum and the ilium, as sacroiliac disease. See Table of Joints and Ligaments in the Appendix.

sa cro-lum ba'lis. Old name for iliocostalis lumborum muscle.

sa cro-lum'bar [*sacer*; L. *lumbus*, loin]. Pertaining to the sacrum and the loins. Syn., *lumbosacral.*

sa cro pos-te ri or [*sacer*; L. *posterior*, that comes after]. A fetal position with the sacrum directed backward.

sa"cro sci-at'ic (say"kro sigh at'ick) [*sacer*; G. *ischiadikos*, of the hips]. Pertaining to the sacrum and the ischium, as the sacrosciatic notch, sacrosciatic ligaments. O.T.

sa cro-spi na'lis (say"kro-spy nah'lis, -nay'lis) [*sacer*; L. *spinalis*, of the spine] [BNA]. A large muscle arising from the posterior aspect of the sacrum and inserted above on the spine and ribs. See Table of Muscles in the Appendix.

sa"cro u'ter ine (say"kro-yoo tur in, -yne, -een) [*sacer*; L. *uterus*, uterus]. Pertaining to the sacrum and the uterus, as sacrouterine ligament, old term for uterosacral ligament.

sa'crum (pl. *sacra*) [*sacer*]. A curved triangular bone composed of five united vertebrae, situated between the last lumbar vertebra above, the coccyx below, and the innominate bones on each side, and forming the posterior boundary of the pelvis. See Table of Bones in the Appendix. See Plates 1, 2, 14. —**sacral,** *adj.*

sac"to-sal'pinx. Hydrosalpinx.

sad'ism, sa dism [after Count de *Sade*, 1740–1814]. Sexual perversion in which pleasure is derived from inflicting cruelty upon another. —**sadis'tic,** *adj.*

sad'ist, sa dist [*Sade*]. One affected with sadism.

sad"o-mas'o-chism. The coexistence of sadism and masochism, i.e., both aggressiveness and passivity in social and sexual relationships; a strong tendency to hurt others and to invite being hurt.

Saemisch, Edwin Theodor [*German ophthalmologist,* 1833–1909]. Known for his description of serpiginous corneal ulcer (1870), called *Saemisch's ulcer.* He described vernal conjunctivitis (1876). Introduced an operation for hypopyon ulcer in

which he transfixed the cornea and the base of the ulcer known as *Saemisch operation*.

Saenger, Max [*German gynecologist*, 1853–1903]. Known for his introduction of the classic, but now obsolete, operation of Cesarean section in which he delivered the uterus through a long abdominal incision, extracting the fetus before returning the uterus to the cavity (1882). Known as *Saenger's operation*. Described his sign of gonorrheal vulvitis, a red spot marking the orifice of the duct of the major vestibular gland.

Safar, Karl [*German ophthalmologist*, contemporary]. Known for his introduction of a method of treating retinal detachment by diathermy using multiple electrodes (1932).

saf'fron [Ar. *za farân*, saffron]. Crocus.

saf'ra nine (saf'rah-neen, -nin), **saf'ra nin** [*za farân*]. A basic aniline dye of the azine group, used as a biologic stain. The commonest form is safranin O, C.C., which is used as a nuclear stain, and as a counterstain in Gram's stain for bacteria.

saf'ra no-phile (saf'rah-no file), **saf'ra no phil** (-fill) [*za farân*; G. *philein*, to love]. Pertaining to tissue elements which stain readily with safranine.

saf'role, saf'rol. $C_{10}H_{10}O_2$; 4-allyl-1,2-methylenedioxybenzene; the preponderant liquid constituent of sassafras oil, present also in other volatile oils.

sa'fu (sah foo). A reticulated vitiligo of the legs, seen in the Pacific area. Some cases seem to be hereditary.

sage. See *salvia*.

sage'brush [L. *salvia*, sage; OF. *broche*]. Any of several members of the genus *Artemisia*; its pollen is among the more important causes of hay fever in the Mountain and Pacific States.

sage femme (sahzh fahm. See Notes §§ 21, 35) [F.]. A midwife.

sag'it tal (sadj -tul) [L. *sagitta*, arrow]. 1. Arrowlike, as the sagittal suture of the skull. 2. Pertaining to the anteroposterior median plane of the body.

Sagnac rays. See *rays of Sagnac* under *ray*.

sa go [Malay *sagu*]. A starch derived from the pith of certain East Indian and Malaysian palms; used as a food and as a demulcent.

sag u lum [L., cloak]. A cell-poor layer of the superficial gray matter lateral to the inferior colliculus.

Sahli, Hermann [*Swiss physician*, 1856–1933]. Introduced a method of ascertaining the functional activity of the stomach (1891), known as *Sahli's test*. See also Sahli *method*.

Sahyun method. See under *method*.

Sai gon ci na mon (sigh-gohn. See Notes §§ 15, 35). Cinnamon.

Saint Agatha's disease. Disease of the female breast.

Saint Agnes's disease. Ringworm, tinea.

Saint Aman's disease. Pellagra.

Saint Anthony's dance. Chorea.

Saint Anthony's fire. Erysipelas or gangrene; ergotism.

Saint Apollonia's disease. Toothache.

Saint Blaise's disease. Quinsy.

St. Clair's method. See Farley, St. Clair and Reisinger's *method*.

Saint Erasmus' disease. Colic.

Saint Fiacre's disease. Hemorrhoids.

Saint Gervasius' disease. Rheumatism.

Saint Gothard's disease. Ancylostomiasis.

Saint Guy's dance. Chorea.

Saint Guy's disease. Chorea.

Saint Ignatius' bean. See *Ignatia*.

Saint Ignatius' itch. Pellagra.

St. John Long, John [*English painter and charlatan*, 1800–37]. Said to have introduced a liniment of turpentine and acetic acid, called *St. John Long's liniment*.

Saint Main's evil. Itch.

Saint Martin's disease. Dipsomania.

Saint Roche's disease. Bubonic plague.

Saint Sebastian's disease. Plague.

Saint Valentine's disease. Epilepsy.

Saint Vitus' dance. Chorea.

Saint Zachary's disease. Mutism.

Saissy, Jean Antoine [*French otologist*, 1756–1822]. Wrote on diseases of the tympanum and auditory tube. Described a bougie for the auditory tube (1829).

sajodin. Trade-mark for a brand of calcium iodobehenate.

Sakaguchi test. See under *test*.

Sakel, Manfred [*American psychiatrist*, 1900–]. Known for his important contribution in the treatment of schizophrenia and other mental disorders with insulin shock (1929); known as *Sakel's method*.

sal [L.]. 1. Salt. 2. Any substance resembling salt.

s. acetosellae. Potassium binoxalate.

s. aeratus. (a) Sodium bicarbonate. (b) Potassium bicarbonate.

s. amarum. Magnesium sulfate.

s. ammoniac. Ammonium chloride.

s. diureticus. Potassium acetate.

s. fossile. Sodium chloride.

s. Glauberi. Sodium sulfate.

s. kissingenesis. A salt obtained from the mineral springs of Kissingen, in Bavaria.

s. marinum. Sodium chloride.

s. mirabile. Sodium sulfate.

s. prunella. (a) A fused mixture of potassium nitrate, 128 parts, and sulfur, 1 part. (b) Fused potassium nitrate. Also called *s. prunelle*.

s. rupium. Rock salt.

s. seignette. Potassium sodium tartrate.

s. soda. Sodium carbonate.

s. vegetabile. Potassium tartrate.

s. volatile. Ammonium carbonate.

sa-la cious [L. *salax*, lustful]. Lustful. —**salac'ity**, *n.*

sal-an'ti-pon. Antipyrine salicylate.

sal'ep, sa'lep [Ar. *sahlab*, from *khusa al-tha'lab*, fox's testes]. The dried tubers of various species of the genus *Orchis* and the genus *Eulophia*. Used as a food, like sago and tapioca, or as a demulcent.

sal"a-ra'tus. Potassium bicarbonate or sodium bicarbonate. Syn., *sal aeratus*.

saletiyl. Trade-mark for ethyl salicylate.

saletiyl carbonate. Trade-mark for the carbonic acid ester of ethyl salicylate. The substance occurs as white, odorless crystals insoluble in water, slightly soluble in alcohol. Used as an antipyretic and analgesic.

Salicete, Guglielmo de (Saliceti; William of Saliceto) [*Italian surgeon*, ca. 1201–77]. Renowned for his skill and teaching abilities. Known to have sutured divided tendons. Author of a work on surgery in the thirteenth century (published 1476). Described dropsy due to contracted kidneys, also called *dropsy of Salicetus*.

sal'i-cin (sal'i-sin). $C_{13}H_{18}O_7$; a glycoside of orthohydroxybenzyl alcohol found in several species of willow and poplar; occurs as shining needles or prisms or as a white, crystalline powder; 1 Gm. dissolves in about 25 cc. of water and in about 90 cc. of alcohol. Salicin is rapidly absorbed and partly decomposed in the system, thus acting as an uncertain form of salicylic acid. Used in rheumatism, but since its conversion is uncertain it is inferior to the salicylates. Dose 0.6–2.0 Gm. (10–30 gr.).

salicionyl. Trade-mark for a granular effervescent salt containing sodium salicylate, sodium bicarbonate, with salts of calcium, potassium, sodium, and magnesium. The salt is used as an antipyretic and antirheumatic.

salicitrin. See *novaspirin*.

sal′i·cyl. 1. The radical, $C_6H_4OH.CO$— of salicylic acid; also called *salicylyl*. 2. The radical C_6H_4OH— (*ortho*). 3. The radical $C_6H_4OH.CH_2$—

s. alcohol. $C_6H_4OHCH_2OH$; *o*-hydroxybenzyl alcohol; occurs as a white, crystalline powder; soluble in water and alcohol. It has marked local anesthetic powers and is practically nontoxic. It is also used as an antipyretic. See *saligenin*, *saligenol*.

sal′i·cyl-. See *salicylo-*.

sal″i·cyl al′de·hyde. $C_6H_4(OH)CHO$; *o*-hydroxybenzaldehyde; an oily liquid, slightly soluble in water, having an odor resembling that of bitter almond oil; used in perfumery. Syn., *salicylic aldehyde*.

sal″i·cyl·am′ide. $C_6H_4(OH)CONH_2$; *o*-hydroxybenzamide; a white, crystalline powder slightly soluble in cold water; used as an analgesic, antipyretic, and antirheumatic.

sal″i·cyl·an′i·lide. $C_6H_5NH.CO.C_6H_4OH$, occurring in white or slightly pink crystals, slightly soluble in water; an antimildew and antifungal agent, used in treatment of tinea capitis due to *Microsporum audouini*.

sal″i·cyl″ate (sal′i·sil·ate, sa·lis′i·late, sal″i·sil′ate). A salt of salicylic acid.

sal″i·cyl·a·zo·sul·fa·pyr′i·dine. $COOH(OH)C_6H_3.N:N.C_6H_4.SO_2NH.C_5H_4N$; 5-[*p*-(2-pyridylsulfamyl)phenylazo]salicylic acid; a brownish-yellow powder practically insoluble in water. It shares the actions of related sulfonamide compounds; because of special affinity for connective tissue it is used in chronic ulcerative colitis. See *azulfidine*.

sal″i·cyl′ic ac′id (*acidum salicylicum*). $C_6H_4OH.COOH$. *o*-Hydroxybenzoic acid; occurs as white crystals, usually in fine needles, or as a white fluffy crystalline powder. 1 Gm. dissolves in about 460 cc. of water and in 3 cc. of alcohol. Internally, the salts of salicylic acid are used as urinary antiseptics, analgesics, antipyretics, and in the treatment of various forms of rheumatism. Salicylic acid is used only for its local effect. It is widely used in the form of dusting powders, lotions, and ointments in the treatment of various skin diseases, especially chronic eczemas. Its action in these conditions is due in part to its antiseptic and fungicidal effect and in part to its softening action upon the corneous layer of the skin.

benzoic and s. a. ointment. One which formerly contained 12% benzoic acid and 6% salicylic acid in a base of wool fat and petrolatum; now 6% benzoic acid and 3% salicylic acid in polyethylene glycol ointment base; used in the treatment of ringworm and other parasitic skin diseases. Also called *Whitfield's ointment*.

zinc oxide paste with s. a. (*pasta zinci oxidi cum acido salicylico*). Contains salicylic acid, 2 Gm., zinc oxide paste, a sufficient quantity to make 100 Gm. The paste adds to the protective action and antiseptic action of the salicylic acid. Also called *Lassar's zinc paste with salicylic acid*.

sal″i·cyl′ic al′de·hyde. Salicylaldehyde.

sal″i·cyl·ism [L. *salix*, willow; G. *hylē*, material]. A toxic condition, produced by full doses of salicylates; characterized chiefly by tinnitus, hebetude, nausea, and vomiting.

sal″i·cyl′o-, salicyl- [*salix*; *hylē*]. In chemistry, a combining form denoting *salicylic*.

sal″i·cyl sal″i·cyl′ic ac′id. $OH.C_6H_4.COO.C_6H_4.COOH$; crystalline powder almost insoluble in water; used for the same purposes as acetylsalicylic acid but yields twice as much salicylate ion. See *diplosal*, *salysal*.

sal″i·cy·lu′ric ac′id. $C_6H_4.OH.CO.NH.CH_2COOH$. A detoxication product of salicylic acid found in the urine.

sal″i·fi′a·ble. Forming a salt by union with an acid.

saligenin. Trade name for salicyl alcohol.

saligenol. Trade name for salicyl alcohol.

sa·lim′e·ter [L. *sal*, salt; G. *metron*, measure]. A hydrometer used to determine the density of salt solutions.

sa′line (say′lyne) [*sal*]. 1. Saltlike in character. 2. Containing sodium chloride.

sa′lines [*sal*]. Salts of the alkalies or of magnesium, used as hydragogue cathartics. Magnesium sulfate and citrate, sodium sulfate, and Rochelle salt are examples.

sal″i·py·raz′o·lone (sal·i·pye·raz′o·lone). See *antipyrine salicylate*.

salipyrin. A brand of antipyrine salicylate.

sa·li′va [L.]. The mixed secretions of the parotid, submaxillary, sublingual, and other glands of the mouth. It is opalescent, tasteless, and weakly alkaline. Its most important constituent is ptyalin. The functions of saliva are to moisten the food and lubricate the bolus, to dissolve certain substances, to facilitate tasting, to aid deglutition and articulation, and to digest starches, which it converts into maltose, dextrin, and glucose. —**sal′i·vary**, **saliveous**, *adj.*

chorda s. That produced by stimulation of the chorda tympani nerve.

ganglionic s. That produced by stimulating the submaxillary ganglion.

resting s. The saliva found in the mouth between meals.

s. ejector. See *saliva ejector*.

sympathetic s. That produced by stimulation of a sympathetic nerve.

sal′i·vant [L. *salivare*, to spit out]. Stimulating the secretion of saliva.

sal′i·vant. A drug which increases the flow of saliva.

sal″i·va′tion [L. *salivatio*, from *salivare*]. An excessive secretion of saliva; a condition produced by mercury, pilocarpine, and by nervous disturbances. In severe cases of mercurial salivation, ulceration of the gums and loosening of the teeth may occur. —**sal′ivate**, *v.*

sal″i·va″tor [*salivare*]. An agent causing salivation. —**saliva·tory**, *adj.*

sal″i·vo·li·thi′a·sis [L. *saliva*, saliva; G. *lithiasis*, disease of the stone]. Presence of a salivary calculus.

sa′lix [L., willow]. The bark of several species of *Salix* (willow). The active constituent of all species of *Salix* is salicin.

Salk, Jonas Edward (1914–). American bacteriologist associated with the development of poliomyelitis vaccine.

Salkowski test. See under *test*.

sal′len·ders. See *malanders*.

sal·mas′ter. See *mentum*.

sal′mine (sal′meen, -min) [L. *salmo*, salmon]. A protamine obtained from the spermatozoa of salmon.

Salmon, Daniel Elmer [American pathologist, 1850–1914]. With Theobald Smith he studied immunity. Discovered that dead virus induces immunity against living virus. A genus of Enterobacteriaceae is called *Salmonella* after him.

sal′mone. A histone obtained from the spermatozoa of salmon.

Sal″mo·nel′la [NL., after *Salmon*]. A genus of bac-

teria of the tribe Salmonelleae, family Enterobacteriaceae, and now including the former genus *Eberthella*. The organisms are non-lactose-fermenting, Gram-negative, motile rods which are commonly called paratyphoid bacilli. Infection produces an acute gastroenteritis called the food-poisoning type or typhoidlike group of symptoms. Many species are causes of diarrhea in domestic animals.

S. abortus equi. A natural pathogen for mares, causing abortion. It is infectious also for guinea pigs, rabbits, goats, and cows, producing abortion. Also called *Salmonella abortivoequina*.

S. abortus ovis. A pathogen causing abortion in sheep, and not known to infect any other animal.

S. aertrycke. Synonym for *S. typhimurium*.

S. choleraesuis. A species occasionally found in epidemics of acute gastroenteritis. Syn., *Bacterium cholerae-suis*. Also called *hog cholera bacillus*.

S. enteritidis. A species causing gastroenteritis in man, isolated also from the horse, hog, mouse, rat, and duck. formerly called *Bacterium enteritidis*.

S. foetida. A small, Gram-negative coccobacillus, variably motile and doubtfully considered the etiologic agent of ozena. formerly called *Coccobacillus foetidus ozaenae*, *Escherichia foetida*, *Perez' bacillus*.

S. gallinarum. A species causing fowl typhoid, diarrhea of domestic fowl, especially adult birds.

S. hirschfeldii. An aerobic, motile, Gram-negative rod causing enteric fever in man formerly called *Bacterium paratyphosum C*, *S. paratyphi C*.

S. icteroides. A bacillus isolated from persons dying with yellow fever formerly called *Bacillus icteroides*, *Bacterium icteroides*, *Sanarelli* bacillus.

S. oranienburg. A species isolated from feces of normal carriers, feces of food-poisoning cases, and from abscesses often found in dried-egg products.

S. paratyphi A. Old term for *S. paratyphosa*.

S. paratyphi B. Old term for *S. schottmülleri*.

S. paratyphi C. Old term for *S. hirschfeldii*.

S. paratyphosa. An aerobic, motile, Gram-negative rod with peritrichous flagella natural pathogen of man, causing an enteric fever formerly called *Bacterium paratyphosum A*, *S. paratyphi A*.

S. pullorum. A species causing pullorum disease or bacillary white diarrhea of chicks. Transmission can occur through the egg.

S. schottmülleri. A motile, Gram-negative rod with peritrichous flagella natural pathogen of man, causing an enteric fever found (rarely) in cattle, sheep, swine, chickens, and lower primates. Formerly called *Bacterium paratyphosum B*, *S. paratyphi B*.

S. suipestifer. A species found commonly in hogs and at one time thought to be the cause of hog cholera. It occasionally causes enteritis in man. Syn., *S. choleraesuis*.

S. typhi. *S. typhosa*.

S. typhimurium. A species commonly causing diarrhea in mice, rats, and birds and gastroenteritis in man. The most commonly isolated bacterium in outbreaks of food poisoning in the United States and Great Britain.

S. typhosa. A species causing typhoid fever the symptoms being produced largely by endotoxins liberated upon destruction of the organisms. I culture, glucose is fermented to acid but not to gas. Also called *Bacterium typhosum*, *Eberthella typhosa*, *S. typhi*.

Sal″mo-nel′le-ae (sal″mo-nel ee-ee) [*Salmonella*]. A tribe of the family Enterobacteriaceae.

S. sp. Any serotype that has not yet been assigned to a definite species.

sal″mo nel lo sis [*Salmonella*; G. *-osis*, condition]. Infection with an organism of the genus *Salmonella*. It may be food-poisoning, gastroenteritis, typhoidal, or septicemic.

sal′ol. Phenyl salicylate.

salophen. Trade-mark for brand of phenetsal.

sal″pin gec′to-my [G. *salpinx*, trumpet; *ektomē*, excision]. Excision of a uterine tube.

sal″pin gem-phrax′is [*salpinx*; G. *emphraxis*, stoppage]. Closure of the auditory or uterine tube.

sal″pin gi′tis [*salpinx*; G. *-itis*, inflammation]. 1. Inflammation of the uterine tube. 2. Inflammation of the auditory tube. —**salpingit′ic**, *adj.*

chronic parenchymatous s. Chronic interstitial inflammation and thickening of the muscular coat of the uterine tube.

chronic vegetating s. Excessive hypertrophy of the mucosa of the uterine tube.

eustachian s. Inflammation of the eustachian tube between the middle ear and the nasopharynx.

gonococcic s., gonorrheal s. That of the uterine tube due to infection with gonococci.

hemorrhagic s. Hematosalpinx.

interstitial s. That marked by excessive formation of connective tissue.

isthmic nodular s. Follicular inflammation of the small constricted portion (isthmus) of the oviduct, with formation of small nodules of muscular and connective tissue also called *productive glandular nodular s.*, *adenomyohyperplasia*, *adenomyosalpingitis*, *adenomyosis of fallopian tube*, *adenosalpingitis*, *diverticulosis of fallopian tube*, *epitheliomyosis*. Syn., *endosalpingiosis*.

mural s. See chronic parenchymatous s.

nodular s. A form marked by formation of solid nodules.

pneumococcic s. That due to infection with pneumococci.

productive glandular nodular s. See isthmic nodular s.

pseudofollicular s. Adenocarcinoma originating in the epithelium of the uterine tube.

purulent s. Salpingitis, 1, in which there is collection of pus; pyosalpinx.

pyogenic s. That of the uterine tube caused by pus-producing organisms.

tuberculous s. That marked by the infiltration of the lining membrane and walls of uterine tube with tuberculous nodules.

sal pin′go- (sal ping go-, sal ping go-), **salping-** [*salpinx*]. A combining form meaning *trumpet*; used to denote *relation to an auditory tube or to uterine tube*.

sal pin″go-cath′e-ter ism [*salpinx*; G. *kathetēr*, anything let down into]. Catheterization of an auditory tube.

sal pin′go-cele [*salpinx*; G. *kēlē*, hernia]. Hernia of an oviduct.

sal pin″go-cy-e′sis (sal ping″go sigh ee sis) [*salpinx*; G. *kyēsis*, pregnancy]. Tubal pregnancy.

sal″pin gol′y-sis [*salpinx*; G. *lysis*, loosing]. The breaking down of adhesions of uterine tube.

sal pin go-o″ pho-rec′t my (-o o-fo reck′to-mee, -o off-o-reck′to-mee) Excision of uterine tube and an ovary.

sal pin go-o o-pho-ri′tis. Inflammation of the uterine tubes and the ovaries.

sal-pin″go-o-oph o-ro-cele (-o-off′o-ro-seel, -o o-for o-seel) Hernial protrusion of an ovary and oviduct.

sal pi go-o the-cec′to-my See *salpingo-oophorectomy*.

sal pin go-o o-the-ci′tis. See *salpingo-oophoritis*.

sal pin go-o o-the co cele. See *salpingo-oophorocele.*

sal pin go- va ri ec to my See *salpingo-oophorectomy*

sal pin go-o-va ri-ot' my See *salpingo-oophorectomy*

sal pin go-o va ri'tis. See *salpingo-oophoritis.*

sal pin go pal tine (sal-ping go-pal uh-tyne, -tin) [*salpinx*; L. *palatum*, palate]. Pertaining to the uditory tube and the palate.

sal pin"go per"i to-ni'tis [*salpinx*; G *peritonaion*, membrane which contains the lower viscera -*itis*, inflammation]. Inflammation of the peritoneum and uterine tube.

sal pin go pex"y [*salpinx*; G *pēxis*, fixing]. Operative fixation of one or both uterine tubes.

sal pin go-pha ryn'ge-al (sal-ping go-fa rin jal, fa rin jee-ul, far in jee ul) [*salpinx*, G *pharynx*, pharynx]. Pertaining to the audi tory tube and the pharynx, as the salpingopharyngeal muscle.

sal pin"go phar"yn ge'us (-far in-jee us, -fa-rin jee-us) [*salpinx*; *pharynx*]. A muscular bundle passing from the uditory tube downward to the constrictors of the pharynx. See T ble of Muscles in the Appendix.

sal pin go plas"ty [*salpinx*; G *plassein*, to form] Surgery of uterine tube.

sal pin gor'rha phy [*salpinx*; G *rhaphē*, suture] Suture of uterine tube.

sal pin"go-sal"pin gos'to my [*salpinx*; *salpinx*; G *stoma*, mouth]. The operation reuniting an oviduct after removal of an intervening section.

sal pin go scope [*salpinx*; G *skopein*, to examine]. Old term for nasopharyngoscope.

sal pi go-sten cho'ri (sal-ping go-sten o-kor ee uh) [*salpinx*; G *stenochōria*, narrowness of space]. Stenosis or stricture of the auditory tube.

sal pin"go-sto mat' my Salpingostomy

sal"pin-gos'to-my [*salpinx*; G *stoma*, mouth]. 1. The operation of making an artificial fistula between uterine tube and the body surface. 2. Any plastic operation for opening th uterine tube.

sal"pin got o-my [*salpinx*; G *tomē*, cutting]. The operation of cutting into uterine tube

sal"pin gys"ter o-cy-e sis (sal pin-jis tur-o sigh-ee'sis) [*salpinx*; G *hystera*, womb *kyēsis*, pregnancy] Interstitial pregnancy

sal'pinx [*salpinx*]. A tube, especially the auditory or the uterine tube.

salt [AS. *sealt*]. 1. Sodium chloride. 2. A group of substances that result from the reaction between acids and bases compound of metal or positive radical and nonmetal or negative radical. 3. A mixture of several salts, as artificial salt and effervescent salt

acid s. A salt that contains unreplaced hydrogen atoms of the acid from which the salt was formed, as N HCO_3.

amphoteric s. A salt that has both acid and base properties.

artificial s. A mixture of the more important chemical salts naturally present in several of the well-known mineral springs of Europe.

basic s. A salt that contains unreplaced hydroxyl groups of the base from which it was formed.

buffer s. The salt of weak acid and strong base, or of strong acid and weak base which, in solution, tends to resist change in reaction upon addition of acid or alkali, respectively

complex s. A salt made up of more than one simple acid or metallic radical, but which ionizes in solution into only two types of ions as $K_4Fe(CN)$

effervescent s. A mixture of one or more active chemical salts with an effervescent base The base usually consists of sodium bicarbonate, citric and tartaric acids. The salts formed are usually in the form of coarse granules or powder

Epsom s. Magnesium sulfate.

Mohr' s. Ferrous ammonium sulfate.

Monsel's s. Ferric subsulfate.

neutral s. A salt whose solution has neutral reaction, as sodium chloride.

normal s. A salt of an acid and base that have completely neutralized each other. The reaction in solution may be neutral, acid, alkaline, amphoteric.

rock s. Sodium chloride as obtained in the solid form by mining.

sal ta'tion [L. *saltatio* from *saltare*, to dance] Dancing or leaping as in chorea.

sal'ta to"ry sal"ta tor'ic [L. *saltatorius*, of dancing]. Dancing or leaping.

Salter Samuel James Augustus [English dentist, 1825–97]. Described the incremental lines of the dentin, called *Salter lines*, *Owen lines*

salt'ing out. A method of precipitating proteins and other substances by the use of aqueous solutions of neutral salts.

salt"pe ter salt"pe'tre [ML. *sal petrae*, rock salt]. Potassium nitrate.

Chile s. Sodium nitrate

salts. A saline cathartic, especially magnesium sulfate, sodium sulfate, or Rochelle salt.

salt' sen si tive. Characterized by tendency to agglutinate in normal saline solution; said of certain bacteria.

sa lu'bri ty [L. *salubritas*, healthfulness]. The state or quality of being wholesome, conducive to physical well-being. —**salubrious**, *adj.*

sal'u tar"y (sal'yoo terr ee) [L. *salutaris*, healthful]. Promoting health.

salvarsan. Trade-mark for brand of arsphenamine

s. glucose solution. An aqueous solution of arsphenamine diglucoside solution containing 10% of salvarsan base. Used as spirochetiddde.

silver-s. Trade-mark for silver arsphenamine

salve [AS. *sealf*]. Ointment.

Deshler' s. Compound rosin cerate.

sal'vi [L., the herb sage] (*salvia*) The dried leaf of *Salvia officinalis*. Both the leaves and flowering tops contain volatile oil. It also contains several terpenes, thujone, ordinary camphor and an unidentified hydrocarbon, salvene. It is claimed to possess secretion-inhibitory and spasmolytic actions. Also called *garden sage.*

salyrgan. Trade-mark for brand of mersalyl

salyrgan-theophylline solution. Trade-mark for brand of mersalyl and theophylline injection.

salysal. Trade-mark for salicylsalicylic acid.

Sam a de ra, Sa mad'er-a [NL] A genus of old-world trees of the Simarubaceae.

S. indica. Produces niepa bark which has been used as bitter tonic.

sa ma ri-um [after Colonel Samarski, Russian mine official]. Sm (or Sa) = 150 43. A metallic element belonging to the didymium group

sam bu'cus [L., elder-tree] (*sambucus*) The dried flower of *Sambucus canadensis*, or of *Sambucus nigra*. The flowers yield, on distillation, small portion of volatile oil. It also contains eldrin, which is identical with rutin. It has been used as diaphoretic and diuretic, in febrile conditions, syphilis, and rheumatism Also called *elder flowers.*

sam ple [L. *exemplum*, model]. A specimen or part to show the quality of the whole.

random s. A finite number of individuals, cases, or measurements chosen from larger group in such manner that each individual, case, or measurement has an equal and independent chance of being selected.

Sampson, John Albertson [*American surgeon*, 1873–1946]. Described ovarian endometriomas, noted by him in his work on chocolate cysts (1921); called *endometrial implants, Sampson implants, endometriosis*.

Sanarelli, Giuseppe [*Italian bacteriologist*, 1864–1940]. *Salmonella icteroides* is sometimes called *Sanarelli's bacillus*. H made experimental observations (1924) of phenomenon interpreted by him as hemorrhagic allergy of intestinal epithelium (epithelaxis) See Shwartzman phenomenon, Sanarelli virus.

san″a·to′ri·um [L. *sanare*, to heal]. An establishment for the treatment of the chronic diseases; especially private hospital or place having conditions which are natural therapeutic agents.

san′ to ry [*sanare*] Health-giving. *Obs.*

san dal wood″ [Skr *candana*, from *candra*, shining]. 1. White sandalwood (*Santalum album*) The heartwood of *Santalum album*. Its therapeutic use is due solely to the volatile oil which it contains. The wood is not used medicinally Also called *white saunders, white santal*. 2 Red sandalwood (*Santalum rubrum*) The heartwood of *Pterocarpus santalinus*. It contains coloring principle called santalin. Th wood is employed solely for the purpose of imparting color It is used in compound tincture of lavender Also called *red saunders, red santal*.

s. oil. The volatile oil distilled with steam from the dried heartwood of *Santalum album*. It contains two isomeric sesquiterpine alcohols, alpha-santalol and beta-santalol. Other less important constituents are isovaleric aldehyde, santene, santenone, teresantol, santalone, and santalene. It is largely used as perfume. I *medicine*, its chief use has been in gonorrheal urethritis; it was also sometimes used in chronic bronchitis and cystitis. Also called *santal oil*.

san′da rac [G *sandarakē*, realgar]. A white, transparent resin produced by *Callitris quadrivalvis*, tree of North Africa.

s. varnish. In *dentistry*, solution of sandarac in alcohol used as separating medium in making plaster casts.

sand crack. I *veterinary medicine*, fissure in the hoof of horse, from the coronet to the sole; due to disease of the horn-secreting membrane.

Sander Wilhelm [*German psychiatrist*, 1838–1922]. Described type of paranoia ppearing in youth (1868) called *Sander' disease* or *paranoia*.

Sanders, Clarence Elmer [*American physician*, 1885–1949]. Devised bed for treatment of peripheral vascular disease which automatically shifts the patient from head-up to a head-down position called *oscillating bed, vaso-oscillator bed, Sanders bed*.

Sanders, James [*English physician*, 1777 1843]. Described the undulatory character of the cardiac impulse in the epigastric region, indicative of adherent pericardium; called *Sanders sign*. (The classic description of adherent pericardium was given by John Broadbent in 1897.) Described epidemic keratoconjunctivitis; also called *Sanders' syndrome, Sanders-Hagen syndrome*.

san ders. Sandalwood.

Sanderson. See *Burdon-Sanderson*.

sand flea. See *Tunga penetrans*.

sand″fly [AS. *sand*; *flyge*]. Any member of the genus *Phlebotomus*, especially the *Phlebotomus papatasii*.

sand″fly fe ver See pappataci *fever*

sandoptal. Trade-mark for 5-allyl-5-isobutylbarbituric acid, officially designated allylbarbituric acid white crystalline powder slightly soluble in water; used as sedative and hypnotic.

Sandström, Ivar Victor [*Swedish anatomist*, 1852–89]. Described the parathyroids (1880); called *Sandström bodies, Gley glands*.

Sandwith, Fleming Mant [*English physician*, 1853–1918]. Described bald tongue sometimes seen in late stages of pellagra called *Sandwith bald tongue*.

sane [L. *sanus*, healthy]. Of sound mind.

Sanford, Arthur Hawley (1882–) American clinical pathologist who, with Magath, introduced graduated tube for the hematocrit reading, called *Sanford and Magath's centrifuge tube*. H introduced an erythrocyte fragility test. See *Sheard-Sanford photelometer* under Charles Sheard. See also Sanford, Sheard, and Osterberg *method*.

sa gui′ lous (sang-gwick′ lus) [L. *sanguis*, blood *colere*, to inhabit]. *Living* in the blood, as a parasite.

san guif′er·ous [*sanguis*; L. *ferre*, to bear]. Carrying, or conveying, blood.

san″gui fi ca′tion [*sanguis*]. The formation of blood; conversion into blood.

san″gui na ri·a (sang″gwi·nair ee·uh) [L. *sanguinarius*, of the blood] (*sanguinaria*) The dried rhizome of *Sanguinaria canadensis*. It contains several alkaloids, of which chelerythrine and sanguinarine are present in greatest quantity It is an active local irritant, in large doses producing nausea and vomiting. It has been used as an expectorant in the treatment of subacute or chronic bronchitis. It is an ingredient in compound syrup of white pine and in the compound syrup with codeine. Also called *bloodroot*.

sa guin′a·rine. $C_{20}H_{15}NO_5$; an alkaloid from sanguinaria. Syn., *pseudochelerythrine*.

san guine (sang′gwin) [L. *sanguis*, blood]. 1. Resembling blood; bloody 2. Hopeful, active, as sanguine temperament.

san guin′e·ous [L. *sanguineus*, of blood] 1 Pertaining to the blood, containing blood. 2. Sanguine.

san guin′o·lent [L. *sanguinolentus*, full of blood]. Tinged with blood.

san′guis [L.] Blood.

san″gui suc′tion [*sanguis*; L. *suctum*, from *sugere*, to suck]. Abstraction of blood by suction, as by leech or other parasite.

sa gui·su ga. See *leech*.

sa ni·es (say nee·eez) [L., bloody matter]. A thin, fetid, greenish, seropurulent fluid discharged from an ulcer wound, or fistula. —**sanious**, *adj*

san″i ta′ri an [L. *sanitas*, health]. One skilled in sanitary science and matters of public health.

san″i ta′ri·um. See *sanatorium*.

san″i tar″y [*sanitas*]. Pertaining to health.

san″i tar″y re·a. I *military medicine*, section in theater of operations in charge of medical officer regulating sanitation in the area.

san″i tar″y or′der I *military medicine* general order issued by the headquarters of command, setting down sanitary measures to be carried out within the whole command.

san″i tar″y re·port′ I *military medicine*, the report of the medical inspector or surgeon of unit to the commanding officer regarding the health and sanitation of the command.

san″i tar″y sur′vey I *military medicine*, study of health conditions in an area occupied by troops, made for the purpose of taking measures that will prevent disease or its spread.

sa ″i ta′tion [*sanitas*]. The art of securing healthful condition; the application of sanitary measures.

san″i tize [*sanitas*]. Make sanitary term proposed by Walter to describe the process of boiling instruments, solutions, etc., to destroy organisms; distinguished from *sterilize*. *Rare*.

san'i ty [*sanitas*]. Soundness of mind.

sanocrysin. Trade-mark for gold and sodium thiosulfate.

Sansom, Arthur Ernest [*English physician*, 1838–1907]. Described number of signs, as extension of dullness in the second and third interspaces in pericardial effusion; rhythmic murmur of possible diagnostic value in aortic aneurysm; reduplication of the second sound of the heart heard at the base in mitral stenosis. These were once called *Sansom signs*.

Sanson, Louis Joseph [*French physician*, 1790–1841]. Described, contemporaneously with Johannes Purkinje, set of three images called *Purkinje-Sanson images*. See under *image*.

san'tal. Sandalwood.

san ta lin. See under *sandalwood*.

san ta lol. $C_{15}H_{24}O$. See under *sandalwood oil*.

san ta-lum. See under *sandalwood*.

san ton'i-ca [G. *santonikon*, wormwood]. The unexpanded flower heads of several species of *Artemisia*. The most important constituent is santonin. It also contains volatile oil and another crystalline principle, artemisin. Also called *wormseed*, *Levant wormseed*.

san ton'ic ac'id. $C_{15}H_{20}O_4$. An acid obtained by heating santonin with alkali; it is isomeric with santoninic acid.

san to-nin (*santoninum*). $C_{15}H_{18}O_3$. The inner anhydride of santoninic acid; occurs as colorless crystals, or white, crystalline powder almost insoluble in water. 1 Gm. dissolves in about 45 cc. of alcohol. Used as vermifuge, especially against the ascarids. Coarse crystals are preferred as they are less readily dissolved and therefore less likely to be absorbed. Dose, for three-year-old child, 0.015–0.03 Gm. (¼–½ gr.) followed by cathartic; for adults, 0.06–0.2 Gm. (1–3 gr.).

san"to nin'ic ac'id. $C_{15}H_{20}O_4$. The acid of which santonin is the inner anhydride.

san ton ism. [*santonikon*]. Poisoning from overdosage of santonin. Symptoms: yellow vision, gastrointestinal, renal, and vesical irritation, weakness, hallucinations, convulsions, coma.

Santorini, Giovanni Domenico (Santorinus) (1681–1739). Italian anatomist, one of the great anatomists of his time; author of *Anatomia Observationes* (1724). He described the cartilaginous nodules on the tips of the arytenoid cartilages, called *Santorini's cartilages, corniculate cartilages*. He is remembered for his description of the accessory pancreatic duct, called *Santorini's duct*. The risorius muscle was once called *Santorini's muscle*. Other structures associated with his name are the muscles of the external ear called *Santorini's muscles*; the papilla of the duodenum; the vesicoprostatic venous plexus in the male and the emissary veins between the sinuses of the dura mater and the veins of the scalp.

Santos, Reynaldo dos [*Portuguese surgeon and radiologist*, 1880–]. With Caldas, introduced thorotrast used in arteriography (1931). Inventor of pistol-shaped instrument with tiny jaws at one end, manipulated from the handle, used in connection with fluoroscopy for removing small particles of metal from tissues, called *Santos' forceps bed remover*.

santyl. Trade-mark for santalyl salicylate. The substance occurs as yellowish, oily liquid insoluble in water, soluble in alcohol. It has been used as urinary sedative and analgesic.

sap [AS. *saep*]. Plant juice. The watery solution which circulates through the vascular tissues of plant.

cell s. Hyaloplasm.

nuclear s. The fluid material within nucleus, occupying the space not taken by nucleolus, linin, or chromatin.

sa phe na [ML. *saphena*, from Ar. *safin*]. One of two large veins of the leg—the great or long and the small or short saphena.

sa ph nous, saph nous [*safin*]. Apparent, superficial, manifest; applied to two veins of the lower limb, the great or long saphenous vein and the small or short saphenous vein, situated just beneath the surface; also applied to the nerves accompanying these veins. See Tables of Nerves and of Veins in the Appendix.

sap'id [L. *sapidus*, savory]. Capable of being tasted.

sa po [L.]. Soap.

sa pog nin (sa-podj'i-nin, sap jen'in). The nonsugar or aglycone component of saponin.

sap na ceous [*sapo*]. Having the nature of soap.

Sap o-na ri a [*sapo*]. A genus of plants of the order Caryophyllaceae. **S. officinalis**, or soapwort, bouncing Bet, is species growing wild abundantly in the United States and Europe. Formerly employed in treatment of gout, syphilis, and as an expectorant. It contains saponin, sapotoxin, saporubin, etc.

sa pon"i fi ca'tion [*sapo*; L. *facere*, to make]. The conversion of an ester into an alcohol and salt; in particular the conversion of fat into soap and glycerin by means of an alkali.—**sapon'ify**.

sa-pon'i form [*sapo*; L. *forma*, form]. Soaplike appearance and consistency.

sap o-nin, sa po nin [*sapo*]. 1. A glycoside usually obtained from *Quillaja* or *Saponaria*. The commercial saponin occurs as white to brownish amorphous powder. Used in liquid soaps, cosmetic preparations, and in many industrial processes. 2. One of group of glycosidal principles which have the property of foaming when shaken with water and dissolving red blood cells. Saponins are widely distributed in nature. Because of their ability to lower surface tension, they form emulsions with oils and resinous substances. They tend to alter the permeability of cell walls and, therefore, exert general toxicity on all organized tissues. Certain of the saponins possess powerful physiologic properties which are quite different from those due to the general surface tension effects of the group.

Saporta, Antoine [*French physician*, d. 1573]. Said to have given the first description of aneurysm of the aorta (1554).

sap o-tox'in [L. *sapo*, soap; G. *toxikon*, poison]. A name sometimes given to the more toxic saponins.

Sappey, Marie Philibert Constant [*French anatomist*, 1810–96]. Author of an important work on the lymphatics (1874). Best known for his description of the accessory portal veins, called *venae parumbilicales, Sappey's accessory portal veins*. Described smooth muscular fibers found in the check ligaments of the eyeball, called *Sappey's ligaments*. See muscle of Sappey.

sap'phism (saf'iz em) [G. *Sapphō*, Greek poetess]. Female homosexuality.

Sap pi ni-a [dip-lo-i'de-a]. A free-living ameba found in decaying feces.

sa pre mi a, sa prae mi a [G. *sapros*, putrid; *haima*, blood]. The intoxication produced by absorption of the products of putrefaction.

sa pre mic [*sapros*; *haima*]. Affected with, of the nature of, or pertaining to, sapremia.

sap rine (sap reen, -rin) [*sapros*]. A product of saprophytic or simple products of growth when saprophytic or parasitic bacteria grow upon diseased or injured tissues.

sap ro-, sapr- [*sapros*]. A combining form meaning

rotting; used to denote dead or decaying organic matter or saprophytic.

sap'ro-gen [sapros; G. gennethei, from gignesthai, to be produced]. A putrefactive microorganism.

sap"ro-gen'ic, sa-prog'e-nous (sa-proj'i-nus) [sapros; gennethei]. 1. Causing putrefaction. 2. Produced by putrefaction.

sa-proph'a-gous [sapros; G. phagein, to eat]. Subsisting on decaying matter.

sap'ro-phyte [sapros; G. phyton, plant]. An organism living on dead organic matter. —sapro-phyt'ic, adj.

sap"ro-zo'ic [sapros; G. zōion, living being]. Characterizing an organism which lives upon decaying organic matter.

sar'a-pus [G. sarapous, splay-footed]. A flat-footed person.

Sar'ci-na [L. sarcina, bundle]. A genus of the family Micrococcaceae. Cell division occurs in three planes forming cubical groups.

sar-ci'tis [G. sarx, flesh; -itis, inflammation]. Inflammation of fleshy tissue; especially inflammation of muscle.

sar'co-, sarc- [sarx]. A combining form meaning flesh.

sar"co-ad"e-no'ma. See adenosarcoma.

sar"co-bi'ont [sarx; G. bioun, to live]. Living on flesh.

sar'co-blast [sarx; G. blastos, germ]. A cell developing into a muscle cell or fiber. Syn., myoblast.

sar"co-car"ci-no'ma. See carcinosarcoma.

sar'co-cele [sarx; G. kēlē, tumor]. A tumor of the testis resembling muscle.

Sar"co-cys'tis [sarx; G. kystis, bladder]. A group of the sporozoa.

S. lindemanni. Genus of the order Sarcosporidia. A rare parasite of man, in various muscles. Sarcosporidiosis is common in lower animals.

sar'code [G. sarkōdēs, fleshy]. An early term used by Dujardin to designate the living substance of the cell, the protoplasm.

Sar"co-di'na [sarkōdēs]. A class of protozoa moving and feeding by means of pseudopodia. Syn., Rhizopoda.

sar"co-en"do-the"li-o'ma. A malignant mesothelioma.

synovial s. Malignant synovioma.

sar"co-gen'ic [G. sarx, flesh; gennethei, from gignesthai, to be produced]. Producing muscle.

sar"co-hy'dro-cele [sarx; G. hydōr, water; kēlē, tumor]. A sarcocele complicated with hydrocele of the tunica vaginalis.

sar'coid [G. sarkoeidēs, fleshlike]. Resembling flesh.

sar'coid. The characteristic lesion seen in sarcoidosis.

Boeck's s. See sarcoidosis.

Spiegler-Fendt s. See lymphocytoma cutis.

sar"coid-o'sis [sarkoeidēs; G. -ōsis, condition]. A disease of young adults and sometimes of older persons, of unknown etiology; characterized by granulomatous lesions, somewhat resembling true tubercles, but showing little or no necrosis, affecting lymph nodes, skin, lungs, bones in distal parts of the extremities (osteitis cystica of Jüngling) and other structures. Iridocyclitis and uveoparotid fever may occur. Usually shows periods of activity and recovery may take place. Also called Boeck's sarcoid, Besnier-Boeck disease, Besnier-Boeck-Schaumann disease, lupus pernio of Besnier, lymphogranulomatosis of Schaumann, benign lymphogranulomatosis.

sar"co-lac'tic ac'id. $CH_3CHOHCOOH$. An isomeric form of lactic acid occurring in muscle. Also called paralactic acid.

sar"co-lem'ma [G. sarx, flesh; lemma, husk]. The delicate sheath enveloping a muscle fiber. —sar-colemmic, adj.

sar"co-leu-ke'mi-a. See leukosarcoma.

sar-co'ma [G. sarkōma, fleshy excrescence]. A malignant tumor composed of cells derived from nonepithelial tissues, mainly connective tissue. May be divided into those made up of immature cells including undifferentiated spindle cells or round cells and those made up of differentiated cells of such nature that the tumor may be so designated, for instance, fibrosarcoma, chondrosarcoma, osteosarcoma, liposarcoma, etc.

alveolar soft-part s. See malignant granular-cell myoblastoma.

ameloblastic s. Ameloblastosarcoma.

botryoid s. See s. botryoides.

carotid-body s. See carotid-body tumor.

endothelial s. 1. Hemangioendothelioma. 2. Ewing's s. 3. A malignant mesothelioma.

Ewing's s. A primary malignant tumor of bone, showing no osteogenic potentialities and usually arising as a central tumor in long bones. It is composed of sheets of cells with little cytoplasm and fairly large, uniform nuclei showing scattered chromatin. It occurs usually in the second decade of life and responds temporarily to radiation therapy but prognosis is poor. Also called angioendothelioma of bone, hemendothelioma of bone, endothelial myeloma. Syn., Ewing's tumor.

giant-cell s. (a) Giant-cell tumor of bone, usually benign. (b) Epulis in malignant form. (c) Synovial sarcoma.

histiocytic s. See reticulum-cell s.

Hodgkin's s. See Hodgkin's disease (c).

intracanalicular s. See cystosarcoma phyllodes.

Jensen's s. A transmissible spindle-cell type of neoplasm which grows in a high percentage of inoculated rats and recedes in a large proportion after a few weeks' growth.

Kaposi's s. See multiple idiopathic hemorrhagic s.

lymph angi end th li l. Lymph gio-sarcoma.

lymphocytic s. See lymphosarcoma.

melanotic s. See melanoma.

meningeal s. See meningioma.

mesothelial s. A malignant mesothelioma.

multiple idiopathic hemorrhagic s. A mesodermal tumor characterized by the occurrence of multiple bluish-red or brown nodules and plaques, usually on the extremities. In the early granulomatous lesions, which occasionally involute spontaneously, tumor is not evident. In later stages, the histologic picture resembles angiosarcoma or fibrosarcoma. Extravasated erythrocytes and hemosiderin granules are inconspicuous but constant features. Infrequently viscera may be involved. Syn., Kaposi's s., s. cutaneum telangiectaticum multiplex, multiplex angiosarcoma.

myelocytic s. See myeloma.

myeloid s. See giant-cell tumor 1.

neurogenic s., neurogenous s. See malignant schwannoma.

osteoblastic s. See osteogenic s.

osteogenic s. A primary malignant tumor of bone, derived from osteoblastic cells, or occasionally via a cartilaginous stage, and usually occurring in younger age groups. Histologically the tumor exhibits a high degree of variability but is characterized essentially by a sarcomatous stroma, and osteoid and osseous transformation. It is variously subdivided on basis of location as medullary, subperiosteal, periosteal, capsular and parosteal. When osteogenesis predominates, it is also called osteoblastic s., sclerosing osteogenic s., and osteoblastoma; when osteolysis is the predominating feature, it is called osteolytic s., telangiectatic s., malignant bone aneurysm, osteo-

aneurysm, and *malignant bone cyst*. Syn., *osteosarcoma*.

osteolytic s. See osteogenic *s.*

paraganglion caroticum s. See carotid-body *tumor*

periductal s. See *cystosarcoma* phylloides.

plasmacytic, plasmocytic s. See *myeloma*.

pleomorphic granular-cell s. See malignant granular-cell *myeloblastoma*.]

pleural s. Malignant mesothelioma of the pleura.

polymorphous s. See malignant granular-cell *myeloblastoma*.

reticulocytic s. Reticulum-cell sarcoma.

reticuloendothelial s. See reticulum-cell *s.*

reticulum-cell s. A type of lymphoma in which the predominant cell type is probably derived from the reticuloendothelium; the cells seen are larger than endothelial cells and have large nucleus with single nucleolus and pale-staining, poorly defined cytoplasm. Multinucleated cells occur and mitotic figures may be numerous. Also called *histiocytic s.*, *reticulocytic s.*, *reticuloendothelial s.*, *reticuloendothelioma*, (*diffuse syncytial*, *trabecular syncytial*, or *lymphoblastic*) *reticulosarcoma*, *clasmatosarcoma*, *retothelioma*, *reticulum-cell lymphosarcoma*, *endothelioma of lymph node*, *clasmocytoma*, *clasmatocytic lymphoma*. See also *lymphosarcoma*.

Rous s. A transplantable tumor of fowls caused by a filtrable virus.

s. of bone. Osteogenic *s.*

s. botryoides. Mesenchymoma (mesenchymal or mesodermal mixed tumor) of the fundus uteri of older women or cervix of children, characterized grossly by polypoid nodular appearance. Also called *s. colli uteri hydropicum papillare*, *botryoid tumor*, *grapelike tumor*.

s. capitis. See *cylindroma*.

s. colli uteri hydropicum papillare. A *s.* botryoides.

s. cutaneum telangiectaticum multiplex. See multiple idiopathic hemorrhagic *s.*

s. epithelioides. Epithelioma of the lymph nodes.

s. myxomatodes. One in which there are foci of mucoid degeneration.

s. of peripheral nerve. See malignant *schwannoma*.

s. phylloides. See *cystosarcoma* phylloides.

sclerosing osteogenic s. See osteogenic *s.*

serocystic s. See *cystosarcoma* phylloides.

spindle-cell s. A malignant connective-tissue tumor composed of spindle-shaped cells.

synovial s. See under *synovioma*.

telangiectatic s. See osteogenic

thymic s. A rare form of thymoma made up largely of spindle cells, sometimes myxomatous.

Walker s. A transplantable, solid, mixed-cell sarcoma of rats.

sar·co·ma·to·sis [*sarkōma*, G. *-ōsis*, condition]. The formation of multiple sarcomatous growths in various parts of the body.

meningeal s. See meningeal *gliomatosis*.

sar·co'ma·tous, sar·com'a·tous [*sarkōma*]. Of the nature of, or resembling, sarcoma.

sar'co·mere [G. *sarx*, flesh; *meros*, part]. One of the segments into which a muscle fibril appears to be divided by Z disks.

sar"co·mes·o·the·li·o'ma. A malignant mesothelioma.

synovial s. Malignant synovioma.

sar"co·my·ces' (sahr"ko-migh·sees) [*sarx*; G. *mykēs*, fungus]. A fleshy growth of a fungous appearance.

Sar"co·phag'i·dae (sahr ko-fadj' i-dee) [*sarx*; G. *phagein*, to eat]. A large cosmopolitan family of the Diptera, commonly known as flesh flies, blowflies, and scavenger flies. They normally deposit their eggs or larvae on the decaying flesh of dead animals, but sometimes also in open wounds and sores of man. The important genera are *Sarcophaga* and *Wohlfahrtia*. The maggots of *W. vigil* are known to cause cutaneous myiasis in young children. *W. magnifica* is said to be a great pest to wounded soldiers in Europe and Asia.

sar'co·plasm [*sarx*; G. *plasma*, anything formed]. The hyaline or finely granular interfibrillar material of muscle tissue; the term is opposed to the myofibrils or contractile substance. —**sarcoplas'mic**, *adj.*

sar'co·plast. See *sarcoblast*, *myoblast*.

sar"co·poi·et'ic [*sarx*; G. *poiētikos*, capable of making]. Producing muscle.

Sar·cop'tes (sahr·cop'teez) [*sarx*; G. *koptein*, to cut]. A genus of minute, rounded, short-legged, flattened mites which cause scabies in man and mange in many kinds of animals.

S. scabiei. The arachnid which causes scabies in man; the itch mite.

Sar·cop'ti·dae (sahr-cop'ti-dee) [*sarx*; *koptein*]. A family of the order Acarina, including the genera *Sarcoptes* and *Notoedres*.

sar·cop'toid [*sarx*; *koptein*, G. *eidos*, form]. Referring to the Sarcoptoidea.

Sar"cop·toi'de·a [*sarx*; *koptein*; *eidos*]. A superfamily of the parasitic mites; the mange and itch mites of the genus *Sarcoptes* are included.

sar'co·sine (sahr'ko-seen, -sin) CH_3NHCH_2COOH; N-methylglycine or N-methylaminoacetic acid; deliquescent crystals, very soluble in water. It occurs naturally in certain higher animals and is a product of hydrolysis of several proteins.

dimethyl s. Betaine.

Sar"co·spo·rid'i·a [*sarx*; dim. from G. *spora*, seed]. An order of sporozoa which includes the genus *Sarcocystis*.

sar"co·spo·rid"i·o'sis [*sarx*; *spora*, G. *-ōsis*, condition]. A disease of warm-blooded animals caused by sporozoa of the order Sarcosporidia; it is rare in man. The parasites usually encyst in striated muscle and produce few symptoms.

sar'co·style. O.T. for myofibril.

sar"co·thla'sis [*sarx*; G. *thlasis*, a bruise]. Old term for a bruise or hematoma.

sar'cous [*sarx*]. Pertaining to flesh or muscle.

sar·don'ic grin. See *risus sardonicus*.

sar·men"to·cy·mar'in. A cardioactive, steroidal glycoside from the seeds of *Strophanthus sarmentosus*. See *sarmentogenin*, *sarmentose*.

sar"men·tog'e·nin. $C_{23}H_{34}O_5$; the steroidal aglycone of sarmentocymarin. It is isomeric with digoxigenin and is characterized by having a hydroxyl group at carbon atom number 11.

sar'men·tose. $C_7H_{14}O_4$; the methyl ether of a 2-desoxyhexomethylose sugar obtained by hydrolysis of sarmentocymarin; it is isomeric with cymarose.

sar'sa. Sarsaparilla.

sar"sa·pa·ril'la [Sp. *zarzaparrilla*] (*sarsaparilla*). The dried root of *Smilax aristolochiaefolia*, *Smilax regelii*, or of undetermined species of *Smilax*. The most important principles in sarsaparilla are at least three saponins: *smilasaponin*, sarsasaponin, and parillin, which on hydrolysis yield the steroidal sapogenins *smilagenin*, *sarsasapogenin*, and *parigenin*. Sarsaparilla was formerly used in chronic rheumatism, skin diseases, and syphilis.

compound s. syrup (*syrupus sarsaparillae compositus*). Contains fluidextracts of sarsaparilla and glycyrrhiza, oils of sassafras and anise, methyl salicylate, syrup, and alcohol; used as a vehicle especially for the iodides and other saline drugs.

sar″sa·sa·pog′e·nin. $C_{27}H_{44}O_3$; the steroidal aglycone of sarsasaponin, a glycoside of sarsaparilla; starting compound for synthesis of desoxycorticosterone, progesterone, and certain other steroid hormones. It is identical with parigenin.

sar″sa·sap′o·nin. A glycoside from sarsaparilla. On hydrolysis it yields the aglycone sarsasapogenin.

sar·to′ri·us [L. *sartor*, patcher]. The tailor's muscle, so called from being concerned in crossing one leg over the other. See Table of Muscles in the Appendix.

sas′sa·fras [Sp. *sasafrás*] (*sassafras*). The dried bark of the root of *Sassafras albidum*. Contains a volatile oil, and has been used as a mild aromatic and carminative.

s. oil (*oleum sassafras*). The volatile oil distilled with steam from the root of *Sassafras albidum*. As it is much less irritant to mucous membranes than other volatile oils, it is less useful as a carminative. The oil contains safrol, pinene, phellandrene, and dextrogyrate camphor. Dose, 0.12–0.4 cc. (2–6 min.)

s. pith. Formerly used, because of the delicate quality of its mucilage, in the preparation of collyrium.

sas′sa·frol. Safrol. See *sassafras oil*.

sas·so′lin. Old term for boric acid extracted from the deposits in lagoons of Tuscany.

sas′sy bark. The bark of *Erythrophleum*. Syn., *casca bark*.

sat. Saturated.

sat′el·lite. See *satellite cell*.

perineuronal s. See *oligodendroglia*.

perivascular s. See *oligodendroglia*.

sat″el·li·to′sis (sat″l·eye·to′sis, ·li·to′sis) [L. *satelles*, attendant; G. *-ōsis*, condition]. *In neuropathology*, a condition in which there is an increase of satellite cells around the nerve cells of the central nervous system in inflammatory and degenerative diseases. These satellite cells usually represent phagocytic neuroglia cells.

sa·ti′e·ty [L. *satietas*, sufficiency]. Fullness beyond desire; a condition of gratification beyond desire or need.

Sato and Shoji′ stain. See under *stain*.

sat. sol. Saturated solution.

Satterthwaite's method. See under *artificial respiration*.

Sattler, Hubert [*Austrian ophthalmologist*, 1844–1928]. Described a thin layer of elastic fibers lying between the layer of large vessels and the lamina choriocapillaris of the choroid of the eye; called *Sattler's elastic layer*.

sat′u·ra″ted [L. *saturatus*, saturated]. 1. Having all the atoms of molecules linked so that only single bonds exist. 2. Having sufficient substance, either solid or gaseous, dissolved in a solution so that no more of that substance can be dissolved. Abbreviated, sat.

s. compound. An organic compound with no free valence and in which there are neither double nor triple bonds.

sat″u·ra′tion. *In optics*, the quality of visual sensation which distinguishes between colors of the same dominant wavelength but different purities.

sat′ur·nine (sat′ur·nyne) [L. *Saturnus*, Saturn]. 1. Pertaining to or produced by lead. 2. Of gloomy nature.

sat′ur·nism [*Saturnus*]. Chronic lead poisoning; plumbism.

sat″y·ri′a·sis [G.]. 1. Excessive venereal desire in man. Also called *satyromania*. See *priapism*. 2. Old term for leprosy.

sat′yr tip. The posteriorly directed pointed portion of the superior part of the helix; also called *satyr tubercle*.

sau′cer·ize [OF *saucier*]. Shape bone cavity in the operation for chronic osteomyelitis, in order to eliminate sharp angles and overhanging walls, thus permitting soft parts to fill it completely during the process of healing; to gutter.

Saucerotte, Nicolas [*French physician*, 1741–1814]. Credited with having given the first clinical description of acromegaly (1772). The case was included among the five reported by Pierre Marie a century later.

Sauerbruch, Ernst Ferdinand [*German surgeon*, 1875–1951]. With E. Schumacher, devised paravertebral thoracoplasty for chronic pulmonary tuberculosis. Invented a negative pressure chamber for use in chest operations. See B.H.G. *diet*.

Saunders, Edward Watt [*American physician*, 1854–1927]. Described an acute gastric disturbance in infants caused by carbohydrate excess in the diet; called *Saunders' disease*.

saun′ders. See under *sandalwood*.

sau·ri′a·sis [G. *sauros*, lizard; NL. *-iasis*, condition]. Ichthyosis.

Sau·rop′si·da [*sauros*; G. *opsis*, appearance]. A superclass of vertebrates comprising the birds and reptiles.

sau·ro·ce′ine (saw·roce′een, ·in). An alkaloid obtained from *Lycopodium saururus*. See *piligan*.

sau·ru′rine (saw·roor′een, ·in). An alkaloid obtained from *Lycopodium saururus*. See *piligan*.

sau′sar·ism [G. *sausarismos*, paralysis of the tongue]. 1. Paralysis of the tongue. 2. Dryness of the tongue.

Sauter, Johann Nepomuk [*German surgeon*, 1766–1840]. Pioneer in performing vaginal hysterectomy leaving ovaries and uterine tubes *in situ*; called *Sauter's operation*.

Sauvineau, Charles [*French ophthalmologist*, 1862–]. Described an ophthalmoplegia in which there is paralysis of the medial rectus muscle of one side and spasm of the lateral rectus muscle on the opposite side; called *Sauvineau's ophthalmoplegia*.

Savill, Thomas Dixon [*English physician*, 1856–1910]. Said to have been the first to describe epidemic exfoliative dermatitis; called *Savill's disease*.

sav′in. The evergreen shrub *Juniperus sabina*, from the tops of which a volatile oil may be obtained and a fluidextract prepared, both formerly used for emmenagogue, vermifuge, and antirheumatic effects.

sa′vo·ry [L. *sapor*, flavor]. Having a pleasant odor or flavor.

saw [AS. *sagu*]. An instrument having a thin blade with sharp teeth on one edge, and used for dividing bones and other hard substances.

Adams' s. A small straight saw with a long handle.

Albee's s. An electrically operated, double rotary circular saw with adjustable blades, for use in preparing bone grafts.

Butcher's s. One in which the blade can be fixed at any angle.

chain s. One in which the teeth are set in links movable upon each other, the saw being moved by pulling alternately upon one and the other handle.

crown s. See *trephine*.

Gigli's s. A flexible wire saw operated by handles at either end, which pass through loops. Adapted to cranial and other bone operations.

Hey's s. A serrated disk affixed to a handle, and used for enlarging an opening in a bone.

nasal s. A small, narrow instrument used for removing nasal spurs and turbinate bones.

saw pal met'to. See *serenoa*.

Sawyer, Wilbur Augustus [*American epidemiologist*, 1879-1951]. With Kitchen and Lloyd, prepared vaccine for prophylactic immunization against yellow fever (1932). Introduced yellow fever test. See Sawyer and Lloyd serum protection *test*.

sax'i frage [L. *saxum*, stone; *frangere*, to break]. Any plant of the genus *Saxifraga*. *S. crassifolia* and other species contain a crystalline bitter principle, bergenin. *Saxifraga ligulata*, containing tannic acid, is used in India for dysentery.

saxin. Trade-mark for a brand of saccharin.

Saxtorph, Matthias [*Danish obstetrician*, 1740-1800]. Described technic for extracting the fetus, in which he applied strong downward pressure with one hand on the lock of the obstetric forceps, while using the other for horizontal traction, called *Saxtorph maneuver*.

Sayre, Lewis Albert [*American surgeon*, 1820-1900]. Known especially for his work in orthopedic surgery. Performed resection of the hip joint (1855). Said to have been the first to use a plaster of Paris jacket as a support for the spine (1877). Inventor of a device for suspending a patient during the application of a plaster jacket, called *Sayre's apparatus*.

Sb Chemical symbol for antimony (stibium).

Sc Chemical symbol for scandium.

scab [ME., from L. *scabere*, to scratch]. 1. Dried exudate covering an ulcer or wound. Syn., *crust*. 2. A disease of sheep caused by a mite.

scab'bard [ME. *scauberc*]. A veterinary term for the prepuce of the horse.

scabbed [L. *scabere*, to scratch]. Crusted.

sca'bi-cide [L. *scabies*, the itch; *caedere*, to kill]. Any agent or drug which kills *Sarcoptes scabiei*, the causative organism of scabies.

sca'bi-es (skay'bee-eez, skay'beez) [L., the itch]. A contagious disorder of the skin caused by *Sarcoptes scabiei*, characterized by multiform lesions with intense itching which occurs chiefly at night. The female insect, burrowing beneath the skin to lay eggs, causes the irritation. Also called *itch*, *seven-year itch*.

camel s. A form acquired from the camel. Runs a limited course as the parasite does not live long on human skin. Various similar organisms live on other animals in conditions which are called *canary s.*, *cat s.*, *horse s.*, etc.

s. crustosa. An extreme form of general scabies of the body resulting in fish-scalelike desquamation. Also called *Boeck's s.*, *Norway itch*.

s. papuliformis. A form marked by papular efflorescence. Also called *rank itch*, *s. papulosa*.

s. pustulosa. That in which there is formation of large pustules resembling those of smallpox, occurring on the wrists and buttocks of children. Seen more commonly in warm weather.

sca"bi-o-pho'bi-a [*scabies*; G. *phobos*, fear]. Morbid fear of scabies.

sca'bi-ous [L. *scabiosus*, rough]. 1. Scabby or scaly. 2. Pertaining to scabies.

sca'brin. $C_{22}H_{35}NO$. N-isobutyl-2,4,8,10 (or 12) 14-octadecapentaenamide; a constituent of the roots of *Heliopsis scabra* (rough heliopsis) and other *Heliopsis* species; an insecticide.

sca bri'ti es (ska-brish'ee-eez) [L., roughness]. Roughness; scabbiness.

s. unguium syphilitica. Abnormal thickening and roughness of the nails seen in syphilis.

sca'la (pl. *scalae*) [L., ladder]. A subdivision of the cavity of the cochlea; especially one of the perilymphatic spaces.

s. media. Old term for cochlear duct.

s. tympani. The perilymphatic space below the osseous spiral lamina and the basilar membrane. See Plate 20.

s. vestibuli. The perilymphatic space above the osseous spiral lamina and the vestibular membrane. See Plate 20.

scald [ME. *scalden*, from L. *calidus*, warm]. The burn caused by hot liquids or vapors.

scald'ing [*scald*]. Burning pain in urination.

scale [ME.]. 1. An instrument bearing marks or graduations at regular intervals and used as a standard in measuring, as barometric scale, thermometric scale. 2. The dry, semiopaque lamina of horny epidermis that is shed from the skin, usually as a result of imperfect cornification; a secondary skin lesion. Also called *squama*.

Bellevue s. See *Wechsler-Bellevue intelligence scale* under *test*.

Binet-Simon intelligence s. See Binet-Simon *test*.

Cattell infant intelligence s. See under *test*.

Cornell-Coxe performance-ability s. See Ethel Letitia *Cornell*.

Haldane s. A standard for establishing hemoglobin levels in which 13.8 Gm. in 100 cc. of blood equals 100 per cent.

Minnesota preschool s. See under *test*.

Vineland social maturity s. See under *test*.

Wechsler-Bellevue intelligence s. See under *test*.

sca lene (skay-leen, skay'leen) [G. *skalēnos*, uneven]. Having unequal sides, as scalene muscle.

sca"le nec'to-my [*scalenus*; G. *ektomē*, excision]. Excision of the scalene muscles, particularly the scalenus anterior.

sca"le not'o-my [*scalenus*; G. *tomē*, a cutting]. Severing of the fibers of a scalene muscle.

sca le'nus [*skalēnos*]. One of three muscles in the neck, arising from the transverse processes of the cervical vertebrae, and inserted on the first two ribs. See Table of Muscles in the Appendix.

s. minimus. An inconstant muscle of the scalene group arising from the anterior tubercle of the sixth or sixth and seventh ribs, inserted into the first rib, and attached to the dome of the pleura.

s. pleuralis. That part of the scalenus minimus muscle attached to the pleura.

sca'ler [ME. *scale*]. 1. An instrument for removing calcareous deposits from the teeth. 2. An electronic instrument for counting and recording electrical impulses, as those produced by such detectors of radioactivity as the Geiger-Müller tube and the scintillation probe.

sca'ling [*scale*]. Desquamating; producing scales.

sca'ling. A pharmaceutical process consisting of drying concentrated solutions of drugs on glass plates.

s. the teeth. An operation, in dentistry, which consists in the removal of deposits of calculus from the teeth.

sca'ling cir'cuit. One which permits mechanical recording of electrical impulses which are produced at a high frequency by counting only every 2^n or 10^n impulse; such a circuit is employed in a scaler 2.

scalp [ME.]. The hairy integument covering the cranium.

scal'pel [L. *scalpellum*, small surgical knife]. A surgical knife with a short blade, convex or straight cutting edge, rounded or pointed at the end.

sca'ly [ME. *scale*]. 1. Resembling scales; characterized by scales. 2. Covered with, or possessing, scales.

scam mo-ny See *ipomea*.

scan'di um [L. *Scandia*, Scandinavia]. Sc = 44.96. A rare metal belonging to the aluminum group.

scan·so′ri·us [L. *scansor*, climber]. The small anterior gluteal muscle.

Scanzoni, Friedrich Wilhelm [German obstetrician, 1821–91]. Introduced a procedure to convert a posterior vertex presentation to an anterior position by the use of double forceps application; called *Scanzoni's maneuver* or *operation*.

sca′pha [BNA] [L., skiff, from G. *skaphē*, boat]. The furrow of the auricle between the helix and antihelix.

scaph″o·ceph′a·ly (skaf″o-sef′uh-lee, skay″fo-) [*skaphē*; G. *kephalē*, head]. A condition of the skull, characterized by a projecting, keel-like sagittal suture, due to its premature closure. —**scaphocephal′ic, scaphocephalous,** *adj.*

scaph′oid [*skaphē*; G. *eidos*, form]. Boat-shaped.

scaphoid. A boat-shaped bone of the tarsus and of the carpus. Old term for navicular. See Table of Bones in the Appendix.

scap′u·la [L.]. The shoulder blade, the large, flat, triangular bone forming the back of the shoulder. See Table of Bones in the Appendix. See Plates 1, 2, 14. —**scapular,** *adj.*

alar s. See *angel's wing*.

winged s. See *angel's wing*.

scap″u·lal′gi·a [*scapula*; G. *algos*, pain]. Pain in the region of the scapula.

scap″u·lec′to·my [*scapula*; G. *ektomē*, excision]. Surgical removal of a scapula.

scap·u·lo- [*scapula*]. A combining form denoting *relation to the shoulder or scapula*.

scap″u·lo·cla·vic″u·la′ris. A variable muscle extending from the coracoid process to the lateral third of the clavicle.

scap″u·lo·cos″tal. Of or pertaining to the scapula and the ribs. Syn., *costoscapular*.

scap″u·lo·hu′mer·al [*scapula*; L. *humerus*, upper bone of the arm]. Pertaining to the scapula and the humerus, or to the shoulder joint, as scapulohumeral amputation.

scap·u·lo·pex″y (skap yoo lo peck″see, skap yoo-lo-peck′see) [*scapula*; G. *pēxis*, a fixing]. Fixation of the scapula to the ribs, as in cases of paralysis of scapular muscles.

scar [OF. *escare*, from G. *eschara*, hearth, scab]. A permanent mark resulting from a wound or disease process in tissue, especially the skin.

scar″a·bi′a·sis (skar″ah bye′ah sis) [L. *scarabaeus*; N.L. *-iasis*, condition]. A condition occurring usually in children in which the intestine is invaded by the dung beetle. Characterized by anorexia, emaciation, and gastrointestinal disturbances. Also called *beetle disease*.

scarf′skin″ [AS. *scearfe*; ON. *skinn*]. The epidermis or cuticle.

scar″i·fi·ca′tion [L. *scarificare*, to scratch open]. The operation of making numerous small, superficial incisions in skin or other tissue. —**scar′ify,** *v.*

scar′i·fi·ca″tor [*scarificare*]. An instrument used in scarification, consisting of a number of small lancets operated by a spring.

scar″la·ti′na (skahr″luh-tee′nuh). Scarlet fever. —**scarlatinal, scarlatinous,** *adj.*

scar″la·ti·nel′la. See fourth *disease*.

scar″la·tin′i·form (skahr″luh tee′ni form, -tin′i-form) [ME. *scarlet*; L. *forma*, form]. Resembling scarlet fever.

scar″la·ti′noid (skahr″luh-tee′noyd, skahr·lat′i-noyd) [*scarlet*; G. *eidos*, form]. Scarlatiniform.

scar′let fe′ver. An acute contagious, febrile disease, having a period of incubation varying from several hours to a week, setting in with vomiting or chill, which is followed by high fever, rapid pulse, sore throat, cervical adenitis, and the appearance of a punctiform, scarlet-red eruption from one to five days thereafter. The tongue, at first heavily coated and red at the tip and edges, soon shows prominence of the papillae, which are red and swollen (strawberry tongue). The eruption, at the appearance of which all the symptoms become intensified, gradually fades after five or six days, and is followed by a scaly desquamation. A peculiarity of scarlet fever is its tendency to involve the kidneys. The causal agent is a hemolytic streptococcus. See Dick *test*. Also called *scarlatina*.

anginal s. f. Scarlet fever with marked inflammation of the throat.

gastric s. f. Scarlet fever complicated with gastroenteritis.

hemorrhagic s. f. Scarlet fever, or more usually septic fever with hemorrhagic spots.

latent s. f. Scarlet fever without eruptions.

malignant s. f. A form characterized by an abrupt onset, high fever, convulsions, coma, and death, often before the appearance of the eruption.

papular s. f. Scarlet fever in which there are prominent papules, due to involvement of the hair follicles.

puerperal s. f. Littré's name for a rash resembling that of scarlet fever sometimes followed by vesication and pustulation of the affected parts, but without fever; observed in puerperants. Also called *erythema diffusum, puerpera*.

pustular s. f. Scarlet fever with a pustular eruption.

s. f. sine angina. Scarlet fever without throat symptoms.

s. f. sine eruptione. Scarlet fever without the rash.

s. f. streptococcus antitoxin (*antitoxinum scarlatinae streptococcicum*). A sterile aqueous solution of antitoxic substances obtained from the blood serum or plasma of a healthy animal which has been immunized against the toxin produced by the streptococcus regarded as the causative agent of scarlet fever. It is used in the treatment of scarlet fever, and occasionally for producing temporary passive immunity in persons exposed to the infection. It is also used to distinguish the rash of scarlet fever from other rashes. Dose, prophylactic 2000 units; therapeutic 6000 units. Also called *s. f. antitoxin, refined s. f. antitoxin, concentrated s. f. antitoxin, anti-scarlet-fever globulins*.

s. f. streptococcus toxin (*toxinum scarlatinae streptococcicum*). A sterile solution in a medium containing not more than 1% of peptone but no meat extractives, of certain products, including a soluble toxin, resulting from the growth in the broth of suitable strains of hemolytic streptococci (*Streptococcus pyogenes*). Used either as a diagnostic agent or as a therapeutic agent against scarlet fever. As a diagnostic agent, the toxin is greatly diluted with a buffered diluent isotonic with the blood and the pH adjusted to 7.5. Dose, diagnostic, 0.1 cc. of the dilution, intracutaneously; as an immunizing agent, graded hypodermic doses, starting at 500 to 650 S.T.D. given at proper intervals until a negative Dick test is obtained. Also called *s. f. toxin for immunization and for the Dick test*.

septic s. f. A grave form of scarlet fever characterized by symptoms of septic intoxication.

simple s. f. Mild scarlet fever.

traumatic s. f. The eruption of scarlet fever accompanied by febrile symptoms, which sometimes follow wounds or surgical operations infected with hemolytic streptococcus.

scar′let red (*rubrum scarlatinum*). $C_{24}H_{20}N_4O$. An azo dye, o-tolyl azo-o-tolyl … occurs as a dark, brownish red powder;

insoluble in water slightly soluble in alcohol. Scarlet red has the power of stimulating the proliferation of epithelial cells. It is used to promote the growth of epithelium in the treatment of burns, wounds, chronic ulcers, etc. It is generally used in the form of an ointment. Also called s. *medicinal*, *Biebrich s.*

s. r ointment (*unguentum rubri scarlatini*) Contains 5% of scarlet red in a base consisting of olive oil, wool fat, and petrolatum.

s. r sulfonate. The sodium salt of azobenzenedisulfonic acid azobetanaphthol; the sulfonic acid derivative of scarlet red. It differs from scarlet red in that the two CH_3 groups are replaced by the SO N group; occurs as dark, brownish red powder It is soluble in water and only slightly soluble in organ solvents. Used for the same purposes as scarlet red. Also called *soluble s.*

Scarpa, Antonio [*Italian anatomist and surgeon*, 1752–1832]. Described the ganglion of the vestibular nerve, called *Scarpa' ganglion*. Described the triangular space having for its base the inguinal ligament, and for its apex the point of intersection of the sartorius and adductor longus muscles, called *Scarpa triangle*, and the median incisive foramen, called *foramen of Scarpa*.

scat a cra ti a (skat uh kray'shuh, -shee-uh) See *scoracratia*.

sca t mi a [G *skōr* dung; *haima*, blood]. Intestinal toxemia.

scat'ol sca'tol. See *skatole*.

scat"o-l gi a, sca tol'o gy [*skōr* G *logos*, word]. The study of excreta. —**scatolog'ic,** *adj.*

sca t ma [*skōr* G *-ōma*, tumor]. A mass of fecal matter in the colon resembling, on palpation, an abdominal tumor

sca toph gous [*skōr*; G *phagein*, to eat]. Excrement-eating.

sca toph' gy [*skōr*; *phagein*]. The eating of excrement.

sca tos'co-py [*skōr*; G. *skopein*, to examine]. Inspection of the excreta.

scat ter [ME. *scateren*]. 1. The spreading of rays, as -rays. 2. *I psychology*, the range of levels through which an individual passes on an intelligence test.

back s. Roentgen rays scattered backward within irradiated tissues and reemerging through the area of incidence.

scat ter ing. *I uclear science*, the change in direction of particle or photon as result of collision with another particle or system.

scav'en ger [ONF *escauwage*, inspection]. A macrophage also called *scavenger cell*.

scav' n ging. *I uclear chemistry*, the formation of an unspecific precipitat to remove from sol tion, by adsorption or coprecipitation, substantial proportion of one or more undesirable radioactive ions Hydrous ferric oxide is frequently so used being then called *scavenger*

Sc. D Doctor of Science.

Sc. D A. Right scapuloanterior position of the fetus.

Sc. D P Right scapuloposterior position of the fetus.

scent [OF *sentir* to smell]. An effluvium from any body capable of affecting the olfactory sense odor; fragrance.

Schachowa Seraphima [*Russian histologist*, nineteenth century]. Described the section of uriniferous tubule lying between the proximal convolution and the loop of Henle called *Schachowa' spiral tubul*

Schachter Rubin Joseph [*American physiologist* 1904–]. Has made valuable contributions to the study of shock, adrenals, antibiotics, antihistamines, thyroid, and parasympathetic drug 5 mg. of acetylcholine chloride dissolved in 0.25 cc. of bicarbonate Ringer solution at pH 7.4 and 25° C., in the presence of cholinesterase, liberating 1 mm. of CO_2 per minute, is *Schachter unit of cholinesterase*.

Schaeffer Jacob Parsons [*American anatomist*, 1878–]. Authority on paranasal sinuses. Author of monographs and papers on anatomy and embryology Editor-in-Chief of Morris *Textbook of Human Anatomy*.

Schaeffer-Fulton stain. See *Schaeffer-Fulton modification of Wirtz method*, under *stain*.

Schafer Edward Albert Sharpey See *Sharpey-Schafer*

Schaffer Károly (Karl) (1864–1939) Hungarian neuropathologist known for his work on hereditary diseases of th nervous system and the three criteria he established for these (1) ectodermal defect, (2) localization determined by the neuraxial defect, (3) system selectivity which are called *triad of Schaffer*

Schäffer' reflex. See under *reflex*.

Schales and Schales method. See under *method*.

Schamberg, Jay Frank (1870–1934) American dermatologist who first (1901) described progressive pigmentary dermatosis (Schamberg's disease) and acarodermatitis urticarioides, and wrote on the etiology of psoriasis.

Schanz, Alfred [*German orthopedic surgeon*, 18– 1931]. Described syndrome of fatigue, pain on pressure over the spinal processes, pain when lying down, spinal curvature, as indicative of spinal weakness; called *Schanz's syndrome*.

Schardinger reaction. See under *reaction*.

Schaudinn, Fritz Richard [*German bacteriologist*, 1871 1906]. Noted for his discovery with F E. Hoffmann, of the *Spirochaeta pallida* or *Treponema pallidum*, the cause of syphilis (1905)

Schaudinn's fixi g fluid. See under *fixing fluid*.

Schaumann Jörgen (1879–1953) Swedish dermatologist known for his fundamental work in sarcoidosis, sometimes called *Schaumann's disease*. H described (1941) the inclusion bodies in giant cells in sarcoidosis and berylliosis, called *Schaumann inclusion bodies*.

Schauta, Friedrich [*Austrian gynecologist*, 18– 1919]. Remembered for his operation of radical hysterectomy called *Schauta operation*. An operation for cystocele is called *Schauta-Wertheim operation*.

Schede, Max [*German surgeon*, 1844–1902]. Devised a method of treating bone caries by curetting the cavity and allowing it to fill with blood clot called *Schede' method*. Best known for his extrapleural pneumonolysis, now obsolete; called *Schede' operation*.

Scheele, Karl Wilhelm [*Swedish chemist*, 1742–86] Isolated oxygen (ca. 1772); see also *Lavoisier* and *Priestley*. Discovered barium, chlorine, and manganese. A brilliant green pigment, an acid copper arsenite, is known as *Scheele' green*. Isolated uric acid from urine (1776)

Scheerer See Goldstein-Scheerer *test*.

Scheiner, Christoph [*German physicist*, 15– 1650]. Famous for his many discoveries and observations in physiologic optics. Demonstrated the changes in the curvature of the crystalline lens during accommodation. Demonstrated the manner in which images strike the retina. Devised pinhole test illustrating refraction and accommodation of the eye (1619) called *Scheiner test*.

Schellong Strisower phenomenon. A fall of systoli blood pressure on assuming the erect position from recumbency

sche ma (skee mah) [G figure]. 1. A simple design

to illustrate a complex mechanism. 2. An outline of a subject. —schemat'ic, *adj.*

sche'mo·graph (skee'mo·graf) [*schēma*; G. *graphein*, to write]. An apparatus for tracing the outline of the field of vision; the measurement of the field is made with the perimeter.

Schenck, Benjamin Robinson [*American surgeon*, 1842–1920]. The first to describe sporotrichosis, called *Schenck's disease*.

Schenk, Samuel Leopold [*Austrian physiologist*, 1840–1902]. Described a method of determination of the sex of infants based on the theory that, by regulation of the mother's diet before and during pregnancy, the sex can be controlled. When no sugar is secreted, he believed that the ovum would be qualified to develop into a male child. Called *Schenk's method* or *theory*.

Scherer's test. See under *test*.

sche·ro'ma (ski·ro'muh). Xerophthalmia.

Scheuermann, Holger Werfel (1877–). Danish surgeon who described osteochondrosis of the vertebral epiphyses in children (1921); called *Scheuermann's disease*.

Schick, Bela (1877–). Austrian pediatrician known for his development of a reliable skin test for the determination of susceptibility to diphtheria (1913). See *Schick test*. Earlier (1905) he made, with C. P. Pirquet von Cesenatico, a study of serum sickness and its importance to medicine. Together they introduced the term *allergy*.

Schiff's reagent. See under *reagent*.

Schilder, Paul Ferdinand [*German physician*, 1886–1940]. Remembered for his description of encephalitis periaxialis diffusa (1912); also known as *Schilder's disease*, *Heubner-Schilder's disease*, *progressive subcortical encephalopathy*.

Schiller, Walter (1887–). American pathologist who introduced his test for carcinoma of the uterine cervix in which he painted the suspected area with Lugol's solution. The appearance of whitish spots indicates the possibility of carcinoma, the change being due to loss of glycogen in the epithelium (1933). See *Schiller test*.

Schilling, Victor (1883–). Austrian hematologist who modified Arneth's classification of the neutrophils (1911) by dividing them into four groups, tabulated from left to right: (1) myelocytes or younger-than-juveniles; (2) juveniles with indented nuclei; (3) band forms with unsegmented but T, V, or U-shaped nuclei; (4) segmented mature neutrophils; also called *Schilling's blood count*, *hemogram* or *method*. He set up an index of nuclear shift and further modified immature neutrophils by describing a degenerative shift (failure of neutrophils to mature) and a regenerative shift (temporary increase in immature cells due to increased production in response to acute infection). See under *shift*. See also monocytic *leukemia*.

Schimmelbusch, Curt [*German surgeon*, 1860–95]. Described adenosis of the breast, called *Schimmelbusch's disease*.

schin"dy·le'sis (skin·di·lee'sis) [G., a cleaving into small pieces]. A form of articulation in which a plate of one bone is received into a fissure of another.

Schiøtz, Hjalmar [*Norwegian ophthalmologist*, 1850–1927]. Known for his invention (1881) of an ocular tonometer, called *Schiøtz's tonometer*. With Louis Émile Javal, modified the Helmholtz ophthalmometer (1881); called *Schiøtz's ophthalmometer*.

-schi'sis (ski'sis) [G. *schisis*, a cleaving]. A combining form meaning *cleft*, *split*, *fissure*.

schis'to- (skis'to-) [G. *schistos*, cleft]. A combining form meaning *split*, *fissured*.

schis"to·ce'li·a [*schistos*; G. *koilia*, cavity]. Celosoma.

schis"to·ceph'a·lus [*schistos*; G. *kephalē*, head]. 1. A monster with a fissured skull. 2. Gurlt's general term for cleft in any part of the head. —schistocephal'ic, *adj.*

schis"to·cor'mus [*schistos*; G. *kormos*, trunk]. A monstrosity having a cleft thorax (schistocormus fissisternalis), neck (schistocormus fissicollis), or abdominal wall (schistocormus fissiventralis).

schis"to·cys'tis [*schistos*; G. *kystis*, bladder]. Fissure of the urinary bladder; also called *vesical ectopia*, *exstrophy of the bladder*.

schis'to·cyte [*schistos*; G. *kytos*, cell]. A fragmented part of an erythrocyte containing hemoglobin.

schis"to·cy·to'sis (skis·to·sigh·to'sis) [*schistos*; *kytos*; G. *-ōsis*, condition]. The presence of large numbers of schistocytes in the blood.

schis"to·glos'si·a [*schistos*; G. *glōssa*, tongue]. Cleft tongue.

schis·tom'e·lus [*schistos*; G. *melos*, limb]. An individual with a cleft extremity.

schis·tom'e·ter [*schistos*; G. *metron*, a measure]. A device for measuring the distance between the vocal cords.

schis"to·pro·so'pi·a, **schis"to·pros'o·py** [*schistos*; G. *prosōpon*, face]. Congenital fissure of the face. —schistopros'opous, *adj.*

schis"to·pros'o·pus (skis"to·pros'o·pus, ·pro·so'pus) [*schistos*; *prosōpon*]. A monster having a fissure of the face.

schis·tor'rha·chis, **schis·tor're·chis** (skis·tor'uh·kis) [*schistos*; G. *rhachis*, spine]. Spina bifida; rachischisis.

schis·to'sis [*schistos*; G. *-ōsis*, condition]. Fibrosis of the lungs occurring in slate cutters. Also see *silicosis*.

Schis"to·so'ma [*schistos*; G. *sōma*, body]. The genus of blood flukes infesting man.

S. haematobium. The adults are found in the vessels of the urinary bladder; common in Africa.

S. japonicum. The adults are found in the mesenteric veins; widely distributed in Japan and China.

S. mansoni. The adults are found in the mesenteric veins and portal vein, found in parts of Africa, South America, and the West Indies.

schis"to·so·mi'a·sis [*schistos*; *sōma*; NL. *-iasis*, condition]. 1. Infestation with *Schistosoma*. Syn., *bilharziasis*. 2. A papular and pustular dermatitis occurring on the skin of persons wading or swimming in fresh-water lakes of the northern United States and Canada. A self-limited disease caused by the penetration of one of the cercarial larvae which are parasites of snails. Also called *swimmer's itch*, *swamp itch*.

Schis"to·so·mo·pho'ra hy"dro·bi·op'sis. A fresh-water snail, the intermediate host of *Schistosoma japonicum*.

schis"to·so'mus [*schistos*; *sōma*]. A monster in which there is a lateral or median eventration extending the whole length of the abdomen, one or both lower extremities being absent or rudimentary.

schis"to·ster'ni·a [*schistos*; G. *sternon*, breast]. Sternal fissure.

schis"to·tho'rax [*schistos*; G. *thōrax*, thorax]. Fissure of the thorax.

schis"to·tra·che'lus (skis·to·tray"ki·lus, ·tra·kee'lus) [*schistos*; G. *trachēlos*, neck]. Cervical fissure. Also called *tracheloschisis*.

schiz·am'ni·on (skiz·am'nee·on) [G. *schizein*, to cleave; *amnion*, membrane around the fetus]. An amnion developing by cavity formation in the inner cell mass.

schiz ax'on (skiz-acks'on) [*schizein*, G. *axōn*, axis]. An axon which divides in its course into equal, or nearly equal, branches.

schiz'o- (skiz o-) **schiz-** [*schizein*]. A combining form denoting *split* or *cleft*.

schiz"o-ble pha'ri a [*schizein*; G. *blepharon*, eyelid]. Fissure of the eyelid.

schiz'o-cyte. See *schistocyte*.

schiz"o-cy t sis (skiz o sigh-to sis) See *schistocytosis*.

schiz"o-gen e sis [*schizein*, G. *genesis*, production]. Reproduction by fission.

schiz" gnath'ism (skiz o-nath'iz-um) [*schizein*, G *gnathos*, jaw]. Cleavage of the j w

schi zog'o-ny (ski-zog' nee skiz-) [*schizein*, G *gonē*, offspring]. 1 Schizogenesis. 2. Multiple division in which the contents of the oocyst eventually split into swarm spores. —**schizogon'ic**, *adj*

schiz"o-gy'ri (skiz"o-jye ree-uh, -jirr'ee-uh) [*schizein*, G *gyros*, circle]. Cerebral deformity marked by partial separation of the gyri.

schiz' id [*schizein*, G *eidos*, form]. Resembling schizophrenia. —**schiz'oid**, *n*.

schiz"o ma'ni [*schizein*, G. *mania*, madness]. A mental disorder presenting features of both schizophrenia and mania.

Schiz" my-ce tes (skiz o-migh-see teez) [*schizein*, G *mykēs*, fungus] A class of fungi the fission fungi or bacteria.

schiz"o my-co sis (skiz o-migh ko sis) [*schizein*, *mykēs*; G -*ōsis*, condition]. A disease due to schizomycetes, disease caused by bacteria.

schiz'ont [*schizein*]. A stage in the asexual life cycle of *Plasmodium*, covering the period from beginning of division of nuclear material until the mature merozoites are formed. See Plates 27 28, 29.

schi zon'ti cide. A substance destructive to schizonts.

schiz"o nych'i-a (skiz o-nick'ee uh) [*schizein*, G *onyx*, nail]. Disease of the nails characterized by irregular splitting.

schiz" pha si a (skiz"o-fay'zhuh, -zee-uh) [*schizein*, G *phasis*, utterance]. Word-salad; scrambled speech which may occur in schizophrenia.

schiz"o-phre ni a [*schizein*, G *phrēn*, mind]. Bleuler term for dementia precox, now classified as *schizophrenic reaction*. —**schizophren'ic**, *n*., *adj*.

schiz" phren'i re-ac'tion. One of group of psychotic reactions, often beginning after adolescence or in young adulthood, characterized by fundamental disturbances in reality relationships and concept formations, with associated affective, behavioral, and intellectual disturbances in varying degrees and mixtures. These reactions are marked by tendency to withdraw from reality inappropriate mood, unpredictable disturbances in stream of thought, regressive tendencies to the point of deterioration, and often hallucinations and delusions.

catatonic type of s.r A form characterized by disturbances in motor behavior varying from generalized inhibition (stupor mutism, negativism, and waxy flexibility) to frenzied activity. The patient may regress completely so that bodily requirements, as feeding and elimination, must be cared for by others.

childhood type of s.r A schizophrenic or schizophreniclike reaction, occurring before puberty which may vary from the more differentiated forms because of the immaturity of the patient. It includes psychotic reactions in young children who are markedly withdrawn and introspective, and may include infantile autism.

hebephrenic type of s.r A form in which there is marked silliness, posturing and mannerisms, playing with words, and regressive behavior delusions and hallucinations, though present, not predominant features.

paranoid type of s.r A form in which ideas of persecution or of grandeur or both, hallucinations, and ideas of reference predominate and sometimes are systematized. The patient is more intact and less bizarre in other ways but generally is hostile, grandiose, excessively religious, and sometimes hypochondriacal.

residual type of s.r Recognizable residual disturbance of thought, affect, or behavior seen by patients who, after a definite psychotic schizophrenic reaction, have improved sufficiently to be able to get along in the general community

schizoaffective type of s.r A psychotic reaction of combined schizophrenic and affective reactions. Mental content may be predominantly schizophrenic, accompanied by marked manic or depressive moods.

simple type of s.r A form characterized by general loss of interest in people and external affairs, leading to apathy and typically progressive course resistant to treatment, with apparent mental deterioration, occasional delusions, and hallucinations.

undifferentiated type of s.r A form with mixed symptomatology unclassifiable as one of the more distinct forms. It includes all early as yet undifferentiated forms t the first attack and may be *acute*, appearing suddenly and disappearing within a brief period though often recurring or *chronic*, including latent, incipient, or prepsychotic forms not classifiable as of another type.

schiz"o-so'ma pl'eu-roi'des (skiz o-so'muh [illegible]) Lateral abdominal cleft with absence of the leg on that side.

schiz" tho rax. See *schistothorax*.

schiz"o thy'mia [*schizein*, G. *thymos*, soul] Eunuchoid, schizoid personality or temperament. —**schizothymic**, *a*.

schiz"o-trich'i a (skiz o-trick'ee-uh) [*schizein*, G *thrix*, hair]. Splitting of the hair

schiz" tryp no-so mi a-sis (skiz try no-so-my'uh-sis, skiz o-try"puh no) [*schizein*, G *trypanon*, auger; *sōma*, body; NL -*iasis*, condition]. Infection with *Trypanosoma cruzi*.

schiz' type. Coined abbreviation for schizophrenic phenotype.

Schlaer test. See Hecht-Schlaer night vision test.

Schlange's sign. See under *sign*.

Schlatter Carl [*Swiss surgeon*, 1864–1934]. Said to have been the first to excise the stomach (1897). He described painful lesion observed in the tibial tuberosity in the young, which had been noted earlier (1903) by R. B. Osgood. Osteochondrosis of tuberosity of the tibia is known as *Osgood-Schlatter disease*

Schleich, Carl Ludwig [*German surgeon*, 1859–1922]. Remembered for his development of infiltration anesthesia (1894–96) Made use of cocaine solution.

Schleiden, Matthias Jakob [*German scientist and botanist*, 1804–81]. Recognized as the discoverer of the universality of the cell in plant structure. He considered plant growth due to increase in the number of cells (1838). It was due to similar research in animal life that Theodor Schwann was able to volve his theory in regard to the animal cell.

Schlemm, Friedrich S. [*German anatomist*, 1795–1858]. Known for his description of the canal at the sclerocorneal junction, called *Schlemm's canal* or *venous sinus of the sclera*. See under *sinus*

Schlesinger's sign. See Pool-Schlesinger's sign

Schlesinger's test. See under *test*.

Schloffer, Hermann [*German surgeon*, 1868–1937]. Said to have been the first to operate for the relief of acromegaly by removing pituitary tumor (1906). Developed method of operating upon pituitary tumors by the nasal route (1907) called *Schloffer operation*. Described an inflammatory swelling of the abdominal wall following surgical repair of inguinal hernia (1908); called *Schloffer' tumor*.

Schlösser, Carl [*German ophthalmologist*, 1857–1925]. First to employ deep alcohol injections in neuralgia (1903); called *Schlösser' treatment*.

Schmelzer method. See *Tirmann-Schmelzer method for tissue iron* under *stain*.

Schmidel, Casimir Christoph [*German anatomist*, 1718–92]. Abnormal communications between the vena cava and the portal system are sometimes called *Schmidel' anastomoses*.

Schmidt, Eduard Oskar [*German anatomist*, 1823–86]. Described his blood coagulation theory that paraglobulin, under the influence of fibrin ferment, combines with fibrinogen t produce fibrin; called *Schmidt' coagulation theory*. Serum globulin is sometimes called *Schmidt' fibrinoplastin*.

Schmidt nuclei test. See under *test*.

Schmidt's test for urobilin. See under *test*.

Schmidt-Lantermann incisures. See *incisures of Schmidt-Lantermann*.

Schmiedeberg, Johann Ernst Oswald [*German pharmacologist*, 1838–1921]. Did important work in pharmacology especially in the effects of poisons on the circulation. Described digitalinum verum (1912) later studied by Kiliani; sometimes called *Schmiedeberg' digitalin*.

Schmincke's tumor. See *lymphoepithelioma*.

Schmitz's bacillus. See *Shigella ambigua*.

Schmorl, Christian G. [*German pathologist*, 1861–1932]. Described herniation of the nucleus pulposus, called *Schmorl' nodules*. See also *Schmorl' method for bone sections* under *stain*.

Schmorl's alizarin SX method for calcium. See under *stain*.

Schneider, Conrad Victor [*German anatomist*, 1614–80]. Remembered for his description of the origin of nasal mucus in the nasal mucous membrane (1660) which is called *Schneider' membrane*, *Schneiderian membrane*.

Schneider, Edward Christian [*American physiologist*, 1874–]. Introduced test of physiologic fitness according t cardiovascular rating; called *Schneider's index*. With Haldane, Douglas, and Henderson, studied the effect of atmospheric pressure at high altitudes.

Schneider' acetocarmine stain. See *acetocarmine* under *stain*.

Schoenbein's test for cyanide. See under *test*.

Schoenheimer, Rudolf [*American biochemist*, 1898–1941]. Introduced the use of isotopes and radioactive tracer compounds in studies of fat and amino acid metabolism. Developed the modern concept of the dynamic state with the continuous, random destruction and resynthesis of the formed elements of the body. With Sperry devised method for analysis of blood cholesterol; see *Schoenheimer nd Sperry' method*.

Schönberg. See *Albers-Schönberg*.

Schönlein, J hann Lucas (1793–1864). German physician who described form of nonthrombocytopenic purpura associated with joint or limb pains, called *Schönlein purpura* (1837). H also discovered fungus, *Achorion schoenleinii* or *Trichophyton schoenleinii*, to be the cause of favus (1839).

Schott, Theodor [*German physician*, 1852–1921]. Remembered for his advocacy of method of treating heart disease by resisted exercise and special forms of baths. *Schott' method* is system of gymnastic movements combined with Nauheim salt baths used for chronic rheumatic affections as well as for diseases of the heart.

Schottmüller, Hugo [*German physician and bacteriologist*, 1867–1936]. The first to isolate *Streptococcus viridans* as the cause of bacterial endocarditis (1910); also called *Schottmüller' bacillus*. The bacillus of paratyphoid is called *Salmonella schottmuelleri*, *Schottmüller bacillus*. Paratyphoid is called *Schottmüller' disease*. Isolated *Streptothrix muris ratti* as cause of rat bite fever (1914).

Schreger' lines. See *lines of Schreger* under *line*.

Schridde, Herman [*German pathologist*, 1875–]. Described thick, coarse, dark hairs found occasionally in the beard and on the temples of cancerous or cachectic patients called *Schridde' cancer hairs*. Congenital generalized dropsy is called *Schridde' disease*.

Schröder, Karl Ernst [*German gynecologist*, 1838–87]. Excised the mucous membrane of the cervix for chronic endometritis called *Schröder's operation*. See also *retraction ring*.

Schroeder's method. See under *artificial respiration*.

Schüffner, Wilhelm August Paul [*German pathologist* 1867–1949]. Known for his description of small, round, pink or reddish yellow granules which appear in red blood cells, stained with the Romanovsky stain, concomitantly with the developing malarial parasite. Called *Schüffner' dots*, *granules*, *stippling*. See Plate 26.

Schüller, Artur (1874–). Austrian neurologist who described a syndrome (1915) similar to one noted earlier by Alfred Hand (1893) and characterized fully by Henry A. Christian (1919). See *Hand-Schüller-Christian disease*.

Schüller, Karl Heinrich Anton Ludwig Max [*German surgeon*, 1843–1907]. Introduced method of artificial respiration in which the thorax is raised rhythmically the fingers being hooked under the ribs. Called *Schüller' method*.

Schultes, Johann (Scultetus; Scultet) [*German surgeon*, 1595–1645]. See *scultetus bandage*.

Schultz, Werner (1878–1945). German physician who described agranulocytosis, called *Schultz' syndrome* or *disease*. See also *Schultz-Charlton blanching test*, *Schultz-Dale test*.

Schultz's sterol reaction method for cholesterol. See under *stain*.

Schultze, Friedrich [*German neurologist*, 1848–1934]. Described type of acroparesthesia (1893) which is also called *Schultze paresthesia*.

Schultze, Maximilian Johann Sigismund [*German anatomist and histologist*, 1825–74]. Showed the role of the cell in muscle tissue (1865). Best known for his description of the olfactory cells and of the nerve endings in the retina (1866). Described descending fibers of the dorsal root, which form plug-shaped bundle lying about the middle of the dorsal funiculus of the cervical and thoracic cords called the *comma tract of Schultze*, *fasciculus interfascicularis*.

Schultze's method. See under *artificial respiration*.

Schütz, E. [*German biochemist*, 1900–]. Known for his law stating that the rate of an enzymatic reaction may be in direct proportion to the square root of the enzyme concentration; known as *Schütz rule*, *Schütz-Borissov rule*.

Schwanbach's test. See under *test*.

Schwalbe, Gustav [*German anatomist*, 1844–1916]. Remembered for his description of the medial vestibular nucleus, also called *nucleus of Schwalbe*. Described supercentral and anterior occipital fissures, called *fissures of Schwalbe*. Described

schiz·ax'on (skiz·aks'on) [schizein; G. axōn, axis]. An axon which divides in its course into equal, or nearly equal, branches.

schiz'o- (skiz'o-) **schiz-** [schizein]. A combining form denoting *split* or *cleft*.

schiz"o·bleph'a·ri·a [schizein; G. *blepharon*, eyelid]. Fissure of the eyelid.

schiz'o·cyte. See *schistocyte*.

schiz"o·cy·to'sis (skiz"o·sigh·to'sis). See *schistocytosis*.

schiz"o·gen'e·sis [schizein; G. *genesis*, production]. Reproduction by fission.

schiz"o·gna·thism (skiz"o·nath'iz·um) [schizein; G. *gnathos*, jaw]. Cleavage of the jaw.

schi·zog'o·ny (ski·zog'o·nee, sky·) [schizein; G. *gonē*, offspring]. 1. Schizogenesis. 2. Multiple division in which the contents of the oocyst eventually split into swarm spores. —**schizo·gon'ic**, *adj.*

schiz"o·gy'ri·a (skiz"o·jye'ree·uh, jirr'ee·uh) [schizein; G. *gyros*, circle]. Cerebral deformity marked by partial separation of the gyri.

schiz'oid [schizein; G. *eidos*, form]. Resembling schizophrenia. —**schiz'oid**, *n.*

schiz"o·ma'ni·a [schizein; G. *mania*, madness]. A mental disorder presenting features of both schizophrenia and mania.

Schiz"o·my·ce'tes (skiz"o·migh·see'teez) [schizein; G. *mykēs*, fungus]. A class of fungi, the fission fungi or bacteria.

schiz"o·my·co'sis (skiz"o·migh·ko'sis) [schizein; *mykēs*; G. *-ōsis*, condition]. A disease due to schizomycetes, disease caused by bacteria.

schiz'ont [schizein]. A stage in the asexual life cycle of *Plasmodium*, covering the period from beginning of division of nuclear material until the mature merozoites are formed. See Plates 27, 28, 29.

schi·zon'ti·cide. A substance destructive to schizonts.

schiz"o·nych'i·a (skiz"o·nick'ee·uh) [schizein; G. *onyx*, nail]. Disease of the nails characterized by irregular splitting.

schiz"o·pha'si·a (skiz"o·fay'zhuh, ·zee·uh) [schizein; G. *phasis*, utterance]. Word-salad; scrambled speech which may occur in schizophrenia.

schiz"o·phre'ni·a [schizein; G. *phrēn*, mind]. Bleuler's term for dementia precox, now classified as *schizophrenic reaction*. —**schizophren'ic**, *n., adj.*

schiz"o·phren'ic re·ac'tion. One of a group of psychotic reactions, often beginning after adolescence or in young adulthood, characterized by fundamental disturbances in reality relationships and concept formations, with associated affective, behavioral, and intellectual disturbances in varying degrees and mixtures. These reactions are marked by a tendency to withdraw from reality, inappropriate mood, unpredictable disturbances in stream of thought, regressive tendencies to the point of deterioration, and often hallucinations and delusions.

catatonic type of s. r. A form characterized by disturbances in motor behavior varying from generalized inhibition (stupor, mutism, negativism, and waxy flexibility) to increased activity. The patient may regress completely so that bodily requirements, as feeding and elimination, must be cared for by others.

childhood type of s. r. A schizophrenic or schizophreniclike reaction, occurring before puberty, which may vary from the more differentiated forms because of the immaturity of the patient. It includes psychotic reactions in young children who are markedly withdrawn and introspective, and may include infantile autism.

hebephrenic type of s. r. A form in which there is marked silliness, posturing and mannerisms, playing with words, and regressive behavior; delusions and hallucinations, though present, not predominant features.

paranoid type of s. r. A form in which delusions of persecution or of grandeur or both, hallucinations, and ideas of reference predominate, and sometimes are systematized. The patient is often more intact and less bizarre in other areas; he generally is hostile, grandiose, excessively religious, and sometimes hypochondriacal.

residual type of s. r. Recognizable residual disturbances of thought, affect, or behavior shown by patients who, after a definite psychotic schizophrenic reaction, have improved sufficiently to be able to get along in the general community.

schizoaffective type of s. r. A psychotic reaction of combined schizophrenic and affective reactions. Mental content may be predominantly schizophrenic, accompanied by marked manic or depressive moods.

simple type of s. r. A form characterized by general loss of interest in people and external affairs, leading to apathy and typically a progressive course resistant to treatment, with apparent mental deterioration, occasional delusions, and hallucinations.

undifferentiated type of s. r. A form with mixed symptomatology unclassifiable as any of the more distinct forms. It includes all early, as yet undifferentiated forms at the first stage, and may be *acute*, appearing suddenly and disappearing within a brief period though often recurring; or *chronic*, including latent, incipient, or prepsychotic forms not classifiable as another type.

schiz"o·so'ma ab"ran·oid'es (skigh ... Lateral abdominal cleft with absence of the ... on that side.

schiz"o·tho'rax. See *schistothorax*.

schiz"o·thy'mi·a [schizein; G. *thymos*, soul]. ... schizoid personality or temperament. —**schizothymic**, *n.*

schiz"o·trich'i·a (skiz"o·trick'ee·uh) [schizein; G. *thrix*, hair]. Splitting of the hair.

schiz"o·tryp"a·no·so·mi'a·sis (skiz"o·trip"uh·no·so·my'uh·sis, skiz"o·try"puh·no·) [schizein; G. *trypanon*, auger; *sōma*, body; NL. *-iasis*, condition]. Infection with *Trypanosoma cruzi*.

schiz'o·type. Coined abbreviation for schizophrenic phenotype.

Schlaer test. See Hecht-Schlaer night vision test.

Schlange's sign. See under *sign*.

Schlatter, Carl [Swiss surgeon, 1864–1934]. Said to have been the first to excise the stomach (1897). He described a painful lesion observed in the tibial tuberosity in the young, which had been noted earlier (1903) by R. B. Osgood. Osteochondrosis of tuberosity of the tibia is known as *Osgood-Schlatter disease*.

Schleich, Carl Ludwig [German surgeon, 1859–1922]. Remembered for his development of infiltration anesthesia (1894–96). Made use of a cocaine solution.

Schleiden, Matthias Jakob [German scientist and botanist, 1804–81]. Recognized as the discoverer of the universality of the cell in plant structure. He considered plant growth due to increase in the number of cells (1838). It was due to similar research in animal life that Theodor Schwann was able to evolve the theory in regard to the animal cell.

Schlemm, Friedrich S. [German anatomist, 1795–1858]. Known for his description of the canal at the sclerocorneal junction called *Schlemm's canal* or *venous sinus of the sclera*. See under *canal*.

Schlesinger's sign. See Pool-Schlesinger's sign.

Schlesinger' test. See under *test.*

Schloffer Hermann [*German surgeon,* 1868–1937]. Said to have been the first to operate for the relief of acromegaly by removing pituitary tumor (1906) Developed method of operating upon pituitary tumors by the nasal route (1907) called *Schloffer' operation.* Described an inflammatory swelling of the abdominal wall following surgical repair of inguinal hernia (1908) called *Schloffer' tumor*

Schlösser Carl [*German ophthalmologist,* 1857–1925]. First to employ deep alcohol injections in neuralgia (1903) called *Schlösser' treatment.*

Schmelzer method. See *Tirmann-Schmelzer method for tonic iron* under *stain.*

Schmiedel, Casimir Christoph [*German anatomist,* 1718–92]. Abnormal communications between the vena cava and the portal system are sometimes called *Schmiedel' anastomoses.*

Schmidt, Eduard Oskar [*German anatomist,* 1833–86]. Described his blood coagulation theory that paraglobulin, under the influence of fibrin ferment, combines with fibrinogen t produce fibrin, called *Schmidt' coagulation theory.* Serum globulin is sometimes called *Schmidt' fibrinoplastin.*

Schmidt nuclei test. See under *test.*

Schmidt's test for urobilin. See under *test.*

Schmidt-Lantermann incisures. See *incisures of Schmidt-Lantermann.*

Schmiedeberg, Johann Ernst Oswald [*German pharmacologist,* 1838–1921]. Did important work in pharmacology especially in the effects of poisons on the circulation. Described digitalinum verum (1913) later studied by Kiliani; sometimes called *Schmiedeberg' digitalis.*

Schmincke's tumor. See *lymphoepithelioma.*

Schmitz's bacillus. See *Shigella ambigua.*

Schmorl, Christian G. [*German pathologist,* 1861 1932]. Described herniation of the nucleus pulposus, called *Schmorl' nodules.* See also *Schmorl' method for bone sections* under *stain.*

Schmorl's alizarin SX method for calcium. See under *stain.*

Schneider Conrad Victor [*German, anatomist,* 1614–80] Remembered for his description of the origin of nasal mucus in the nasal mucous membrane (1660) which is called *Schneider' membrane, Schneiderian membrane.*

Schneider Edward Christian [*American physiologist,* 1874–]. Introduced test of physiologic fitness according to cardiovascular rating called *Schneider's index.* With Haldane, Douglas, and Henderson, studied the effect of atmospheric pressure at high altitudes.

Schneider' acetocarmine stain. See *acetocarmine* under *stain.*

Schoenbein's test for cyanide. See under *test.*

Schoenheimer Rudolf [*American biochemist,* 1898–1941]. Introduced the use of isotopic and radioactive tracer compounds in studies of fat and amino acid metabolism. Developed the modern concept of the dynamic state with the continuous, random destruction and resynthesis of the formed elements of the body With Sperry devised method for analysis of blood cholesterol; see *Schoenheimer and Sperry' method.*

Schönberg. See *Albers-Schönberg.*

Schönlein, Johann Lucas (1793–1864) German physician who described form of nonthrombocytopenic purpura associated with joint or limb pains, called *Schönlein purpura* (1837) He also discovered fungus, *Achorion schoenleini* or *Trichophyton schoenleini,* to be the cause of favus (1839)

Schott, Theodor [*German physician,* 1852–1921]. Remembered for his advocacy of method of treating heart disease by resisted exercise and special forms of baths. *Schott' method* is system of gymnastic movements combined with Nauheim salt baths used for chronic rheumatic affections as well as for diseases of the heart.

Schottmüller Hugo [*German physician and bacteriologist,* 1867 1936]. The first to isolate *Streptococcus viridans* as the cause of bacterial endocarditis (1910); also called *Schottmüller' bacillus.* The bacillus of paratyphoid is called *Salmonella schottmuelleri, Schottmüller' bacillus.* Paratyphoid is called *Schottmüller' disease.* Isolated *Streptothrix muris ratti* as cause of rat bite fever (1914)

Schreger's lines. See *lines of Schreger* under *line.*

Schridde, Hermann [*German pathologist,* 1875–] Described thick, coarse, dark hairs found occasionally in the beard and on the temples of cancerous or cachectic patients, called *Schridde' cancer hairs* Congenital generalized dropsy is called *Schridde' disease.*

Schröder Karl Ernst [*German gynecologist,* 1838–87]. Excised the mucous membrane of the cervix for chronic endometritis called *Schröder' operation.* See also *retraction ring*

Schroeder' method. See under *artificial respiration.*

Schüffner Wilhelm August Paul [*German pathologist,* 1867 1949]. Known for his description of small, round, pink or reddish yellow granules which ppear in red blood cells, stained with the Romanovsky stain, concomitantly with the developing malarial parasite Called *Schüffner' dots, granules, stippling.* See Plate 26.

Schüller Artur (1874–) Austrian neurologist who described syndrome (1915) similar to one noted earlier by Alfred Hand (1893) and characterized fully by Henry A. Christian (1919) See Hand-Schüller-Christian *disease.*

Schüller Karl Heinrich Anton Ludwig Max [*German surgeon,* 1843–1907]. Introduced method of artificial respiration in which the thorax is raised rhythmically the fingers being hooked under the ribs. Called *Schüller' method.*

Schultes, Johan (Scultetus; Scultet) [*German surgeon,* 1595–1645]. See *scultetus bandage.*

Schultz, Werner (1878–1945) German physician who described agranulocytosis, called *Schultz' syndrome* or *disease.* See also Schultz-Charlton blanching *test,* Schultz-Dale *test.*

Schultz's sterol reaction method for cholesterol. See under *stain.*

Schultze, Friedrich [*German neurologist,* 1848–1934]. Described type of acroparesthesia (1893) which is also called *Schultze paresthesia.*

Schultze, Maximilian Johann Sigismund [*German anatomist and histologist,* 1825–74]. Showed the role of the cell in muscle tissue (1865) Best known for his description of the olfactory cells and of the nerve endings in the retina (1866) Described descending fibers of the dorsal root, which form plug-shaped bundle lying about the middle of the dorsal fasciculus of the cervical and thoracic cords called the *comma tract of Schultze, fasciculus interfascicularis.*

Schultze method. See under *artificial respiration.*

Schütz, E. [*German biochemist,* 1900–]. Known for his law stating that the rate of an enzymatic reaction may be in direct proportion to the square root of the enzyme concentration, known as *Schütz rule, Schütz-Borissow rule.*

Schwabach test. See under *test.*

Schwalbe, Gustav [*German anatomist,* 1844–1916]. Remembered for his description of the medial vestibular nucleus; also called *nucleus of Schwalbe.* Described supercentral and anterior occipital fissures, called *fissures of Schwalbe.* Described

lymph spaces along the outer surface of the dural sheath of the optic nerve; called *Schwalbe' spaces*.

Schwalbe, Marcus Walter [*German neurologist*, 1883–]. Described dystonia musculorum deformans (1908) later described by Oppenheim and Ziehen, called *torsion spasm*.

Schwann, Theodor [*German anatomist*, 1810–82]. Widely known for his application of Schleiden theories to animal life. Regarded as the founder of theories of putrefaction and fermentation. Demonstrated pepsin in gastric juice (1836). Discovered the yeast cell (1837). Made important studies concerning the action of bile on digestion (1844). Described the neurilemma of nerve fiber which is also called *sheath of Schwann*. See *myelin*. See also *neurilemma*, 1.

schwan'no gli-o ma. Neurilemmoma.

schwan no ma (shvon-o mah). A neurilemmoma. **malignant s.** A malignant tumor of peripheral nerves derived from Schwann cells, possibly associated with neurofibromatosis but not with neurilemmoma, also called *fibrosarcoma of nerve sheath*, *malignant neurilemmoma*, *malignant neurinoma*, *malignant neurofibroma*, *malignant peripheral glioma*, *neurilemmosarcoma*, *neurofibrosarcoma*, *neurogenic (neurogenous) sarcoma*, *sarcoma of peripheral nerve*, *schwannosarcoma*.

schwan"no-sar-co ma. See malignant *schwannoma*.

Schwartz-McNeil test for gonorrhea. See under *test*.

Schwartze Hermann Hugo Rudolf [*German otologist*, 1837 1910]. With Eysell, revived mastoidectomy. A procedure using hammer and chisel is known as *Schwartze' operation*.

Schweigger-Seidel, Franz [*German physiologist*, 1834–71]. Remembered for his demonstration of the nucleus and cytoplasm of the spermatozoon (1865). See also *sheath of Schweigger-Seidel*.

Schweinfurth green Paris green.

Schweinitz, George Edmund de [*American ophthalmologist*, 1858–1938]. Long regarded as the leader in ophthalmology in the United States of America.

Schweitzer reagent. See under *reagent*.

Schweizer-Foley Y-plasty See *Y plasty of Schweizer-Foley*.

Schwenninger Ernst [*German physician*, 1850–1924]. Introduced his method for reducing, based on the restriction of fluids in the diet, called *Schweninger' method*.

sci age (see ahah see ahah) [F]. A sawing movement in massage, practised with the ulnar border or with the dorsum of the hand.

sci-ap o-dy (sigh-ap o-dee) [G *Skiapodes*, shade-footed people]. Gigantism of the foot. Also called *macropodia*, *pes gigas*.

sci"as co pi a, sci as'co-py (sigh-ass'ko-pee) See *retinoscopy*.

sci-at'ic (sigh-at'ick) [G *ischion*, hip-joint]. 1. Pertaining to the ischium, as the sciatic notch. 2. Pertaining to the sciatic nerve, as sciatic neuralgia. See Table of Nerves in the Appendix.

sci at'i-ca (sigh-at ick-uh) [*ischias*] A disease characterized by neuralgic pain along the course of the sciatic nerve. It is dependent upon inflammation or injury to the nerve. In addition to pain, there are numbness, tingling, and tenderness along the course of the nerve, and eventually wasting of the muscles innervated by it.

sci" ro pi [G *skieros*, shady; *ops* eye]. Defective vision in which all objects appear dark.

scil'la. See *squill*.

scil"la bi'ose. $C_{12}H_{22}O_{10}$: glucosidorhamnose disaccharide obtained by hydrolysis of the squill glycoside known by the trade-marked name *scillaren-A*.

scillaren. Trade-mark for mixture of the natural glycosides, **scillaren-A** and **scillaren-B** (the latter mixture) occurring in fresh squill, *Urginea maritima*, in the proportions in which they exist in the fresh crude drug; namely about 2 parts of scillaren-A to 1 part of scillaren-B. The substance is used as cardiac stimulant and as diuretic.

scil'le-rin. See under *squill*.

scil"li a zu re-side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li-ce-sl o side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li-cryp to-side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li cy an o-side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li di u-ret'in. See under *squill*.

scil"li glau'co-side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li mar'in. See under *squill*.

scil'lin. See under *squill*.

scil"li phae -side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

scil"li pic'rin. See under *squill*.

scil li re-side. $C_{30}H_{42}O_{11}$ glycoside from red squill, the red variety of *Urginea maritima*. Its sugar component is D-glucose.

scil'lism [L. *scilla*, squill, from G. *skilla*]. Poisoning from preparations of squill; characterized by vomiting, retarded pulse, cardiac arrhythmia, and ventricular fibrillation.

scil"li tin. See under *squill*.

scil"li tox'in. See under *squill*.

scil"lo-ceph'a-lus [*scilla*; G. *kephalē*, head]. A person exhibiting scillocephaly.

scil"lo-ceph ly [*scilla*, *kephalē*]. Congenital deformity of the head, in which it is small and conically pointed.

scin ti gram. A printed or penned record, consisting of horizontal rows of short vertical lines variably spaced, which in the aggregate show the distribution of radioactive tracer substance in intact tissue and also the profile of the tissue. It is obtained by automatic scanning of the region of the body in which the tissue is located by means of directional scintillation counter called *scintiscanner*.

scin til'la-scope [L. *scintilla*, spark; G. *skopein*, to examine]. An instrument for observing minute flashes of light upon fluorescent screen struck by alpha particles, emitted from small source of radioactive material.

scin"til la'tion [L. *scintillatio*, from *scintilla*]. 1. An emission of sparks. 2. A subjective visual sensation, as of sparks.

scin"til la'tion coun'ter A counter in which radioactive particles cause scintillations on fluorescent screen that are picked up by the photosensitive electrode of multiplier tube and amplified into electric signals that can be registered on meter.

scin"ti scan"ner A directional scintillation counter which automatically scans an object or region of the body to determine the distribution of radioactive tracer substance and obtain profile of the radioactive area, simultaneously recording the information in the form of scintigram.

scir'rhoid (skirr oyd, sirr oyd) [G. *skiros*, hard; *eidos*, form]. Resembling scirrhus.

scir'rhous (skirr'us, sirr'us) [*skiros*]. Hard.

scir'rhus (skurr'us, sirr us) [*skiros*]. A hard carcinoma.

scis'sion. 1. A splitting or dividing, as of a living cell or molecule. 2. Fission of the nucleus of an atom.

scis'sors [ME. *sisoures*, from L. *scindere*, to cut]. An instrument consisting of two blades held together on a pivot, and crossing each other so that in closing they cut the object placed between them. The blades may be straight, angular or curved, blunt, sharp, or probe-pointed.

canalicular s. Delicate scissors, one blade of which is probe-pointed; used in slitting the lacrimal canaliculus.

craniotomy s. A strong S-shaped instrument used in craniotomy for perforating the skull and cutting away portions of bone.

iris s. One having flat blades bent in such a manner that they may be applied to the eyeball.

Smellie's s. Craniotomy scissors.

scis-su'ra [L., a tearing]. A fissure, a splitting.

scissure. Scissura.

scle'ra [G. *sklēros*, hard]. The sclerotic coat of the eye; the firm, fibrous, outer layer of the eyeball, continuous with the sheath of the optic nerve behind and with the cornea in front. See Plate 19. —**scleral**, *adj.*

scler-ad'en-i-tis (skli-rad-en-eye'tis) ... See acne indurata.

scle-ra-ti'tis, scler"a-ti'tis. See *scleritis*.

scle"ra-tog'e-nous (sklee"ruh-todj'i-nus, sklerr'uh-) See *sclerogenous*.

scler"ec-ta'si-a (sklerr ek-tay'zhuh, -see-uh, -zuh, -see uh, sklee"rek-) [*sklēros*; G. *ektasis*, extension]. Localized bulging of the sclera.

scle-rec"to-ir"i-dec'to-my [*sklēros*; G. *ektomē*, excision; *iris*, iris; *ektomē*]. Excision of a portion of the sclera and of the iris, for glaucoma.

scle-rec'to-my [*sklēros*; *ektomē*]. Excision of a portion of the sclera.

scler"e-de'ma a"dul-to'rum (sklerr"e-dee'muh, sklee"re-dee'muh). An affection characterized by indurated edema, often beginning on the head and later involving larger areas of the body surface. Terminates after weeks or months, leaving no sequels. Often follows some acute general infection. Also called *Buschke's scleredema*.

scle-re'ma [*sklēros*]. Sclerosis, or hardening, especially of the skin.

s. adiposum. See s. neonatorum.

s. cutis. Scleroderma.

s. edematosum. A generally fatal form of edema of the skin with induration, impairment of muscular action, and subnormal temperature. Also called *edema neonatorum*.

s. neonatorum. A disease of the newborn characterized by a hardening of the subcutaneous tissue, especially of the legs and feet. Dryness of the skin is marked, so that little fluid exudes on incision.

scle-re'mi-a, scle-re'mus. See *sclerema*.

scle"ren-ce-pha'li-a, scle-ren-ceph'a-ly [*sklēros*; G. *enkephalos*, brain]. Sclerosis of brain tissue.

scle-ren'chy-ma (skli-reng'ki-muh) [*sklēros*; G. *enchyma*, instillation]. The hard, fibrous, woody tissue or covering of plants. —**sclerenchyma'tous**, *adj.*

scle-rer'y-thrin, scler"e-ryth'rin [*sklēros*; G. *erythros*, red]. A red coloring matter in ergot.

scle-ri'a-sis. Scleroderma.

scle-rit'is [*sklēros*]. Sclerosis.

scle-ri'tis [*sklēros*; G. *-itis*, inflammation]. Inflammation of the sclerotic coat of the eye. It may exist alone (simple scleritis or episcleritis) or involve the cornea, iris, or choroid.

annular s. Inflammation of the sclera at the limbus.

scle-ro- (sklee'ro-, sklerr'o-) [*sklēros*]. 1. A combining form meaning *hard*. 2. A combining form denoting *connection with the sclera*.

scle"ro-a-troph'ic [*sklēros*; G. *atrophia*, want of food]. Pertaining to fibrosis associated with atrophy.

scle"ro-blas-te'ma [*sklēros*; G. *blastēma*, offspring]. Embryonic tissue from which bones are formed. —**scleroblastem'ic**, *adj.*

scle"ro-cat"a-rac'ta [*sklēros*; G. *kataraktēs*, cataract]. A hard cataract.

scle"ro-cho"roid-i'tis (sklee"ro-kor-oy-dye'tis, sklerr"o-) [*sklēros*; G. *chorioeidēs*, choroid; *-itis*, inflammation]. Inflammation of the choroid and sclerotic coats of the eye.

scle"ro-con"junc'ti-val (-kon-junk-ty'vul, -kon-junk'ti-vul) [*sklēros*; L. *conjunctivus*, connective]. Pertaining conjointly to the sclerotic coat of the eye and the conjunctiva.

scle"ro-con-junc"ti-vi'tis [*sklēros*; *conjunctiva*; G. *-itis*, inflammation]. Simultaneous conjunctivitis and scleritis.

scle"ro-cor'ne-a [*sklēros*; L. *corneus*, horny]. The sclera and cornea regarded as one. Syn., *corneosclera*. —**sclerocorneal**, *adj.*

scle"ro-dac-tyl'i-a, scle"ro-dac'ty-ly [*sklēros*; G. *daktylos*, finger]. Scleroderma of the fingers. It is often symmetrical, occurs chiefly in women, and leads to marked deformity.

scle-ro-der'ma [*sklēros*; G. *derma*, skin]. A disease characterized by induration of the skin in localized patches or diffuse areas, and associated with atrophy of the epidermis and pigmentation. Vasomotor disturbances, myosclerosis, and calcinosis may occur. Also called *scleriasis*, *dermatosclerosis*, *chorionitis*. Also see *acrosclerosis*.

scle-ro-der"ma-ti'tis [*sklēros*; *derma*; G. *-itis*, inflammation]. Inflammatory thickening and hardening of the skin; also spelled *sclerodermitis*.

scle-rog'e-nous (skli-rodj'i-nus) [*sklēros*, G. *gennaein*, from *gignesthai*, to be produced]. Producing a hard substance.

scle-roid [*sklēros*; G. *eidos*, form]. Hard or bony in texture.

scle"ro-i-ri'tis (sklee"ro-eye-rye'tis, sklerr"o-) [*sklēros*; G. *iris*, iris; *-itis*, inflammation]. Inflammation of the sclera and the iris.

scle-ro-ker"a-ti'tis [*sklēros*; G. *keras*, horn; *-itis*]. Inflammation of the sclera and cornea.

scle"ro-ker"a-to-i-ri'tis (-kerr"uh-to-eye-rye'tis) [*sklēros*; *keras*, G. *iris*, iris; *-itis*]. Combined inflammation of the sclera, cornea, and iris.

scle-ro'ma [G. *sklērōma*, induration]. Abnormal hardness or induration of a part.

respiratory s. Rhinoscleroma.

scle"ro-ma-la'ci-a (sklee"ro-ma-lay'shee-uh, -see-uh, sklerr"o-) [G. *sklēros*, hard; *malakia*, softening]. Softening of the sclera.

s. perforans. Softening of the sclera with perforation.

scle-ro-mere [*sklēros*; G. *meros*, part]. The caudal half of a sclerotome, a primitive vertebra.

scle-rom'e-ter [*sklēros*; G. *metron*, a measure]. 1. A device for determining hardness. 2. Obsolete instrument for determining penetration or quality of x-rays.

scle-ro-nych'i-a (sklee"ro-nik'ee-uh, sklerr"o-) [*sklēros*; G. *onyx*, nail]. Induration and thickening of the nails.

scle-ro-nyx'is [*sklēros*; G. *nyxis*, a pricking]. Operative puncture of the sclera.

scle"ro-o"pho-ri'tis (-o"o-fo-rye'tis, -o"off-o-rye'tis) Sclerosis of the ovary.

scle'ro-plas"ty [*sklēros*; G. *plassein*, to form]. Plastic surgery on the sclera.

scle"ro-pro'te-in [*sklēros*; G. *prōteios*, of first rank].

The term used in the British classification of proteins corresponding to the term albuminoid in the American classification. See American Classification of Proteins in the Appendix.

scle·ro·sant. A chemical irritant producing an inflammatory reaction and subsequent fibrosis.

scle·rose (skli·rose', skli·roze', skleer'ose) [*sklēros*]. Affect with sclerosis; become affected with sclerosis. —**sclerosed'**, *adj.*

scle·ro·sis [G. *sklērōsis*, hardening]. Hardening, especially of a part by overgrowth of fibrous tissue; applied particularly to hardening of the nervous system from atrophy or degeneration of the nerve elements and hyperplasia of the interstitial tissue; also to a thickening of the coats of arteries, produced by proliferation of fibrous connective tissue and deposit of lipids and calcium salts.

amyotrophic lateral s. A degenerative disease of the pyramidal tracts and lower motor neurons, characterized by motor weakness and a spastic condition of the limbs associated with muscular atrophy, fibrillary twitching, and final involvement of nuclei in the medulla.

annular s. A chronic myelitis, in which the sclerosis extends about the spinal cord like a ring.

arterial s. See *arteriosclerosis.*

arteriolar s. That involving irregularly distributed hardening of arterioles with uneven reduction of the caliber of the lumens. See generalized arteriolar s.

atrophic s. Sclerosis with atrophy.

calcific nodular valvular s. See valvular *s.*

cerebrospinal s. See multiple *s.*

combined s. Simultaneous sclerosis of the posterior and lateral columns of the spinal cord.

diffuse hyperplastic s. See generalized arteriolar *s.*

diffuse s. One extending through a large part of the brain and spinal cord.

disseminated s. See multiple *s.*

dorsal s. Old term for degeneration of the posterior white columns of the spinal cord, or for sclerosis involving the thoracic (dorsal) levels of the spinal cord.

dorsolateral s. See subacute combined *degeneration of spinal cord.*

endocardial s. See endocardial *fibrosis.*

focal s. One confined to a particular region of the brain and cord.

generalized arteriolar s. That affecting the arterioles of the kidney, liver, brain, meninges, gastrointestinal tract, skeletal muscle, adrenal, pancreas, and other organs; more frequent and severe in hypertensive subjects. Also called *diffuse arteriolar s., diffuse hyperplastic s.*

general s. A connective-tissue hyperplasia affecting an entire organ.

hereditary cerebellar s. See hereditary cerebellar *ataxia.*

hereditary spinal s. See Friedreich's *ataxia.*

insular s. See multiple *s.*

lateral s. See amyotrophic lateral *s.*, primary lateral *s.*

lobar s. Gliosis and atrophy of a lobe of the cerebrum, resulting in dementia. Also called *lobar atrophy, convolutional atrophy of the brain, walnut brain.* See also circumscribed cerebral *atrophy.*

miliary s. Small sclerotic patches such as have been observed in the spinal cord in some cases of pernicious anemia.

Mönckeberg's aortic s. See valvular.

multilocular s. See multiple *s.*

multiple cerebral s. Multiple sclerosis affecting only the brain.

multiple cerebrospinal s. Multiple sclerosis affecting both the brain and the spinal cord.

multiple s. Chronic induration occurring in patches in different parts of the nervous system. The principal symptoms are intention tremor, nystagmus, scanning speech, urogenital disturbances, labile emotions, ataxia, and retrobulbar retinitis (mnemonic, *insular sclerosis*). Syn., *insular s.*

neural s. Sclerosis attended by chronic neuritis.

posterior spinal s. See *tabes dorsalis.*

posterolateral s. See subacute combined *degeneration of spinal cord.*

presenile s. A degeneration of the cortical cells of the brain, characterized by an abnormal bunching and distortion of the neurofibrils within the cytoplasm; this is associated with the appearance of large, star-shaped plaques, scattered through the cortex, which contain masses of argentophile material surrounded by a homogeneous nonstaining area; these changes are noted both in presenile and senile dementia. Also called *Alzheimer's disease.*

primary ascending s. of the aortic valve. See valvular.

primary lateral s. A sclerotic disease of the crossed pyramidal tracts of the cord, characterized by paralysis of the limbs, with rigidity, increased tendon reflexes, and absence of sensory and nutritive disorders. A peculiar characteristic jerking gait is produced, and clonus of the lower limbs may be readily excited. It is usually a spinal form of multiple sclerosis.

progressive muscular s. See pseudohypertrophic muscular *paralysis.*

Putnam's type of spinal s. See subacute combined *degeneration* of spinal cord.

renal s. See *nephrosclerosis.*

s. corii. Old term for scleroderma.

s. dermatis. Old term for scleroderma.

s. ossium. See condensing *osteitis.*

subacute combined s. See subacute combined *degeneration* of spinal cord.

tuberous s. A syndrome consisting of mental deficiency, epileptic attacks, adenoma sebaceum, nodular sclerosis of the cerebral cortex, and tumors of the kidney and other organs, generally congenital. Also called *Bourneville's disease.*

ulcerating s. The primary lesion of syphilis; chancre.

valvular s. Primary nonrheumatic degenerative changes of aortic cusps, producing rigidity, calcification, and deformity of the valves. This may result in stenosis, with or without insufficiency. Syn., *calcific nodular valvular sclerosis, sclerotic valvular disease, Mönckeberg's aortic sclerosis, primary ascending sclerosis of the aortic valve.*

vascular s. Sclerosis of the walls of the blood vessels; arteriosclerosis.

venous s. See *phlebosclerosis.*

scle·ro·ste·no·sis [G. *sklēros*, hard; *stenōsis*, being straitened]. Hardening with contracture of a part or closure of an orifice.

s. cutanea. Scleroderma.

scle·ros'to·my [*sklēros*; G. *stoma*, mouth]. Making an artificial opening in the sclera for the relief of glaucoma.

scle·ro·ther'a·py. The deposition or injection of an irritant into a tissue to produce fibrosis, as in the treatment of varicose veins or hemorrhoids.

scle·ro·thrix [*sklēros*; G. *thrix*, hair]. Abnormal brittleness of the hair.

scle·ro'ti·a [*sklēros*]. Firm, small, compact masses of hyphal cells which develop in grain when the ergot fungus grows under unfavorable conditions.

scle·rot'ic [*sklēros*]. 1. Hard; indurated. 2. Pertain-

ing to the outer coat of the eye, as the sclerotic coat, or sclera. 2. Related to or derived from ergot.

scle·rot'ic. The sclera.

blue sclerotics. A congenital, often hereditary condition of unknown cause in which the sclerae are deep blue indigo sometimes fading with age often associated with osteogenesis imperfecta, but may occur in the absence of bone fragility

scle·rot'i·ca. See *sclera*.

scle·rot''i·cec'to·my [*sklēros*; G. *ektomē*, excision]. The removal of part of the sclera.

scle·rot''i·co·cho·roid·i'tis (kor·oy·dye'tis). See *sclerochoroiditis*.

scle·rot''i·co·nyx'is. See *scleronyxis*.

scle·rot''i·co·punc'ture. Scleronyxis.

scle·rot''i·cot'o·my. See *sclerotomy*.

scle·rot''i·do·tot'o·my. See *sclerotomy*.

scle·ro·tin [*sklēros*]. The ergot of rye.

scle·ro·ti'tis. See *scleritis*.

scle·ro'ti·um (skli·ro'shee·um) [*sklēros*]. A thick mass of mycelium constituting a resting stage in the development of some fungi, as the ergot.

scle·ro·tome [*sklēros*; G. *tomos*, cutting]. 1. A knife used in sclerotomy. 2. The fibrous tissue separating successive myotomes in certain of the lower vertebrates. 3. That part of a mesodermal somite which enters into the formation of the vertebrae. —**sclerotom'ic,** *adj.*

scle·rot'o·my [*sklēros*; G. *tomē*, a cutting]. The operation of incising the sclera.

anterior s. The making of an incision through the sclera anterior to the ciliary body and entering the anterior chamber as in glaucoma.

posterior s. Sclerotomy by an incision through the sclera behind the ciliary body and entering the vitreous chamber.

scle·ro·to·nyx'is [*sklēros*; G. *nyxis*, pricking]. An operation for cataract formerly practiced, in which a broad needle was introduced into the sclera, behind the ciliary region, passed between the iris and the lens, and the latter depressed into the vitreous body.

scle''ro·trich'i·a (sklee''·trick'ee·uh, skleer·o-) [*sklēros*; G. *thrix*, hair]. A harsh and dry state of the hair.

scle·rous [*sklēros*]. Hard; indurated.

sco'bi·nate [L. *scobis*, powder produced by scraping]. Having a rough surface.

sco·lec'i·form (sko·less'i·form, sko·lee'si·form) [G. *skōlēx*, earthworm; L. *forma*, form]. Having the form or character of a scolex.

scol'e·coid, sco'le·coid [G. *skōlēkoeidēs*, worm-shaped]. Vermiform.

sco'lex (pl. *scolices*) [G.]. The head of a tapeworm by means of which it attaches to the intestinal wall.

sco''li·o·lor·do'sis [G. *skolios*, crooked; *lordōsis*, curvature of the spine which is convex in front]. Combined scoliosis and lordosis.

sco''li·o·si·om'e·try [G. *skoliōsis*, obliquity; *metron*, measure]. The estimation of the degree of deformity in scoliosis.

sco''li·o'sis [G.]. Lateral curvature of the spine, named according to location and direction of the convexity as right thoracic. Usually there are two curves, the original and a compensatory curve, as an original right thoracic with a compensating left lumbar curve. —**scoliot'ic,** *adj.*

congenital s. One due to a congenital defect in the development of the spine, such as a hemivertebra.

functional s. One due to persistent faulty posture, such as standing on one leg or with one shoulder held lower than the other or with the head tilted. Early this is a mobile scoliosis, that is, one which can be voluntarily straightened, but if the faulty posture is long continued, it may become a structural scoliosis. Also called *habit s.*

organic s. That due to a disease process, as one which affects the spine, such as rickets or infection; one which affects the muscles which support the spine, such as paralysis; due to deformities of the thoracic cage, as following empyema; or due to disease of the hip or leg.

structural s. One in which a series of vertebrae remain constantly deviated from the normal spinal axis and accompanied by some degree of rotation of the vertebrae with corresponding changes in the thoracic cage. Organic and congenital forms are structural, and the functional type may become so.

sco''li·o·som'e·ter [*skoliōsis*; G. *metron*, measure]. An instrument for measuring the amount of deformity in scoliosis.

sco'li·o·tone'' [G. *skolios*, crooked; *tonos*, stretching]. An apparatus for elongating the spine and lessening the rotation in lateral curvature.

Scol''o·pen'dra. A genus of centipedes.

scom'brine (skom'breen, -brin) [G. *skombros*, mackerel]. A protamine obtained from mature spermatozoa of mackerel.

scom'brone [*skombros*]. A histone obtained from spermatozoa of mackerel.

scoop [ME. *scope*]. An instrument resembling a spoon, for the extraction of bodies from cavities, as an ear scoop, lithotomy scoop.

sco·pa·rin. $C_{20}H_{20}O_{10}$; a glycosidal principle from scoparius, occurring in yellow crystals, soluble in hot water.

sco·pa·ri·us [L. *scopa*, broom]. The dried tops of *Cytisus scoparius*, a shrub of the family Leguminosae; they contain the alkaloid sparteine, and a glycoside, scoparin. Scoparius has been used as a diuretic and cathartic. Also called *broom-tops*.

-scope [G. *skopein*, to examine]. A combining form denoting an *instrument for seeing* or *examining*.

sco'po·la, sco·po'la [after G. A. *Scopoli* of Pavia, 1723–88]. The dried rhizome of *Scopolia carniolica*. It yields approximately 0.6% of total alkaloids, of which about 80% is hyoscyamine and the rest scopolamine and nor-hyoscyamine. The physiologic action and therapeutic effects closely resemble those of belladonna. It is little used as an internal medicine but is employed as a commercial source of scopolamine and hyoscyamine.

sco·pol'a·mine (sko·pol'ah·meen, -min, sko·po·lah-, sko·po·lah·meen, sko·po·lam'in). $C_{17}H_{21}NO_4$. An alkaloid obtained from various plants of the Solanaceae. It occurs as a syrupy liquid, if obtained from a chloroform solution; as crystals, if obtained from an ether solution. It is slightly soluble in water; soluble in alcohol, chloroform, and ether.

s. hydrobromide (*scopolaminae hydrobromidum*). $C_{17}H_{21}NO_4.HBr.3H_2O$. The hydrobromide of levorotatory scopolamine obtained from plants of the Solanaceae; occurs as colorless or white crystals or a white, granular powder; 1 Gm. dissolves in 1.5 cc. of water and in 20 cc. of alcohol. Scopolamine paralyzes the peripheral endings of the parasympathetic nerves, acting like atropine but less powerfully and without stimulating the medullary centers. It also appears to act frequently as a cerebral depressant and tends to promote sleep. It has slight analgesic properties, but greatly enhances the effect of other narcotics, such as morphine. When locally applied it will cause dilation of the pupil. It is used mainly as a sedative in psychiatry and surgery. As a mydriatic it is much quicker and less permanent in its effects than atropine. For the relief of pain it is advantageously combined with morphine. In doses of

0.5–1.0 mg. of scopolamine with 10 mg. of morphine it is used for producing anesthesia, especially for obstetric purposes. Great care must be exercised when used in this manner Dose, 0.3–0.8 mg. ($\frac{1}{200}$–$\frac{1}{80}$ gr) Also called *hyoscine hydrobromide*.

scopolamine stable. Trade-mark for an aqueous solution of levorotatory scopolamine hydrobromide with 10% of mannite to prevent decomposition. The substance is used in surgery as preanesthesia medication and in obstetrics for the production of twilight sleep It is also used in psychiatry as cerebral sedative in acute mania, delirium tremens, drug addiction, alcoholism, and similar disturbances. See *scopomannit*.

sco po le'tin, sco-po'le-tin. $C_{10}H_8O_4$; β-methylesculetin or 6-methoxy-7-hydroxycoumarin the aglycone of scopolin.

sco-po'lin. A glycoside from certain species of *Scopolia*; on hydrolysis it yields scopoletin and D-glucose.

sco-po'line. $C_8H_{13}NO_2$; decomposition product of scopolamine Syn., *oscine*.

scopomannit. Trade name for an aqueous solution of scopolamine hydrobromide, protected against decomposition by the addition of 10% of mannite See *scopolamine stable*.

sco-pom'e-ter [G *skopein*, to examine; *metron*, measure]. An optical instrument with an optical wedge for visual measurement of turbidity or opalescence, by observation of the disappearance of an illuminated target.

sco-pom'e-try [*skopein*; *metron*]. A branch of nephelometry; matching colors or turbidities by comparing an illuminated line against field of constant intensity

sco po-pho'bi a [*skopein*; G *phobos*, fear]. Morbid dread of being seen.

Scop u la"ri-op'sis [L. *scopula*, broom; *opsis*, vision]. A genus of fungi.

S. brevicaulis. One of the species of fungi which cause aspergillosis.

-scopy [G *skopein*, to examine]. A combining form denoting *inspection* or *examination*.

scor"a-cra ti a (skor"ah kray'shee-uh) [G *skōr* dung *akrateia*, want of power]. Involuntary evacuation of feces.

scor bu"ti gen'ic [ML. *scorbutus*, scurvy; G *genesthai*, from *gignesthai*, to be produced]. Causing scurvy

scor bu'tus. See *scurvy*.

scor"di ne ma [G stretching]. Y wning.

scor"e-te'rid a. See *scateria*.

Scor'pi-o [L from G *skorpios*, scorpion]. A genus of the order Scorpionida (scorpions)

S. maurus. A poisonous species of scorpion found in Egypt and Tunis.

scor'pi-on [*skorpios*]. An arachnid of the order Scorpionida which injects poison by sting located on the end of the tail. The venom is neurotoxin similar in action to cobra venom. See *Buthus*, *Centruroides Euscorpius*, *Scorpio Tityus*.

scot"o-din'i (skot"o-din ee-uh, -dye nee-uh, sko to-) [G *skotos*, darkness *dinos*, whirling]. Vertigo associated with the appearance of black spots before the eyes.

scot'o-gram (skot o-gram, sko to-) [*skotos*; G. *gramma*, letter]. An impression made on photographi plate by radioactive substance without the intervention of an opaque object.

sco-to ma [G dimness]. An area of absent or depressed vision in the visual field, surrounded by an area of normal or less depressed vision.

absolute s. Scotoma with perception of light entirely absent.

annular s. A partial or complete area of blindness in the form of ring. Also called *ring s.*

Bjerrum s s. See Jannik Peterson *Bjerrum*.

central s. One limited to the region of the visual field corresponding to the macula lutea.

color s. Colorblindness limited to part of the visual field may exist without interruption of the field for white light.

negative s. A defect, due to the destruction of the retinal center; not noticeable to the patient

positive s. A scotoma perceptible to the patient as a dark spot before his eyes.

relative s. A scotoma within which perception of light is only partially impaired.

scintillating s. A scotoma with serrated margins extending peripherally and producing a large defect in the visual field.

sco to ma graph [*skotoma*; G *graphein*, to write] An instrument for recording the size and shape of scotoma.

sco-to-ma'e-ter [G *skotos*, darkness; *metron*, a measure]. An instrument for detecting, locating, and measuring scotomas.

scot"o phil'i-a. See *nyctophilia*.

scot"o pho'bi a (skot"o-fo'bee-uh, sko"to-) [*skotos*; G *phobos*, fear]. A morbid fear of darkness.

sco-to pi [*skotos*; G *ōps*, eye]. The bility to see in the dark; dark adaptation. —**scotop'ic**, *adj*

sco top sin. A name proposed for the protein moiety of rhodopsin.

sco tos'co-py See *retinoscopy*.

sco-to sis. See *scotoma*.

scour'ing. A nonscientific term for diarrhea in horses and cattle and usually attributed to excesses in eating green fodder and unripe fruit.

scours. An infectious diarrhea of horses and cattle.

scra per [AS. *screpian*]. An instrument used to produce an abrasion.

scrap'ie (scrap ee, skray'pee) [*screpian*] A form of dysentery in sheep caused by *Mycobacterium paratuberculosis* (*Johne bacillus*)

scra pings [*screpian*]. Epithelial or nail fragments removed from dermal lesions for microscopical examination for the presence of fungi.

screen [ME. *scren*]. That which cuts off, shelters, or protects.

fluorescent s. A screen covered with substance which become fluorescent on exposure to rays which are normally invisible to the eye.

intensifying s. A sheet of cardboard coated with fluorescent material, such as calcium tungstate. When placed in contact with an x-ray film When roentgen rays pass through film and screen, the fluorescent light from the screen supplements the effect of the roentgen rays on the film, thus reducing the necessary exposure time.

screen mem o-ry *psychoanalysis*, an unimportant memory recalled in place of an associated important one.

scrive ner's pal'sy See writer' *cramp*.

scro-bi u lus [L., little ditch] A small pit. —**scrobiculate**, *adj*.

scrof'u la [L. *scrofa*, breeding sow]. Tuberculosis of cervical lymph nodes. —**scrofulous**, *adj*

scrof"u lo-der'ma [*scrofa*; G. *derma*, skin]. Lesions of the skin produced by the local action of the *Mycobacterium tuberculosis* by direct extension from som focus of infection beneath the skin, usually on the neck from draining lymph nodes, resulting in ulceration, draining sinuses, and scar formation.

scroph"u la ri [*scrofa*]. The leaves of *Scrophularia marilandica*, figwort; formerly used internally and externally as cure-all, but probably without definite value.

scro tec'to-my [L. *scrotum*, scrotum; G *ektomē*, excision]. Resection of the scrotum or part of it.

scro'to·plas"ty [*scrotum*; G. *plassein*, to form]. Plastic surgery on the scrotum.

scro·tum [L.]. The pouch containing the testes, consisting of skin and subcutaneous tissue, dartos, external spermatic fascia, cremasteric fascia, internal spermatic fascia, and parietal tunica vaginalis propria. See Plate 44. —**scrotal**, *adj.*

bifid s. A congenital failure of the lateral halves of the scrotum to fuse at the line of the median raphe, resulting in a separate pouch for each testis.

scrub ty'phus. See tsutsugamushi *disease*.

scru'ple [L. *scrupulus*, small stone]. A unit of apothecaries' weight represented by the symbol ℈, and equal to 20 grains.

scru·pu·los'i·ty [L. *scrupulosus*, careful]. An over precision, or morbid conscientiousness as to one's thoughts, words, and deeds. A prominent personality trait in those persons predisposed to psychasthenia or obsessive compulsive reaction and to certain schizophrenic reactions.

Scudder, Charles Locke [American surgeon, 1860–1949]. Known for his reduction of supracondylar fracture of the femur. Author of an important textbook on fractures in 11 editions (1900–39).

Scultet' bandage. See scultetus bandage.

scurf [AS.]. A branlike desquamation of the epidermis, especially from the scalp; dandruff.

scur'vy [*scurf*]. A nutritional disorder caused by deficiency of vitamin C; characterized by extreme weakness, spongy gums, and a tendency to develop hemorrhages under the skin, from the mucous membranes, and under the periosteum.

infantile s. An acute form, characterized by subperiosteal hemorrhage, especially of the long bones, with painful swellings; also called *Moeller-Barlow disease*.

land s. See idiopathic thrombocytopenic *purpura*.

scute [L. *scutum*, shield]. 1. An external plate or scale, as that of reptiles, fish, and certain insects. 2. Old term for tegmen tympani.

scu"tel·la'ri·a [L. *scutella*, tray] (*scutellaria*). The dried overground portion of *Scutellaria lateriflora*. It contains a yellow crystalline substance, scutellarin. Formerly used in neuralgia, epilepsy, chorea, and other nervous diseases. Dose, 2–6 Gm. (30–90 gr.). Also called *skullcap*.

scu·tel'la·rin, scu"tel·la·rin. See under *scutellaria*.

scu·tel'lum [dim. from L. *scutum*, shield]. Small plate or squamous structure.

scu'ti·form [*scutum*]. Shaped like a lozenge.

scu'tu·lum [*scutum*]. 1. Any one of the thin crusts of the eruption of favus. Syn., *godet*. 2. The scapula. —**scutular**, *adj.*

scu'tum [L.]. A shieldlike plate of bone. —**scutate**, *adj.*

s. tympanicum. The semilunar plate of bone separating the attic of the tympanum from the outer mastoid cells.

scyb·a·lum (sib'uh·lum) (pl. *scybala*) [G. *skybalon*, dung]. A mass of abnormally hard fecal matter. —**scybalous**, *adj.*

scyl'li·tol. $C_6H_6(OH)_6$; an alcohol isomeric with inositol, often described as an inositol, identified as a constituent of dogfish liver and cartilage, and also of several plants.

scy'phi·form (sigh'fi·form) [G. *skyphos*, cup; L. *forma*, form]. Cup-shaped.

scy·ti'tis (sigh·tight'is) [G. *skytos*, skin; -*itis*, inflammation]. Inflammation of the skin; dermatitis.

SD Streptodornase.

Se Chemical symbol for selenium.

Seaborg, Glenn Theodore (1912–). American chemist known for his work on neutron and nuclear reactions; with E. M. McMillan, he shared the Nobel prize (1951) in chemistry for the discovery and creation of transuranium elements.

seam. See *suture*, *raphe*.

sea on'ion. Squill.

Seashore, Carl Emil [American psychologist, 1866–1949]. Widely known for his research in esthetics, acoustics, motor skills, etc. Devised a much used test to measure native musical aptitude; see *Seashore test*.

sea'sick"ness [AS. *sǣ*; *seoc*]. A condition produced in some persons by the rolling of a ship; characterized by vertigo, nausea, retching, and prostration. A similar state may be induced by riding in cars, elevators, airplanes.

seat worm. *Enterobius vermicularis*.

se·ba·ce·o·fol·lic·u·lar [L. *sebaceus*, tallow candle; *folliculus*, follicle]. Relating to the pilosebaceous apparatus.

se·ba·ceous [*sebaceus*]. Pertaining to sebum; secreting sebum.

se·bac'ic ac'id (si·bass'ick, si·bay'sick). COOH $(CH_2)_8COOH$; decanedioic acid or 1,8-octanedicarboxylic acid, obtained by decomposition of certain fatty acids. It occurs in white leaflets, slightly soluble in water.

se·bas"to·ma'ni·a [G. *sebastos*, venerable; *mania*, madness]. Religious psychosis. *Obs.*

se·bif'er·ous [L. *sebum*, tallow, grease; *ferre*, to bear]. See *sebiparous*.

se·bip'a·rous [*sebum*; L. *parere*, to bring forth]. Secreting sebum.

seb"o·cys"to·ma·to'sis. See *steatocystoma multiplex*.

seb'o·lith [*sebum*; G. *lithos*, stone]. A concretion in a sebaceous gland.

seb"or·rhe'i·a. See *seborrhea*.

seb"or·rhe'a, seb"or·rhoe'a [*sebum*; G. *rhoia*, flow]. A functional disease of the sebaceous glands, characterized by an excessive secretion or disturbed quality of sebum, which collects upon the skin in the form of an oily coating or of crusts or scales. —**seborrheic, seborrheal**, *adj.*

s. capitis. Seborrhea of the scalp.

s. congestiva. Lupus erythematosus.

s. corporis. Seborrheic dermatitis of the trunk.

s. furfuracea. See *dermatitis seborrheica*.

s. ichthyosis. A variety characterized by the formation of large, platelike crusts.

s. nasi. Seborrhea of the sebaceous glands of the nose.

s. nigricans. Chromhidrosis in which there is dark, greasy-looking discoloration of the eyelids and adjacent skin.

s. oleosa. A form characterized by an excessive oiliness of the skin, especially about the forehead and nose.

s. sicca. See *dermatitis seborrheica*.

se'bum (pl. *seba*) [L.]. The secretion of the sebaceous glands, composed of fat, keratohyalin granules, keratin, and cellular debris.

s. palpebrale. The dried secretion of the sebaceous glands of the eyelids.

s. preputiale. Smegma preputii.

sec'a·line. $(CH_3)_3N$; trimethylamine. Traces are found in ergot. It has no medicinal importance.

se·cern'ment [L. *secernere*, to separate]. Secretion applied to the function of a gland.

se·clu'sion of pu'pil. Annular or posterior synechia.

se·co·bar'bi·tal so'di·um. Generic name for the barbiturate introduced under the trade-marked name seconal sodium. Syn., *quinalbarbitone sodium*.

sec'o·dont (seck'o·dont, see'ko-) [L. *secare*, to cut; G. *odous*, tooth]. Possessing molar teeth which have cusps with cutting edges.

seconal sodium. Trade-mark for monosodium 5-allyl-5-(1-methylbutyl) barbiturate, short-acting hypnotic and sedative.

sec nd ar″y [L. *secundarius*, secondary]. 1 Second in the order of time or development, as the secondary lesions of syphilis. 2 Second in relation; subordinate; produced by cause considered primary

se-cre ta [L. *secretum*, from *secernere* to separate]. Th substances secreted by gland, follicle, or other organ products of secretion.

se cre ta gogue (si kree tuh gog) **se-cre t gogue** [*secretum*, G *agōgos*, leading]. A substance promoting or causing secretion, as certain hormones.

se-crete′ [*secretum*] Separate specifically to separate from blood, or form out of materials furnished by the blood, certain substance termed secretion. —**secret′ing,** *adj.*

se-cre tin [*secret in*]. A hormone produced in th epithelial cells of the duodenum by the contact of acid. It is absorbed from the cells by the blood and excites the pancreas to activity· it has been isolated as secretin picrolonate. See Table of Hormones in the Appendix.

se-cre′tin-ase. An enzyme present in blood serum which inactivates the hormone secretin.

se-cre tion [L. *secretio*, from *secernere*, to separate]. 1 The act of secreting or forming, from materials furnished by the blood, certain substance which is either liminated from the body (excretion) or used in carrying on special functions. 2. The substance secreted.

antilytic s. That arising in control salivary gland as the result of experimental denervation of the gland of the opposite side. Syn., *antiparalytic s.*

external s. A secretion thrown out upon any epithelial surf ce of the body

gastric s. The secretion of the glands of the stomach.

internal s. A secretion that is not thrown out pon surface, but is absorbed into the blood.

paralytic s. That occurring in gland or organ after denervation, as in the stomach after vagotomy

sali ary s. The secretion of the salivary glands.

se cre′tor A person who secretes demonstrable amounts of the A or B antigen or both in his saliva and gastric juice. This characteristic is Mendelian dominant.

se-cre′to ry [L. *secretum*, from *secernere*, to separate]. Pertaining to secretion performing secretion

sec-ta ri an [ML. *sectarius*]. Old term for one who, in the practice of medicine, follow dogma, tenet, or principle based on the authority of its promulgator to the exclusion of demonstration and experience.

sec tile (seck′tyle, -til) [L. *sectilis*, cut]. Capable of bei g cut.

sec′tion [L. *sectio*, cutting]. 1. A cutting or dividing 2. A cut or slice. —**section** v.

abdominal s. Incision into the abdominal cavity

Cesarean s. See *Cesarean section.*

coronal s. One in vertical and frontal plane making 90-degree angle with the sagittal plane of the head.

cross s. See *cross section.*

frontal s. One d viding the body or the head into dorsal and ventral parts.

frozen s. In the teaching of anatomy one of series of divisions of the body or part which has been frozen before being sectioned. See *frozen sections*

parasagittal s. One in plane which is parallel to the sagittal plane.

perineal s. External urethrotomy

Pitres sections. A series of sections made through the brain for post-mortem examination.

sagittal s. One made in the sagittal suture and hence in the median plane of the body dividing it into equal halves. See Plate 12.

sec′tion cut′ter A microtome, particularly one to be held in the hand.

sec-to ri al [L. *sector*, from *secare*, to cut]. Having cutting edges, as the molar teeth of carnivorous animals.

se-cun″di grav′i da [L. *secundus*, second *gravida*, pregnant]. A woman pregnant the second time

sec″un di′na (seck un-dye nuh, -dee nuh, se kun) See *secundines.*

sec un dines (seck′un-dynz, -deenz, -dinz, kun dynz) [*secundae*]. The placenta and membranes discharged from the uterus after birth.

sec″un dip a ra (seck un-dip uh-ruh, se″kun) [*secundus*; L. *parere*, to bring forth]. A woman who has borne two children, not twins —**secundiparous,** *adj* **secundipar′ity** *n.*

se cun dum ar tem [L.]. In the approved professional manner *Obs.*

SED Skin erythema dose.

sed′ tine (sed uh-teen, -tin) See *antipyrine*

se da tion [L. *sedatio*, from *sedare*, to soothe]. 1 A state of lessened functional activity 2. The production of state of lessened functional activity

sed′ tive [*sedare*]. Quieting function or activity —**sed′ative** *n.*

sed′en tar″y [L. *sedentarius*, sedentary] Occupied in sitting. Pertaining to the habit of sitting

Sedillot, Charles Emmanuel [*French surgeon*, 1804–83]. One of the first to perform gastrostomy (1849)

sed′i ment [L. *sedimentum*, sinking down] The material settling to the bottom of liquid. —**sedimen′tary** *adj*

sed″i men ta′tion [*sedimentum*]. The process of producing the deposition of sediment, especially the rapid deposition by means of centrifugal machine See *sedimentation rate.*

sed″i men tom e-ter [*sedimentum*; G. *metron*, measure]. An apparatus for recording the sedimentation rate of blood.

sedobrol. Trade-mark for preparation in cube form containing 17 grains of sodium bromide with concentrated vegetable extractives and condiments. A cube dissolved in boiling water yields broth in which the taste of the bromide is masked Used in conditions where bromides are indicated.

se do hep tu lose $CH_2OH.CO.HOCH.HCOH.HCOH.HCOH.CH_2OH$ ketoheptose found in plants of the genus *Sedum* of the stonecrop family under certain conditions. product of photosynthesis.

sedormid. Trade-mark for allyl-isopropyl-acetylcarbamide. The substance occurs as white, crystalline powder slightly soluble in water used as sedative and hypnotic.

seed [AS. *sǣd*]. A fertilized and ripened ovule produced by flowering plants, along with reserve utritive material and protective covering It is primarily sporophyte in resting stage.

radon s. A small capillary tube, of glass, containing radon, suitable for implantation in tissues the tube may be placed inside small gold tube.

Seeligmueller Ott Ludwig Gustav Adolf [*German neurologist*, 1837 1912] Described bilateral neuralgia of the auriculotemporal nerves See Seeligmueller′ *neuralgia* Mydriasis on the side of the face affected is called *Seeligmueller sign*

Seessel Albert [*American embryologist*, 1850–1910] Described small diverticulum which persists as vestige of the preoral gut that extended cephalic

to the point of rupture of the stomodeal plate. It indicates the point at which the stomodeal ectoderm and fore-gut entoderm became continuous upon rupture of the oral plate; called *Seessel's pocket*.

seg'ment [L. *segmentum*, piece cut off]. 1. A small piece cut along the radii of anything regarded as circular; part bounded by natural or imaginary line. 2. A natural division, resulting from segmentation; one of series of homologous parts, as myotome the part of limb between two consecutive joints. A subdivision, ring, lobe, somite, or metamere of any cleft or articulated body.

body s. A somite or division of the body derived from an embryonic somite. Syn., *metamere*.

bronchopulmonary s. The portion of lung supplied by any bronchus.

interannular s. The portion of nerve included between two successive nodes of Ranvier. *Obs.*

intermediate s. of cilium. The isotropous, delicately striated portion of cilium between the cilium proper and its pedicle. *Obs.*

lower uterine s. The isthmus of the uterus which expands as pregnancy progresses, and whose muscle fibers are stretched passively during labor together with the cervix, allowing the upper uterine musculature to retract and thus to expel the fetus. See also retraction *ring*.

mesodermal s. A somite.

muscle s. A myotome.

P-R s. The interval between the end of the P wave and the beginning of the QRS complex.

primitive s. A somite.

R(S)-T s. In an electrocardiogram, that portion of the ECG from R(S)-T which is usually isoelectric. It may be slightly elevated or depressed normally. It corresponds to the period when depolarization is complete.

S-T s. In an electrocardiogram, that interval between the end of the S wave and the beginning of the T wave.

T-P s. The interval from the end of the T wave to the beginning of the P wave.

upper uterine s. The upper and major portion of the uterine musculature, which actively contracts and thickens during labor. See also retraction *ring*.

seg·men'tal [*segmentum*]. 1. Pertaining to segment; made up of segments. 2. Undergoing or resulting from segmentation.

seg"men·ta'tion [*segmentum*]. 1. The process of cleavage or cell division, especially as applied to the fertilized ovum and blastomeres. 2. The division of an organism into somites or metameres.

complete s. Holoblastic cleavage.

unequal s. Segmentation producing blastomeres of unequal size, those of the animal pole being smaller and more numerous than those of the vegetal pole.

Seg"men·ti·na [*segmentum*]. A fresh-water snail; the intermediate host of *Fasciolopsis buski*.

seg'ment·ing bod'y. The sporulating malaria parasite, when the schizont breaks up into the merozoites.

seg"re·ga'tion [L. *segregatio*, from *segregare*, to separate]. The reappearance of contrasted Mendelian characters in the offspring of heterozygotes, or the separation of the paired maternal and paternal genes at meiosis in the formation of gametes.

s. apparatus. See internal reticular *apparatus*.

seg're·ga"tor [*segregare*]. An instrument by means of which urine from each kidney may be secured without admixture.

Séguin, Edouard [*American psychiatrist*, 1812–80]. Described the involuntary muscular contraction occurring just before an attack of Jacksonian epilepsy; called *Séguin's sign*.

Seidel, Erich [*German ophthalmologist*, 1882–1946]. Known for his description of sign of early glaucoma. He observed an increase in the normal size of the blind spot in the retina, characterized by irregular wedge-shaped extensions at the periphery; called *Seidel's sign*.

Seidelin, Harald [*English physician*, contemporary]. Described *Paraplasma flavigenum* bodies which he observed in the red blood cells of yellow fever patients. He considered them parasites and of etiologic significance. Called *Seidelin bodies*.

Seid'litz pow'ders. Two powders, one commonly in blue paper containing potassium sodium tartrate and sodium bicarbonate, the other in white paper containing tartaric acid. On mixing solutions of the powders effervescence occurs; the solution is taken for cathartic effect. Syn., *compound effervescent powders*.

sei"es·the'si·a (sigh"ess-thee'zhuh, -zee-uh) [G. *seiein*, to shake; *aisthēsis*, perception]. Perception of concussion.

Seignette, Pierre [*French apothecary*, 1660–1719]. Said to have introduced the use of potassium sodium tartrate as laxative known as *Rochelle salt*, once called *Seignette's salt*.

seis"mo·ther'a·py (size"mo-therr'uh-pee, sice"mo-) [G. *seismos*, earthquake; *therapeia*, treatment]. The therapeutic use of mechanical vibration.

Seitz filter. See under *filter*.

sei'zure [OF *seisir*]. 1. The sudden onset of disease or an attack. 2. In surgery, the grasping of part to be operated upon. 3. Specifically, an epileptic or epileptoid attack. See *epilepsy*.

akinetic s. An epileptic seizure marked by sudden loss of consciousness and of motor power resulting in head nodding or body slumping; and usually lasting few seconds to few minutes.

larval seizures. In *electroencephalography*, subliminal seizures which produce no clinical symptoms but which are recognized by abnormal brain wave discharges.

se·junc'tion [L. *sejunctio*, from *sejungere*, to separate]. In psychology, the interruption of the continuity of association complexes, tending to break up personality.

se"la·pho'bi·a [G. *selas*, light; *phobos*, fear]. Morbid fear of flashing light.

se·lec'tion [L. *selectio*, from *seligere*, to choose out]. In biology, choosing for survival or elimination.

artificial s. Process in which man, for his own purposes, picks out some individuals in group of organisms for survival, others for elimination.

natural s. Darwin's theory of evolution, according to which organisms tend to produce progeny far above the means of subsistence; struggle for existence ensues which results in the survival of those with favorable variations. Since the favorable variations accumulate as the generations pass, the descendants tend to diverge markedly from their ancestors, and to remain adapted to the conditions under which they live.

sexual s. The view that the differences between males and females, other than the presence of ovaries or testes, have originated as the result of preferential mating, regarded usually as preference of the females for the males showing the differentiated traits.

se·lec'tor [*selectum*, from *seligere*]. A device for selecting or separating.

switch s. A switch arranged so that an electric conductor connection may be connected to any one of several other conductors.

se·le'ne (si-lee'nee) [G. *selēnē*, moon]. The white

spot sometimes occurring on the finger nails. Also see *lunula*, 1

se·le·ni·ate (si-lee'nee-ate, sil-en'ee-ate) A salt of selenic acid.

se·le·nic (si-lee'nick, si-len'ick) A compound of hexavalent (sometimes tetravalent) selenium.

se·le·nic ac'id. H_2SeO_4 A crystalline acid, soluble in water, forming a corrosive liquid.

sel"e·nif'er·ous [*selen*; L. *ferre*, to bear]. Containing selenium.

se·le·ni·ous ac'id. H_2SeO_3. The acid formed by tetravalent selenium.

sel'e·nite, se'le·nite. 1. A salt of selenious acid. 2. A translucent form of calcium sulfate.

se·le·ni·um [*selen*]. Se = 78.96. A poisonous element resembling sulfur. Plants grown in seleniferous soil may prove fatal to cattle feeding upon them.

se·le·no·dont [*selen*; G. *odous*, tooth]. Possessing molar teeth with crescent-shaped ridges.

se·le·no·gam'i·a [*selen*; G. *gamos*, marriage]. Somnambulism. *Obs.*

se·le·no'sis. Selenium poisoning.

self"-ab·sorp'tion. Absorption of radiation by the source material itself.

self"-a·buse'. See *masturbation*.

self"-di·ges'tion. See *autodigestion*.

self"-fer·men·ta'tion. See *autolysis*.

self"-fer·ti·li·za'tion. The impregnation of the ovules by pollen of the same flower or of the ova by sperm of the same animal.

self"-hyp·no'sis. Hypnosis by autosuggestion; autohypnosis.

self"-in·duc'tance. The property of a conductor to oppose changes in current by the development of a counter electromotive force.

self"-in·fec'tion. See *autoinfection*.

self"-in·oc"u·la'tion. See *autoinoculation*.

self"-lim'it·ed. Denoting a disease which runs a definite course in a specific time.

self"-pol·lu'tion. See *masturbation*.

self"-sug·ges'tion. See *autosuggestion*.

self"-sus·pen'sion. Suspension of the body by the head for the purpose of stretching or making extension on the vertebral column.

Sellwandt' test. See under *test*.

sel'la (pl. *sellae*) [L., seat]. A saddle. —**sellar**, *adj.*

s. turcica. The superior portion of the body of the sphenoid bone that surrounds the hypophyseal fossa. It includes the tuberculum sellae, anterior clinoid processes, and the dorsum sellae with its posterior clinoid processes.

Sellards, Andrew Watson [*American physician*, 1884–1942]. Introduced a test for acidosis based on alkaline tolerance, called *Sellards' test*.

sel'len·ders. Sallenders.

Selter, Paul (1866–1941). German pediatrician who described erythredema polyneuropathy.

Selye, Hans (1907–). Canadian endocrinologist who investigated the functions and pathology of the endocrine glands (particularly the adrenals), the pharmacology of steroid hormones and of pregnancy and lactation. He described the general adaptation syndrome as a response to severe or prolonged physiological stress.

se·man'tics [G. *sēmantikos*, significant]. The branch of linguistic science that treats of problems of meaning, both current and historical.

general s. A study or theory of living which stresses a scientific approach to problems and life; emphasizes the way in which language is used as an important factor in adjustment; used in treating certain psychologic maladjustments.

Semb, Carl [*Norwegian surgeon*, 1895–]. Known for his thoracoplasty with extrafascial pneumolysis for pulmonary tuberculosis, called *Semb operation*.

se·mei·og'ra·phy, se·mi·og'ra·phy (see-migh-og'ruh-fee, see-mee-, sem-ee-) [G. *sēmeion*, sign; *graphein*, to write]. Symptomatology. *Obs.*

se"mei·ol'o·gy, se"mi·ol'o·gy (see"migh-ol'o-jee, see-mee-, sem-ee-) [*sēmeion*; G. *logos*, word]. Symptomatology. *Obs.* —**semeiolog'ic**, *adj.*

se·mei·ot'ics, se·mi·ot'ics (see"migh-ot'icks, see-mee-, sem-ee-) [G. *sēmeiōtikos*, observant of signs]. Symptomatology. *Obs.* —**semeiotic**, *adj.*

se'men [L.]. 1. A seed. 2. The fluid produced by the male reproductive organs, carrying the male germ cells or spermatozoa. —**sem'inal**, *adj.*

sem·e·nu'ri·a. See *seminuria*.

sem'i- [L., half-]. A prefix denoting *half*.

sem"i·a·ceph'a·lus. See *anencephalus*.

sem"i·ca·nal' [*semi-*; L. *canalis*, channel]. A canal open on one side; a sulcus or groove.

s. for the auditory tube. The groove in the temporal bone in which the auditory tube lies.

s. for tensor tympani muscle. The groove in the temporal bone in which the tensor tympani muscle lies.

sem"i·ca·nal'is (sem"i-ka-nal'is, -nay'lis) (pl. *semicanales*) [*semi-*; *canalis*]. See *semicanal*.

sem"i·car'ba·zide. $NH_2NHCO.NH_2$; an organic compound formed by the reaction of cyanic acid with hydrazine or by electrolytic reduction of nitrourea: used for the detection of aldehydes and ketones in tissues. Also called *hydrazinoformamide* or *carbamylhydrazide*.

s. hy"dro·chlo'ride. $NH_2NHCO.NH_2.HCl$; carbamylhydrazine hydrochloride or aminourea hydrochloride; a crystalline salt freely soluble in water: used as a reagent for ketones and aldehydes.

sem"i·car'ba·zone. A colored compound formed by reaction of aldehydes or ketones with semicarbazide.

sem"i·car"ti·lag'i·nous (-kahr-ti-laj'i-nus) [*semi-*; L. *cartilagineus*, cartilaginous]. Gristly; partly cartilaginous.

sem"i·co'ma [*semi-*; G. *kōma*, deep sleep]. A condition of mild or partial coma.

sem"i·com'a·tose (-kom'uh-toce, -toze, -ko'muh-) [*semi-*; *kōma*]. Partially comatose.

sem"i·con'scious [*semi-*; L. *conscius*, knowing of something with another]. Half conscious; partially conscious.

semikon hydrochloride. A trade-marked name for *methapyrilene hydrochloride*.

sem"i·lu'nar [*semi-*; L. *luna*, moon]. Resembling a half moon in shape.

sem"i·lu'nare. One of the carpal bones. Old term for *lunate*. See Table of Bones in the Appendix.

sem"i·lux·a'tion [*semi-*; L. *luxatio*, from *luxare*, to dislocate]. Subluxation.

sem"i·mem"bra·no'sus [*semi-*; L. *membrana*, membrane]. One of the hamstring muscles, arising from the ischial tuberosity and inserted into the tibia. See Table of Muscles in the Appendix.

sem"i·mem'bra·nous [*semi-*; *membrana*]. Partly membranous, as semimembranous muscle.

sem'i·nal [L. *semen*, seed]. Pertaining to the semen.

sem'i·nal ve·si·cu·log'ra·phy. A radiograph of the seminal vesicles, made by injecting a radiopaque substance into them via the ejaculatory ducts.

sem"i·na'tio [L. *seminatio*, from *seminare*, to sow]. The intromission of semen into the uterus or vagina. Also called *insemination*.

sem"i·nif'er·ous (sem"i-nif'ur-us, see-mi-) [L. *semen*, seed; *ferre*, to bear]. Producing or carrying semen, as the seminiferous tubules of the testis.

sem"i·no'ma, se·mi·no'ma [*semen*; G. *-ōma*, tumor]. A testicular tumor of low malignancy made up of characteristic large, uniform cells with clear cytoplasm which resemble spermatogonia.

also called *dysgerminoma*, *seminal carcinoma*, *spermatocytoma*.

pineal s. See *pinealoma*.

sem"i·nor'mal [L. *semi-*, half; *norma*, rule]. Half-normal, as seminormal solution, a solution which contains one-half of an equivalent weight of the active reagent, in grams, in one liter of solution. It is written 0.5 N or N/2.

sem"i·nu'ri·a (sem"i-new'ree-uh, sem"i-) [L. *semen*, seed; G. *ouron*, urine]. The discharge of semen in the urine.

se"mi·og'ra·phy. See *semeiography*.

se"mi·ol'o·gy. See *semeiology*.

se"mi·ot'ics. See *semeiotics*.

sem"i·pen'ni·form [L. *semi-*, half; *penna*, wing; *forma*, form]. Penniform on one side only.

sem"i·ple'gi·a. See *hemiplegia*.

sem"i·pro·na'tion [*semi-*; L. *pronare*, to bend forward]. The assumption of a semiprone or partly prone position; an attitude of semisupination. —**semiprone**, *adj.*

sem"i·pto'sis (sem"i-to'sis, sem"ip-to'sis) [*semi-*; G. *ptōsis*, a falling]. Partial ptosis.

se'mis [L.]. Half; abbreviated in prescriptions to ss, which is placed after the sign indicating the measure. Sometimes abbreviated, s.

sem"i·sid"e·ra'ti·o (sem"i-sid"uh-ray'shee-o). See *hemiplegia*.

sem"i·som'nus [L. *semi-*, half; *somnus*, sleep]. Coma. —**semisomnous**, *adj.*

sem"i·so'por [*semi-*; L. *sopor*, sleep]. Partial coma.

sem"i·spi·na'lis (sem"i-spy-nah'lis, -nay'lis) [*semi-*; L. *spinalis*, of the spine]. One of the longitudinal muscles of the back, attached to the vertebrae. See Table of Muscles in the Appendix.

se·mis'sis. Semis.

sem"i·su"pi·na'tion [*semi-*; L. *supinatio*, from *supinare*, to bend backward]. A position halfway between supination and pronation.

sem"i·ten"di·no'sus [*semi-*; L. *tendere*, to stretch]. One of the hamstring muscles, arising from the ischium and inserted into the tibia. See Table of Muscles in the Appendix.

sem"i·ten'di·nous [*semi-*; *tendon*]. Partly tendinous, as a semitendinous muscle.

Semmelweis, Ignaz Philipp [*Hungarian obstetrician*, 1818–65]. The first to recognize the septicemic character of puerperal fever and to attribute its spread to contamination by the hands of attending physicians.

Semon, Felix [*English laryngologist*, 1849–1921]. Known for his observations on myxedema and cretinism and their relationship (1883). Studied carcinoma of the thyroid gland and noted the impaired mobility of the vocal cords in this disease; called *Semon's symptom*. Believed that, in progressive organic lesions of the motor laryngeal nerves, the abductor muscles of the vocal cords are the first, and sometimes the only, muscles affected, called *Semon's*, *Semon-Rosenbach law*.

sem·per·vi'rine. An alkaloid from gelsemium.

Semple, David [*English physician*, 1856–1937]. Introduced an inoculation against rabies called *Semple treatment*. The vaccine used is made from 4% inoculated rabbit brain attenuated with 0.5% phenol; called *Semple's vaccine*.

Semrirey method. See under *method*.

Senear, Francis Eugene [*American dermatologist*, 1889–]. With B. Usher described dermatitis combining features of pemphigus and lupus erythematosus. See *pemphigus erythematosus*.

Se·ne'ci·o (si-nee'shee-o, -see-o) [L.]. Groundsel; genus of composite-flowered plants, said to contain 900 species, many of which have been used medicinally. **S. aureus** is the common liferoot. **S. canicida**, yerba del Puebla, a Mexican species, is diuretic. **S. cineraria** is a species of South America; the fresh juice of the leaves, stems, and flowers has been recommended in treatment of diseases of the eye. **S. jacobaea**, ragwort, is astringent.

se·nec'i·o·nine (si-nee'shee-o-neen, -nin, si-nee'see-o-) An alkaloid, $C_{18}H_{25}NO_{6}$, from various species of South African *Senecio*.

se·nec'tu·tude [L. *senectus*, old age]. Old age.

sen'e·ga (*senega*). The dried root of *Polygala senega*. The active principles of senega belong to the group of saponins. The names senegin and polygalic acid have been applied to them. Used in various preparations as an expectorant in bronchitis and in asthma.

sen'e·gin. See under *senega*.

se·nes'cence [L. *senescere*, to grow old]. A growing old; aging. —**senescent**, *adj.*

se'nile (see'nile, -nil) [L. *senilis*, aged]. Pertaining to, caused by, or characteristic of, old age or the infirmities of old age. —**senil'ity**, *n.*

se·nil'ism (see'nigh-liz-um, see'ni-) [*senile*]. Senility, especially when premature.

se'ni·um [L., the feebleness of age]. Old age.

s. praecox. Premature senility, considered clinically to occur in individuals under the age of 65 who exhibit senile manifestations, and associated with pseudocirrhosis and presenile sclerosis; also called *presenile dementia*.

Senn, Nicholas [*American surgeon*, 1844–1908]. Described a method of detecting intestinal perforation by rectal insufflation (1888), called *Senn's test*. Used decalcified bone plates in intestinal anastomosis and devised a two-stage operation for pancreatic cyst, both called *Senn's operation*.

sen'na [Ar. *sana*] (*senna*). The dried leaflets of *Cassia acutifolia*, or of *C. angustifolia*. It has been reported to contain the anthraquinone derivatives, either free or in glycosidal combination, rhein and aloe-emodin. A substance, sennanigrin, which yielded chrysophanol and emodin has also been found; more recently the glycosides sennoside A and sennoside B have been isolated and claimed to be the laxative principles. Other substances which have been found, but which probably are not connected with its purgative properties, are sennarol, sennapicrin, sennarhamnetin, kaempferol and its glycoside, kaempferin, and a small amount of volatile oil. Senna is a cathartic; its action is chiefly upon the lower bowel. Its tendency to gripe may be obviated by combining it with aromatics or with a saline laxative. Dose, 2–6 Gm. (½–1 dr.). Also called *senna leaves*.

compound s. powder (*pulvis sennae compositus*). Contains senna, 180 Gm.; glycyrrhiza, 236 Gm.; washed sulfur, 80 Gm.; fennel oil, 4 Gm.; sucrose, 500 Gm. Used as a laxative for the relief of habitual constipation. Dose, 2–4 Gm. (30–60 gr.). Also called *compound licorice powder*.

sen'na·rol. See under *senna*.

sen"na·pic'rin. See under *senna*.

Sennert, Daniel [*German physician*, 1572–1637]. Author of an important monograph on fevers (1627). Noted for his early description of scarlet fever, scurvy, and dysentery (1641).

sen'no·side. See under *senna*.

se·no'pi·a [G. *senex*, old; *ōps*, eye]. The change of vision in the aged, in which persons formerly myopic acquire what seems to be normal vision because of presbyopia.

sen·sa'tion [L. *sensatus*, gifted with sense]. A feeling or impression produced by the stimulation of an afferent nerve. Also see *sensibility*.

cincture s. Zonesthesia.

correlative s. Stimulation of the cerebrum by sensation carried by a single sensory nerve.

cutaneous s. A sensation produced through the medium of the skin.
eccentric s. The conception of locality
external s. A sensation transmitted from peripheral sense organ.
general s. One of the body sensations, as pain, touch, heat, cold.
internal s. A sensation from viscera, such as hunger thirst, fullness.
kinesthetic sensations. Sensations of motion.
psychovisual sensations. Those of sight without the stimulation of the retina visions.
radiating s. See secondary s.
secondary s. (a) Mueller's name for the excitement of one sensation by another or the extension of morbid sensations in disease to unaffected parts. (b) Synesthesia, sensation of one type attending sensation of another type.
special s. Any sensation produced by the special senses See sense.
subjective s. One not caused by external stimuli.
tactile s. One produced through the sense of touch.
transference of s. Clairvoyance.

sen sa'tion lev'el. A scale of the strength of stimulus necessary to produce the minimal or threshold subjective sensation, used chiefly as decibel scale in measuring sound intensity

sense [L. *sensus*, sense]. Any one of the faculties by which stimuli from the external world or from within the body are received and transformed into sensations. The faculties receiving impulses from the external world are the senses of sight, hearing, touch, smell, and taste, which are the special senses, and the muscular and dermal senses. Those receiving impulses from the internal organs, the visceral senses, are the hunger sense, thirst sense and others.
body s. Impressions from somatic structures which orient with regard to the body or its parts in space or which concern contacts or degrees of contact.
chemical s. Perception of chemical agents in the neighborhood of or in contact with the body; as smell, taste, and the detection of irritating chemicals on the mucous membranes
color s. *In ophthalmology*, the faculty of distinguishing light of various wave lengths.
dermal s. The faculty of perceiving heat, cold, pain or pressure mediated through receptors in the skin.
form s. *I ophthalmology* acuteness of vision the faculty of perceiving the shape or form of objects.
genetic s. The sexual instinct
light s. *I ophthalmology*, the faculty of perceiving light and recognizing gradations of its intensity
muscular s. Deep sensibility proprioception.
posture s. The capability of recognizing (without seeing) the position in which limb has been placed
pressure s. The sense by which knowledge is btained of the amount of weight or of pressure which is exerted upon part of the body
s. organs. Structures capable of detecting the presence of some specific type of agent in the environment of the body and reacting to this agent by sending impulses p their afferent erves to the central nervous system.
seventh s. Visceral sense *Obs*
sixth s. Muscular sense *Obs.*
space s. The faculty of orienting environmental objects in space.
temperature s. The sense by which differences in temperature are ppreciated, consisting of sense for cold, cryesthesia, and heat sense, thermesthesia. These are represented on the surface by different nerve-endings, the so-called cold and hot points.
vibratory s. A modification of the touch sense with possible response from pressure receptors, elicited by vibrating body (e g. tuning fork) in contact with parts of the human body not sense modality per se.

sense or'gan. A specialized sensory nerve terminal giving rise to specific sensation, but responding to any adequate stimulus.

sen sib mine (sen-sib uh-meen, -min, sen si-bam een) A name given to an alkaloid of ergot, but later found to be an equimolecular mixture of ergotamine and ergotaminine.

sen"si bil'i ty [L. *sensibilis*, that which can be perceived by the senses]. 1 The bility to receive and feel impressions. 2. The bility of nerve or end organ to receive and transmit impulses
deep s. Perception of pressure, tension, and pain in the muscles, joints, tendons, and deep layers of the skin, as contrasted with sensations derived from the superficial layers of the skin.
electromuscular s. Responsiveness of muscle to electric stimulus.
epicritic s. The bility to appreciate and localize fine degrees of light touch, pain, and temperature stimuli.
gnostic s. The perception of epicritic sensations as contrasted with sensations from the viscera, which are called paleosensations. Also called neo-sensibility
two-point s. See two-point *discrimination*

sen si bil"i za'tion. See *sensitization*.

sen si bi li"zer [*sensibilis*] 1. An agent that renders an enzyme active. 2. An amboceptor

sen si ble [*sensibilis*]. Perceptible by the senses, as sensible perspiration; capable of receiving an impression through the senses; endowed with sensation.

sen sim' ter [L. *sensus*, sense; G *metron*, measure]. An instrument for determining the sensitiveness of the skin.

sen si tiv'i ty 1. Capacity to feel or to transmit sensation. 2. Power to react to stimulus —sensitive *adj*
tuberculin type s. See tuberculin type of *hypersensitivity*.

sen si ti za'tion [*sensitive*]. 1 Rendering cells sensitive by the action of an amboceptor 2 The process of rendering an individual sensitive to given protein.
Rh s. See *Rh sensitization*.

sen si tized [*sensitive*]. Rendered sensitive to subthreshold stimuli or ordinarily ineffective agents, as in allergy —sen sitize v.

sen'si ti"zer [*sensitive*]. The intermediary body of Ehrlich, by some called hemotoxic sensitizer

sen"so-mo'tor Sensorimotor

sen"so-pa-ral'y sis [L. *sensus*, sense; G. *paralysis*, paralysis]. Paralysis of sensory nerve. *Obs.*

sen"so-ri mo tor [*sensus*; L. *motor* from *movere*, to move]. Both sensory and motor concerned with the perception of sensory impulses and with motor impulses, as sensorimotor centers.

sen so'ri um [*sensus*] A center for sensations, especially the part of the brain which receives and combines impressions conveyed to the individual sensory centers. Also called *perceptorium*

sen'so ry [*sensus*]. Pertaining to or conveying sensation.

sen'su al ism [*sensus*]. The condition or character of one who is controlled by the more primitive instincts or emotions.

sen'sus [L.]. Sense; *feeling*.

sen'tient (sen shunt, -shee unt) [L. *sentire*, to feel]. Having sensation; capable of feeling.

sen'ti ment [*sentir*]. In *psychology*, a mental attitude characterized by feeling: an emotional disposition toward some object or objects.

sep a-ra tor [L. *separare*, to separate]. 1. Anything that separates, especially an instrument for separating the teeth. 2. An instrument for detaching periosteum; also called *periosteal elevator*.

sep sine (sep seen, -sin). A poisonous ptomaine obtained from decomposed yeast and blood.

sep sis [G., putrefaction]. A general reaction, usually febrile, the result of action of bacteria or their products or both; the organisms may be parasites or saprophytes.

gas s. That due to presence of *Clostridium welchii* or other gas-forming anaerobes.

puerperal s. That occurring as a complication or sequel of pregnancy, due to infection, usually streptococcal, in the birth canal, especially in the uterus.

s. agranulocytica. See *agranulocytosis*.

sep tec to-my [L. *septum*, fence; G. *ektomē*, excision]. Excision of part of the nasal septum.

sep-te mal s., sep-tee mal s. See *septicemia*.

sep"ten tri'o-nal'ine. $C_{31}H_{46}N_2O_9$, an alkaloid isolated from *Aconitum septentrionale*.

sep tic [G. *sēptikos*, putrefactive]. Relating to sepsis; affected by pathogenic organisms or their toxins.

sep ti ce'mi a [*sēptikos*; G. *haima*, blood]. A systemic disease produced by microorganisms and their poisonous products in the blood stream. —**septicemic**, adj.

puerperal s. A febrile state caused by infection of the blood stream of the mother through the genital tract before, during, or following delivery. Also called *puerperal sepsis*.

sep"ti co-phle-bi'tis [*sēptikos*; G. *phleps*, vein; -*itis*, inflammation]. Inflammation of veins secondary to infection of the blood stream.

sep'tic tank. In sewage disposal, a closed chamber through which sewage passes slowly to permit bacterial action.

sep"ti grav'i-da [L. *septem*, seven; *gravida*, pregnant]. A woman who is pregnant for the seventh time.

sep"ti me-tri'tis [G. *sēptikos*, putrefactive; *mētra*, womb; -*itis*, inflammation]. Infection of the uterus.

sep tip a ra [L. *septem*, seven; *parere*, to bring forth]. A woman who has borne seven children.

sep"to-mar gi nal [L. *saeptum*, fence; *margo*, edge]. Relating to the margin of a septum, as septomarginal tract.

sep-tom e-ter [*septum*; G. *metron*, a measure]. An instrument for determining the thickness of the nasal septum.

sep tom e-ter [G. *sēptikos*, putrefactive; *metron*]. An apparatus for determining organic impurities in the air.

sep'to tome [L. *saeptum*, fence; G. *tomos*, cutting]. An instrument for cutting the nasal septum.

sep tot'o-my [*septum*; G. *tomē*, a cutting]. The operation of cutting the nasal septum.

sep'tu-lum (pl. *septula*) [dim. from *saeptum*]. A small septum.

septula of the pia mater. Thin septal processes from the pia mater which enter the substance of the white matter of the spinal cord.

septula testis. The interlobular septums of the testis.

sep'tum (pl. *septums, septa*) [*saeptum*]. A partition; dividing wall between two spaces or cavities. —**septal**, **septile**, adj.

a. [illegible] **s.** See bulbar s.

atrial s. The septum between the right and left atria of the heart.

branchial s. The ridge at the bifurcation of the trachea. See *carina tracheae*.

bulbar s. A septum, formed from the paired bulbar endocardial ridges, that divides spirally the bulbus cordis into aortic and pulmonary trunks. Also called *aortico-pulmonary s.*, *aortic s.*

bulbourethral s. A partial median fibrous septum of the urethral bulb.

cartilaginous s. The angular cartilage plate forming the anterior part of the nasal septum.

cloacal s. See urorectal s.

dorsal median s. A glial partition continuous with the dorsal median sulcus and extending into the gray matter of the spinal cord.

femoral s. The layer of areolar tissue closing the femoral ring.

gingival s. The mucous membrane projecting into the interproximal space between two teeth.

hanging s. A broad alar cartilage overlying the anterior nasal septum abnormally.

interalveolar s. A bony septum between the tooth sockets.

interatrial s. See atrial s.

interdental s. The alveolar process between adjoining teeth.

intermediate cervical s. The septum formed by the union of the cervical spinal arachnoid and dura mater in the posterior midline.

intermuscular s. A connective-tissue septum between muscles, particularly one from which the muscles take origin, as the septum between the brachialis and the triceps muscles in the arm.

interradicular s. The bony partition between the roots of a tooth.

intersegmental s. The space intervening between two mesodermal somites.

interventricular s. The wall between the ventricles of the heart, largely muscular, partly membranaceous. Syn., *ventricular s.*

intraalveolar s. A bony projection within the tooth socket.

lingual s. The vertical median partition of the tongue which divides the muscular tissue into halves.

mediastinal s. See mediastinum.

mobile s. See nasal membranous s.

nasal membranous s. The most anterior and inferior part of the nasal septum, consisting of fibrous membrane and the medial crura of the alar cartilages: the movable part of the nasal septum.

nasal s. The septum between the two nasal cavities.

orbital s. A membranous sheet attached to the anterior edge of the orbit, where it is continuous with the periosteum.

pectiniform s. The septum between the corpora cavernosa of the penis or clitoris.

pontine s. The median raphe of the pons, formed by the decussation of nerve fibers and by neuroglia fibers.

posterior intermediate s. The septum between the fasciculus gracilis and the fasciculus cuneatus.

posterior median s. The septum between the two posterior funiculi of the spinal cord.

posterior s. See subarachnoid s.

rectovaginal s. The tissue forming the partition between the rectum and the vagina.

s. crurale. Old term for femoral septum.

s. lucidum. Old term for septum pellucidum.

s. membranaceum. The superior part of the interventricular septum, composed of fibrous connective tissue.

s. mobile nasi. See nasal membranous s.

s. of musculotubarius canal. See cochleariform process.

s. pellucidum. A thin, translucent septum form-

ing the internal boundary of the lateral ventricles of the brain and enclosing between its two laminae the so-called fifth ventricle. See Plate 16.

s. primum. The first incomplete interatrial septum of the embryo.

s. secundum. The second incomplete interatrial septum of the embryo containing the foramen ovale, it develops to the right of the septum primum and fuses with it to form the adult atrial septum.

s. spurium. A fold on the anterodorsal wall of the embryonic right atrium, formed by the fusion of the ends of the right and left valves of th sinus venosus.

sigmoidal s. A thin membrane that occupies the mandibular notch and separates the masseter from the external pterygoid muscles.

subarachnoid s. A partition formed by bands of fibroelastic tissue attaching the spinal arachnoid to the pia mater along the dorsal midline.

transverse s. The embryonic partition between the ventral part of the pericardial cavity and the peritoneal cavity that contributes to the formation of the diaphragm, the capsule and connective tissue of the liver as well as the lesser omentum.

tubal s. See cochleariform *process*.

urorectal s. Th embryonic horizontal connective-tissue septum that divides the cloaca into the rectum and primary urogenital sinus. Syn., *cloacal s.* Formerly called *Douglas s.*

ventricular s. See interve tricular *s.*

sep tu plet, sep tu'plet [L. *septem*, seven; after *triplet*] One of seven offspring born from single gestation.

sep ul ture [L. *sepultura*, burial]. The disposal of the dead by burial.

Séquard. See Charles Edouard *Brown-Séquard*.

se que'la, se quel a (pl. *sequelae*) [L. *sequi*, to follow]. An bnormal condition following disease upon which it is directly or indirectly dependent.

se quence [L. *sequi*, to follow]. 1 The order of occurrence, as of symptoms. 2. A sequela. —**sequen'tial,** *adj*

se-ques'ter [L. *sequester* depository]. Sequestrum.

se ques ter ing gent. Any substance which will inactivate metallic ion in solution, as by formation of complex compound, and keep the resulting compound in solution.

se"ques-tra tion [L. *sequestratio* from *sequestrare* to give up for safekeeping]. 1 The formation of sequestrum. 2. The isolation of persons suffering from disease for purposes of treatment or for the protection of others.

se"ques tres to-my [L. *sequester* depository G *ektomē*, excision]. The operative removal of sequestrum.

sequestrene. A trade-mark for ethylenediaminetetraacetic acid and various of its salts.

se"ques-trot'o my [*sequester* G *tomē*, cutting]. See *sequestrectomy*.

se-ques'trum (pl *sequestrums*, *sequestra*) [L., deposit]. A detached or dead piece of bone within cavity abscess, or wound. —**sequestral** *adj*

primary s. That entirely detached and requiring removal.

secondary s. One that is partially detached and that, unless very loose, may be pushed into place.

tertiary s. That which is cracked or partially detached and remaining firmly in place.

se"ral bu min [L. *serum*, whey *albus*, white]. Serum albumin, the albumin fraction of serum.

se-ram pi n. A form of epidemic measles occurring in the West I dies, which causes great mortality especially among children.

serenium. Trade-mark for the hydrochloride of 2,4-diamino-4 -ethoxy-azobenzene, an organic azo dye. The substance is used as an urinary antiseptic, most active in acid medium.

ser" n a (*serenoa*) The partially dried ripe fruit of *Serenoa repens* The drug yields on pressure brownish yellow to dark red oil, which is composed of about 63% of free fatty acids and about 37% of thyl esters of these acids. It exerts stimulating action upon the mucous membrane of the genitourinary tract and has been used in chronic and subacute cystitis. Also called *saw palmetto berries*, *sabal*.

ser'i-ceps [L. *sericum*, silk; *caput*, head]. A device made of loops of ribbon for making traction upon the fetal head.

se ries [L.]. 1. A succession or group of compounds, objects, or numbers, arranged systematically according to rule. 2. *I taxonomy*, the sample of population which forms the base working unit in modern systematics. 3. *I hematology*, the succession of cell types in the development of cell of the circulating blood Classification and terminology vary widely among investigators in the field. There may be considered to be five series: (a) the myeloid or granulocytic series composed of the myeloblast, myelocyte, unsegmented or nonfilamentous polymorphonuclear leukocyte, and the neutrophil, eosinophil, or basophil granulocyte; (b) the lymphoid or lymphocytic series composed of the lymphoblast, young lymphocyte, and adult lymphocyte ( ) the monocytic series composed of the monoblast, immature monocyte, and adult monocyte, (d) the erythrocytic series, the megaloblast, erythroblast, normoblast, reticulocyte, and adult erythrocyte and ( ) the blood platelet or thrombocytic series, the megakaryoblast, megakaryocyte, and blood platelet or thrombocyte.

acetylene s. Straight-chained hydrocarbons with triple linkage.

aliphatic s. The series of organic compounds in which the linkages of successive carbon atoms are terminated, as in an open chain.

aromatic s. The series of organic compounds derived from benzene and characterized by the presence of number of the carbon atoms arranged in the form of closed chain.

closed chain s. A series of organic compounds characterized by linkages between successive atoms as in closed chain.

contact s. A series of metals ranged in such an order that each becomes positively electrified by contact with the one that follows it.

homologous s. A group of compounds differing from one another by definite radical or group.

lyotropic s. An arrangement of the ions in the order of their behavior such as their effect in salting-out of proteins, or on the viscosity of colloids. Also called *Hofmeister*

open chain s. A series of organic compounds characterized by linkages between successive atoms as in an open chain.

ser'i flux, se'ri flux [L. *serum*, whey; *fluxus*, flow] Any serous or watery discharge, or a disease characterized by such discharge. Obs

ser'ine, se'rine. $CH_2OH\ CHNH_2\ COOH$. *α*-Amino-*β*-hydroxypropionic acid; hydroxyalanine, an amino acid; occurs as colorless, crystalline powder soluble in water insoluble in alcohol or ether It is constituent of many proteins.

se ro- ser [serum]. A combining form denoting *relating to serum or serous*.

serobacterin. Trade-mark for emulsions of killed bacteria which have been sensitized by treatment with specific immune serum and which more rapidly produce immunity

se·roche′ (seh·rotch′ay). See chronic mountain *sickness*.

se″ro·chrome [*serum*; G. *chrōma*, color]. Gilbert's name for the pigments which serve to give color to normal serum.

se″ro·co·li′tis [*serum*; G. *kolon*, colon; *-itis*, inflammation]. Inflammation of the serous covering of the colon. *Obs.*

se″ro·cul″ture [*serum*; L. *cultura*, cultivation]. A bacterial culture on blood serum.

se″ro·der″ma·ti′tis [*serum*; G. *derma*, skin; *-itis*, inflammation]. An inflammatory skin affection attended with serous effusion.

se″ro·der″ma·to′sis [*serum*; *derma*; *-ōsis*, condition]. A skin disease characterized by serous effusion into or onto the skin.

se″ro·der″mi′tis. See *serodermatitis*.

se″ro·di″ag·no′sis [*serum*; G. *diagnōsis*, deciding]. Diagnosis based upon the reaction of blood serum of patients.

se″ro·en″ter·i′tis [*serum*; G. *enteron*, intestine; *-itis*, inflammation]. Inflammation of the serous covering of the small intestine. *Obs.*

se″ro·fi′bri·nous [*serum*; L. *fibra*, fiber]. 1. Composed of serum and fibrin, as a serofibrinous exudate. 2. Characterized by the production of a serofibrinous exudate, as serofibrinous inflammation.

se″ro·lem′ma [*serum*; G. *lemma*, husk]. Old term for the serosa or false amnion, especially in *Sauropsida*. Syn., *chorion*.

se″ro·li′pase (seer″o·lye′pace, ·lip′ace). Lipase as found in blood serum.

se·rol′o·gist [*serum*; G. *logos*, word]. One versed in serology.

se·rol′o·gy [*serum*; *logos*]. That branch of science which deals with serum. —**serolog′ic, serolog′ical,** *adj.*

se·rol′y·sin, se″ro·ly′sin [*serum*; G. *lysis*, loosing]. Bactericidal substance contained in normal blood serum.

se″ro·mem′bra·nous [*serum*; L. *membrana*, membrane]. Pertaining to a serosa.

se″ro·mu′cous [*serum*; L. *mucus*, mucus]. Having the nature of or containing both serum and mucus, as a glandular cell which has the characteristics of both a serous cell and a mucous cell.

seromycin. A name assigned to cycloserine.

se″ro·per″i·to·ne′um [*serum*; G. *peritonaion*, membrane which encloses the lower viscera]. Hydroperitoneum, ascites.

se″ro·prog·no′sis [*serum*; G. *prognōsis*, foreknowledge]. Prognosis of disease as determined by seroreactions.

se″ro·pu′ru·lent [*serum*; L. *purulentus*, purulent]. Composed of serum and pus, as a seropurulent exudate.

se″ro·re·ac′tion [*serum*; L. *re-*, again; *agere*, to act]. A reaction performed with serum.

se″ro·re·sis′tance. Persistent positive serologic reaction for syphilis despite prolonged intensive treatment; the patient is said to be *Wassermann-fast*. —**seroresis′tant,** *adj.*

se·ro′sa [*serum*]. 1. A serous membrane composed of mesothelium and subjacent connective tissue lining the pericardial, pleural, and peritoneal cavities and covering their contents. Also called *tunica s.* 2. The chorion of birds and reptiles.

se″ro·sa·mu′cin. A protein resembling mucin found in ascitic fluid.

se″ro·san″guin′e·ous [L. *serum*, whey; *sanguineus*, bloody]. Having the nature of or containing both serum and blood.

se″ro·se′rous [*serum*; *serum*]. Pertaining jointly to two serous surfaces.

se″ro·si′tis [*serum*; G. *-itis*, inflammation]. Inflammation of a serous membrane.

adhesive s. See fibrous *adhesion*.

multiple s. See *polyserositis*.

se″ro·syn″o·vi′tis (seer″o·sin·o·vye′tis, ·sigh·no·vye′tis) [*serum*; NL. *synovia*; *-itis*]. A synovitis with increase of synovial fluid.

se″ro·ther′a·py [*serum*; G. *therapeia*, treatment]. The treatment of disease by means of human or animal blood serum containing antibodies.

ser″o·to′nin. A substance present in the blood stream which imparts vasoconstrictor activity to the latter. It has been isolated in crystalline form, but its chemical structure has not been determined.

ser′o·trin. A glycoside from the leaves of the wild black cherry (*Prunus serotina*); on hydrolysis it yields D-glucose and quercetin. Sometimes written *serotin*.

se′rous [*serum*]. 1. Pertaining to, characterized by, or resembling serum. 2. Producing serum, as a serous gland; containing serum, as a serous cyst.

se″ro·zyme. See *prothrombin*.

serpasil. Trade-mark for *reserpine*.

ser′pens (sur′penz) [L., creeping thing]. Serpentine, sinuous; creeping.

ser″pen·tar′i·a [*serpens*]. The dried rhizome and roots of *Aristolochia serpentaria* or of *A. reticulata*. It contains a volatile oil and a bitter principle. The volatile oil consists mainly of an ester of borneol and a terpene. The drug is classed among the aromatic bitters and in moderate dose acts as a gastric stimulant.

ser′pen·tine. An alkaloid from *Rauwolfia serpentina*.

ser·pen′ti·nine. An alkaloid isolated from *Rauwolfia serpentina*, sometimes called *isorauwolfine*.

ser·pig′i·nous (sur·pidj′i·nus) [L. *serpere*, to creep]. Creeping; having an irregular but arched and serpentine shape; applied to skin lesions.

ser·pyl′lum [L.]. The wild thyme, *Thymus serpyllum*, used by the homeopaths as a bronchial antispasmodic.

ser′ra [L.]. In *biology*, a saw or sawlike structure, as the saw of a sawfish.

Ser·ra′ti·a (seh·ray′shee·uh) [*serra*]. A genus of bacilli commonly found in water.

S. marcescens. A motile, Gram-negative organism which produces a deep-red pigment. It may be found in stool cultures, but has no clinical significance. Formerly called *Bacillus prodigiosus*.

ser·ra′tion [*serra*]. The state or condition of being toothed or having a toothed margin. —**ser′rate,** *adj.*

ser·ra′tus [L., from *serra*]. Serrated; said of muscles arising or inserted by a series of processes like teeth of a saw, as serratus anterior muscle. See Table of Muscles in the Appendix.

s. magnus. Old name for the anterior serratus muscle.

Serres, Antoine Étienne Rénaud Augustin [*French physician*, 1786–1868]. Remembered for his description of pearl-like epithelial masses found on the gums of infants. Called *Serres' glands, gingival glands*. Described the metafacial angle also called *Serres' angle*.

Sertoli, Enrico [*Italian histologist*, 1842–1910]. Known for his exploration of the origin and histology of the sustentacular cells of the seminiferous tubules, called *cells of Sertoli*.

Sertürner, Friedrich Wilhelm Adam [*German pharmacologist*, 1784–1841]. Isolated morphine (1806).

se′rum (pl. *serums, sera*) [L., whey]. 1. The amber colored fluid which exudes from coagulated

blood as the clot shrinks and then no longer contains fibrinogen. Serum is of complex nature and is made up of water albumin, globulins, metabolites, catabolites, lipids, hormones, salts, enzymes, etc. Serum proteins are antigenic and may be toxic for members of different species. Serum may carry agglutinating, precipitating, neutralizing, opsonic, bactericidal, hemolytic, bacteriolytic, complementary vasoconstrictive, sensitizing, and other properties. Serum proteins have been designated by Tiselius as albumin, α-globulin, β-globulin, and γ-globulin on the basis of their electrophoretic mobilities. In human serum, the albumin comprises about 55% to 60% of the total serum proteins, the α-globulin about 10% to 15%, the β-globulin varies from 9% to 13%, and the γ-globulin from 9% to 12%. The fact that the serums of immunized animals and of man contain antibodies, etc., has resulted in extensive use of serums for diagnosis, prophylaxis, and therapy. See Table of Normal Values of Blood Constituents in the Appendix. —**serous, seral, adj.**

antianthrax s. A serum prepared by immunizing horses against virulent anthrax bacilli (*Bacillus anthracis*). Used in the treatment of human anthrax. Dose, minimum of 50 cc., intramuscularly or intravenously.

antibotulinus s. An antitoxin prepared from animals which have been immunized by botulinus toxin-antitoxin or toxoid. Dose, 20–40 cc. intravenously early in the disease, or 10 cc. intramuscularly for prophylaxis.

antidysenteric s. The serum (polyvalent) of horses immunized against the Shiga bacillus (*Shigella dysenteriae*), its products of growth, and other types of the dysentery bacilli. Dose, 20–100 cc., subcutaneously or intramuscularly.

antierysipelas s. A serum containing the antibodies and antibacterial properties for hemolytic streptococci from erysipelas. The serum is obtained from horses immunized with strains of hemolytic streptococci obtained from human cases of erysipelas. Since chemotherapeutic preparations are now available, this serum is rarely used.

antierysipeloid s. A serum containing the antibodies and antibacterial properties for *Erysipelothrix rhusiopathiae* (suis). It is prepared from horses subjected to increasing subcutaneous injections of live cultures of the organism. It is used in cases of erysipeloid. Dose, 10–20 cc., subcutaneously or intramuscularly.

antiglobulin s. An immune serum containing globulin antibodies produced in rabbits by repeated injection of human serum or gamma-globulin of human serum; used in the antiglobulin test. Syn. *Coombs'*

antimeningococcic s. (*serum antimeningococcicum*) A serum obtained from the blood of an animal immunized with cultures of the several types of meningococci (*Neisseria meningitidis*) which prevail in the United States. It has been supplemented or supplanted by the newer chemotherapeutic agents. Dose, intravenously 50 cc. for children and up to 100 cc. for adults; intrathecally 20 cc. Also called *antimeningococcus* , *meningococcus s.*, *meningitis s.*

antiphage s. A serum produced against a given bacteriophage. See *bacteriophage*.

antiplague s. Immune serum obtained by injecting an animal with *Pasteurella pestis* or its products. Its use in cases of plague has been disappointing.

antipneumococci s.—type specific (*serum antipneumococcicum*) A serum obtained from the blood of an animal which has been immunized with cultures of pneumococcus (*Diplococcus pneumoniae*) of one of the types for which serum has been prepared and which has been standardized, or is released, by the National Institute of Health of the United States Public Health Service and complies with the requirements of that agency of the government. It is used principally in the treatment of pneumococcic pneumonia. Dose, parenteral, therapeutic, from 20,000 to 100,000 units. Also called *antipneumococcus s.*, *pneumonia s.*

antireticular cytotoxic s. See ACS.

anti-Rh serums. Immune serums prepared in rabbits, guinea pigs, goats, and other animals by injecting them with the blood of rhesus monkeys.

antitetanic s. See *tetanus antitoxin*.

convalescent s. Blood serum taken from a person who is convalescing from some acute, infectious disease. It is injected as a prophylactic or curative measure.

Coombs' s. See antiglobulin s.

despeciated bovine s. A bovine serum altered in such a manner that its species specificity is reduced. Also called *DBS*.

gastrotoxic s. An immune serum which when injected damages the gastric cells, allowing ulceration of the mucosa by the gastric juice; produced by using gastric cells to immunize an animal.

Hiss' s. water Serum diluted with two or three times its volume of distilled water. It is used in bacteriology to aid the growth of fastidious organisms.

horse s. One obtained from the blood of a horse. It may be normal or immune serum. Many of the therapeutically useful serums are obtained from horses immunized against a specific organism or its toxin. The serum obtained from an immunized animal is known as **immune horse serum** as distinguished from the **normal horse serum** obtained from an unimmunized animal.

human measles immune s. (*serum immune morbillosi humanum*) Sterile serum obtained from the blood of a healthy human who has survived an attack of measles. This serum is administered during the incubation period to prevent or modify the expected attack of measles. Dose, children 6 years or under 10 cc., intramuscularly within five days after exposure; for children between 7 and 12 years of age 15 cc., and for older children and adults, 20 cc. Also called *measles convalescent*

human scarlet fever immune s. (*serum immune scarlatinae humanum*) A sterile serum obtained from the blood of a healthy human who has survived an attack of scarlet fever. It is of value in transferring passive immunity to a patient exposed to scarlet fever. Dose, children under 6 years of age, 10 cc.; for children between 6 and 12 years of age, 15 cc., and for children over 12 years and for adults, 15 to 20 cc. are given intramuscularly. Also called *scarlet fever convalescent s.*

immune s. The sterile serum of an immunized animal or person, which carries antibodies naturally or artificially produced.

normal human s. (*serum humanum normale*) The sterile serum obtained by pooling approximately equal amounts of serum from eight or more healthy humans. Its chief use is in the treatment of bacterial infections, in the treatment of surgical and traumatic shock, and in the treatment of burns. Dose, 500 cc., intravenously or subcutaneously. Also called *human s.*

North American antisnakebite s. An antivenin serum prepared by immunizing animals against the venom of snakes of the crotalus family. Dose, 50 cc. administered intramuscularly or sub-

cutaneously; in late cases or in the presence of severe symptoms, it may be given intravenously Also called *antiviper antivenin, antivenin* *viperis*.

pooled s. Mixed serum from umber of persons.

pregnant mare' **s.** The source for the manufacture of various sex hormones.

purified antidiphtheritic s. See *diphtheria antitoxin.*

purified antitetanic s. See *tetanus antitoxin.*

Rh blocking s. One able to react with blood containing the Rh factor without producing agglutination, though blocking the action of subsequently added anti-Rh serum: i Rh positive blood treated with Rh blocking serum can longer be agglutinated by anti-Rh serum. Blocking antibodies of only one specificity anti-Rh, are known.

truth s. See *narcoanalysis.*

se rum ac-cel'er ter glob'u lin. See *accelerin.*

se rum pro'te-ase. See *plasmin.*

se rum pro-throm'bin con ver sion ac-cel'er ter (SPCA) See *convertin.*

se'rum rash. See serum *sickness.*

se rum tryp'sin, tryp'tase. See *plasmin.*

se rum tryp'to-gen. See *plasminogen.*

se rum r"ti-car'i-a. An anaphylactic reaction to the injection of serum.

Servetus, Michael [*Spanish theologian and physician*, 1511–53]. Celebrated in medical history for his early concept of the pulmonary circulation (1546) sometimes referred to as the *circulation of Servetus.*

ser vo-mech'an ism. A control system such that small continuous mechanical displacements involving small expenditures of power by the controller cause proportionate displacements involving large amounts of power i distance in the device being controlled.

ser'yl. The univalent radical, $HOCH_2CH(NH_2)$-CO— of the amino acid serine.

ses a-me (ses uh-mee) [G.]. An herb, *Sesamum indicum*, yields sesame oil.

ses' moid [G *sēsamon*, sesame; *eidos*, form] Resembling sesame seed, as in sesamoid bone, small bone developed in tendon subjected to much pressure (see Table of Bones in the Appendix) and sesamoid cartilages, small cartilages in the alae of the nose.

ses moid i'tis [*sesamoid*; *eidos*; G. *-itis*, inflammation]. An inflammation of the sesamoid bones which may involve the articular surfaces and cause lameness.

Se-sar'ma. A genus of fresh water crabs found in Asia. *S. dehaani* and *S. sinensis* are intermediate hosts of the lung fluke, *Paragonimus westermani.*

ses qui- [L., more by half]. A combining form indicating *one and one-half*; *the proportion of two of one radical or element to three of another*

ses"qui-chlo'ride. A compound of chlorine and another element containing three parts of chlorine to two of the other element, as Fe_2Cl_6.

ses"qui ho ra [*sesqui*; L. *hora*, hour]. An hour and half.

ses qui-ox'ide. A compound of three parts of oxygen to two of another element, as Al_2O_3.

ses qui-salt. A salt containing one and one-half times as much of the acid as of the radical or base, as $Fe_2(SO_4)_3$

ses qui-sul'fide. A compound of sulfur and another lement containing three parts of sulfur to two of the other element, as Sb_2S_3.

ses qui ter pene. One of group of terpenes of the general formula $C_{15}H_{24}$.

ses sile (ses il) [L. *sessilis*, of sitting]. Attached by broad base not pedunculated, as sessile tumor.

set [AS. *settan*]. 1. T reduce the displacement in fracture and pply bandages suitably arranged for fixation. 2. T harden, solidify as cement, amalgam, or plaster

set, mental s. The ttitude, interest, or intent of an observer which may influence his perception.

se'ta (pl. *setae*) [L. *saeta*, bristle]. A stiff, stout, bristlelike appendage chaeta, vibrissa. —**seta ceous,** *adj*

Se-ta ri [*seta*]. A genus of grasses including millet, *Setaria italica.*

se'ton [*seta*]. A thread or skein of threads drawn through fold of the skin, so as to produce fistulous tract; used as counterirritant. *Obs.*

Sever James Warren [*American orthopedic surgeon*, 1878–]. Known for his numerous contributions to the knowledge of orthopedic surgery Described epiphysitis of the calcaneus; also called *Sever' disease.* Originated *Sever' operation* for obstetric paralysis.

se-vip' rous [L. *sebum*, tallow *parere*, to bring forth]. Sebiparous fat-producing.

se vum [L.]. Suet.

sew'age [OF *esewier*]. The heterogeneous substances constituting the excreta and waste matter of domestic economy and the contents of drains.

sew'er [*sewer*]. A canal for the removal of sewage.

sew'er-age [*sewer*]. 1. The collection and removal of sewage. 2. The system of pipes, etc., for the removal of sewage.

sex [L. *sexus*, sex]. The state or condition of an organism which comes to expression in the production of ova, as in the female, or of sperm cells, as in the male, or both ova and sperm cells, as in certain hermaphroditic invertebrates.

sex [L. *sex*, six]. A combining form meaning *six.*

sex chro mo-some. An odd or accessory chromosome having special relation to determining whether fertilized egg develops into male or female. The X and Y chromosomes. When other conditions are normal, fertilized egg with two X' becomes female; one with the XY combination becomes male.

sex de-ter"mi na tion. The process which determines the sex of an individual. See *sex chromosome.*

sex"i-dig'i tal (seck si-didj'i-tul) **sex"i-dig'i tate** (seck"si-didj'i-tayt) [*sex*; L. *digitus*, finger]. Having six fingers or six toes.

sex'-in'ter grade An intersex.

sex'-lim'it-ed. Appearing in, or affecting, one sex only

sex -linked" Applied to genes located on the X chromosome, and to the characteristics, which may occur in either sex, conditioned by such genes.

sex'o-es thet'ic in ver'sion. The adoption of the habits, manners, and costume of the opposite sex. Also see *eonism, transvestitism.*

sex ol'o-gy [L. *sexus*, sex; G *logos*, word] The science or study of sex and sex relations. —**sex olog'ic,** *adj*

sex re ver'sal. A change of characteristics in an individual of one sex to those of the opposite sex.

sex"ti grav'i-da [L. *sextus*, sixth; *gravidus*, pregnant]. A woman who is pregnant for the sixth time.

sex tip a-ra [*sextus*; L. *parere*, to bring forth]. A woman who has borne six children.

sex'tu-plet, sex tu'plet [*sextus*; after *triplet*]. One of the six offspring of single gestation.

sex'u-al [L. *sexualis*, of sex]. Pertaining to or characteristic of sex, as the sexual organs. —**sexual'ity** *n.*

sex ual de-vi 'tion. *I psychiatry* sociopathic personality disturbance characterized by deviant or aberrant sexuality which is not part of any more extensive disorder such as the schizophrenic

or obsessional reactions. It includes the various forms and practices of homosexuality, transvestitism, pedophilia, fetishism, and sexual sadism (assault and rape, mutilation).

Sgambati, O [*Italian physician*, contemporary]. Described a test for peritonitis. If nitric acid and chloroform are added to urine and a red tint results, the reaction is said to be positive. Called *Sgambati' test or reaction*.

S. G. O. Surgeon General's Office.

SH Sulfhydryl.

shad'ow [ME. *shadewe*]. A hemolyzed erythrocyte consisting only of stroma. Also called *phantom cell*, *ghost cell*, *blood shadow*.

Shaffer method. See Folin-Shaffer *method*.

Shaffer's theory of oxidation catalysis. See under *theory*.

shaft [AS. *sceaft*]. The trunk of any columnar mass, especially the diaphysis of a long bone.

hair-s. A hair, particularly that portion of it imbedded in the hair follicle.

sha'king [AS *sceacan*]. A type of massage imparting vibration to the tissues.

sham rage. Paroxysms of reactions in decorticate animals, giving the appearance of rage, which are evoked by very mild stimuli. The reactions, such as erection of hairs, dilatation of the pupil, protrusion of claws, struggling and biting, are in considerable part those which are controlled by the autonomic nervous system.

shank [AS. *sceanca*]. The leg from the knee to the ankle; the tibia.

Sharpey, William [*English physiologist and anatomist*, 1802–80]. Celebrated founder of English physiology. Made many important anatomic studies including research on the ossicles of the ear and the histology of bone.

Sharpey-Schafer, Edward Albert [*English physiologist*, 1850–1935]. With George Oliver discovered the existence of an adrenal pressor substance (1894), later named epinephrine by Abel. See also *Schafer (prone pressure) method* under *artificial respiration*.

sha'ven-beard ap-pear'ance. A spotted pigmentation of the intestinal mucosa, especially the colon; the spots are discrete, 1 millimeter or less in diameter and closely approximated, suggesting the appearance of a freshly shaved, heavy beard. The pigment is usually hemosiderin but may be other pigments, such as bismuth or a protein combination with hydrogen sulfide.

Sheard, Charles (1883–) American biophysicist who introduced, with Sanford, a photoelectric colorimeter called *Sheard-Sanford photelometer*. He designed and introduced the spectrophotelometer. See also Sanford, Sheard, and Osterberg *method*.

shears [AS. *sceara*]. A large pair of scissors.

bandage s. Strong shears for cutting bandages, the blades usually bent at an angle with the shaft.

sheath [AS. *scēath*]. 1 An envelope or covering. 2. In *anatomy*, the connective tissue covering vessels, muscles, nerves, tendons, etc. 3. A condom.

arachnoidean s. A delicate partition lying between the pial sheath and the dural sheath of the optic nerve.

bast s. Phloem sheath.

carotid s. The fibrous sheath about the carotid arteries and associated structures.

cellular s. See *epineurium*.

crural s. The femoral sheath.

dentinal s. The structure lining the dentinal tubules.

dural s. A strong fibrous membrane forming the external investment of the optic nerve. See *dura mater*.

epithelial s. of Hertwig. That portion of the enamel organ which forms no enamel, but serves as a mold for the shape of the root of a tooth.

femoral s. A continuation downward of the fasciae that line the abdomen. It contains the femoral vessels.

fibril s. A sheath formed by connective-tissue fibrils and surrounding individual nerve fibers.

Hertwig s. See epithelial s. of Hertwig.

Huxley's s. See *layer* of Huxley.

lamellar s. See *perineurium*.

Mauthner's s. See *axolemma*.

medullary s. The myelin sheath.

mucous s. Tendon sheath.

myelin s. A glistening white sheath of myelinated nerve fibers, immediately around the axis cylinder. Consists of a complex lipoid mixture and is a poor electric conductor.

nerve s. See *perineurium*.

Neumann's s. See dentinal s.

neural s. See myelin s.

phloem s. In *botany*, a layer of thin-walled cells surrounding the phloem tissue; bast sheath, periphloem; vascular bundle sheath.

pial s. The extension of the pia which closely invests the surface of the optic nerve. See pia.

primitive s. See *neurilemma*.

root s. That portion of the hair follicle derived from the epidermis. It surrounds the root of the hair and consists of the **internal root sheath**, three layers of cells immediately surrounding the root, and the **external root sheath**, a stratified layer adjacent to the dermal portion of the hair follicle.

Schwalbe's s. The delicate sheath which covers elastic fibers.

s. of Henle. The endoneurium. See *layer of Henle*.

s. of rectus. That formed by the aponeuroses of the external and internal oblique and transverse abdominal muscles. See Plate 4.

s. of Schwann. See *neurilemma*.

s. of Schweigger-Seidel. The thickening of the arterial wall in the sheathed arteries of the splenic penicilli.

s. of the optic nerve. See dural.

synovial s. A synovial membrane which lines the cavity through which a tendon glides.

tendon s. In particular, the synovial sheath surrounding a tendon crossing the wrist or ankle joints.

shed [AS. *scēdan*]. Throw off.

shed'ding [*scēdan*]. 1 Casting off. 2. In *dentistry*, the natural process of resorption of the roots and the subsequent loss of deciduous teeth.

sheep pox. In *veterinary medicine*, a contagious disease of sheep characterized by vesicopustular lesions of the skin. Found only in central Asia and Europe.

shell. 1 A hard outer covering, as for an animal, egg, fruit, seed, or the like. 2. In *nuclear physics*, an orbit of electrons at the same energy level around the nucleus of an atom.

equipotential s. A surface at every point of which the potential energy is equal, and having a contour everywhere normal to the force or flux lines of the field.

shel lac' See *lac*, 2.

shells [AS. *scell*]. Tinted spectacles, for protection of the eyes; conquilles.

shell'shock. 1 Old term for battle fatigue. 2. Concussion produced by the bursting of a shell.

shel'tered work'shop" A workshop for disabled ambulatory individuals. Type of work, machinery and tempo are modified so that the handicapped may cope with their jobs successfully.

Shenstone, Norman Strahan [*Canadian surgeon*,

1881). Known for his introduction of an operation for the closure of bronchial fistula, in which he implanted intercostal muscle into the fistulous tract. Two ribs are resected to give proper access and to allow pedicle graft to be made from the muscle. Called *Shenstone' operation.*

Shepherd, Francis J [*British surgeon,* 1851–1929]. Described type of fracture of the lateral process of the talus, called *Shepherd' fracture*

Sherman, Harry Mitchell [*American orthopedic surgeon,* 1854–1921]. Vanadium steel bone plates for internal fixation of fractures are called *Sherman plates.* Vanadium steel tap screws used for attaching them are called *Sherman screws.*

Sherman, Henry Clapp [*American chemist,* 1875–]. With Hazel E. Munsell, introduced the rat growth unit, which is the daily requirement of vitamin A necessary to maintain weekly gain of 3 Gm. in test rats previously depleted of vitamin A; called *Sherman-Munsell unit.* See also Bourquin-Sherman unit.

Sherman nd **Chase assay t.** See under *test.*

Sherrington, Charles Scott (1857 1952) English neurophysiologist who established neurophysiology as discipline by numerous and epochal contributions to the experimental knowledge, nomenclature, and concepts of this field. He analyzed the distribution of the ventral and dorsal nerve roots, established the sensory innervation of striated muscles, laid the foundation of our knowledge of the proprioceptive system (1894) described decerebrate rigidity (1897) and introduced the term *synapse* (1897) His classic work, *The Integrative Action of the Nervous System* (1906) introduced the classification of the senses into *proprio- extero- intero- tele-* and *nociceptors* and established the concept of the nervous system implied in the term *integrative action.* H mapped the cerebral cortex, studied special reflexes, and discovered the stretch reflex (1927) Nobel laureate in physiology and medicine, with E. D Adrian, 1932.

she·ster·in. $C_{21}H_{20}O_{9}$; glycoside from the berries of *Rhamnus cathartica.*

Shevsky's test. See Addis and Shevsky' test.

Shibley Gerald Spencer [*American internist,* 1890–]. Described sign useful in the diagnosis of consolidation of the lung or of collection of fluid in the pleural cavity. When bronchial or tracheal voice is heard through the stethoscope, the vowels spoken are carried to the ear of the examiner as Ah!" Called *Shibley' sign,* te *sign.*

shield [AS. *scild*]. 1. A protective structure or apparatus. 2. *I biology,* protective plate, scute, lorica, or carapace. 3. A structure having the shape of shield.

antithermic s. A protective covering of the eastery to prevent destruction of the tissues about the field of operation.

eythorsem s. A condom.

embryonic s. The shield-shaped bilaminar blastodisk from which develops the embryo proper

nipple s. A protective covering for sore nipples.

Shiels method. See Reinhold and Shiels *method.*

shift [AS. *sciftan,* to divide]. A change of direction or position.

axis s. Axis deviation.

basal s. A dislocation of the brain beneath the arch of the falx cerebri, due to increased pressure.

chloride s. The movement of chloride ions from plasma into the red blood cells when the blood is giving up oxygen and receiving carbon dioxide. When hemoglobin is reduced it becomes more basic, therefore shift of negative ions into the cell is required to maintain ionic equilibrium. The chloride shift frees base (N^+) in the plasma. This unites with part of the CO_2 entering the blood to form bicarbonate which together with carbonic acid constitutes an acid-salt buffer pair The buffers prevent serious changes in pH with respiratory gas exchanges in the tissues and the lungs.

degenerative s. to left. A term used by Schilling to designate depression of bone-marrow function characterized by delivery into the circulation of immature neutrophils and degenerative changes in the cells such as pyknotic nuclei, vacuoles, and irregularities in staining. Such cells, it is assumed, can mature no further. See *s. to left.*

index of nuclear s. The ratio of the percentages of immature to mature neutrophils, based on Schilling classification. Normal values are 1:10 or less.

left axis s. Left axis deviation.

regenerative s. to left. A term used by Schilling to describe the presence of many immature neutrophils in the peripheral blood, as result of rapid delivery from the bone marrow in reaction to an acute need, as in an infection. See *s. to left.*

right axis s. Right axis deviation.

s. t left. A marked increase in the percentage of immature neutrophils (those h ving single or bilobed nucleus) in the peripheral blood, occurring in granulocytic leukemia, in acute infective diseases, and also in pernicious anemia. Th term is based on Arneth classification of neutrophils. See also *degenerative* and *regenerative s. to left.*

s. to right. A marked increase in the percentage of mature neutrophils (those having nuclei with three or more lobes) in the peripheral blood, frequently occurring in diseases of the liver and in pernicious anemia. The term is based on Arneth's classification of neutrophils.

Shiga, Kiyoshi [*Japanese bacteriologist,* 1870–]. Collaborated with Paul Ehrlich. Studied leprosy beriberi, tuberculosis. Especially known for his work on bacillary dysentery See *Shigella* dysenteriae, Shiga *bacillus.*

Shi·gel'la (shi jel'ah, shi-ghel'uh) [after *Shiga*]. The genus of the dysentery bacillus of the family Enterobacteriaceae, tribe Salmonelleae. They are non-lactose-fermenting, nonmotile, Gram-negative rods. **S. ambigua** (Schmitz bacillus) **S. madampensis, S. sonnei** (Duval' bacillus) and the strains of **S. paradysenteriae** (Flexner Strong, and Hiss) have been isolated from human cases of dysentery

S. dysenteriae, Shiga bacillus, is the most virulent, as these organisms elaborate neurotropic exotoxin in addition to the endotoxin common to all members of the *Shigella* group. Also called *Bacillus dysenteriae.*

Boyd's types of S. A classification of the large Flexner group of *Shigella* which is gaining acceptance. It includes three new pathogenic types which exist in India.

S. alkalescens. A species found associated with enteric disease of sporadic nature; identified by fermentation of dulcitol.

shi"gel·lo·si (shy"g l lo sis, shig"l lo sis) [*Shiga,* G *-osis,* condition]. Bacillary dysentery caused by bacteria of the genus *Shigella.*

shi kim'ic ac'id. $C_6H_6O_3.COOH$ 3,4,5-trihydroxy Δ-1,6-cyclohexene-1-carboxylic acid, found in plant tissues. It serves as precursor of phenylalanine tyrosine, tryptophan, and para-aminobenzoic acid for certain strains of *E. coli* and *Neurospora.*

shi ma-mu′ hi (shee mah-mōō shee) Japanese river fever or tsutsugamushi disease.

shi mu-mu′shi. See *shima-mushi.*

shin [AS. *scea*] The sharp anterior margin of the tibia.

saber s. A condition seen in congenital syphilis, in which the anterior border of the tibia has sharp convex edge due to periosteal proliferation.

shin gles. See *herpes zoster*

Shinowara, Jones, and Reinhart method. See under *method.*

shiv′er [ME. *chiveren*]. A slight tremor or shaking of the body due to cold, etc.

Shock nd Hasti gs method. See under *method.*

shock [F choquer to shock]. 1 The clinical manifestations of an inadequate volume of circulating blood accompanied by physiologic adjustments of the organism to progressive discrepancy between the capacity of the arterial tree and the volume of blood to fill it. Signs include marked decrease in blood pressure, weak thready pulse, pale cold skin with ashen-gray cyanosis, and thirst relieved only by transfusion. Shock may be classified according to mechanism as *cardiogenic, vasogenic, neurogenic,* or *hematogenic.* Also called *peripheral circulatory failure, shock syndrome.* See also *countershock,* general adaptation *syndrome, photoshock, shellshock.* 2. A physical or emotional trauma 3. *In physiology,* electric s. 4. The first phase of the alarm reaction in the general adaptation syndrome. —**shock,** *v.*

anaphylactic s. The syndrome following the reintroduction of an antigen in an animal previously sensitized to it. See *anaphylaxis.*

anaphylactoid s. A shock syndrome resembling anaphylactic shock but independent of antigen-antibody reactions and produced by the injection of variety of substances, including certain colloids such as peptone, into the body

cardiogenic s. Shock caused by inadequate pumping of blood into the arterial tree wing to left-ventricular failure, tamponade, or pulmonary embolism.

colloidoclastic s. See anaphylactoid *Obs.*

electric s. (a) The sudden violent effect of the passage of an electric current through the body (b) A therapeutic measure in psychosis. Also see electroshock *therapy*

gravity s. Circulatory failure resulting from prolonged maintenance of vertical position of the body particularly when muscle tension is absent

hematogenic s. Shock caused by reduced blood volume which may be due t loss of blood or plasma as in burns, the crush syndrome, per forating gastrointestinal wounds, or ther wounds. Syn., *wound s.*

insulin s. Hypoglycemia with coma as result of overdosage of insulin in diabetes or as therapeutic measure psychoses Also see insulin shock *therapy.*

irreversible s. A late stage of shock from which recovery cannot be achieved by any known form of therapy

nervou s. An acute nervous collapse, typically accompanied by syncope, that is produced by severe physical or psychic trauma.

neuroge ic s. That caused by vasodilatation leading to low blood pressure and reduction in venous return and in cardiac output due to such causes as injury to the central nervous system, spinal anesthesia, or reflex.

osmotic s. A phenomenon bserved in certain bacteriophages, in which (when the salt solution medium is rapidly diluted and osmotic pressure suddenly reduced) the bacteriophages swell and burst and only their outer membranes can be demonstrated.

peptone s. See anaphylactoid

primary s. The type of shock manifested immediately after an injury

secondary s. The type of shock appearing several hours after an injury

serum s. An anaphylactic reaction resulting from the injection of serum into sensitive individual It may be in the nature of an accident, with death (serum accident); or reaction, with cyanosis feeble pulse, fall in blood pressure, cold clammy skin, chills, and high fever Sometimes edema, urticarial rashes, joint pains, etc will occur in protein-sensitive individual after he has been given the homologous protein to which he sensitive.

spinal s. Temporary condition of flaccid paralysis and areflexia following functional transection of the spinal cord rostral to the motor outflow to the affected muscles.

systoli s. That occurring in association with diastolic impact when the heart pounds against the thorax.

therapeutic s. See Jarisch-Herxheimer reaction.

vasogenic s. Shock caused by paralysis and dilatation of small arteries, arterioles, and capillaries, with no loss of blood volume but increased vascular-tree capacity as seen in overwhelming toxic infections or due to histamine.

wound s. See hematogenic *s.*

shoe boil [AS. *scōh,* L. *bulla,* bubble]. A hard, fibrous mass formed on the sole of horse's hoof, caused by poorly fitting shoes.

Shohl and King method. See under *method*

Sholl's stain. See Sato and Shoji stain.

Shorr trichrome stain. See under *stain.*

short cir′cuit. 1 A circuit in which an electric current encounters an abnormally small resistance. 2. *I surgery,* an intestinal anastomosis whereby segment of bowel, in which is located tumor or other obstruction, is isolated and the fecal current diverted beyond the point of obstruction or pathologic process. It is generally palliative or temporary procedure.

should′der [AS. *sculdor*]. The region where the arm joins the trunk, formed by the meeting of the clavicle, scapula, humerus, and the overlying soft parts. See Table of Joints and Ligaments in the Appendix. See Plates 2, 4.

frozen s. A chronic tenosynovitis of unknown cause associated with increased vascularity degeneration, and fibrosis of collagen fibers in and bout the shoulder joint, and characterized by pain and limitation of motion; also called *adhesive capsulitis, periarthritis of the shoulder scapulohumeral periarthritis.*

noisy s. A grating over the scapula on moving the shoulder up and down, believed to be due to snapping tendon or bursitis.

painful s. See frozen

slipped s. A dislocated humerus.

shoul′der slip. Upward displacement of the scapula in the horse caused by excessive impact of the front leg with the ground.

show [AS. *sceawian*]. A bloody discharge from the birth canal prior to labor or to menstrual flow

Shrady George Frederick [*American surgeon,* 1837 1907] Well known in his time as surgeon, medical writer, and editor I ventor of surgical saw to be used through cannula which enabled the surgeon to cut through bone in subcutaneous operation called *Shrady saw.*

Shrapnell Henry Jones [*English anatomist,* 1761 1841]. Described the flaccid portion of the tympanic membrane (1831) called *pars flaccida* See Shrapnell's *membrane.*

shreds [AS. *screade*]. Slender strands of mucus visible grossly in urine, denoting inflammation of the urethra, urinary bladder, or prostate.

shriv'el [cf. Swed. dial. *skryvla*]. Shrink in bulk and wrinkle.

shud'der [ME. *shoderen*]. A convulsive momentary tremor caused by fright, disgust, or nervous shock.

Shunk's stain. See under *stain*.

shunt [ME. *shunten*]. 1. *In medicine*, an alternate pathway, bypass, or sidetrack; an anastomosis, either occurring as a natural anatomic feature or established by surgical means. 2. *In electricity*, a branch of a circuit parallel with other parts of it.

Oxford s. See Trueta's s.

peritoneosubarachnoid s. Surgical communication between the lumbar subarachnoid space and the peritoneal cavity for relief of hydrocephalus; also called *peritoneothecal s.*

portacaval s. A surgical connection between the portal vein and inferior vena cava.

portorenal s. A surgical connection between the left renal vein and the portal system, usually the splenic vein.

renal s. See Trueta's s.

salpingothecal s. Surgical communication between the lumbar subarachnoid space and an oviduct, for drainage of cerebrospinal fluid into the peritoneal cavity.

Trueta's s. A part of the renal circulation in which blood passes through the juxtamedullary glomeruli into the capillary beds of the medulla, bypassing the cortex. It results in greatly decreased production of urine and may be of special significance under certain abnormal circulatory conditions, as hemorrhage and shock. Also called *Oxford s.*, *renal s.*

ureterothecal s. See *arachnoid-ureterostomy*.

ventriculoperitoneal s. Surgical communication between a lateral ventricle and the peritoneal cavity by means of a plastic or rubber tube, for the relief of hydrocephaly.

Shwartzman phenomenon, reaction. See under *phenomenon*.

Si Chemical symbol for silicon.

Sia's test. See under *test*.

si"a-go-nag'ra (sigh"uh-go-nag'ruh, -nay'gruh) [G. *siagōn*, jawbone; *agra*, seizure]. Gouty pain in the maxilla.

si-al'a-den (sigh-al'uh-den) [G. *sialon*, saliva; *adēn*, gland]. A salivary gland.

si"al-ad"e-ni'tis [*sialon*; *adēn*; G. *-itis*, inflammation]. Inflammation of a salivary gland.

si-al'a-gogue (sigh-al'uh-gog), **si-al'o-gog** [*sialon*; G. *agōgos*, leading]. A drug producing a flow of saliva. —**sialagog'ic**, *adj.*, *n.*

si"al-an"gi-og'ra-phy, **si"a-lo-an"gi-og'ra-phy**. See *sialography*.

si"a-la-po'ri-a [*sialon*; G. *aporia*, difficulty]. Deficiency in the amount of saliva.

si-al'ic (sigh-al'ick), **si'a-line** (sigh'uh-lyne, -leen) [*sialon*]. Having the nature of saliva.

si"a-lith-ot'o-my [*sialon*; G. *lithos*, stone; *tomē*, cutting]. Incision of a salivary gland or duct for removal of a calculus.

si'al-o-, si al-. Combining form meaning *saliva*.

si"a-lo-ad"e-nec'to-my [*sialon*; G. *adēn*, gland; *ektomē*, excision]. Surgical removal of a salivary gland.

si"a-lo-ad"e-ni'tis [*sialon*; *adēn*; G. *-itis*, inflammation]. Sialadenitis.

si"a-lo-ad"e-not'o-my [*sialon*; *adēn*; G. *tomē*, cutting]. Incision of a salivary gland.

si"a-lo-a"er-oph'a-gy [*sialon*; G. *aēr*, air; *phagein*, to eat]. The habit of constantly swallowing and thus taking saliva and air into the stomach.

si"a-lo-an-gi'tis [*sialon*; G. *angeion*, vessel; *-itis*, inflammation]. Inflammation of a salivary duct.

si"a-lo-do-chi'tis (sigh"uh-lo-do-kigh'tis) [*sialon*; G. *dochos*, receptacle; *-itis*]. Inflammation of a salivary duct.

si"a-lo-do'chi-um (-do'kee-um) [*sialon*; *dochos*]. A salivary duct.

si"a-lo-do"cho-plas"ty (-do'ko-plas-tee) [*sialon*; *dochos*; G. *plassein*, to form]. Plastic surgery of a salivary gland duct.

si"a-log'e-nous (sigh"uh-lodj'e-nus) [*sialon*; G. *genesthai*, from *gignesthai*, to be produced]. Generating saliva.

si-al'o-gram (sigh-al'o-gram) [*sialon*; G. *gramma*, letter]. Roentgenogram of a salivary duct.

si"a-log'ra-phy [*sialon*; G. *graphein*, to write]. Radiographic examination of a salivary gland following injection of an opaque substance into its duct.

si'a-loid [*sialon*; G. *eidos*, form]. Pertaining to, or like, saliva.

si-al'o-lith (sigh-al'o-lith, sigh'uh-lo-lith") [*sialon*; G. *lithos*, stone]. A salivary calculus.

si"a-lo-li-thi'a-sis [*sialon*; *lithos*; NL. *-iasis*, condition]. The presence of salivary calculi.

si"a-lo-li-thot'o-my [*sialon*; *lithos*; G. *tomē*, cutting]. Surgical incision into a salivary duct or salivary gland for the removal of a calculus.

si'a-lon [G.]. Saliva.

si"a-lor-rhe'a, si"a-lor-rhoe'a [*sialon*; G. *rhoia*, flow]. Salivation.

pancreatic s. A flow of pancreatic juice.

si"a-los'che-sis [*sialon*; G. *schesis*, retention]. Suppression of the secretion of saliva.

si"a-lo-se-mei-ol'o-gy (sigh"uh-lo-see-migh-ol'o-jee) [*sialon*; G. *sēmeion*, sign; *logos*, word]. Diagnosis based upon examination of the saliva.

si"a-lo'sis. See *salivation*.

si"a-lo-ste-no'sis [*sialon*; G. *stenōsis*, a being straitened]. Stricture of a salivary duct.

si"a-lo-syr'inx (sigh"uh-lo-sirr'inks, -sigh'rinks) [*sialon*; G. *syrinx*, pipe]. 1. A salivary fistula. 2. A syringe for washing out the salivary ducts. 3. A drainage tube for a salivary duct.

sib, sibling [AS. *sibb*]. One of a group of children of the same parents; a brother or sister.

sib'i-lant [L. *sibilare*, to hiss]. Hissing or whistling, as a sibilant rale.

sib"i-la'tion [L. *sibilatio*, from *sibilare*]. Pronunciation in which the s sound predominates.

sib"i-lis'mus (sib"i-liz'mus) [*sibilare*]. 1. A hissing sound. 2. A sibilant rale.

s. aurium. Tinnitus.

sib'i-lus [L., a hissing]. A sibilant rale.

sib'ship [*sibb*; AS. *-scipe*]. All the brothers and sisters in a family regarded as a single group.

Sibson, Francis [*English anatomist*, 1814–76]. Remembered for his description of a furrow formed in some individuals by a prominence of the lower border of the pectoralis major muscle, called *Sibson's furrow*. See also Sibson's *fascia*.

Sicard, Jean Athanase [*French physician and radiologist*, 1872–1929]. Used lipiodol in roentgenology (1921). Described his method of treating varicose veins by injecting sodium salicylate (1922). Described a syndrome of retroparotid-space injury (similar to Villaret's syndrome) in which there is homolateral paralysis of the last four cranial nerves.

sic'cant, sic'ca-tive [L. *siccare*, to make dry]. Drying; tending to make dry. —**sic'cant, sic'ca-tive**, *n.*

sic-cha'si-a (si-kay'zhuh, -see-uh) [G. *sikchasia*, loathing]. Nausea.

sic'cus [L., dry]. Dry.

sick [AS. *seoc*]. Ill; not well. Also used colloquially for nauseated.

sick call. *1. military medicine* the assembly of the sick at a dispensary, hospital, or other point for examination and disposition by the military surgeon in charge; a term used in the United States Army. Also see *sick parade*.
veterinary s. c. *In military medicine*, routine inspection and treatment of sick animals assembled daily at a veterinary dispensary or station hospital.

sick"le-cell a ne mi a. See sickle-cell *anemia*.

sick'le-form. Descriptive of certain forms of malarial parasites and of blood cells.

sick'le-hocked". Excessive flexion of the hock of a horse due to strained ligaments and tendons of the tarsus.

sick l e mi a (sick-lee'mee-uh, sick"ul-ee mee-uh). See sickle-cell *anemia*.

sick list. A list of persons, especially in military or naval service, who are disabled by sickness.

sick'ness [AS. *seoc*]. Disease; illness.
African horse s. A highly infectious virus disease of horses and mules probably carried by mosquitoes. It is characterized by fever, constitutional symptoms, and edematous swellings.
air s. See *airsickness*.
altitude s. See chronic mountain s.
black s. See *kala-azar*.
bleeding s. Hemophilia.
bush s. Enzootic marasmus; cobalt deficiency disease of herbivorous animals in New Zealand causing severe anemia and emaciation.
car s. See motion *s*.
Ceylon s. Beriberi.
chronic mountain s. A disease occurring in persons living at high altitudes when homeostatic adjustments to the lowered atmospheric oxygen tension fail or develop disproportionately. The *erythremic type*, in which the hematopoietic system is the primary reacting tissue, is characterized by great increase in erythrocytes (polycythemia). Symptoms include cyanosis, vasodilatation, clubbing of fingers, and epistaxis. In the *emphysematous type*, symptoms may include dyspnea on slight effort, reduction in vital capacity, and respiratory acidosis. Reversible disturbances of vision and mental and physical depression also are common. Syn., *high-altitude disease, Monge's disease, high-altitude erythremia, soroche*.
compressed-air s. See caisson *disease*.
creeping s. Chronic ergotism.
decompression s. Aeroembolism.
fainting s. Old term for epilepsy.
falling s. Epilepsy.
green s. Chlorosis.
Indian s. Gangrenous proctitis.
milk s. An acute disease with weakness, anorexia, and vomiting due to ingestion of milk or flesh of animals which have a disease called trembles.
miner's s. See *ancylostomiasis*.
monthly s. Menstruation.
morning s. Nausea of early pregnancy.
motion s. Vertigo, nausea, and vomiting occurring during travel by auto, airplane, or train.
mountain s. See chronic mountain s.
painted s. See *pinta*.
radiation s. (a) Illness due to the effects of therapeutic irradiation with roentgen rays or radium and comprising symptoms of nausea, vomiting, headache, cramps, and diarrhea. (b) The effect of radiant energy following the explosion of an atomic bomb, the resultant effects of which include alopecia, loss of teeth, decrease in red and white blood cells, and prolonged hemorrhage.
sea s. See *seasickness*.
serum s. An anaphylactic reaction following serum therapy characterized by urticaria, arthritis, edema, fever, and prostration.
sleeping s. Lethargic encephalitis or trypanosomiasis.
sweating s. See miliary *fever*.

sick pa rade. A term used in the British military service for sick call.

sick re port'. *In military medicine*, daily organization record that lists the personnel of a command who require medical treatment; similar report for sick animals.

Si'da [G. *sidē*]. A genus of plants of the Malvaceae.
S. paniculata. A species of Peru, reputed to be an active vermifuge. Its action is believed to be due to the very minute but resisting bristles which cover its leaves.
S. rhombifolia. Queensland hemp, which contains a great amount of mucilage. Is used in Australia for snake bite, pulmonary disease, and in making poultices.

Siddall, Alcines Clair [American gynecologist and obstetrician, 1897–]. Introduced (1928) a hormone test for early or late pregnancy using an immature virgin white mouse. For four or five days, serum from the woman is injected into the mouse. At the end of that time, if the ratio between the mouse's body weight and the weight of its uterus and ovaries is less than 400, the test is positive; known as *Siddall's test for pregnancy*.

side [AS. *side*]. The lateral aspect of any body organ.

side'bone [*side*; AS. *bān*]. *In veterinary medicine*, ossification of the lateral cartilages of the pedal bone in the horse, resulting in lameness.

sid"er a tion [L. *sideratio*, disease produced by a constellation]. Obsolete term for a sudden stroke, as in apoplexy.

sid'er ism [G. *sidēritis*, loadstone]. The curative influences long supposed to be exerted over the body by the lodestone. *Obs.*

sid'er ite. Native ferrous carbonate, $FeCO_3$.

sid'er-o-cyte [G. *sidēros*, iron; *kytos*, cell]. An erythrocyte which contains iron in other forms than hemoglobin; probably an aging erythrocyte.

sid"er o dro mo pho'bi a (sid"ur-o-dro mo fo bee-uh, -drom o-) [*sidēros*; G. *dromos*, course; *phobos*, fear]. Morbid dread of traveling by railway; fear of trains.

sid"er-o-fi bro sis (sid"ur o-figh-bro sis) [*sidēros*; L. *fibra*, fiber; G. *-ōsis*, condition]. Fibrosis associated with deposits of iron-bearing pigments. Usually seen in the reticuloendothelial system.

sid"er-o-pe ni a [*sidēros*; G. *penia*, want]. Deficiency of iron, especially in the blood.

sid'er o phil, **sid'er-o-phile** [*sidēros*; G. *philein*, to love]. A cell or tissue having affinity for iron. —**sid'erophil**, *adj.*

sid er o phil'in. A pseudoglobulin of blood, having a molecular weight of about 90,000, capable of combining with two atoms of ferric iron to form a compound which serves as a transport form of iron in blood. Syn., *transferrin*.

sid"er oph'i lous [*sidēros*; *philein*]. Having an affinity for iron; applied to erythrocytes or other cells. Syn., *siderophil*.

sid'er-o-scope" [*sidēros*; G. *skopein*, to examine]. An instrument for the detection of particles of iron or steel in the eyes.

sid"er o-sil"i co'sis [*sidēros*; L. *silex*, flint; G. *-ōsis*, condition]. Diffuse fibrosis of the lungs due to the prolonged inhalation of dusts containing silicon dioxide and iron salts.

sid"er o sis [*sidēros*, *-ōsis*]. Chronic inflammation of the lungs due to prolonged inhalation of dust containing iron salts; occurs in iron miners and arc welders. It is characterized by inflammatory

tissue reaction mainly in the lymphatic tissues of the lungs and by diffuse, nodular shadows in the -ray film. Also called *arc-welder' disease*, *arc-welder' nodulation*. —siderot'ic, *adj.*

Siebold, Adam Elias von [*German obstetrician*, 1775–1828]. Celebrated clinician. Noted for his classic account of uterine cancer (1824)

Siebold, Eduard Caspar Jacob von [*German obstetrician*, 1801–61]. Popularized pubic symphysiotomy for difficult delivery in Germany The operation was first proposed by Pieter Camper and introd ced in 1777 by Jean Sigault. Called *Siebold'* or *Sigault' operation*.

Siebold, Karl Theodor Ernst von [*German zoologist and parasitologist*, 1804–85]. First to establish definitely the life cycle of parasite (1854) In his study of sheep gid he found that the causative organism, *Taenia coenurus*, is the larval stage of *Taenia multiceps* which spends its adult lif in the intestine of the dog

Siegemundin, Justine Dittrichi [*German midwife*, 1650–1705]. Widely known as the most celebrated midwif of her time. Advocated puncture of the amnioti sac to arrest hemorrhage in placenta previa.

Siegert, Ferdinand [*German pediatrician*, 1865–1946]. Observed that in mongolism the terminal phalanges of the little fingers are short and curved inward this is known as *Siegert' sign*.

Siegfried' hypothesis. See Kossel and Siegfried's protamine nucleus *hypothesis*.

Siegle, Emil [*German otologist*, 1833–1900]. Inventor of an otoscope in which compressed air was employed to give mobility to the tympanum while under observation; called *Siegle otoscope* or *speculum*

Siemens, Hermann Werner [*German dermatologist*, 1891]. Known for his description of congenital ectodermal dysplasia, also called *Siemens' syndrome*.

sig. Abbreviation for *signa*, label it; *signetur* let it be labeled.

Sigault, Jean René [*French surgeon*, b. 1740]. Introduced pubic symphysiotomy (1777); also called *Sigault' operation*. See also under Eduard Caspar Jacob von *Siebold*.

Sigerist, Henry Ernest [*Swiss medical historian*, 1891]. Well-known writer on medical history

sigh [AS. *sican*]. A prolonged and deep inspiration followed by shorter expiration Also called *suspirium*. —sigh, *v.*

sight [AS. *gesiht*]. 1. The act of seeing. 2. The special sense concerned in seeing.

agi g s. Presbyopia.

day s. Hemeralopia.

far s. Hypermetropia.

short s. Myopia.

weak s. Asthenopia.

sig'ma tism [G. *sigma*, Σ, eighteenth letter of the Greek alphabet]. 1. Lisping. 2. The too frequent se of the sound in speech.

sigmodal. A trade-mark for secondary amyl-β-bromallylbarbituric acid. The substance is used in the form of solution of the sodium salt.

sig'moid [G *sigmoeidēs*, shaped like the letter sigma]. 1 Shaped like the letter S. 2. Pertaining to the sigmoid flexure of the colon, as the sigmoid artery (see T ble of Arteries in the Appendix) the sigmoid mesocolon. —sigmoid n.

sig"moid-ec'to-my [*sigmoeidēs*; G *ektomē*, excision]. Excision of part or all of the sigmoid flexure of the colon.

sig"moid i'tis [*sigmoeidēs*; G. *-itis*, inflammation]. Inflammation of the sigmoid flexure of the colon.

sig moi'do- sigmoid- [*sigmoeidēs*]. A combining form meaning *sigmoid*.

sig moi'do-pex"y [*sigmoeidēs*; G *pēxis*, fixing]. An operation for prolapse of the rectum colopexy fixation of the sigmoid colon by obliterating the intersigmoid fossa and shortening the mesosigmoid by suture, through an abdominal incision.

sig moi"do-proc tos'to my [*sigmoeidēs*; G *prōktos*, anus *stoma*, mouth]. Anastomosis of the sigmoid flexure of the colon with the rectum.

sig moi"do rec tos'to my [*sigmoeidēs*; L. *rectus*, straight *stoma*]. Formation by surgical means of an artificial anus at the sigmoid flexure of the descending colon, at its junction with the rectum sigmoidostomy; low colostomy

sig moi'do-scope [*sigmoeidēs*; G *skopein*, to examine]. An appliance for the inspection, by artificial light, of the sigmoid flexure; it differs from the proctoscope in its greater length and diameter —sigmoidos'copy n.

sig"moid-os co-py [*sigmoeidēs*; *skopein*]. Visual inspection of the sigmoid flexure, with the aid of special instruments.

sig moi"do sig"moid-os'to-my [*sigmoeidēs*; *sigmoeidēs* G *stoma*, mouth]. Surgical anastomosis between two portions of the sigmoid colon.

sig"moid-os'to my [*sigmoeidēs*; *stoma*]. The formation of an artificial anus in the sigmoid flexure of the colon; sigmoid colostomy

sig"moid-ot' my [*sigmoeidēs*; G *tomē*, cutting]. Incision into the sigmoid colon.

sig'mo-scope. See *sigmoidoscope*.

Sigmund, Karl Ludwig [*Austrian physician*, 1810–83]. Described epitrochlear lymph nodes called *Sigmund' glands*.

sign [L. *signum*]. 1. A mark or objective evidence in restricted sense, physical manifestation of disease. For any sign not listed here see under the individual whose name it bears see also under *reflex*.

abdominocardiac s. A sign for hypotonia in which the right area of cardiac dullness becomes larger on stimulation of the bdominal aortic plexus, as when the patient changes from the reclining to the erect position also called *Livierato s.*, or *orthostatic s.*

accessory s. A nonpathognomonic sign.

Allis s. When the neck of the femur is fractured, the fascia between the greater trochanter and the crest of the ilium is less tense than normally

André Thomas' s. In patients with disease of the cerebellum, rebound phenomenon If the patient is directed to raise his arm and then suddenly asked to let it fall, the arm will rebound.

antecedent s. A sign which precedes an attack of disease.

Argyll Robertson s. See Argyll Robertson *pupil*.

Arnoux's s. See Emile *Arnoux*.

assident s. See accessory *s.*

Auenbrugger's s. A sign of pericardial effusion in which there is bulging of the epigastrium.

Babinski's s. See Joseph F F *Babinski*.

Baccelli' s. A sign for pleural effusion in which whispered voice sounds are heard over the chest.

Ballance's s. A sign for rupture of the spleen in which the dullness in the right flank will shift with position but not that on the left.

Barré's s. The patient lies prone and his legs are flexed at the knee. If there is disease of the corticospinal tracts, the patient is unable to hold his legs in the vertical position.

Battle's s. A sign for fracture of the posterior cranial fossa in which discoloration ppears over the tip of the mastoid process.

Beevor' s. The umbilicus is higher than normal due to paralysis of the inferior portion of the rectus abdominis muscle.

Bezold's s. Swelling below the apex of the mastoid process considered sign of mastoiditis.
Bjerrum's s. See Jannik Peterson *Bjerrum*.
Blumberg' s. A sign of peritoneal inflammation in which sudden release of the examiner's hand from the right iliac fossa produces pain.
Boas s. A sign for cholecystitis in which there is an area of hyperesthesia over the lower right ribs posteriorly
Boston s s. An ye sign for exophthalmic goiter in which the upper lid does not follow the downward motion of the eye smoothly but jerks.
Bragard's s. Aggravated pain or muscle spasm elicited by strong dorsiflexion of the foot after th production of positive Lasègue sign.
Braxton Hicks s. See Hicks s.
Broadbent s. A systolic retraction in the back at the leventh or twelfth rib on the left side seen when there are adhesions between the pericardium and the diaphragm
Brudzinski' signs. A group of signs frequently seen in meningeal irritation, especially meningitis (1) **neck sign.** Passive flexion of the head is followed by flexion of both thighs and legs. (2) **contralateral leg signs.** (a) Passive flexion of one thigh is accompanied by flexion of the opposite hip and knee (b) When one leg and thigh are flexed and the ther extended, lowering of the flexed limb is followed by flexion of the contralateral one. (3) **cheek sign.** Pressure on both cheeks just below the zygomatic arch causes flexio of both elbows and rapid lifting of the arms (4) **symphysis sign.** Pressure on the symphysis pubis is followed by flexion of both lower extremities.
Brun s. See hand s. of Brun
Bryant's s. When the humerus is dislocated, the anterior and posterior boundaries of the axillary fossa are lowered.
Carman's meniscus s. See meniscus s.
Chvostek s s. A sign for tetany in which tapping of the face in front of the ear produces spasm of the facial muscles.
Claybrook's s. A sign for rupture of the intestine in which the heart and respiratory sounds are transmitted ver the bdominal area.
coin s. See bell *sound*.
commemorative s. A sign of some previous disease
coughing s. of Huntington. Flexion of the thigh and extension of the paralyzed leg on coughing, when the patient is recumbent with legs hanging over the edge of the table
Cowen s. A jerky pupillary reaction on eliciting the consensual light reaction.
Crichton-Browne s. A sign seen early in paralytic dementia which there is twitching of the outer corners of the eyes and lips.
Crowe's s. I patients with lateral sinus thrombosis, the retinal vessels are engorged if the internal j gular vein is compressed on the normal side
Cruveilhier's s. A sign for saphenous varix in which tremor can be palpated when the patient coughs.
Cullen's s. A sign for ruptured ectopic pregnancy in which bluish discoloration is seen about the umbilicus
Dalrymple's s. Widening of the palpebral fissures sometimes seen in hyperthyroidism.
Dance' s. A sign for intussusception consisting of an empty feeling in the right iliac fossa.
D Espine's s. A sign for tracheobronchial adenitis or mediastinal tumor in which whispered voice sounds are heard over the upper thoracic vertebrae.
diaphragmatic s. The movement of the diaphragm during respiratory excursions causing an altered contour of the chest wall. If the patient is observed by means of oblique illumination, shadow is seen moving up or down the side of the chest. Also called *Litten* shadow.
drawer s. A sign diagnostic of rupture of the cruciate ligaments of the knee, in which, with the knee flexed to right angle, there is increased anterior or posterior glide of the tibia in rupture of the anterior or posterior ligaments, respectively
Duroziez's s. A to-and-fro hum heard with the stethoscope placed over the femoral artery seen in aortic insufficiency
echo s. The involuntary repetition of the last syllable, word, or clause of sentence.
Ely' s. A sign of irritation of the psoas muscle or of hip-joint disease, elicited by having the patient lie prone with feet hanging over the edge of the table. The heel is pproximated to the buttock and th thigh is hyperextended. Inability to complete the movement is positive response
Enroth' s. Puffy edematous swelling of the eyelid, often found in thyrotropic exophthalmos
Erb's s. A sign for tetany in which hyperexcitability can be determined by the use of a galvanic current.
"e" to "a" s. See Gerald B. *Shibley*
Ewart s s. Dullness, increased fremitus, and bronchial breathing at the left lung base in pericardial effusion.
fanning s. f Babinski. See Joseph F F. *Babinski*
fontanel s. Constant bulging of the anterior fontanel in infants observed in acute meningeal infections and in the condition where the intracranial pressure is increased.
Friedreich's s. A sign for cavitation of the lungs i which there is change in the percussion note during inspiration and expiration.
Froment s. In ulnar paralysis, the thumb of the affected limb is involuntarily flexed by the flexor pollicis longus.
Gerhardt's s. A sign for cavitation of the lungs in which there is change in percussion note with change in the patient position from upright to recumbent.
Gifford' s. Inability to evert the upper eyelid in the early stages of exophthalmic goiter
Goodell' s. Softening of the cervix of the uterus considered to be evidence of pregnancy
Gordon's s. See Gordon reflex.
Graefe s. See von Graef 's s.
Griesinger's s. In patients with transverse sinus thrombosis, swelling behind the mastoid process.
Grocco s s. A sign for pleural effusion in which there is paravertebral dullness on the opposite side.
Haenel's s. Analgesia to pressure on the eyeball in tabes dorsalis.
Hamilton's s. Long hairs growing on the antitragus of the ear typical of males with normal androgenic function after the age of 25 or 30
hand s. of Brun. Genital grasping by patients (especially children) with vesical stones or foreign bodies to prevent involuntary escape of urine. The hands may become lacerated and have strong mmoniacal odor
Hefke-Turner s. See obturator s.
Hertoghe s. A trichomadesis characterized by frontal alopecia with oily scales and loss of the outer third of the eyebrows, seen most frequently in myxedema, and also in syphilis, thallium poisoning, and other types of hair loss.
Hicks s. A sign of pregnancy after the third month in which rhythmic uterine contractions can be detected.

Hoehne's s. If uterine contractions disappear during delivery rupture of the uterus may have occurred.

Hoffmann's s. A test for overactive tendon reflexes in which tapping the nail of the index or middle finger causes flexion of the thumb. *Syn., digital reflex.*

Homans's s. Pain in the calf on strong passive dorsiflexion of the foot, indicating deep venous thrombosis of calf.

Horsley's s. A sign for middle meningeal hemorrhage in which the axillary temperature is higher on the paralysed side.

Hutchinson's s. Interstitial keratitis, eighth-nerve deafness, and notched teeth occurring in patient with congenital syphilis. Also called *Hutchinson triad.*

Jackson's s. In patients with pulmonary tuberculosis, prolonged expiratory sound heard over the affected area.

Jellinek Tillais' s. In toxic diffuse goiter pigmentation of the area surrounding the eyes.

Joffroy's s. *A sign for exophthalmic goiter in which the forehead does not wrinkle when the patient looks up with the head bent down.*

Kanavel's s. A sign for ulnar bursitis in which there is point of maximal tenderness in the center of the hypothenar eminence.

Kashida s. *The appearance of paresthesias with* the application of cold and warm stimuli to the skin of the involved area in tetany

Kayser–Fleischer s. See Kayser Fleischer ring.

Kehr's s. A sign for rupture of the spleen in which there is an area of hyperesthesia over the left shoulder due to the presence of blood under the left diaphragm.

Kérandel's s. A delayed hyperesthesia in which pain occurs after few minutes following pressure or slight knock. Seen in African trypanosomiasis.

Kernig's s. A sign for meningeal irritation in which an attempt to completely extend the leg at the knee with the thigh flexed at right angle causes pain or meets resistance.

Kerr's s. A peculiar thickening of the skin in levels below spinal-cord lesion.

Knies' s. Unequal dilatation of the pupils, found in thyrotoxicosis and other conditions.

Kocher's s. When the patient looks up, his upper lid retracts faster than the globe is raised, thus exposing the sclera above the cornea found in thyrotoxicosis. Syn., *globe lag*

Koplik's s. Small red spots surrounded by quite white areas seen in the mucous membrane of the mouth in the prodromal stage of measles. Also called *Koplik spots.*

Kussmaul's s. Air hunger seen in patients with severe diabetes.

Larrey's s. *A sign for sacroiliac joint disease in* which pain in the joint is felt when the patient sits down abruptly on hard seat.

Lasègue's s. A sign elicited in certain types of muscle spasm of the lower extremity The patient is placed supine and the entire extremity is raised, *keeping the knee in full extension. The sign* becomes positive at whatever angle of elevation pain or muscle spasm is produced.

leg s. of Neri. *In clinical neurology,* the patient is asked to bend forward, whereupon the paralysed leg flexes at the knee while the other leg *remains extended.*

Leudet's s. In catarrhal or nervous diseases of the ear the patient hears fine crackling sound in the ear

Lhermitte's s. Flexion of the neck is accompanied by the sensation of an electric shock shooting *into the extremities in certain cases of multiple* sclerosis, and rarely in other conditions associated with thickening of the cervical meninges.

Litten's s. See diaphragmatic *s.*

Livierato's s. See abdominocardiac *s.*

Lockwood's s. A sign for chronic appendicitis in which *flatus* can be palpated trickling through the ileocecal valve.

McBurney's s. A sign for early acute appendicitis in which the area of maximum tenderness is over McBurney' point.

Macewen's s. Increased resonance on combined percussion and auscultation of the skull in certain gross lesions of the intracranial contents, as in cerebral abscess or overdistended lateral ventricles.

McMurray's s. A sign for posterior tears of th lateral and medial menisci of the knee in which, with the knee fully flexed, finger flattened along the joint line feels click when the torn meniscus moves in and out on internal and external rotation of the tibia respectively as the joint is extended.

meniscus s. Roentgenographic concavoconvex filling defect of the stomach, valued as an aid in the diagnosis of carcinoma.

Millian's ear s. A sign to differentiate facial erysipelas from subcutaneous inflammations; involvement of the ear occurs in the former and not in the latter

Möbius s. *Inability to maintain convergence of* the eyes in exophthalmic goiter

moulage s. *In radiology,* lack of the normal delicate, feathery appearance of the small intestine after barium meal often seen in sprue.

Murphy's s. A sign for cholecystitis in which the thumb presses over the area of the gallbladder and on expiration causes pain and catching of the breath.

Myerson s. A series of reflex blinking movements following tap on the forehead or quick thrust towards the eyes, frequently seen in parkinsonism.

Negro's s. See cogwheel *rigidity.*

Neri's s. 1. Faradic stimulation of the sole of the foot causes extension of the great toe in sciatica; in normal condition, flexion results. 2. See leg *s.* of Neri.

Nikolsky's s. The ready removal of epidermis upon the slightest injury found between lesions (bullae) on the seemingly unaffected skin. It may be disclosed by (1) pulling the ruptured wall of the blister or (2) rubbing off the epidermis between bullae by slight friction without breaking the surface of the skin. It occurs in pemphigus and epidermolysis bullosa. Described by Peter S. Nikolsky (1896).

objective s. One apparent to the observer

obturator s. A widening and change in the *contour of the x-ray shadow* of the obturator foramen indicative of pathologic condition of the hip joint, also called *Hefke-Turner s.*

Oliver's s. See William S *Oliver*

Orrego's s. Delay of the contraction of the pupil to light; symptom of status lymphaticus. See *also lymphatism,* Sergent *s.,* Schridde *s.*

orthocardiac s. See abdominocardiac *s.*

Pardee's s. See Harold E. B. *Pardee.*

Pastia's s. See *Pastia lines* under *line.*

physical s. One of the phenomena observed on inspection, palpation, percussion, auscultation, mensuration, or combinations of these methods.

Pool–Schlesinger's s. The production of painful extensor spasm at the knee joint and tonic spasm at the ankle by flexion of the affected leg at the hip with the knee extended; seen in tetany

Queckenstedt's s. See Queckenstedt-Stookey *test.*

Roskey's s. A sign for depression of the zygoma: the bone in which there is difference in the angle on the two sides where two straight edges are placed from the outer edge of the orbit t the prominence f the zygomatic bone.

Romaña s s. Unilateral edema of the face seen early in an out attack of Chagas disease. Usually seen in children.

R mberg s. (a) A sign for bturator hernia in which there is pain radiating to the knee. (b) A sign for tabes dorsalis in which the patient cannot maintain equilibrium when standing with feet together and eyes closed.

Roque's s. Unilateral dilation of the pupil of the eye and elevation of the upper eyelid, due to compression of the cervical sympathetic chain by tuberculous lesion at the pex of the lung.

Rosenbach's s. Fibrillary tremor of the closed eyelids sometimes seen in hyperthyroidism.

Rotch s. Obliteration of the cardiohepatic angle in pericardial effusion dullness on percussion over the right fifth intercostal space.

Rovsing' s. A sign for acute ppendicitis in which pressure over the right iliac fossa causes pai in the left iliac fossa.

Schlange' s. Fecal blocking; the intestine is dilated above the obstruction and peristalti movements are absent below that point.

Schridde s s. Prominence of lymphoid follicles on the pharyngeal wall between the tonsils symptom of status lymphaticus. See also *lymphatism*, Orroya s., Sergent s.

Sergent's s. Delay or failure of the skin of the best or abdomen to redden when lightly scratched symptom of status lymphaticus. See also *lymphatism*, Orroya s., Schridde s.

Spalding's s. The roentgenographic finding in fetus of overlapping of the skull bones at several sutures, associated with distinct signs of shrinkage of th cerebrum. bserved in some cases of fetal death.

stairs s. Difficulty in descending stairs one of th early symptoms of tabes dorsalis.

Stellwag' s. A sign for exophthalmic goiter in which the upper eyelid is retracted.

sternomastoid s. Spasm of the sternomastoid muscle manifested by increased tenseness of its tendinous attachment to the manubrium sterni in cases of pulmonary disease causing either displacement or traction of the mediastinum toward the same side.

Strümpell' s. Dorsal flexion of the foot when the thigh is flexed seen in paralysis. Also called *tibialis s.*

subjective s. One recognized only by the patient.

Suker' s. Inability to maintain fixation on extreme lateral rotation of the eye seen in thyrotoxicosis.

Szabo's s. Sensory changes restricted to the skin below the lateral malleolus in sciatica.

Thomas' s. A test for flexion fixation of the hip joint in which the examiner flexes the sound hip until the lumbar lordosis is reduced and then the amount of flexion observed in the affected limb can be estimated.

tibialis s. See Strümpell'

Tinel' s. A sign to indicate nerve regeneration in which tapping the nerve below the point of injury causes tingling sensation in the distal parts

Troisier's s. A sign for late bdominal carcinoma in which the left supraclavicular lymph odes are enlarged.

Trousseau s. A sign for tetany in which carpal spasm can be licited by compressing the upper arm.

Vedder's s. In patients with beriberi, pressure on the calf muscles causes pain.

von Graefe's s. A sign for exophthalmic goiter in which the upper eyelid lags when the patient looks down.

Wartenberg' s. Decreased swinging of the leg or legs affected by parkinsonism after the patient' legs are placed so they can swing freely and caused to do so also called *pendulousness of the legs* test.

Wernicke's s. A reaction obtained in some cases of hemianopsia in which pencil of light thrown on the blind side of the retina gives rise to no movement in the iris, but, when thrown upon the normal side, produces contraction of the iris. It indicates that the lesion producing the hemianopsia is situated t or anterior to the geniculate bodies.

Westphal's s. Absence of the knee jerk.

Wintrich's s. A sign for cavitation of the lung in which there is a change in percussion note when the mouth is closed or open.

sig'na. 1 Plural of signum. 2. Used in prescriptions to mean write ; abbreviated, S sig

sig'na ture [L. *signare*, to mark]. 1. The part of the prescription that is placed on the label, containing directions to the patient. 2. A distinguishing character

doctrine of signatures. A theory that the medicinal uses of plant can be determined from its fancied physical resemblance to normal or diseased organs (liverwort, lungwort, orchis).

sig nif'i-cant dif'fer-ence. A difference between two statistical constants, calculated from two separate samples, which is of such magnitude that it is unlikely to have occurred by chance alone. Usually this probability must be less than 0.05 (5%) before difference is accepted as significant. The smaller the probability the more significant is the difference.

sig'num (pl. *signa*) [L.]. A mark, sign, or indication.

si'lent. *I clinical medicine*, progressing without signs or symptoms: said of pathological process.

sil'i-ca [L. *silex*, flint]. Silicon dioxide, SiO_2, occurring in nature in the form of quartz, flint, and other minerals.

s. gel. A precipitated and dried silicic acid in the form of granules, used as dehydrating agent and for absorption of various vapors.

sil'i-cate. A salt or ester of silicic acid.

sil"i-ca t sis [*silex*; G -*osis*, condition]. Chronic inflammation of the lungs caused by the prolonged inhalation of dust containing silicates. A form of pneumonoconiosis. The only recognized example is asbestosis.

si li'ceous, si li'cious (si lish us) [*silex*] Having the nature of, or containing, silicon.

si lic'ic ac'id (si-lis'ick) Approximately H_2SiO_3. A white, amorphous powder

si lic"i-co'lin. A tumor-damaging substance, shown to be identical with desoxypodophyllotoxin, obtained from the dried needles of *Juniperus silicicola*, the southern red cedar

si lic'i um (si-lish ee-um, si lis ee-um) Silicon.

sil"i-co flu o-ride. A compound of silicon and fluorine with some other element.

sil'i-con [*silex*]. Si = 28.09. A nonmetallic element of the carbon group. It occurs in several allotropic modifications. Like carbon, it forms many complex compounds that are an essential part of the earth surface.

s. carbide. See carborundum.

s. dioxide. SiO_2 silica. See purified siliceous earth.

silicone. Trade-mark for class of synthetic polymers having the composition of polyorganosiloxane.

si"li-co-si"der-o sis. A type of pneumonoconiosis occurring among hematite miners. The lungs

are bright brick red owing to the presence of hematite. Silica is also present in amounts up to 1.6% in fatal cases. Fibrosis of the lungs is diffuse, but occasionally nodular. There is often an associated tuberculosis. This disease has only recently been recognized and is probably caused by modern mining methods which greatly increase the dust in the atmosphere.

sil"i-co'sis [*silex*; G. *-ōsis*, condition]. Diffuse fibrosis of the lungs caused by the inhalation, through a period of years, of dust having a significant content of silicon dioxide particles less than 10μ in diameter. A form of pneumonoconiosis. Also called *chalicosis, lithosis, schistosis, miners' phthisis, miners' asthma, grinders' asthma, grinders' rot, potters' asthma, potters' rot, potters' consumption.*

conglomerate s. That form in which, in addition to discrete nodules, there are single or multiple fibrous masses of larger size. It is also known as silicosis with infection, based on the concept that infection, either obsolete, latent, or active, is an essential etiologic factor in the development of the conglomerate masses. Conglomerate silicosis may be indistinguishable from tuberculosilicosis.

simple s. Fibrosis in the form of discrete nodules, usually not exceeding 5 mm. in diameter and tending toward uniformity in size and in distribution.

sil"i-co-tu-ber"cu-lo'sis [*silex*; L. *tuberculum*, small swelling; *-ōsis*]. Silicosis with tuberculosis; any manifestation of tuberculous infection in a silicotic lung.

sil"i-co-tung'stic ac'id. $SiO_2.12WO_3.26H_2O$. In white or yellowish crystals, used as reagent for alkaloids.

si lique (si leek, sil'ick) [F from L. *siliqua*, pod]. *In biology*, the slender two-valved capsule of some plants, as the mustard.

sil'i quose [*siliqua*]. Resembling silique.

silvol. Trade-mark for brand of mild silver protein containing about 20% of silver. The substance is used in various inflammations of the mucous membranes in strengths of from 5–10%.

sil"le-ton' (see ye ton'. *See* NOTES § 35) [F.]. A three-bladed scalpel used by ophthalmologists.

Silvatico, Giambattista [*Italian physician*, 1550–1621]. Said to have written the earliest work on malingering (1595).

sil'ver [AS. *seolfor*] (*argentum*) Ag = 107.880. A white, soft, ductile, and malleable metal. Metallic silver is insol ble in water, HCl, and most other acids in the cold, but dissolves in dilute nitric acid; dissolves slowly in hot concentrated sulfuric acid and is dissolved by solutions of alkali cyanides. Silver compounds are used in medicine to secure caustic, astringent, and antiseptic effects. The results are brought about by free silver ions. For caustic and astringent effects, silver nitrate is the drug of choice. For antiseptic effects, colloidal silver preparations are used, as the antiseptic action of silver nitrate is accompanied with irritation, pain, astringency and corrosion. The colloidal silver compounds are used mainly on mucous membranes for antisepsis. The long-continued use of any silver preparation may produce irremediable discoloration of the skin or mucous membrane.

ammoniacal s. nitrate solution. See under *solution.*

colloidal s. chloride. See *lunosol.*

colloidal s. iodide. See *neo-silvol.*

mild s. protein (*argentum proteinicum mite*). Silver rendered colloidal by the presence of, or combination with, protein. It contains between 19% and 23% of silver; occurs as dark brown or almost black, shining scales or granules; freely soluble in water but almost insoluble in alcohol. Used in medicine, especially in the treatment of infections of mucous membranes. Possibilities of argyri from its continued use must be kept in mind. Also called *mild protein s., mild protargin.*

s. acetate. CH_3COOAg; white to slightly grayish crystalline powder sparingly sol ble i water; used as reagent.

s. arsphenamine. The sodium salt of silver diamino-dihydroxy-arseno-benzene; contains not less than 19% of arsenic and 13–14% of silver; occurs as brownish black powder unstable in air; readily soluble in water. Silver arsphenamine has been used for the same purposes as arsphenamine. Also called *sodium s. arsphenamine, s. diarsenol.* See *silver-salvarsan.*

s. bromide. AgBr; yellowish powder insoluble in water; the basis of light-sensitive emulsions used in photography.

s. chloride. AgCl; white powder practically insoluble in water; used in preparing antiseptic silver preparations.

s. citrate. $C_6H_5Ag_3O_7$; white, crystalline powder very slightly soluble in water. It has been used as an antiseptic dusting powder for wounds.

s. iodate. $AgIO_3$; white, crystalline powder very slightly soluble in water; used as reagent.

s. iodide. AgI; light-yellow powder practically insoluble in water; used, especially in colloidal form, as mild local antiseptic.

s. lactate. $AgC_3H_5O_3.H_2O$. The silver salt of lactic acid; occurs as crystalline needles, granular masses, or crystalline powder; it dissolves in bout 15 parts of water. It is used as an active antiseptic. See *actol.*

s. nitrate (*argenti nitras*). $AgNO_3$. Occurs as colorless or whit crystals; 1 Gm. is soluble in 0.4 cc. of water and in 30 cc. of alcohol. It is used locally as an astringent and germicide, especially in infections of the mucous membranes. The strength varies according to the location and nature of the infection. It is also used as prophylactic against ophthalmia neonatorum. Silver nitrate has been employed as an astringent in the treatment of various types of gastritis, especially in ulcer of the stomach. Dose, 0.016–0.032 Gm. (1/4–1/2 gr.)

s. nucleate. Trade name for brand of mild silver protein.

s. nucleinate. Silver nucleate.

s. oxide. Ag_2O; brownish-black powder practically insoluble in water; formerly used in human medicine. In veterinary practice it is employed locally as general germicide and parasiticide.

s. picrate. $(NO_2)_3C_6H_2OAg.H_2O$; yellow crystals, sparingly soluble in water; used locally in treatment of urethritis and vaginitis.

s. potassium cyanide. AgK(CN); white crystals, soluble in water. It has been used as bactericide. Syn., *potassium argenticyanide.*

s. sulfate. Ag_2SO_4; colorless crystals or white, crystalline powder slightly soluble in water; used as reagent.

s. trinitrophenolate. Silver picrate.

strong s. protein (*argentum proteinicum forte*). Contains from 7.5% to 8.5% of silver; occurs as brown, odorless powder; freely soluble in water but almost insoluble in alcohol. It is used in the same conditions for which the mild compound is used. It differs from the mild compound in that it has irritating properties, which are practically absent in the mild compound, even in concentrated solution; this is because strong silver protein contains more ionizable silver than the mild variety. Possibilities of argyria from its continued use must be kept in mind. Also called *strong protein s., strong protargin.*

toughened s. nitrate (*argenti nitras induratus*). Silver nitrate toughened by the addition of a small proportion of hydrochloric acid, sodium chloride, or potassium nitrate; occurs in the form of white hard pencils or cones. Used as a means of applying silver nitrate locally in concentrated form where an escharotic and germicidal action is desired. Also called *molded s. nitrate, fused s. nitrate, s. nitrate pencils, lunar caustic.*

silver-salvarsan. Trade-mark for *silver arsphenamine.*

Silvester's method. See under *artificial respiration.*

silvol. Trade-mark for a brand of mild silver protein.

Sim a ru'ba [Galabi *simaruba*]. A genus of trees of the family Simarubaceae. The bark of the root of **S. officinalis** has been used as a simple bitter.

sim a ru'bi din. $C_{22}H_{30}O_9$. A principle, probably glycoside, in the bark and wood of *Simaruba amara.*

sim'i an [L. *simia*, ape]. Apelike; pertaining to or characteristic of apes or monkeys.

sim'i le phe-nom e non. See *homeopathy, simile phenomenon.*

si mil'i a si mil'i bus cu ran'tur [L.]. Likes are cured by likes: sophism formulated by Hippocrates, then by Paracelsus (simile similis cura, non contrarium). See *homeopathy.*

si mil'i mum [L. *simillimus*, superl. of *similis*, like]. The homeopathic remedy which will produce the symptom complex most like that of a given disease.

Simmonds, Morris [German physician, 1855–1925]. Described hypopituitary cachexia, also called *hypophyseal cachexia, Simmonds' disease.*

Simmons, James Stevens (1890–1954). American physician and bacteriologist who demonstrated that dengue virus as it exists in *Aëdes aegypti* is filtrable; incriminated *Aëdes albopictus* as vector and proved that *Anopheles punctimacula* and other mosquitoes are malaria vectors (1934).

Simon, Gustav [German surgeon, 1824–76]. Repaired rectovaginal fistula and lacerated perineum by colpocleisis (1854), called *Simon's operation.* Revived extirpation of the spleen (1854) which had been performed previously by C. F. Quittenbaum (1836). Probably the first in Europe to excise the kidney (1870). See also Simon position.

Simon, John [English physician, 1816–1904]. Recognized as one of the great sanitarians of the nineteenth century. First medical health officer of the city of London. Originator of the English Public Health Act (1848).

Simon, Théodore [French psychologist, 1873–]. Developed, with Alfred Binet, a well-known intelligence test for children in current use today; called *Binet-Simon test.* See Alfred Binet.

Simonart, Pierre Joseph Cécilien [Belgian obstetrician, 1817–47]. Remembered for his description of the amniotic bands formed by adhesions between the fetus and the amnion; called *Simonart's bands* or *threads.*

sim'ple [L. *simplex*, simple]. 1. Not complex; consisting of but one substance, or containing only one active substance; not compound. 2. Wanting in intellect.

sim'ple. A medicinal plant, thought of as possessing a single medicinal substance; also, any drug consisting of but one vegetable medicinal ingredient.

sim'plex'in. An antibiotic substance derived from *Bacillus simplex*, active against Gram-negative and Gram-positive bacteria and against fungi.

Simpson, James Young [Scottish obstetrician, 1811–70]. The first to promote the use of chloroform in England, especially in obstetrics (1847). In this he was closely followed by John Snow, who, however, preferred ether. Inventor of a number of obstetric and gynecologic instruments, including a forceps called *Simpson's forceps.*

Simpson, William Kelly [American laryngologist, 1855–1914]. Devised a shaped cotton tampon cut to fit the nasal cavity, and used to retain the parts and to control epistaxis following operation, called *Simpson's nasal splint.*

Sims, James Marion [American surgeon, 1813–83]. Noted for his distinguished contributions to gynecology and to general surgery. Developed a successful operation for the closure of vesicovaginal fistula, in which he used sutures of silver wire (1858). Introduced his operation for amputation of the uterine cervix (1861). Performed cholecystectomy for hydrops of the gallbladder (1870). Invented the duckbill vaginal speculum, called *Sims' speculum.* See also Sims' position.

si'mul [L.]. At once; at the same time.

sim u la'tion [L. *simulatio*, from *simulare*, to pretend]. The feigning or counterfeiting of disease; malingering.

sim'u la"tor. See *malingerer.*

Si mu'li um [*simulare*]. A genus of small, robust, humpbacked Diptera with short legs and broad wings, commonly called black flies or buffalo gnats. They are worldwide in distribution. The females are vicious bloodsuckers.

S. columbaczense. A migratory species of Europe; kills cattle and has been known to kill children.

S. damnosum. An intermediate host of the nematode worm, *Onchocerca volvulus;* other transmitters of this parasite are *S. metallicum, S. ochraceum* and *S. callidum.*

S. griseicollis. Known as the nimetti pest in the African Sudan.

S. pecuarum. A small black fly which is an important scourge of man and cattle in the Mississippi Valley.

S. venustum. A small black fly of northern New England, New York, and Canada, most bothersome to man in June and July.

si"mul tag no'si a (cf. Wolpert). A form of visual agnosia in which the patient is able to perceive parts but not the whole of a pattern or picture; the result of bilateral lesions of the occipital lobes (area 19 and perhaps also 18, of Brodmann).

sin al'bin. A glycoside found in white mustard, which on enzymatic hydrolysis yields glucose, parahydroxybenzylisothiocyanate, choline, and sinapinic acid.

sinan. Trade-mark for arsphenamine.

si na'pis [G. *sinapi*]. Mustard.

sin a pis'co-py [*sinapi*, G. *skopein*, to examine]. The use of mustard as a test of sensory disturbances.

sin'a pism [*sinapi*]. A mustard plaster.

sin ca line (sing'kah-leen, -lin). See choline.

sin ci put (sin'sip it) [L., half head]. 1. The top of the head; the bregma. 2. Old term for the superior and anterior part of the head. —**sincip'ital**, *adj.*

sin ew (sin'yoo) [AS. *sinu*]. A tendon.

weeping s. See *ganglion*, 2.

Singleton, Albert Olin [American surgeon, 1882–1947]. Introduced an incision for upper abdominal operations, called *Singleton's incision.*

sin gul'tus [L., sobbing]. A hiccup. —**singultous**, *adj.*; **sin gulta'tion**, *n.*

sin'i grin. $KC_{10}H_{16}O_9NS_2 \cdot H_2O$. Potassium myronate, a glycoside found in black mustard, *Brassica nigra.* Under the influence of myrosin, an albu-

rosinous ferment which is also in black mustard, the glycoside is hydrolyzed, yielding allyl isothiocyanate, acid potassium sulfate, and glucose.

sin'is-ter (sin'is-tur, si-nis'tur) si-nis'tra, si-nis'trum [L.]. Left. Abbreviated, *s*.

sin'is-trad, sin-is'trad [*sinister*; L. *ad*, to, toward]. Toward the left.

sin'is-tral, sin-is'tral [*sinister*]. 1. On the left side. 2. Showing preference for the left hand, eye, or foot for certain acts or functions. —**sinistral'ity**, *n*.

sin'is-tral. A left-handed individual.

sin"is-tra'tion [*sinister*]. 1. A turning to the left. 2. Development of dominance of the right side of the cerebral hemisphere in left-handed persons; the opposite of *dextralization*.

sin"is-trau'ral [*sinister*; L. *auris*, ear]. Left-eared; the opposite of *dextraural*.

sin'is-tro- (sin'is-tro-, si-nis'tro-), **sinistr-** [*sinister*]. A combining form denoting *left* or *toward the left side*.

sin"is-tro-car'di-al [*sinister*; G. *kardia*, heart]. Having the heart displaced to the left.

sin"is-tro-cer'e-bral [*sinister*; L. *cerebrum*, brain]. 1. Located in the left cerebral hemisphere. 2. Functioning preferentially with the left side of the brain; the opposite of *dextrocerebral*.

sin"is-troc'u-lar [*sinister*; L. *oculus*, eye]. Left-eyed; the opposite of *dextrocular*.

sin"is-tro-gy-ra'tion (sin"is-tro-jye-ray'shun, si-nis"tro-) [*sinister*; G. *gyros*, circle]. Turning or twisting to the left; as the plane of polarization, or movement of the eye. —**sinistrogy'ric**, *adj*.

sin"is-tro-man'u-al [*sinister*; L. *manualis*, of the hand]. Left-handed.

sin"is-trop'e-dal (sin"is-trop'i-dul, sin-is-tro-pee'dul, si-nis"tro-) [*sinister*; L. *pedalis*, of the foot]. Left-footed.

sin"is-tro-phor'i-a. See *levophoria*.

sin'is-trorse [*sinister*; L. *versus*, from *vertere*, to turn]. *In biology*, turning from right to left, as certain twining stems.

sin"is-tro'sis [*sinister*; G. *-osis*, condition]. Shell-shock.

sin"is-tro-tor'sion [*sinister*; L. *torsio*, from *torquere*, to twist]. A twisting or turning toward the left; the opposite of *dextrotorsion*.

sin'is-trous, sin-is'trous [*sinister*]. Awkward; unskilled; the reverse of *dextrous*, skilled, expert.

sink'a-line, sink'a-leen, sink'a-lin. See *choline*.

si'no- [L. *sinus*, fold, curve]. A combining form denoting *sinus*.

si"no-a'tri-al [*sinus*; L. *atrium*, atrium]. Pertaining to the region between the atrium and the sinus venosus, as the sinoatrial node.

si"no-au-ric'u-lar. See *sinoatrial*.

si"no-bron-chi'tis. Inflammation of the bronchi and the paranasal sinuses.

si-nom'e-nine. $C_{19}H_{23}NO_4$; an alkaloid from *Sinomenium acutum* or *diversifolium*, having morphinelike structure but not the sedative or analgesic properties of morphine; a convulsive poison.

sin-u- [*sinus*]. A combining form signifying *sinus*.

sin"u-i'tis. See *sinusitis*.

sin-u-ot'o-my. See *sinusotomy*.

sin'u-ous [L. *sinuosus*, curving]. Wavy; applied especially to tortuous fistulas and sinuses.

si'nus [L.]. 1. A hollow or cavity; a recess or pocket. 2. A large channel containing blood, especially venous blood. 3. A suppurating tract. 4. A cavity within a bone. —**sinal**, **sinusal**, *adj*.

accessory nasal sinuses. See *paranasal sinuses* under *sinus*.

air s. A cavity containing air within a bone, especially one communicating with the nasal passages; paranasal sinus.

anal s. The anal pit or proctodeum.

aortic s. One of the pouchlike dilatations of the aorta opposite the cusps of the semilunar valves. Also called *s. of Valsalva*.

basilar s. See basilar *plexus*.

carotid s. 1. A slight dilatation of the common carotid artery at the bifurcation, the walls of which are innervated by the intercarotid or sinus branch of the glossopharyngeal nerve. It is concerned with the regulation of systemic blood pressure. 2. An extension of the cavernous sinus into the carotid canal.

cavernous s. An irregularly shaped sinus of the dura mater located on the side of the body of the sphenoid bone, and extending from the superior orbital fissure in front to the apex of the petrous bone behind. See Table of Veins in the Appendix. See Plate 10.

cervical s. A triangular depression caudal to the hyoid arch containing the posterior visceral arches and grooves; it is obliterated superficially by the growth of the hyoid arch and forms the cervical vesicle.

circular s. That consisting of the two cavernous sinuses and their communications across the median line by means of the anterior and posterior intercavernous sinuses, all of which surround the hypophysis.

coccygeal s. The coccygeal fovea.

coronary s. A venous sinus which drains most of the cardiac veins, opens into the right atrium, and is located in the lower part of the atrioventricular sulcus of the heart. It is derived from the transverse portion of the embryonic sinus venosus. See Table of Veins in the Appendix. See Plate 5.

cortical s. A lymph sinus in the cortex of a lymph node.

costomediastinal s. Bilateral spaces between the reflection of the costal pleura upon the anterior mediastinum into which the border of the lung advances on inspiration.

definitive urogenital s. The distal part of the primitive urogenital sinus forming a common chamber for the openings of the primary urethra and the mesonephric and paramesonephric ducts.

dural s. See *s.* of the dura.

ethmoidal sinuses. The ethmoidal cells. See Plate 12.

frontal s. The paranasal sinus situated in the frontal bone. See Plates 12, 20.

inferior petrosal s. A sinus of the dura running posteriorly from the cavernous sinus along the line of the petro-occipital suture to the beginning of the internal jugular vein at the jugular foramen. See Table of Veins in the Appendix.

inferior sagittal s. A sinus of the dura which extends along the posterior half of the lower border of the falx cerebri and terminates in the straight sinus. See Table of Veins in the Appendix. See Plates 10, 12.

intercavernous sinuses. Sinuses of the dura running across the median line of the hypophyseal fossa in front of and behind the hypophysis, connecting the cavernous sinuses of each side. See Table of Veins in the Appendix.

lactiferous s. A dilatation of a lactiferous duct where milk may accumulate. See Plate 42.

laryngeal s. See laryngeal *ventricle*.

lateral s. Transverse sinus of the dura. See Plate 17.

longitudinal s. Sagittal sinus. See inferior sagittal, superior sagittal.

lymph s. One of the tracts of diffuse lymphatic

tissue between the cords and nodules, and the septa and capsule of lymph node.

marginal s. ( ) An enlarged venous sinus incompletely encircling the margin of the placenta. (b) One of the bilateral, small sinuses of the dura which skirt the edge of the foramen magnum, usually uniting posteriorly to form the occipital sinus. ( ) Terminal sinus.

mastoid s. See mastoid cell.

maxillary s. The paranasal sinus in the maxilla. Also called *antrum of Highmore*. See Plate 12.

medullary s. A lymph sinus in the medulla of lymph node.

nasal sinuses. See *paranasal sinuses* under *sinus*.

oblique s. of the pericardium. An arched reflection of pericardium forming pocket that extends upward on the posterior aspect of the atria.

occipital s. A sinus of the dura running in the attached margin of the falx cerebelli from the foramen magnum to the confluence of the sinuses. See Table of Veins in the Appendix. See Plates 10, 17

oral s. The stomodeum.

paranasal sinuses. Air cavities lined by mucous membrane which communicate with the nasal cavity the ethmoidal, frontal, sphenoidal, and maxillary sinuses. See Plate 12.

parasinoidal s. Any one of a number of irregular spaces in the dura mater found on either sid of the superior sagittal sinus and communicating with the latter The arachnoid granulations project into the sinuses. Also called *lateral lacunae*.

petrosquamous s. An inconstant sinus of th dura t the junction of the petrous and squamous parts of the temporal bone, opening into the transverse sinus posteriorly

phrenicocostal s. Bilateral space between the reflection of the costal pleura upon the diaphragm into which the inferior edge of the lung advances on inspiration.

pilonidal s. A congenital anomaly in the sacral region which may be cystic, consisting of tract leading to the exterior Also called *pilonidal cyst*.

piriform, pyriform s. See piriform recess.

pleural si uses. See costomediastinal s., phrenicocostal s.

precervical s. See cervical s.

primitiv urogenital s. The larger part of the cloaca ventral to the urorectal septum. Also called *urogenital tube*.

prostatic s. The groove on each side of the urethral crest into which open the ducts of the prostate gland.

pyriform s. See piriform recess

rectal s. One of the depressions between the rectal columns in the anal canal.

renal s. The potential space surrounded by the mass of the kidney and occupied by the renal pelvis, calyxes, vessels, and parts of the renal capsule.

rhomboidal s. The opening in th extreme posterior end of the embryonic spinal cord which forms the terminal ventricle of the adult.

Rokitansky-Aschoff sinuses. Small outpouchings of the mucosa of the gallbladder lined and continuous with the surface epithelium, and extending through the lamina propria and muscular layer

sagittal s. See inferior sagittal s., superior sagittal s.

sigmoid s. The S-shaped part of the transverse sinus which lies on the mastoid portion of the temporal bone and the jugular portion of the occipital bone. See Table of Veins in the Appendix. See Plate 17

s. alae parvae. The sphenoparietal sinus.

s. of external jugular vein. The portion of the external jugular vein between two sets of valves in the distal part of the vessel; this area is often dilated.

s. of the dura. Any endothelially lined, venous blood space situated between the periosteal and meningeal layers of the dura mater One of the channels by which the blood is conveyed from the cerebral veins, and from some of the veins of the meninges and diploë, into the veins of neck

s. of the epididymis. See digital fossa.

s. of Valsalva. See aortic s.

s. pocularis. Old term for prostatic utricle.

s. venarum. That portion of the adult right atrium behind the crista terminalis.

s. venosus. (a) The chamber of the lower vertebrate heart to which the veins return blood from the body (b) The vessel in the transverse septum of the embryonic mammalian heart into which open the vitelline and allantoic veins, and the ducts of Cuvier

sphenoidal s. The paranasal sinus in the body of the sphenoid bone. See Plates 12, 20

sphenoparietal s. A sinus of the dura located along the posterior border of the lesser wing of the sphenoid bone.

straight s. A sinus of the dura running from the inferior sagittal sinus along the junction of the falx cerebri and tentorium to the transverse sinus. See Table of Veins in the Appendix. See Plates 10, 17 18.

subcapsular s. A lymph sinus between the capsule and the cortex of lymph node.

superior petrosal s. A sinus of the dura running in a groove in the petrous portion of the temporal bone from the cavernous sinus to the transverse sinus. See Table of Veins in the Appendix.

superior sagittal s. A sinus of the dura which runs along the upper edge of the falx cerebri, beginning in front of the crista galli and terminating at the confluence of the sinuses. See Table of Veins in the Appendix. See Plates 10, 17

terminal s. That bounding the area vasculosa of the blastoderm of meroblastic ova. Syn marginal s.

transverse s. (a) A sinus of the dura running from the internal occipital protuberance, following for part of its course the attached margin of the tentorium cerebelli, then over the jugular process of the occipital bone to reach the jugular foramen. Also called *lateral s.* See Table of Veins in the Appendix. See Plate 10. (b) A dorsal communication between the right and left sides of the pericardial cavity between the reflections of the epicardium at the arterial and venous attachments of the heart, passing behind the aorta and pulmonary artery and in front of the superior vena cava and left atrium.

tympanic s. A deep recess in the labyrinthine wall of the tympanic cavity whose inferior border is formed by the subiculum promontorii.

urogenital s. See definitive urogenital s., primitive urogenital s.

uterine s. A venous sinus in the wall of the gravid uterus.

venous s. of the sclera. A canal in the sclera close to the sclerocorneal junction running circularly around the periphery of the cornea. It gives rise to the anterior ciliary veins. Also called *Schlemm canal*.

vertebral s. See vertebral *plexus* (b)

si"nus i'tis (sigh nuh-sigh'tis, sin yoo- sigh ser) [*sinus*; G. *-itis*, inflammation]. Inflammation of sinus. M y affect any of the paranasal sinuses, as ethmoidal, frontal, or maxillary.

adenomatous s. Glandular s.

follicular s. A type of pathologic lesion in chronically infected sinuses, characterized by numerous lymph follicles.

glandular s. An extensive hyperplasia of the submucous glands of the nose, which in the advanced stage may become cystic; also called *adenomatous s.*

papillary s. Papillary hypertrophy of the mucosa of any of the paranasal sinuses.

si'nus·oid [*sinus*; G. *eidos*, form]. One of the relatively large spaces or tubes constituting part of the venous circulatory system in the suprarenal gland, liver, and other viscera. —**si''nusoi'dal**, *adj.*

si''nus·oi'dal [*sinus*; *eidos*]. 1. Varying in proportion to the sine of an angle or of a time function. 2. Pertaining to a sinus.

si''nus·oi''dal·i·za'tion (sigh''nuh·soy''dul·i·zay'shun, ·eye·zay'shun) [*sinus*; *eidos*]. The medical application of a sinusoidal current.

si''nus·ot'o·my (sigh''nuh·sot'o·mee, sigh''new·sot'o·mee) [*sinus*; G. *tomē*, a cutting]. The production of an artificial opening into a paranasal sinus, to promote drainage.

siomine. Trade-mark for $(CH_2)_6N_4I_4$; hexamethylenetetramine tetraiodide or methenamine tetraiodide. The substance occurs as an amorphous red powder insoluble in water, slightly soluble in alcohol. It is decomposed in the intestines with formation of methenamine and iodide, and is used for the effects of the iodide. The methenamine serves only to render the substance insoluble.

si'phon [G.]. A tube bent at an angle, one arm of which is longer than the other; used for the purpose of removing liquids from a cavity or vessel, by means of atmospheric pressure.

si'phon·age [*siphōn*]. The action of a siphon, such as washing out the stomach, drainage of wounds, by the use of atmospheric pressure.

Si''pho·nap'ter·a [*siphōn*; G. *pteron*, wing]. An order of insects, commonly called fleas. They have small, hard, laterally compressed bodies without wings, and the mouth parts are adapted for piercing and sucking. They feed exclusively upon the blood of birds and mammals and so become important disease vectors. The important genera are *Ctenocephalides*, *Echidnophaga*, *Pulex*, *Tunga*, and *Xenopsylla*.

Si·phun''cu·la'ta (sigh·funk''yoo·lay'tah, ·lah'tah) [L. *siphunculus*, a little pipe]. Suborder of Anoplura; the sucking lice.

Si·phun''cu·li'na (sigh·funk''yoo·lye'nuh) [*siphunculus*]. A genus of flies found in India.

S. funicola. The common eye fly of India which is responsible for transmitting conjunctivitis.

Sippy, Bertram Welton [*American physician*, 1866–1924]. Widely known for his advocacy of a diet adapted to the treatment of gastric and duodenal ulcer. The *Sippy diet* consisted of alternately taking Sippy's powders (see under *powder* 2) and a milk-cream mixture.

si'ren [G. *seirēn*, siren]. In *teratology*, sirenomelus.

si'ren-limb. See *sympus*.

si''re·no·me'li·a, si''re·nom'e·ly [*sirens*; *melos*, limb]. The condition of having fused lower extremities and no feet.

si''ren·om'e·lus [*sirēn*; *melos*]. A monster whose lower extremities are intimately fused, the feet being absent. Also called *sympus apus*.

si·ri'a·sis [G. *seiriasis*, heatstroke]. Sunstroke. *Obs.*

sir'up. See *syrup*.

sis''mo·ther'a·py. See *seismotherapy*.

Sisto, Genaro [*Argentinian pediatrician*, d. 1923]. Observed that constant crying is a sign of hereditary syphilis in infants; called *Sisto's sign*.

Sis·tru'rus [G. *seistron*, rattle; *oura*, tail]. A genus of small rattlesnakes.

site [L. *situs*, placed]. Situation.

placental s. The area to which the placenta is attached.

sit'fast'' [AS. *sittan*, *fæst*]. In *veterinary medicine*, a form of dry gangrene, resulting from pressure on a circumscribed area of the skin, with firm adherence of the dead tissue to the living tissue below through its continuity with fibrous elements of the underlying structures; affects horses.

sit''i·er'gi·a (sit''ee·ur'jee·uh, ·ee·ur'jee·uh) [G. *sitos*, food; *eirgein*, to shut out]. Hysterical anorexia. *Obs.*

sit''i·ol'o·gy (sit''ee·ol'o·jee, sigh''tee-). See *sitology*.

sit''i·o·pho'bi·a. See *sitophobia*.

si·tol'o·gy (sigh·tol'o·jee) [*sitos*; G. *logos*, word]. The science of foods; dietetics.

si''to·ma'ni·a [*sitos*; G. *mania*, madness]. An abnormal craving for food. Also spelled *sitiomania*.

si''to·pho'bi·a [*sitos*; G. *phobos*, fear]. Morbid aversion to food; morbid fear of eating.

si'to·stane, si·tos'tane. $C_{29}H_{52}$. A steroid hydrocarbon, probably the parent substance of sitosterols.

si·tos'ter·ol. Any one of the principal sterols of plants, probably derivatives of sitostane.

si''to·ther'a·py [*sitos*; G. *therapeia*, treatment]. Dietotherapy.

sit'ting height. In *anthropometry*, a measurement taken vertically from the table on which the subject is sitting to the vertex, with the anthropometer behind the subject. Enough pressure is applied to compress the hair.

si'tus [L.]. A position.

s. inversus. Altered location or position.

s. inversus viscerum. An anomaly in which the viscera are changed from the normal to the opposite side of the body. Also called *s. mutatus*, *s. transversus*.

s. perversus. Malposition of one or more of the viscera.

Sjögren, Tage Anton Ultimus [*Swedish surgeon*, 1859–1939]. The first to employ successfully radiation therapy in carcinoma and sarcoma (1899–1904).

SK Streptokinase.

skat'ole, ska'tole. C_9H_9N; methyl indole. A nitrogenous decomposition product of proteins, formed from tryptophan in the intestine. It contributes to the characteristic, disagreeable odor of feces.

skat·ox'yl. C_9H_9ON. A product of the oxidation of skatole. It occurs as the sulfuric acid ester in the urine in cases of disease of the intestine or in excessive intestinal putrefaction.

skein (skane). See *spireme*.

ske·lal'gi·a [G. *skelos*, leg; *algos*, pain]. Pain in the leg.

skel'e·tal trac'tion. Traction exerted directly upon the long bones themselves by means of pins, wire, tongs, and other mechanical devices which are attached to, or passed through, the bones by operative procedures.

skel''e·ti·za'tion [G. *skeletos*, dried up]. The process of converting into a skeleton; gradual wasting of the soft parts, leaving only the skeleton.

skel'e·to- [*skeleton*]. A combining form meaning *skeleton*.

skel'e·ton [*skeleton*]. A supporting structure, especially the bony framework supporting and protecting the soft parts of an organism. See Plates 1–24. —**skeletal**, *adj.*

appendicular s. The skeleton of the pectoral and pelvic girdles and limbs.

axial s. The skeleton of the head and trunk.

cartilaginous s. The cartilaginous precursor of most of the bony skeleton.

dermal s. The exoskeleton.

s. of the heart. The fibrous rings (*annuli fibrosi*) surrounding the four valvular orifices of the heart. The four rings are conjoined and attached to the upper membranous part of the interventricular septum (*pars membranacea septi*). All heart muscles arise from the cardiac skeleton and eventually return to be inserted therein.

Skene, Alexander Johnston Chalmers [*American gynecologist*, 1838–1900]. Remembered for his description of the tubular mucous glands in the female urethra opening just within the urinary meatus (1880), called *Skene's glands, paraurethral glands*. The duct of each is known as *Skene's duct*.

ske·nei'tis, ske·ni'tis [after A. J. C. *Skene*; G. *-itis*, inflammation]. Inflammation of the paraurethral glands, or Skene's ducts.

skene'o·scope" (skee'no-scope) [*Skene*; G. *skopein*, to examine]. An endoscope for use in examining Skene's glands.

ske·ni'tis. See *skeneitis*.

sk·e·cy·to·sis (skee-o-sigh-to'sis). See *shift to left*.

k·p·t· phy·lax'i·a, sk·p·to·phy·l·x'is. See *tachyphylaxis*.

skew de"vi·a'tion. A condition in which one eyeball is deviated upward and outward, the other inward and downward; sometimes observed in cerebellar disease.

skew foot. Metatarsus adductovarus.

skiabaryt. Trade-mark for barium sulfate and for mixtures of barium sulfate, sugar, and tragacanth suitable for use in roentgen examinations.

ski'a·gram [G. *skia*, shadow; *gramma*, letter]. The finished, printed roentgen-ray picture.

ski·ag'ra·phy [*skia*; G. *graphein*, to write]. Radiography.

ski·am'e·try (sky-am'i-tree) [*skia*; G. *metron*, a measure]. 1. Shadow mensuration applied to a method of determining the density of x-ray shadow. 2. The measurement of x-ray intensity for the determination of exposure time. 3. The measurement of accommodation by retinoscopy.

dynamic s. Refraction in which retinoscopy is performed with the accommodation active but controlled.

ski·a·po·res'co·py. See *retinoscopy*.

ski'a·scope [*skia*; G. *skopein*, to examine]. An instrument employed in retinoscopy.

ski·as'co·py (sky-ass'ko-pee) [*skia*; *skopein*]. 1. Examination with a retinoscope. 2. Examination with a fluoroscope.

ski"a·ther'a·py [*skia*; G. *therapeia*, treatment]. Old term for x-ray therapy.

skim"mi·an'ine. $C_{14}H_{13}NO_4$, an alkaloid from *Skimmia japonica* and other *Skimmia* species; identical with *β*-fagarine.

skin [ON. *skinn*]. The covering of the body composed of the epidermis (*cuticle*) or cuticle, and the corium (true skin) or derma. The epidermis consists of a deep layer, the stratum germinativum, and three superficial layers, the stratum granulosum, the stratum lucidum, and the stratum corneum. The corium, derma, or true skin consists of a papillary and reticular layer (stratum papillare and stratum reticulare), the former projecting upward in the form of papillae. The true skin is made up of fibroelastic connective tissue and, in some regions, smooth muscle (the arrectores pilorum). The subcutaneous tissue consists of fibroelastic and adipose tissue, blood vessels, and sweat glands in its upper portion. The appendages of the skin are the nails, hairs, and sweat, sebaceous and mammary glands, which are derivatives of the epithelial layer of the skin. In the skin are also placed terminal nerve organs subserving the senses of touch, pain, and temperature.

anserine s. Goose flesh; cutis anserina.

atrophic s. A wasting or retrogressive change in the skin. Also called *dermatrophia*.

bronzed s. See *adrenal cortical hypofunction*.

congestive s. Engorgement of the blood vessels of the skin. Also called *dermathemia*.

deciduous s. Keratolysis.

edematous s. Effusion of serum into the areolar tissue of the skin. Also called *dermatodyschia*.

farmer's s. See *sailor's s.*

fish s. See *ichthyosis*.

glossy s. A peculiar shiny skin seen in conditions in which the trophic nerve supply to the skin is cut off, as after injury to a nerve.

goldbeater's s. A thin tenacious sheet from the cecum of cattle, occasionally used as a surgical dressing.

goose s. See *goose flesh*.

india-rubber s. See *cutis* hyperelastica.

parchment s. Atrophy of the skin.

piebald s. See *vitiligo*.

pigmentation of the s. Coloration of the skin due to natural body pigments, or to the deposition of foreign substances in the skin. Natural pigments include melanin, hemosiderin, carotene, and bile salts. Foreign pigments include arsenic and silver salts.

sailor's s. A condition seen in exposed areas in elderly persons. There is pigmentation and senile keratosis, frequently leading to epithelioma. Also called *farmer's s.*

shark s. See *dyssebacia*.

toad s. A dry, roughened skin associated with vitamin-A deficiency.

true s. The corium.

skin graft'ing. The application of portions of the skin, either the outer layers or the full thickness, to a granulating wound to promote healing, to fill a defect, to replace scar tissue for plastic repair. Also see *graft*.

skin'ny [*skinn*]. 1. Cutaneous. 2. Emaciated.

skin trac'tion. Traction exerted by direct attachment to the skin, using adhesive plaster or linen or gauze strips cemented to the skin.

skiodan sodium. Trade-marked name for the radiopaque substance methiodal sodium.

skle·ri'·sis. See *scleroderma*.

Sklowsky, E. L. [*German physician, contemporary*]. Introduced a method of distinguishing varicella vesicle from the vesicles of smallpox and herpes. A very light pressure of the index finger near and then over the lesion will easily rupture the former while greater pressure is necessary to rupture the latter. This is known as *Sklowsky's symptom*.

Skoda, Josef [*Austrian physician*, 1805–81]. First to attempt systematic investigation of pulmonary disease on the basis of sounds observed in examination by percussion. Tympanitic resonance is also called *Skoda's resonance* or *tympany*.

sko"li·o'sis. See *scoliosis*.

sko"li·o·som'e·ter. See *scoliosometer*.

Skop'tsy. Religious sect in Russia whose members practice castration.

skull [ME. *skulle*]. 1. The entire bony framework of the head, consisting of the cranium and the face. The cranium is made up of the occipital, frontal, sphenoid, and ethmoid bones, and the two parietal and two temporal bones. The face is composed of two nasal, two lacrimal, two zygomatic, two palate, and two inferior turbinate bones, two maxillae, the vomer and the mandible. Sometimes loosely used to include only the fixed bones, excluding the mandible. See Table of Bones in the Appendix. See Plate 1. 2. In embryology, neurocranium (fixed bones of head and face listed in 1) and viscerocranium (derivatives of the visceral arches, such as the hyoid bone).

fenestrated s. Osteoporosis of the skull, as from osteomyelitis.
lacuna s. A congenital bony defect of the skull, restricted to the diploë and the inner table. See *craniofenestria*.
open-roofed s. See *cranioschisis*.
steeple s. See *oxycephaly*.
tower s. See *oxycephaly*.
skull'cap" [*skulle*; AS. *caeppe*]. 1. The bones comprising the vault of the skull; calvaria. 2. See *scutellaria*.
skunk cab'bage. *Symplocarpus foetidus*, the rhizome of which has been used as stimulant, antispasmodic, and narcotic in asthma, rheumatism, hysteria, and dropsy.
Skutsch, Felix [*German gynecologist*, 1861–1951]. Remembered for his operation of salpingostomy in which he excised an oval portion of tissue from the abdominal end of the uterine tube, uniting the mucous and serous surfaces with silk sutures around the opening, the new ampulla being sutured to the ovary; called *Skutsch operation*.
slake [AS. *slacian*]. 1. Quench or appease. 2. Disintegrate by the action of water.
slap'ping. *I.* massage, percussion movements in which the hands with palms open come down alternately in a sharp series of blows. The movement is carried out chiefly from the wrist.
slav'er [cf. Icel. *slafra*]. Drivel; saliva, especially that which is discharged involuntarily.
sleep [AS. *slǣp*]. The periodic state of rest in which there is diminution of consciousness and activity.
hypnotic s. See *hypnotism*.
paroxysmal s. See *narcolepsy*.
sleep'ing sick'ness. Lethargic encephalitis.
sleep'less-ness. See *insomnia*.
sli'cer [ME. *slice*]. Tissue slicers for making fresh tissue slices for studies of respiration include such types as Martin, Stadie-Riggs, template, Terry Thomas De Eds. See *microtome*.
slide [AS. *slidan*]. A piece of glass on which objects are examined by use of the microscope.
sling [ME.]. A bandage, usually slung from the neck, to support the arm or wrist.
sling and swathe. A dressing for fractures of the humerus at the upper end. It consists of a three-cornered handkerchief sling holding the arm at the side, the forearm flexed at 90° with an axillary pad, the swathe passing about the body and arm from shoulder to elbow and secured by pins.
slit [AS. *slite*]. A narrow opening; visceral cleft; the separation between any pair of lips.
genitourinary s. The urogenital opening.
Sloan, Gary Arthur [*American surgeon*, 1889–]. Introduced an incision for upper abdominal surgery called *Sloan incision*.
slough (sluf) [ME. *slughe*]. A mass of necrotic tissue in, or separating from, living tissue, as in a wound or ulcer.
slows. See *trembles*.
Sluder, Greenfield [*American laryngologist*, 1865–1928]. Introduced a snare for use in tonsillectomy called *Sluder's snare*. His operation, in which he used this snare to excise completely the tonsil in its capsule, is called *Sluder's method* or *operation*. The syndrome of sphenopalatine ganglion neuralgia is called *Sluder's syndrome* or *neuralgia*.
sludge. Sewage deposit.
slum'ber [AS. *sluma*]. Light sleep. —**slum'ber**, *v.*
Slye, Maud [*American pathologist*, 1879–1954]. Noted for her work on cancer and heredity (1928). Her selective breeding of mice, both resistant to and capable of developing cancer, has shown that there is hereditary influence determining susceptibility to cancer type, site of malignancy, and age at which it is likely to occur.

Sm. Chemical symbol for samarium.
small'pox" [AS. *smael*, *pocc*]. A contagious infectious disease often fatal, ushered in with severe febrile symptoms, which, in the course of two or three days, are followed by a papular eruption appearing over all parts of the body. The eruption passes successively through the states of maculation, vesiculation, pustulation, and later crust formation; after this a pitted appearance of the skin (pock-marks) is produced. The period of incubation is twelve to twenty-one days. The papules appear about the third day, pustules the sixth day, crusting the twelfth day.
black s. See hemorrhagic *s.*
bovine s. Vaccinia.
coherent s. A form in which the pustules coalesce but retain their individuality.
confluent s. A severe form in which the pustules spread and run together.
discrete s. A form in which the pustules preserve their distinct individuality.
equine s. Horsepox.
hemorrhagic s. Smallpox in which hemorrhage occurs into the vesicles, which gives them a blackish appearance.
malignant s. A severe hemorrhagic type with high mortality.
modified s. See *varioloid*.
s. inoculation. A method formerly used for protecting or attempting to protect against a severe attack of smallpox in adult life, by the direct transfer of the virus from a sick patient to a well person.
s. vaccine. See under *vaccine*.
smear [AS. *smeoru*]. Preparation of secretions or blood for microscopical study made by spreading them on a glass slide.
Smee, Alfred [*English surgeon*, 1818–77]. Described an electric cell composed of one zinc plate and one of platinized silver in dilute sulfuric acid, called *Smee cell*.
smeg'ma [G., soap, unguent]. Sebum. —**smegmatic**, *adj.*
s. clitoridis. The substance secreted by the sebaceous glands of the clitoris and labia minora.
s. embryonum. See *vernix caseosa*.
s. praeputii. The substance secreted by the sebaceous glands of the prepuce.
smell [ME. *smellen*]. 1. The perception of odor. 2. Odor.
Smellie, William [*English obstetrician*, 1697–1763]. Devised several types of obstetric forceps, some with lock and curved blades, called *Smellie's forceps*. Developed craniotomy scissors, called *Smellie's scissors*. His method of delivery of the aftercoming head with the child resting on the physician's forearm is known as the *Smellie method*, *Smellie-Veit method*, *Mauriceau's method*.
smell'ing salts. A preparation containing ammonium carbonate and stronger ammonia water usually scented with aromatic substances.
smi'la-cin. A saponin from sarsaparilla, identical with parillin.
smi·lag'e·nin. $C_{27}H_{44}O_3$; the steroidal aglycone of smilasaponin, a glycoside of sarsaparilla; an isomer of sarsasapogenin. Syn., *isosarsasapogenin*.
smi"la·sap'o·nin. A glycoside from sarsaparilla; on hydrolysis it yields the aglycone smilagenin.
smi'lax. See *sarsaparilla*.
Smith, Edwin [*American Egyptologist*, nineteenth century]. Remembered for his acquisition (1862) of the oldest known medical writing of ancient Egypt, the manuscript dating from the seventeenth century B.C. It has been published in facsimile with translation by James Henry Breasted, as the *Edwin Smith papyrus*.

Smith, Grafton Elliot (1871–1937) English neuroanatomist known for his fundamental work in comparative anatomy and in the study of the evolution of the nervous system, particularly comparative analyses of the fissural pattern of the cerebral cortex. He furthered the understanding of the development of speech and of binocular vision.

Smith, Henry [*English surgeon of the Indian medical service*, 1862–1948]. Famous throughout the world for his original clinical work on the extraction of immature cataract within the capsule (ca. 1900) known as *Smith operation*.

Smith, John Blackburn [*English surgeon*, 1865–1928]. Devised method for staining flagella; known as *Smith-Pitfield method*.

Smith, Nathan [*American surgeon*, 1762–1829]. Wrote extensively on typhus (1824). Performed oophorectomy (1822). Described amputation at the knee, using large anterior and smaller posterior flap called *Smith operation*. Described osteomyelitis (1827).

Smith, Richard Root [*American surgeon*, 1869–1940]. Remembered for his ingenuity in devising type of skin closure after radical amputation of the breast. The operation is done through long incision from below the center of the clavicle, around the inner border of the breast, vertically downward to the costal margin, and lateral five or six inches. A second incision joins the first, completing the circle around the breast. By mobilizing the flaps thus formed, plastic skin repair can be made with closure of the defect through the transference of large skin areas to new positions. Called *Smith incision*.

Smith, Theobald [*American pathologist*, 1859–1934]. With D. E. Salmon, demonstrated that dead virus can give immunity against living virus (1884). Discovered the parasite of Texas cattle fever and that it is transmitted by the tick (1893). Differentiated human and bovine tuberculosis (1898). Sensitization to specific foreign proteins on inoculation is called *Theobald Smith phenomenon*. Richet gave it the name of *anaphylaxis*.

Smith, Thomas [*English pathologist*, 1833–1909]. Reported case of craniohypophyseal xanthomatosis, later called *Hand-Schüller-Christian disease* (1865).

Smith, Walter George [*Irish physician*, 1844–1932]. Devised test for bile in the urine. A positive test is the appearance of green color at the interface between the urine and tincture of iodine called *Smith test*.

Smith's method. See erythrocyte sedimentation test.

Smith-Dietrich stain. See under stain.

Smith-Hodge pessary. See retroversion pessary.

Smith-Petersen, Marius Nygaard [*American physician*, 1886–1953]. Outstanding authority on fractures. Devised supraarticular subperiosteal approach to the hip joint (1917) called *Smith-Petersen incision*. Devised flanged metal nail used for intracapsular fractures of the neck of the femur called *Smith-Petersen nail*.

Smithwick, Reginald Hammerick [*American surgeon*, 1899–]. Known for his introduction of an operation for hypertension, in which he resected the greater splanchnic nerve and the sympathetic chain from the ninth thoracic through the first lumbar ganglion, through a transdiaphragmatic extrapleural incision; called *lumbodorsal splanchnicectomy*, *Smithwick operation*.

smudge cells. See basket cells under cell.

smudg'ing [ME. *smogen*]. A form of defective speech in which the difficult consonants are dropped.

smut [LG. *smut*]. 1. A fungous disease of plants involving the grains wheat, rye, oats, and corn. 2. A fungus producing such disease; common allergen.

Sn Chemical symbol for tin.

SN 7618 See *chloroquine*.

SN 13,274 Isopentaquine.

SN 13,276 See *pentaquine*.

snail [AS. *snaegel*]. An invertebrate of the order Gastropoda, phylum Mollusca. Important hosts of many of the flukes.

snake [AS. *snaca*]. An elongate reptile covered with scales and without limbs, external ears, or functional eyelids; serpent.

black s. A poisonous snake of Australia. See *Pseudechis porphyriacus*.

brown s. A venomous snake of New Guinea and Australia. See *Pseudechis scutellatus*.

copperhead s. See *Ancistrodon mokasen*.

coral s. A small, brightly colored snake found in America; the venom is neurotoxic. See *Leptomicrurus*, *Micrurus*.

cottonmouth s. A thick-bodied pit viper found in or near water; the water moccasin. See *Ancistrodon piscivorus*.

poisonous snakes. The venom-producing snakes, which are divided into four families: Elapidae, the cobras and coral snakes; Hydrophiidae, the sea snakes; Crotalidae, the pit vipers; and Viperidae, the true vipers. All have large, hypodermic-like front fangs by which venom is injected.

sea s. A venomous snake found in the ocean near northern Australia and southern Asia. See *Hydrophiidae*.

tiger s. An important poisonous snake of Australia which is named for its marking of dark bands on yellow-buff. See *Notechis scutatus*.

snake root [snaca, AS. *rōt*]. Any of various plants, such as species of *Asarum*, *Cimicifuga racemosa*, or *Eupatorium rugosum*, most of which have been used as remedies for snakebite.

snap [MD. *snappen*]. A short, abrupt sound heard in auscultation of the heart in certain cardiac diseases. Also applied to the sound made by the action of a tendon on contraction of its muscle.

snare [AS. *snear*]. An instrument designed to hold a wire loop which can be constricted by means of a mechanism in the handle, and used to remove tonsils, polyps, and small growths having a narrow base or pedicle.

sneeze [ME. *snesen*]. A sudden, noisy spasmodic expiration through the nose. It is caused by irritation of nasal nerves or overstimulation of the optic nerve by a very bright light. —**sneeze**, v.

Snell, Simeon [*English ophthalmologist*, 1851–1909]. Known for his laws of refraction. (1) With any two adjacent mediums, the sine of the angle of incidence bears a fixed ratio to the sine of the angle of refraction, the ratio varying with different mediums; called *Snell's* or *Descartes' law*. (2) The incident and the refracted ray are in the same plane, which is perpendicular to the surface separating the two mediums; called *Snell's law*.

Snell-Strong method. See under method.

Snellen, Hermann [*Dutch ophthalmologist*, 1834–1908]. Introduced a number of ophthalmic procedures, including operations for ectropion and entropion. An operation for ptosis in which he shortened the levator tendon by section or tucking is called *Snellen's operation*. An ophthalmologic test chart which measures the degree of visual acuity is called the *Snellen chart*. See also *Snellen's reflex*, test type, Snellen *test*.

snore [ME. *snoren*]. Breathe through the nose in such a manner as to cause a vibration of the soft palate, thereby producing a rough, audible sound.

Snow, John [*English physician*, 1813–58]. Contributed valuable study on the water-borne character of cholera (1849). He was pioneer anesthetist, using extensively both chloroform and ether (1848–58).

snow'blind"ness. Photophobia and conjunctivitis due to exposure of the eyes to ultraviolet rays; also spelled *snow blindness*.

snuff'box. See *anatomist's snuffbox*.

soap [AS. *sāpe*]. A salt of one or more of the higher fatty acids with an alkali or metal. Soaps may be divided into two classes, soluble and insoluble. The soluble soaps are the detergent or cleansing soaps, and usually are prepared from the alkali metals, sodium and potassium. The insoluble soaps are *salts of the fatty acids and metals of other groups*. Soap is used chiefly as detergent and in solution as vehicle for liniments. In constipation, solution of soap forms useful enema. In skin conditions, soap is useful, not merely because of its detergent action but also because it softens the horny layer of the epidermis and has distinct germicidal power. In pharmacy soap is an excellent emulsifying agent when the mixture is intended for external use. Soap is also used in making pills, liniments, and plasters.

castile s. A hard soap usually prepared from sodium hydroxide and olive oil. Much commercial castile soap contains coconut oil soap to increase its lathering quality.

compound green s. tincture. Compound soft soap liniment.

compound soft s. liniment (*linimentum saponis mollis compositum*). Contains soft soap, 180 Gm.; juniper tar 20 cc.; alcohol, sufficient quantity to make 1000 cc. Used as detergent in parasitic skin diseases. Also called *compound green s. tincture*.

curd s. A soap usually made from sodium hydroxide and animal fats and oils. It is used largely for domestic purposes.

disinfectant s. A soap containing some form of disinfectant, such as phenol, cresol, or some salt of mercury.

floating s. A soap in which air bubbles have been incorporated.

green s. See medicinal soft s.

green s. tincture. Soft soap liniment.

hard s. (*sapo durus*). A soap made with sodium hydroxide. Hard soap occurs as white solid in the form of bars, or white or yellowish white fine powder. Hard soap is used in the following preparations: camphor and soap liniment, chloroform liniment, aloe pills, and N.F. dentifrices.

hard water s. Marine soap.

hexachlorophene s. One containing the anti-infective agent hexachlorophene.

liquid s. A solution of soap used as an economical and sanitary substitute for soap in public places.

marine s. A soap for use with sea water or with water containing calcium or magnesium salts. Ordinary soap is unsatisfactory with such water, as the soap is precipitated by the salts contained therein. Marine soaps usually contain coconut or palm kernel oil. Also called *salt water soap*.

medicinal soft s. (*sapo mollis medicinalis*). A potassium soap made by the saponification of vegetable oils, excluding coconut oil and palm kernel oil, without the removal of glycerin; occurs as soft, unctuous, yellowish white to brownish or greenish yellow transparent to translucent, mass; 1 in 20 solution is alkaline to indicators. Soft soap possesses the detergent properties of soap in general, but because of its alkaline reaction has active medical virtues as topical remedy. It is useful in many forms of skin diseases. Also called *green soft s.*

potash s. A soft soap. See medicinal soft s.

s. liniment. See *camphor* and soap liniment.

soda s. See hard s.

soft s. liniment (*linimentum saponis mollis*). Contains medicinal soft soap, 650 Gm.; lavender oil, 20 cc.; alcohol, sufficient quantity to make 1000 cc. Used as detergent and largely employed for cleansing the skin preceding surgical operations. It is also used in certain skin diseases. It exerts mild germicidal action because of its alcohol and alkalinity. Also called *green s. tincture*.

solid s. liniment (*linimentum saponis spissum*). A liniment made into solid form by sodium stearate and containing camphor, oils of thyme and rosemary, diluted solution of ammonia and alcohol. *Used as mild stimulating liniment.* Also called *solid opodeldoc, camphorated s. liniment*.

transparent s. Soap made transparent by the presence of glycerin, alcohol, or sucrose.

sob [ME. *sobben*]. A convulsive inspiration due to contraction of the diaphragm and spasmodic closure of the glottis. —**sob**, *v.*

sobisminol mass. A complex organic bismuth product obtained by the interaction of sodium bismuthate, triisopropanolamine, and propylene glycol; it contains approximately 30% of bismuth; occurs as red-brown to chocolate-brown pasty mass, soluble in water and alcohol. It has been used in the treatment of syphilis.

so-cal'oin. Aloin obtained from Socotrine aloes.

so'cial [L. *socialis*, belonging to companionship]. Gregarious; growing near or together.

so'cial med'i·cine. See social medicine.

so'ci·a pa·rot'i·dis (so'shee-uh, so'see-uh) [L.]. Old term for small, separate lobe of the parotid gland.

so·ci'e·ty screw. The screw at the lower end of the drawtube or body tube of microscope for receiving the objective.

Socin, August [*Swiss surgeon*, 1837–99]. An advocate of radical cure of inguinal hernia by ligature and excision of the sac; sometimes called *Socin operation*. Incised through healthy thyroid tissue and enucleated neoplasms to avoid cachexia strumipriva; also called *Socin operation*.

so·ci·ol'o·gy [L. *socius*, companion; G. *logos*, word]. The science of mutual relations of people and of social organization.

so·ci·o·med'i·cal [*socio*; L. *medicus*, medical]. Referring to the relationship between social welfare and medicine.

so'ci·o·path'ic per·son·al'i·ty dis·turb'ance. See under personality.

sock'et [AF. *soket*]. The concavity into which movable part is inserted.

dry s. Alveolitis after tooth extraction; without suppuration, but associated with pain.

tooth s. The alveolus in which the tooth is fixed.

so·cor'di·a [L., folly]. Hallucination.

so'da [Ar. *suda'*, splitting headache]. Sodium carbonate.

baking s. Sodium bicarbonate.

caustic s. Sodium hydroxide.

chlorinated s. solution. Sodium hypochlorite solution.

sal s. Sodium carbonate.

s. ash. Commercial sodium carbonate, essentially anhydrous but containing more or less impurity.

s. lime (*calx sodica*). A mixture in granular form of calcium hydroxide with sodium hydroxide or potassium hydroxide or both; occurs as white or grayish white granules. Used to absorb carbon dioxide in basal metabolism tests, in rebreathing anesthesia machines, and in oxygen therapy. Also used to absorb carbon dioxide in various chemical manipulations.

s. lye. Sodium hydroxide.
s. mint. Solution of soda and mint.
s. niter Sodium nitrate.
s. water W ter charged with carbon dioxide gas.
washi g s. Sodium carbonate.

so da mide sod mi'ide. N NH ; sodium amide, prepared by th interaction of sodium and gaseous or liquid ammonia white crystalline powder decomposable by water to sodi m hydroxide and ammonia used in various syntheses.

so di-o- [sodi]. A combining form denoting compound containing sodium.

so'di-um [sodi'] (natrium) N = 22.991. A metallic element of the alkali group of metals. Light, silver-white, and lustrous when freshly cut, but rapidly oxidizes when exposed to air becoming dull and gray Sodium violently decomposes water forming sodium hydroxide and hydrogen. It also decomposes alcohol and other liquids containing hydroxyl groups. It is usually stored under kerosene in tightly stoppered containers. Sodium metal and its salts are widely used in industry and in medicine. The sodium ion is the least toxic of all the metallic ions, and is therefore the base of choice when it is desired to obtain the effects of various acid ions. See Table of Normal Values of Blood Constituents in the Appendix.

anticoagulant s. citrate solution. A solution of 4 Gm of sodium citrate in sufficient water for injection to mak 100 cc.

aromatic s. perborate (*sodii perboras aromaticus N.F.*) Sodium perborate containing 0.4% each of soluble saccharin and peppermint oil. Used as dentifrice, and in solution as mouthwash and gargle.

compound s. borate solution (*liquor sodii boratis compositus*) Contains sodium borate 15 Gm., sodium bicarbonate 15 Gm., liquefied phenol 3 cc., glycerin 35 cc., distilled water sufficient quantity to make 1000 cc. Used as nonirritant wash for the mucous membranes. Also called *Dobell' solution.*

dextrose a d s. chloride injection (*injectio dextrosi et sodii chloridi*) A sterile solution of dextrose and sodium chlorid in water for injection. Administered parenterally when dextrose is required, to supply fluid, to sustain blood volume temporarily or to produce diuresis.

diluted s. hypochlorite solution (*liquor sodii hypochloritis dilutus*) Each 100 cc. contains 0.45–0.50 Gm of NaOCl, equivalent to 0.43–0.48 Gm. of vailable Cl occurs as colorless or faintly yellow liquid This solution possesses powerful germicidal action and is applied by method of continuous irrigation. Also called *modified Dakin solution.*

effervescent s. phosphate (*sodii phosphas effervescens*) Sodium phosphate made into an effervescent salt by the addition of citric and tartaric acids and sodium bicarbonate. Used as pleasant means of administering sodium phosphate. Dose, 8–15 Gm. (2–4 dr)

exsiccated s. arsenate (*sodii arsenas exsiccatus*) Na_2HAsO_4 Occurs as an amorphous, white powder 1 Gm dissolves in bout 3.5 cc of water; slightly soluble in alcohol. The arsenic in this compound is reduced in the body to exert an ffect similar to that of trivalent arsenic. It is usually administered in solution. Dose 1.6–4.0 mg. (1/40 1/16 gr) Also called *dried arsenate.*

exsiccated s. phosphate (*sodii phosphas exsiccatus*) Sodium phosphate rendered free of its water of crystallization Used in preparing the effervescent salt. Also called *dried s. phosphate.*

exsiccated s. sulfite (*sodii sulfis exsiccatus*) Na_2SO_3. Occurs as white powder; 1 Gm. dissolves in bout 4 cc. of water sparingly soluble in alcohol. It is used as preservative in some acid glycerite.

isotonic s. chloride solution (*liquor sodii chloridi isotonicus*) Contains 0.9 Gm. of NaCl each 100 cc. This solution provides simple, watery fluid which is pproximately isotonic with the body fluids and free from drug action Used for washing mucous membranes and ra surfaces and as a nonirritating solvent for parenteral injection of drugs. It is also used, by parenteral injection, for the restoration of the body water dehydration or for the temporary replacement of the circulating blood volume. Also called *normal saline solution, physiological salt solution, physiological s. chloride solution.* The injectable preparation, made with water for injection, is called *sodium chloride injection.*

monohydrated s. carbonate (*sodii carbonas monohydratus*) $Na_2CO_3.H_2O$ Occurs as colorless crystals or white, granular powder 1 Gm dissolves in 3 cc. of water; insoluble in alcohol. It is used primarily for pharmaceutical purposes; medicine it is used chiefly in the preparation of alkaline baths and occasionally as an antacid. Dose, 0.3–2.0 Gm. (5–30 gr)

one-sixth molar s. r-lactate. Sodium lactate oxidized in the body to carbonate. This solution is used in the treatment of acidosis. It is approximately isotonic with the blood. Also used for the purpose of alkalizing the urine. Dose, subcutaneously or intravenously rate not greater than 300 cc. per hour (60 drops per minute) Also called *sodium lactate injection* (*injectio sodii lactatis*)

s. acetat (*sodii acetas*) $NaC_2H_3O_2.3H_2O$. Occurs as colorless, transparent crystals or granular, crystalline powder 1 Gm. is soluble in about 1 cc. of water and about 19 cc. of alcohol It diuretic, acting much like potassium acetate Dose, 1.3–8.0 Gm. (20–120 gr)

s. ac tri zo ate. Official generic name for sodium 3-acetylamino-2,4,6-triiodobenzoate $C_9H_5I_3NNaO_3$ contrast medium. See *urokon sodium.*

s. acid phosphate. See *s. biphosphate.*
s. acid sulfate. Sodium bisulfate
s. acid tartrate. Sodium bitartrate

s. alginate. The sodium salt of alginic acid. A gelatinous substance btained from various seaweeds. I cold water it dissolves to form a mucilage similar to acacia, but more viscous. Used in pharmaceutical compounding as suspending agent.

s. alizarin sulfonate. Alizarin red S.

s. aluminate. $NaAlO_2$ is white, granular masses, very soluble in water; used as water softener and in many industrial applications.

s. alurate. See under *alurate.*

s. mide. Sodamide.

s. ammoni m phosphate. $NaNH_4HPO_4.4H_2O$ colorless crystals or hite granules, freely soluble in water used as reagent for determination of magnesium. Syn., *microcosmic salt.*

s. mytal. See under *amytal.*

s. ntimony tartrate. Antimony sodium tartrate.

s. arsanilate Atoxyl.

s. rsenate. $Na_2HAsO_4.7H_2O$; colorless, efflorescent crystals, freely soluble in water also vailable as exsiccated sodium arsenate It has been used therapeutically for the effect of arsenic.

s. arsenat solution (*liquor sodii arsenatis*) An aqueous solution of sodium arsenate containing 1 Gm. of Na_2HAsO_4 in each 100 cc. Dose, 0.2–0.3 cc. (3–5 min.)

s. arsenite. Approximately $NaAsO_2$; white or grayish-white powder freely soluble in water; an insecticide.

s. ascorbate. $C_6H_7O_6Na$. The sodium salt of ascorbic acid. This salt possesses the activity of ascorbic acid and is used when parenteral therapy is indicated.

s. aurothiomalate. Gold sodium thiomalate. See myochrysine.

s. azide. NaN_3. A compound which has inhibiting action on many Gram-negative bacteria and can be used to allow growth of Gram-positive organisms in mixture.

s. barbital. See *barbital* sodium.

s. benzoate (*sodii benzoas*). C_6H_5COONa. Occurs as white, granular salt or crystalline powder; 1 Gm. dissolves in 2 cc. of water and in 60 cc. of mixture of 47.5 cc. of alcohol and 3.7 cc. of water. Occasionally used in the treatment of rheumatism, either acute or chronic, but less efficient than the salicylates. Also used as urinary antiseptic, but the ammonium salt is generally preferred. By intravenous injection, it is used as liver function test. Also used as food preservative. Dose, 1-2 Gm. (15-30 gr.); intravenously for liver function test, 20 cc. of solution containing 1.77 Gm. (27 gr.) of sodium benzoate.

s. benzosulfimide. See saccharin sodium.

s. biborate. Sodium borate.

s. bicarbonate (*sodii bicarbonas*). $NaHCO_3$. Occurs as white, crystalline powder. 1 Gm. dissolves in 10 cc. of water; insoluble in alcohol. Used as antacid alkali for the relief of hyperacidity of the stomach, blood, or urine. As local remedy its solution is used for washing the nose or mouth. A saturated solution is used as an application for minor burns. In pharmacy it is used in the preparation of effervescent salts. Dose, 0.6-4.0 Gm. (10-60 gr.). Syn., *baking soda*.

s. bichromate. Sodium dichromate.

s. biphosphate (*sodii biphosphas*). $NaH_2PO_4.H_2O$. Occurs as colorless crystals or white, crystalline powder; freely soluble in water but almost insoluble in alcohol. Used for the purpose of increasing the acidity of the urine. Dose, 0.6-2.0 Gm. (10-30 gr.). Also called *s. dihydrogen phosphate*, *monosodium orthophosphate*, *s. acid phosphate*.

s. bismuthate. $NaBiO_3$; yellow to yellowish-brown powder which slowly decomposes, especially in the presence of moisture; reagent. It has been used in treating syphilis.

s. bismuth iodide. See s. iodobismuthite.

s. bismuth thioglycollate. See *thio-bismol*.

s. bismuthyl tartrate. See bismuth and sodium tartrate.

s. bisulfate. $NaHSO_4.H_2O$; colorless crystals, very soluble in water; reagent having many important industrial uses. Syn., *acid sulfate*.

s. bisulfite. The substance known by this name, corresponding to the formula $NaHSO_3$, actually has the composition $Na_2S_2O_5$, corresponding to sodium metabisulfite or (International Pharmacopoeia) sodium pyrosulfite; white, crystalline powder; freely soluble in water. It has been used internally as an antiseptic in gastric fermentation, externally in treatment of parasitic diseases. It prevents oxidative deterioration of certain injections.

s. bitartrate. $NaHC_4H_4O_6.H_2O$; white crystals, freely soluble in water; used as reagent and to treat media. Syn., *sodium acid tartrate*.

s. borate (*sodii boras*). $Na_2B_4O_7.10H_2O$. Occurs as colorless, transparent crystals or white, crystalline powder. 1 Gm. dissolves in 16 cc. of water and in about 1 cc. of glycerin; insoluble in alcohol. Used as wash for ulcers and abscesses, and for inflammatory conditions of the mucous membranes. Syn., *borax*, *s. tetraborate*.

s. bromate. $NaBrO_3$; colorless crystals or white granules or powder; freely soluble in water; used as an oxidizing agent.

s. bromide (*sodii bromidum*). NaBr. Occurs as white crystals or white, crystalline powder; 1 Gm. dissolves in 1.2 cc. of water and 16 cc. of alcohol. Its action and uses are similar to those of potassium bromide. Dose, 0.6-4.0 Gm. (10-60 gr.)

s. cacodylate (*sodii cacodylas*). $Na(CH_3)_2AsO_2.3H_2O$. Sodium dimethylarsonate; occurs as white crystals or white, crystalline powder; 1 Gm. dissolves in about 0.5 cc. of water and in about 2.5 cc. of alcohol. Like other pentavalent arsenicals, it is changed in the body into the trivalent state and becomes therapeutically active. Its uses are similar to those of arsenic. Its advantages over arsenic lie in its lower toxicity and in that it can be given hypodermically. Dose, 0.015-0.130 Gm. (¼-2 gr.)

s. carbonate. (a) $Na_2CO_3.10H_2O$. Usually in colorless, transparent, efflorescent crystals soluble in water; insoluble in alcohol. Occasionally used in pharmacy and medicine like monohydrated sodium carbonate. Syn., *soda*, *washing soda*, *sal soda*. (b) $Na_2CO_3.H_2O$. Monohydrated sodium carbonate. (c) Na_2CO_3. Anhydrous or exsiccated sodium carbonate, sometimes used like monohydrated sodium carbonate.

s. carboxymethylcellulose. $ROCH_2COONa$, where R represents cellulose; white to light buff hygroscopic powder forming viscous solutions with water; synthetic hydrophilic colloid gum, used to increase viscosity of aqueous systems, as protective colloid, and in medicine as colloid laxative and antacid.

s. cevitamate. Sodium ascorbate.

s. chlorate. $NaClO_3$; colorless crystals or white granules, freely soluble in water; an oxidizing agent and weed killer.

s. chloride (*sodii chloridum*). NaCl. Occurs as colorless crystals or white, crystalline powder; 1 Gm. dissolves in 2.8 cc. of water; slightly soluble in alcohol. Sodium chloride constitutes the greater part of the inorganic constituents of blood serum and, therefore, is the salt preferred for making solutions isotonic with the blood. Externally sodium chloride in saturated solution tends to relieve congestion and exudation and is useful in sprains and bruises.

s. chromate. $Na_2CrO_4.4H_2O$; yellow somewhat deliquescent crystals, very soluble in water; used as reagent and to protect iron against corrosion and rusting.

s. citrate (*sodii citras*). $Na_3C_6H_5O_7.2H_2O$. Occurs as colorless crystals or white, crystalline powder; 1 Gm. dissolves in 1.5 cc. of water; insoluble in alcohol. It is used, like potassium citrate, to restore the carbonate reserve of the blood and to overcome excessive acidity of the urine. Also used as diuretic, expectorant, and sudorific, and as an anticoagulant in the indirect transfusion of blood. Dose, 1-4 Gm. (15-60 gr.)

s. citrate, acid. $C_6H_7O_7Na.H_2O$; monosodium citrate; white powder soluble in water having the uses of sodium citrate, but its solutions are not alkaline in reaction.

s. citrate solution (*liquor sodii citratis*). Each 100 cc. contains 2.75 Gm. of $Na_3C_6H_5O_7.2H_2O$; it is prepared from citric acid 2.0 Gm., sodium bicarbonate 2.5 Gm., and distilled water, sufficient quantity to make 100 cc. Dose, 15 cc. (4 fluidrachms)

s. cobaltinitrite. $Na_3Co(NO_2)_6$; yellow to

brownish-yellow crystalline powder very soluble in water reagent for detection of potassium.

s. cyanide. NaCN white granules or fused pieces, freely soluble in water th aqueous solution is markedly alkaline and quickly decomposes: used as fumigant and in industry

s. deficit. A deficit of water and of some electrolytes results if sodium chloride is withdrawn from the diet.

s. dehydrocholate. The sodium salt of dehydrocholic acid; occurs as a fine, colorless, crystalline powder; soluble in water and alcohol. It is useful for its ability to increase the volume of the bile to encourage drainage of the bile ducts for the removal of mucus, inspissated bile, and debris, and to prevent the ascent of infection in these structures. It is also useful in the determination of the arm to tongue circulation time as diagnostic aid in certain conditions affecting the velocity of the blood flow

s. dichromate. $N_2Cr_2O_7.2H_2O$; red, somewhat deliquescent crystals, very soluble in water used as an oxidizing agent. Syn., *sodium bichromate.*

s. diethylbarbiturate. Barbital sodium.

s. diethyldithiocarbamate. $(C_2H_5)_2N\ CS_2N$; colorless or white crystals, freely soluble in water used as reagent for determining small amounts of copper

s. dihydrogen phosphate. Sodium biphosphate.

s. diphenylhydantoin, s. diphenylhydantoinate. See *diphenylhydantoin sodium.*

s. estrone sulfate. An oral estrogenic hormone.

s. ethoxide. Sodium thylate.

s. ethylate. C_2H_5ONa white or yellowish powder decomposable by water into sodium hydroxide and alcohol. An alcoholic solution has been used as an escharotic. Syn., *sodium ethoxide.*

s. ethylmercurithiosalicylate. Thimerosal.

s. fluoride. NaF; colorless crystals or white powder sol ble in water used as an insecticide and for disinfecting fermentation apparatus, preserving wood, and fluoridating drinking water

s. fluoroacetate. A rodenticide. Also called *compound 1080.*

s. fluosilicate. Sodium silicofluoride.

s. folate. $C_{19}H_1\ N\ N\ O_6$; the form in which folic acid is prepared to btain water-soluble solutions for injection yellow to orange-yellow solution having pH of 8.5 to 11 It has the actions of folic acid

s. formaldehyde sulfoxylate. $CH_2OHSO_2Na.2H_2O$ Occurs as white, crystalline powder sol ble in water but sparingly sol ble in alcohol. It has been used as an antidote for poisoning by bichloride of mercury

s. formate. HCOON white, deliquescent granules or crystalline powder freely soluble in water used in industry and as reagent; in medicine it has been used as caustic and astringent

s. glutamate Monosodium glutamate.

s. glycerophosphate (*sodii glycerophosphas*) $N_2C_3H_5(OH)\ PO_4\ 5\frac{1}{2}H_2O$ Occurs as white, scalelike crystals or white powder; 1 Gm. dissolves i bout 1.5 cc. of water it is nearly insol ble in alcohol It has been used as nerve tonic but clinical evidence shows its usefulness to be slight.

s. glycocholate. The sodium salt of glycocholic acid, usually containing also som sodium taurocholate constituent of the bile of man and of herbivora white to yellowish powder hygroscopic, sol ble in water used as choleretic and cholagogue

s. gold thiosulfate Gold sodium thiosulfate.

s. hexametaphosphate. See under *s. metaphosphate.*

s. hydnocarpate. The sodium salts of the fatty acids of chaulmoogra oil; yellowish powder soluble in water used in the treatment of Hansen disease (leprosy)

s. hydrosulfite. 1. $Na_2S_2O_4$; a white or grayish-white, crystalline powder very soluble in water used as reducing agent. Syn *sodium sulfoxylate* 2. $NaHSO_3$; white powder soluble in water.

s. hydroxide (*sodii hydroxidum*) NaOH. Occurs as fused masses, small pellets, flakes, or sticks; 1 Gm. dissolves in 1 cc. of water; it is freely soluble in alcohol. Rarely used as an internal remedy its most important medicinal use is as caustic. Its chief use is in various chemical and pharmaceutical manipulations. Syn., *caustic soda.*

s. hypochlorite solution (*liquor sodii hypochloritis*) Contains 5% of NaOCl; occurs as pale, clear greenish yellow liquid. This solution possesses the germicidal value of its available chlorine. Used for the disinfection of various utensils which are not injured by its bleaching action, such as clinical thermometers, glass, or china ware. This solution is not suitable for application to wounds. See also diluted hypochlorite solution.

s. hypophosphite (*sodii hypophosphis*) $NaH_2PO_2.H_2O$ Occurs as white plates or scales or white powder; 1 Gm. dissolves in about 1 cc of water soluble in alcohol. The hypophosphites have been used as tonics, but reliable evidence indicates they are inert. Dose, 0.6–1.2 Gm. (10–20 gr.)

s. hyposulfite. Sodium thiosulfate

s. indigotindisulfonate (*sodii indigotindisulfonas*) Indigo carmine.

s. iodate. $NaIO_3$; white, crystalline powder freely soluble in water It is an oxidizing agent and has been used locally in treating inflammatory conditions of mucous membranes.

s. iodide (*sodii iodidum*) NaI. Occurs as colorless crystals or a white, crystalline powder; 1 Gm dissolves in 0.6 cc. of water and about 2 cc of alcohol. Its uses are practically identical with those of potassium iodide. Dose, 0.3–2.0 Gm. (5–30 gr)

s. iodoacetate. $CH_2I.COONa$. See under *iodoacetic acid.*

s. iodobismuthite. A compound formed by the interaction of bismuth chloride and sodium iodide in ethyl acetate solution, consisting essentially of hydrated sodium iodobismuthite, Na_3BiI with inorganic salts. It is claimed that this compound penetrates readily into the cerebrospinal canal, for which reason it has been used in cases of nerve syphilis. Syn., *s. bismuth iodide.*

s. iodohippurate. See *hippuran.*

s. iodomethamate. $C_8H_5I_2NNa_2O_5$; disodium 1-methyl-3,5-diiodo-4-pyridone-2,6-dicarboxylate. white powder freely soluble in water; used as radiopaque medium for urography and retrograde pyelography Syn., *iodoxyl.* See *neo-iopax*

s. lactate. $CH_3CHOHCOONa$. Occurs as a clear or faintly yellow viscous liquid, containing about 70% of sodium lactate soluble in water and alcohol. Has been used as a substitute for glycerin in making cataplasm of kaolin. In the form of an injection (see one-sixth molar sodium r-lactate injection) it is administered parenterally in acidosis.

s. lauryl sulfate (*sodii laurylis sulfas*) Chiefly $CH_3(CH_2)_{10}CH_2OSO_3Na$. Occurs as white crystals; soluble in water Used as wetting agent and substitute for soap; not affected by hard water. It has been used in treatment of gastric ulcer. See *duponol C*

s. malate. $N_2C_4H_4O_5\ \frac{1}{2}H_2O$. Occurs as white granular powder soluble in water Because of its

salty taste it is used in place of table salt to render food more palatable in salt-free diets.

s. mandelate. $C_6H_5.CHOH.COONa$; white, crystalline powder freely soluble in water: used as urinary antiseptic.

s. metabisulfite. $Na_2S_2O_5$, commonly though incorrectly called *sodium bisulfite*

s. metaphosphate. Any of several salts of the composition $(NaPO_3)_n$, where n is 2 or more; the most common is *sodium hexametaphosphate*, where n is 6. The salts occur as colorless, hygroscopic sticks, or white flakes or powder soluble in water to form alkaline solutions. Sodium metaphosphates are used as water softeners.

s. molybdate. $Na_2MoO_4.2H_2O$; white crystalline powder, freely soluble in water: used as reagent, especially for alkaloids.

s. [illegible]ate. Sodium phosphomolybdate.

s. morrhuate. A mixture of the sodium salts of the saturated and unsaturated fatty acids occurring in cod liver oil; occurs as pale, yellowish, granular powder; soluble in water. It is sclerosing agent. It is used in solution with addition of local anesthetic for the obliteration of varicose veins. Dose, 0.5–1.0 cc. of 5% solution, injected into the lumen of the vein.

s. nicotinate. $C_5H_4N.COONa.1\frac{1}{2}H_2O$; white crystalline powder freely soluble in water. It has the actions and is used for the effects of nicotinic acid, especially when the latter is to be administered by injection.

s. nitrate. $NaNO_3$. Colorless, transparent crystals, white granules or powder; 1 Gm. is soluble in 1.1 cc. of water. Formerly used in the treatment of dysentery. Syn., *Chile saltpeter, soda niter*.

s. nitrite (*sodii nitris*). $NaNO_2$. Occurs as white to slightly yellow granular powder; 1 Gm. dissolves in 1.5 cc. of water; sparingly soluble in alcohol. Used to dilate the general arterial system for the purpose of lowering the general blood pressure in hypertension and in cardiac weakness, and to increase secretions from the sweat glands or kidneys. Also used to relieve local spasm in angina pectoris and in Raynaud's syndrome, and to relieve spasms in asthma. Has been found useful in intestinal spasms not caused by inflammatory conditions, and in seasickness. Dose, 0.06–0.2 Gm. (1–3 gr.)

s. nitroferricyanide. $Na_2Fe(CN)_5NO.2H_2O$; ruby-red, transparent crystals, freely soluble in water: used as reagent for many organic compounds, alkali sulfides, and zinc. Syn., *sodium nitroprusside*.

s. nitroprusside. Sodium nitroferricyanide.

s. oleate. Approximately $C_{17}H_{33}COONa$; white powder freely soluble in water: formerly used as choleretic agent.

s. oxalate. $Na_2C_2O_4$; white crystalline powder soluble in water: used as reagent and industrially.

s. para-aminobenzoate. $NH_2.C_6H_4.COONa$, colorless crystals, freely soluble in water having the actions and uses of para-aminobenzoic acid.

s. para-aminosalicylate. $NH_2.C_6H_3.OH.COONa.2H_2O$; white to cream-colored, crystalline powder; 1 Gm. dissolves in about 2 cc. of water; solutions decompose slowly. It has the actions and uses of para-aminosalicylic acid. Also called *s. aminosalicylate*.

s. paratoluenesulfonchloramide. See *chloramine-T*.

s. pentothal. See *pentothal sodium*.

s. perborate (*sodii perboras*). $NaBO_3.4H_2O$. Occurs as white, crystalline granules or as white powder; 1 Gm. dissolves in about 40 cc. of water. It is used for its antiseptic action. It may be employed in solution or as dusting powder. It is most frequently used for the preparation of mouth washes and dentifrices.

s. perchlorate. $NaClO_4.H_2O$; white deliquescent crystals, very soluble in water: used as reagent and in explosives.

s. peroxide. Na_2O_2. The sodium compound analogous to hydrogen peroxide; occurs as white or yellowish powder; it is soluble in water with decomposition and evolution of heat, forming an alkaline solution and liberating oxygen. A powerful oxidizing agent. Used in acne, applied in the form of paste prepared with liquid petrolatum, or as soap to remove comedones. Also called *s. superoxide*.

s. persulfate. $Na_2S_2O_8$; white crystalline powder soluble in water: used as an oxidizing agent.

s. phenolsulfonate. $OH.C_6H_4.SO_3Na.2H_2O$; white crystalline powder freely soluble in water. It has been used internally and externally for supposed antiseptic action. Syn., *sodium sulfocarbolate*.

s. phosphate (*sodii phosphas*). $Na_2HPO_4.7H_2O$. Occurs as colorless or white, granular salt; 1 Gm. dissolves in 4 cc. of water; it is very slightly soluble in alcohol. Used as mild saline cathartic and has less disagreeable taste than magnesium or sodium sulfate. Dose, 4–15 Gm. (1–4 dr.) Also called *dibasic s. phosphate, disodium hydrogen phosphate*.

s. phosphate solution (*liquor sodii phosphatis*). Contains exsiccated sodium phosphate 400 Gm., citric acid 130 Gm., glycerin 140 cc., distilled water sufficient quantity to make 1000 cc. This solution affords convenient way of administering sodium phosphate. Dose, 4–12 cc. (1–3 fluidrachms)

s. phosphomolybdate. $Na_3PO_4.12MoO_3$; white crystals, freely soluble in water: used as reagent in various chemical determinations. Syn., *sodium molybdophosphate*.

s. phosphotungstate. $2Na_2O.P_2O_5.12WO_3.18H_2O$; white crystals, freely soluble in water: used as reagent in various chemical determinations.

s. potassium bismuthyl tartrate. A basic water-soluble sodium potassium bismuth tartrate; occurs as white, heavy powder. Used as means of obtaining the systemic effects of bismuth in the treatment of syphilis.

s. propionate (*sodii propionas*). CH_3CH_2COONa. Occurs as colorless crystals or granular powder; 1 Gm. dissolves in about 1 cc. of water and in about 24 cc. of alcohol. This salt has been shown to possess antibacterial and fungicidal properties; used in the control of athlete's foot, tinea cruris, and other mycoses.

s. psylliate. The sodium salt of the liquid fatty acids of psyllium oil (plantago-seed oil), available as an aqueous solution, commonly of 5% concentration; used as sclerosing agent for obliteration of varicose veins. See *sylnasol*.

s. pyrophosphate. $Na_4P_2O_7.10H_2O$; white granules or colorless crystals, soluble in water: used for removing rust stains, in industry and has been used as laxative.

s. pyrosulfite. The International Pharmacopoeia name for sodium metabisulfite commonly though incorrectly known as *sodium bisulfite*.

s. rhodanate. Sodium thiocyanate.

s. ricinate. A mixture of the sodium salts of the fatty acids from castor oil, chiefly ricinoleic; occurs as white or yellowish powder; soluble in water and in alcohol. This compound has the

property of detoxifying bacterial toxins and is used in various types of intestinal intoxication. Dose, 0.3 Gm. (5 gr.) t.i.d. Also called *s. ricinoleat s. oleoricinate*.

s. salicylate (*sodii salicylas*) $C_6H_4OH.COONa$. Occurs as white, microcrystalline powder. It has not more than faint pink tinge; 1 Gm. dissolves in 1 cc. of water and in 10 cc. of alcohol. Its actions and uses are those of salicylic acid, except that it is not locally irritating and is more rapidly absorbed. It is used as an antirheumatic, antipyretic, and analgesic. It has also been recommended as sclerosing agent in the treatment of varicose veins. Dose, 0.6–2.0 Gm. (10–30 gr.)

s. silicate. Any of several compounds representing combinations of Na_2O and SiO_2, as Na_2SiO_3, $Na_2Si_2O_5$ and $Na_2Si_3O_7$, with variable amounts of water. They occur as colorless to white or grayish-white crystal-like pieces or lumps, insoluble or very slightly soluble in cold water but dissolved by heating with water under pressure. The common sodium silicate solution contains about 40% $Na_2Si_3O_7$. It is used as dressing in fractures, as detergent, fireproofing and waterproofing material, and in industry.

s. silicofluoride. Na_2SiF_6. white, granular powder slightly soluble in water used as source of fluoride in fluoridation of municipal water supplies, and as an insecticide and rodenticide and in industry. Also called *s. fluosilicate*.

s. silver arsphenamine. Silver arsphenamine.

s. stearate (*sodii stearas*). A mixture of varying proportions of sodium stearate ($NaC_{18}H_{35}O_2$) and sodium palmitate ($NaC_{16}H_{31}O_2$). Occurs as fine, white powder. It is slightly soluble in cold water and alcohol, but readily soluble when these solvents are hot. Used in the preparation of glycerin suppositories.

s. stibogluconate. A pentavalent antimony derivative, of indefinite composition, prepared by interaction of pentavalent inorganic antimony compound, gluconic acid, and sodium hydroxide colorless powder soluble in water used in the treatment of leishmaniasis. See *pentostam*, *solustibosan*.

s. succinate. $COONa.CH_2CH_2COONa$ white, crystalline or granular powder freely soluble in water. It has been variously used in medicine, g to waken patients after barbiturate anesthesia.

s. sulfate (*sodii sulfas*) $Na_2SO_4.10H_2O$. Occurs as large colorless, transparent crystals or granular powder. 1 Gm. dissolves in 1.5 cc. of water insoluble in alcohol. In large doses it is an efficient hydragogue cathartic; in smaller doses it is aperient and diuretic. Dose, 8–30 Gm. (2 dr.–1 oz.) Also called *Glauber salt*.

s. sulfide. $Na_2S.9H_2O$ colorless, deliquescent crystals, very soluble in water to form strongly alkaline solution used as reagent and for many industrial purposes.

s. sulfite. $Na_2SO_3.7H_2O$ colorless, efflorescent crystals, freely soluble in water prepared also in anhydrous form. It has been used for treatment of parasitic skin diseases and widely in industry chiefly because of its reducing property.

s. sulfocarbolate. Sodium phenolsulfonate.

s. sulfocyanate. Sodium thiocyanate.

s. sulfoxylate. Sodium hydrosulfite, 1

s. superoxide. Sodium peroxide.

s. tartrate $Na_2C_4H_4O_6.2H_2O$ white crystals or granules, freely soluble in water formerly used as laxative.

s. taurocholate. The sodium salt of taurocholic acid, usually containing also some sodium glycocholate; constituent of the bile of carnivora; yellowish-gray powder soluble in water used as choleretic and cholagogue.

s. tetraborate Sodium borate.

s. tetradecyl sulfate. $C_{14}H_{29}SO_4Na$; white, waxy solid, soluble in water variously used as wetting agent.

s. thiocyanate (*sodii thiocyanas*). NaSCN. Occurs as white or colorless crystals it is hygroscopic 1 Gm. dissolves in about 0.7 cc. of water and in about 4 cc. of alcohol. Used in hypertension Dose, 0.06–0.3 Gm. (1–5 gr.) Syn., *sulfocyanate*, *s. rhodanate*.

s. thiosulfate (*sodii thiosulfas*) $Na_2S_2O_3.5H_2O$ Occurs as large, colorless crystals or coarse, crystalline powder 1 Gm. dissolves in 0.5 cc. of water insoluble in alcohol. Intravenously it used against the late toxic action of arsphenamine. Also used as an antidote in other metallic poisons. Has also been used, internally in the treatment of nonarsenical skin diseases such as eczema and urticaria. Dose, 0.6–2.0 Gm. (10–30 gr.) larger doses are used in mercuric chloride poisoning. Intravenously 0.5–1.0 Gm. (8–15 gr.) in about 3% solution, injected slowly once day Also called *s. hyposulfite*.

s. tungstate. $Na_2WO_4.2H_2O$ white, crystalline powder or colorless crystals, freely soluble water used as reagent, especially to precipitate alkaloids, and in industry.

sulf bromophthalein s. (*sulfobromophthaleinum sodicum*) $C_{20}H_8Br_4O_{10}S_2Na_2$. The disodium salt of phenoltetrabromophthalein disulfonic acid, occurs as white, crystalline powder soluble in water but insoluble in alcohol. In aqueous solution (sulfobromophthalein sodium injection) it used as test of the functional capacity of the liver Dose, 2 mg. per kilo of body weight Also called *bromsulphalein*. See also *bromsulphalein*.

tribasic s. phosphate. $Na_3PO_4.12H_2O$. Occurs as colorless or white crystals; soluble in water, insoluble in alcohol This sodium salt of phosphoric acid is not used medicinally but has many industrial uses.

so do ku (so do-koo, so-do'koo) See rat-bite fever

sod'om ist. See *sodomite*.

sod' m ite [*Sodom*]. One who practices sodomy Syn., *sodomist*.

sod'om y [*Sodom*]. 1. Sexual intercourse by the anus, usually considered as between males. See also *pederasty*. 2. Bestiality 2.

so do sha. See rat-bite *fever*

Soemmering, Samuel Thomas [German anatomist, 1755–1830]. Classified the cranial nerves (1778). Said to have been the first to describe achondroplasia (1791). The marginal process of the zygomatic bone is called *Soemmering's bone*. The foramen centralis is called *Soemmering's foramen*. The substantia nigra is called *Soemmering's ganglion*. The suspensory ligament of the lacrimal gland is called *Soemmering's ligament*. The pudendal nerve is called *Soemmering's nerve*. The macula lutea called *Soemmering's spot*.

sof'ten ing [AS. *softe*]. The act of becoming less cohesive, firm, or resistant.

acute s. Disintegration and liquefaction of the brain substance from lack of blood supply

colliquative s. Condition in which the affected tissues liquefy

gray s. An inflammatory softening of the brain or cord with gray discoloration.

green s. A purulent softening of nervous matter

hemorrhagic s. The softening of parts involved in hemorrhage.

mucoid s. Myxomatous degeneration.

red s. That of the brain when hemorrhage accompanies the ischemic softening, and the

products of disintegration of the blood pigment with the nerve substance, giving it a red hue.

s. of the bones. Osteomalacia.

s. of the brain. Encephalomalacia.

s. of the heart. Myomalacia cordis.

s. of the spinal cord. Various stages in myelitis.

s. of the stomach. Gastromalacia, consequent upon highly acid contents with a feeble circulation in the walls, but usually a post-mortem phenomenon.

white s. Softening of nerve substance in which the affected area presents a whitish color due to fatty degeneration following anemia.

so'ja bean (so'yah, so'jah). See *soybean*.

so-ko'sho. See rat-bite *fever*.

sol. 1. A colloidal solution. A sol consists of a suitable dispersion medium, which may be gas, liquid, or solid, and the colloidal substance, the disperse phase, which is distributed throughout the dispersion medium. The disperse phase may be gas, liquid, or solid. To indicate the nature of the dispersion medium, a prefix is often added, thus, hydrosol, alcosol, aerosol. 2. Abbreviation for *solution*.

Sol"a-na'ce-ae [L. *solanum*, nightshade]. A family of herbs, shrubs, and trees comprising approximately 75 genera and 1,800 species and including the potato and tomato plants, and also plants from which are derived such drugs as belladonna, hyoscyamus, scopola, and stramonium. —**solana'ceous,** *adj.*

so-lan'i-dine (so-lan'i-deen, -din). $C_{27}H_{43}NO$; the alkaloidal aglycone, having a steroid structure, obtained by hydrolysis of solanine. Syn., *solatubine*.

so-lan'i-dine-S. Solasodine.

sol'a-nine (sol'uh-neen, -nin, so'lah-). $C_{45}H_{73}NO_{15}$; a glycosidal alkaloid from *Solanum tuberosum*, the potato, and other *Solanum* species. On hydrolysis it yields glucose, galactose, rhamnose, and the steroidal aglycone solanidine. Syn., *solatunine*.

sol'a-nine-S. Solasonine.

So-la'num [L., nightshade]. A genus of the Solanaceae, including the tomato, potato, bitter sweet, and black nightshade.

so-lap'sone. British generic name for the agent, used in the treatment of leprosy, supplied under the trade-mark *sulphetrone*.

solargentum. Trade-mark for a brand of mild silver protein.

so"lar-i-za'tion [L. *solaris*, of the sun]. The application of solar or electric light for therapeutic purposes. —**so'larize,** *v.*

so'lar plex'us. Celiac plexus.

solarson. Trade-mark for ammonium heptenchlorarsonate, $CH_3(CH_2)_4CCl{:}CHAsO(OH)ONH_4$, a brand of chlorarsenol used as a substitute for arsenous oxide in the treatment of anemia, skin diseases, malaria, and neuroses.

so-las'o-dine. [illegible] the alkaloidal aglycone, having a steroid structure, obtained by hydrolysis of solasonine. Syn., *solanidine-S*.

so-las'o-nine. [illegible] a glycosidal alkaloid from certain *Solanum* species. On hydrolysis it yields glucose, galactose, rhamnose, and the steroidal aglycone solasodine. Syn., *solanine-S*.

so-la'tion. Conversion of a gel into a sol.

so"la-tu'bine. Solanidine.

so"la-tu'nine. Solanine.

so"lau-ric'i-dine. $C_{27}H$[illegible]NO_2; the alkaloidal aglycone having a steroid structure, obtained by hydrolysis of solauricine.

so-lau'ri-cine. C[illegible]$H_{73}NO_{16}{\cdot}2H_2O$; a glycosidal alkaloid from *Solanum auriculatum*, violet nightshade. On hydrolysis it yields glucose, rhamnose, galactose, and the aglycone solauricidine.

solbrol. Trade-mark for methyl parahydroxybenzoate. See *methylparaben*.

sol'dier's heart. See neurocirculatory *asthenia*.

sole [L. *solea*, sole]. The plantar surface of the foot.

So"le-no-glyph'a [G. *sōlēn*, channel; *glyphein*, to engrave]. One of the two groups of the important venomous snakes. Includes the family Crotalidae (pit vipers) and Viperidae (true vipers).

sole-plate. End-plate.

Salera reaction. See under *reaction*.

so'le-us, so-le'us [L. *solea*, sole]. A flat muscle of the calf. See Table of Muscles in the Appendix.

s. accessorius. A small anomalous muscle running from the head of the fibula to the medial surface of the calcaneus.

solganal. Trade-mark for a suspension in oil of aurothioglucose.

sol'id [L. *solidus*]. 1. Firm; dense; not fluid or gaseous. 2. Not hollow.

so-lid"i-fi-ca'tion [*solidus*; L. *facere*, to make]. The act of becoming solid.

sol'i-ped [L. *solus*, alone; *pes*, foot]. An animal having a solid, undivided hoof, as the horse, donkey, zebra.

sol'ip-sism [*solus*; L. *ipse*, self]. The doctrine that any organism can know only itself and its own conception of its environment.

sol'i-tar"y [L. *solitarius*]. Single; existing separately; not collected together, as solitary fasciculus, a strand of nerve fibers in the medulla, the central processes of the sensory fibers of the seventh, ninth, and tenth cranial nerves; and solitary follicles, minute lymphatic nodules in the mucous membrane of the intestines.

Sollmann, Torald Hermann [American pharmacologist, 1874–]. Known for his *Manual of Pharmacology* (1917–45). Described the carotid sinus depressor reflex (1912).

sol"-lu'nar [L. *sol*, sun; *luna*, moon]. Influenced by or relating to, the sun and the moon.

Sol-pu'gi-da [L. *solpuga*, a venomous spider]. An order of the Arachnida which are hairy and spider like in external appearance but in structure show closer relationship to the scorpions. They lack poison glands, but have powerful fangs capable of inflicting severe wounds that are liable to secondary infections. They live in warm countries in sandy regions, as in the southwestern United States.

sol"u-bil'i-ty [L. *solubilis*, that may be loosed]. The extent to which a substance (solute) dissolves in a liquid (solvent) to produce a homogeneous system (solution). The degree of solubility is the concentration of a saturated solution at a given temperature.

s. product. The product of the concentrations of the ions of a solute, each raised to the power of the number of such ions in a molecule of the solute, in a saturated solution of the substance. Also called *precipitation value*.

sol'u-ble [*solubilis*]. Capable of mixing with a liquid (dissolving) to form a homogeneous mixture (solution).

s. gluside. Saccharin sodium.

s. saccharin. Saccharin sodium.

so'lum tym'pa-ni (tim'pah-nigh) [L.]. The floor of the tympanic cavity.

sol"u-sep'ta-zine (sol"yoo-sep'tuh-zeen, -zin). Disodium-p-(γ-phenylpropylamino)-benzenesulfonamide-α,γ-disulfonate, a white, crystalline powder soluble in water. It is used, by intravenous injection, in scarlet fever and streptococcal tonsillitis locally in the treatment of varicose ulcers, skin infections, and infected wounds.

solustibosan. Trade-mark for sodium stibogluconate.

property of detoxifying bacterial toxins and is used in various types of intestinal intoxication. Dose, 0.3 Gm. (5 gr.) t.i.d. Also called *s. ricinoleate, s. oleoricinat*.

s. salicylate (*sodii salicylas*) $C_6H_4OH.COONa$. Occurs as a white, microcrystalline powder; it has not more than a faint pink tinge. 1 Gm. dissolves in 1 cc. of water and in 10 cc. of alcohol. Its actions and uses are those of salicylic acid, except that it is not locally irritating and is more rapidly absorbed. It is used as an antirheumatic, antipyretic, and analgesic. It has also been recommended as a sclerosing agent in the treatment of varicose veins. Dose, 0.6–2.0 Gm. (10–30 gr.)

s. silicate. Any of several compounds representing combinations of Na_2O and SiO_2, as Na_2SiO_3, $Na_6Si_2O_7$, and $Na_2Si_3O_7$, with variable amounts of water. They occur as colorless to white or grayish-white crystal-like pieces or lumps, insoluble or very slightly soluble in cold water but dissolved by heating with water under pressure. The common sodium silicate solution contains about 40% $Na_2Si_3O_7$. It is used as a dressing in fractures, as a detergent, fireproofing and waterproofing material, and in industry.

s. silicofluoride. Na_2SiF_6; a white, granular powder slightly soluble in water; used as a source of fluoride in fluoridation of municipal water supplies, and as an insecticide and rodenticide and in industry. Also called *s. fluosilicate*.

s. silver arsphenamine. Silver arsphenamine.

s. stearate (*sodii stearas*). A mixture of varying proportions of sodium stearate ($NaC_{18}H_{35}O_2$) and sodium palmitate ($NaC_{16}H_{31}O_2$). Occurs as a fine, white powder; it is slightly soluble in cold water and alcohol, but readily soluble when these solvents are hot. Used in the preparation of glycerin suppositories.

s. stibogluconate. A pentavalent antimony derivative, of indefinite composition, prepared by interaction of a pentavalent inorganic antimony compound, gluconic acid, and sodium hydroxide; a colorless powder soluble in water; used in the treatment of leishmaniasis. See *pentostam, solustibosan*.

s. succinate. $COONa.CH_2.CH_2.COONa$; white, crystalline or granular powder freely soluble in water. It has been variously used in medicine, e.g., to waken patients after barbiturate anesthesia.

s. sulfate (*sodii sulfas*). $Na_2SO_4.10H_2O$. Occurs as large, colorless, transparent crystals or a granular powder. 1 Gm. dissolves in 1.5 cc. of water; insoluble in alcohol. In large doses it is an efficient hydragogue cathartic; in smaller doses it is aperient and diuretic. Dose, 8–30 Gm. (2 dr.–1 oz.) Also called *Glauber's salt*.

s. sulfide. $Na_2S.9H_2O$; colorless, deliquescent crystals, very soluble in water to form a strongly alkaline solution; used as a reagent and for many industrial purposes.

s. sulfite. $Na_2SO_3.7H_2O$; colorless, efflorescent crystals, freely soluble in water; prepared also in anhydrous form. It has been used for treatment of parasitic skin diseases and widely in industry, chiefly because of its reducing property.

s. sulfocarbolate. Sodium phenolsulfonate.

s. sulfocyanate. Sodium thiocyanate.

s. sulfoxylate. Sodium hydrosulfite, 1.

s. superoxide. Sodium peroxide.

s. tartrate. $Na_2C_4H_4O_6.2H_2O$; white crystals or granules, freely soluble in water; formerly used as a laxative.

s. taurocholate. The sodium salt of taurocholic acid, usually containing also some sodium glycocholate; a constituent of the bile of carnivora; a yellowish-gray powder; soluble in water; used as a choleretic and cholagogue.

s. tetraborate. Sodium borate.

s. tetradecyl sulfate. $C_{14}H_{29}SO_4Na$; a white, waxy solid, soluble in water; variously used as a wetting agent.

s. thiocyanate (*sodii thiocyanas*). NaSCN. Occurs as white or colorless crystals; it is hygroscopic. 1 Gm. dissolves in about 0.7 cc. of water and in about 4 cc. of alcohol. Used in hypertension. Dose, 0.06–0.3 Gm. (1–5 gr.) Syn., *sulfocyanate, s. rhodanate*.

s. thiosulfate (*sodii thiosulfas*). $Na_2S_2O_3.5H_2O$. Occurs as large, colorless crystals or a coarse, crystalline powder. 1 Gm. dissolves in 0.5 cc. of water; insoluble in alcohol. Intravenously it is used against the late toxic action of arsphenamine. Also used as an antidote in other metallic poisons. Has also been used, internally, in the treatment of nonarsenical skin diseases such as eczema and urticaria. Dose, 0.6–2.0 Gm. (10–30 gr.); larger doses are used in mercuric chloride poisoning: intravenously 0.5–1.0 Gm. (8–15 gr.) in about 2% solution, injected slowly once a day. Also called *s. hyposulfite*.

s. tungstate. $Na_2WO_4.2H_2O$; a white, crystalline powder or colorless crystals, freely soluble in water; used as a reagent, especially to precipitate alkaloids, and in industry.

sulfobromophthalein s. (*sulfobromophthaleinum sodicum*). $C_{20}H_8Br_4O_{10}S_2Na_2$. The disodium salt of phenoltetrabromophthalein disulfonic acid; occurs as a white, crystalline powder soluble in water but insoluble in alcohol. Its aqueous solution (sulfobromophthalein sodium injection) is used as a test of the functional capacity of the liver. Dose, 2 mg. per kilo of body weight. Also called *bromsulphalein*. See also *bromsulphalein*.

tribasic s. phosphate. $Na_3PO_4.12H_2O$. Occurs as colorless or white crystals, soluble in water, insoluble in alcohol. This sodium salt of phosphoric acid is not used medicinally but has many industrial uses.

so do-ku (so do-kōō, so do'kōō). See rat-bite fever.

sod'om ist. See sodomite.

sod'om ite [*Sodom*]. One who practices sodomy. Syn., *sodomist*.

sod'om y [*Sodom*]. 1. Sexual intercourse by the anus, usually considered as between males. See also *pederasty*. 2. Bestiality. 2.

so do sha. See rat-bite fever.

Soemmering, Samuel Thomas [German anatomist, 1755–1830]. Classified the cranial nerves (1778). Said to have been the first to describe the macula lutea (1791). The marginal process of the zygomatic bone is called *Soemmering's bone*. The fovea centralis is called *Soemmering's foramen*. The substantia nigra is called *Soemmering's ganglion*. The suspensory ligament of the lacrimal gland is called *Soemmering's ligament*. The pudendal nerve is called *Soemmering's nerve*. The macula lutea is called *Soemmering's spot*.

sof'ten-ing [AS. *softe*]. The act of becoming less cohesive, firm, or resistant.

anemic s. Disintegration and liquefaction of the cerebral substance from lack of blood supply.

colliquative s. Condition in which the affected tissues liquefy.

gray s. A gray inflammatory softening of the brain or cord with a gray discoloration.

green s. A purulent softening of nervous matter.

hemorrhagic s. The softening of parts involved in a hemorrhage.

mucoid s. Myxomatous degeneration.

red s. That of the brain when hemorrhage accompanies the ischemic softening, and the

tive valence or decrease the negative valence of gram-formula weight of reducing agent by one.
normal reducing s. The opposite of normal oxidizing solution.
normal saline s. See isotonic sodium chloride solution.
normal salt s. See isotonic sodium chloride solution.
normal s. One containing one gram-equivalent weight of reagent in 1000 cc. of solution.
physiological salt s. Isotonic sodium chloride solution.
Ringer's s. (*liquor Ringeri*) Contains sodium chloride 8.6 Gm., potassium chloride 0.30 Gm., calcium chloride 0.33 Gm., and purified water sufficient quantity to make 1000 cc. Used in all forms of dehydration but particularly in cases in which loss of gastrointestinal secretions has resulted from vomiting, diarrhea, or fistulas when sodium, potassium, and calcium have been diminished. Also used in acidosis or alkalosis for improvement of circulation and stimulation of renal activity. Also called *isotonic solution of three chlorides*. When prepared with water for injection for parenteral administration it is called *Ringer's injection*.
Rosenheim iodopotassium iodide s. Dissolve 272 Gm. of potassium iodide in water and add 80 Gm. of bismuth subnitrate dissolved in 200 Gm. of nitric acid (sp. gr. 1.18). Permit the potassium nitrate to crystallize out, then filter it off and make the filtrate up to 1 liter with water.
saturated s. One that normally contains the maximum amount of substance able to be dissolved. Abbreviated, sat. sol.
seminormal s. A solution which contains one-half of an equivalent weight of the active reagent in grams, in one liter of solution. It is written 0.5N or N/2.
soda and mint s. (*liquor sodae et menthae*) Contains sodium bicarbonate 50 Gm., aromatic ammonia spirit 20 cc., spearmint water or peppermint water sufficient quantity to make 1000 cc. Used occasionally as a mild gastric antacid. Dose, 8–15 cc. (2–4 fluidrachms).
s. pressure. The tendency of the molecules or ions to leave the surface of a solute and pass into the solvent. It varies in different solute-solvent combinations.
standard s. One that contains a definite amount of substance, as a molar or normal solution.
Sulzby's s. See Q s.
sulfurated lime s. (*liquor calcis sulfuratae*) Prepared from lime 165 Gm., sublimed sulfur 250 Gm., water sufficient quantity to make 1000 cc. Occurs as a clear brownish red liquid, with a slight odor of hydrogen sulfide. Used as a means of obtaining the action of the sulfides in the treatment of various skin diseases. It should be diluted with from five to ten volumes of water before using. Also called *Vleminckx' solution*, *Vleminckx' lotion*.
supersaturated s. One that contains a greater quantity of solid than can normally be dissolved at a given temperature. It is an unstable system.
Takayama s. A mixture of 3 ml. of 10% NaOH, 3 ml. of pyridine, 3 ml. of saturated solution of glucose, and 7 ml. of water. The solution works rapidly in the cold if at least 24 hours old. With fresh solution, warming or more time is necessary.
test s. A reagent solution. Abbreviated, T. S.
Tyrode s. A solution containing sodium chloride 8 Gm., calcium chloride 0.2 Gm., potassium chloride 0.2 Gm., sodium bicarbonate 1 Gm., glucose 1 Gm., magnesium chloride 0.1 Gm., sodium diphosphate 0.05 Gm., and distilled water to make 1000 cc.
volumetric s. A standard solution containing 1, ½, ⅒, etc. gram-equivalent of a substance in 1000 cc. of solution. Used in volumetric analysis. Abbreviated, V. S.

sol'vate. A compound formed between solute and solvent in a solution.

sol·va'tion. The process of forming a solvate.

sol'vent. 1. That component of a homogeneous mixture which is in excess. 2. A liquid which dissolves another substance (solute) without any change in chemical composition, as sugar or salt in water. 3. A liquid which reacts chemically with a solid and brings it into solution, as acids which dissolve metals.

so'ma [G.]. 1. The entire body with the exclusion of the germ cells. 2. A term used loosely for the body without the limbs. —**somal,** *adj.*

som'a·lin. A cardiac glycoside from the root of *Adenium somalense*. It may be hydrolyzed to digitoxigenin and cymarose.

so·mas·the'ni·a [G. *sōma*, body; *asthenia*, weakness]. Old term for bodily deterioration and exhaustion.

so·mes·the'si·a (so·muh·tes·thee'zhuh, ·see·uh) [*sōma*; G. *aisthēsis*, perception]. Bodily sensation, the consciousness of the body.

so·mat'ic [G. *sōmatikos*, of the body]. 1. Pertaining to the body. 2. Pertaining to the framework of the body and not to the viscera, as the somatic musculature, the muscles of the body wall or somatopleure, as distinguished from those of the splanchnopleure, the splanchnic musculature.

so·mat''i·co·splanch'nic (·splank'nick). See *somaticovisceral*.

so·mat''i·co·vis'cer·al [*sōmatikos*; L. *viscera*, internal organs]. Relating to the body and the viscera.

so'ma·tist [G. *sōma*, body]. A psychiatrist who regards any psychoneurosis or psychosis as of physical origin.

so''ma·ti·za'tion. In *psychiatry*, a psychoneurotic displacement of emotional conflicts onto muscles and sensory apparatus innervated by the voluntary nervous system, in distinction from *psychosomatic reaction*, in which displacement occurs onto organs and viscera innervated by the autonomic nervous system; a conversion reaction. See also *psychophysiologic autonomic and visceral disorders*.

so·mat'o·chrome'' so·mat·o·chrome [*sōma*; G. *chrōma*, color]. Term applied by Nissl to a group of nerve cells possessing a well-defined cell body completely surrounding the nucleus on all sides, the cytoplasm having a distinct contour and readily taking a stain.

so''ma·to·did'y·mus [*sōma*; G. *didymos*, twin]. Conjoined twins united by their trunks.

so''ma·to·dym'i·a [*sōma*; *didymos*]. A general term for union of the trunks of conjoined twins.

so''ma·tog'e·ny (so·muh·todj'i·nee) [*sōma*; G. *genesthai*, from *gignesthai*, to be produced]. The acquirement of bodily characters, especially the acquirement of characters due to environment. —**somatogen'ic,** *adj.*

so·ma·tol'o·gy [*sōma*; G. *logos*, word]. The study of the development, structure, and functions of the body. —**somatolog'ic,** *adj.*

so'ma·tome [*sōma*; G. *tomos*, cutting]. 1. A transverse segment of an organized body; a somite. 2. An embryotome. *O.T.* —**somatom'ic,** *adj.*

so·ma·to·meg'a·ly [*sōma*; G. *megas*, large]. Gigantism.

so·ma·tom'e·try [*sōma*; G. *metron*, measure]. Measurement of the human body with the soft parts intact. —**somatomet'ric,** *adj.*

so''ma·top'a·gus [*sōma*; G. *pagos*, that which is fixed]. Conjoined twins with their trunks more or less in common.

so ma to path'ic [*sōma*; G. *pathos*, disease]. Disordered in body.

so ma to plasm" (so muh-to plaz um, so-mat o-) [*sōma*; G. *plasma*, anything formed]. Th proto-plasm of the body cells that form of living matter which composes the mass of the body as distinguished from germ plasm, which composes the reproductive cells.

so ma to-pleure (so muh-to ploor" so-mat'o-) [*sōma*, G. *pleura*, rib]. The body wall composed of ectoderm and somatic mesoderm, as contrasted with splanchnopleura. —**somatopleur l,** *adj*

so ma to psy'chic (so muh to-sigh'kick) [*sōma*, G. *psychē*, soul]. Pertaining to both the body and mind.

somatose. Trade-mark for an artificially digested *meat albumin containing deutero- and hetero-*albuminoses and pepton the substance occurs as yellowish powder; soluble in water.

so ma to planch n pl u l (-splank no-ploor'ick) [*sōma*, G. *splagchnon*, inner parts; *pleura*, rib]. Relating to the somatopleure and the splanchnopleure.

so"ma to-to ni [*sōma*; G. *tonos* tension]. The behavioral counterpart of component II (mesomorphy) of the somatotype, manifested in desire for expenditure of energy through vigorous bodily assertiveness and the enjoyment of muscular activity —**somatoton'ic,** *adj*

so ma to top" g no si a. Inability to identify or orient the body or its parts. There may be loss of identification of and amnesia for limb or ther body part, or of one half of the body *Autotopagnosia* is special form. Th condition occurs in lesions of the thalamoparietal pathways or the cortex t the subparietal sulcus.

so ma-to-top'ic. Pertaining to the correspondence between body part and particular area of the cerebral cortex, or other region of the brain, to which sensory pathways from the body part are projected, or from which motor pathways to the part take rigin.

so"ma to-trid'y mus [*sōma*, G *tridymos*, three-fold]. A monster with three trunks or bodies.

so ma to tro phin. See *somatotropin*.

so ma to tro pin [*sōma*, G *tropos*, turn, turning]. The growth hormone formerly spelled *somatotrophin*.

so ma to-type [*sōma*; G *typos*, impression] The body type the quantitative description of th morphological structure of an individual by series of three numerals representing the primary components I *endomorphy*; II *mesomorphy*; III *ectomorphy*. On the behavioral level, these are termed *viscerotonia*, *somatotonia*, and *cerebrotonia*. See also *plasia*, 3, *dysmorphic*, *dysplasia*, *gynandromorphy*, t *component*.

midrange s. Any individual whose somatotype includes nly the midrange umerical evaluation of th three primary components also called *midranger*.

Somers method. See *Sumner-Somers method*.

s m the si a (so mess-thee h h, -zee uh) [*sōma*; G *aisthēsis*, perception] Sensibility to bodily sensations.

so mes thet'ic [*sōma*; G *aisthētikos*, of perception] Pertaining t proprioceptive and tactile *sensation*, as the somesthetic area of the parietal cortex, Brodmann's areas 1 2 3.

so mes-the"tog no sis. Somesthesia.

so mes the"t psy hic (sigh'kick) [*sōma*, *aisthētikos*; G *psychē* soul]. Pertaining to the somesthetic association area of the parietal cortex, Brodmann's areas 5, 7.

so mite [*sōma*]. A segment of the body of an embryo; one of series of paired segments of the paraxial mesoderm composed of dermatome, myotome, and sclerotome. —**so mit'ic,** *adj*

occipital s. Three or four indistinct somites in the occipital region, part of which form the tongue muscles innervated by the hypoglossal nerve.

preotl s. Condensation of mesenchyme that forms the eye muscles believed to represent head somites.

som nam'bu lance. See *somnambulism*.

som nam"bu la tion. See *somnambulism*.

som nam'bu lism [L. *somnus*, sleep; *ambulare*, to walk]. 1. Sleepwalking; condition in which the individual walks during sleep. 2. The type of hypnotic sleep in which the subject is possessed of all his senses, often having the appearance of one awake, but his consciousness is under the control of th hypnotizer.

som nam bu lis mus pro-vo-ca'tus (som nam-bew-lees'muh pro-vo kay *See* Notes § 12 [F]) Sleepwalking induced by hypnotism.

som nam'bu list [*somnus*; *ambulare*]. One who walks in his sleep also called *somnambulator*.

som'ni al [L. *somnialis*, dream-bringing]. Relating to dreams. *Rare*.

som"ni-a tion [L. *somniare*, to dream]. Dreaming. *Obs.*

som'ni a"tive [*somniare*]. Somnial. *Rare*.

som ni o lous [L. *somniculosus*, sleepy]. Drowsy sleepy. *Obs.*

som ni f cient [L. *somnus*, sleep; *facere*, to make]. A medicine producing sleep; hypnotic. —**somnifa cient,** *adj*

som nif'er-ous [*somnus*; L. *ferre*, to bring] Producing sleep.

som nif'ic [*somnus*; L. *facere*, to make] Causing sleep.

som nif'u gous [*somnus*; L. *fugare*, to flee]. Driving away sleep.

som nil'o-quence. See *somniloquism*.

som nil' -quism [*somnus*; L. *loqui*, to speak]. The act of talking during sleep.

som nil' quist [*somnus*; *loqui*]. One given to talking during sleep.

som nil'o-quy [*somnus*; *loqui*]. Talking in one's sleep.

som nip' thist [*somnus*; G. *pathos*, disease]. One affected by somnipathy.

som nip thy [*somnus*; *pathos*]. 1. Any disorder of sleep. 2. Hypnoti somnambulism.

som"no cin e-mat'o-graph [*somnus*; G. *kinēma*, movement; *graphein*, to write]. Apparatus for recording, experimentally movements made during sleep.

som no form [*somnus*; L. *forma*, form]. An anesthetic consisting of ethyl chloride 60%, methyl chloride 35%, methyl bromide 5%.

som'no lence [L. *somnulentia*, sleepiness]. A condition of drowsiness or sleep. —**som nolent,** *adj*.

som no len'ti a (som no len shee uh) [L. *somnolentia*, sleepiness]. 1 Sleep-drunkenness. condition of incomplet sleep in which part of the faculties are abnormally excited, while the others are in repose. 2. Somnolence.

som"no-les cent [L. *somnus*, sleep]. 1. Drowsy. 2. Inducing drowsiness.

som no-lism [*somnus*]. Hypnotism.

som nop thist. See *somnipathist*.

som nop a thy. See *somnipathy*.

som no vig'il (som no vidj il) See *coma vigil*.

som nus [L.]. Sleep.

Somogyi, Michael (1883–) American biochemist wh has contributed studies on insulin action, on amylase action, and on method for determination of true sugar in blood. He formulated th basis for large-scale preparation of insulin (1922). See *Somogyi's method*, *Somogyi's unit*.

sone [L. *sonus*, noise]. The unit of loudness.

son'l tee. See *tinnitus*.

Sonne, Carl [*Danish bacteriologist* 1882-1948]. Described strain of the *Shigella* group which ferments mannitol and lactose; called *Sonne' bacillus*.

so no-chem"is try The study of chemical reactions brought about by sound waves, especially those in the ultrasonic range. —**sonochem'ical**, *adj*

so-nom e-ter [L. *sonus*, noise G. *metron*, measure]. An instrument for determining the pitch of sounds and their relation to the musical scale.

son te-chin. $C_{20}H_{28}ClN$; 7-chloro-4-(4-diethylamino-1-methylbutylamino)-3-methylquinoline; suppressive antimalarial drug with action similar to that of chloroquine: also written *sontochin*, *sontoquin*, *santoquin*.

so'nus. See *sound*.

soor (soor sor) See *thrush*.

soor pilz. See *moniliasis*.

so-phis"ti-ca'tion [G. *sophistikos*, of sophist]. The adulteration or imitation of substance.

soph"o-ma'ni [G *sophos*, wise; *mania*, madness]. Megalomania in which the patient believes himself to excel in wisdom.

So-pho ra [Ar *sufaira*]. A genus of the Leguminosae grown mainly in warm regions. Yields poisonous seeds **S. sericea** is poisonous plant of the United States; its seeds contain sophorine. **S. speciosa**, tree of Texas, and **S. tomentosa**, of the East Indies, also contain sophorine The seeds of *Sophora* have been used as remedy for cholera and diarrhea.

so pho ra bi' -side. $C_{27}H_{30}O_{15}.3H_2O$ glycoside from *Sophora japonica*. On hydrolysis it yields D-glucose, rhamnose, and genistein (4',5,7-trihydroxyisoflavone)

so pho ri-co-side. $C_{21}H_{20}O_{10}$ glycoside from *Sophora japonica* On hydrolysis it yields D-glucose and genistein (4',5,7-trihydroxyisoflavone)

soph o-rine (sof'o-reen, rin, so'fo-) C H ,O'N A paralyzant, poisonous alkaloid which exists in the seeds of some species of *Sophora*, *Cytisus*, and *Baptisia*.

soph ro-nis'tae den'tes (sof"ro-nis'tee den'teez) [L] Wisdom teeth Obs.

so'por [L] Sleep, especially the profound sleep symptomatic of morbid condition.

sop -rate, so po-rate [L. *soporare*, to cast into sleep] Stupefy render drowsy Obs.

so po rif'er-ous. See *soporific*.

so po rif'ic, sop o-rif'ic [L. *sopor* sleep *facere*, to make] 1 Producing sleep. 2 Narcotic. —**soporific**, n.

sop o-rose so po-rose [sopor]. Sleepy- character used by morbid sleep.

sor"be fa cient [L. *sorbere* to suck in *facere*, to make] A medicine or agent that induces absorption Obs —**sorbefacient**, *adj*.

sor'bic [L. *sorbus*, service-tree] Pertaining to, or derived from, the mountain ash.

sor'bic ac'id. CH_3CH CH CH CH:CH.COOH 2,4-hexadienoic acid, from the berries of *Sorbus aucuparia* European mountain ash; white crystal very slightly soluble in water

sor"bi al'co hol. CH CH CH CH CH.CH CH-OH 2 4 hexadien-1-ol, as crystals, practically insoluble ter It has been proposed for use in treatment of burns

sor'bi tan. An anhydride also called inner ether produced when molecule of water is eliminated from sorbitol Several such derivatives are possible

sor'bite Sorbitol

sor"bi tol. CH_2OH.HCOH.HOCH HCOH.HCOH CH_2OH D-sorbitol; hexahydric alcohol isomeric with mannitol; occurs as colorless or hite, sweet crystals; soluble in water sparingly soluble in alcohol. Used as an osmotic dehydrating agent and diuretic, usually administered in 50% solution. It is also recommended as sweetening agent for diabetics in place of sugar

sor'bose. CH_2OH.CO HOCH.HCOH.HOCH.CH_2-OH L-sorbose, ketohexose obtained by oxidative fermentation of D-sorbitol by certain organisms used in the synthesis of ascorbic acid.

Sorby's cell. See under *cell*.

sor'des (sor dees) [L]. Filth, dirt, especially the crusts that accumulate on the teeth and lips in continued fevers.

sor'did [L. *sordidus*, dirty]. *I* *biology*, of dull or dirty color

sore [AS. *sar*]. Painful tender

sore. An ulcer or wound.

  bed s. See *bedsore*.

  canker s. Small ulceration of the mucous membrane of the mouth. Some may be due to food allergy

  coldsore. Herpes facialis.

  date s. Leishmaniasis.

  Delhi s. See *oriental sore*.

  Delhi s. See *oriental sore*.

  desert s. See *veldt sore*.

  hard s. Chancre.

  Kandahar s. See *oriental sore*.

  Naga s. See *tropical ulcer*

  Natal s. See *veldt sore*.

  oriental s. See *oriental sore*.

  pressure s. See *bedsore*.

  primary s. The initial lesion, chancre, of syphilis. Also called *hard*

  soft s. Chancroid.

  tropical s. See *oriental sore*.

  veldt s. See *veldt sore*

  venereal s. See *chancre*

Sörensen, Sören Peter Lauritz [*Danish chemist*, 1868-1939]. Introduced the symbol pH, used in expressing hydrogen-ion concentration; called *Sörensen symbol*. *Sörensen indicators* are the indicators of hydrogen-ion concentration.

Sörensen's method. See Henriques-Sörensen method for amino-acid nitrogen.

Soret, Celestin [*French radiologist*, d. 1931]. Described an absorption band in the extreme violet end of the spectrum of blood, characteristic of hemoglobin called *Soret' band*.

sor'ghum [It. *sorgo*]. A group of annual fodder grasses of the family Gramineae from which sugar and syrup are obtained.

soricin. Trade-mark for certain preparations containing purified sodium ricinoleate used as detoxicants and to prevent absorption of toxins.

so-ro"si 'tion [L. *soror* sister]. The development which takes place in the female breasts at puberty

sor'rel [OF *sur* sour]. A plant of the genus *Rumex*, containing oxalates.

  salt of s. Potassium binoxalate.

S. O. S. *Si opus sit*, if necessary

sotradecol. Trade-mark for solutions of sodium tetradecyl sulfate for use as sclerosing gent.

Sottas, Jules [*F* *ench neurologist*, 1866-1943]. Described, with J J Dejerine progressive hypertrophic interstitial neuropathy (1893) also called *Dejerine-Sottas disease* or *neuropathy*.

souf'fle (soo fel) [F] A blowing sound an auscultatory murmur

  cardiac s. See *heart murmur*

  fetal s. An incessant murmur heard over the uterus during pregnancy

  funic s. A hissing sound, synchronous with the fetal heart sounds, heard over the abdomen of

pregnant woman, and supposed to be produced in the umbilical cord.

placental s. Old term for uterine souffle; the sound erroneously believed to be produced by circulation of blood through the placenta.

splenic s. A sound said to be udible over the spleen in cases of malaria and leukemia.

uterine s. A soft, blowing sound, synchronous with the maternal heart, heard over the abdomen at the sides of the uterus. The sound is due to the circulation of the blood in the large terine arteries and veins. Its value as diagnostic sign of pregnancy is doubtful.

sou'ma (sōō muh) An acute infection in cattle, horses, mules, and sheep, marked by hemorrhages and serous exudates in the body cavities. It may become chronic, with anemia and subcutaneous edema.

sound [L. *sonus*, sound]. The sensation produced by timulation of the uditory nerve by vibrations transmitted by the endolymph.

anasarcous s. A moist bubbling sometimes heard on uscultation when the skin is edematous.

bandbox s. The resonant percussion note sometimes heard in emphysema.

bellows s. An endocardial murmur which sounds like bellows.

bell s. That produced in pneumothorax by striking coin, placed flat upon the chest, with another coin. It can be heard through stethoscope placed over the affected side. Also called *bell tympany*, *coin s.*

blowing s. A blowing murmur

bottle s. See amphoric *respiration*.

breath sounds. The sounds heard during respiration when usculting the lungs under all possible pathologic and normal conditions.

bronchial s. The large, harsh sound of bronchial respiration.

cardiac sounds. See *heart sounds* under *sound*.

cracked-pot s. A type of tympanitic resonance indicative of cavity

fetal heart sounds. The sounds produced by the beating of the fetal heart, best heard near the umbilicus of the mother

flapping s. The clap made by the closure of the cardiac valves.

friction s. The sound heard in auscultation, as result of the rubbing together of adjacent parts, as of the pleural folds, the pericardium, or the peritoneum, when the layers are dry or roughened.

funicular bellows s. See *souffle*.

heart sounds. See *heart sounds*.

humming-top s. See venous *hum*.

kettle-singing s. A chest sound sometimes heard in early pulmonary tuberculosis. It resembles the sound of water boiling in kettle.

Korotkov sounds. See Nikolai S. *Korotkov*.

mediastinal emphysematous sounds. Crackling or popping noises in the mediastinum caused by the heart moving against air caught in the mediastinum. It sometimes occurs with conditions such as interstitial pulmonary emphysema or trauma.

metamorphosing breath s. A sound due to the passage of air through narrow opening into and out of pulmonary cavity

muscle s. The sound heard through the stethoscope when placed over muscle while it is contracting susurrus.

osseous s. A high-pitched, intense, uscultatory sound having slightly metallic timbre.

pulmonary s. The respiratory murmur

respiratory s. Respiratory murmur

sawing s. A cardiac murmur resembling the sound produced by sawing.

shadow s. The interference with a sound [illegible] caused by an object being placed between the [illegible] and the source of sound.

subjective s. See *phonism*.

to-and-fro s. The friction sound of pericarditis and pleuritis.

tubular s. The sound of tracheal respiration

white s. A noise made up of pure tones, [illegible] monics, and discordants throughout the range of human hearing in equal parts and at equal intensities. It is used as background noise in speech intelligibility tests.

xiphosternal crunch s. See *xiphosternal crunch*.

sound [OF *sonde*]. An instrument for introduction into channel or cavity for determining the presence of constriction, foreign bodies, or other morbid conditions, and for treatment.

esophageal s. A long flexible sound for examination of the esophagus.

lacrimal s. A fine sound for exploring or dilating the lacrimal canaliculus.

urethral s. An elongated steel instrument, usually slightly conical, for examination and dilatation of the urethra.

uterine s. A graduated probe for measurement of the uterine cavity

Souques' sign. See *Souques' phenomenon*.

Sourdille, Maurice [*French otologist*, 18[illegible]-]. Known for his operation for the restoration of hearing in otosclerosis, in which he made [illegible] into the horizontal semicircular canal, covering it with plastic skin flap attached to the tympanum; called *fenestration operation*, *Sourdille's operation*.

sour'wood" [AS. *sūr wudu*]. *Oxydendrum arboreum*, tree of the Ericaceae. The leaves have [illegible] taste; has been used as a diuretic.

south'ern wood" [AS. *sūth*, *wudu*]. *Artemisia abrotanum*, related to absinthium. The leaves have been used as bitter tonic and anthelmintic.

Soxhlet, Franz von [*German chemist*, 18[illegible]-19[illegible]]. Known for his invention of an apparatus for sterilizing milk (1886). Best known for his apparatus for extracting fats in foods and for analysis of fat in tissues.

soy'bean so ya bean. The seed of *Glycine soja* (*Glycine hispida*, *Soja hispida*) legume native to Asia but now cultivated in other regions, particularly the United States, because of the high food and commercial value of its seeds. The bean and flour are used in dietetics for their high protein and relatively low carbohydrate content. The bean contains protein, fixed oil, carbohydrate, crude fiber and several enzymes. The meal is used as feed, in the manufacture of number of industrial products, and in some articles of food.

Soy'mi-da. A genus of the Meliaceae. S. *febrifuga* is an East Indian tree that furnishes roots bark which has been used as tonic and antiperiodic.

so"zo i-od' late (so zo-eye od' late, [illegible] late) A salt of sozoiodolic acid.

so"zo-i"o-dol'ic ac'id. $C_6H_2I_2(SO_3H)OH$. A crystalline, odorless powder used as an antiseptic, disinfectant, and parasiticide, chiefly in the form of its salts. Also called *sozoiodol*.

sp. *Spiritus*, spirit.

spa [after place of this name in Belgium which has mineral springs]. A mineral spring, especially one having medicinal value and visited as health resort.

space [L. *spatium*, space] A delimited area or region. —**spa'tial**, *adj.*

air s. The space in tissues filled with air or other gases.

antecubital s. The triangular space in front of the elbow often used as the site of venipuncture.

anterior perforated s. Anterior perforated substance.

Bogros's s. A potential space between the parietal peritoneum and the transversalis fascia, situated in the lower anterior abdominal wall, the retroinguinal space.

bregmatic s. The anterior fontanel.

chloride s. A theoretical volume of body fluid containing all the body chloride at a concentration equal to that in a plasma ultrafiltrate.

circumlental s. The interspace between the ciliary body and the equator of the lens.

complemental s. The portion of the pleural cavity just above the attachments of the diaphragm, which is not filled with lung during ordinary inspiration.

corneal spaces. Spaces in the interstitial cement substance between the lamellae of the substantia propria of the cornea.

dead s. (a) A cavity left after the closure of a wound. (b) **Anatomical d. s.** is that space in the trachea, bronchi, and air passages in general which contains air that does not reach the alveoli during respiration, the amount of air being about 140 cc. The **physiological d. s.** is a calculated expression of the anatomical plus whatever degree of overventilation or underperfusion is present. It is alleged to reflect the relationship of ventilation to pulmonary capillary perfusion. The formula is

$$\text{Physiological dead space} = \text{tidal volume} \times \frac{\text{arterial } pCO_2 - \text{expired } pCO_2}{\text{arterial } pCO_2}$$

distal closed s. The fascial space overlying the palmar surface of a distal phalanx, covered by fascia attached to the tip, lateral margins, and base of the distal phalanx.

endolymphatic s. The space containing the endolymphatic sac, situated behind the petrous portion of the temporal bone and communicating with the vestibular aqueduct.

epidural s. The space between the spinal dura and the periosteum lining the canal.

epitympanic s. See epitympanic recess.

fascial spaces. Potential spaces between layers of fascia, as fascial spaces of the foot.

Fontana's spaces. A series of small spaces formed by the interlacing of the connective-tissue fibers of the framework of the peripheral processes of the iris, situated in the angle of the anterior chamber and serving as a medium for the transudation of the aqueous humor from the posterior to the anterior chamber of the eye. Also called *Fontana's canal.*

freeway s. The distance between the occluding surfaces of the upper and lower teeth when the mandible is at rest.

Gerota's s. See Dumitru Gerota.

hypothenar s. A potential space in the fascia surrounding the muscles of the hypothenar eminence in the hand.

image s. The space around an optical system each point of which is an image of a corresponding point in the object space. Properties relating to the image are said to be in the image space, and properties relating to the object are said to be in the object space.

intercellular spaces. Cavities between adjacent cells.

intercostal s. The space between two adjacent ribs.

interfascial s. See s. of Tenon.

interglobular s. A region of incompletely calcified dentin bounded by calcified spherules. Preferably called interglobular dentin.

interpeduncular s. The region between the cerebral peduncles.

interpleural s. The mediastinum.

interproximate s. In dentistry, the V-shaped space between the proximal surfaces of the teeth and the alveolar septum which is filled by the gum.

intersepto-valvular s. A narrow cleft between the left valve of the sinus venosus and the septum primum after the latter develops.

intervaginal spaces. The subdural and subarachnoid spaces of the optic sheaths.

intervillous spaces. Spaces within the placenta developed from the trophoblastic lacunae and the dilated maternal veins, with which the maternal vessels communicate.

ischiorectal s. See ischiorectal *fossa.*

lateral midpalmar s. A deep fascial space on the radial side of the palm; thenar space.

lymph s. Lymph sinus; a tract of loose lymphatic tissue in a lymph node.

marrow s. A marrow-filled space between the trabeculae of cancellous bone.

medial palmar s. See midpalmar s.

mediastinal s. The mediastinum.

meningeal spaces. The subdural and subarachnoid spaces.

midpalmar s. A deep fascial space beneath the flexor tendons on the ulnar side of the palm. Syn. *medial palmar s.*

Nuel's s. A space between the outer pillars and the outer hair cells.

object s. The space around an optical system each point of which is considered as a possible source of radiation of light.

palmar spaces. The lateral and medial potential fascial spaces in the hand between the thenar and hypothenar areas, separated by a fibrous septum and filled with areolar tissue.

perichoroidal s. A potential space between the sclera and the choroid.

perilenticular s. The space surrounding the crystalline lens holding the ciliary zonule.

perilymphatic spaces. Small, irregular cavities filled with perilymph, between the membranous and bony labyrinths of the internal ear.

perineural spaces. Spaces within the sheaths of cranial nerve roots, through which passes cerebrospinal fluid.

perineuronal spaces. The tissue spaces surrounding neurons.

periotic spaces. See perilymphatic *spaces.*

perisinusoidal s. Lymphatic space of the liver bounded on one side by the endothelium of the sinusoids and on the other by the walls of the liver cells; also called *space of Disse.*

peritoneal spaces. Potential spaces within the peritoneum formed by the various reflections from the parietes and abdominal viscera.

perivascular spaces. Fluid-filled spaces between the adventitia of the blood vessels of the brain substance and the pial limiting membrane, lined with endothelial cells, connecting with the subarachnoid space. Also called *spaces of Virchow-Robin.*

perivitelline s. In mammalian ova, the space formed between the ovum and the zona pellucida at the time of maturation, into which the polar bodies are given off.

placental blood spaces. The intervillous lacunae of the placenta.

popliteal s. A diamond-shaped space at the back of the knee joint.

portal s. The area between hepatic lobules, containing connective tissue, arteries, veins, bile ducts, nerves, and lymphatics.

posterior triangular s. The space lying above

the clavicle and between the sternomastoid and the trapezius muscles and the occiput.

preputial s. A potential space between the prepuce and glans penis represented by two shallow fossae on either side of the frenulum.

prevesical s. A space lying immediately above the pubis and between the peritoneum and the posterior surface of the rectus abdominis. Also called *s. of Retzius, retropubic s.*

prezonular s. The space of the eye enclosed by the iris, lens, ciliary body and vitreous body.

Prussak s. See *recess* of tympanic cavity (b). See also Alexander *Prussak*.

quadrangular s. The lateral division of the triangular space of the shoulder which contains the axillary nerve and the posterior humeral circumflex artery.

quadrilateral s. (a) The anterior and posterior triangles of the neck taken together. (b) The deep fascial space of the wrist beneath the annular ligament and flexor tendons, above the pronator quadratus muscle.

rectovesical s. The rectovesical pouch; the space between the urinary bladder and the rectum.

retroparotid s. A potential space situated between the medial surface of the parotid gland and the upper lateral wall of the pharynx.

retroperitoneal s. That behind the peritoneum, but in front of the spinal column and lumbar muscles. In it lie the kidneys, the aorta, the inferior vena cava, and the sympathetic trunk.

retropharyngeal s. That behind the pharynx, containing areolar tissue.

retropubic s. See prevesical *s.*

semilunar s. A percussion area on the left anterior portion of the thorax, overlying the stomach. Also called *Traube s.*

small triangular s. The medial division of the triangular space of the shoulder through which pass the circumflex scapular vessels.

snuffbox s. Anatomist snuffbox.

s. of Burns. See suprasternal *s.*

s. of Disse. See perisinusoidal *s.*

s. of Retzius. See prevesical *s.*

s. of Tenon. The space between the sclera and the capsule of Tenon.

spaces of Littré. The potential spaces between the liver cell cords and the lining cells of the sinusoids; characteristically enlarged and filled with transudate in edema of the liver.

spaces of Virchow-Robins. See perivascular *spaces.*

subarachnoid s. The space between the arachnoid and the pia proper, containing subarachnoid trabeculae and filled with cerebrospinal fluid.

subdural s. The space between the dura and the arachnoid which normally contains only a capillary layer of fluid.

subphrenic s. One of the two spaces, right and left, between the diaphragm and the liver on either side of the falciform ligament.

subumbilical s. A triangular space in the body cavity having its apex at the umbilicus.

suprasternal s. The triangular space above the manubrium, enclosed by the layers of the deep cervical fascia which are attached to the front and back of this bone. Formerly called *s. of Burns.*

supravaginal s. A continuation of the space of Tenon along the external side of the dural sheath of the optic nerve.

temporal s. The temporal fossa.

thenar s. A deep fascial space beneath the flexor tendons of the index and, occasionally, of the middle finger and overlying the second metacarpal bone. Syn. *lateral midpalmar s.*

tissue s. A cavity or space in connective tissue.

Traube s. s. See semilunar *s.*

triangular s. A space of triangular form in the posterior wall of the axilla, bounded by the latissimus dorsi, teres minor and subscapular muscles and the surgical neck of the humerus; it is divided by the long head of the triceps into the quadrangular and small triangular spaces.

tunnel s. See *tunnel* of Corti.

undefended s. of Peacock. The thin membranous portion of the interventricular septum of the heart.

vitelline s. See perivitelline *s.*

zonular spaces. Those between the zonular fibers, part of the posterior chamber of the eye. Also called *canals of Petit.*

space med'i·cine. A division of aviation medicine concerned with the physiologic and pathologic effects of flying at extremely high altitudes and at supersonic speeds.

spa·gyr'ic [G. *span*, to draw; *ageirein*, to assemble]. Pertaining to the obsolete chemical, alchemistic, or Paracelsian school of medicine. —**spag'yrist,**

spag'y·rism (spadj'i·riz·um) [*span*, *ageirein*]. The Paracelsian, or spagyric, school or doctrine of medicine.

Spallanzani, Lazaro [Italian physiologist, 1729-99]. Remembered for his investigations on fertilization, circulation, and digestion. He opposed the doctrine of spontaneous generation. Made a number of important observations on the character of gastric juice; his experiments included the obtaining of specimens from the living by the use of a sponge attached to a cord which was swallowed (1780). Observed that the regenerative power of cells is in proportion to the age of the individual; known as *Spallanzani's law.*

spal·la'tion. The process of bombarding various elements with extremely high energy protons, deuterons, or alpha particles, whereby extensive alteration of the bombarded nucleus results.

span"i·o·car'di·a [G. *spanios*, scanty; *kardia*, heart]. Bradycardia.

Span'ish col'lar. Paraphimosis.

Span'ish wind'lass. An improvised tourniquet consisting of a handkerchief knotted about a limb and tightened by means of a stick which is twisted.

span. Trade-mark for a series of long chain fatty acid partial esters of hexitol anhydrides such as those of sorbitol and mannitol. The substances are used as wetting agents, emulsifiers, and solubilizing agents. See *tweens.*

spar'a·drap [It. *sparadrappo*]. A plaster spread on cotton, linen, silk, leather, or paper; adhesive plaster.

spa·ras'sol. $C_{10}H_{12}O_4$; 6-hydroxy-4-methoxy-2-methylbenzoic acid methyl ester; an antibiotic substance produced by the fungus *Sparassis ramosa* and also obtained in extracts of the lichen *Evernia prunastri.*

spar"ga·no'sis [G. *sparganon*, swaddling-clothes; *-osis*, condition]. Infestation with *Sparganum*, which is a larval stage of the fish tapeworms.

Spar'ga·num, Spar'ga·nu·m (pl. *Spargana*) [*sparganon*]. A generic name applied to the plerocercoid larva of *Diphyllobothrium*, especially if the adult form is unknown.

S. mansoni. A species seen in the Far East, which is frequently found in the eye. Infestation probably follows contact with freshly killed frogs.

S. mansonoides. A species which infests mice and has also been reported in the muscles and subcutaneous tissues of man.

S. proliferum. A species which proliferates in the tissues of the host by branching and budding of large numbers of sparganа. The adult form is unknown.

spar go sis [G., swelling]. Enlargement or distention, as of the breasts due to accumulation of milk.

spark [AS. *spearca*]. A light flash, usually electric in origin, as that emanating from an electrode through which current is passing.

Sparkman test for urobilin. See under *test*.

sp t ine (pah tee-een, in spahr tee) $C_{15}H_{26}N$ A liquid alkaloid obtained from *Cytisus scoparius*; occurs as colorless, oily liquid; slightly soluble in water but soluble in alcohol.

s. sulfate (*sparteinae sulfas*) $C_{15}H_{26}N_2 \cdot H_2SO_4 \cdot 5H_2O$; occurs as colorless crystals or white crystalline powder; 1 Gm. dissolves in about 1 1 cc. of w ter and in bout 3 cc. of alcohol. Has been used chiefly in the treatment of irregularities of the heart, such as tachycardia and functional palpitation. Dose, 0.01–0.13 Gm. (⅙–2 gr.)

spasm [G *spasmos*]. A sudden muscular contraction.

Bell's s. Convulsive facial tic.

bronchial s. Asthma.

cadaveric s. Early or at times immediate, appearance of rigor mortis seen after death from certain causes. The muscle spasm actually causes movements of the limbs.

carpopedal s. A spasm of the hands and feet, or of the thumbs and great toes; associated with tetany

clonic s. (a) A spasm broken by relaxations of the muscles. (b) In the area of the accessory nerve it is called spasmodic torticollis. (c) In the area of the facial nerve it is called painless tic.

cynic s. A contraction of the facial muscles upon one side, so as to expose the teeth.

facial s. A peculiar clonic contraction of the muscles surrounding the eye, or else involving one entire side of the face.

fatigue spasms. A group of affections characterized by spasmodic contractions, either clonic or tonic, brought bout by voluntary movement, the exciting cause being limited to some particular action. Also called *business spasms, coordinated business neuroses, functional spasms, handicraft spasms, movement spasms, occupational spasms, professional spasms.*

fixed s. Permanent or continuous tetanic rigidity of one or more muscles.

Friedreich's spasm. See *paramyoclonus multiplex*.

functional spasms. See *fatigue spasms* under *spasm*.

habit s. Half voluntary spasmodic movements, the result of habit, sometimes called *habit chorea*.

histrionic s. A condition in which local involuntary twitchings of the face, acquired in childhood, persist during adult life, and are increased by emotional causes

idiopathic muscular s. See *tetany*.

inspiratory s. A spasmodic contraction of nearly all the inspiratory muscles.

laryngeal congenital s. A peculiar stridor developing at birth, and disappearing after one or two years.

lingual s. See *aphthongia*.

lock s. A form of writer' cramp in which the fingers become locked on the pen.

masticatory s. f the face. See *trismus*.

mimic s. Facial tic.

mobil s. Slow irregular movements following hemiplegia.

movement spasms. See *fatigue spasms* under *spasm*.

myopathic s. One ttending disease of muscles.

nodding s. Eclampsia nutans; spasmus nutans.

occupation spasms. See *fatigue spasms* under *spasm*.

pantomimic s. See painless *tic*.

phonic s. A spasm of the laryngeal muscles occurring on attempting to speak.

retrocollic s. Spasm of the muscles at the back of the neck, causing retraction of the head.

salaam s. Clonic spasm causing bowing movements. See also *eclampsia nutans* and *spasmus nutans*.

saltatory s. A clonic spasm that causes the patient to leap or jump when he attempts to stand.

sewing s. An occupational spasm seen in tailors, seamstresses, and shoemakers.

smith's s. An occupational spasm with associated hemiplegia also called *hephestic hemiplegia*

s. of accommodation. Spasm of the ciliary muscles, in attempting accommodation for objects nearby

s. of the glottis. See *laryngismus stridulus*.

stutter s. See *laliophobia*.

synclonic s. Tremulous agitation.

tailor' s. An occupational neurosis occurring in tailors, characterized by spasm of the muscles of the arm and hand. Also called *tailor' cramp*.

telegrapher's s. An occupational spasm. See *fatigue pasms* under *spasm*.

tetanic s. See tonic *s*.

tonic s. A spasm that persists without relaxation for som time.

torsion s. See *dystonia* musculorum deformans.

toxic s. One due to poison.

winking s. A habit tic of spasmodic twitching or blinking of the eyelids. Also called *spasmus nictitans*.

spasmalgin. Trade-mark for tablet or injection containing papaverine hydrochloride, pantopon, and atrinal The preparations are used as an analgesic and antispasmodic.

spas'mo- (spaz'mo-) [*spasmos*]. A combining form denoting *pertaining to spasm*.

spas-mod'ic (spaz mod'ick) [G. *spasmōdēs*, convulsive]. Pertaining to, or characterized by spasm.

spas-mol'o gy (spaz mol'o-jee) [G *spasmos*, spasm; *logos*, word]. The sum of scientific knowledge of the nature and causes of spasms and convulsions

spas"mo-lyg'mus. See *hiccup*.

spas"mo-lyt'ic. Antispasmodic.

spas"mo-pho'nia [*spasmos*; G. *phōnē*, speech]. Stuttering. *Obs.*

spas"mo-phil'i [*spasmos*; G *philein*, to love]. A morbid tendency to convulsions, and to tonic spasms, such as those observed in tetany —**spasmophilic**, *adj.*

spas mous (spaz'mus) [*spasmos*]. Having the nature of spasm. *Rare.*

spas mus (spaz'mus) [*spasmos*]. A spasm.

s. bronchialis. See *asthma*.

s. glottidis. Spasm of the glottis or larynx; laryngismus stridulus.

s. intestinorum. See *enteralgia*.

s. musculorum. See *cramp*.

s. nictitans. Spasmodic action of the orbicularis oculi muscle, causing winking movement of the lid.

s. nutans. Rhythmic nodding and eye jerking frequently seen in rachitic and debilitated children also called *gyrospasm, nodding spasm*.

s. oculi. See *nystagmus*.

spas'tic [G *spastikos*, drawing in]. Pertaining to, or characterized by spasm; produced by spasm.

spas-tic'i-ty (spas tiss'i tee) [*spastikos*]. An increased tonus or tension of muscle which is associated with an exaggeration of deep reflexes, and frequently with clonus and partial or complete loss of voluntary control.

cerebral s. That due to organic disease of the brain.

clasp-knife s. The resistance of muscle to passive extension followed by a sudden relaxation, like the snapping of clasp-knife blade.

spa ti um (spay shee-um) Space.

spat'u la [L. dim from *spatha*, flat wooden instrument]. A flexible blunt blade used for spreading ointment. —**spatulate,** *adj*

Spatz, Hugo [*German neurologist*, 1888–]. Described progressive degenerative disease of childhood, characterized by an extrapyramidal syndrome of athetosis, mental deterioration, and speech defect; called *Hallervorden-Spatz syndrome*.

spav'in [OF *esparvain*] Disease of the hock of horse. Also see *hock*.

s. bog. An enlargement due to distention of the capsular ligament, prominent on the inner aspect of the joint.

s. bone. An enlargement due to an exostosis of the tarsal bones, termed high or low depending on its position.

spay [AF *espeier*]. Remove th ovaries.

SPCA Serum prothrombin conversion accelerator See *convertin*.

S.P C.A. Society for the Prevention of Cruelty to Animals

spear'mint [ME. *spere*; G *mintha*, mint] (*mentha viridis*) The dried leaf and flowering top of *Mentha spicata* (*Mentha viridis*) containing a volatile oil which is found in the external glandular hairs.

s. oil (*oleum menthe viridis*) A volatile oil distilled with steam from fresh, overground parts of the flowering plant of *Mentha spicata* (*Mentha viridis*) occurs as a colorless, yellow or greenish yellow liquid sol ble in an equal volume of 80% alcohol. It contains about 50% of *l*-carvone. Other constituents are phellandrene, *l*-limonene, pinene, dihydrocarvol acetate, dihydrocuminic cetate. The oil as well as the plant is little used except as flavoring agent.

s. spirit (*spiritus menthae viridis*) An alcoholic solution containing 10% of spearmint oil.

s. water (*aqua menthae viridis*) A clear saturated solution of spearmint oil in distilled water Used as vehicle.

spe cial-ist [L. *specialis*, individual]. One who limits his practice to certain diseases, or to the diseases of single organ or class, or to certain type of therapy specifically diplomate of one of the American specialty boards in medicine, such as the American Board of Surgery

spe cial ty [*specialis*]. The branch of medicine or surgery pursued by specialist

spe cies (spee shees) [L., appearance]. 1. A group of individuals, similar in certain morphologic and physiologic characteristics which distinguish them from other groups with which they may be united on the basis of other characters into higher group, the genus the species also may fall into groups of minor rank, as subspecies, varieties, races 2 A name sometimes pplied to certain mixtures of herbs used in making decoctions and infusions

spe-cif'ic [*species*; L. *facere*, to make]. 1 Of or pertaining to species or to that which distinguishes thing or makes t of the species to which it belongs. 2 Produced by certain microorganism, as a specific disease in restricted sense, syphilitic.

spe-cif'ic. A medicine that has distinct curative influence on particular disease, as quinine in malaria or mercury in syphilis.

spec"i fic'i ty (spess -fiss -tee) [*species*; *facere*]. The quality of being specific.

compound s. The qualitative and quantitative differences in physiologic behavior of various compounds of similar structure on the same animal organism.

species s. The difference in physiologic response to one or more compounds by different species of animals.

spec ta-cles [L. *spectaculum*, sight]. Framed or mounted lenses for aiding vision where there are optical or muscular defects of the eye. See lens

bifocal s. See *bifocal*.

orthoscopi s. See *orthoscopic*.

pantoscopic s. Bifocal spectacles.

prismatic s. Spectacles with prismatic lenses, either alone or combined with spherical or cylindrical lenses.

protective s. Lenses that shield the eyes from light, dust, heat.

telescopic s. Spectacles that magnify the retinal image used for persons with cloudy media, partial cataracts, or impaired retinal sensitivity

trifocal s. See under *glasses*.

spec tro- [L. *spectrum*, appearance]. A combining form denoting *relating to spectrum*.

spec tro-col"or im ter (kol urim ter) [*spectrum*, L. *color* color; G *metron*, measure] Combination of spectroscope and ophthalmoscope for the detection of colorblindness to one spectral color

spec tro gram. A graphical record of spectrum

spec tro-graph [*spectrum*, G *graphein*, to write] A spectroscope which records spectrum on photographic plate.

mass s. An instrument used for determining the mass of atoms or molecules by producing charged ions and measuring their deflection in magnetic field.

spec trom ter [*spectrum*, G *metron*, measure] A spectroscope provided with equipment for measuring the deviations of light and other electromagnetic rays and therewith the wavelengths of spectral lines. —**spectrometry** *n.*

Beckman s. One in which the spectrum is produced by the use of quartz prism.

Coleman s. One in which the spectrum is produced by diffraction grating.

spec"tro mi'cro scope. See *microspectroscope*

spec"tro pho"to-lum e-ter A device combining spectrometer and photoelectric cell for the accurate identification and quantitation of unknown material.

spec"tro-pho tom e ter [*spectrum*, G *phōs*, light, *metron*]. Combination of spectrometer and photometer for making quantitative measurements in various parts of the visible, ultraviolet, or infrared spectrum. —**spectrophotometry** *n.*

flame s. A device used to quantitate emission spectra derived from heating solid or solution in flame. See flame *photometry*.

spec"tro po"lar im e-ter [*spectrum*, L. *polus*, pole; *metron*]. Combination of spectrometer and polariscope used for measuring optical rotation produced by certain solutions.

spec tro scope [*spectrum*, G *skopein*, to examine] An instrument for dispersing radiations by various methods, such as prism, diffraction gratings, and crystals, and for observing the resultant spectrum. —**spectroscop'ic,** *adj*

spec tros co-py Study of spectra use of the spectroscope.

microwave s. The study of interactions between matter and radio waves of wavelengths between few meters and few tenths of millimeter such study provides information concerning the molecular and nuclear structure of matter

spec trum (pl. *spectrums*, *spectra*) [L.] 1 The series

of images resulting when beam of electromagnetic waves (such as electric waves, infrared, visible light, ultraviolet, or -rays) is dispersed and the constituent waves are arranged according to their frequencies or wavelengths. 2. Figuratively any series of entities arranged according to the quantitative variation of given common property; range. —spectral, adj.

absorption s. Spectrum of radiation, which has passed through some selectively absorbing substance, as white light after it has passed through vapor

antibiotic s. The range of activity of an antibiotic against different bacteria also called bacteriostatic antibacterial antimicrobial s.

auditory s. See phonism, photism.

bacterial s. The susceptibility of range of microorganisms to particular chemotherapeutic or antibiotic agent.

comparison s. The arrangement side by side of the spectrums of two different substances.

continuous s. A spectrum without sudden variations, representing continuous variation of wavelengths from one end to the other

electromagnetic s. See electromagnetic *radiation.*

emission s. Spectrum of the radiation which substance emits. The opposite of absorption spectrum.

fortification s. Scintillating scotoma.

solar s. The spectrum afforded by the refraction of sunlight.

spec u lum [L., mirror]. An instrument for dilating the opening of cavity of the body in order that the interior may be more easily visible.

anal s. An instrument of varying design similar to nasal speculum, but with longer blades which allows examination of the lower portion of the rectum also called rectal s.

aural s. A small, hollow instrument with an expanded end, which may be introduced into the ear for examination of the external auditory canal and the tympanic membrane.

duckbill s. A bivalve vaginal speculum with flat, broad blades.

eye s. An instrument for retracting the eyelids.

nasal s. A small bivalve instrument with handles, which dilates the nostril and allows examination of the nasal passages.

Spee, *Ferdinand* von (1855–1937) German embryologist who described curved line which extends along the summits of the buccal cusps from the first premolar to the third molar called *Spee' curve*

speech [AS. *spæc*]. 1 The faculty of expressing thought by spoken words; the act of speaking. 2. The words spoken.

ataxic s. The intermittent, explosive speech resulting from cerebellar disorders.

bulbar s. The thick speech occurring when the nuclei of the medulla concerned with speech are damaged or when there is injury to both corticobulbar tracts.

echo s. Echolalia.

esophageal s. Speech produced after laryngectomy by swallowing air into the esophagus and belching it with an eructation past the pharyngeal opening to produce sound which is then modulated by the lips, tongue, and palate

interjectional s. The expression of emotions by inarticulate sounds.

laryngeal s. Speech produced by means of an artificial larynx following laryngectomy: now less commonly employed.

mirror s. Defective speech characterized by pronouncing words or syllables backward.

scanning s. A slow and measured form of speech with pauses between syllables. Characteristic of diffuse lesions of the cerebellum and brain stem, particularly common in multiple sclerosis.

slurred s. The tremulous, feeble, careless speech which is characteristic of lesions of the basal ganglions.

staccato s. See scanning s.

syllable s. A form of dysphasia with halting, stumbling articulation.

spe-le-os'to-my See *cavernostomy*

Spemann, Hans [*German embryologist*, 1869–1941]. Demonstrated that the structural development of the embryo is the result of the physicochemical interaction between different regions of tissue, thereby introducing the concept of the organizer Nobel laureate (1935)

Spencer Roscoe Roy (1888–) American physician who developed, with R. R. Parker Rocky Mountain spotted-fever vaccine.

Spencer's bright-line counting chamber A double membrane counting chamber

Spencer Wells. See Thomas Spencer *Wells.*

Spengler Carl [*Swiss physician*, 1861–1937]. Described small, spheroidal bodies found in the sputum of tuberculous patients called *Spengler' fragments.*

Spens, Thomas [*Scottish physician*, 1764–1842]. Reported case of what was undoubtedly heart block (1793) Morgagni had earlier described similar case. The classic descriptions are those of Robert Adams (1826) and William Stokes (1846) Stokes-Adams syndrome is sometimes called *Spens' syndrome.*

sperm [G *sperma*, seed]. 1. A spermatozoon; the mature male germ cell. Syn., *sperm cell.* 2. An inexact term for the seminal fluid.

sper"ma-cet'i (sper mah-see'tee, -set'ee) [*sperma*; G. *kētos*, sea-monster] (*cetaceum*) A waxy substance obtained from the head of the sperm whale, *Physeter macrocephalus.* The chief constituent is cetyl palmitate or cetin. Cetyl alcohol is also present in appreciable amounts. There are also small amounts of the esters of lauric, myristic, palmitic, and stearic acids, and also of dodecyl, tetradecyl, and octadodecyl alcohols. Used chiefly to add firmness to ointment bases. An ingredient in rose water ointment.

sperm'at-ist (*sperma*). A preformationist who held the view that the animalcule was in the sperm cell rather than in the egg. Syn., *spermist.*

sperm as'ter The radiating structure which precedes the sperm nucleus as it advances within the egg

sper"ma ta cra si (spur"mah-tah kray zhah, -zee-ah) [*sperma*, G. *akrasia*, absence of mixture]. Deficiency or decrease of spermatozoa in the semen Also called *spermacrasia.*

sper mat'ic [L. *spermaticus*, of seed]. 1. Pertaining to the semen or spermatozoa; conveying semen, as the spermatic cord. See Plate 4. 2. Pertaining to the spermatic cord, as the spermatic fascia.

sper'ma tid [*sperma*]. A male germ cell immediately before assuming its final typical form.

sper'ma to-, spermat- [*sperma*]. A combining form meaning seed, germ.

sper'ma to cele" (sper'mah-to-seel spur-mat'o-) [*sperma*; G *kēlē* hernia]. Cystic dilatation of duct in the head of the epididymis or in the rete testis. Rupture into the tunica vaginalis produces spermatic hydrocele.

sper"ma to-ce-lec"to-my [*sperma*; *kēlē*; G. *ektomē*, excision]. Excision of a spermatocele, or cyst of the epididymis.

sper"ma to-ci'dal [*sperma*; L. *caedere*, to kill]. Destructive to spermatozoa also spelled *spermaticidal.*

sper'ma to-cide" [*sperma*; *caedere*]. An agent that destroys spermatozoa.

sper'ma to-cyst (spur'muh-to-sist spur-mat'o-) See *seminal vesicle*. —**spermatocys'tic**, *adj*

sper"ma to-cys tec'to-my See *vesiculectomy*

sper"ma t -cys ti' tis [*sperma*, G *kystis*, bladder; *-itis*, inflammation]. Inflammation of the seminal vesicles.

sper"ma to-cys-tot' my [*sperma*, *kystis*; G *temnō*, cutting]. Surgical incision of seminal vesicle

sper'ma to-cyte (spur'muh-to-sight spur mat o-) [*sperma*, G *kytos*, cell]. A cell of the last or next to the last generation of cells which divide to form mature male germ cells.

primary s. A developing sperm cell in the growth phase preceding the first meiotic division.

secondary s. One of the two cells produced by the first meiotic division.

sper"ma to cy to ma. Seminoma.

sper"ma to-gen'e-sis [*sperma*, G *genesis* production]. The phenomena involved in the production of mature male germ cells, sometimes restricted to denote the process of meiosis in the male.

sper"ma to-gen'ic [*sperma*, G *gennaein*, from *gignesthai*, to be produced]. Producing spermatozoa, as the spermatogenic cells of the testis. Also called *spermatogenous*

sper"ma to go ni um (pl. *spermatogonia*) [*sperma*, G *gone*, offspring]. One of the primitive male germ cells. The primary spermatocytes arise from the last generation of spermatogonia by an increase in size.

sper'ma toid [*sperma*; G *eidos*, form]. Resembling sperm cell

sper"ma tol'y sin (spur"muh-tol' sin, spur"muh-to lye sin) [*sperma*, G *lysis*, loosing]. A substance causing dissolution of sperm cells

sper"ma tol'y-sis [*sperma*, *lysis*] The process of dissolution of sperm cells. —**spermatolyt'ic**, *adj*

sper"ma top a thy [*sperma*; G *pathos*, disease]. Disease of the sperm cells or of their secreting mechanism.

sper'ma to phore" **sper mat'o-phore** [*sperma*; G *phoros*, bearing]. A special capsule or pocket containing male germ cells; found in certain annelids, mollusks, crustacea, and vertebrates, but especially remarkable in the cephalopoda.

sper"ma tor rhe a, **sper"ma tor rhoe** [*sperma*, G *rhoia*, flow] Involuntary discharge of semen without orgasm.

false s. That occurring when spermatozoa are not in the fluid. Also called *prostatorrhea*.

s. dormientium. A nocturnal emission of semen.

sper"ma tox'in, **sper"ma to-tox'in.** See *spermolysin*.

sper"ma to-zo'i-cide [*sperma*; G *zōion*, living being; L. *caedere*, to kill]. An agent destructive to spermatozoa. Syn *spermicide* *spermatocide*.

sper"ma-to zo'id [*sperma*; *zōon*]. *I* botany, motile male germ cell found in certain algae, in mosses and ferns, and in certain gymnosperms. Also called *spermatozoon*

sper"ma to-zo on (pl *spermatozoa*) [*sperma*; *zōon*]. The mature male germ cell See Plate 41 —**spermatozoal** *adj*

sper"ma tu'ri [*sperma*, G *ouron*, urine]. The presence of semen in the urine

sperm cell. A spermatozoon Syn *sperm*.

sperm cen'ter The centrosome which precedes the sperm nucleus as it advances within the egg. I flagellate spermatozoa t arises from the middle piece

sper mat ic-to-my [*sperma*; G *ektomē*, excision]. Resection of part of the spermatic duct.

sperm head. The head of spermatozoon.

sper'mi-cide [*sperma*; L. *caedere*, to kill]. An agent that destroys spermatozoa. Syn., *spermatocide*.

sper'mi dine. $H_2N(CH_2)_3NH(CH_2)_4NH_2$ polyamino compound found in semen and other animal tissues

sper'min, **sper mine** [*sperma*]. Diaminopropyltetramethylene-diamine, $H_2N(CH_2)_3NH(CH_2)_4NH(CH_2)_3NH_2$, found in the form of phosphate in semen and other animal fluids and tissues; its exact function is unknown. Has been used in the treatment of nervous disorders.

sperm'ism [*sperma*]. A form of the theory of preformation which held that the sperm cell contains the animalcule. —**spermist**, *n.*

sper'mo lith [*sperma*; G *lithos*, stone]. A calculus in spermatic duct or seminal vesicle.

sper mol'y sin, **sper"mo-ly'sin** [*sperma*; G. *lysis*, loosing]. A cytolysin produced by inoculation with spermatozoa. Syn., *spermatoxin*.

sper mol'y sis. See *spermatolysis*.

sper"mor-rhe'a. See *spermatorrhea*.

Sperry's method. See Schoenheimer and Sperry' method.

sp. g., **sp. gr** Specific gravity

sph. Spherical or spherical lens.

sphac"e-la'tion (sfass i lay'shun) [G. *sphakelos*, gangrene]. Necrosis, gangrene, mortification —**sphac'elate** *v.*

sphac' lism (sfass'l-iz um) [*sphakelos*]. The condition of being affected by sphacelus.

sphac"e-lo der'ma (sfass"l lo dur'muh) [*sphakelos*; G *derma*, skin]. Gangrene of the skin from many different causes.

sphac' lus (sfass'l-lus) [*sphakelos*]. A slough —**sphac'eloid**, **sphac elous**, *adj*.

spha"gi as'mus (sfay"jee as mus) [G *sphagiasmos*, slaying]. Epileptic spasm of the muscles of the neck.

spha gi'tis [G *sphagē*, throat; *-itis*, inflammation]. 1. Inflammation of a jugular vein. 2. Sore throat.

sphe ni-on [G *sphēn*, wedge]. The point at the anterior extremity of the sphenoparietal suture.

sphe no-, **sphen-** [*sphēn*]. A combining form meaning wedge; used to denote pertaining to the sphenoid bone

sphe"no-bas'i lar Spheno-occipital.

sphe no-ceph'a lus [*sphēn*, G. *kephalē*, head]. 1. In Isidore Geoffrey Saint-Hilaire's classification, variety of monster with separated eyes, the ears united under the head, the jaws and mouth distinct, and the sphenoid bone altered in shape. 2 In Blanc classification, monster in which the lower jaw is absent or rudimentary the fauces are occluded, with severe defects in the upper jaw and sphenoid region, and with various degrees of synotia. The upper face is nearly normal, as is 3 As Geoffrey Saint-Hilaire sphenocephalus. individual having wedge-shaped, narrow head resulting from compensatory enlargement of the anterior fontanel after premature sagittal suture union

sphe"no-ceph'a-ly [*sphēn*, *kephalē*]. The condition of having wedge-shaped head.

sphe"no-eth'moid [*sphēn*, G *ēthmoeidēs*, perforated] Relating to both the sphenoid and the ethmoid bones.

sphe noid [G *sphēnoeidēs*, wedge-shaped]. Wedge shaped, as the sphenoid bone.

sphe noid. The sphenoid bone See Table of Bones in the Appendix. —**sphenoid'al**, *adj*

sphe"noid i'ti [*sphēnoeidēs*; G *-itis*, inflammation]. Inflammation of the sphenoid air sinus.

sphe"noid ot' my [*sphēnoeidēs*; G. *tomē*, cutting]. Incision into the sphenoid air sinus

sphe"no-man-dib u lar [G. *sphēn*, wedge; L.

mandibula, jaw]. Pertaining to the sphenoid and mandibular bones, as sphenomandibular ligament.

sphe"no·max'il·lar"y (sfee"no·mack'si·lerr·ee) [sphen-; L. *maxilla*, jawbone]. Pertaining to the sphenoid and maxillary bones, as the sphenomaxillary *fossa*.

sphe"no·oc·cip'i·tal (-ock·sip'i·tul). Pertaining to the sphenoid and the occipital bones; sphenobasilar.

sphen·op"ti·cus par"a·sit'i·cus. See *epignathus*.

sphe"no·pal"a·tine (sfee"no·pal'uh·tyne, -tin, -teen) [sphen-; L. *palatum*, palate]. Pertaining to the sphenoid bone and the palate, as the sphenopalatine foramen.

sphe"no·pa·ri'e·tal [sphen-; L. *paries*, wall]. Pertaining to the sphenoid and parietal bones.

sphe"no·pe·tro'sal. Pertaining to the sphenoid bone and the petrous portion of the temporal bone.

sphe·no'sis [G. [illegible], closing up]. The wedging of the fetus in the pelvis.

sphe"no·tre'si·a (sfee"no·tree'zhuh, -see·uh, -zhuh, -see·uh) [G. *sphēn*, wedge; *trēsis*, perforation]. A variety of craniotomy in which the basal portion of the fetal skull is perforated.

sphe'no·tribe [sphen-; G. *tribein*, to rub]. An instrument for crushing the basal portion of the fetal skull.

sphe'no·trip"sy [sphen-; G. *tripsis*, rubbing]. Crushing of the fetal skull.

sphere [G. *sphaira*, ball]. 1. A ball or globe. 2. A space. —**spher'ic, spher'ical,** *adj.*

attraction s. A clear spot in the cytoplasm, outside and close to the nucleus of an ovum undergoing mitosis. It contains the centrosome, and is the center of the formation of the amphiasters in karyokinesis.

vitelline s. The mulberrylike mass of cells that results from the fission of the substance of the ovum after fertilization. Also called *yolk s.*

sphe"res·the'si·a, sphe"raes·the'si·a (sfeer"esthee'zhuh, -zee·uh) [sphere; G. *aisthēsis*, perception]. Globus hystericus.

sphe"ro·ceph'a·lus [sphere; G. *kephalē*, head]. Blanc's term for a monster with absent or rudimentary lower jaw, occlusion of the fauces, approximation of the ears, lack of the bones of the face, marked deformities in the frontal and sphenoid bones, and with a vesicular brain.

sphe"ro·cyl'in·der [sphere; G. *kylindros*, cylinder]. Bifocal lens combining spherical with cylindrical surface.

sphe'ro·cyte [sphere; G. *kytos*, cell]. An erythrocyte which is spheroid in form rather than biconcave and having the microscopic appearance of a hyperchromatic microcyte.

sphe"ro·cy'tic. Pertaining to a blood picture in which the mean corpuscular volume (MCV) is normal or within ±2 standard deviations of the mean normal, but the mean corpuscular diameter is more than 2 standard deviations below the mean normal as determined by the same method on the bloods of healthy persons of the patient's age or sex group.

sphe"ro·cy·to'sis (sfeer"o·sigh·to'sis) [sphere; G. *kytos*; G. -*osis*, condition]. A preponderance in the blood of spherocytes as observed microscopically.

hereditary s. A chronic congenital disorder of the erythrocytopoietic system characterized by spherocytosis, increased osmotic fragility, variable degree of intracorpuscular hemolytic anemia, and splenomegaly. The manifestations vary widely in severity and hence in time of recognition. Also called *congenital hemolytic anemia, chronic acholuric jaundice, chronic familial jaundice* or *icterus, familial acholuric jaundice, familial hemolytic jaundice* or *icterus, familial jaundice, hemolytic splenomegaly.*

sphe'roid, sphe·roi'dal [sphaira; G. *eidos*, form]. Resembling a sphere.

sphe'roid. A solid resembling a sphere.

oblate s. One in which the polar axis is less than the equatorial diameter.

prolate s. One in which the polar axis exceeds the equatorial diameter.

sphe·rom'e·ter [sphaira; G. *metron*, measure]. An instrument for determining the degree of curvature of a sphere or part of a sphere, especially of optical lenses, or of the tools used for grinding them.

spher'ule [dim. from *sphaera*]. A minute sphere.

sphinc'ter [G. *sphinktēr*, that which binds tight]. A muscle surrounding and closing an orifice. See Table of Muscles in the Appendix. —**sphincter'ic,** *adj.*

anal s. Either of the sphincter ani muscles.

cardiac s. The circular muscle fibers around the cardiac end of the esophagus.

pyloric s. The thickened ringlike band of the circular layer of smooth muscle at the lower end of the pyloric canal of the stomach.

s. ampullae. The occasionally present network of smooth muscle of the ampulla of Vater.

s. ani. (a) The sphincter ani externus, composed of bundles of striate muscle fibers surrounding the anus. (b) The sphincter ani internus, a thickening of the inner circular (smooth) muscle layer of the anal canal.

s. choledochus. The annular smooth muscle of the common bile duct just before its junction with the pancreatic duct.

s. of Boyden. That strong muscular part of the sphincter of Oddi around the preampullary part of the bile duct, which remains contracted during interdigestive phases, allowing the gallbladder to be filled.

s. of Oddi. The intricate arrangement of smooth muscle about the ductus choledochus and pancreatic duct in the wall of the duodenum.

s. pancreaticus. The inconstant band of smooth muscle encircling the pancreatic duct just before it joins the ampulla of Vater.

s. urethrae. (a) The sphincter urethrae membranaceae, composed of bundles of voluntary muscle which surround the membranous portion of the urethra in the male; in the female the analogous muscle fibers surround the proximal portion of the urethra. (b) The sphincter vesicae, composed of bundles of smooth muscle which are part of the tunica muscularis of the bladder; the fibers are looped around the neck of the bladder, thus forming an involuntary urethral sphincter.

urethral s. See *s. urethrae*.

vaginal s. The bulbocavernosus muscle in the female.

sphinc"ter·al'gi·a [sphinktēr; G. *algos*, pain]. Pain in the sphincter ani muscle or about the anus.

sphinc"ter·ec'to·my [sphinktēr; G. *ektomē*, excision]. Oblique blepharotomy; the [illegible] operation for the dilatation of the palpebral fissure, or for blepharospasm.

sphinc"ter·is'mus (sfink"tur·iz'mus) [sphincter-]. A spasmodic contraction of the sphincter ani muscle, usually [illegible] with fissure or ulcer of the anus, but occasionally occurring independently of such lesion.

sphinc"ter·i'tis [sphincter-; [illegible] -*itis*, inflammation]. Inflammation of [illegible] sphincter [illegible] the sphincter.

sphinc"ter·ol'y·sis [sphincter-; G. *lysis*, [illegible]]. The operation of freeing the iris in [illegible] synechia.

sphinc"ter-o-plas"ty [*sphinktēr*; G. *plassein*, to form]. A plastic or reparative operation on a sphincter muscle.

sphinc"ter-ot'o-my [*sphinktēr*; G. *tomē*, a cutting]. The operation of incising a sphincter.

sphin'gol. Sphingosine.

sphin"go-my'e-lin. A phospholipid occurring in brain, kidney, liver, and egg yolk. It is composed of choline, sphingosine, phosphoric acid, and a fatty acid. The latter is usually lignoceric acid but probably several sphingomyelins exist which contain other fatty acids, such as stearic and nervonic acids.

sphin'go-sine (sfing'go-seen, -sin). A basic, unsaturated amino-alcohol occurring in sphingomyelin and the cerebrosides. It has the probable composition, $CH_3(CH_2)_{12}CH{=}CH.CHOH.CH.NH_2.CH_2OH$. Syn., *sphingol*.

sphyg'mic, sphyg'mi-cal [G. *sphygmos*, pulse]. Pertaining to the pulse.

sphyg'mo- [*sphygmos*]. A combining form meaning pulse.

sphyg"mo-bo-lom'e-ter [*sphygmos*; G. *bolē*, stroke; *metron*, a measure]. An instrument for measuring and recording the force of the pulse. —**sphygmobolometry**, *n.*

sphyg"mo-chron'o-graph (sfig"mo-kron'o-graf, -kro'no-graf) [*sphygmos*; G. *chronos*, time; *graphein*, to write]. A registering sphygmograph.

sphyg"mo-chro-nog'ra-phy [*sphygmos*; *chronos*; *graphein*]. The registration of the extent and oscillations of the pulse wave.

sphyg-moid'ic (sfig-moid'ick, -mo-dick) [G. *sphygmōdēs*, like the pulse]. Like the pulse; throbbing.

sphyg"mo-dy"na-mom'e-ter (-dye"na-mom'i-tur, -din"uh-) [G. *sphygmos*, pulse; *dynamis*, power; *metron*, a measure]. An instrument for measuring the force of the pulse.

sphyg'mo-gram" [*sphygmos*; G. *gramma*, letter]. The tracing made by the sphygmograph.

sphyg'mo-graph" [*sphygmos*; G. *graphein*, to write]. An instrument for recording graphically the features of the pulse and the variations in blood pressure. —**sphygmograph'ic**, *adj.*

sphyg-mog'ra-phy [*sphygmos*; *graphein*]. A description of the pulse, its pathologic variations and their significance.

sphyg'moid [*sphygmos*; G. *eidos*, form]. Resembling or having the nature of continuous pulsation.

sphyg"mo-ma-nom'e-ter [*sphygmos*; G. *manos*, rare; *metron*, a measure]. An instrument for measuring the tension of the blood current or arterial pressure. —**sphygmomanometry**, *n.*

sphyg-mom'e-ter. See *sphygmograph*.

sphyg"mo-os"cil-lom'e-ter [*sphygmos*; L. *oscillare*, to swing; *metron*]. A form of sphygmomanometer in which the systolic and diastolic blood pressures are indicated by an oscillating device.

sphyg"mo-pal-pa'tion [*sphygmos*; L. *palpatio*, from *palpare*, to touch softly]. The palpation of the pulse.

sphyg'mo-phone [*sphygmos*; G. *phōnē*, sound]. A sphygmograph in which the vibrations of the pulse produce a sound.

sphyg'mo-scope [*sphygmos*; G. *skopein*, to examine]. A pulse pressure recorder in which the force of arterial pressure is made visible. There are numerous mechanical devices for accomplishing this result.

sphyg-mos'co-py [*sphygmos*; *skopein*]. 1. The art of tracing the pulse curve by the sphygmoscope. 2. Examination of the pulse.

sphyg"mo-sys'to-le (sfig"mo-sis'to-lee) [*sphygmos*; G. *systolē*, contraction]. That part of the sphygmogram produced under the influence of the cardiac systole upon the pulse.

sphyg"mo-tech"ny (sfig'mo-teck"nee, sfig-mo-teck'nee) [*sphygmos*; G. *technē*, art]. The art of diagnosis and prognosis by means of the pulse.

sphyg"mo-to-no-graph [*sphygmos*; G. *tonos*, tension; *graphein*, to write]. An instrument which records pulsations from an inflatable rubber cuff; systolic and diastolic pressures are read by this means.

sphyg"mo-to-nom'e-ter [*sphygmos*; *tonos*; G. *metron*, a measure]. An instrument for measuring human blood pressure.

sphyg'mus [*sphygmos*]. The pulse; a pulsation. —**sphygmous**, *adj.*

sphynx-neck. The webbed neck seen in Turner syndrome.

spi'ca [L.]. 1. A spike or spur. 2. A spiral bandage with reversed turns. See Plate 34.

spice [L. *species*, sort]. An aromatic vegetable substance used for flavoring; a condiment.

spic'u-la, spic'ule. 1. A small spike-shaped bone or fragment of bone. 2. A needle-shaped body; a spike. —**spicular**, *adj.*

spi'der [AS. *spinnan*, to spin]. An animal of the order Araneida of the class Arachnida, characterized by having four pairs of legs, usually eight eyes, and an unsegmented abdomen.

black widow s. The species *Latrodectus mactans*, a black spider with globose abdomen. The adult has an hourglass-shaped red or yellow spot on the ventral side. The female is about 0.5 in. long, the male about half as big as the female. Its bite has been fatal in about 5% of the reported cases. Also called *knoppie s.*

Menavody s. A poisonous species of *Latrodectus* found in Madagascar.

spi'der burst. Old term for the telangiectatic areas in the skin of the legs associated with varicose veins.

Spiegler's test for albumin. See under *test*.

Spielmeyer, Walter [German neurologist, 1879–1935]. Described juvenile amaurotic familial idiocy; also called *Spielmeyer-Vogt disease*. The retinal atrophy observed in this disease is known as *Spielmeyer-Stock disease*.

Spielmeyer's myelin stain. See under *stain*.

Spies, Tom Douglas [American physician, 1902–]. Distinguished for contributions in the field of vitamins and vitamin deficiency diseases. Demonstrated that folic acid is an erythrocyte maturation factor (1945–46). See also Spies test.

Spi-ge'li-a (spy-jee'lee-uh) [L., after Adriaan van der *Spieghel*, Belgian botanist and anatomist, 1578–1625]. Pinkroot. A genus of plants of the family Loganiaceae. The rhizome and rootlets of *S. marilandica* formerly were used as a vermifuge.

Spigelian hernia. See under *hernia*.

Spigelian lobe. See caudate *lobe*.

Spigelius' line. Linea semilunaris; see semilunar *line*.

spike [L. *spica*, spike]. *In electroencephalography*, a sporadic, rapid wave appearing suddenly out of a slower wave rhythm. Duration, about 0.02 sec.

spike-and-wave. *In electroencephalography*, a complex consisting of a spike followed by a slow wave.

spike'nard (spike'nard, -nard) [*spica*; L. *nardus*, nard]. 1. A name given to the rhizome of various species of *Valeriana* or closely related genera. Used as an aromatic and a perfume among ancient Oriental peoples. 2. American spikenard. See *Aralia racemosa*.

spill [AS. *spillan*, to destroy]. An overflow, especially that of blood. Also applied to certain forms of cellular metastasis in malignant disease.

Spiller, William Gibson [American neurologist, 1863–1940]. With C. H. Frazier introduced intra-

cranial neurotomy of the sensory root of the trigeminal nerve for the relief of trigeminal neuralgia or tic douloureux (1901) called *Spiller'* or *Frazier's operation.* He also described epidural ascending spinal paralysis, called *Spiller'* *syndrome.*

spi lo ma (spy-lo muh) Nevus.

spi"lo-pla'ni-a [G. *spilos*, spot; *planos*, wandering]. A condition characterized by transient macules of the skin.

spi'lus [*spilos*]. A mole or colored mark on the skin; nevus.

spi na (pl. *spinae*) [L., thorn]. A sharp projection. See *spine.*

s. bifida. A congenital defect in the closure of the spinal canal with hernial protrusion of the meninges of the cord. The hernial sac contains cerebrospinal fluid and sometimes nervous tissue. Most common in the lumbosacral region. Also called *rachischisis.*

s. bifida occulta. A defect in the closure of the spinal canal without hernial protrusion of the meninges, usually diagnosed only by -ray

s. ventosa. Tuberculous infection of the long bones of the hand or foot, involving rarefaction of the compacta and subperiosteal formation of new bone to produce spindle-shaped enlargement of the shaft. Syn., *tuberculous dactylitis.*

spin' -cene. Squalene.

spi nal ac-ces'so-ry nerve. See accessory nerve.

spi'nal cord. See under *cord.* See Plate 16.

spi na'lis (spy-nah'lis, -nay'lis) [L. *spinalis*, spinal]. A muscle attached to the spinous processes of the vertebrae. See Table of Muscles in the Appendix.

spi'nal man. A patient in prolonged state of spinal shock, following complete transection of the spinal cord.

spi -as'ter-ol. A phytosterol obtained from spinach.

spin dle [AS. *spinel*]. 1. A tapering rod. A fusiform shape. 2. That part of the achromatic figure in mitosis between the centrosomes or asters, consisting of modified cytoplasm and spindle fibers.

achromatic s. A protoplasmic framework of achromatin. See nuclear *s.*, *karyokinesis.* Syn., *amphiaster*

central s. A central group of fibers extending between the asters, in contrast to the peripheral ones ttached to chromosomes.

cleavage s. A spindle formed during cleavage of the ovum or blastomeres.

enamel s. A space in the dental enamel due to growth of an odontoblastic process into the ameloblastic layer before enamel formation.

Krukenberg's s. A pigmented line seen with the corneal slit lamp on the endothelium of the cornea.

muscle s. See neuromuscular *s.*

neuromuscular s. Small fusiform sensory end-organs found in almost all the muscles of the body

neurotendinous s. See tendon *s.*

nuclear s. A spindle formed from nuclear substance, especially in some types of ancestral mitoses.

sleep s. *I* *electroencephalography* the bursts of about 14-per-second waves that occur during sleep.

s. cataract. A form of cataract characterized by spindle-shaped opacity extending from the posterior surface of the anterior portion of the capsule to the anterior surface of the posterior portion of the capsule, with central dilatation.

s. cell. See under *cell.*

tendon s. A specialized, encapsulated sensory nerve end-organ in tendon adjacent to muscular tissue. Also called *neurotendinous s.*

spi dle tree. See *euonymus.*

spine [L. *spina*, thorn]. 1. A sharp process of bone. 2. The backbone or spinal column. Also see *tubercle.* —**spi'nous, spi'nal,** *adj.*

angular s. A downward projection from the posterior extremity of the great wing of the sphenoid, giving attachment to the sphenomandibular ligament and some fibers of the tensor veli palatini muscle.

anterior nasal s. A median, sharp process formed by the forward prolongation of the two maxillae at the lower margin of the anterior aperture of the nose.

bifid s. A complete or incomplete congenital cleft of the vertebral column posterior fusion defect of the vertebral arches. Also called *spina bifida.*

cervical s. Loosely the spinous process of cervical vertebra.

Civinini's s. A small process on the lateral pterygoid plate.

ethmoid s. The spine of the sphenoid bone articulating with the cribriform plate of the ethmoid bone.

frontal s. A sharp, medial, downward projection from the nasal process of the frontal bone; nasal spine.

helical s. An anterior projection of th cartilage of the auricle of the ear in the region of the helix.

hemal s. The part that closes in the hemal arch of typical vertebra, e.g. in fish tail.

Henle' **s.** The suprameatal spine.

iliac spines. Four spines of the ilium. The anterior extremity of the iliac crest forms the **anterior superior iliac spine;** the posterior extremity the **posterior superior iliac spine.** The **anterior i ferior iliac spine** is that on the anterior border of the ilium, and the **posterior inferior iliac spine** is that on the posterior border separated from the respective posterio superior spine by notch.

mental s. Spina mentalis [BNA]. Th single or double tubercle on each side of the body of the mandible near the midline, for origin of the genioglossus and geniohyoid muscles. Syn., *genial tubercle.*

nasal s. (a) A sharp, medial process projecting downward from the nasal process of the frontal bone into the nasal septum and articulating with the crests of the nasal bones and the perpendicular plate of the ethmoid. (b) See anterior nasal *s.* ( ) See posterior nasal *s.*

neural s. The part that closes in the neural arch of the typical vertebra.

occult bifid s. A simple variety of spinal nonunion in the lumbar or thoracolumbar region, with few or no symptoms. Often revealed only by the presence of dimple in the skin. Also called *spina bifida occulta.*

palatine s. See posterior nasal *s.*

pharyngeal s. A small elevation near the middle of the inferior surface of the basilar process of the occipital bone, for the superior attachment of the median raphe of the pharynx.

posterior nasal s. A process formed by the united, projecting, medial ends of the posterior borders of the two palate bones, giving attachment to the muscle of the uvula.

pubic s. The pubic tubercle on the superior border of the pubis.

railway s. Traumatic neurosis following concussion injury with spinal symptoms and without demonstrable pathology *Obs.*

sphenoid s. (a) See angular *s.* (b) See ethmoid *s.*

s. of ischium. A pointed eminence on the posterior border of the body of the ischium. It forms the lower border of the greater sciatic notch. Also called *ischial s.*

s. of the scapula. The strong, triangular plate of bone attached obliquely to the dorsum of the scapula and dividing it into two unequal parts, the supraspinous and infraspinous fossae.

s. of the tibia. Intercondyloid eminence.

suprameatal s. A small tubercle projecting from the posterosuperior margin of the external auditory meatus of the temporal bone.

trochlear s. A small projection on the upper medial wall of the orbit, for attachment of the fibrocartilaginous pulley for the superior oblique muscle.

typhoid s. A neurosis sometimes following typhoid, characterized by acute pains in the vertebral column on the slightest movement.

vertebral s. See *spinous process of vertebra.*

spinocain. Trade-mark for 10% solution of novocain in solvent of specific gravity lower than that of the spinal fluid. The solution is used in spinal anesthesia by the method of Dr George P Pitkin.

spi"no cel'lu lar [*spina*; L. *cellula*, small storeroom]. Pertaining to, or like, prickle cells.

spi"no-gal"va ni za tion [*spina*, Luigi *Galvani*]. Galvanization of the spinal cord.

spi'no gram See *myelogram.*

spi'no-graph" [*spina*; G *graphein*, to write]. A radiograph of the spine.

spi"no tec'tal [*spina*, L *tectum*, roof]. Pertaining to the spinal cord and the corpora quadrigemina, as the spinotectal tract

spi"n trans ver-sa ri us [*spina*, L. *transversarius*, transverse]. Old term for any of the rotator muscles of the spine

spin thar'i scope. Scintillascope.

spin'ther ism [G *spinther* spark]. Sensation of sparks before the eyes. See scintillating *scotoma.*

spin u lo sin, spin'u lo sin [L. *spinula*, little thorn] $C_8H_8O_4$ 3,6-dihydroxy-5-methoxy-p-toluquinone or hydroxyfumigatin an antibiotic substance produced by *Penicillium spinulosum* and *Aspergillus fumigatus*, occurring purple-black crystals, slightly soluble in cold water and having some activity against Gram-positive organisms.

spi rad"e-ni'tis sup pu ra ti'va (spy rad nigh tis) See *hidradenitis suppurativa.*

spi ral [*spiral*] Winding screwlike, as spiral bandage helical. —**spi'ral,**

Curschmann's spirals. See Heinrich *Curschmann.*

spi'reme (spy'reem, spy-reem') [G *speirema*, coil]. The skein or ribbon of chromatin in the prophase of meiosis or mitosis which segments and condenses to form the chromosomes

spi "ri li ci dal (pirr l l-sigh dul. py ril) [*spira*, L. *caedere*, to kill] Capable of destroying spirilla.

spir"il-lo sis (spirr i lo sis, spy ri) [*speira*, G *-osis*, condition] A disease caused by infection with one of th spiral bacilli. See rat-bite *fever* *Spirillum.*

Spi ril'lum (spy-ril' m) (pl *spirilla*) [*speira*]. A genus of spiral bacilli of the family Pseudomonadaceae

S. minus. The causative agent of rat-bite f ver

spir'it [L *spiritus*, breath] 1 An alcoholic solution of volatile principle, formerly prepared by distillation but now generally prepared by dissolving the volatile substance in alcohol. 2. Any distilled liquid. Abbreviated, sp.

cologne s. Ethanol.

colonial s. Methanol.

columbian s. Methanol.

methylated s. Denatured ethanol.

perfumed s. (*spiritus odoratus*) Contains the volatile oils from bergamot, lemon, rosemary lavender and orange flower ethyl acetate, water, and alcohol. Used as pleasant perfume and sometimes used externally for the relief of neuralgia. Also called *cologne water*

s. of wine. Alcohol, 2.

sweet s. of niter Ethyl nitrite spirit.

spi'ro- spi [G *speira*, coil] A combining form meaning coil, used to denote *spiral.*

spi'ro- [L. *spirare*, to breathe]. A combining form denoting *respiration.*

Spi"ro chae t (spy"ro kee'tuh) [G *speira*, coil; *chaitē*, hair]. A genus of spiral microorganisms of the family Spirochaetaceae.

S. cuniculi. See *Treponema cuniculi.*

S. icterogenes. See *Leptospira icterohaemorrhagiae.*

S. icterohaemorrhagiae. See *Leptospira icterohaemorrhagiae.*

S. morsus muris. See *Spirillum minus.*

S. nodosa. See *Leptospira icterohaemorrhagiae.*

S. obermeieri. See *Borrelia recurrentis.*

S. pallida. See *Treponema pallidum.*

S. sogdiana. Old name for *Borrelia recurrentis*

Spi"ro chae ta ce ae (spy ro ki tay see ee) [*speira*, *chaitē*]. A family of spiral microorganisms which includes the genera *Spirochaeta*, *Saprospira*, and *Cristispira*. The family is nonpathogenic for man. few species of *Cristispira* are parasites of crustaceans, all other species are free-living forms.

Spi"ro-chae-ta'les (spy ro ki tay'leez) [*speira*; *chaitē*]. An order of spiral microorganisms which includes the families Spirochaetaceae and Treponemataceae.

spi"ro-chae-to sis ic"te-ro hae mor-rhag'i ca. See spirochetal *jaundice.*

spi'ro-chete (spy'ro-keet) [*speira*; *chaitē*]. Any of the spiral microorganisms belonging to the order Spirochaetales. —**spirochē'tal** *adj.*

spi"ro-che-te mi (spy ro-ki tee mee-uh) [*speira*; *chaitē*; G *haima*, blood]. The presence of spirochetes in the blood.

spi"ro h ti cide (spy ro-kee ti side) [*speira*, *chaitē*, L. *caedere*, to kill]. An agent which kills spirochetes.

spi"ro-che tol'y sis (spy ro ki tol'i-sis) [*speira*; *chaitē*; G *lysis*, loosing]. Destruction of spirochetes by lysis.

spi"ro che to sis [*speira*; *chaitē*; G *-osis*, condition] An f the diseases caused by infection with one of the spirochetes, such as syphilis, relapsing fever, spirochetal jaundice. —**spirochetot'ic,** *adj.*

spirocid. Trade-mark for brand of acetarsone

spiroform. Trade-mark for phenyl acetylsalicylate

spi'ro-gram" [L. *spirare*, to breathe; G. *gramma*, letter]. A recorded tracing of the movements and excursion of the chest in respiration.

spi'ro graph" [*spirare*; G *graphein*, to write]. An instrument for registering respiration.

spi rom ter (spy-rom'i-tur) [*spirare*; G. *metron*, measure]. An instrument for measuring the vital capacity or volumes of inhaled and exhaled air Syn., *pneometer* —**spiromet ric,** *adj.* **spirometry** *n.*

Tissot s. See *Tissot spirometer*

spis'sa ted (spis y-tid) [L. *spissus*, thick] Inspissated

spis si tude [L *spissitudo*, thickness]. The state of being inspissated.

spitz'en stoss" [Ger *Spitze*, point *Stoss*, beat]. The apex beat in contradistinction to *herzstoss*. See point of maximal impulse.

Spitzer Alexander [*Austrian anatomist*, 18— 1916]. Proposed phylogenetic theory of heart development, accounting for anomalies by trait degrees of torsion called *Spitzer' phylogenetic theory.*

Spitzka, Edward Charles [*American neurologist*, 1852–1914]. Said to have discovered the dorsolateral tract one year before Lissauer; called *Spitzka's* or *Lissauer's tract* or *zone*.

Spix, Johann Baptist [*German anatomist*, 1781–1826]. Described the lingula mandibulae, the spine at the medial border of the mandibular foramen, to which the sphenomandibular ligament is attached. Called *Spix' spine*.

splanch·na (splank'nuh) [G. *splanchna*, inward parts]. 1. The intestines. 2. The viscera.

splanch·nec·to·pi·a (splank"neck-to'pee-uh) [*splanchna*; G. *ektopos*, away from a place]. The abnormal position or dislocation of a viscus.

splanch"nem·phrax'is [*splanchna*; G. *emphraxis*, stoppage]. Obstruction of the intestine.

splanch·nes·the·si·a (splank"nes-thee'zhuh, -zee-uh) [*splanchna*; G. *aisthēsis*, perception]. Visceral sensation. —**splanchnesthet'ic**, *adj.*

splanch·neu·rys·ma (splank"new-riz'muh) [*splanchna*; G. *eurynein*, to make wide]. Distention of the intestine.

splanch'nic [*splanchna*]. Pertaining to, or supplying, the viscera.

splanch"ni·cec'to·my [*splanchnic*; G. *ektomē*, excision]. The surgical excision of the splanchnic nerves.

splanch"ni·cot'o·my [*splanchnic*; G. *tomē*, a cutting]. Surgical division of a splanchnic nerve.

splanch'no- (splank'no-), **splanchn-** [*splanchna*]. A combining form denoting *pertaining to the viscera*.

splanch'no·cele [*splanchna*; G. *kēlē*, hernia]. A protrusion of any abdominal viscus.

splanch·no·coele (splank'no-seel) [*splanchna*; G. *koilos*, hollow]. That part of the coelom which persists in the adult, and gives rise to the pericardial, pleural, and abdominal cavities; the ventral coelom, or pleuroperitoneal space. It appears as a narrow fissure in the lateral mesoderm.

splanch·no·di·as·ta·sis (splank"no-dye-as'tuh-sis) [*splanchna*; G. *diastasis*, separation]. Displacement or separation of the viscera.

splanch·nog'ra·phy [*splanchna*; G. *graphein*, to write]. The descriptive anatomy of the viscera.

splanch'no·lith [*splanchna*; G. *lithos*, stone]. Calculus of a viscus.

splanch·no·li·thi'a·sis [*splanchna*; G. *lithiasis*, disease of the stone]. The condition of having a calculus of the intestine.

splanch·nol'o·gy [*splanchna*; G. *logos*, word]. The branch of medical science pertaining to the viscera.

splanch"no·meg'a·ly [*splanchna*, G. *megas*, large]. Abnormal enlargement of the viscera.

splanch·no·mi·cri·a (splank"no-migh'kree-uh, -mick'ree-uh) [*splanchna*; G. *mikros*, small]. Generalized smallness of the visceral organs.

splanch·nop'a·thy [*splanchna*; G. *pathos*, disease]. Disease of the viscera.

splanch'no·pleure [*splanchna*; G. *pleura*, side]. The wall of the gut, composed of endoderm and the splanchnic layer of lateral mesoderm. —**splanchnopleu'ral**, *adj.*

splanch"nop·to'sis (splank"nop-to'sis, splank"no-), **splanch·nop·to·si·a** (splank"nop-to'shuh, -see-uh, -zhuh, -zee-uh, splank"no-) [*splanchna*; G. *ptōsis*, a falling]. A condition of abnormal relaxation of the abdominal viscera.

splanch"no·scle·ro'sis [*splanchna*; G. *sklērōsis*, hardening]. Visceral induration.

splanch·nos'co·py [*splanchna*; G. *skopein*, to examine]. Visual examination of the viscera.

splanch·no·skel'e·ton [*splanchna*; G. *skeleton*, dried up]. 1. That portion of the skeleton related to the viscera. Obs. 2. The visceral skeleton.

splanch"no·so·mat'ic [*splanchna*; G. *sōmatikos*, of the body]. Pertaining to the viscera and the body.

splanch·not'o·my [*splanchna*; G. *tomē*, a cutting]. Dissection of the viscera.

splanch'no·tribe [*splanchna*; G. *tribein*, to rub]. An instrument for crushing a segment of the intestine and so occluding its lumen, previous to resecting it.

spleen [G. *splēn*]. One of the abdominal viscera, located immediately below the diaphragm on the left side; the largest lymphatic organ of the body. It is covered by a fibromuscular capsule continuous with trabeculae which radiate through the organ from the hilus, the portal of entry and exit of the splenic vessels. Between the trabeculae is white pulp, ensheathing branches of the splenic artery and composed of cords and nodules of lymphatic tissue, and red pulp composed of typical lymphatic tissue, the splenic cords, filling the spaces between venous sinuses. See Plates 8, 10, 13, 14.

accessory s. Small mass of splenic tissue found either isolated or connected to the spleen by thin bands of splenic tissue. Also called *supernumerary s.*

ague cake s. That which is the seat of chronic, long-standing malarial splenomegaly.

bacon s. One with areas of amyloid degeneration, appearing like fried bacon on cut surface.

flecked s. One containing multiple areas of nonembolic anemic necrosis.

floating s. An abnormally movable and perhaps displaced spleen. Also called *wandering s.*

Gandy-Gamna s. An enlarged siderotic spleen.

iced s. One with a clear translucent pearl-gray or pale blue hyalinized capsule occurring most often in chronic syphilitic hyperplasia. Also called *sugar-coated s.*, *sugar-iced s.*

lardaceous s. One affected with diffuse amyloid degeneration. Also called *waxy s.*

porphyry s. One which is affected by multiple nodular infiltrations.

sago s. One in which amyloid is present in the follicles showing on cut section numerous small glassy areas transmitting the red color of the spleen.

wandering s. See floating s.

sple·nal'gi·a [*splēn*; G. *algos*, pain]. Pain originating in the spleen.

sple·nec'to·my [*splēn*; *ektomē*]. Excision of the spleen. —**splenec'tomize**, *v.*

sple·nec·to·pi·a (splee"neck-to'pee-uh, splee"neck-) **sple"nec'to·py** [*splēn*; G. *ektopos*, away from a place]. Displacement of the spleen.

sple·net'ic [*splēn*]. 1. Pertaining to the spleen. 2. Having a diseased spleen.

splen'ic, sple'nal [*splēn*]. Pertaining to the spleen.

splen"i·co·pan"cre·at'ic [G. *splēnikos*, of the spleen; *pankreas*, pancreas]. Belonging, or pertaining, to both the spleen and the pancreas.

splen'i·form, sple'ni·form [*splēn*, L. *forma*, form]. Resembling the spleen.

sple·ni'tis [G., disease of the spleen]. Inflammation of the spleen.

sple'ni·um [G. *splēnion*, pad of linen]. 1. Old term for a bandage. 2. The rounded posterior extremity of the corpus callosum. See Plate 18.

sple'ni·us [*splēnion*]. One of two muscles of the back of the neck, splenius capitis and splenius cervicis. See Table of Muscles in the Appendix. —**splenial**, *adj.*

s. cervicis accessorius. A variant of the splenius cervicis muscle.

splen"i·za'tion [G. *splēn*, spleen]. The stage of consolidation in the development of

during which lung tissue, grossly takes on an appearance resembling that of the normal spleen or liver thus also called hepatization.

sple no- (splee o- splen o-) **splen-** [*splēn*]. A combining form denoting *pertaining to the spleen*.

spl no cele [*splēn*, G. *kēlē*, hernia]. 1 Hernia of the spleen. 2. A tumor of the spleen.

sple"no-clei'sis (kly sis) [*splēn*, G *kleisis*, closing]. Causing the prod ction of new fibrous tissue on the spleen.

sple no-cyte [*splēn*, G *kytos*, cell]. A monocyte, regarded as developing from the pulp of the spleen.

sple no-dyn'i-a (splee no-din ee-uh, -dye nee uh, splen o-) [*splēn*, G *odynē*, pain]. Pain in the spleen

sple no gran u lo ma t sis sid"er-ot'i ca. A rare, slowly progressive splenomegaly of southern Europe, generally considered form of chronic congestive splenomegaly Histologically the spleen is granulomatous with heavy hemosiderin deposition. Syn., *Gamna disease*, *mycotic splenomegaly*.

sple"no hep"a to-meg' ly [*splēn*, G *hēpar* liver; *megas*, large]. Enlargement of the liver and spleen.

sple noid [*splēn*, G. *eidos*, form]. Resembling the spleen.

sple-nol'y sis, splen"o-ly'sis [*splēn*, G *lysis*, a loosing] Destruction of splenic tissue.

sple no-ma la'ci-a (-ma-lay'shee-uh, -see-uh) [*splēn*, G *malakia*, softness]. Softening of the spleen.

sple no meg' ly [*splēn*, G *megas*, large]. Enlargement of the spleen; occurs in brucellosis, histoplasmosis, malaria, and other diseases.

chronic congestive s. A syndrome associated with portal hypertension, in which there is leukopenia and splenomegaly which may precede the anemia present The degree and type of anemia vary with duratio of the syndrome, the presence of cirrhosis of th liver and the amount of hemor rhage. Lymphadenopathy is absent. Probably synonymous with *Banti' syndrome*. Also called *splenic anemia*, *hepatolienal fibrosis*. See also *splenogranulomatosis siderotica*

Egyptian s. Large spleen probably due to *Schistosoma mansoni*

hemolytic s. See hereditary *spherocytosis*.

mycotic s. See *splenogranulomatosis siderotica*.

Stengel-Wolbach s. See splenic *anemia*.

tropical s. Enlarged spleen due to kala-azar

spl nop thy [*splēn*, G *pathos*, disease]. Any disease of the spleen.

sple'no-pex"y [*splēn*, G *pēxis* fixing]. Fixation of the spleen to the abdominal wall by means f sutures.

sple no-pneu mo ni a [*splēn*, G. *pneumōn*, lung]. The stage of pneumonia producing splenization or hepatization of lung tissue.

sple nop t sis [*splēn*, G *ptōsis*, falling] Downward displacement of the spleen, due to bnormal mobility

sple nor'rha phy [*splēn*, G *rhaphē*, suture]. Suture of the spleen

sple not'o-my [*splēn*, G *tomē*, cutting]. 1 The operation of incising the spleen. 2. Dissection of the spleen.

sple"no tox'in (splee no-tok sin, splen o-) [*splēn*, G *toxikon*, poison]. A cytotoxin with specific action on the cells of the spleen.

sple no-ty'phoid [*splēn*, G. *typhos*, cloud; *eidos*, form]. Typhoid fever with splenic complication. *Obs.*

splen u lus [L., dim. from *splēn*]. Accessory spleen or rudimentary spleen.

splice [D *splissen*]. Join by suture, as to splice tendon.

splint [MD *splinte*]. 1 A piece of wood, metal, plastic, wire, or other material for immobilizing the ends of fractured bone or for restricting the movement of any movable part. 2. *I veterinary medicine*, form of periostitis in the limbs of the horse.

acrylic s. (a) *In dental surgery*, an apparatus or stent of plastic material used in fracture of the mandible and maxilla, or to give support in bone grafts of the jaws. (b) *I facial surgery*, one used to give support in fractures of the nasal bones and septum.

airplane s. A special type which holds the arm in abduction with the forearm midway in flexion; generally of wire with an axillary strut and frequently incorporated in plaster body support.

mbulatory s. See ambulatory *traction*.

anchor s. A special type used in dentistry in fracture of the j w equipped with metal loops fitting about the teeth.

Andersen s. One used in fracture of the femur. Also see under Roger *Anderson*.

angular s. One formed by two flat splints united at an angle, or wire or other metal or plastic splint forming an angle appropriate to the condition to be treated.

Balkan s. See *Balkan frame*.

banjo s. A hand splint usually made of wire in the shape of banjo or racket, attached to the forearm and sometimes incorporated in plaster. It is used generally for the attachment of rubber band traction devices for overriding and comminuted phalangeal bones; the rubber bands are said to resemble the strings of banjo.

Bähler' s. A wire extension splint used in the treatment of fractured fingers.

Bolles' s. One used in the treatment of fracture of the coronoid process of the ulna

caliper s. One designed for the leg, consisting of two metal rods from posterior thigh band or padded ischial ring to metal plate attached to the sole of the shoe at the instep. Also called *walking caliper*

coaptation s. A series of narrow splints of uniform size placed parallel to one another and held by adhesive plaster or leather used to envelop limb, such as the upper arm or thigh, where uniform and complete support is desired in the area covered.

cockup s. A hand splint for immobilizing the hand in hyperextension during wound healing

divided dental s. One constructed in sections, lingual and buccal, joined together by wire hinges or ligatures and used in jaw fractures to retain bony fragments in apposition.

flange s. *In dentistry* one of cast silver with high flange pointed upward to ride upon the buccal surface of the opposing upper teeth. The splint is cemented to several posterior teeth of the lower jaw in dentulous fragment of mandibular fracture.

Fulton s. One used in the treatment of dislocation of the radius.

Hodgen s. A splint used in the treatment of fractures of the shaft of the femur.

interdental s. A dental apparatus for holding the ends of fractured maxillae or mandibles in place by means of wires passing about the teeth.

Jones s. A hinged arm splint of the Thomas type. See traction *s*.

Keller Blake s. A hinged, half-ring splint of the Thomas type for the lower extremity

ladder s. One with cross bars resembling ladder

Magnuson s. An bduction splint used in the treatment of fractures of the humerus.

pillow s. A pillow support used as an emergency dressing for fractures of the lower leg. The pillow is compressed on either side and posteriorly with board splints held by several straps so as to exert firm pressure upon the leg.
plastic s. One made of plastic material which can be molded into the form desired.
sectional s. See divided dental s.
Stader's s. A metal bar with pins affixed at right angles. The pins are driven into the fragments of fracture, and the bar maintains the alignment.
Thomas s. One used to maintain traction in fractures of the humerus or femur consisting of ring which fits around the upper arm or thigh and two long metal rods extending from the ring on either side of the extremity. The rods are joined by crosspiece below the hand or foot, and traction or fixation is applied to the crosspiece. Also used as an emergency splint for safe transportation in such injuries.
traction s. One so devised that traction can be exerted on the distal fragment of fracture to overcome muscle pull and maintain proper alignment of the fractured bone, such as the banjo, Thomas, or caliper splint.
T s. One used to hold back the shoulders, and adapted by bandaging to hold the fragments in position in clavicular fractures.
splint'age [*splint*]. The application of splints.
splin'ter [MD.] *1* veterinary medicine, vestigial second or fourth metacarpal or metatarsal of the horse one of the splint bones extending, in the forelimb, from the knee and, in the hindlimb, from the hock, toward the fetlock.
splint'ing [MD *splinte*]. Application of splint.
split-prod'uct. A decomposition product, as the aglycone produced by hydrolysis of glycoside.
split'ters of Speng'ler Fragments of Spengler See Carl *Spengler*
split'ting [MD *splitten*]. A chemical change in which compound is changed into two or more simpler bodies, as by hydrolysis.
spo di my" li'tis (spo dee-o-migh ly 'tis, spod ee-o) [G *spodios*, gray *myelos*, marrow; *-itis*, inflammation] Old term for acute anterior poliomyelitis.
spo di um [G. *spodos*, wood-ashes]. Old term for animal charcoal
spo'do-gram. A photograph or diagram picturing the distribution of mineral ash of cell or tissue section following microincineration.
spoke shave" [AS *spaca*; *scafan*]. A ring knife, devised by Carmalt Jones, for use in operations on the nasal cavities.
spondyl- See *spondylo-*
spon"dy lal'gi [G *spondylos*, vertebra; *algos*, pain]. Pain referred to vertebra.
spon"dy lar throe -ae (spon di lahr-throck uhsee) [*spondylos*; G *arthron*, joint; *kaka*, badness] Caries of vertebra.
spon dy li'tis [*spondylos*; G *-itis*, inflammation] Inflammation of one or more vertebrae. —**spondylit'ic,** *adj*
ankylosing s. Arthritis of the spine affecting the apophyseal and the sacroiliac joints leading to bony ankylosis with complete stiffness of the back. The costovertebral joints are included in the process when it involves the thoracic spine. Ossification of the anterior lateral, and posterior or yellow ligaments produces the so-called bamboo spine. The intervertebral disks are not affected It usually affects young men and is accompanied by severe debility The peripheral joints except for the hips, are usually spared. Also called *bamboo spine rhizomelic spondylosis, spondylitis ankylopoietica, spondylarthritis ankylopoietica, rheumatoid arthritis of the spine, poker back, poker spine, deforming spondylitis, Strümpell-Marie disease, Bekhterev disease.*
deforming s. (a) Ankylosing spondylitis. (b) Degenerati joint disease of the spine characterized by spur formation. It results, in part at least, from trauma with injury and deformity of the intervertebral disks Limitation of motion is due to bony block, not to bony ankylosis.
osteoarthritic s. See *osteoarthritis.*
rheumatoid s. See ankylosing *s.*
tuberculous s. Tuberculosis of the vertebral bodies leading to bone destruction, vertebral collapse, and kyphosis, healing by fusion of adjacent vertebrae. There may be accompanying psoas abscess and compression of the spinal cord. Also called *Pott disease.*
spon"dy li ze'ma (spon di li zee mah, -lye-zee' mah) [*spondylos*, G *hizema*, sinking]. The settling of vertebra into the place of subjacent one that has been destroyed. Obs.
spon'dy lo- *spondyl-* [*spondylos*]. A combining form signifying *pertaining to* vertebra.
spon dy lo ar thri'tis an"ky lo-poi-et'i-ca. See ankylosing *spondylitis.*
spon"dy loc'a-ce (spon di-lock'uh-see) See *spondylarthrocace.*
spon"dy lo-di-dym'i a [*spondylos*; G. *didymos*, twin]. The condition of union of conjoined twins united by their vertebrae. See *rachipagus.*
spon"dyl-od'y mus [*spondylos*; *didymos*]. Conjoined twins united by the vertebrae.
spon"dy lo-dyn'i-a (spon di lo-din ee-uh, -dye nee-uh) [*spondylos*; G. *odyne*, pain]. Pain in vertebra.
spon"dy lo-lis the sis [*spondylos*; G *olisthesis*, slipping and falling]. Forward displacement of vertebra upon the one below as result of bilateral defect in the vertebral arch, or erosion of the articular surface of the posterior facets due to degenerative joint disease It occurs most commonly between the fifth lumbar vertebra and the sacrum.
spon"dyl-ol'y sis [*spondylos*; G. *lysis*, loosing]. Dissolution or destruction of vertebra.
spon"dyl op'a thy [*spondylos*; G. *pathos*, disease]. Any disease of the vertebrae
spon"dy lo-py-o sis (spon di lo-pye sis) [*spondylos*; G. *pyosis*, suppuration]. Suppurative inflammation of one or more vertebrae.
spon dy lo sis [*spondylos*; G *-osis*, condition]. Vertebral ankylosis
rhizomelic s. Spondylose rhizomélique; Marie' term for ankylosing *spondylitis.*
spon"dy lo-syn-de sis. Spinal fusion.
spon"dy lot'o-my [*spondylos*; G *tomē*, cutting]. Section of vertebra in correcting deformity
spon dy lus [*spondylos*]. Old term for vertebra. —**spondylous,** *adj.*
sponge [G. *spongos*]. A marine animal of the phylum Porifera. Some of the class Demospongia have porous, horny skeleton. Also the skeleton itself used as an absorbent —**spon'giform,** *adj.*
gauze s. A flat folded piece of gauze of varying size, used by surgical assistant to mop blood from the wound during the process of an operation.
gelatin s. Sheet of gelatin, prepared to check bleeding when pplied to raw surface.
sponge hold er An instrument consisting of a rod which serves as handle furnished at the distal end with device for clasping sponge.
spon gi-o blast" (spon"jee-o-blast spun"jee-o-) [G *spongia*, sponge; *blastos* germ]. A nonnervous cell derived from the ectoderm of the embryonic neural tube, and later forming the neuroglia, the ependymal cells, the neurilemma sheath cells

satellite cells of ganglions, and Müller' fibers of the retina.

spon"gi blas-to ma. Astroblastoma.

s. multiforme. See *glioblastoma multiforme*.

s. polare. See *astroblastoma*.

s. primitivum. See *ependymoma*.

s. unipolare. See *astroblastoma*.

spon'gi o-cyte" [*spoggia*; G *kytos*, cell]. 1 A neuroglia cell. 2. A cell, in the fasciculate zone of the adrenal cortex, which appears spongy because of the solution of lipoids during preparation of the tissue for microscopical study

spon"gi o-cy to ma. See *astrocytoma*.

spon gi-oid (spon'jee-oyd, spun) [*spoggia*, G *eidos*, form]. Spongiform.

spon gi-o neu"ro blas to ma. See *neuroastrocytoma*.

spon gi plasm [*spoggia*; G *plasma*, anything formed]. The fine protoplasmic threads forming the reticulum of cells after certain fixations. *Obs.*

spon gi-ose [*spoggia*]. Full of pores, like sponge.

spon"gi o sis. Accumulation of fluid in the inter cellular spaces of the epidermis causing an increase in the width of the spaces and stretching out of the intercellular bridges intercellular edema.

spon gi-o si'tis [*spoggia*, G *-itis*, inflammation]. Inflammation of the corpus spongiosum.

spon'gy (spun'jee) [G *spoggos*, sponge] Having the texture of sponge very porous.

spon ta ne-ous gen"er-a tion. The view that living matter may arise at the present tim from nonliving matter Syn., *abiogenesis*. *Obs.*

spoon [AS *spōn*, chip] An instrument, usually made of metal, with circular or oval bowl ttached to handle. A spoon is considered full when the co tained liquid comes up to, but does not show curve above, the upper edge or rim of the bowl Household spoons are popularly used to measure the dose of medicines on the generally incorrect assumption that teaspoon holds 4 cc (1 drachm) tablespoon 15 cc. (half an ounce) and dessertspoon 8 cc. (2 drachms) Medicine glasses are graduated on this basis. The actual spoons vary quite widely teaspoons from 2 to 8 cc., veraging doses of 5 rather than f 4 cc.

cataract s. A small spoon-shaped instrument used to remove the lens in cataract operations.

s. nail. A fingernail with concave outer surface.

surgical s. A surgical instrument consisting of an oval or circular bowl fixed to handle It is used to scrape way dead tissue, granulations, etc.

spoon er ism [after the Rev Wm. A. *Spooner* of England, 1844–1930]. A psychic speech or writing defect characterized by the tendency to transpose letters or syllables of two or more words.

spo-rad'ic [G *sporadikos*, scattered]. Scattered; occurring in an isolated manner

spo-ran gi o-phore [G *spora*, seed, *aggeion*, vessel; *phoros*, bearing]. A specialized hyphal branch of fungus which bears sporangium.

spo ran gi-o-spore [*spora*, *aggeion*, *spora*]. A fungus spore borne within sporangium.

spo-ran'gi-um (pl. *sporangia*) [*spora*; *aggeion*]. A specialized structure of fungus the enlarged end of hypha within which spores develop.

resting s. I *biology*, Pringsheim term for peculiar resting cells formed by the mycelium of few fungi (such as *Saprolegnia*) in which zoospores are produced.

spore [*spora*]. A reproductive cell of protozoan, bacterium, or higher plant There is usually thick cell wall enabling the cell to survive in adverse environments.

asexual s. A spore formed without previous fusion of nuclear material.

resting s. *In biology* spore, invested with firm cell wall, which remains dormant during adverse environmental conditions before it germinates.

sexual s. A spore formed subsequent to the union of two nuclei.

spo ri-cide [*spora*, L. *caedere*, to kill]. Any agent which destroys spores. —**sporici'dal**, *adj.*

spo ro- spor [*spora*]. A combining form signifying *relating to spore* or *seed*.

spo ro-ag glu"ti na tion [*spora*; L. *agglutinare*, to glue]. Agglutination of spores by antiserum.

spo ro-cyst [*spora*, G. *kystis*, bladder] 1. The oocyst of certain protozoa, g., plasmodia and coccidia, in which sporozoites develop. 2. The larval stage of flukes in snails, from which cercariae develop.

spo ro-cyte" A single binucleated cell formed the M cycle of protozoa of the orders *Myxosporidia* and *Actinomyxidia*.

spo ro-gen e-sis [*spora*; G *genesis*, production]. Production of spores.

spo-rog'e-ny [*spora*; G *gignesthai*, to be produced]. Reproduction by spores, especially spore formation in Sporozoa following encystment of zygote.

spo ront [*spora*; G *ōn*, pres. part. of *einai*, to be] In Sporozoa, cell which forms spores by encystment and subsequent division

spo ro phyte. The asexual, spore-producing phase in plants having alternation of generations

spo-rot ri chin (spo rot ri kin) [*spora*, G *thrix*, hair]. An antigenl filtrate of culture of *Sporotrichum*, used for diagnostic complement fixation test.

spo ro-tri-cho sis (spor tri ko sis, -try ko sis) [*spora*, *thrix*; G *-ōsis*, condition] A subacute or chronic granulomatous disease caused by the fungus *Sporotrichum*. The lesions are usually cutaneous and spread along lymph channels occasionally the internal organs and bones may be involved. The disease is reported among farmers, florists, and others working in soil. Also called de *Beurmann-Gougerot disease*, Schenck's *disease*.

Spo ro-trich'um (spo ro trick um) [*spora*; *thrix*] A genus of fungi, the causative agents of sporotrichosis short, blunt, cigar-shaped to spheroidal partially Gram-positive bodies which occur singly or in groups, either in pus or in tissues. They may be free in th necrotic material or phagocytosed by macrophages. *S. beurmanni* and *S. schenckii* are the species most frequently isolated from cases of human infestation.

Spo ro-zo a [*spora*; G *zōon*, living being] A class of parasitic Protozoa the orders Coccidia, Sarcosporidia, and Haemosporidia are parasites of man

spo ro-zo an [*spora*; *zōon*]. Pertaining to Sporozoa. —**sporozo an**, *n.*

spo ro-zo'ite [*spora*; *zōon*]. 1 The organism resulting from sexual multiplication of the Sporozoa 2. An animal spore.

spo"ro-zo on [*spora*; *zōon*]. I *biology*, member of the Sporozoa.

sport [M.E. *disport*] An individual organism which differs from its parents to an unusual degree mutation.

spor'u late [*spora*]. T eject spores from sporangium.

spot [M.E.] A small circumscribed area, differing in appearance or function from the surrounding area

acoustic spots. See *maculae acusticae* under *macula*

Bier spots. See A. K. G *Bier*

Bitot's spots. Xerosis conjunctivae silver-gray shiny triangular spots on both sides of the cornea, within the region of the palpebral aperture, consisting of dried epithelium, flaky masses, and microorganisms seen in some cases of nyctalopia

blind s. of Mariotte. A scotoma in the visual field representing the entrance of the optic nerve, where the rods and cones are absent. Syn., *optic disk, optic papilla.* See Plate 19.

blue s. A bluish discoloration of the skin seen in such nevi as Mongolian *spot*, blue nevus.

Brushfield' spots. Speckled white or very light yellow clearly defined pinpoints seen on the irides of infant mongolian idiots, which disappear if later the color of the iris changes to brown sometimes also seen in normal infants, but their absence may serve to rule out suspected cases of mongolism so named for Thomas Brushfield, English physician, 1858–1937

café au lait spots. Light brown or coffee-colored areas of the skin seen independently of tumor nodules in multiple fibromatosis.

Cayenne-pepper s. See papillary varix.

cherry-red s. A bright red area seen in the retina in cases of amaurotic familial idiocy

cold spots. Areas on the surface of the skin over lying the nerve endings that are stimulated by cold.

corneal s. An opacity of the cornea leukoma.

cribriform spots. The perforations of the wall of the vestibule for the passage of the filaments of the acoustic nerve also called *maculae cribrosae.*

embryonic s. The nucleolus of the ovum.

focal s. The area of an x-ray-tube target against which the main electron beam strikes

genital s. An area on the nasal mucosa which has tendency to bleed during menstruation. The bleeding is called vicarious menstruation.

germinal s. The nucleolus of the egg nucleus.

hot spots. Areas on the surface of the skin over lying the sense organs that are stimulated by heat.

hypnogenetic spots. Surface areas of the body stimulation of which produces sleep.

itch spots. Small areas of the skin upon stimulation of which the sensation of itching is per ceived They appear to be identical with pain spots

Koplik's spots. The characteristic exanthema of measles See Koplik sign.

light s. A cone of light on the anterior and inferior part of the tympanic membrane, with its apex directed inward.

Mariotte's s. The optic disk.

Michel' spots. Black spots of posterior pigment epithelium, seen in the iris through atrophied areas of anterior lamina, and sometimes seen in protracted iritis.

milk s. A patch of thickening and opacity of the epicardium, found post mortem, usually over the *right* ventricle of common occurrence in persons who have passed middle life.

milky spots. Small regions of the omentum containing multitudes of fixed and free macrophages.

Mongolian s. A focal bluish-gray discoloration of the skin of the lower back, also aberrantly on the face present at birth and fading gradually often seen in members of the Mongolian race.

mother's s. *Nevus.*

Mueller's spots. Spots seen (rarely) on the iris after an attack of smallpox. Syn *vitiligo iridis.*

pain spots. Areas on the skin overlying the nerve endings which respond to painful stimuli.

rose spots. A red, papular eruption forming spots from 1 to 5 mm in size which fade on pressure, occurring mostly on the abdomen and loins *during the first seven days of typhoid fever* They are due to inflammation of the papillary layer of the skin from invasion of typhoid bacilli Also called *typhoid roseola, typhoid spots, taches rosées lenticulaires.*

Roth spots. See Moritz Roth.

soldier's s. See milk *plaque.*

sore spots. See *bruise*

temperature spots. *Hot and cold spots* on the skin.

typhoid spots. See *rose spots* under spot.

vesical blind s. In *urology* the area or areas of the anterior urinary bladder wall which cannot be visualized in cystoscopic examination.

white spots. Grayish or yellowish white elevated spots, from 3–12 mm in diameter of varying shape and distinctness of outline, often occurring on the ventricular surface of the anterior leaflet of the mitral valve.

wine s. See port-wine nevus.

yellow s. See macula lutea.

spot grind'ing. In *dentistry* correction of occlusion by removal of high areas of teeth or prosthetic devices, as disclosed by use of articulating paper

spot'ting [spot]. Small amounts of bloody vaginal discharge, usually intermenstrual, and of significance in certain obstetric and gynecologic conditions.

sprain [OF *espreindre*, from L. *exprimere* to press out]. A wrenching of a joint, producing stretching or laceration of the ligaments

rider's s. A sprain of the adductor longus muscle of the thigh, resulting from sudden effort of the horseman to maintain his seat owing to some unexpected movement of his horse.

s. fracture. An injury in which a tendon, together with a shell of bone, is torn from its attachment.

spray [ME. *spreyen*]. 1 A stream of air and finely divided liquid produced with an atomizer nebulizer or other device. 2. A liquid pharmaceutical preparation intended for applying medication to the nose, throat, or other cavities by spraying from an atomizer or nebulizer may be aqueous or oily in character Light liquid petrolatum is usually employed as the vehicle for oily sprays.

spread'ing [AS. *sprǣdan*]. Growth of bacteria beyond the line of inoculation

Sprengel, Otto Gerhard Karl [German *surgeon*, 1852–1915]. Described congenital elevation of the scapula (1891) also called *Sprengel' deformity* This was first noted by M M Eulenburg (1863) as congenital high scapula, but never received his name.

spring fin'ger See under *finger*

spring'halt spring hock. See stringhalt.

Spritz bottle. A wash bottle for laboratory use.

sprue [D *spruw*]. 1 An afebrile, chronic disease characterized by the passage of voluminous, mushy and often frothy stools, weakness, emaciation, changes in the tongue, and anemia. Common in white people in southeastern Asia, East Indies, Ceylon, West Indies. Originally the disease was thought to be caused by the yeast *Monilia psilosis*, but recent work tends to show that the disease is basically deficiency disease. Vedder stated that sprue may occur in individuals who have excellent diets The question of defective absorption has been considered. Vedder also suggested that dysfunction of the anterior pituitary gland may be associated with the disturbed absorption from the intestine. Also called *phthisis sacharis, psilosis, Ceylon sore mouth, diarrhea alba, Cochin-China diarrhea, tropical sprue.* 2. In *dentistry* wire or other object used to produce a vent in mold for casting.

indigenous s. See celiac disease.

nontropical s. A form of celiac syndrome seen in adults

para-sprue. A dietary disease characterized by chronic watery diarrhea, weight loss, sore red tongue, and macrocytic anemia. It differs from true sprue in showing less emaciation, no swollen lower abdomen, dry skin, dysphagia, and pale, frothy stools with the fat content above 40%.

spud [ME.] A dull flattened blade used in surgery

spur [AS. *spura*]. 1 A sharp projection. Also called *calcar*. 2. *In biology*, pointed, spinelike outgrowth, either of the integument or of projecting appendage.

calcaneal s. A painful exostosis of the heel due to trauma, static conditions of the foot, improper shoes, or systemic infections. Also called *heel s.*

s. of the septum. An outgrowth of the nasal septum.

spur'gall" (spur gawl") [spura, ME. *galle*, sore spot]. A calloused and hairless place on the side of horse, caused by the use of spur

spurge [L. *expurgare* to purge] A general name for plants of the genus *Euphorbia*.

spurge flax. See *mezereum*.

spu'tum (pl. *sputums, sputa*) [L., spittle] Material discharged from the surface of the air passages, throat, or mouth, and removed chiefly by spitting but in lesser degree by swallowing. It may consist of saliva, mucus, or pus, either alone or in any combination. It may also contain microorganisms, fibrin blood or its decomposition products, or inhaled particulate foreign matter

hailstone s. That containing particles having the appearance of hailstones.

mucopurulent s. That consisting of mixture of mucus and pus.

mucous s. Sputum consisting chiefly of mucus, often erroneously designated as mucoid sputum.

nummular s. Sputum containing small, round, flattened masses of heavy material.

purulent s. That consisting chiefly of pus.

rusty s. That colored by various decomposition products of blood seen chiefly in lobar pneumonia. Also called *prune-juice* ... *icteric s.*

squa'lene. $C_{30}H_{50}$; 2,6,10,15,19,23-hexamethyl-2,6,10,14,18,22-tetracosahexaene an unsaturated hydrocarbon occurring in large proportion in shark-liver oil and in smaller proportion in various vegetable oils; an oil, insoluble in water sparingly soluble in alcohol, and freely soluble in ether; believed to be an intermediate in th biological synthesis of cholesterol Syn *spinacene*.

synthetic s. A product obtained in an attempt to prepare natural squalene, differing from it probably in the position of double bonds.

squa'ma (pl. *squamae*) [L., scale] A scale or scale-like mass, as the squama of the temporal bone.

s. frontalis. The vertical portion of th frontal bone.

s. occipitalis. Posterior part of the occipital bone.

s. temporalis. The squamosa.

squame (pl. *squames*) [squama]. A flat plate, scale, or platelike cell.

squa'mo- [squama]. A combining form denoting *relating to the squamous portion of the occipital or temporal bone*

squa"mo-oc-cip'i tal (skway mo-ook sip tul) Pertaining to the squamous portion of the occipital bone, or to the suture between the squamosa and the occipital bone.

squa mo sa [L. *squamosus*, scaly]. The squamous portion of the temporal bone.

squa mo-sphe noid [L *squama*, scale; G *sphenoeides*, wedge-shaped] Pertaining to the squamous portion of the temporal bone and to the sphenoid bone.

squa mo tym pan'ic [squama; G. *tympanon*, drum]. Pertaining to the squamosal and tympanic parts of the temporal bone.

squa mous [L. *squamosus*, scaly] Of the shape of scale, as the squamous portion of the temporal bone, or squamous epithelium, epithelium consisting of flat, scalelike cells.

squill [G. *skilla*] (*scilla*) The cut and dried fleshy inner scale of the bulb of the white variety of *Urginea maritima*, or of *Urginea indica*. The active principles of squill have been variously reported as scillipicrin, scillitoxin, scillin, scillain, scillimarin, scillitin, and scillidiuretin. In many cases, these have been obtained from the dry drug. Investigations on th fresh drug first led to separation of the crystalline glycoside known by the trade-marked name *scillaren-A* and an amorphous fraction known as *scillaren-B*. Later studies showed the amorphous fraction to contain glucoscillaren A, scillipheoside, glucoscillipheoside, scillicryptoside, scilliglaucoside, scillicyanoside, scillicoeloside, and scillirubroside. Its action and uses are similar to those of digitalis. Squill has been used as nauseant and as expectorant.

compound s. syrup (*syrupus scillae compositus*) Contains fluidextracts of squill and senega, of each 80 cc.; antimony and potassium tartrate, 2 Gm. sucrose, 720 Gm.; distilled water sufficient quantity to make 1000 cc. It was originally introduced as remedy for croup or hives. It has expectorant and diaphoretic properties. Dose, children, 0.12–1.2 cc. (2–20 min) adults, 1.2–2 cc. (20–30 min.)

s. fluidextract (*fluidextractum scillae*). Chiefly employed as nauseating expectorant. It is an ingredient in expectorant mixtures. Dose, 0.06–0.2 cc. (1–3 min.)

s. syrup (*syrupus scillae*) Contains squill vinegar, 450 cc. sucrose, 800 Gm.; distilled water sufficient quantity to make 1000 cc. Used as an expectorant. Dose, 2–4 cc. (½–1 fluidrachm).

squint. See *strabismus*.

squir'rel corn. See *corydalis*.

squirt'ing cu'cum ber See *elaterium*.

Sr Chemical symbol for strontium.

ss, ss. *Semis*, one-half

SSS. Specific soluble substance.

S.T Surface tension.

S.T 37 Trade-mark for 1 1000 solution of hexylresorcinol in glycerin and water having surface tension of 37 dynes per cm. also used for certain related products.

stab. 1. A puncture wound. 2. Path formed by plunging an inoculation needle into nutrient media. 3. See band *cell*. —**stab, v.**

sta'ble (stay'bil, stab il) [L. *stabilis*, stable]. Stationary immobile; maintaining fixed position.

sta'bi li"zer [stabilis] 1 A retarding agent, or substance that counteracts the effect of vigorous accelerator and preserves chemical equilibrium. 2. A substance added to solution to render it more stable, as acetanilid to hydrogen peroxide solution.

froth s. Certain oils and chemicals which produce stable froths in water; they function best in the presence of finely divided solids.

sta'ble [stabilis]. Unlikely to break down or dissolve in the case of compound, likely to retain its composition under the application of physical or chemical forces.

sta'ble cost po nent. See *ansertin*.

sta'ble pro-throm'bin con-ver sion ac-cel"er-a'tor (SPCA) See *convertin*.

stac-ca'to (sta kah to) [It., detached]. Denoting an abrupt, jerky manner of speech with noticeable interval between words

stach'y drine. C H ${}_{13}NO_2$. N Methylproline-methylbetaine, an alkaloid occurring in *Stachys tuberifera* and other plants.

stach'y ose. A tetrasaccharide obtained from the tubers of *Stachys tuberifera* and some other plants. On complete hydrolysis it yields one molecule each of fructose and glucose and two of galactose Also called *mannotetrose, lupeose*.

Stacke, Ludwig [German otologist, 1859-1918]

Introduced erosion of the ossicles of the ear. Made important improvements in the technic of radical mastoidectomy. Devised an operation in which the tympanum and external acoustic meatus were connected, in chronic suppurative disease of the middle ear; called Stacke's operation.

Stader's splint. See under splint.

Stadie method. See Riggs and Stadie method.

sta'di um (pl. *stadia*) [G. *stadion*, race-course]. Stage.

s. acmes. The height of a disease.

s. amphiboles. See amphibole stage.

s. convalescentiae. The convalescent stage.

s. augmenti. The period in which there is increase in the intensity of the disease.

s. caloris. The period during which there is fever.

s. contagii. The prodromal stage of an infectious disease.

s. convalescentiae. The period of recovery from disease.

s. decrementi. Defervescence of a febrile disease; the period in which there is a decrease in the severity of the disease.

s. decrustationis. The stage of an exanthematous disease in which the lesions form crusts.

s. desquamationis. The period of desquamation in an exanthematous fever.

s. eruptionis. That period of an exanthematous fever in which the exanthema appears.

s. exsiccationis. See s. decrustationis.

s. floritionis. The stage of an eruptive disease during which the exanthema is at its height.

s. frigoris. The cold or algid stage of a fever.

s. incrementi. The stage of increase of a fever or disease.

s. incubationis. See stage of latency.

s. invasionis. The last stage of excitement in mania, after which the nervous manifestations gradually subside.

s. nervosum. The paroxysmal stage of a disease.

s. prodromorum. The stage immediately prior to the appearance of the signs and symptoms of disease.

s. sudoris. The sweating stage.

s. suppurationis. The period in the course of smallpox in which suppuration occurs.

s. ultimum. The final stage of a febrile affection.

staff [AS. *staef*]. 1. An instrument for passing through the urethra to the urinary bladder, used as a guide in operations on the bladder or for stricture. It is usually grooved. 2. The personnel concerned with the care of patients in a hospital. **consulting s.** Specifically, a body of physicians, surgeons, or specialists attached to a hospital or medical unit, who serve only in an advisory capacity.

house s. The interns and residents living in the hospital.

visiting s. The nonresident physicians and surgeons who supervise the care of patients in a hospital.

stage [L. *stare*, to stand]. 1. A definite period of disease characterized by certain symptoms; a condition in the course of a disease. 2. The horizontal plate projecting from the pillar of a microscope for supporting the slide or object.

algid s. A condition characterized by subnormal temperature, feeble flickering pulse, and various nervous symptoms. It occurs in cholera and other diseases marked by exhausting intestinal discharges.

amphibolic s. The stage of a disease intervening between its height and its decline.

asphyxial s. The preliminary stage of Asiatic cholera, marked by extreme thirst, muscular cramps, etc., due to loss of water from the blood.

cold s. The rigor or chill of an attack of a malarial paroxysm.

defervescent s. Stage of declining temperature.

eruptive s. That in which an exanthema makes its appearance.

expulsive s. The stage of labor which begins when dilatation of the cervix uteri is complete and during which the child is expelled from the uterus.

first s. That stage of labor in which the molding of the fetal head and the dilatation of the cervix are effected.

hot s. The febrile stage of a malarial paroxysm.

mechanical s. A fixture on a microscope stage with two horizontal screw adjustments at right angles to each other which permit the specimen to be moved as desired. Some have vernier scales for reading the amount of displacement to 0.1 mm.

microscope s. The platform under the microscope tube which carries the specimen and is usually mounted permanently on the microscope pillar. It may be mounted on a rack and pinion.

placental s. The period of labor occupied by the expulsion of the placenta and fetal membranes.

pre-eruptive s. The period of an eruptive fever following infection and prior to the appearance of the eruption.

pyrogenetic s. The stage of invasion in febrile diseases. Also called *pyrogenetic s.*

resting s. In biology, the period of dormancy of a plant or germ.

second s. See *expulsive s.*

s. of invasion. The period in the course of a disease in which the body comes under the influence of the infective agent.

s. of latency. The incubation period of an infectious disease, or that period intervening between the entrance of the agent and the manifestations of the symptoms to which it gives rise.

sweating s. The third or terminal stage of a malarial paroxysm, during which sweating occurs.

third s. See *placental s.*

stag'gers [ON. *stakra*, to push]. A term applied to various diseases which are manifested by lack of coordination in movement and a staggering gait, as gid and sturdy of sheep, encephalomyelitis of horses, botulism, loco poisoning, and acute cerebral affections of livestock.

stag'ing a're-a. A military camp near a port of embarkation where troop units are assembled en route to overseas stations to await embarkation. Such areas include station hospitals and dispensary service, where immunizations against infectious disease are accomplished if necessary.

stag na'tion [L. *stagnare*, to form a pool of standing water]. 1. A cessation of motion. 2. In pathology, a cessation of motion in any fluid; stasis. —**stag'nate**, *v.*

Stahl, Friedrich Karl [German physician, 1811–73]. Described a congenital deformity of the ear consisting of a broadening of the helix. The fossa antihelicis and upper part of the scaphoid fossa are practically obliterated; called *Stahl's ear*.

Stahl, Georg Ernst [German physiologist and chemist, 1660–1734]. Described lacrimal fistula and its causation (1702). Expounded a theory (now obsolete) that the body is presided over by the sensitive soul which regulates its activities by motion; called animism, *Stahl's theory*. With Johann Becher postulated the phlogiston theory of combustion.

Stahl's pigment line. A horizontal brown line at the lower part of the cornea, found in senile degeneration. Also called *Hudson's line*.

stain [L. *dis-*, depriving; *tingere*, to color]. (For a list of Special Stains and Staining Methods ...)

see below) 1. A discoloration produced by absorption of, or contact with, foreign matter. 2. *In microscopy*, pigment or dye used (a) to render minute and transparent structures visible, (b) to differentiate tissue elements, or (c) to produce specific microchemical reactions.

acid s. A dye in which the anion is colored and does the staining. Acid stains are the common stains for cytoplasm and cytoplasmic inclusions.

acid-fast s. See Ziehl-Neelsen method.

basic s. A dye in which the cation is colored and does the staining. Basic stains are the common stains for chromatin in nuclei, for nucleoproteins, for mucins, and for calcium-salt deposits in tissues.

celestin blue s. An aqueous solution of iron alum and celestin blue, useful as a nuclear stain.

chrome hematoxylin. A stain for lipofuscins, containing equal parts of 1% aqueous hematoxylin and 2% aqueous chrome alum.

Commission Certified s. A stain which has been certified by the Biological Stain Commission. Abbreviated C.C.

contrast s. A double stain in which certain cell constituents take one stain and other constituents take the contrasting stain.

counterstain. A second stain, usually a contrasting one, which is used after one which stains nuclei or desired constituents.

double s. A mixture of two dyes of contrasting colors, usually an acid stain and a basic stain, or a method involving the successive use of contrasting stains. See contrast.

fluorescent s. method. A staining method using a fluorescent dye, such as the method for demonstrating *Mycobacterium tuberculosis* in smears using auramine O and a fluorescence microscope.

Gram-Claudius s. A stain for fungi in tissue sections.

intravital s. A dye, introduced by injection into the body of man or animal, which stains certain tissues or cells selectively; the stain must be nontoxic so as not to kill any of the cells.

inversion s. A process in which, under the influence of a mordant, a basic aniline dye behaves as a plasma or acid dye.

metachromatic s. A stain which changes apparent color when absorbed by certain cell constituents, as mucin staining red instead of blue with toluidine blue.

neutral s. A compound produced by the interaction of an acid and a basic dye, insoluble in pure water and therefore employed in alcoholic solution when used as a stain.

nuclear s. A stain, usually a basic dye, which stains nuclei selectively.

Papanicolaou stains. A group of stains (e.g., hematoxylin, light green–Bismarck brown–eosin yellowish) used in a staining technique which is efficacious for the detailed study of exfoliated cells, particularly those from the vagina.

Paschen's s. A stain used to make a presumptive diagnosis of smallpox from a smear of the material from skin lesions.

rhodamine B. A stain used in the fluorescent microscopy of the *Mycobacterium tuberculosis*. It minimizes the chance of error since artifacts do not take on an orange tinge.

Southgate's mucicarmine s. A stain used in the diagnosis of carcinoma of the stomach, particularly that with unicellular diffuse infiltration and secondary carcinomatous nodules.

substantive s. A histologic stain obtained by direct absorption of the pigment from the solution in which the tissue is immersed. Dyes that combine directly with the substance acted on are called substantive dyes.

supravital s. A stain applied to living cells removed from a living animal or to still living cells within a recently killed animal; the stain may be perfused through the blood vessels of the animal.

triple s. See Mallory's triple s., Masson's trichrome s.

vital s. A nontoxic coloration of tissues produced by injection of a nontoxic dye into a living organism. Also called *intravital s.*

SPECIAL STAINS AND STAINING METHODS

Abbott's staining method (*for staining spores*). Cover the preparation with Loeffler's alkaline methylene blue, heat to boiling, and maintain at that temperature for one minute. Wash and decolorize with acid alcohol (2% nitric acid in 80% alcohol) until all traces of blue disappear. Wash and counterstain with 10% eosin for 8-10 seconds. Wash, dry, and mount. The spores appear blue while the bacteria are pink or red.

acetocarmine (Belling's). Acetocarmine to which an iron salt is added; one of the best stains for chromosomes in fresh tissue.

acetocarmine (Schneider). A saturated solution of powdered carmine in 45% acetic acid.

Achucarro's silver tannin method (*for astrocytes*). Place sections in 3% aqueous tannin solution at 50° C. for 5 minutes; wash in 1% dilution of 28% ammonia water until sections are pliable. Impregnate in three changes of diamine silver hydroxide—sections become yellowish brown when sufficiently impregnated; wash in three changes of distilled water; tone 20 minutes at 40° C. in 0.2% gold chloride solution, wash in water; fix in 5-10% sodium thiosulfate for 1-2 minutes. Astrocytes are stained dark gray to violet.

acid alizarin blue modification (*for connective tissue*). *Staining solution A*: Acid alizarin blue 2B (C.I. No. 1063) 0.25 Gm.; $Al_2(SO_4)_3$ (Baker's analyzed, dried) 5 Gm.; distilled water 50 cc. Boil 5 min., cool, filter and restore to original volume. Buffer to pH 2.25 with 20 cc. of Sørensen citrate solution. *Staining solution B*: Aniline blue W.S. (C.C.) 0.5 Gm.; orange G (C.C.) 2 Gm.; distilled water 100 cc.; glacial acetic acid 8 cc. Bring to a boil, cool, and filter. After stain A, 5% phosphotungstic acid is used as a mordant.

acid fuchsin (C.C.). An acid dye of the triphenylmethane series, the sulfonated derivative of basic fuchsin, widely used as a cytoplasmic stain; 0.5%–1.0% aqueous solution of acid fuchsin (dye content) is employed. Also called *acid magenta*, *acid rubin*, *fuchsin S*, *SN*, *SS*, *ST* or *S III*.

acid green. See *light green SF yellowish* under *Special Stains*.

acid polychrome methylene blue (*Goodpasture's*). Mix 1 Gm. of methylene blue, 1 Gm. of potassium carbonate, and 400 cc. of distilled water. Boil for one-half hour. Cool, add 3 cc. of glacial acetic acid, and shake well. Boil down to 200 cc. and cool.

acid violet. Any one of several triphenylmethane dyes; an inaccurate designation for various violet-colored dyes.

acridine stains. Dyes formed from acridine; they include acriflavine and phosphine.

acriflavine. A yellow dye used as a disinfectant or bacteriostatic agent. Mixed with methyl and crystal violets to make acriviolet. Also called *neutral a.*

Albert's s. (*for diphtheria bacilli*). Dissolve 0.15 Gm. of toluidine blue (85% dye content) and 0.2 Gm. of methyl green (85% dye content) in 100 cc. of distilled water. Add 1 cc. of glacial acetic acid and 2 cc. of alcohol. Filter after 24 hours. Stain the

heat-fixed film for 5 minutes, drain, and, without washing, apply iodine solution (2 Gm. of iodine and 3 Gm. of potassium iodide in 300 cc. of water) for one minute.

alizarin red S (C.C.) An acid aniline dye, sodium alizarin sulfonate; an ingredient in some mitochondrial staining methods such as Benda's stain. Used as a stain for bone. Also called *alizarin red, water soluble; alizarin carmine.*

alizarin red S and toluidine blue (*for mammalian embryos*) This alizarin red method employs a blue counterstain, made as follows: Toluidine blue (C.C.) 0.25 Gm.; 70% alcohol, 100 cc.; 0.5% HCl, 2 cc. Let stand for 24 hours, filter and keep tightly corked.

Altmann's aniline-acid fuchsin-picric acid s. (*for mitochondria*) A stain which gives the mitochondria a crimson color against a bright yellow cytoplasm. The sections are stained first in the aniline acid fuchsin, and then differentiated and counterstained in picric acid.

alum hematoxylin. See *Delafield's, Ehrlich's,* and *Harris' hematoxylins* and *Mayer's hemalum* under *Special Stains.*

Alzheimer's s. A modification of Mann's eosin-methyl blue stain.

aniline blue, water soluble (C.C.) An acid aniline dye of the triphenylmethane series, a mixture of trisulfonates of diphenylrosaniline and triphenylpararosaniline. *Used to stain collagenous fibers,* and as a general stain. Usually 0.2%–1.0% solution of aniline blue in water or in 90% alcohol. Also called *china blue, soluble blue 3M* or *2R, marine blue V, cotton blue, water blue, Berlin blue.*

aniline-fuchsin-methyl green method (*for mitochondria*) A modification of Altmann's stain using methyl green as the counterstain instead of picric acid. The mitochondria are stained red against a green background. Also called *Bensley's stain* (for mitochondria).

Anthony's method (*for bacterial capsules*) Air dried smears are stained with 1% aqueous crystal violet (C.C.) and washed with 20% aqueous $CuSO_4 \cdot 5H_2O$.

auramine O (C.C.) A basic aniline dye of the diphenylmethane series, used chiefly as a drug, but of use in fluorescence microscopy. Also called *canary yellow, pyoktanin yellow, pyoktaninum aureum.*

azan s. See *Heidenhain's azocarmine* under *stain.*

azocarmine G (C.C.) A basic azine dye used in tissue staining; a constituent of Heidenhain's (azan) stain. Also called *azocarmine GX, rosazine, rosindulin GXF.*

azure. A basic thiazine dye used in blood and connective-tissue stains.

azure A (C.C.) Asymmetrical dimethyl thionine used in 0.1%–1.5% aqueous solution as a nuclear stain for sections of fixed tissue, or in combination with other dyes.

azure B (C.C.) The trimethyl derivative of thionine.

azure C. A basic dye, monomethyl thionine.

azure I. Trade name for a mixture of azure A and azure B. Syn. *methylene azure.*

azure II. A mixture of equal parts of azure I and methylene blue.

Bailey's method (*for bacterial flagella*) *Mordant solution A.* Mix 18 cc. of 10% aqueous tannic acid with 6 cc. of 6% aqueous $FeCl_3 \cdot 6H_2O$. *Mordant solution B.* To 3.5 cc. of solution A, add 0.5 cc. alcoholic basic fuchsin (C.C.) 0.5 cc. conc. HCl, 0.5 cc. formalin, 2 cc. After mordanting, Ziehl carbolfuchsin is used as a stain.

basic fuchsin (C.C.) A basic dye, or group of dyes, of the triphenylmethane group; mixtures of pararosaniline and rosaniline and magenta II of varying proportions, used as a bacterial stain and in general histologic work. 0.5% aqueous solution of basic fuchsin (90% dye content is employed). Also called *diamond fuchsin, magenta, aniline red, rubin.*

Bauer's method (*for glycogen*) Stain for 15 min. in Schiff reagent: 1 Gm. of basic fuchsin (C.C.) in 100 cc. of hot (80°–100° C.) distilled water. Filter at 50°–60° C. Cool, add 2 Gm. of $NaHSO_3$ and 10 cc. of N/1 HCl. Stopper tightly; let stand 18–24 hours in the dark. Add 300 mg. of finely ground charcoal, shake 1 min., store at 0°–5° C. Wash in M/20 $NaHSO_3$ and water; counterstain with acid hemalum.

Benda's alizarin red S s. 1 cc. of saturated aqueous solution of alizarin red S diluted with 80–100 cc. of distilled water. Originally used in Benda's stain for mitochondria, but more commonly used in the gross staining of skeletons.

Benda's method (*for mitochondria*) Crystal violet and alizarin are employed to stain the mitochondria a deep violet in a rose background. A method more complicated than iron hematoxylin or aniline acid fuchsin, and now not much used.

Bensley's crystal violet-acid fuchsin s. (*for cytoplasmic granules*) A saturated and filtered aqueous solution of acid fuchsin is added to a similar solution of crystal violet. The precipitate is collected, washed with distilled water, dried, and dissolved in absolute alcohol to saturation, for stock solution. A 1:6 dilution with 20% alcohol (made from absolute) is used for staining.

Bensley's method (*for glycogen*) Fixation of material in 10 parts of neutral formalin diluted either with 90 parts of 100% alcohol or with 90 parts of saturated picric acid solution in 100% alcohol. Stain in Best's carmine.

Bensley's neutral safranin s. A neutral dye, composed of safranin O and acid violet, used to stain mitochondria and antecedents of secretions.

Berlin blue. Aniline blue.

Best's carmine (*for glycogen*) Prepare a stock solution by mixing 2 Gm. of carmine, 1 Gm. of potassium carbonate, 5 Gm. of potassium chloride, and 60 cc. of distilled water. Boil gently until color darkens, cool, and add 20 cc. of concentrated ammonia. A test for the selectivity of the glycogen staining is the pretreatment of the section with saliva, which digests the glycogen. Best's carmine should then stain nothing in the section.

Biebrich scarlet. An acid diazo dye used as a plasma stain.

Bielschowsky silver methods (*for nervous system*) Various modifications, the essentials of which are: fixation, usually in formol, silver impregnation, washing, treating with ammoniacal silver solution, washing, and reducing in formol. Different modifications selectively stain nerve cells or neuroglia. Bielschowsky methods are also used for the demonstration of reticular fibers in other organs.

Bielschowsky-Maresch diamine silver solution. Add 5 drops of 40% NaOH to 10 cc. of 10% $AgNO_3$ solution. Brown precipitate is redissolved by constant shaking while adding 28% ammonia water drop by drop (about 1 cc.). It is best to leave the last few granules undissolved as excess NH_3 inhibits impregnation. Dilute to 25 cc. with distilled water for use. Use once. See *Opeta and Opeda silver method,* under *Special Stains.*

Biondi's s. A triple histologic stain consisting of orange G, methyl green, and acid fuchsin. Now not much used. Also called *Ehrlich-Biondi-Heidenhain stain.*

Bismarck brown with methyl green. Stain for m cin, cartilage, and goblet cells with 1% aqueous Bismarck brown (C.C.) followed by rinsing in alcohol and subsequent staining with 0.5% aqueous methyl green (C.C.)
Bismarck brown Y (C.C.) An aniline dye of the azo series used in aqueous or saturated alcoholic solution as contrast stain, as a mucin stain, for vital staining, and for staining in bulk. Also called *Vesuvin, phenylene brown, Manchester brown, Excelsior brown, leather brown, basic brown G GX* or *GXP aniline brown.*
Bodian method. A method of staining nerve fibers in paraffin sections. The sections are saturated with copper protargol solution, the colloidal silver proteinate then being reduced with hydroquinone, and the sections finally toned in gold.
Böhmer's hematoxylin. An alum hematoxylin stain. Largely of historical interest.
borax carmine (Grenacher) Make concentrated solution of carmine in borax (2%–3% carmine in 4% aqueous solution of borax) by boiling for 30 min. Allow to stand 2–3 days with occasional stirring. Dilute with equal volume 70% alcohol. Again allow to stand, and filter used for staining tissues in bulk or in section.
Bordeaux red. An acid monoazo dye used as plasma stain. Also called *acid Bordeaux; archelline 2B, azo-Bordeaux; cerasin R, fast red B BN* or *P*
Bowie s ethyl violet–Biebrich scarlet s. A neutral stain made from ethyl violet and Biebrich scarlet, used for staining pepsinogen granules in sections of stomach.
brazalum s. A good nuclear stain made by the formula for hemalum, but by using brazilin instead of hematoxylin.
brazilin. A dye extracted from Brazilian redwood; similar in properties and uses to hematoxylin.
brilliant cresyl blue (C.C) A basic dye of the oxazine group, having highly metachromatic properties used chiefly for staining blood to demonstrate the platelets and reticulated erythrocytes. Also called *brilliant blue C cresyl blue 2R* V or *BBS.*
brilliant green (C C) A basi dye of the triphenylmethane series used to color culture media. Also called *ethyl green, malachite green G*
Buzaglo' s. (*for connective tissue*) Staining solutions used are glycogymin, orcein, acid alizarin blue, and alizarin-viridine. Nuclei stain dark blue; elastic fibers, red brown muscle and epithelium, pale blue violet collagen, m cus, and cartilage, shades of green; myelin sheaths, rose axis cylinders, dark blue and erythrocytes, red-brown.
Cajal' gold-sublimate method (*for astrocytes*) Impregnate sections 3–4 hours in Cajal' gold-sublimate solution at 25° C. If impregnation is satisfactory sections acquire an over-all purple coloration Wash in distilled water Fix in 5–10% sodium thiosulfate solution for 5–10 minutes. Wash thoroughly in several changes of tap water Dehydrate in alcohol, clear and mount
Cajal's silver methods (*for nerve tissue*) These are based upon silver impregnations reduced by photographic developer such as hydroquinone. There are many variations some have high selectivity fo certain cells of the nervous system, others for various types of nerve fibers.
carbol-aniline fuchsin s. (*for Negri bodies*) 1 cc. of phenol and 1 cc. of aniline oil are added to 100 cc. of 0.5% basic fuchsin in 20% alcohol. Sections are stained for 10–30 minutes, washed, decolorized in alcohol, and counterstained with methylene blue. Negri bodies are stained crimson. Also called *Goodpasture'* s.
carbol-crystal violet (Nicolle). Dissolve 1.0 Gm. of crystal violet (85% dye content) in 10 of 95% alcohol, and 1 Gm. of phenol in 100 cc of distilled water mix the solutions and filter
carbolfuchsin. Basi fuchsin, saturated alcoholic solution (about 6%–7%) 10 cc.; carbolic acid, 5% aqueous, 90 cc.
carbolfuchsin (Kinyoun) Basic fuchsin 4 Gm phenol 8 Gm., alcohol 95% 20 cc., distilled water 100 cc.
carbolfuchsin solution (*for Mycobacterium tuberculosis*) A staining fluid composed of basic fuchsin 0.3 Gm., alcohol 10 cc., liquefied phenol 5 cc., distilled water 95 cc. Used primarily for the staining of tubercle bacilli. Formerly called *Ziehl-Neelsen carbolfuchsin.*
carbol-thionine (King) (*for Nissl bodies*). A saturated alcoholic solution of thionine in 1 aqueous carbolic acid.
carbol-thionine (Nicolle) Thionine (90% dye content) 0.125 Gm., phenol 1 Gm., distilled water 100 cc. Filter before use.
Carey's method (*for motor end-plates*). Muscles are fixed in full-strength, fresh, filtered lemon juice for 10–15 minutes, placed into 1% aqueous solution f gold chloride until golden in color (30 minutes to one hour) and then reduced in 25% formic acid. End-plates are stained black.
carmalum. Carmine; stain consisting of carminic acid 1 potassium alum 10, water 100 parts It is well adapted for sections cut on the freezing microtom and for staining of small embryos tote. Also called *Mayer' carmalum.*
carmine (C.C.) A bright red coloring matter prepared from cochineal, the active staining principle being carminic acid of use in staining in toto for staining tissues in bulk which are later sectioned used as specific stain for glycogen and for mucus and as counterstain for blue vital dyes.
Casares Gil' s. (*for flagella*) Carbolfuchsin used to stain the smears which have been treated with special mordant composed of tannic acid (hydrated) aluminum chloride, zinc chloride, basi fuchsin, and alcohol (60%)
Champy-Kull's method (*for mitochondria*). Anilin acid fuchsin is used as in Altmann's method, but toluidine blue and aurantia are used as counterstains.
chlorazol black E (C.C.) An acid poly-azo dye used as vital dye and as nuclear stain. Also called *Erie black GXOO Pontamine black E.*
chromaffin reaction. A brown coloration of tissue, as adrenal medulla, when fixing fluids containing dichromate salts are used.
chromotrope aniline blue s. A stain made up of 1 Gm phosphotungstic acid dissolved in 100 cc 0.03 *N* hydrochloric acid, to which 0.5 Gm aniline blue is added and dissolved by means of gentle heat. After cooling, 2 Gm. chromotrope is added and the solution is allowed to stand for several hours and then filtered It is useful in staining Mallory bodies, pituitary cells, and renal glomeruli.
Congo red (C.C) An acid aniline dye of the azo group used as histologic stain and as an indicator usually in 0 1% aqueous solution, for estimating free mineral acids, especially in the presence of organic acids. It is also used to test for amyloidosis, in the determination of plasma and blood volumes, and as a cytoplasmic stain. Also called *Congo; cotton red A, B* or *C direct red C R* or *Y*
Conn's technic (*for soil bacteria*) Rose bengal (C.C.) 1 Gm.; $CaCl_2$ 0.01 Gm. more or less, 5% aqueous phenol, 100 cc
cresyl violet (C.C.) A basic dye of the oxazine group having strongly metachromatic properties.

used for staining nervous tissue and fresh tumor tissue. Also called *aronplecki violet, arecyl fast violet*.
crystal violet (C.C.) A basic dye of the triphenylmethane group, hexamethyl pararosaniline. A constituent of all the bluer shades of methyl violet and gentian violet; may be used in nearly all procedures calling for gentian violet, being of more constant composition than gentian violet. Also called *hexamethyl violet, methyl violet 10B, gentian violet*.
crystal violet s. (*for amyloid*) Pathologic tissue stain of crystal violet (C.C.) 1.0 Gm.; methyl violet 2B (C.C.) 0.5 Gm.; 10% alcohol, 100 cc.
Custer's method (*for bone marrow in sections*) *Solution A.* Eosin Y (C.C.) 0.1% aqueous. *Solution B.* Azure II (C.C.) 0.1% aqueous. *Solution C.* Mix 20 cc. of solution A, 10 cc. of solution B, and 60 cc. of distilled water. Filter through cotton.
da Fano's cobalt nitrate method (*for Golgi apparatus*) Fix in 1 Gm. of cobalt nitrate ($Co(NO_3)_2 \cdot 6H_2O$), 100 cc. of distilled water, 6–15 cc. of formalin, for 3–18 hours. Vary the amount of formalin and time according to the type of tissue. Rinse in distilled water. Impregnate 1–2 days in 1.2% $AgNO_3$ (1% for very small, easily permeable fragments, 2% for fatty and central nervous tissues). Rinse in distilled water. Cut blocks thinner than 2 mm. Reduce in fresh Ramón y Cajal developer for 12–24 hours. Wash in distilled water 30 minutes. Dehydrate, clear and imbed in paraffin. For greater permanence, bring sections to water, tone 1–3 hours in 0.1 to 0.2% gold chloride, wash, counterstain with alum carmine. *Result:* Golgi apparatus black.
D'Antoni s. One containing powdered reagent iodine crystals and accurately standardized 1% potassium iodide solution; used to stain intestinal parasites and their ova.
Davenport's alcoholic silver nitrate method (*for nerve tissue*) See *Cajal's silver methods*, under *Special Stains*.
Delafield's hematoxylin. An excellent nuclear stain. Dissolve 4 Gm. of hematoxylin in 25 cc. of absolute alcohol, and add 400 cc. of saturated aqueous solution of ammonium alum; expose to light and air for 3–4 days; filter; add to the filtrate 100 cc. each of glycerin and methyl alcohol; allow to ripen before use and dilute with water as desired.
del Río Hortega's silver method. See *Hortega silver method* under *Special Stains*.
Dominici s. A blood stain, especially for sectioned material, using eosin-orange G (eosin 0.5 Gm., orange G 0.5 Gm., distilled water 100 cc.) and toluidine blue (0.5% aqueous) solutions. Stain 5–7 minutes in the eosin-orange G; rinse briefly in distilled water; stain about 20 seconds in toluidine blue; rinse in water; differentiate in 95% alcohol.
Donaldson's method (*for protozoan cysts in feces*) A staining procedure for cysts in feces using an eosin, iodine, and potassium iodide solution.
Dorner's spore s. A solution containing nigrosin, formalin, and water; used in staining bacteria. The bacteria are stained with Ziehl-Neelsen carbolfuchsin with the aid of heat, decolorized with 95% alcohol, washed in water and treated with saturated aqueous solution of nigrosin. Spores are stained red, other parts of bacilli colorless against dark gray background.
Dunn-Thompson s. (*for hemoglobin*). Stain 15 minutes in unacidified alum hematoxylin, wash in tap water, mordant 1 minute in 4% iron alum, rinse in tap water, stain 15 minutes in picrofuchsin solution (13 cc. of 1% acid fuchsin and 87 cc. of saturated aqueous picric acid solution), dehydrate, and mount. Hemoglobin casts, phagocytized particles, and erythrocytes are stained green.
Ehrlich's acid hematoxylin. Used for staining sections and in the mass. Dissolve 1 Gm. of hematoxylin in 30 cc. of alcohol and add 50 cc. each of glycerin and water, alum in excess, and 4 cc. of glacial acetic acid. Allow the mixture to stand in the light until it acquires a deep red color. Stains nuclei, mucin, and calcium deposits deep blue. One of the most frequently used hematoxylin stains.
Ehrlich's aniline gentian violet solution. Shake 2 cc. of aniline with 98 cc. of distilled water; allow the mixture to stand several minutes, and filter until clear. Dissolve 1.2 Gm. of crystal violet (85% dye content) in 12 cc. of alcohol. Mix the two solutions.
Ehrlich-Biondi-Heidenhain s. A triple stain, the constituent dyes of which are acid fuchsin, methyl green, and orange G.
Einarson's gallocyanin chrome alum method (*for Nissl bodies*) *Stain.* Dissolve 10 Gm. of chrome alum—$KCr(SO_4)_2 \cdot 12H_2O$—in 200 cc. of distilled water. Add 300 mg. of gallocyanin. Heat slowly to boiling and boil 15–25 minutes, with frequent shaking. Cool slowly and filter. *Technic:* Deparaffinize and bring down to water the usual way. Stain 24–48 hours, depending upon fixative used. Dehydrate in alcohol, clear in xylol, and mount. See also *gallocyanin*, under *Special Stains*.
eosin. Tetrabromofluorescein, an acid dye which occurs in red or yellowish crystals. Commercially several rose-colored fluorescein dyes of the xanthine series are called eosins; eosin Y, ethyl eosin, eosin B, phloxine, and rose bengal.
eosin, bluish (C.C.) Dinitro-dibromofluorescein, useful counterstain for hematoxylin. Also called *eosin BN, B, BW, or DHV; saffrosin; eosin scarlet B or BB, scarlet J, JJ, or V; nopalin G; imperial red*.
eosin A. Erythrosin, bluish.
eosin-methylene blue s. (**Mallory's**). See *phloxine-methylene blue s.*
eosin S (C.C.) The ethyl ester of eosin Y. Dissolve 1 Gm. of erythrosin B (78% dye content) in 100 cc. of 95% alcohol. Also called *ethyl eosin*.
eosin Y. Tetrabromofluorescein, a valuable stain; used most frequently as a counterstain for hematoxylin and the green or blue basic dyes. Dissolve 0.1–1.0 Gm. of eosin Y (85% dye content) in 100 cc. of distilled water. Also called *water-soluble yellowish eosin, eosin W or WS*.
Erie garnet B s. Acid dye used with basic azure A to form a polychromatic stain for freshly incised frozen tissue. Add 4 parts of filtered 1% aqueous solution azure A to 1 part filtered 0.5% aqueous solution Erie garnet B; filter; then stain the tissue for 10–15 seconds.
erythrosin. A red dye, an iodine derivative of fluorescein.
erythrosin BB (C.C.) Phloxine.
erythrosin, bluish (C.C.). Tetraiodofluorescein; used as a counterstain. Also called *bluish erythrosin, dianthine B, eosin J, iodeosin B, pyrosin B*.
erythrosin, yellowish. Di-iodofluorescein; valuable counterstain after Delafield's hematoxylin or methylene blue. Also called *dianthine G, erythrosin R or G, iodeosin G, pyrosin J*.
ethyl violet. Hexaethyl pararosaniline, a basic dye used in staining glands.
fast green FCF (C.C.) An acid dye of the diaminotriphenylmethane series, used as a counterstain.
fat stains in supersaturated isopropanol alcohol. Sudan IV (C.C.), Sudan brown, oil red 4B in 99% isopropanol. After various stainings these are mounted in Apathy's gum syrup.

Feulgen reaction. See under *reaction*.

Foley's combined method (*for nerve fibers sheaths cell*) A modification of the Bodian method, dependent on special reducing and counter toning techniques.

Fontana s. (*for Treponema pallidum*) (a) *Fixing solution*. 1 cc. of glacial acetic acid, 2 cc. of formalin 100 cc of distilled water (b) *Mordant*. 1 cc. of phenol (liquid crystals) 5 Gm. of tannic acid, 100 cc. of distilled water (c) A 0.25% silver nitrate solution. *T pallidum* appears dark brown or black on light brown background.

Foot' ammoniated silver carbonate method (*for brain tissue*) See *Bielschowsky silver methods*, under *Special Stains*.

Foot methods. The method for the staining of reticular fibers is modification of Bielschowsky method. That for the staining of nerve fibers is modification of Cajal method.

fuchsin. $C_{20}H_{19}N_3C_2H_3O_2$. Rosaniline hydrochloride or acetate lustrous, green, crystalline salt, imparting an intense red color to solutions used as stain in microscopy There are two main types acid fuchsin and basic fuchsin.

fuchsin NB. New fuchsin.

Gabbett's s. (*for Mycobacterium tuberculosis*) Stain the dried and fixed preparation with carbolfuchsin solution with heat; wash in distilled water and counterstain with Gabbett methylene blue solution (2 Gm. of methylene blue, 100 cc. of 25% sulfuric acid) then wash and mount.

gallocyanin. A basic oxazine dye used in an aqueous solution with chromalum as stain for Nissl bodies; sometimes used as nuclear stain.

gentian violet. A violet aniline dye, a mixture of methylated pararosanilines composed of pentamethyl or hexamethyl pararosaniline or either of these compounds alone. It is biologic stain having many histologic and cytologic applications, including its use in Gram stain. Also used as an antiseptic, anthelmintic, and bactericide, having selective action on Gram-positive organisms. Crystal violet is now used where old formulas call for gentian violet, since it is of more definite composition

Giemsa s. (C C) A neutral stain used in staining blood, and as general cytologic stain. It is the compound formed from eosin with one of the derivatives of methylene blue, known as azure II. A stock solution may be prepared by dissolving 0.5 Gm of Giemsa powder in 33 cc. of glycerin, C.P and after several hours adding 33 cc. of absolute alcohol. Also called *azur II-eosin*.

gold chloride. Recommended for tracing nerve endings in fresh tissues and for staining connective tissue and cartilage cells

Golgi's silver method. Fresh pieces of nervous tissue are immersed in solution containing potassium bichromate and osmic acid, and then in silver nitrate producing black deposit of reduced silver salt in and around the processes and cell bodies of many of the neurons. The original of all the silver staining methods for nerve cells, and still very useful

Gomori's acid phosphatase method. Remove sections from water and incubate in lead nitrate sodium glycerophosphate solution (5 cc of molar acetate buffer pH 4.7 2 cc of 5% lead nitrate, 6 cc of 2% sodium glycerophosphat 87 cc. f distilled water) at 37° C for 1½–24 hours Rinse in distilled water then in 2–3% acetic acid and again thoroughly in distilled water Immerse 1 minute in 1 40 or 1 50 dilution of yellow ammonium sulfide. Wash thoroughly in tap water Counterstain as desired. Results sites of phosphatase activity are shown by dark brown deposits of lead sulfide.

Gomori' alkaline phosphatase method. The method depends on the action of alkaline phosphatase on organic phosphates in the presence of Ca ions to form calcium phosphate in situ, followed by the replacement of the Ca by Ag *Technic*. deparaffinize in two changes of xylol, pass through two changes of absolute alcohol, soak in 0.5–1% ether alcohol solution of collodion or nitrocellulose for 5–10 minutes. Drain 1 minute, harden in 80% alcohol 5 minutes, and transfer to water Incubate 3–14 hours at 37° C. in 6 cc of 3 2% aqueous solution of N glycerophosphate, 9 cc. of 2% aqueous $Ca(NO_3)$ 6 cc of 10% Na barbital, 6 cc. of 2.465% $MgSO$ 33 cc. of distilled water Calcium control sections should be run concurrently incubating these in 0 1% $Ca(NO_3)_2$ solution at the same temperature for the same length of time. Rinse in distilled water treated with 5% $AgNO$ in strong light for 15–60 min tes. Counterstain. Dehydrate with acetone and clear Mount. Results alkaline phosphatase appears as black deposits in nuclei and cytoplasm.

Gomori' lipase method. The method involves the hydrolysis of water-soluble palmitic or stearic acid esters of certain polymer glycols or hexitans in the presence of 2% anhydrous calcium chloride and the calcium soaps formed in situ are converted into lead soaps by treatment with 2% lead nitrate solution. Lead soaps are converted to black lead sulfide with 1:100 dilution of yellow ammonium sulfide in distilled water Counterstain in alum hematoxylin. Dehydrate clear in dichlorethylene or ligroin. Mount. Result. sites of lipase activity in dark brown deposits of lead sulfide

Goodpasture s. (*for bacteria in sections*) A combined tissue and bacterial stain, the staining constituents of which are basic fuchsin, picric acid, and Stirling gentian violet. Gram-negative bacteria stain red Gram-positive, blue tissue, red and blue; fibrin, deep blue.

Goodpasture s s. (*for peroxidase granules*) Cover dried blood smear with solution containing 0.05 Gm. of sodium nitroprusside dissolved in 1 cc. of distilled water 0.05 cc. of benzidine, 0.05 Gm. of basic fuchsin, and 0 5 cc. of hydrogen peroxide in 100 cc. of 95% alcohol. After one minute add an equal volume of distilled water plus hydrogen peroxide, 3–4 minutes. Rinse. Peroxidase granules are colored blue.

Graham alpha-naphthol pyronin method (*for oxidase granules*) 1 2 minute fixation of fresh air-dried smears in fresh 10% formalin alcohol. Wash in water Stain 4–5 minutes in 1 Gm. of alpha-naphthol dissolved in 100 cc. of 40% alcohol to which 0.2 cc. of 3% H_2O_2 is added shortly before using Wash 15 minutes in running water Stain 2 minutes in 0.1 Gm. of pyronin (C.I. No. 739 or 741 B) 4 cc. of anilin, and 96 cc. of 40% alcohol Wash in water Stain 30–60 seconds in 0 1% aqueous methylene blue. Wash in water blot, dry and mount. Results neutrophil granules, giving oxidase reaction, are purplish red, eosinophil granules lighter red, basophil granules deep purple. All nuclei blue, cytoplasm pale blue, erythrocytes greenish yellow to pink.

Gram iodine. See *Lugol' solution*, under *Special Stains*.

Gram's s. (*for staining bacteria*) Smear material to be examined on glass slide, dry and fix with heat. Stain with carbol-gentian violet for one-half minute. Wash with water Stain with Gram's iodine for 1½ minutes. Wash with water Decolorize

with 95% ethyl alcohol for 2–3 minutes. Wash with water. Stain with 1% safranin for one-half to one minute. Wash with water, dry, and mount. Gram-positive organisms are dark violet or purple. Gram-negative organisms are faint pink. Numerous modifications are used.

Gram-Weigert staining method (*for bacteria in sections*). Stain paraffin sections which have been fixed in Zenker's solution in alum hematoxylin, 1% aqueous eosin, and aniline methyl violet, washing with water after each. Mordant with Lugol's solution, wash, blot, dehydrate, clear and mount.

Gray's s. (*for flagella*). Carbolfuchsin is used to stain the smears which have been treated with special mordant composed of: (a) *Solution A*. potassium alum, saturated aqueous solution; tannic acid and mercuric chloride. (b) *Solution B*. saturated alcoholic solution of basic fuchsin.

Gutstein's s. An aqueous solution of 1% methyl violet and 2% sodium bicarbonate, used to stain smears of the material from skin lesions of smallpox.

Harris' hematoxylin. Dissolve 1 Gm. of hematoxylin in 10 cc. of alcohol and add to 200 cc. of saturated aqueous solution of alum; heat to boiling and add 0.5 Gm. of mercuric oxide. When the solution turns a dark purple, remove from the flame and cool quickly. For use dilute to the color of port wine with aqueous solution of alum.

Heidenhain's (azan) azocarmine. A 2% aqueous solution of azocarmine G in distilled water. When used as a tissue stain it is acidified strongly with glacial acetic acid. Aniline blue and orange G are used as counterstains in Heidenhain's modification of the Mallory connective-tissue stain.

Heidenhain's iron hematoxylin s. See *iron hematoxylin* (*Heidenhain's*) under *Special Stains*.

hemalum. A solution of hematoxylin containing an alum salt for a mordant. Hematoxylin ordinarily will not stain tissues readily unless they are previously mordanted or unless a mordant is added to the hematoxylin solution.

hematoxylin (C.C.) $C_{16}H_{14}O_6$. A crystalline glycoside derived by extracting logwood with water in the presence of ether. It is oxidized to hematein which yields a deep blue coloration. An excellent nuclear stain. Various types are chrome hematoxylin, Harris' hematoxylin, iron hematoxylin, Mallory's ferric chloride hematoxylin, Mallory's phosphomolybdic acid hematoxylin, Mallory's phosphotungstic acid hematoxylin.

hematoxylin-eosin method. Stain sections with hematoxylin (Harris'). Rinse with tap water; decolorize in 0.5% acid alcohol, washing thoroughly afterward with tap water, then with 0.5% ammonia water and again with tap water. Rinse in 70% alcohol, stain with alcoholic eosin, and rinse with 95% alcohol. Dehydrate in absolute alcohol, clear in carbolxylol and xylol, and mount. Many modifications are employed, such as the use of other hematoxylin solutions, or of water-soluble eosin.

Herxheimer's scarlet (*for staining fat*). See the various Sudan stains.

Hetherington's pinacyanol supravital mitochondria s. Make a stock 0.1% solution in 100% alcohol of pinacyanol (C.I. No. 808). Dilute this 1:40 in 100% alcohol (1 drop per cc.) for use. Technic: flame clean slide, flood with dilute alcohol pinacyanol, and drain. Let slide dry; then place on it a small drop of blood, cover with clean cover glass, let spread, and ring cover with petrolatum. Mitochondria stain color of deep blue to violet in living and motile cells. Addition of similar quantity of neutral red will stain nuclei and other cell granules. See *pinacyanol*, under *Special Stains*.

Hiss method (*for capsules of bacteria*). Films are prepared from fresh material or by mixing cultures of organisms with animal serum. Dry in air. Apply staining solution (Ziehl-Neelsen carbolfuchsin or gentian violet solution). Heat until steam appears and allow to stain for 1–2 minutes. Wash off the stain with a 20% copper sulfate solution. Blot dry or examine wet under a cover slip. The capsule should show a lighter color than the rest of the organism.

Hortega's silver method (*for oligodendrocytes*). Wash in 1:100 dilution of 28% ammonia water and then distilled water. Impregnate 1–5 minutes in an ammoniacal silver carbonate solution, wash 15 seconds in distilled water, reduce 30 seconds in a 1:100 dilution of strong formalin, wash in tap water, tone in 0.2% gold chloride until gray, fix in 5–10% sodium thiosulfate 2–5 minutes, wash in tap water, dehydrate and mount. Cytoplasm and processes of oligodendrocytes stain black.

Huber's toluidine blue s. (*for Nissl bodies*). Paraffin sections of tissues which have been fixed in a mixture of 95% alcohol, trichloroacetic acid, and mercuric chloride are stained with 0.1% aqueous solution of toluidine blue, and washed in distilled water and a weak aqueous solution of lithium carbonate. Differentiate in 70% alcohol and 95% alcohol, dehydrate, clear and mount.

Hucker's ammonium oxalate crystal violet s. (*used in Hucker's modification of the Gram stain*). 2 or 4 Gm. of crystal violet (85% dye content) in 20 cc. of 95% ethyl alcohol; 0.8 Gm. of ammonium oxalate in 80 cc. of distilled water. Mix the two solutions and filter. The concentration of the crystal violet may be varied as desired.

Huntoon's s. (*for capsules*). *Solution I*. 100 cc. of a 3% sodium caseinate solution (nutrose) and 5 cc. of 2% phenol solution. *Solution II*. 100 cc. of 2% phenol solution; 0.25–0.5 cc. of concentrated lactic acid; 1 cc. of 1% acetic acid; 1 cc. of saturated alcoholic basic fuchsin solution; 1 cc. of carbolfuchsin. Mix the organisms to be stained with a drop of solution I; spread a thin film; and dry in air without fixing. Stain with solution II for 30 seconds, wash, and dry.

Huntoon's s. (*for spores*). *Staining solution*. The filtrate obtained upon filtering a mixture of acid fuchsin in 50 cc. of 2% acetic acid and 2 Gm. of methylene blue in 50 cc. of 2% acetic acid. A rather thick smear, after drying and fixing, is stained with the aid of heat, and washed in water, the film appearing bright red. It is then dipped a few times into a weak sodium carbonate solution, and, as soon as it turns blue, washed again with water, dried, and mounted.

India ink method. A method of making spirochetes and other organisms visible under the microscope by means of India ink. Negative staining. The background is black with India ink, and the spirochetes, being unstained, show up clearly.

indigo blue. Indigo carmine.

indigo carmine (C.C.). A blue dye, sodium or potassium indigo-disulfonate, very sensitive to oxidizing agents; used in urologic work and as a test for kidney function; as a coloring for foods, drugs, and cosmetics. Sometimes used as a cytoplasmic stain. Also called *indigotine Ia*.

iron hematoxylin (**Heidenhain's**). Tissues are mordanted in a 5% aqueous solution of ferric ammonium sulfate (iron alum), rinsed in distilled water, stained with 1% aqueous hematoxylin, and differentiated in 1% aqueous iron alum.

iron hematoxylin (**Weigert's**). *Solution A*. 1% alcoholic hematoxylin solution. *Solution B*. Ferric

chloride 20% solution 4 cc., hydrochloric acid 1 cc., and distilled water to make 100 cc. For use, mix equal parts of solutions A and B

Janus green B (C.C.) A basic aniline dye, diethyl safranin-azodimethylaniline chloride used as supravital stain for mitochondria and as an oxidation-reduction indicator Useful in the flocculation reaction for syphilis. Also called *diazin green S*.

Jelly method of in vitro staining. The use of an agar solution containing dye and other ingredients, spread on glass slide, in studying living cells under the microscope.

Jenner's s. (C.C.) (*for blood*) The eosinate of methylene blue, precipitated from aqueous solution and redissolved in methanol. For use, dissolve 0.5 Gm. of powder (Jenner's stain) in 100 cc. of acetone-free methanol.

Kernhauser's quadruple s. (*for connective tissue*) (A) Orcein, synthetic (C.C.) 0.4 Gm.; conc. HNO_3, C.P 0.4 cc; 90% ethyl alcohol, 100 cc. (B) Acid alizarin blue 2B, 0.35 Gm. ammonium alum, 5 Gm.; N/10 acetic acid, 82 cc.; N/10 sodium acetate, 18 cc. Boil gently for 10 min. in flask covered with watch crystal. Cool, filter (C) Orange G (C.C) 2 Gm.; fast green FCF (C.C.) 0.2 Gm.; glacial acetic acid, 2 cc.; distilled water 100 cc. (D) Phosphotungstic acid C.P crystals, 4 Gm. phosphomolybdic acid C.P crystals, 1 Gm.; distilled water 100 cc.

Krajian's Congo s. (*for elastic fibers*) Congo red staining followed by aniline blue gives red elastic fibers, other fibers blue.

Krajian's rapid staining. The principle of the modification of staining with hematoxylin and eosin consists in the dehydration of the section before counterstaining and the application of eosin as solution in carbolxylol. Then, since the tissue passes afterward through xylol only there is opportunity for decolorization. Alcohol is saved because dehydration can be commenced in the stronger alcohol, discarding the lower gradations. The solution of eosin in carbolxylol which constitutes the principal element of modification may be called, for convenience, eosinol.

Kultschitzky's hematoxylin. The stock solution of 10% hematoxylin in absolute alcohol is ripened at least 6 months, and diluted for use as follows stock solution 10 cc., 2% acetic acid 90 cc. A valuable myelin-sheath stain Used in the Smith-Dietrich stain for lipoids

Kultschitzky's myelin s. *Technic:* stain celloidin sections 12–24 hours at 15°–20° C in Kultschitzky's hematoxylin. Differentiate in Kultschitzky's decolorizer (10 cc. of 1% potassium ferricyanide, 100 cc. of saturated aqueous Li_2CO_3) three to four changes during period of 4–12 hours Wash thoroughly Dehydrate, clear and mount.

lactophenol blue s. A aqueous solution of 1 part phenol crystals, 1 part lactic acid, and 2 parts glycerol, for the mounting of fungi in routine or permanent wet preparations.

Laidlaw's s. Silver stain for normal ectodermal cells except basal epidermal cells and Schwann cells. It also stains ectodermal tumors.

Leishman's s. (*for blood*) A Romanovsky type of stain, the eosinate of polychrome methylene blue, available as dry powder which is dissolved for use in pure methyl alcohol in the proportion of 0 15 Gm to 100 cc.

leuko-basic fuchsin s. When to an aqueous solution of basic fuchsin hydrochloric acid and sodium bisulfite are added, in that order sulfurous acid is liberated and the magenta dye becomes colorless.

Levaditi's method (*for Treponema pallidum sections*) A modification of Cajal's method of staining nerve fibers silver nitrate solution used, which stains the treponema dense black.

Liebermann-Burchardt cholesterol test. See *Schultz's sterol reaction method* (for cholesterol) under *Special Stains.*

Liefson's method (*for bacterial flagella*) A modification of Gray's stain.

light green SF yellowish (C.C.) An acid dye of the triphenylmethane series, sulfonated derivative of brilliant green and valuable counterstain for safranin; used in 0 5% aqueous solution. Also called *light green SG 2G 4G or 2GN; acid green, fast acid green N*

Lillie's acid hemalum. See *Mayer's acid hemalum modified by Lillie* under *Special Stains.*

Lillie's azure eosinates in buffered solutions (*for staining bacteria in tissues*) These are mixtures of azure A (C.C.) or C (C.C.) eosin Y or B in distilled water from which the precipitated filtrate is dissolved in methanol and glycerol. Buffer solutions of M/10 citric acid and M/5 Na_2HPO_4 are prepared and the stains are used solution of stain 1 cc.; buffer mixture, 2 cc. acetone (C.P.) 5 cc.; distilled water 32 cc.

Lillie's azure-eosin method. Stain 3–5 minutes in alum hematoxylin, wash in water stain 1 hour in azure eosinate solution, rinse in distilled water, dehydrate with acetone, and mount Nitrocellulose sections or collodion-coated sections require 2–2½ hours staining in the azure eosinate solution. See *Lillie's azure eosinates in buffered solutions* under *Special Stains.*

Lillie's combined myelin and fat s. An iron hematoxylin method, followed by Sudan II (C.I. No. 73)-isopropanol stain, differentiated with borax-$K_3Fe(CN)_6$

Lillie's oil blue N or NA. Saturated oil blue N or NA in 60% isopropanol. Dilute to 40% or 50% isopropanol with distilled water for use Counterstain with Janus green B, Bismarck brown Y, Bismarck brown R, or pyronin Y For fat in animal tissue.

lithium carmine (Orth's). Contains 2.5–5 Gm. of carmine in 100 cc of saturated aqueous lithium carbonate. It is used to stain histologic sections, the nuclei being stained bright red, and as vital stain.

Ljubinsky's s. (*for bacterial granules*). Methyl violet 2B or crystal violet in 5% acetic acid. counterstain, Bismarck brown, 0.1% aqueous solution.

Loeffler's alkaline methylene blue. Add 30 cc. of concentrated alcoholic methylene blue solution to 100 cc. of caustic potash solution (0 01 100) Filter before using.

Loeffler's s. (*for flagella*) Treat air-dried film with freshly filtered mordant (100 cc. of 20% aqueous solution of tannic acid, 50 cc. of saturated aqueous solution of ferrous sulfate, 10 cc. of saturated basic fuchsin in 95% alcohol) heating gently for one-half to one minute stain with carbol-fuchsin.

Lorrain Smith's s. (*for fatty acids*) See *Nile blue A* under *Special Stains.*

Lugol's solution (*liquor iodi compositus*) Iodine 5 Gm potassium iodide 10 Gm., water 100 cc. Gram iodine solution may be made from this by adding 14 times its volume of water For stained smears for protozoan cysts, dilute solutions may be used, such as iodine 1 part, potassium iodide 2 parts, and distilled water 100 parts.

MacCallum's s. (*for influenza bacilli and Gram-positive organisms in tissues*) A combination of Goodpasture's stain with gentian violet.

Macchiavello's s. (*for Rickettsiae*) See *basic fuchsin* under *Special Stains.*

MacNeal's tetrachrome s. A blood stain containing eosin, methylene azure A, methylene blue, and methylene violet in methyl alcohol; it is used like Wright's stain.

malachite green (C.C.) A weakly basic dye of the triphenylmethane series, commonly used as counterstain for safranin or carmine. A 1% aqueous solution may be used. Has also been used in the treatment of trypanosomiasis. Also called *emerald green, new Victoria green, diamond green, solid green, light green N.*

Mallory's acid fuchsin s. (*for connective tissue*) Zenker fixation, paraffin sections. Stain in 1% aqueous solution of acid fuchsin overnight at room temperature or for one hour at 54° C. Differentiate in 0.1% potassium permanganate solution for 40–60 seconds, dehydrate, clear and mount. Neuroglia and fibroglia fibrils stain red; elastic fibrils, bright lemon yellow; collagen, pale reddish yellow; red blood corpuscles, purplish red.

Mallory's connective-tissue s. (*for collagen*) Zenker fixation, paraffin or celloidin sections. Remove mercury from sections with iodine or 0.5% sodium hyposulfite. Stain in 0.5% aqueous acid fuchsin, 1–5 minutes. Drain off and put in aniline blue, water sol ble, 0.5 Gm.; orange G, 2 Gm.; 1% aqueous phosphotungstic acid, 100 cc., for 20 minutes or longer. Rinse in 95% alcohol, dehydrate, clear and mount. For celloidin sections, reduce staining time and pass from 95% alcohol to terpineol and mount. Collagenous fibers, blue; myoglia fibrils, neuroglia, and fibroglia, red; elastic fibers, pink or yellow. Numerous modifications of this stain are in use. Heidenhain's azan stain using azocarmine instead of acid fuchsin is the most popular modification.

Mallory's eosin–methylene blue s. See *phloxine–methylene blue s.*

Mallory's ferric chloride hematoxylin. Mordant in 10% ferric chloride for 5 minutes; rinse quickly and stain in 1% hematoxylin for 5 minutes; differentiate in 0.25% ferric chloride.

Mallory's phosphomolybdic acid hematoxylin. Mix 10% phosphomolybdic acid solution 1 part, hematoxylin 1 part, water 100 parts, chloral from 6 to 10 parts. Expose to sunlight for week. Filter before using, and save the used portions. Stain sections for from 10 minutes to one hour; wash in 40%–50% alcohol, changing it two or three times. Dehydrate and mount. If the solution does not stain readily add little hematoxylin. The stain is blue, and in its general effect similar to Weigert's. It is recommended for preparations of the central nervous system.

Mallory's phosphotungstic acid hematoxylin. Dissolve 0.1 Gm. of hematoxylin and 2 Gm. of phosphotungstic acid crystals in 100 cc. of water. Ripen with 10 cc. of 0.25% aqueous potassium permanganate or 0.2 cc. of hydrogen peroxide. An excellent stain for muscle tissue.

Mallory's triple s. (*for connective tissue*) See Mallory's connective-tissue s. (for collagen).

Mann's eosin–methyl blue s. Composed of 35 cc. of 1% aqueous methyl blue and 45 cc. of 1% aqueous eosin in 100 cc. of distilled water. Used for inclusions caused by viruses and for protozoa.

Marchi's method. Used to demonstrate early degeneration of nerves. After hardening in Mueller's fluid, place the tissue in large quantity of mixture of Mueller's fluid 2 parts, 1% osmic acid 1 part. The myelin sheaths of degenerated fibers are stained black; the normal are yellow or uncolored.

Martius yellow (C.C.). An acid nitro dye used as stain and in preparing certain light filters for photomicrography. Also called *Manchester yellow, naphthol yellow.*

Masson's trichrome s. (*for connective tissue*) Paraffin sections are stained in (a) Regaud's hematoxylin, (b) mixture of 0.3% acid fuchsin and 0.7% ponceau de xylidine in 1% acetic acid, and (c) saturated aniline blue in 2% acetic acid.

M lm w h m t ylin-azu II eosin method (*for blood-forming organs*) Stain sections with alum hematoxylin, wash in water, stain 16–24 hours in azure II-eosin (dilute 5 cc. of 1:1000 eosin Y with 40 cc. of distilled water and add 5 cc. of 1:1000 azure II), differentiate in 95% alcohol, dehydrate, and mount.

May–Grünwald s. (*for blood*) A saturated solution of methylene blue eosinate in methyl alcohol. Syn., *Jenner's s.*

Mayer's acid carmine. Add 4 Gm. of carmine to 20 cc. of distilled water and 30 drops of hydrochloric acid and boil to dissolve. Add 100 cc. of 80% alcohol, filter and neutralize with ammonia (until carmine reprecipitates); add 4 drops of ammonia, and filter again.

Mayer's acid hemalum modified by Lillie. A modified formula for nuclei. Dissolve 5.0 Gm. of hematoxylin (C.C.) in 700 cc. of distilled water overnight. Add 50.0 Gm. of ammonia alum and 1 Gm. of $NaIO_3$; after these are dissolved add 300 cc. of glycerin (C.P.) and 20 cc. of glacial acetic acid.

Mayer's carmalum. Take 1 Gm. of carminic acid, 10 Gm. of alum, and 200 cc. of distilled water; heat the mixture and filter, adding an antiseptic to keep it clear. The fluid is light red in color shading toward violet, and is said to have good penetrating powers, even in osmium preparations, and to be better than alum carmine for staining *in toto.*

Mayer's hemalum. An excellent stain for large objects. It consists of two solutions: (a) hematein, or ammonium hematein, 1 Gm., dissolved by the aid of heat in 50 cc. of 90% alcohol; (b) alum 50 Gm. and distilled water 1 liter. The solutions are mixed, left to cool, and then filtered. A crystal of thymol may be added to prevent the formation of mold. For most purposes it is advisable to dilute this stain with water or alum solution. Hemalum plus 2% glacial acetic acid gives more precise nuclear stain. *Later modified formula:* Dissolve 1 Gm. of hematoxylin in 1 liter of water. To the solution add 0.2 Gm. of sodium iodate and 50 Gm. of alum. When the latter is dissolved, add 1 Gm. of citric acid and 50 Gm. of chloral hydrate.

Mayer's hemalum and indigo carmine. Add 1 volume of 0.05% aqueous solution of indigo carmine to 4 volumes of hemalum.

Mayer's paracarmine. Dissolve carminic acid 1 Gm., aluminum chloride 0.5 Gm., calcium chloride 4 Gm., in 100 cc. of 70% alcohol, with or without heat. Filter after precipitation, and the solution will have clear red color.

medicinal methylene blue. Methylthionine chloride. It is free of zinc, hence less toxic than commercial methylene blue. It is used as urinary antiseptic, and for kidney-function test. Also as antidote for carbon monoxide and cyanide poisoning.

methyl blue. An acid dye of the triphenylmethane series, used as counterstain and in Mann stain. Also called *cotton blue, Helvetia blue.*

methylene azure. Azure I.

methylene blue. An aniline dye of the thiazine series, tetramethylthionine chloride, widely used as histologic and bacteriologic stain. 1% aqueous

one solution being commonly used. Also called *Swiss blue*

methylene blue Med. U.S.P Methylene blue which is zinc-free, less toxic, and superior as stain.

methylene blue N. A basic dye f the thiazine series, of greener shade than the true methylene blue. Also called *methylene blue NN*

methylene blue O Toluidine blue O

methylene violet (C.C) A weakly basi thiazine dye, one of the oxidation products of methylen blue, and constituent of polychrome methylene blue used in MacNeal tetrachrome blood stain.

methyl green (C.C) A basic triphenylmethane dye readily decomposed to crystal violet, used as biologic stain in aqueous solution. Also called *double green, light green.*

methyl green pyronin s. (*for bacteria in sections*) M thyl green (C C.) 1 Gm. pyronin Y or B (C.C) 0.25 Gm. 95% alcohol, 5 cc. glycerol, 20 cc. 2% aqueous phenol, 100 cc.

methyl orange (C.C.) A weakly acid dye of the azo series used as an acid-base indicator; used occasionally as histologic counterstain. Also called *orange III heliantin, gold orange, tropaeolin D*

methyl violet. A basic aniline dye of the triphenylmethane series, which is mixture of tetramethyl, pentamethyl, and hexamethyl rosanilines or pararosanilines. The shade of blue varies with the degree of methylation; the greater the degree, the more blue is the shade used as general biologic stain and as stain for amyloid tissue. Also called *dahlia B gentian violet, Paris violet, pyoktaninum coeruleum, methylrosaniline chloride.*

methyl violet 2B (C.C.) A bluish shade of methyl violet; used as substitute for methyl or gentian violet.

modified Gallego elastic tissue s. A fuchsin procedure dependent on special mordant prepared as follows conc. HNO 1.5 cc.; conc. formalin, 1 cc; 50% aqueous $FeCl_3$ (U.S.P) 1 5 cc. distilled water 200 cc.

modified Warthin-Starry method (*for leptospirosis*) This stain depends on an acidulated water buffered; Walpole buffer solution AgNO in the acidulated water AgNO in the buffer solution; and developers using $AgNO_3$ in acidulated water gelatin in hot acidulated water and hydroquinone in buffer

Moeller's method (*for staining spores*) Make thin smears, dry and fix. Wash in chloroform and then in water Apply 5% chromic acid solution and wash again in water Apply carbolfuchsin and heat to boiling. Decolorize in 5% sulfuric acid solution. Wash in water and stain with 1% aqueous solution of methylene blue or malachite green. Wash, dry and mount.

M ller's quadruple s. (*for connective tissue*) (A) Dissolve 1 Gm. of orcein (C C) in 100 cc of 70% alcohol, then add 1 cc. of conc. HCl (B) Dissolve 0.1 Gm. of azocarmine G (C C) in 100 cc. of distilled water by bringing to boil; cool to room temp., filter at once through medium paper Add 1.0 cc. of glacial acetic acid. (C) Dissolve 1 Gm. of naphthol green B in 100 cc. of distilled water and 1 cc. of glacial acetic acid.

muchemat in (Mayer') (*for mucin*) (a) *Alcoholic* Dissolve 0 2 Gm. of hematein and 0.1 Gm of aluminum chloride in 100 cc. of 70% alcohol Two drops of nitric acid may be added. (b) *Aqueous* Pulverize 0.2 Gm. of hematein with few drops of glycerin add 0.1 Gm. of aluminum chloride, 40 cc. of glycerol, and 60 cc. of water

mucicarmi (Mayer's) (*for mucin*) A stain made p of carmine and aluminum hydroxide 50% alcohol, diluted for use 1:10 with water or 50% alcohol; used after alum hematoxylin.

mucicarmine with hematoxylin and metanil yellow (*for connective tissue*) (A) Mucicarmine Dissolve 1 Gm. of carmine (C.C.) with 0.5 Gm. of anhydrous AlCl in 2 cc. of distilled water by gentle heat for 2 min., stirring until mixture becomes dark. Add 100 cc. of 50% alcohol, stirring co tin ously After standing 24 hours, filter. Dilute 1 volume of this stock with 10 vols of distilled water or preferably 50%-70% alcohol for use (B) Place 0.25 Gm. of metanil yellow on filter paper in funnel and pour over it 100 cc of 0.25% acetic acid.

myelin stains. Staining technics for myelin sheaths includ the following methods: Kultschitzky Pal, Spielmeyer Weigert, Wolters, Wright. See under *stain* for these methods.

negative tal ing of bacteria. Nigrosin (C C) 10 Gm., 100 cc. of distilled water heat for 30 min. over water bath, replace water lost by evaporation, add 0.5 cc. of formalin. Filter Useful when India ink is not vailable.

Neisser' s. (*for demonstration of granules in diphtheria bacilli*) *Solution 1* 0.1 Gm. of methylene blue (90% dye content) 2 cc. of alcohol, 5 cc. of glacial acetic acid, and distilled water to make 100 cc. *Solution 2* 1.0 Gm. of crystal violet (85% dye content) 10 cc. of alcohol, and 300 cc of distilled water *Solution 3.* 1.0–2.0 Gm. of chrysoidin Y in 300 cc. of distilled water For use mix two parts of Solution 1 with one part of Solution 2 and counterstain with Solution 3.

neutral red (C.C.) A weakly basic, amino-azine dye, usually chloride; used as an indicator and in staining as vital stain and general histologic stain, 1% aqueous solution of neutral red (55% dye content) being employed. Also called *toluylene red.*

new fuchsin. A basic dye, similar in staining properties to basic fuchsin; triamino-tritolylmethane chloride.

Nil blue A (C C.) A basic oxazine dye, of value as biologic stain because of its property of staining fatty acids blue used as 0.5% alcoholic solution or 2% aqueous solution. Also called *Nile blue sulfate.*

Nissl's methylene blue. Methylene blue 3.75 parts, Venice soap 1.75 parts, distilled water 1000 parts. Used for the staining of Nissl substance in nerve cells.

Nocht Romanovsky s. This requires two solutions (a) Methylene blue 1.0 Gm sodium carbonate 0.5 Gm distilled water 100 Gm. Heat at 60° C for two days until solution shows slight purplish color (b) Eosin soluble, yellowish, 1.0 Gm., distilled water 100 cc. Mix few drops of each of these solutions with about 10 cc. of distilled water in an Esmarch dish; the smear which has previously been fixed in absolute methyl alcohol, is then floated on this mixture for about 30 minutes.

Nonidez chloral hydrate method (*for nerve tissue*) Method dependent on fixation 1–3 days in chloral hydrate, 25 Gm.; 50% alcohol, 100 cc. Reducer: pyrogallol, 2.5–3 0 Gm.; formalin, 5 cc. distilled water 100 cc.

Ogata nd Ogata s silver method (*for chromaffin cells*) *Technic* Treat fresh tissue for 1–2 hours in the dark in 1% dilution of 28% ammonia water (1 cc. and 99 cc.) Place blocks in Bielschowsky Maresch diammine silver solution, diluted with an equal volume of distilled water for 3–5 hours in the dark. Transfer to several changes of 1 100 dilution of ammonia water during 30 minutes.

the dark. Fix 1 hour in 2% sodium thiosulfate in the dark. Wash 1 hour in running water. Fix 1 2 days in 10% formalin. Cut frozen sections, float onto slides, dehydrate, clear and mount. See *Bielschowsky-Maresch diamine silver solution* under *Special Stains*

orange G (C.C.) An acid monoazo dye, widely used as counterstain with various nuclear stains. Also called *wool orange 2G*

orange II (C.C.) An acid monoazo dye used as histologic stain. Also called acid orange; *orange A, P or R; acid orange; orange extra; mandarin G; tropaeolin OOO No. 2.*

orcein (C.C.) A weakly acid dye obtained from certain lichens. It is violet in color and has metachromatic effects, which make it useful as biologic stain, staining nuclei blue, cytoplasm pink. Dissolve 2 Gm. of orcein in 2% acetic acid. Especially used for staining elastic fibers. See *Unna's orcein method* (for elastic tissue) under *Special Stains.*

osmic acid. Osmium tetroxide used in fixing fluids blackens many fatty inclusions in cells, and is used to stain the Golgi apparatus. It also stains degenerating myelin, as used in Marchi's method.

Pal's myelin s. Celloidin sections stained in combined Weigert lithium hematoxylin 6–48 hours at 15° 20° C. Wash in water and 2–3 drops of saturated aqueous Li_2CO_3. Differentiate in 0.25% $KMnO_4$ for 15–20 seconds followed by few seconds in Pal's bleach (0.5 Gm. of oxalic acid, 0.5 Gm. of potassium sulfite, 100 cc. of distilled water). Wash thoroughly. Counterstain in carmine optional. Dehydrate, clear and mount.

Pal-Weigert method (*for nerve tissue*). See *Weigert's method* under *Special Stains.*

panchrome s. (*for blood*) A modification by Pappenheim of the Giemsa stain, available as powder (Grübler)

Pappenheim's method (*for Mycobacterium tuberculosis*) Stain the fixed smear by steaming with carbolfuchsin (Ziehl-Neelsen). Pour off the dye, and without washing, apply Pappenheim solution 4–5 times. Wash, dry and mount.

Pappenheim's solution. Dissolve 1.0 Gm. of rosolic acid in 100 cc. of alcohol; add 1.2 Gm. of methylene blue and shake until dissolved. Add 20 cc. of glycerin, mix well, and filter

Pappenheim-Saathoff methyl green–pyronin s. Dissolve 1.0 Gm. of methyl green (65% dye content) in 5 cc. of 96% ethyl alcohol. Mix 20 cc. of glycerin with 100 cc. of distilled water and dissolve 0.25 Gm. of pyronin and 2.0 Gm. of phenol in the mixture. Mix the two solutions and filter. This solution is used as stain for chromatin, for granules in mast cells, for gonococci in smears of exudates, and for lymphocytes and plasma cells in tissue sections.

Penfield's method (*for glia*) Increase the volume of the silver solution in Hortega's silver method from 45–75 cc. with distilled water and take out sections after 20, 45, and 120 seconds in the silver. The rest of the technic is the same. Glia cells dark gray to black and background pale. See also *Hortega silver method* under *Special Stains.*

Perdrau's method (*for reticulum*) A modification of Bielschowsky's method.

peroxidase s. A stain used for distinguishing between leukocytes of myeloid origin and those of lymphatic origin. See Goodpasture's s., Sato and Sekiya's s. under *Special Stains.*

phloxine (C.C.) An acid dye of the xanthine series, used as counterstain with certain blue dyes of the thiazine series; usually 1%–5% solution in water or in 90% alcohol is employed. Also called erythrosin BB new pink.

phloxine–methylene blue s. (*Mallory's*) Deparaffinize sections of Zenker fixed material. Remove mercury and wash in water. Stain sections in 2.5% aqueous solution of phloxine or 5% aqueous solution of eosin overnight in the cold or for one hour at 55° C. Cool and then wash off in water. Take 5 cc. of 1% methylene blue in 1% borax, 5 cc. of 1% aqueous azure II, add 90 cc. of distilled water filter onto the sections, and pour the solution on and off several times. Differentiate in absolute alcohol, clear and mount. Nuclei and bacteria, blue; collagen, etc., bright rose. This method has modifications for celloidin sections or formol-fixed tissues.

phosphine. A mixture of nitrates of chrysaniline, used following methylene blue to stain bacterial nucleoproteins yellow. Also used as microchemical test for nucleoproteins.

phosphomolybdic acid hematoxylin. See *Mallory phosphomolybdic acid hematoxylin* under *Special Stains*

phosphotungstic acid hematoxylin. See *Mallory phosphotungstic acid hematoxylin* under *Special Stains.*

picrocarmine. A large number of solutions of carmine, picric acid, and an alkali are called picrocarmine. One formula is prepared as follows: Dissolve 1 Gm. of carmine in mixture of 5 cc. of ammonia and 50 cc. of distilled water; then add 50 cc. of saturated aqueous solution of picric acid. Expose the mixture to light and air for 3 days and filter

picro-indigo carmine. Three parts saturated indigo carmine in 70% alcohol and one part saturated picric acid, also in 70% alcohol.

picronigrosin (*for muscle*) After Bouin or alcohol fixation, stain sections in a saturated solution of nigrosin in saturated aqueous picric acid. Muscle is stained yellow connective tissue black.

pinacyanol. A basic quinoline dye of the cyanine group, used as supravital stain for mitochondria, and for the staining of frozen sections.

polychrome methylene blue. Methylene blue partially oxidized into its lower homologs, methylene violet and the azures, with an increase in metachromatic properties prepared by allowing methylene blue to age or by boiling methylene blue solution with alkali.

ponceau de xylidine. Probably the same as the dye sold in the United States as ponceau 2R or brilliant ponceau G. Used in Masson's trichrome stain.

Ponder Kinyoun s. (*for diphtheria bacilli*) Dissolve 100 mg. of toluidine blue (85% dye content) 10 mg. of azure A (90% dye content) and 10 mg. of methylene blue (90% dye content) in 5 cc. of alcohol; add 120 cc. of distilled water and 1 cc. of glacial acetic acid. Use after 24 hours. Stain the heat-fixed film for 2–7 minutes.

Proescher's oil red–pyridine (*for lipids*) Oil red O 3–5 Gm.; 70% pyridine, 100 cc. Let stand for 1 hr at room temperature, stirring occasionally. Keep in glass-stoppered bottle in the dark. Delafield's hematoxylin is used as counterstain.

protargol. A proprietary protein silver compound, used for staining nervous tissue. See *Bodian method* under *Special Stains.*

Prussian blue. $Fe_4[Fe(CN)_6]_3$. Ferric ferrocyanide. Used in injection media for demonstrating blood vessels.

purpurin (*for calcium deposits*). Schmorl stains material fixed in 80%–90% alcohol in saturated alcoholic purpurin, 5–10 minutes, washes 3–5 minutes in 0.75% aqueous NaCl, then in 70% alcohol until color clouds no longer appear.

pyridine-silver method (*for neurons, axis*

ders, and neurofibrils) See *Cajal' silver methods* under *Special Stains*.

pyronin (C C.) A basic triphenylmethane dye-stuff

pyronin B. Tetraethyldiamino-xanthine; used as histologi stain.

pyronin G or Y Tetramethyldiamino-xanthine used as stain in certain special procedures, as in the Pappenheim-Saathoff stain in combination with methyl green, and as supravital stain for the d ct system of the pancreas.

Ramón y Cajal's gold-sublimate method. See *Cajal' gold-sublimate method* under *Special Stains*.

Ranson s pyridine silver s. A modification of Cajal method for staining erve fibers, in which the tissue is treated with pyridine before being immersed in the silver nitrate solution.

Ranvier's gold chloride method. For modern modification of this staining method, see *Carey' method* under *Special Stains*.

Regaud' s. (*for mitochondria*) An iron hematoxylin method similar to Heidenhain s, after fixation of the tissue in Regaud' fluid, formalin potassium dichromate mixture.

resazurin (C C) A dye occurring in the form of dark red crystals with greenish luster; soluble in dilute alkali hydroxides. Also called *diazoresorcinol, resazoin*.

resorcin-fuchsin. See Weigert's resorcin-fuchsin s. under *Special Stains*.

Retterer's s. (*for muscle*) Stain sections of tissue which has been fixed in 80% alcohol 10 parts, formic acid 1 part, with alum carmine. Muscle bright red, all connective tissue unstained.

Romanovsky s. Polychrome methylene blue eosinates used for staining blood. The modifications include the Leishman, Giemsa, Wright, MacNeal, and Jenner stains.

rose bengal (C.C.) An acid dye, dichlor-tetraiodo or tetrachlor-tetraiodo fluorescein; used as bacterial stain.

safranin. A basic aniline dye of the azine group used as biologi stain.

safranin O (C C) A mixture of di-methyl and tri-methyl phenosafranins used as uclear stain, in making neutral stains, and as counter stain in the Gram techni Dissolve 0.25 Gm. of safranin O (90% dye content) in 10 cc. of alcohol and add 100 cc. of distilled water d mix. Also called *cotton red, gossypimine; safranin Y* or *A*

Sato and Shoji's s. (*for peroxidase granules*) Flood dry blood smears with solution A (0 5% copper sulfate) After one minute, without washing, pply solution B (saturated aqueous solution of benzidine to which hydrogen peroxide has been added) for 2 minutes. Wash, and stain with solution C (1% aqueous safranin sol tion) one minute. Wash and dry Peroxidase granules are colored blue in granular leukocytes and th ucle orange-red

Schaeffer-Fulton modification of Wirtz method (*for spores*) Stain the flame-fixed smear with 5% aqueous solution of malachite green for 30–60 seconds, heating to steam 3–4 times. Wash and stain with 0 5% aqueous solution of safranin for 30 seconds. Spores, green; remainder of the cells, red.

Scharlach R stain. A stain utilizing scarlet red solution with subsequent staining with hematoxylin Used to demonstrate f t in tissue sections. F t globules stain brilliant red, nuclei dark blue.

Schmorl's alizarin SX method (*for calcium*) Sections are deparaffinized and brought through 100% alcohol into saturated alcohol stain for 5–10 minutes. Al zarin SX solution should contain also 1% NaCl and trace of ammonia water Wash in 0.75% aqueous N Cl solution for 3–5 minutes. Wash thoroughly in 70% alcohol until no more color comes out of sections Dehydrate, clear and mount as usual.

Schmorl's method (*for bone sections*) A method employing carbol-thionine (Nicolle) and the-nine in alcohol-water

Schultz's sterol reaction method (*for cholesterol*) An pplication of the Liebermann-Burchardt cholesterol test. Mordant thin frozen sections of formalin-fixed tissue in closely stoppered bottle 3 days at 37° C. in 2.5% iron alum solution. Rinse in distilled ater float onto slides, and blot dry Treat with few drops of acetic sulfuric mixture (2–5 cc. of glacial acetic acid with an equal volume of concentrated H_2SO_4, mixture made while tube is in ice water) Place cover glass and examine at once Preparations may be kept few days if sealed with petrolatum At least 2 or 3 sections should be tested before considering test negative. Results blue-green color appears in few seconds, becoming stronger in the first few minutes and often turning to brown in ½ hr Positive controls, such as sections from tissue other sections of which had been treated previously, should always be used.

Shorr trichrome s. (*for vaginal epithelium*). In alcoholic solution of Biebrich scarlet (water soluble) orange G fast green FCF aniline blue (water soluble) phosphomolybdic acid, phosphotungstic acid, and glacial acetic acid. It differentiates between cornified (brilliant orange-red) and noncornified (blue-green) cells.

Shunk s s. (*for flagella*) Smears are mordanted with special reagent composed of two solutions—(*Solution A*, tannic acid, saturated aqueous solution, 3 parts ferric chloride, 5% aqueous solution, 1 part *Solution B* aniline, 1 part 95% alcohol, 4 parts)—and stained with Loeffler' methylene blue solution (30 cc. mixed with 3 cc. of solution B of mordant) carbolfuchsin, 1% safranin in 80% alcohol, or aniline gentian violet may be used.

silver method (*for Treponema pallidum*) A method for staining spirochetes, based upon the principle of the precipitation of metallic silver from silver nitrate solution onto the body of the organisms, causing them to appear black.

silver nitrat method (*for calcium deposits*) Lillie treats formalin-fixed tissue 4–5 days 2 0–2.5% $AgNO_3$ solution, decalcifies in Ebner's fluid Sections are variously counterstained. See also *Von Kóssa* $AgNO_3$ *method* under Special Stains.

Smith-Dietrich s. (*for lipoids*) Staining in Kultschitzky hematoxylin after mordanting potassium dichromate. Lipoid droplets are stained dark blue.

Spielmeyer's myelin s. Used on formol-fixed tissues. Frozen sections taken into 2–5% iron alum 6 minutes followed by Spielmeyer's hematoxylin (4 cc of 5% alcohol hematoxylin and 36 cc. of distilled water) staining 10–24 hours at 20° C. Rinse. Differentiate in 2 5% iron alum under microscopic observation. Wash in two changes of distilled water and 1 2 hours in tap water Dehydrate, clear and mount.

Stirling's aniline-gentian violet solution. Mix 2 cc. of aniline with 10 cc. of alcohol, and dissolve 5 Gm. of crystal violet (88% dye content) in the mixture add 88 cc. of distilled water mix well, let stand for at least 24 hours, and filter

Stovall and Black s. (*for Negri bodies in sections*) (A) 1% ethyl eosin (C.C.) in 95% ethyl alcohol adjusted to pH 3 0 with N/10 HCl. If ethyl eosin fails to stain Negri bodies, add about 1 acetic acid. (B) Dissolve 0 3 Gm. of methylene blue (C.C.) in 30 cc. of 95% ethyl alcohol, mix

with 100 cc. of distilled water. Adjust to pH 5.5 by adding 2 cc. of acetate-acetic acid buffer to 60 cc. of fluid. Differentiation must be in water acidulated by adding 15 drops of acetic acid to 60 cc. of distilled water.

Sudan. $C_{16}H_{12}N_2O$. A diazo compound from alpha-naphthylamine with naphthol; a brown powder used as a stain; soluble in alcohol, ether, fats, and oils. Also called *pigment brown*.

Sudan black. A valuable stain for fat.

Sudan R. A stain suggested for use in the Kahn reaction for syphilis. Also called *oil vermilion*.

Sudan II. An acid monoazo dye; used to stain fat in sections.

Sudan III (C.C.). A weakly acid, diazo, fat-soluble dye which colors fat orange. Use a saturated solution in 70% alcohol for staining. (Herxheimer: Sudan III, equal parts of 70% alcohol and acetone saturated with Sudan III.) Also called *Sudan G; Tony red; scarlet G* or *B; fat ponceau G; oil red; cerasin red*.

Sudan IV (C.C.). A weakly acid diazo dye, a dimethyl derivative of Sudan III. May be used as a stain by dissolving an excess in equal parts of 70% alcohol and acetone or as a saturated solution in 70% alcohol alone. Also called *Scharlach R, oil red IV, scarlet red, ponceau 3B, fat ponceau*.

tetrachrome s. (MacNeal's) (C.C.) (*for blood*). A solution containing eosin, methylene blue, methylene violet, and methylene azure A in methyl alcohol; employed like Wright's stain.

thiazine red R. An acid monoazo dye used especially as a counterstain after iron hematoxylin.

thionine (C.C.). A basic thiazine dye, highly metachromatic, the uses and technic of which are the same as for methylene blue; use a 0.5% solution in 20% alcohol. Also called *Lauth's violet*.

thionine "end point" staining (*for chromophilic substance of nerve cells*). (A) *Stock dye solution*: thionine (C.C.) 1 Gm.; distilled water 100 cc. (B) *Buffer acid component*: glacial acetic acid (99%–100%) 6 cc.; distilled water to make 1000 cc. (C) *Buffer base component*: $NaC_2H_3O_2.3H_2O$ crystals, 13.6 Gm.; distilled water to make 1000 cc. (D) *Staining solution*: Mix 90 cc. of solution B with 10 cc. of solution C and add 2.5 cc. of solution A, getting pH ca. 3.7. (E) *Staining solution*: Mix 60 cc. of solution B with 40 cc. of solution C and add 2.5 cc. of solution A, getting pH ca. 4.5.

Tirmann-Schmelzer method (*for tissue iron*). This method is based on the formation of ferrous ferricyanide from the ferrous sulfide by treatment with ferricyanide and acid. Impregnate sections for 1 hours (may be as long as 1–3 days) in strong, slightly yellow ammonium sulfide solution. Wash thoroughly in distilled water. Soak 15 minutes in equal volumes of 1% hydrochloric acid and 20% potassium ferricyanide, freshly mixed. Wash thoroughly in distilled water. Counterstain in 0.5% basic fuchsin in 50% alcohol for 5–20 minutes. Wash in water. Differentiate in alcohol. Dehydrate with alcohol, clear, and mount.

toluidine blue O (C.C.). A basic dye of the thiazine series used in Albert's stain for the diphtheria organism, in the panchrome stain of Pappenheim, and for many other purposes. Also called *methylene blue O*. Also see under *toluidine*.

trypan blue. An acid disazo dye of the benzopurpurin series used in vital staining, and also as a trypanocide.

tubercle bacilli, staining of. The smear is stained with hot carbolfuchsin for 1–2 minutes, then rinsed with water, then decolorized with 10% aqueous solution of sodium sulfite for 30–60 seconds, then rinsed with water, then counterstained with malachite green (50 cc. of saturated aqueous solution of malachite green in 100 cc. of distilled water) for 15–30 seconds; the tubercle bacilli appear as dark red rods on a green background. Also see *carbolfuchsin solution* (for tubercle bacilli) under *Special Stains*.

Turnbull's blue. $Fe_3[Fe(CN)_6]_2$. Ferrous ferricyanide.

universal s. (Kitrowsky's). A mixture of the Giemsa and May-Grünwald stains in 1% aqueous solution of sodium carbonate.

Unna's alkaline polychrome methylene blue. A 0.5% methylene blue solution in distilled water plus 0.5 Gm. of potassium carbonate per 100 cc.

Unna's orcein method (*for elastic tissue*). Stain sections in orcein 1 Gm., absolute alcohol 100 cc., and hydrochloric acid 1 cc. for several hours. Wash in 70% alcohol and destain in 95% alcohol plus a trace of hydrochloric acid to sharpen the brown coloration. Wash in 95% alcohol, dehydrate, clear and mount. Methylene blue may be used as counterstain.

Unna's orcein method (*for muscle*). A modification of the stain for elastic tissue may be used. After sublimate fixation, stain sections for 24 hours in aniline blue 0.25 Gm., absolute alcohol 60 cc., orcein 1 Gm., glycerin 10 cc., water 30 cc.; wash in 70% alcohol, dehydrate, clear and mount. Muscle purple, elastic connective tissue red, collagenous tissue blue.

Van Gieson's s. (*for connective tissue*). Saturated aqueous solution of picric acid 100 cc., with 5 cc. of a 1% solution of acid fuchsin. Used after hematoxylin.

Verhoeff's s. (*for elastic tissue*). 1 Gm. of hematoxylin crystals, 20 cc. of absolute alcohol, 8 cc. of 10% aqueous solution of ferric chloride, and 8 cc. of Lugol's solution. Eosin may be used as counterstain. Elastic fibers are stained black, while collagenous fibers, myelin, fibrin, myoglia fibrils, and neuroglia fibrils take the eosin stain.

Victoria blue. A basic triphenylmethane dye used for staining viruses.

vital red. An acid disazo dye frequently used in the determination of plasma and blood volumes. Also called *acid Congo R, azidine scarlet R, brilliant Congo R, brilliant dianil red D, brilliant vital red*.

Von Kóssa's $AgNO_3$ method (*for demonstration of calcification*). Remove sections from water and immerse in 5% $AgNO_3$ for 5 minutes exposed to bright daylight. Wash well in distilled water. Treat for 2–3 minutes in 5% aqueous sodium thiosulfate solution. Wash in water. Counterstain 30–60 seconds in 0.5%–1.0% aqueous safranin O (C.I. No. 841). Differentiate and dehydrate in 95% and 100% alcohol. Clear with 100% alcohol and xylene and two changes of xylene. Mount.

Weigert's iron hematoxylin with safranin. The standard Weigert iron hematoxylin method with basophil granules counterstained by 0.5% aqueous safranin O (C.C.).

Weigert's method (*for myelin sheaths*). Used on formol-fixed tissues of the central nervous system to show the arrangement of the gray and white matter and to demonstrate the fiber tracts. Four special solutions are required: a primary mordant (Weigert's rapid mordant), secondary mordant (copper mordant, Weigert's neuroglia mordant), hematoxylin stain, and a differentiating fluid. There are several variants.

Weigert's resorcin-fuchsin s. (*for elastic fibers*). Boil 200 cc. of distilled water with 2 Gm. of basic fuchsin and 4 Gm. of resorcin in an enamel dish, and while boiling add 25 cc. of 29% aqueous ferric chloride. Collect the precipitate, and, after drying, dissolve in 95% alcohol (200 cc.) and add 4 cc. of hydrochloric acid.

Weil and Davenport's modified Stern method (*for brain*) See *Bielschowsky silver methods*, under *Special Stains*.

Weil-Davenport method (*for gliomas*) (A) *Stain* Dissolve 8 Gm. of $AgNO_3$ (Merck' reagent) in 10 cc. f distilled water add 90 cc. of 95% alcohol. (B) *Reducer* Dissolve 5 Gm. of pyrogallic acid in 95 cc. of 95% alcohol, add 5 cc. of commercial formalin. Dilute with alcohol to control intensity of staining. Control settling of precipitate with solution of 3 vols. of distilled water to 1 vol. of commercial corn syrup, applied t the rate of 1 cc. of corn solution to 100 cc. of reducer

Weil' rapid method (*for myelin sheaths*) An iron hematoxylin method with original methods of destaining.

Wolters' myelin s. Used on formol-fixed tissue. Stain celloidin sections 24 hours in warm Wolters hematoxylin (2 Gm. f hematoxylin dissolved in 10–20 cc. of alcohol, 2 cc. of glacial aceti acid, diluted to 100 cc. with distilled water) Wash for a few seconds in Müller fluid. Differentiate and mount according to Pal variation of myelin stain. See Müller *fixing fluid*.

Wright myelin s. Used on formol-fixed tissues. Take frozen sections into 10% FeCl for 5 minutes followed by Wright's hematoxylin (a few crystals in 15 cc. of distilled water) staining 30 minutes at 20° C. Rinse and differentiat in 10% FeCl briefly Wash thoroughly Dehydrate, clear and mount.

Wright's s. (C C) (*for blood*) Wright stain powder (methylene blue, polychromated with sodium bicarbonate and heat, to which eosin is added) 0.3 Gm., 100 cc. of absolute methyl alcohol (aceton free) Filter; let filtrate stand. Cover the dried film of blood for one minute. Add distilled water or buffered water (pH 6.4–7 0) for 4–10 minutes, the time for staining varying with different batches of stain. Wash with distilled water and dry The nuclei of the leukocytes should stain dark purple, the eosinophilic granules bright red, and the erythrocytes an orange or buff

Ziehl-Neelsen s. (*for Mycobacterium tuberculosis*) See *carbolfuchsin solution* under *Special Stains*.

stair'case phe-nom e-non. See under *phenomenon*.

stal'ag mom e-ter [G *stalagmos*, dropping *metron*, measure]. An instrument for measuring the size of drops, or the number of drops in given volume of liquid. It is used to measure the surface tension of liquids.

sta'li g [ME. *stalen*]. Urination in farm animals.

stalk [ME. *stalke*]. Any lengthened support to an organ.

allantois s. The narrow proximal part of the allantois vesicle. Syn., *allantoic duct*.

uditory s. The temporary epithelial connection between auditory vesicle and superficial ectoderm. Syn *placodal s.*

body s. The extraembryonic mesoderm connecting the chorion and the caudal region of the amnioembryonic vesicle. It forms path for the allantoic blood vessels and the connective tissue of the future umbilical cord.

cerebellar s. One of the peduncles of the cerebellum.

Meckel' s. The yolk stalk or vitelline duct.

optic s. The narrow median part of the optic vesicle and cup which forms pathway for the developing optic nerve.

placodal s. See uditory *s.*

s. of the neurohypophysis. That part of the neurohypophysis between the pars nervosa and the median eminence of the tuber cinereum, transmitting fibers of the hypothalamo-hypophyseal tract and supplied with clusters of capillaries also called *infundibulum*, *infundibular stem*.

yolk s. The narrow ductlike part of the yolk sac uniting it to the midgut. Syn *Meckel'* *vitelline duct*.

sta men [L., thread]. The male organ of the flower, consisting of stalk or filament and an anther containing pollen.

stam'i na [L., plural of *stamen*] Natural strength of constitution vigor inherent force.

Stamm Martin [*American surgeon*, 1847-1925] Devised an operation for gastrostomy in which he withdrew cone of gastric wall through his rectus muscle incision, perforating the apex of the cone, and introducing rubber catheter by inverting the stomach wall. Several concentric purse string sutures were applied for retention purposes

stam mer ing [AS. *stamerian*]. Interrupted or hesitating speech. Syn., *anarthria*, *balbuties*, *psellism*. —**stammer** *v.*, **stammerer** *n.*

urinary s. See stammering bladder

stamp er [ME. *stampen*] Colloquial term for one affected with tabes dorsalis, from the stamping gait incident to it.

stamyl. Trade-mark for a pancreatic extract containing trypsin, amylopsin, and steapsin with hemicellulase and ox gall. The preparation is used in intestinal indigestion due to insufficiency of pancreas secretion, in chronic gastroenteritis, and in fermentative and putrefactive dyspepsia.

sta d'ard [OF *estandart*]. 1. An established form of quality or quantity 2. A substance of known strength used for determining the strength of an unknown by comparison.

albumin standards. See under F Kingsbury

Harris and Benedict standards. Multiple prediction equ tions and tables based on statistical study of the vailable data for the basal metabolism of normal men and women.

reference standards. Substances of defined purity used for comparison in conducting certain assays of the United States Pharmacopeia National Formulary

stand' rd con di'tions. In gas analysis, an atmospheric pressure of 760 mm., and temperature of 0° C., at latitude 45° It is sometimes bbreviated S.T.P (= standard temperature and pressure)

stand'ard de vi-a'tion. Sigma (σ). The square root of the arithmetic verage of the squares of the differences of each observation in series from the mean of the series. The most commonly used measure of variation. Also called *the root-mean squared deviation from the mean*.

stand'ard er'ror A measure of the variability which any statistical constant would be expected to show in taking repeated random samples of given size from the same universe of observations.

stand"ard i za'tion [*standard*] The procedure necessary to bring a preparation to an established or known quality as the adjustment of standard solution in volumetric analysis.

biological s. The standardization of drugs or biological products, which cannot be chemically analyzed, by their pharmacologic action on animals. Also called *physiologic standardization*, *biological assaying*.

sta d'ard ized death rate. I *biometry*, the number of deaths per 1000 which would have occurred in some standard population with known age-specifi death rate. The rate may be standardized for race, sex, or other variables with known death rates.

stand'ard mil'lion. A population of one million divided into age groups in the same proportion as found in designated population, as the ...

distribution of England and Wales in 1901 or the age distribution of the United States as shown in the census of 1940. Used in calculating standardized death rates.

stand'still [AS. *standan*, *stille*]. A state of quiescence dependent upon suspended action.

atrial s. Complete sinoatrial block; atrial paralysis. Also called *auricular s.*

cardiac s. Cessation or suspension of heartbeats.

expiratory s. Suspension of action at the end of expiration.

inspiratory s. A halt in the respiratory cycle at the end of inspiration when the lungs are filled with air. The condition can be produced by stimulating the central end of the cut vagus.

respiratory s. Suspended respiration.

Stanford achievement test. See under *test*.

Stanford revision of Binet-Simon test. See under *test*.

Stanford scientific aptitude test. See under *test*.

Stanford-Binet test. See under *test*.

Stanley, Wendell Meredith [American biochemist, 1904–]. Isolated tobacco mosaic virus in crystalline form (1935) and found it to be a nucleoprotein. Subsequently he isolated other viruses in purified form, demonstrated that virus strains can exist in the form of similar yet different nucleoproteins, prepared centrifuge-type influenza vaccine, and laid the foundation for studies of the chemistry of viruses. Nobel laureate in chemistry with J. H. Northrop (1946).

stan'nate. A salt of stannic acid.

stan'nic [L. *stannum*, tin]. Pertaining to stannum, or tin; containing tin in the tetravalent state.

stan'nic ac'ids. A series of acids which vary in composition from H_2SnO_3 to H_2SnO.

stan'nic oxide. SnO_2. Its inhalation for long periods may produce benign, symptomless pneumonoconiosis.

Stannius, Hermann Friedrich [German physiologist, 1808–83]. A constriction placed between the sinus venosus and the atrium in the frog is called *Stannius' first ligature*. A constriction tied around the atrioventricular groove is called *Stannius' second ligature*. Using these ligatures, he demonstrated that the muscle tissues of the atria and ventricles have independent, spontaneous rhythm, called *Stannius' experiment*. His work suggests the role of the sinus venosus as pacemaker of the heart.

stan'nous [L. *stannum*, tin]. Containing tin as a bivalent element.

Stannoxyl. Trade-mark for a preparation containing metallic tin and oxide of tin.

stan'num. See *tin*.

sta"pe·dec'to·my [LL. *stapes*, stirrup; G. *ektomē*, excision]. Resection of the stapes.

sta'pe·des (stay'pi·deez). Plural of stapes.

sta·pe'di·al [stapes]. 1. Shaped like a stirrup. 2. Relating to the stapes.

sta·pe"di·o·te·not'o·my [stapes; G. *tenōn*, tendon; *tomē*, cutting]. Cutting of the tendon of the stapedius muscle.

sta·pe"di·o·ves·tib'u·lar [stapes; L. *vestibulum*, entrance-court]. Relating to the stapes and the vestibule.

sta·pe'di·us [stapes]. A muscle in the middle ear inserted into the stapes. See Table of Muscles in the Appendix.

sta'pes (stay'peez) (pl. *stapedes*) [LL.]. The stirrup-shaped bone of the middle ear, articulating with the incus and the fenestra ovalis. It is composed of the head, the crura or legs, and the foot plate. See Table of Bones in the Appendix. See Plate 20.

staph"is·a·gri'a (staf"iss·ay'gree·uh, ·ag'ree·uh) [G. *staphis agria*, stavesacre]. The ripe seed of *Delphinium staphisagria*. It contains the alkaloids delphinine and its isomer delphisine, delphinoidine, and staphisagroine. It is used for the destruction of lice in the hair. Also called *stavesacre*.

staph"y·la·gra'ma, staph"y·la'gra (staf"i·lay'gruh, ·lag'ruh, sta·fil'uh·gruh) [G. *staphylagra*, forceps for taking hold of the uvula]. An instrument formerly used to hold the uvula during amputation of that body.

staph'y·le (staf'i·lee) [G. *staphylē*, bunch of grapes, uvula]. Old term for the uvula.

staph"y·lec'to·my [*staphylē*; G. *ektomē*, excision]. Operation for removal of the uvula.

staph"yl·e·de'ma [*staphylē*; G. *oidēma*, swelling]. Edema of the uvula; any enlargement of the uvula.

staph"y·le'us [*staphylē*]. Pertaining to the uvula.

staph"yl·he·ma·to'ma, staph"yl·hae·ma·to'ma (staf"il·hee·muh·to'muh, ·hem·uh·to'muh) [*staphylē*; G. *haima*, blood; *-ōma*, tumor]. An extravasation of blood into the uvula.

staph'y·line (staf'i·lyne, ·leen) [*staphylē*]. Pertaining to the uvula or to the entire palate.

staph"y·li"no·pha·ryn·ge'us (staf"i·lye"no·fa·rin'jee·us) [*staphylē*; G. *pharynx*, pharynx]. Old term for the pharyngopalatinus muscle.

staph·y·li'nus [*staphylē*]. Old term for palatal.

s. externus. O.T. The tensor veli palatini muscle.

s. internus. O.T. The levator veli palatini muscle.

s. medius. O.T. The uvular muscle.

sta·phyl'i·on [G., dim. from *staphylē*]. The point where the straight line, that is drawn tangent to the two curved posterior borders of the horizontal plates of the palatine bones, intersects the interpalatine suture.

staph"y·li'tis [*staphylē*; G. *-itis*, inflammation]. Inflammation of the uvula.

staph'y·lo-, staphyl- [*staphylē*]. A combining form denoting relating to the uvula.

staph"y·lo·coc'cal [*staphylē*; G. *kokkos*, berry]. Pertaining to, or caused by, staphylococci.

staph"y·lo·coc·ce'mi·a, staph"y·lo·coc·cae'mi·a (staf"i·lo·cock·see'mee·uh) [*staphylē*; *kokkos*; G. *haima*, blood]. A morbid condition due to the presence of staphylococci (*Micrococcus pyogenes*) in the blood.

staph"y·lo·coc'cic (staf"i·lo·cock'sick) [*staphylē*; *kokkos*]. Pertaining to, or caused by, staphylococci.

Staph"y·lo·coc'cus [*staphylē*; *kokkos*]. A genus of cocci officially classified with *Micrococcus* by American bacteriologists.

S. albus. *Micrococcus pyogenes* var. *albus*.

S. aureus. *Micrococcus pyogenes* var. *aureus*.

S. citreus. *Micrococcus citreus*.

staph"y·lo·coc'cus (pl. *staphylococci*) [*staphylē*; *kokkos*]. Any coccus of the genus *Micrococcus* (*Staphylococcus*).

s. antitoxin. An antitoxin prepared by immunizing horses with staphylococcus toxoid and/or staphylococcus toxin. Its use is suggested in the treatment of acute and severe staphylococcic infections with or without septicemia. The antitoxin should be supplemented with normal or immune donors in the more severe infections. Dose: localized infections, 10,000 units; more severe infections, 20,000 to 100,000 units in divided doses during first day followed by 20,000 to 100,000 units daily.

s. toxin. See *staphylotoxin*.

s. toxoid. Univalent or polyvalent, potently hemolytic and dermonecrotic toxins of *Staphylococcus aureus* and *albus* altered by the formaldehyde-detoxifying process of Burnet (modified from Ramon). Antigenicity is maintained but toxicity is greatly diminished. Used in the prophylaxis and therapy of various staphylococcic

pyodermas and localized pyogenic processes due to *S. aureus* and *albus*. Dose, 0.1 cc. injected subcutaneously at the insertion of the deltoid. Subsequent doses, at weekly intervals, of 0.1 to 0.2 cc.

staph″y·lo·co·sis [*staphylē*; G. *-ōsis*, condition]. Infection by staphylococci. *Obs.*

staph″y·lo·der″ma·ti′tis [*staphylē*; G. *derma*, skin; *-itis*, inflammation]. Dermatitis due to staphylococci (*Micrococcus pyogenes*).

staph″y·lo·di·al′y·sis (staf″i·lo·dye·al′·sis) [*staphylē*; G. *dialysis*, separation]. Relaxation of the uvula. *Obs.*

staph″y·lo·e·de′ma [*staphylē*; G. *oidēma*, swelling]. Edema of the uvula. *Obs.*

staph″y·lo·ki′nase. A factor isolated from strains of *Micrococcus pyogenes* (staphylococci) which can convert plasminogen to plasmin.

staph″y·lol′y·sin (staf″i·lol′i·sin, staf″i·l·lye′sin) [*staphylē*; G. *lysis*, loosing]. A hemolysin produced by staphylococci (*Micrococcus pyogenes*).

staph″y·lo′ma [G.]. A bulging of the cornea or sclera of the eye. —**staphylomat′ic, staphylom′atous,** *adj.*

anterior s. See *keratoglobus*.

ciliary s. One in the region of the ciliary body.

equatorial s. Staphyloma of the sclera in the equatorial region.

intercalary s. One developing in that region of the sclera which is united with the periphery of the iris. See *buphthalmia*.

posterior s. A backward bulging of the sclerotic coat at the posterior pole of the eye.

s. corneae. A bulging of the cornea due to thinning of the membrane with or without previous ulceration.

s. uveale. Thickening of the iris. Syn., *iridoncosis*.

staph″y·lon′cus [G. *staphylē*, bunch of grapes, uvula; *onkos*, mass]. Swelling of the uvula. *Obs.*

staph″y·lo·pha·ryn′ge·us (staf″i·lo·fa·rin′jee·us, ·far·in·jee′us) [*staphylē*; G. *pharynx*, pharynx]. Old term for the palatopharyngeus muscle.

staph″y·lo·pha·ryn″go·rha′phy [*staphylē*; *pharynx*; G. *rhaphē*, suture]. A plastic operation on the palate and pharynx, as for repair of cleft palate.

staph″y·lo·plas″ty [*staphylē*; G. *plassein*, to form]. A plastic operation on the soft palate or uvula.

staph″y·lop·to′sis [*staphylē*; G. *ptōsis*, a falling]. Abnormal elongation of the uvula.

staph″y·lor′rha·phy [*staphylē*; G. *rhaphē*, suture]. Repair of a cleft palate by plastic operation and suture.

staph″y·los·chi′sis (staf″i·los′ki·sis) [*staphylē*; G. *schisis*, cleavage]. Cleft uvula, or cleft soft palate.

staph′y·lo·tome″ [*staphylē*; G. *tomos*, cutting]. A cutting instrument used in staphylotomy.

staph″y·lot′o·my [*staphylē*; G. *tomē*, a cutting]. 1. The operation of incising the uvula. 2. *In ophthalmology*, the operation of incising a staphyloma.

staph″y·lo·tox′in [*staphylē*; G. *toxikon*, poison]. One of the toxins elaborated by the Staphylococci. Hemolysin, leukocidin, coagulase, fibrinolysin, necrotizing enterotoxin, and lethal exotoxin are some of the toxins which have been identified.

staph″yl″y·gro′ma. See *staphyloedema*.

star. *In biology*, any of various radiate structures, granules, cells, groups of cells, or organisms.

fibrin s. See fibrin *aster*.

lens s. The starlike arrangement of the lens sutures, having three to nine rays, produced by the growth of the lens fibers.

Winslow's stars. Capillary whorls which form the beginning of the vorticose veins of the choroid.

star an′ise. See *Illicium*.

star′blind″ [*starra*; AS. *blind*]. Half blind; blinking.

starch [AS. *stercan*, to stiffen]. 1. Any one of a group of carbohydrates or polysaccharides occurring as organized or structural granules of varying size and markings in many plant cells. Starch is especially abundant in the cereals (as barley, corn, oats, rice, rye, and wheat), in the legumes (as peas and beans), in seeds (as acorns, chestnuts, and other nuts), in many rhizomes or roots (as arrowroot, potatoes, and yams), and in some stems. The ordinary starch occurs as a white, soft, amorphous powder or as irregular angular masses. It is insoluble in cold water and alcohol. It hydrolyzes to several forms of dextrin and glucose. Its chemical structure is not completely known, but the granules consist of at least two fractions: an inner portion called amylose or granulose, relatively soluble in water, and an outer portion called amylopectin, which is practically insoluble in water. Iodine produces a characteristic blue coloration with starch. The mechanism of this reaction is not clearly understood. 2. (*amylum*) Consists of the granules separated from the grain of *Zea mays*; occurs as irregular angular white masses or as a fine powder, insoluble in cold water and alcohol. Powdered and dusted upon the skin, it is of value to absorb irritant or excessive secretions. Also used as a diluent in pastes and ointments, and in the preparation of powdered extracts. Has many technical applications in industry. Also called *cornstarch*.

animal s. Glycogen.

soluble s. Starch transformed into water-soluble dextrins by heating to about 200° C.

s. glycerite (*glyceritum amyli*). Contains starch 10 Gm., benzoic acid 0.2 Gm., distilled water 20 cc., glycerin 70 cc. to make about 100 Gm.; occurs as a translucent, jellylike mass. Used directly as an emollient, or as a vehicle for other substances to be employed locally.

s. syrup. A commercial product obtained by the acid hydrolysis of starch, and containing dextrins, maltose, and dextrose, and variously designated commercial glucose, glucose syrup, and corn syrup.

starch su′gar. See *dextrose*.

star grass. Aletris, the dried rhizomes of *Aletris farinosa*, has been used as a tonic. Also called *starwort, bitter grass, blazing star*.

Starling, Ernest Henry [English physiologist, 1866–1927]. Expressed the fundamental principle of cardiac behavior: that the energy set free at each contraction is a simple function of cardiac filling, called *Starling's law of the heart*. With W. M. Bayliss, demonstrated that secretin stimulates pancreatic secretion (1902). With E. B. Verney, demonstrated the reabsorption of water by the tubules of the kidney (1924).

start′er [ME. *sterten*]. A pure culture of bacteria employed to start a particular fermentation, as in ripening of cream.

star·va′tion [ME. *sterven*, to die]. 1. Deprivation of food. 2. The state produced by deprivation of food. —**starve,** *v.*

Stas, Jean Servais [Belgian chemist, 1813–91]. Introduced a method of extracting alkaloids using successively alcohol, water, and other compounds. Called *Stas-Otto method*.

sta″si·ba″si·pho′bi·a (stas″i·bas″i·fo′bee·uh) [G. *stasis*, standing; *basis*, stepping; *phobos*, fear]. A morbid fear of walking or of standing.

sta″si·pho′bi·a (stas″i·fo′bee·uh, stay″si·) [*stasis*; *phobos*]. A morbid fear of standing upright.

sta′sis [G.]. In blood vessels, complete cessation of the blood flow. The vessels are dilated and completely filled with a mass of red blood corpuscles. There is no transudation of fluid through the capillary walls and no diapedesis of erythrocytes.

biliary s. Stasis of the bile in the bile ducts and capillaries.
diffusion s. Stasis in which there occurs diffusion of serum or lymph.
duodenal s. Stasis of the duodenal contents.
intestinal s. An undue delay in the passage of fecal matter along the intestines.
pressure s. The discoloration of the head and neck when the upper torso undergoes sudden and severe compression.
venous s. Stasis due to venous congestion.

state [L. status, standing]. A condition.
anxiety s. See anxiety reaction.
catalepsoid s. A condition due to neuromuscular excitability and differing from true catalepsy in that the limbs must be held in fixed attitudes for few seconds before they maintain themselves and then fatigue causes them to become limp.
central excitatory s. The state of supernormal excitability of a motoneuron, corresponding to the negative afterpotential, produced by stimuli each of which alone is incapable of exciting the motoneuron. Abbreviated c.e.s.
central inhibitory s. The state of subnormal excitability of neuron, corresponding to the positive afterpotential, produced by one or more stimuli. Abbreviated i.s.
convulsive s. See status convulsivus.
depressive states. Certain mental disorders characterized by extreme depression. See also depressive reaction.
dream s. A state of disturbed consciousness of psychogenic origin in which the patient perceives his environment inadequately or may be wholly disoriented. Auditory and visual hallucinations are common. Dream states usually last few minutes to few days, and on regaining full consciousness the patient may feel he has dreamed and remember little. It is associated often with hysterical dissociative reactions and epilepsy. Syn. twilight s.
fatigue s. See neurasthenia.
hypnoidal s. The state between sleeping and waking.
metastable s. An excited state of an atomic system such that its energy of excitation cannot be radiated as electromagnetic energy.
moment s. The active state.
resting s. In biology, state of suspended activity; the condition of perennial plants (bulbs, seeds) and spores during their period of dormancy.
steady s. In muscular exercise. The condition in which the rate of oxygen consumption and the rate of energy release are metabolically equal.
twilight s. See dream s.
typhoid s. A condition of stupor and hebetude, with dry brown tongue, sordes on the teeth, rapid, feeble pulse, incontinence of feces and urine, and rapid wasting, seen in typhoid fever and other continued fevers.

state ment [ment]. A declaration.
ante-mortem s. A declaration made immediately before death, which, if made with the consciousness of impending death, is legally held as binding as statement sworn to.

stat'ic [G. statikos, causing to stand]. At rest. In equilibrium. Pertaining to the laws of statics.
s. breeze. A method of administration of static electricity consisting in the withdrawal of static charge from patient by means of a pointed electrode.
tatiskin. A trade-mark applied to carbamide.

stat'ics [statikos]. That science which deals with bodies at rest or at equilibrium relative to some given state of reference.

stat"i-den-sig'ra-phy. Measurement of the quantity of roentgen rays passing through subject onto radioscopic screen provided with photoelectric cells; used to determine the local density of the lung.

sta'tim, sta'tim [L.]. Immediately; at once.

sta'tion [L. statio, from stare, to stand]. 1. Standing position or attitude. 2. A place where first aid or treatment is given, as dressing station, rest station.
aid s. In U. S. Army medicine, medical treatment facility where emergency treatment, sorting, classification, and evacuation of sick and wounded to the next higher echelon in the chain of evacuation are accomplished.
clearing s. In U. S. Army medicine, medical installation which receives casualties from collecting stations and gives additional treatment to, classifies, and makes further disposition of those patients.
collecting s. In U. S. Army medicine, medical station in the forward combat zone where casualties are treated, sorted, returned to duty if fit, or prepared for evacuation to clearing station in the rear.
NP treatment s. In U. S. Army medicine, field army medical treatment facility normally located in the forward part of the field army service area, serving as principal focal point for the reception of NP (neuropsychiatric) casualties from the division, from corps, and from field army units and installations. Usually all NP casualties pass through one of these stations prior to evacuation from the field army area.
personnel decontamination s. In military medicine, an installation intended for decontamination of personnel, located as far forward as the tactical situation permits, near medical aid station and where water for bathing is available.

sta'tion hos'pi tal. See under hospital.

sta tis'ti-cal con'stant. A value such as the arithmetic mean, the standard error or any other measure which characterizes particular series of quantitative observations. Used as an estimate of the corresponding value for the universe from which the observations were chosen.

sta tis'tics [NL. statisticus]. A numerical collection of facts relating to any subject.
medical s. That part of statistics relating to facts and data concerning human disease.
vital s. A term usually limited to data concerning births, marriages, and deaths; branch of biostatistics.

stat"o-ki net'ic (stat o-ki-net'ick, high-net'ick) [G. statos, standing; kinētikos, of motion]. Pertaining to the position of the body or its parts during movement, as in locomotion.

stat o-lith. Otolith.

sta tom'e-ter [statos; G. metron, measure]. An instrument for measuring the degree of exophthalmos.

stat'ure [L. statura, stature]. The height of any animal when standing. In quadrupeds, it is measured at point over the shoulders. In man, it is the measured distance from the sole to the top of the head.

sta'tus [L.]. A state or condition; often, severe or intractable condition.
s. anginosus. A severe or prolonged attack of angina pectoris, due to extreme coronary insufficiency with or without thrombosis of coronary artery.
s. arthriticus. The nervous manifestations preceding an attack of gout.
s. asthmaticus. Intractable asthma characterized by extreme dyspnea, cyanosis, and exhaus-

tion, lasting from few days to week or longer sometimes fatal.

s. catarrhalis. A condition characterized by succession of inflammatory processes of mucosa.

s. convulsivus. A transient state of uncontrollable motor activity focal or generalized, alternating with rigidity or atonia; it may be associated with diminution or loss of consciousness.

s. cribrosus. A scarcely macroscopic sievelike condition of the brain or nerve substance, due to dilatation of perivascular spaces probably post mortem effect.

s. dysmyelinicus. See Hallervorden-Spatz *syndrome*

s. dysmyelinisatus of Vogt. A syndrome of cerebral degeneration, similar to the Haller vorden-Spatz syndrome but differing from t by not being heredofamilial condition, and pathologically by showing less increase of pigmentation f the globus pallidus and other structures.

s. dysraphicus. A developmental defect in closure of the neural tube, associated with anomalies of the spinal cord, spine, and sternum.

s. epilepticus. A condition in which epilepti attacks occur in rapid succession, the patient not regaining consciousness during the interval.

s. lymphaticus. See *s.* thymicolymphaticus.

s. marmoratus. The gross pathological ppearance of the stratum suggesting marbled surface, as described by C. and O. Vogt, in form of thetosis characterized by hyperkinesis and rigidity Th ganglion cells show spotty atrophy being replaced by network of myelinated fibers. Syn., *état marbré*.

s. parathyreoprivus. A pathologic state caused by complete loss of parathyroid tissue.

s. praesens. The state of patient at the time of examination.

s. raptus. Ecstasy

s. thymicolymphaticus. A condition formerly held to be the cause of sudden and otherwise unexplained death in children, in which the only pathologic finding was relative enlargement of the thymus and lymphoid tissues. The diagnosis is held by many to be untenable Syn., *lymphatism, s. lymphaticus. thymicus.*

s. vertiginosus. Persistent vertigo.

sta″tu vo′lence, sta-tu vo lence [*status*, L. *volens*, from *velle*, to be willing] Autohypnotism; voluntary somnambulism or clairvoyance trance into which one voluntarily enters without aid from another *Obs.*

Sta b, Hans [*Swiss internist* 1890–]. Demonstrated that second administration of dextrose one hour after the first will not raise the blood sugar level called *Staub-Traugott phenomenon* or *fect*

stau ri-on [G *stauros*, cross]. The craniometric point located at the intersection of the median palatine and transverse palatine sutures.

taves are (stayvz y″kur) See *staphisagria*.

stax′is [G dropping] Obsolete term for hemorrhage or dribbling of urine

S.T.D Abbreviation for standard test dose of scarlet fever toxin. A skin test dose is the least amount of standard scarlet fever streptococcus toxin which, when injected intracutaneously int person known t be susceptible to th toxin, will ind ce red area in the skin measuring 1 cm. in diameter when observed 18 to 24 hours after the injection The reaction is compared with that made by control njection of the same amount of the material hich has been heated to 100° C. for two hours. See Dick *test*.

stead′y stat See *homeostasis*, steady *state* in muscular exercise.

steam [AS. *stēam*]. The vapor of water water in gaseous state.

steap sin (steep sin) A lipase present in pancreatic juice and capable of hydrolyzing fats to glycerin and fatty acids also called *pancreatic lipase*.

stear′ te (steer′ te) An ester or salt of stearic acid, as stearin (glyceryl stearate) or sodium stearate

ste-ar′ic ac′id (stee-ar′ik, steer ik) (*acidum stearicum*) A mixture of solid acids obtained from fats consists chiefly of stearic acid, $CH_3(CH_2)_{16}COOH$, and palmitic acid, $CH_3(CH_2)_{14}COOH$ occurs as hard, white, or faintly yellowish, somewhat glossy and crystalline solid, or white or yellowish powder 1 Gm. dissolves bout 20 cc. of alcohol, it is almost insoluble water It was formerly used in making glycerin suppositories but is now replaced by sodium stearate. It is used as an ingredient of the so-called vanishing cream used as an ointment base

ste-ar′i form [G *stear* fat; L. *forma*, form] Having the ppearance of or resembling, fat.

stear′in (steer′in) $C_3H_5O_3(C_{17}H_{35}CO)_3$ Tristearin glyceryl tristearate The glyceryl ester of stearic acid occurri g in many of the solid animal fats.

stear″o-der′mi-a [*stear* G *derma*, skin] An affection of the sebaceous glands of the skin

stearodine. A trade-mark for calcium iodostearate

stea op t n. That portion of volatile oil, usually consisting of oxygenated substances, which is solid at ordinary temperatures.

ste ar rhe a. See *seborrhea*.

s. flavescens. A seborrhea in which the sebaceous matter turns yellow after being deposited upon the skin.

s. nigricans s. See *chromhidrosis*

s. simplex. Seborrhea oleosa.

stear′yl. The monovalent radical, $C_{17}H_{35}CO-$ of stearic acid.

stear′yl al′co hol. $CH_3(CH_2)_{16}CH_2OH$ white unctuous solid, occurring as flakes or granules, insoluble in water soluble in alcohol. The official substance of this name is mixture of alcohols, composed chiefly of the preceding It is an ingredient of ointment bases and creams.

ste tin. 1 *Stearin*. 2 Any cerate containing considerable proportion of tallow

ste a ti′rum. Certain pharmaceutical preparations similar t cerates. Their use is now obsolete.

ste ti′tis [*stear* G *-itis*, inflammation]. Inflammation of adipose tissue.

ste a to- steat [*stear*]. A combining form meaning *fat*

ste″ t -cryp-t sis [*stear* G *kryptein*, to hide *-osis*, condition]. Abnormal function of the sebaceous glands

ste t -cys to ma mul ti plex. An uncommon skin disorder characterized by various-sized cystic lesions over the trunk, back, arms, or thighs. Usually occurs in young men be, as rule do not have acne or seborrhea. Also called *steatomatosis*.

ste tog′e-nous (stee uh-todj nus) [*stear* G *gennaein*, to be produced] Producing steatosis.

ste a tol′y sis [*stear* G. *lysis*, loosing] The emulsifying process by which fats are prepared for bsorption and assimilation. —steatolyt′ic, *adj*

ste a-to ma [G sebaceous tumor]. 1. A sebaceous cyst. *Obs.* 2 A lipoma. *Obs*

t t py′gi (stee uh-to-pye′jee uh, -pidj ee-uh) [G *stear* fat; *pygē*, buttocks]. Excessive accumulation of fat on the buttocks. —steatopygous, *adj*

ste″ tor rhe [*stear* G *rhoia*, flow] 1 A

increased flow of the secretion of the sebaceous follicles; see seborrhea. 2. Fatty stools.
chronic idiopathic s. See celiac disease.
congenital pancreatic s. See pancreatic fibrosis.
s. simplex. Excess of sebaceous excretion of the face.

ste"a·to'sis [stear; G. -ōsis, condition]. An old term formerly used loosely for fatty degeneration, or disease of sebaceous glands.
corneal s. Deposits of fat in the cornea.

steclin. Trade-mark for the antibiotic substance tetracycline, commonly supplied as the hydrochloride.

steel [AS. *stēl*]. Iron chemically combined with a certain proportion of carbon. It holds an intermediate position between white cast iron and wrought iron, partaking of the most valuable qualities of both. Steel of good quality is fine-grained, elastic, and tough.
stainless s. A steel which contains elements such as nickel and/or chromium; it does not tarnish on exposure and is extensively used in the manufacture of high-grade cutlery.

Steell, Graham [English physician, 1851–1942]. Described the murmur of pulmonary valve incompetence. It may occur in mitral stenosis and cardiac insufficiency; called *Graham Steell murmur*.

Steenbock, Harry (1886–) American physiologist and biochemist known for his researches in nutrition, e.g., the correlation of vitamin-A activity with the occurrence of yellow plant pigments, the role of copper in the prevention of anemia, and the effect of ultraviolet irradiation on calcium and phosphorus metabolism. He invented vitamin-D milk and the synthesis of vitamin D by the irradiation of certain sterols.

stee'ple skull. Oxycephaly.

steg·no'sis [G., a making watertight]. The closing of a passage. —**steg·not'ic,** *adj.*

Steg"o·my'ia, Ste·go·my'ia [G. *stegos,* roof; *myia,* fly]. A genus of mosquitoes of Culicidae, represented in most tropical and subtropical countries. See *Aëdes aegypti.* Obs.

Stehle gasometric method (for urea). See under method.

Stein, Stanislav Aleksandr Fyodorovich von [Russian otologist, b. 1855]. Remembered for his test for labyrinthine disease. If the patient closes his eyes, he will be unable to stand or hop on one foot. Called *Stein's test.*

Stein-McCarthy prostatic electrotome. See Joseph Francis *McCarthy.*

Steinach, Eugen [Austrian physiologist, 1861–1944]. Widely known for his rejuvenation operation in which he occluded the ductus deferens, called *Steinach method* or *operation.*

Steindler, Arthur (1878–) American orthopedic surgeon who made many contributions to kinesiology and orthopedic surgery. His methods for fusion of the shoulder joint, the stripping of the calcaneus, and plastic repair of the elbow paralyzed by poliomyelitis are called *Steindler operations.*

Steinmann, Fritz [Swiss surgeon, 1872–1932]. Remembered for his invention of a surgical nail inserted in distal portions of such bones as the femur or tibia for skeletal traction, called *Steinmann pin* or *nail.*

stel'la len'tis hy"a·loi'de·a. Posterior pole of the lens of the eye.

stel'la len'tis i·rid'i·ca. The anterior pole of the lens of the eye.

stel'late [L. *stellatus,* starry]. Star-shaped, or with parts radiating from a center.

stellite. Trade-mark for an acid-resistant alloy containing cobalt, chromium, tungsten, and molybdenum; used in certain surgical instruments.

Stellwag von Carion, Carl [Austrian ophthalmologist, 1823–1904]. Known for his description of a sign of exophthalmic goiter: absence or diminution in frequency of the winking movements of the eyelids with abnormal width of the palpebral aperture indicates the disease. Called *Stellwag's sign.*

stem [AS. *stemn*]. 1. The pedicle or stalk of a tumor. 2. A supporting stalk, as of a leaf or plant.
brain s. The portion of the brain remaining after the cerebral hemispheres and cerebellum have been removed. See Plates 17, 18.
infundibular s. See stalk of the neurohypophysis.

ste·nag'ma [G.]. Sigh. Rare.

ste·nag'mus [G. *stenagmos,* a sighing]. Sighing. Rare.

Stender dish. A covered cylindrical glass vessel used in histologic technic.

Stenger test. See Wells-Stenger test.

ste'ni·on, sten'i·on (pl. *stenia*) [G. *stenos* narrow]. That point on the sphenosquamosal suture which is located most medially.

Steno, Nicolaus (Nils). See Nicolaus *Stensen.*

sten·o- [*stenos*]. A combining form meaning narrow or constricted.

sten"o·car'di·a [*stenos;* G. *kardia,* heart]. Angina pectoris. Obs.

sten"o·ceph'a·ly, sten"o·ce·pha'li·a [*stenos;* G. *kephalē,* head]. Unusual narrowness of the head. —**stenocephalous,** *adj.*

sten"o·chas'mus (sten·o·kaz'mus) [*stenos;* G. *chasma,* chasm]. Lissauer's term for a skull with a small angle, 64° to 74°, of the nasopharynx. The angle is included between two lines drawn, respectively, from the posterior nasal spine and basion to the point on the rostrum of the sphenoid where it is included between the alae vomeris.

sten"o·cho·ri'a (sten·o·kor·ee'uh) [G., narrowness of space]. Narrowing; partial obstruction, particularly of a lacrimal duct.

sten"o·co·ri'a·sis [G., unnatural contraction of the pupil]. Narrowing of the pupil.

sten"o·crot'a·phy (sten·o·krot'uh·fee, kro'tuh·fee) [G. *stenos,* narrow; *krotaphos,* temple]. Abnormal narrowness of the skull in the pterionic region, probably due to hypoplasia of the sphenoidal angles of the parietal bones, and of the great wings of the sphenoid bone.

sten'o·dont [*stenos;* G. *odous,* tooth]. Provided with narrow teeth.

sten"o·mer'ic [*stenos;* G. *mēros,* thigh]. In osteometry, designating a femur with no anteroposterior compression of the proximal portion of the diaphysis. There may be considerable mediolateral compression of the same portion as is indicated by the platymeric index of 100.0 or more. Stenomeric femurs are abnormal, normal femurs being either platymeric or eurymeric.

sten"o·myc·te·ri'a [*stenos;* G. *myktēr,* nostril]. Nasal stenosis. Obs.

sten"o·pe'ic [*stenos;* G. *opē,* hole]. A device of metal or other opaque substance with a very fine slit or minute hole or holes. Held before defective eyes, it facilitates vision. Duke-Elder's device enables a presbyope who has lost his glasses to read in an emergency. The slitted stenopeic (long used by Eskimos) protects from ultraviolet radiation from sunlight on snow or ice.

sten"o·pe'ic. Pertaining to a narrow slit or minute hole.

ste·nosed' (sti·nozd', ·nosed', sten'ozed) [*stenos*]. Constricted, narrowed.

ste·no'sis [G.]. Constriction or narrowing, especially

of channel or aperture. —**steno sal, stenot'ic,** *adj*

aortic s. A narrowing of the aortic orifice at the base of the heart or narrowing of the aorta itself.

aqueduct s. Stenosis of the cerebral aqueduct, usually at the junction of the upper and middle third also called *atresia* / *iter*

br nchial s. See *bronchostenosis*.

cicatricial s. Stenosis due to contracted cicatrix.

Dittrich's s. Stenosis of the conus arteriosus.

granulation s. Narrowing caused by encroachment or co traction of granulations.

mitral s. Disease of the mitral valve causing obstruction to the flow of blood through the left atrioventricular opening It is late (remote) effect of acute rheumatic fever

post-tracheostomy s. Stenosis after tracheotomy

pulmonary s. A disease of th pulmonary valve in which congenital obstruction and ther anomalies are usually present.

pyloric s. Congenital bstruction of the pyloric orifice of the stomach caused by hypertrophy of the pylorus muscle.

tricuspid s. Narrowing of the tricuspid valve, with resultant resistance to flow of blood into the right ventricle. There is an elevation of right- trial and venous pressure, with hypertrophy of the right atrium and distention of the veins.

valvula s. Narrowing of the orifice of valve.

sten sto mi [G *stenostomos* narrow-mouthed]. A reduction in the orifice of the mouth as result of cicatrization. —**stenostom atous,** *adj*

ste-nos to my [*stenostomos*] Contracture of any mouth or aperture

sten o-ther mal [G *stenos*, narrow *therme*, heat] Capable of resisting small range of temperature

sten the rax [G narrow-chested]. An unusually narrow chest

Stensen, Nicolaus (1638–1686) Danish natomist who discovered the parotid duct and the lateral incisive foramen variously called *Nils* or *Niels Stensen* or *Steno*

stent. 1 A compound used for immobilizing some forms of skin graft. 2. A mold made of stent, used for immobilizing some forms of skin graft.

sten"t reph' nous [G *Stentor* Greek at Troy famous for his loud voice *phone*, voice] Having loud voice

ste pha ni-on (sti fay nee on, sti-fan ee-on) [G *stephanos*, wreath] The point here the coronal suture crosses the linea temporalis inferior —**stephanial, stephan'ic,** *adj*

Stephanus. See Charles *Estienne*.

step page gait. The peculiar high-stepping gait seen in tabes dorsalis and certain forms of multiple neuritis, or neuropathy It also occurs in toe drop

ster"co bi'lin. The chief constituent of the brown pigment found in feces Derived from bilirubin by reduction due to bacteria in the intestine. Also called *hydrobil ubin*, *urobilin*

ster"co-bi li gen (stur"ko buy lin o-jen, bi lin jin) A reduction product of stercobilin which occurs in the feces Stercobilinogen is colorless compound which becomes brown on oxidation. It is probably identical with urobilinogen.

ster'co lith [L. *stercus*, dung G *lithos*, stone]. A calcified, fecal concretion.

ster"co-ra ceous [*stercus*]. Fecal having the nature of or containing feces, as stercoraceous vomiting.

ster'co-ral ter'co rous. See *stercoraceous*.

ster'co-rar"y (stur'ko rerr ee) [L. *stercorarius*, of dung]. Fecal.

ster"co-ro ma [*stercus*; G *-oma*, tumor]. Fecalith hard fecal mass usually in the rectum.

Ster-cu'li-a [L. *Sterculius*, deity who presided over manuring]. A large genus of tropical trees S. urens of India and S. tragacantha of Africa afford karaya gum, which has been substituted for tragacanth. S. acuminata (*Cola nitida*) produces the kola ut.

ster'cus [L.]. Feces.

stere (steer stair) [G *stereos*, solid]. A measure of 1000 liters kiloliter

ster" tron'ics. The science of the controllable electronic performance of solids.

ster e o- (sterr'ee-o- steer ee-o-) ster'e- [*stereos*] A combining form meaning *solid*.

ster" -o-ag no sis. See *astereognosis*.

ster"e- -an es the si a [*stereos*; G. *anaisthesia*, lack of sensation]. Inability to ascertain the form or size of objects by feeling them.

ster"e ar throl'y-sis [*stereos*; G. *arthron*, joint; *lysis*, loosing]. Loosening stiff joints by operation or manipulation in cases of ankylosis.

ster" -o-blas'tu la [*stereos*; NL. dim. from G *blastos*, sprout] A solid blastula, not having blastocoele, but having all its cells bounding the external surface.

equal s. One having cells of the same size derived from equal cleavage.

unequal s. One with small cells in one pole or hemisphere and large cells in the other

ster"e-o cam pim e-ter An instrument for measuring the extent of th visual field of both eyes simultaneously Syn., *stereoscopic campimeter*

ster"e-o-chem'is try [*stereos*; G. *chymos*, juice]. A branch of science that investigates the spatial arrangement of the atoms in molecule

ster" -o-cil'i [*stereos*; L. *cilium*, eyelid] Nonmotile cilia.

ster"e-o-en-ceph lo tome. A device for localizing exactly any point within the brain, for the operation of stereoencephalotomy

ster" o-en-ceph a lot' my Selective destruction, by cautery or electrolysis, of cerebral tracts or uclei, using the pineal body or posterior commissure as the point of reference or zero point on the stereotaxic coordinates.

ster" -og no sis [*stereos*, G *gnosis*, knowledge] The faculty of recognizing the size and shape of objects by the sense of touch —**stereognos'tic,** *adj*

ster'e-o-gram [*stereos*; G *gramma*, letter]. 1. A two-dimensional picture which represents an bject with the impression of three dimensions, by means of contour lines or shading. 2. A stereoscopic picture.

ster'e- graph" [*stereos*; G. *graphein*, to write] An instrument devised by Broca for drawing geometric contours of skulls in the various normae

ster" og'ra phy [*stereos*; *graphein*]. That phase of craniometry which consists of making geometric projections of skull held rigidly in predetermined plane, thus producing drawings so accurate that lines and angles may be measured on them.

ster" -o i'so mer [*stereos*; G *isomeris*, equally divided] A compound containing the same number and kind of atoms as another compound, but with the atoms grouped differently in the molecule. A stereoisomer is optically active and contains one or more asymmetric toms.

st r" -o i sm or i'sm (sterr ee-o-eye-soe m- is um, steer ee-o-) [*stereos*; *isomeris*] The condition in which two or more substances having the same molecular formulas have different properties; these differences are due to the different relative positions of the toms in the molecule.

ster" mon o-scope [*stereos*; G. *monos*, alone *skopein*, to examine] An instrument hich projects two stereoscopic images upon the same spot on ground glass screen by means of two lenses.

the combined image giving the impression of solidity.

ster"e-oph-thal'mo-scope. See under *ophthalmoscope*.

ster"e-o-phan'to-scope [*stereo*; G. *phantos*, visible; *skopein*]. A panoramic stereoscope using rotating disks in place of pictures. Obs.

ster"e-o-pho'ro-scope [*stereo*; G. *phoros*, bearing; *skopein*]. A stereoscopic stroboscope, an instrument for producing a series of images apparently in motion; used in tests of visual perception.

ster'e-o-plasm [*stereo*; G. *plasma*, anything formed]. The solid part of the protoplasm of cells. *Obs.*

ster"e-op'sis [*stereo*; G. *opsis*, vision]. Stereoscopic vision.

ster'e-op"ter [*stereo*; G. *optēr*, one who looks]. An instrument to provide a rapid quantitative test for depth perception.

ster"e-o-ra"di-og'ra-phy [*stereo*; L. *radius*, ray; G. *graphein*, to write]. Taking of two radiographs with the roentgen-ray tube in two positions, about six inches apart, and viewing of these two films in such a manner that the stereoscopic picture appears three-dimensional.

ster"e-o-roent"gen-og'ra-phy (sterr"ee-o-rent"ghin-og'ruh-fee, steer"ee-o-) [*stereo*; *Röntgen*; *graphein*]. A roentgenographic procedure for making stereoscopic roentgenograms.

ster"e-o-roent"gen-om'e-ter. Apparatus for determining the solid dimensions of a radiopaque object from its stereoscopic roentgenograms.

ster"e-o-roent"gen-om'e-try (-rent"ghin-om'i-tree) [*stereo*; *Röntgen*; G. *metron*, a measure]. The use of the stereoscope in the study of stereoroentgenograms.

ster'e-o-scope [*stereo*; G. *skopein*, to examine]. An instrument by which two similar pictures of the same object are so mounted that the images are seen as one, thereby giving a three-dimensional impression. —**stereoscop'ic**, *adj.*; **stereos'copy**, *n.*

ster"e-o-stro'bo-scope [*stereo*; G. *strobos*, whirling round; *skopein*]. An apparatus for the study of points moving in three dimensions.

ster"e-o-tax'i-a [*stereo*; G. *taxis*, arrangement]. The production of electrolysis in a definite circumscribed area within the brain, with minimal damage to the remainder of the organ. —**stereotac'tic**, *adj.*

ster"e-o-tax'is. Taxis in response to touch or contact, especially with respect to a solid body. Syn., *thigmotaxis*.

ster"e-ot'ro-pism [*stereo*; G. *tropein*, to turn]. Growth or movement toward a solid body (positive stereotropism) or away from a solid body (negative stereotropism). Syn., *thigmotropism*. —**stereotrop'ic**, *adj.*

ster"e-o-ty"py (sterr"ee-o-tye"pee, steer"ee-) [*stereo*; G. *typos*, impression]. Morbid persistence of a volitional impulse when once started.

ster"e-o-vec"tor-car'di-o-graph. Dual-beam oscillograph for instantaneous registration of three-dimensional vectorcardiogram.

ster'ic. Relating to the arrangement of atoms in space.

steric hindrance. In *chemistry*, the power ascribed to bulky atoms or bulky groups of atoms of interfering with the normal mobility of molecules or parts thereof. According to the theory, if the bulky group is close to the site of the reaction, it may interfere with the attack by a reagent and may retard or prevent the reaction or permit a competing process to occur. The presence of bulky groups in a molecule may also interfere with the free rotation around single bonds. This can increase the number of stable stereoisomeric forms and can decrease the stabilization of the molecule by resonance.

ster'id. A substance that is either a sterol or steroid.

Ster"ig-mat"o-cys'tis [G. *stērigma*, support; *kystis*, bladder]. A genus of molds belonging to the family Mucoraceae. It is occasionally a parasite of man. **S. cinnamomina.** A species found in mycetoma and occasionally producing a generalized infection similar to aspergillosis.

ster'ile [L. *sterilis*]. 1. Not fertile; not capable of reproducing. 2. Free from germs.

ste·ril'i·ty. Involuntary total inability to reproduce. **facultative s.** Sterility caused by the prevention of conception.

idiopathic s. See *aspermia*.

one-child s. Sterility occurring in a woman after she has given birth to one child.

relative s. Inability to produce a viable child.

sterility clinic. See *fertility clinic*.

ster"i-li-za'tion [L. *sterilis*, sterile]. 1. The destruction of all forms of life. Substances may be sterilized by the use of physical or chemical agents, heat being the most important. Moist heat, at temperatures above the boiling point of water, will kill the most resistant spores formed by microorganisms within a relatively short period of time. Fractional or intermittent sterilization consists of the successive application of moist heat to destroy vegetative cells with intervening periods of sufficient duration to permit spores to germinate. 2. Any procedure which renders an individual incapable of reproduction.

ster'i-lize [*sterilis*]. 1. Render sterile or free from bacteria. 2. Render incapable of procreation.

ster'i-liz"er [*sterilis*]. An instrument for the destruction of all forms of life. The Arnold sterilizer utilizes steam at atmospheric pressure. The autoclave or pressure cooker uses steam under pressure at temperatures above the boiling point of water.

Stern potential. See under *potential*.

ster·nal'gi·a [G. *sternon*, breast; *algos*, pain]. Pain in the sternum.

ster·na'lis (stur·nah'lis, ·nay'lis) [*sternon*]. A rare muscle over the sternum. See Table of Muscles in the Appendix.

Sternberg, Carl (1872–1935). German pathologist who described the large polynuclear cells characteristic of Hodgkin's disease, in America called Reed-Sternberg cells. Leukosarcoma is sometimes called *Sternberg's disease*, and Hodgkin's disease is sometimes called *Paltauf-Sternberg disease*.

Sternberg, George Miller (1838–1915). American Army medical officer, pioneer bacteriologist who discovered the pneumococcus independently of its discovery by Louis Pasteur. He was the first to photograph the *Mycobacterium tuberculosis*.

ster'ne·bra. Embryological segment of the body of the sternum; there are usually four, of which the lower two or three arise from paired ossification centers.

ster·no- [G. *sternon*, breast]. A combining form denoting breast or connection with the sternum.

ster"no-chon"dro-scap"u-lar'is (stur"no-kon"dro-skap"yoo-lair'is) [*sternon*; G. *chondros*, cartilage; L. *scapula*, shoulder]. A rare muscle arising from the sternum and the first costal cartilage and extending to the upper border of the scapula.

ster"no-cla-vic'u-lar [*sternon*; L. *clavicula*, small key]. Pertaining to the sternum and the clavicle, as the sternoclavicular joint. See Table of Joints and Ligaments in the Appendix.

ster"no-cla-vic"u-lar'is. A rare variant slip of the subclavius muscle.

ster no-cleí"do-mas'toid (stur o-kly do-mas toyd) [*sternon*, G *kleis*, hook *mastoidēs*, like breast]. Pertaining to the sternum, the clavicle, and the mastoid process, as the sternocleidomastoid muscle. See Table of Muscles in the Appendix.

ster"no-cos ta'lis. BR name for the transversus thoracis muscle.

ster"no dym'i [*sternon*, G *didymos*, twin]. A form of conjoined twins in which the union is in the sternum. Also called *sternopagia*.

ster nod y mus [*sternon*, *didymos*] Twin monsters united at the anterior wall of the thorax sternopagus.

ster"no dyn'i a (stur no-din ee-uh, -dye nee-uh) [*sternon*, G *odynē*, pain]. Sternalgia pain in the sternum.

ster"no hy'oid [*sternon*, G *hyoeidēs*, shaped like the letter upsilon] Pertaining to the sternum and the hyoid bone, as the sternohyoid muscle. See Tabl of Muscles in the Appendix.

ster"no hy oid' us a zy gos. A rare muscle of the neck extending from the posterior surface of the manubrium of the sternum to the hyoid

ster"no mas'toid [*sternon*, G *mastoeidēs*, like breast]. U official term for sternocleidomastoid muscle.

ster"no-om phal" -dym'i a. A form of conjoined twins in which the union is in both the sternal and the umbilical regions.

ster"no-pa gi a, ster nop a gy [*sternon*, G *pagos*, that which is fixed]. The condition of being sternopagus.

ster nop a gus [*sternon*, *pagos*]. Conjoined twins united at the sternum. Also called *ectopagus*, *thoracopagus*.

ster"no per"i-car'di al [*sternon*, G *perikardios*, around the heart] Pertaining to the sternum and the underlying pericardium.

ster nos hi-sis (stur-nos'ki-sis) [*sternon*, G *schisis* cleavage]. Congenital cleft or fissure of the sternum also called *fissura sterni*.

ster"no thy roid [*sternon*, G *thyreoeidēs*, shield-shaped]. Pertaining to the sternum and thyroid cartilage, as the sternothyroid muscle. See Table of Muscles in th Appendix.

ster not'o-my [*sternon*, G *tomē*, cutting]. Cutting through the sternum.

ster'num [*sternon*]. The flat, narrow bone in the median line in the front of the chest, composed of three portions—the manubrium, the body and the xiphoid process. See Table of Bones in the Appendix. See Plates 1, 13. —**sternal**, *adj*

cleft s. Congenital fissure of the sternum.

ster"nu ta'tion [L. *sternutatio*]. The act of sneezing.

ster'nu ta"tor [L. *sternutare*, to sneeze] A substance capable of inducing sneezing, as certain war gases. See also vomiting *gas*.

ster" -chem'is try See *stereochemistry*

ster'oid, ste roid [G. *stereos*, solid; *eidos*, form]. The generic name for the compounds comprising the sterols, bile acids, heart poisons, saponins, and sex hormones. See Table of Hormones in the Appendix.

ster'ol st rol. Any saturated or unsaturated alcohol derived from cyclopentanoperhydrophenanthrene the alcohols occur both free and combined as esters or glycosides, and usually are btained as principal constituents of the nonsaponifiabl fraction of fixed oils and fats *Zoosterols* are sterols of animal origin *phytosterol* are sterols from higher plants *mycosterol* are the sterols of fungi.

ter one st rone. A steroid possessing one or more ketone groups.

ster'tor [L *stertere* to snore]. Sonorous breathing or snoring; the rasping, rattling sound produced when the larynx and the air passages are partially betructed by mucus. —**stertorous**, *adj*.

steth ar"te-ri'tis [G *stēthos*, breast *artēria*, artery -*itis*, inflammation]. Inflammation of the arteries of the thorax. *Rare*.

steth o-, steth- [*stēthos*]. A combining form meaning *breast* or *chest*.

ste thog'ra phy [*stēthos*; G *graphein*, to write]. *See* *phonocardiography*

steth'o-phone [*stēthos*; G *phōnē*, sound] 1. Stethoscope. A more accurate term than stethoscope, but now obsolete. 2. An electric stethoscope capable of transmitting heart murmurs and lung sounds to large group of listeners.

steth"o-pol'y-scope [*stēthos*; G *polys*, many; *skopein*, to examine] A stethoscope having several tubes for the simultaneous use of several listeners

steth o-scope [*stēthos*; *skopein*]. An instrument for the detection and study of sounds arising within the body Invented by Laennec. The early type was slender wooden tube with flange at each end. The modern stethoscope has bell or cup-shaped end piece of metal or hard rubber connected with rubber tubing, which conducts the sound to both ears of the examiner

binaural s. One which connects t both ears of the user

steth"o-scop'ic [*stēthos*; *skopein*]. Pertaining to, or detected by means of, stethoscope.

st thos co py [*stēthos*; *skopein*]. Examination with the aid of the stethoscope.

Stevens, William [*Scottish surgeon*, 1786-1868]. Remembered for his successful ligation of the internal iliac artery for gluteal aneurysm (1812). This is said to have been the first case of the kind on record. Called *Stevens' operation*.

Stewart, Francis Torrens [*American surgeon*, 1877 1920]. Remembered for his incision for radical mastectomy by means of two transverse incisions meeting laterally and at the sternum to form pointed oval around the breast, called *Stewart' incision*.

Stewart Holmes phenomenon. Rebound phenomenon.

Stewart Morel syndrome. See metabolic craniopathy.

STH Abbreviation for somatotropic hormone.

sthe ni [G *sthenos*, strength] Normal or excessive force or vigor opposed to *asthenia*.

sthen'ic [*sthenos*]. Strong; active.

stib amine glu co-side. A nitrogen glucoside of sodium *p*-aminophenylstibonate, pentavalent antimony compound used in the treatment of kala-azar

stib"i ac ne (stib ee ack nee) [G. *stibi*, antimony perhaps G *achnē*, chaff]. Acne caused by the use of antimony *Rare*.

stib"i al ism [*stibi*]. Antimonial poisoning.

stib'ine (stib een, -in) Antimonous hydride, SbH_3

stib"i um [L., from *stibi*]. Antimony

sti bo ni um. The monovalent radical SbH_4 analogous to ammonium.

stib o-phen $(NaO_3S)_2C_6H_2O_2SbOC_6H_2(ONa)$-$(SO_3Na)\cdot 7H_2O$ Sodium antimony-bispyrocatechol-3,5-sodium disulfonate employed as remedy in venereal lymphogranuloma and schistosomiasis. Dose, intramuscularly total of 40 cc, in divided portions, of 6.3% solution. See *fuadin*.

stich -chrome (stick o-krohm) [G. *stichos*, row; *chrōma*, color]. Applied by Nissl to nerve cell in which the chromophilic substance is arranged and as striae running in the same direction ally parallel with, the contour of the cell body

Sticker Georg (1860-). German physician and epidemiologist, known for his many writings on

the history of medicine. He described erythema infectiosum (1899) also called *Sticker's disease*.

stic'ta [G. *stiktos*, spotted, pricked]. A lichen, *Sticta pulmonaria*; used in rheumatism and chronic coughs by homeopaths and eclectics.

stig'ma (pl. *stigmata*, *stigmas*) [G. tattoo-mark]. 1. A small spot or mark, especially spot of hemorrhage in the palm or sole, occurring in hysterical persons. 2. Any one of the marks or signs characteristic of condition, as hysterical stigmas. 3. That part of pistil which receives the pollen. 4. An opening between cells, especially one between the endothelial cells of capillary now considered an artifact. A stoma. —**stig'mal, stigmat'ic,** *adj.*

baker's stigmas. Corns on the fingers from kneading dough.

follicular s. The thin, nonvascular area of the ovary overlying the mature follicle marking the spot at which rupture of the follicle will occur; also the point of rupture.

hereditary stigmas. Psychic stigmas resembling those of an ancestor and supposed to be inherited.

hysterical stigmas. The specific, peculiar phenomena or symptoms of hysteria, as anesthesia, hyperesthesia, hysterogenic zones, reversal of the color field, contraction of the visual field, the phenomena of transport amblyopia, impairment of the senses of hearing and of taste and of ocular sense, etc.

neurasthenic stigmas. See *hysterical stigmas* under *stigma*.

psychic stigmas. Certain mental states characterized by susceptibility to particular suggestions.

somatic stigmas. The objective signs of certain nervous affections.

s. of the Graafian follicle. The point of rupture through which the ovum escapes.

stigmata of Beneke. Acute ulcers along the greater curvature of the stomach.

stigmata nigra. The black spots caused by the presence of grains of gunpowder in the skin.

stig mas ter ol. $C_{29}H_{48}O$. A sterol derived from the soybean.

stig ma tism [*stigma*]. 1. A condition of the refracting media of the eye in which rays of light from a point are accurately brought to a focus on the retina. Also see *astigmatism*. 2. The condition of having stigmas.

stig"ma ti za'tion [*stigma*]. The formation of stigmas.

stig ma tose [*stigma*]. Marked with stigmas.

stigmonene bromide. Trade-marked name for the benzpyrinium bromide, cholinergic agent.

stil bam'i dine (stil bam' deen, -din). NH:C-(NH_2)C_6H_4 CH:CH.C_6H_4 (NH_2)C NH; 4,4'-diamidinostilbene. One of group of diamidines possessing trypanocidal activity. It has been used in the treatment of kala-azar and of multiple myeloma.

stil'bene. C_6H_5.CH═CH.C_6H_5. The parent hydrocarbon from which the synthetic estrogen diethylstilbestrol may be considered to be derived.

stil bes'trol, stil bees'trol (stil bes'trole, -trol, -trawl). Diethylstilbestrol.

Stiles, Charles Wardell [American bacteriologist and parasitologist, 1867–1941]. Known for his extensive work in ancylostomiasis in America. Discovered its cause, the American hookworm, *Necator americanus* or *Uncinaria americana* (1902).

sti let', sti lette' (sti let', sty-let', sty'let). See *stylet*.

Still, Andrew Taylor [American osteopathic physician, 1828–1917]. Widely known as the founder of osteopathy.

Still, George Frederic [English pediatrician, 1868–1941]. Described form of polyarthritis affecting children; called Still's disease. Author of *History of Pediatrics*.

still'birth" [AS. *stille*; ME. *burth*]. The birth of dead child.

still'born" [*stille*; AS. *boren*]. Born dead.

Stiller, Berthold (1837–1922). German physician who described an asthenic body-build (1907) associated with enteroptosis, called *Stiller's disease*. The attribution of enteroptosis and gastroptosis to universal asthenia is called *Stiller's theory*. He noted the marked mobility or fluctuation of the tenth rib in neurasthenia and enteroptosis; this is known as *Stiller's sign*.

stil"li-cid'i um [L., liquid which falls drop by drop]. Old term for the flow of liquid drop by drop.

s. lacrimarum. Overflow of tears from obstruction of the lacrimal ducts; epiphora. *Obs.*

s. urinae. Dribbling of urine. *Obs.*

Stilling, Benedikt [German anatomist, 1810–79]. Described the central canal of the spinal cord, called *Clarke's* or *Stilling's canal*. The scattered cells lying along its anterior aspect are called *Stilling's nucleus*. The gelatinous substance surrounding the central canal, is also called *Stilling's nucleus*. The hyaloid canal of the vitreous body is called *Cloquet's* or *Stilling's canal*. See also Stilling's raphe.

Stilling's test. See under *test*.

stil-lin'gi a [after Benjamin *Stillingfleet*, English botanist, 1702–71]. The dried root of *Stillingia sylvatica*. It contains volatile oil, an acrid resin termed sylvacrol, and an acrid fixed oil. Formerly used in syphilitic and scrofulous conditions. Syn., *queen's root*.

stilpalmitate. Trade-mark for the dipalmitic acid ester of diethylstilbestrol, used in oil solution like diethylstilbestrol; the ester has prolonged therapeutic effect because of slower absorption.

stilronate. Trade-mark for brand of diethylstilbestrol.

Stimson, Lewis Atterbury [American surgeon, 1844–1917]. Described method of reducing dislocated hip called *Stimson's method*. See Plate 25.

stim'u lant [L. *stimulare*, to goad]. An agent that causes stimulation. —**stim ulant,** *adj.*

diffusible s. One that has a prompt but transient effect.

local s. One acting directly on the end organs of the sensory nerves of the skin.

stim u-late [*stimulare*]. Quicken; stir up; excite; increase functional activity.

stim u la'tion [L. *stimulatio*, from *stimulare*]. 1. The act of stimulating. 2. The effect of stimulant.

stim'u lin [L. *stimulus*, goad]. Metchnikoff' name for substances supposed to stimulate the phagocytes to destroy germs. Obs.

stim u lus (pl. *stimuli*) [L.]. An excitant or irritant an alteration in th environment of any living thing (cell, tissue, organism) producing response.

adequate s. A physical or chemical change in the environment to which there is preferential response, g rods and cones of the eye respond preferentially to th electromagnetic vibrations between 400 and 800 mμ and with much higher threshold to mechanical stimuli (inadequate stimulus)

chemical s. One due to, or produced by chemical means.

conditioned s. On to which conditioned reflex response has been developed.

heterologous s. One acting upon the nervous elements of the sensory apparatus along their entire course.

homologous s. One acting only upon the end organ.

inadequate s. 1 One unabl to produce response; subthreshold s. 2. One to which a response occurs t m ch higher threshold than to an adequate stimulus.

liminal s. See threshold *s.*

maximal s. A stimulus, increase above which produces no additional ction.

mechanical s. One acting by mechanical means, as pinching or striking.

minimal s. See threshold *s.*

noxious stimuli. Stimuli f injurious nature.

subliminal s. See subthreshold *s.*

subsubl imal s. See subthreshold *s.*

subthreshold s. One too weak to produce any bvious effect. Syn., *subliminal s.*, *subminimal s.*

summation of stimuli. See under *summation.*

thermal s. One acting through change in temperature.

threshold s. The smallest stimulus which produces an effect Syn *subliminal* *subminimal s.*

sting [AS *stingan*]. 1. The acute burning sensation caused by pricking, striking, or chemically stimulating the skin or m cous membrane. 2. The wound caused. 3. The organ or part causing the wound, e.g the sting of bee. —**sting**, *v.*

stip"i tat'ic ac'id. $C_8H_3O(OH)_2COOH$; 7-membered cyclic compound produced by the mold *Penicillium stipitatum.*

stip pling [D. *stippelen*]. 1 A change of surface whereby the presence of tiny nodules produces an ppearance like that of pebbled paper as slight deposits of fibrin on serous surface 2 A change in erythrocytes whereby minute droplets with affinity for base dyes occur in erythrocytes, as in lead poisoning.

Stirling's aniline-gentian violet solution. See under *stain.*

stir"pi-cul"ture [L. *stirps*, stock, family *cultura*, culture]. The improvement of animal stocks by scientific breeding. —**stirpicul'tural**, *adj.*

stir'rup bone. Old term for the stapes.

stitch [AS. *stice*] 1 A sudden, sharp, lancin ting pain. 2. See *suture*, 2.

glover' s. The continuous suture used especially in wounds of the intestines. See Plate 40.

s.-abscess. A pustular infection in the skin, about suture

Stitt, Edward Rhodes [*American naval medical officer* 1867 1943]. Known for his lifelong devotion to problems of bacteriology tropical medicine, and hematology Author with R P Strong, of standard work on tropical diseases and parasitology

Stock, Wolfgang [*German ophthalmologist*, 187-]. Described retinal atrophy in juvenile amaurotic familial idiocy called *Spielmeyer-Stock disease.*

stock [AS. *stocc*]. 1. A quantity of sol tion, or other material, kept on hand ready for use. 2. A line of descent, ethnic or linguistic lineage.

Stockert phenomenon. See von Stockert phenomenon.

Stockholm and Koch method. See under *method.*

stock"i net [*stocc*]. Cotton material or shirting woven like stocking, but of uniform caliber and used according to size to cover extremities or the body preparatory to the application of fixed dressing, as plaster, splints.

stock'ing [*stocc*]. A close-fitting covering for the leg and foot, sometimes designed and fitted for special hygienic or therapeutic purpose; usually made of knitted or woven goods that sometimes contains an elastic thread.

elastic s. One containing rubber so that it exerts continuous pressure on the part.

Stoddard and Drury method. See under *method.*

Stoerk, Carl [*Austrian laryngologist*, 1832-99]. Described chronic catarrh of the upper air passages which is first purulent, then dry and leads to hypertrophy of the mucous membrane called *Stoerk's blennorrhea.*

Stoerk, Oscar [*German physician*, 1870-1926]. With Hans Eppinger described electrocardiographic changes in bundle-branch block. Described primitive loop of the developing nephron, part of which forms Henle's loop; called *Stoerk's loop.*

Stoffel, Adolf [*German orthopedic surgeon*, 1880-1937]. Devised an operation for the relief of spastic paralysis, in which he resected portion of the bundles of the nerve trunk supplying the affected area, called *Stoffel' operation.*

stoi"chi-om try (stoy"kee-om tree) [G. *stoicheion*, element; *metron*, measure]. The branch of chemistry that deals with the numerical relationship between elements or compounds (atomic weights) the determination of the proportions in which the elements combine (formulas) and the weight relations in reactions (equations). —**stoichiomet'ric**, *adj.*

Stokes, Charles Francis [*American naval medical officer* 1863-1931]. Invented an open basket type of litter used in the United States N vy called *Stokes litter.*

Stokes, Whitley [*Irish physician*, 1763-1845]. First to describe ecthyma gangrenosum or dermatitis gangrenosa infantum (1807).

Stokes, William [*Irish physician*, 1804-78]. Author of classic works on diseases of the chest and heart and on the use of the stethoscope. Described the characteristic syndrome of heart block which had been noted earlier by Morgagni and Spens, and classically described by Adams (1846), called *Spens syndrome*, or *Stokes-Adams syndrome.* See Cheyne-Stokes respiration, Stokes's *law.*

Stokes, William Royal [*American bacteriologist*, 1870-1930]. Introduced reagent for reducing oxyhemoglobin to hemoglobin. See *Stokes's reagent.*

Stokes's law. See under *law.*

Stokes operation. See Gritti-Stokes *amputation.*

Stokvis, Barend Joseph E. [*Dutch physician*, 1834-1902]. Introduced the term enterogenous cyanosis for cyanosis due to intestinal disturbances of long standing. It is associated with methemoglobin and sulfhemoglobin in the blood. Called *Stokvis disease.*

Stoll's method. See under *method.*

sto'lon [L. *stolo*, shoot]. 1. *In biology*, creeping stem or runner capable of taking root or bearing bud, where it forms one or more new plants. 2. An analogous budding stock in certain lower animals.

Stoltz, Joseph [French gynecologist, 1803–96]. Known for his purse-string operation for cystocele, called *Stoltz' operation*.

sto'ma [G., mouth]. A minute opening or pore in a surface, particularly one of the stigmas, or minute openings of the peritoneal surface, presumably for the drainage of fluid into lymphatics.

sto·mac'a·ce (sto·mack'uh·see) [*stoma*; G. *kakē*, badness]. Ulcerative stomatitis.

sto·ma·ceph'a·lus [*stoma*; G. *kephalē*, head]. A combination of the ethmocephalic type of cyclopia with agnathia or micrognathia. Microstomia (or astomia) and a variable degree of synotia are associated. Also called *stomatocephalus*.

stom'ach [G. *stomachos*, gullet]. The most dilated part of the alimentary canal, situated below the diaphragm in the left hypochondriac, the epigastric, and part of the right hypochondriac regions. It is continuous at the cardiac end with the esophagus, at the pyloric end with the duodenum. Its wall consists of four coats: mucous, submucous, muscular, and serous. The mucous coat contains the gastric glands—cardiac, fundic, and pyloric—which secrete the gastric juice and mucus. See Plates 8, 10, 13. —**stomachic**, *adj.*

accessory s. See gastroenteric cyst.

cascade s. That due to hypertrophy of the circular muscle fibers between the pyloric antrum and the body of the stomach; characterized by filling of the cardiac portion followed by spilling into the pyloric segment. Also called *cup and spill s.*

dumping s. See dumping syndrome.

fishhook s. See *J s.*

hourglass s. One divided more or less completely into two compartments by an equatorial constriction.

J s. A long, vertically located stomach.

leather-bottle s. The small stomach with markedly thickened wall seen in chronic interstitial gastritis or scirrhous carcinoma.

powdered s. (*stomachus pulveratus*). Powdered stomach is the dried and powdered, defatted wall of the stomach of the hog, *Sus scrofa* var. *domesticus*; occurs as a granular substance with a slight, not unpleasant, meaty odor and is practically insoluble in water. It contains factors which cause an increase in the number of red blood cells in the blood of persons suffering from pernicious anemia. The activity is readily destroyed when the preparation is suspended in a hot liquid. It is used solely in the treatment of anemia, especially pernicious anemia. Also called *dried stomach*. See *ventriculin*.

primitive s. The endoderm-lined cavity of the gastrula, archenteron.

steerhorn s. A high, transversely located stomach. Also called *cow horn s.*

thoracic s. Congenital herniation of the stomach above the diaphragm due to imperfect development of the diaphragm.

sto·mach'ic (sto·mack'ick) [*stomachos*]. One of a class of substances which may stimulate the secretory activity of the stomach.

sto"ma·tal'gi·a [G. *stoma*, mouth; *algos*, pain]. Pain in the mouth.

sto'mat'ic [G. *stomatikos*, good for the mouth]. Relating or belonging to the mouth.

sto·ma·ti'tis (sto·muh·tye'tis, stom·uh-) [G. *stoma*, mouth; -*itis*, inflammation]. Inflammation of the soft tissues of the mouth.

aphthous s. A form characterized by the presence of small white vesicles in the mouth, occurring chiefly in children under three years.

arsenical s. Necrotic stomatitis due to arsenical poisoning.

catarrhal s. A simple or nonulcerative form characterized by swelling.

epidemic s. An acute, infectious stomatitis occurring in epidemics.

epizootic s. See foot-and-mouth disease.

erythematous s. Simple inflammation of the oral mucous membrane.

exudative s. Inflammation of the oral mucosa characterized by swelling and redness. Also called *fetid s.*

gangrenous s. Stomatitis characterized by necrosis. See *noma*.

herpetic s. That characterized by fever blisters or cold sores.

membranous s. Stomatitis with the formation of an adventitious membrane.

mercurial s. Stomatitis due to the excessive absorption of mercury.

mycotic s. See *thrush*, 1.

parasitic s. See *thrush*, 1.

scorbutic s. That associated with scurvy.

s. venenata. One caused by drugs.

syphilitic s. Inflammation associated with the oral lesions of syphilis.

traumatic s. That due to mechanical injury.

ulcerative s. Stomatitis characterized by the formation of ulcers and necrosis of oral tissues.

vesicular s. Bednar's aphthae, two symmetrically placed ulcers, one on each side of the median line, seen at times on the hard palate of cachectic infants.

Vincent's s. An extension of necrotizing ulcerative gingivitis to other oral tissues. See also Vincent's angina.

sto'ma·to- (sto'muh·to-, stom'uh·to-), **stomat-** [*stoma*]. A combining form meaning mouth.

sto"ma·tocac'e (sto"muh·tock'uh·see, stom"uh-) [*stoma*; G. *kakē*, badness]. Ulcerative stomatitis.

sto"ma·to·ca·thar'sis. Salivation. *Obs.*

sto"ma·to·ceph'a·lus. See *stomacephalus*.

sto"ma·to·dyn'i·a [*stoma*; G. *odynē*, pain]. Pain in the mouth.

sto"ma·to·dy·so'di·a (sto"muh·to·di·so'dee·uh, stom"uh·to-) [*stoma*; G. *dysōdia*, foul smell]. Ill-smelling breath.

sto"ma·to·gas'tric [*stoma*; G. *gastēr*, belly]. 1. Pertaining to the mouth and the stomach. 2. Pertaining to the nerves which supply the anterior end of the digestive tract in various invertebrates.

sto"ma·tol'o·gy (sto"muh·tol'o·jee, stom"uh-) [*stoma*; G. *logos*, word]. That branch of medical science which treats of the anatomy, physiology, pathology, therapeutics, and hygiene of the oral cavity, of the tongue, teeth, and adjacent structures and tissues, and of the relationship of that field to the entire body. —**stomatolog'ic**, *adj.*

sto"ma·to·ma·la'ci·a (-muh·lay'shee·uh, -see·uh) [*stoma*; G. *malakia*, softness]. Sloughing or degeneration of the structures of the mouth.

sto"ma·to·me'ni·a [*stoma*; G. *mēn*, month]. Vicarious bleeding in the mouth, associated with menstrual disorders.

sto"ma·to·me'ni·a... **sto"ma·to'mi·a** (sto"muh·to'mee·uh, stom"uh-) [*stoma*; G. *tomē*, to cut]. A general term for the incision of a mouth, as of the uterus.

sto"ma·tot'o·my [*stoma*; G. *tomē*, a cutting]. Incision of the os uteri.

sto"ma·to·my·co'sis (sto"muh·to·migh·ko'sis, stom"uh·to-) [*stoma*; G. *mykēs*, fungus; -*osis*, condition]. A disease of the mouth due to fungi, especially *Candida albicans*. See *thrush*, 1.

sto ma to ne cro sis. See gangrenous *stomatitis*.

sto ma to no ma [*stoma*, G *nomē*, feeding] Gangrene of the mouth also called *stomatonecrosis*.

sto ma top thy (sto muh top th-ee, stom uh-) [*stoma*, G *pathos*, disease]. Any disease of the mouth.

st ma to plas"ty (sto muh-to-plas tee, stom uh-to- sto-mat o-) [*stoma*, G *plassein*, to form]. A plastic operation upon th mouth. —**stomatoplas tic**, *adj*

st ma tor rha gi a (-ray juh, jee-uh, radj uh, -radj ee-uh) [*stoma*, G *rhēgnynai*, to burst forth]. Copious hemorrhage from the mouth.

sto ma t scope (st muh-to-scope stom uh to- sto-mat o-) [*stoma*, G *skopein*, to examin]. An instrument used for inspecting the cavity of the mouth.

sto ma to sis [*stoma*, G *-osis*, condition]. Disease of the mouth.

sto ma tot o my [*stoma*, G *tomē*, a cutting] Incision of the os uteri.

sto-men"or-rha gi a (sto-men o-ray'juh, -jee-uh, -radj'uh, -radj ee uh, sto men o-) [*stoma*; G *mēn*, month *rhēgnynai*, to burst forth]. Vicarious bleeding in the mouth, associated with abnormal menstruation.

sto"mo de um (st mo-dee m, stom o-) [*stoma*, G. *hodaios* on the way]. The primitive oral cavity of th embryo an ectodermal fossa formed by the growth of the facial processes about the buccopharyngeal membrane. —**stomodeal**, *adj*.

sto-mos chi si (sto-mos'ki sis) [*stoma*, G *schisis*, cleavage]. Fissure of the mouth. There are the following special types cheiloschisis, cleft lip; gnathoschisis, cleft j w uranoschisis or palatoschisis, cleft palate staphyloschisis, cleft soft palate uvula fissa, cleft uvula.

Sto mox'ys [*stoma*; G *oxys*, sharp]. A genus of bloodsucking flies of the family Muscidae. It is similar to the common house fly

S. calcitrans. The common stable fly which aids in the transmission of trypanosomiasis and anthrax, and serves as an intermediate host of the nematode *Habronema*, parasitic in the stomach of the horse.

Stone Harvey Brinton [*American surgeon*, 1882–]. Known for his operation for the relief of anal incontinence, in which he used strips of fascia lata, passing them through the gluteal muscles and encircling the anus by two loops running in opposite directions. The patient uses the action of the gluteal muscles for control.

stone [AS. *stān*]. 1 A hardened mass of mineral matter See *calculus*. 2. An English unit of weight, 14 lb.

blue s. Copper sulfate crystals.

kidney s. See under *kidney*.

pulp s. See *denticle*, 2.

sto cut"ter's dis ease See *silicosis*.

st ne search er An instrument equipped with porcelain tip, used to explore the urinary bladder bile duct, etc for concretions now little used

Stookey Byron Polk (1887) American neurosurgeon who described test for spinal subarachnoid block, called Queckenstedt-Stookey *test*. See also Stookey *reflex*.

stool [AS. *stōl*]. 1 Evacuation of th bowels. Also see *allochezia*. 2. In the plural, *feces*.

acholic stools. (a) Light gray or clay-colored stools having the consistency of putty which follow obstruction of the flow of bile into the duodenum. The color is due to the presence of the normal urobilin The stools show under the microscope an abnormal amount of fat. This form of acholic stool is accompanied by icterus and choluria. (b) Stools of the same color may occur in noninterference with the flow of bile, but then th stools do not contain an excessively large amou t of fat and f tty acids

bilious stools. The discharge is green-colored, as after large doses of calomel.

caddy stools. Yellow fever stools which resemble fine, dark, sandy mud.

fatty stools. Stools in which fat is present; due to pancreatic disease.

lead-pencil stools. Fecal discharges of very small caliber Usually due to general nervousness causing local intestinal spasm, or to stricture or stenosis of the descending colon, sigmoid, or rectum. Also called *ribbon stools*.

mucous stools. Stools containing mucus They indicate the existence of intestinal inflammation

pea-soup stools. The peculiar liquid evacuation of typhoid fever

rice-water stools. The stools of cholera, in which there is a copious serous exudation containing detached epithelium.

sheep-dung stools. The small, round, hard masses, similar to the dung of sheep, due to atony of the intestine; this form of passage may occur in the so-called starvation or hunger evacuation which is found in cases of inanition.

tarry stools. Stools having the color and consistency of tar usually due to hemorrhage into the intestinal tract but also produced by iron, bismuth, barium, or other medication.

stop cock" [AS. *stoppian*, *cocc*]. A turning cock connected with pipe, for regulating the flow of gases or liquids.

stop page [*stoppian*]. Cessation of flow or action, closure or stenosis.

sto rax [L., from G *styrax*] (*styrax*) A balsam obtained from the trunk of *Liquidambar orientalis*, or of *L. styraciflua*; occurs as semiliquid, grayish to grayish brown, sticky opaque mass, or semisolid, sometimes a solid mass, softened by gentle warming; insoluble in water but is soluble, usually incompletely in an equal weight of warm alcohol. It consists largely of storesin, which is present in two forms—alpha and beta storesin—both free and in the form of cinnamic ester Cinnamic acid and its esters are also present. Of the esters, cinnamyl cinnamate, or styracin, is present in greater proportion. Other esters present are phenylpropyl cinnamate, ethyl cinnamate, and benzyl cinnamate. It also contains hydrocarbon called styrol or styrene, small amount of levorotatory oil, and traces of vanillin. Storax stimulating expectorant and was at one time used in various catarrhs, but is now seldom used except as an ingredient of compound benzoin tincture Externally as an ointment, it has been used as parasiticide in scabies and other parasitic infections. Also called *liquid s*.

sto res'in (sto rez in) A hard resin from storax.

storm [AS.]. Term sometimes used for sudden exacerbation of symptoms or crisis in disease

renal s. A peculiar form of neuronal attack referred to the kidney frequently seen in patients suffering from aortic regurgitation. There is sudden excruciating pain over the region of the kidney like renal colic, but without nausea or retraction of the testis and with the passage of normal urine.

thyroid s. Severe, acute thyrotoxicosis

stovaine. Trade-mark for amylocaine hydrochloride

Stovall a d Black stain. See under *stain*.

stovarsol. Trade-mark for acetarsone.

STP Standard temperature and pressure

STPD Standard temperature, pressure, dry (0° C 760 mm Hg)

stra"bi-lis'mus (stray"bi-lis'mus, strab"i-). See *strabismus*.

stra'bism (stray'biz-um, strab'iz-um). See *strabismus*.

stra"bis-mom'e-ter. Strabometer.

stra"bis-mom'e-try. Strabometry.

stra-bis'mus (stra-bis'mus) [*strabismos*]. Squint; that abnormality of the eyes in which the visual axes do not meet at the desired objective point, in consequence of incoordinate action of the extrinsic ocular muscles. Syn., *heterotropia*. —**strabismal, strabismic,** *adj.*

alternating s. One in which either eye fixes alternately.

anoopsia s. See *sursumvergent s.*

apparent s. A subjective strabismus in which the patient sees angle alpha as too large or too small according to his degree of myopia or hyperopia.

bilateral s. See *alternating s.*

concomitant s. One in which the squinting eye has full range of movement.

convergent s. Esotropia; the squinting eye is turned to the nasal side.

divergent s. Exotropia; the squinting eye is turned to the temporal side.

external s. See *divergent s.*

Hirschberg's test for s. A rough estimate of the amount of strabismus. See under Julius *Hirschberg*.

internal s. See *convergent s.*

paralytic s. Due to paralysis of one or more muscles.

senile s. See Peyronie's *disease*.

spastic s. Due to spastic contraction of an ocular muscle.

sursumvergent s. One in which the visual axis is directed upward.

vertical concomitant s. A squint in which one eye turns up, the deviation remaining constant in all fields of vision.

stra-bom'e-ter [G. *strabos*, squinting; *metron*, measure]. An instrument for the measurement of the deviation of the eyes in strabismus. Syn., *strabismometer*.

stra-bom'e-try [*strabos*; *metron*]. The determination of the degree of ocular deviation in strabismus. Syn., *strabismometry*.

strab'o-tome [*strabos*; G. *tomos*, cutting]. A knife used for strabotomy. *Obs.*

stra-bot'o-my [*strabos*; G. *tomē*, a cutting]. An operation for the correction of strabismus. *Obs.*

strag'u-lum. A layer of gray matter lying lateral to the brachium conjunctivum and containing several small fiber tracts.

strain [OF. *estreindre*, from L. *stringere*, to draw tight]. 1. Excessive stretching; overuse of a part. 2. The condition produced in a part by overuse or wrong use, as eyestrain. 3. A group of organisms closely related to each other characterized by some common peculiarity.

Flury s. A rabies strain 3, used in prophylactic vaccination of dogs. It has been modified by prolonged cultivation in chick embryos.

Lansing s. A mouse-adapted strain of the type II (Lansing) poliomyelitis virus.

ventricular s. A term used in electrocardiography as either (a) left-ventricular strain, designating the effect of increased left-ventricular work as caused by hypertension or aortic valve disease, possibly reversible if the hypertension is removed (see left axis deviation); or (b) right-ventricular strain, designating the effect of increased right-ventricular work as caused by pulmonary embolism (acute) or pulmonary disease or pulmonic stenosis (chronic). See right axis deviation.

strain, *v.* In pharmacy, to separate insoluble substances from liquid; to filter.

strait [OF. *estreit*, from L. *stringere*]. A narrow or constricted passage, as the inferior or superior strait of the pelvis.

strait'jack"et. A strong jacket placed on the insane or delirious to prevent injury to themselves or others.

stramid. Trade name for a brand of sulfanilamide.

stra-mo'ni-um [NL.] (*stramonium*). The dried leaf and flowering top of *Datura stramonium* (including *Datura tatula*). It contains the alkaloid daturine, which is identical with hyoscyamine, and traces of scopolamine. The general physiologic and therapeutic action of stramonium is similar to that of belladonna. Stramonium has also been used in the treatment of asthma by smoking in cigarettes or by mixing with potassium nitrate and burning and inhaling the vapors. Dose, 0.06–0.2 Gm. (1–3 gr.). Syn., *Jamestown weed*, *Jimson weed*.

stran'gle [G. *strangalē*, halter]. Choke or throttle by compression of the glottis or trachea.

stran'gles (*strangalē*). An infectious disease of solipeds involving the nasal passages and related structures, characterized by a purulent inflammation with involvement of the lymphatic system of the head and, in some instances, accompanied by difficult breathing. Caused by the organism *Streptococcus equi*.

stran"gu-la'tion [L. *strangulatio*, from *strangalē*]. 1. Asphyxiation due to obstruction of the air passages, as by external pressure on the neck. 2. Constriction of a part producing arrest of the circulation, as strangulation of a hernia. —**strangulated,** *adj.*

stran'gu-ry [G. *stranx*, drop; *ouron*, urine]. Painful urination, the urine being voided drop by drop.

strap [AS. *stropp*, from G. *strophos*, band]. A long band, as of adhesive plaster.

strap. To compress or support a part by means of bands, especially bands of adhesive plaster.

Strassmann, Paul Ferdinand [German gynecologist, 1866–1938]. Described a reaction which indicates that the placenta has not become detached in the third stage of labor. Pressure on the fundus uteri is transmitted to the umbilical vein, which becomes engorged; called *Strassmann's phenomenon*.

strat"i-fi-ca'tion [L. *stratum*, covering; *facere*, to make]. Arrangement in layers.

strat'i-fied [*stratum*, *facere*]. Arranged in layers.

stra-tig'ra-phy. Sectional radiography.

strat'o-sphere (strat'o-sfeer, stray'to-) [*stratum*; G. *sphaira*, sphere]. The atmosphere above the tropopause, where temperature changes are small and winds essentially horizontal.

stra'tum (strat'um, stray'tum) (pl. *strata*) [L.]. A layer.

central gray s. The layer of gray matter surrounding the cerebral aqueduct in the midbrain, and continuous with the gray matter surrounding the fourth ventricle and that covering the rhomboid fossa.

optic s. The third layer of superior colliculus, composed of optic fibers from the retina and lateral geniculate body which enter through the brachium of the superior colliculus and end mainly in the stratum cinereum.

s. basale. The basal layer of the endometrium not subject to loss during menstruation or at the termination of pregnancy.

s. cinereum. The second layer of the superior colliculus, composed of radially arranged cells which receive the corticotectal fibers and most of the optic fibers.

s. compactum. The surface layer (about one-fourth) of the decidua parietalis.

s. corneum. The layer of keratinized cells of the epidermis.

s. cylindricum. The basal-cell layer of tratified epithelium, especially of stratified squamous epithelium, as the epidermis.

s. disjunctum. The outermost layer of desquamating cells of the stratum corneum of the epidermis.

s. germinativum. The deeper layer of the epidermis in which cell proliferation and growth take place. Syn., *Malpighian layer.* Formerly called *s. mucosum, rete mucosum.*

s. granulosum. A layer of minute cells or one of cells containing many granules, especially the layer containing keratohyalin granules in volar epidermis.

s. intermedium. The thin zone of the enamel pulp which lies next to the ameloblasts and consists of cells which do not become part of the stellate reticulum.

s. lemnisci. The deepest layer of the superior colliculus, composed of cell bodies and nerve fibers, which receives the spinocollicular tract and sends out fibers mainly to th reticular formation, oculomotor nucleus, medulla oblongata, and spinal cord.

s. lucidum. A translucent layer of the epidermis consisting of irregular transparent cells with traces of nuclei.

s. Malpighii. See *s. germinativum.*

s. papillare. The zone of fine-fibered connective tissue within and immediately subjacent to the papillae of the corium.

s. reticulare. The coarse-fibered connective tissue of th corium.

s. spinosum. Prickle-cell layer.

s. spongiosum. The deeper layer (about three-fourths) of the decidua parietalis.

s. submucosum. The thin layer of smooth muscle of the myometrium adjacent to the endometrium.

s. subserosum. The thin layer of smooth muscle of the myometrium adjacent to the serous coat.

s. supravasculare. The layer of muscle of th myometrium between the stratum vasculare and the stratum subserosum.

s. vasculare. The thickest layer of muscle in the myometrium next to the stratum submucosum.

s. zonale of midbrain. The most superficial layer of the superior colliculus, composed of fibers which arise from the occipital cortex and enter the colliculus through the brachium of the superior colliculus.

s. zonale of thalamus. A thin plate of nerve fibers covering the thalamus and giving it whitish color.

Straus reaction. See under *reaction.*

Strauss's phenomenon. The administration of fatty foods by mouth results in an increase of fatty constituents in the effusion of chylous ascites.

Strauss's test for lactic acid. See under *test.*

Straus test for glanders. See under *test.*

straw'ber"ry mark. A congenital hemangioma clinically characterized by its raised, bright-red, soft, often lobulated ppearance. Syn., *nevus vasculosus.*

streak [AS *strica*]. 1 A furrow line, or stripe. 2. I *bacteriology,* the process of distributing the inoculum over the surface of solid culture medium. Cultures thus obtained are called streak cultures.

angioid s. A dark, linear streak seen in the retina with the ophthalmoscope in individuals having pseudoxanthoma elasticum. Occasionally followed by complete degeneration of the macula.

medullary s. See medullary plate.

meningitic s. See *tache cérébrale.*

primitive s. A dense, opaque band of ectoderm in the bilaminar blastoderm associated with the morphogenetic movements and proliferation of the mesoderm and notochord. It indicates the first trace of the embryo.

reflex s. A shining, white streak running along the vessels in the retina. It is due to the reflection of light from the anterior surface of the column of blood.

stream [AS. *stréam*]. Flow especially in a definite direction applied to movement in protoplasm.

Streatfeild, John Fremlyn [*English ophthalmologist,* 1828–66]. Described his operation for entropion in which he removed wedge-shaped strip from the tarsal plate; called *Streatfeild' operation.*

Streeter, George Linius [*American anatomist and embryologist,* 1873–1948]. Described his theory stating that the cause of intrauterine amputation is intrinsic and due to focal deterioration, not the result of constriction by the umbilical cord or by amniotic bands called *Streeter' theory.* Made other notable contributions to embryology and the study of placentation.

strem ma [G twist]. A sprain. *Obs.*

streph"o-sym bo'li-a (stref"o-sim-bo'lee uh, -sim-bol'ee-uh) [G. *strephein,* to twist; *symbolon,* symbol]. Difficulty of children in learning to read. Inability to distinguish between similar letters, as p and q or n and u. It is the result of mixed motor dominance of right and left cerebral hemispheres.

strep'i tus [L.]. A sound, noise.

coriaceous s. An auscultatory sound resembling the creaking of leather

s. aurium. See *tinnitus.*

s. uteri. See uterine *souffle.*

s. uterinus. Uterine bruit.

strep o-gen'in. A factor possibly peptide derivative of glutamic acid, reported to exist in certain proteins, acting as growth stimulant to bacteria and mice in the presence of completely hydrolyzed protein; also called *streptogenin.*

streptamide. Trade name for brand of sulfanilamide.

strep"ti-ce mi a [G *streptos,* curved ; *septos,* putrefactive *haima,* blood]. Streptococcal septicemia.

strep'ti-dine. $C_8H_{18}N_6O$ 1,3-Diguanidino-2,4,5,6-tetrahydroxycyclohexane, obtained when streptomycin undergoes acid hydrolysis. In the streptomycin molecule it is glycosidally linked to streptobiosamine.

strep'tin. An antibiotic substance derived from species of *Streptomyces.* Its action is similar to that of streptothricin, but it is more active against staphylococci and micrococci.

strep'to- strept [*streptos*]. A combining form meaning *twisted* or *curved* or *streptococcal*

strep"to-an gi'na (strep to an-jye'nuh, -an-ji-nuh) [*streptos,* L. *angina,* quinsy]. Streptococcal sore throat; septic sore throat; pseudomembranous deposit in the throat due to streptococci.

strep"to ba-cil'lus [*streptos;* L. *bacillum,* little stick]. A bacillus which remains attached end to end, resulting in the formation of chains. It constant characteristic of some strains and appears typically in others.

strep"to-bi os-amine. $C_{13}H_{23}NO_9$. A nitrogen-containing disaccharide obtained when streptomycin undergoes acid hydrolysis; in the streptomycin molecule it is glycosidally linked to streptidine.

streptocide. Trade-mark for brand of sulfanilamide.

strep to-coc'cal strep to coc cic (strep"to-

cock'sick) [streptos; G. kokkos, berry]. Relating to, or due to, streptococci.

strep"to·coc·ce'mi·a (-cock·see'mee·uh) [streptos; kokkos; G. haima, blood]. The presence of streptococci in the blood.

strep"to·coc'ci. Members of the genus *Streptococcus*. The streptococci have been classified into (1) alpha, beta, and gamma s. by type of reaction of colonies on blood agar (Brown); (2) groups A through O (Lancefield method) by the specific antigenic complex carbohydrates (C-substances) elaborated; (3) *hemolytic*, *viridans*, *enterococci*, and *Streptococcus lactis* by their immunologic, biochemical, and physiologic characters.

alpha s. A group which produces greenish or brownish discoloration of blood agar. Syn., green s. See also viridans s.

beta s. A group which produces clear hemolysis on blood agar. See also hemolytic s.

gamma s. A group which produces no change on blood agar, including organisms of low pathogenicity and many anaerobic strains, often isolated as secondary invaders. Syn., *Streptococcus anhemolyticus*, indifferent s.

green s. Alpha s.

hemolytic s. A group which produces complete hemolysis on blood agar. It includes Lancefield groups A, B, C, E, F, G, H, K, L, M, O. Occasionally strains not producing complete hemolysis elaborate C-substance identical with the above Lancefield groups and are therefore classified in that group. Group A and less commonly groups C and G are pathogenic for man. Group A is subdivided into 40 or more types on the basis of type-specific protein (M-substance) produced by matt colonies; specifically, types 12 and 4 are thought to be associated with acute glomerulonephritis. Members of this group also cause scarlet fever, erysipelas, rheumatic fever, sore throat, and other infections. Syn., *Streptococcus pyogenes*, *Streptococcus epidemicus*.

indifferent s. Gamma s.

viridans s. A group including strains not causing beta hemolysis, although many members cause alpha hemolysis; they do not elaborate C-substance and therefore cannot be classified by the Lancefield method. Both pathogenic and saprophytic organisms are involved, the former often being isolated from subacute bacterial endocarditis, bronchopneumonia, urinary-tract infections, and focal inflammations. See also alpha s.

Strep"to·coc'cus [streptos; kokkos]. A genus of Gram-positive, chain-forming bacteria of the tribe Streptococceae, family Lactobacteriaceae. See streptococci.

S. anhemolyticus. See gamma streptococci.

S. epidemicus. See hemolytic streptococci.

S. lactis. A group all the members of which produce group N C-substance and are nonpathogenic for man. They readily coagulate milk and are very important in the dairy industry.

S. pyogenes. Old term for hemolytic streptococci.

strep"to·co·ly'sin [streptos; kokkos; G. lysis, loosing]. See streptolysin.

strep"to·der"ma·ti'tis [streptos; G. derma, skin; -itis, inflammation]. Inflammation of the skin due to streptococci.

strep"to·dor'nase. An enzyme, occurring in filtrates of cultures of certain hemolytic streptococci, capable of hydrolyzing desoxyribonucleoproteins and desoxyribonucleic acid; used, along with streptokinase, for enzymatic debridement of infected tissues. Syn., *Streptococcal desoxyribonuclease*. Abbreviated, SD. See varidase.

strep"to·gen'in. See streptogenin.

strep"to·he·mo·ly'sin. See streptolysin.

strep"to·hy'dra·zid. A product obtained by condensation of streptomycin and isoniazid. In tuberculosis protection studies in animals, it has been found to be at least as effective as combined therapy with streptomycin and isoniazid.

strep"to·ki'nase. A catalytic enzyme, component of the fibrinolysin occurring in cultures of certain hemolytic streptococci. The enzyme activates the fibrinolyzing system present in the euglobulin fraction of human blood. With streptodornase, it is used for enzymatic debridement of infected tissues. Abbreviated, SK. See varidase.

strep'to·lin. An antibiotic agent isolated from cultures of an actinomycete designated as *Streptomyces* No. 11. It has been separated into two components, designated *streptolin A* and *streptolin B*. The antibiotic is active against a wide range of Gram-positive and Gram-negative bacteria, but appears to be too toxic to be therapeutically useful.

strep"to·ly'sin (strep-to-lye'sin, strep-tol'i-sin) [streptos; G. lysis, loosing]. A group of hemolysins produced by *Streptococcus pyogenes*. Streptolysin O is one of a group of oxygen-labile and antigenically related toxins, including the theta toxin of *Clostridium perfringens*, the tetanolysin of *Clostridium perfringens*, and the pneumolysin of *Diplococcus pneumoniae*. Streptolysin S is an oxygen-stable hemolysin, probably not antigenic, and separable from the streptococcal cells by serum extraction.

Strep"to·my'ces [streptos; G. mykēs, fungus]. An aerobic genus of fungus whose species are saprophytic soil forms. Several species are sources of antibiotics: *S. aureofaciens* elaborates chlortetracycline (aureomycin); *S. erythreus*, erythromycin; *S. fradiae*, neomycin; *S. griseocarneus*, hydroxystreptomycin; *S. griseus*, streptomycin; *S. lavendulae*, streptothricin; *S. rimosus*, oxytetracycline (terramycin); *S. venezuelae*, chloramphenicol (chloromycetin).

strep"to·my'cin [streptos; G. mykēs, fungus]. $C_{21}H_{39}N_7O_{12}$. A water-soluble antibiotic obtained from *Streptomyces griseus*. It consists of a hydroxylated base, streptidine, glycosidically linked to the disaccharidelike molecule streptobiosamine. It is active against a variety of organisms including *Mycobacterium tuberculosis*, and has been successfully employed in the treatment of tularemia, *Hemophilus influenzae* infections, certain types of meningitis, bacteremia due to Gram-negative organisms, certain urinary-tract infections, and tuberculosis. Resistant strains of organisms have appeared. The antibiotic may produce toxic effects, of which those involving the eighth nerve are the most serious. It is administered subcutaneously, intramuscularly, intrathecally, and, sometimes, by intravenous drip; various salts, such as the hydrochloride, sulfate, or calcium chloride complex, are used therapeutically.

strep"to·sep"ti·ce'mi·a [streptos; G. sēptikos, putrefactive; haima, blood]. Septicemia due to streptococci.

strep"to·so'mus [streptos; G. sōma, body]. A nonhuman form of celosoma in which the spine is twisted so that the legs are displaced laterally.

strep"to·thri'cin (strep-to-thry'sin, -thrις'in) [streptos; G. thrix, hair]. An antibiotic substance from *Streptomyces lavendulae*. It is an organic base and is soluble in water, dilute mineral acids, and acid alcohol. It is insoluble in ether and chloroform. Streptothricin is active against various Gram-negative and some Gram-positive bacteria; toxicity is limited and it is active in vivo.

strep to thri co sis [*streptos; thrix;* G. *-ōsis*, condition]. A disease resulting from infection with streptothrix.

Strep'to thrix [*streptos; thrix*]. A genus which is not clearly differentiated from *Actinomyces*.

S. muris ratti. Causative agent of epidemic arthritic erythema. Also called *Actinomyces muris ratti, Streptobacillus moniliformis*, and *Actinomyces muris*.

strep"t thry'cin. Streptothricin.

streptozone. Trade-mark for brand of sulfanilamide.

stress [L. *stringere*, to bind tight]. 1. Force exerted by load, pull, pressure, or other mechanical means; also the exertion of such force. 2. *In medicine*, any stimulus or succession of stimuli of such magnitude as to tend to disrupt the homeostasis of the organism; when mechanisms of adjustment fail or become disproportionate or incoordinate, the stress may be considered an injury resulting in disease, disability, or death. See also general adaptation *syndrome, injury*. 3. *In dentistry*, the force exerted by the lower teeth against the upper during mastication.

stress in-con ti nence. See under *incontinence*.

stress phe nom non. See general adaptation *syndrome*.

stretch [AS. *streccan*]. Draw out to full length.

stretch er [*streccan*]. See *litter*.

Neil Robertson s. A canvas litter strengthened with slats of split bamboo. It is used to transport an injured man aboard vessel.

stri (pl. *striae*) [L., *furrow*]. 1. Streak, stripe, narrow band. 2. Fibrinoid.

lateral longitudinal s. The lateral one of the two long bundles of fibers on the upper surface of the corpus callosum.

medial longitudinal s. The medial one of the two long bundles of fibers on the upper surface of the corpus callosum. Syn. *stria Lancisii*.

s. albicans gravidarum. Stria atrophica due to pregnancy.

s. atrophica. See *lineae albicantes* under *linea*.

s. cerebellaris. See *s.* medullaris.

striae acusticae. Inaccurate term for several fiber strands (striae medullares) transversely crossing the intermediate portion of the floor of the fourth ventricle. The true acoustic fibers lie ventral to the visible fibers. Also called *striae of Piccolomini*.

striae gravidarum. See *lineae albicantes* under *linea*.

s. Lancisii. Medial longitudinal stria.

s. medullaris. Any of the white fibers originating in the acoustic tubercle and the surrounding region which traverse the intermediate portion of the rhomboid fossa to pass over the dorsal surface of the restiform body and area acustica and disappear in the median sulcus of the fossa. Formerly called *s. of Held, s. of Monakow*; also called *s. acustica, s. cerebellaris, s. medullaris acustica*.

s. medullaris thalami. A band of white matter on the dorsal surface of the thalamus.

s. of Baillarger. One of two well-defined, white bands in the cerebral cortex, containing large numbers of myelinated nerve fibers running parallel to the surface of the cortex; in the region of the calcarine fissure, the outer band is known as the stripe of Gennari, the inner band being absent. Formerly called *lines of Baillarger*.

s. of Gennari. See under *Gennari*.

s. of Held. Old term for *stria medullaris*.

s. of Lancisi. Medial longitudinal stria.

s. of La ghans. The discontinuous zone of fibrinoid on the chorionic plate present during the first half of pregnancy.

s. of Monakow. Old term for *stria medullaris*.

s. of Nitabuch. The first fibrinoid to appear in the placenta, located in the decidua basalis and capsularis below the exposed surface at the boundary of the fetal and maternal tissues.

s. of Rohr. The fibrinoid found on the maternal surface of the intervillous spaces and on the villi.

s. olfactoria. One of the two divisions, lateral and medial, of the olfactory tract, containing fibers continued from the tract and covered by thin layer of gray matter; also called *medial and lateral olfactory gyri*.

s. semicircularis. See *s.* terminalis.

s. terminalis. A longitudinal bundle of nerve fibers lying in the terminal sulcus. It arises in the amygdaloid nucleus and terminates mainly in the preoptic region and hypothalamus, although some fibers cross in the anterior commissure to the amygdaloid nucleus of the opposite side. Syn. *s. semicircularis*.

s. vascularis. The vascular upper part of the spiral ligament of the ductus cochlearis; also called *s. vascularis of Huschke*.

stri'a ted (stry'ay-tid) [L. *striare*, to furnish with channels]. Striped, as striated muscle.

stri tum (stry-ay'tum) [*striare*]. The corpus striatum. —**striatal**, *adj.*

Stricker, Salomon [German pathologist, 1834-98]. Contributed to the knowledge of tissue anatomy, cell proliferation, and the histology of the cornea. The first to describe vasodilatation following stimulation of the posterior nerve roots (1876).

stric ture [L. *strictura*, compression]. A narrowing of the lumen of canal or hollow organ, as the esophagus, pylorus, ureter, or urethra, the result of inflammatory or other changes in its walls, and, occasionally, of external pressure. It may be temporary or permanent, depending upon the cause and the course of the disease producing it.

annular s. A ringlike obstruction produced by contracture which involves the entire circumference of canal, intestine, etc.

bridle s. A stricture caused by delicate band stretched across the urethral lumen.

spasmodic s. That involving the membranous urethra and caused by muscular spasm of the sphincter muscle, and usually associated with urethritis.

stri dor [L., harsh sound]. A peculiar harsh, vibrating sound produced during respiration.

congenital laryngeal s. Respiratory crowing heard in babies.

inspiratory s. The sound heard in inspiration through spasmodically closed glottis.

laryngeal s. Stridor due to laryngeal stenosis.

s. dentium. Grinding of the teeth.

s. serraticus. A sound like sharpening saw, sometimes produced by expiration through tracheotomy tube.

strid'u lous [L. *stridulus*, creaking]. Characterized by stridor, as stridulous laryngismus.

strin gent [L. *stringere*, to bind]. Binding.

string-gal"va nom ter. Instrument for measuring intensity and direction of minute currents. See *electrocardiograph*.

string'halt" (string'hawlt") [AS. *streng*; *healt*]. An involuntary convulsive movement of muscles in the hind leg of the horse; the leg is suddenly raised from the ground and lowered again with unnatural force. Also called *springhalt*.

strip [AS. *strypan*]. Press with milking movement so as to force out the contents of canal or duct.

stripe [MD.]. A streak; discolored mark.

strip ping [AS. *strypan*]. 1. Uncovering; undressing. 2. In the plural, the last and richest milk

given at any one milking; so called because it is slowly removed by the milker who strips the teats between the fingers.

s. of the pleura. Removal of the lining membrane of the thorax of an animal used for food, to remove the traces of pleurisy and of tuberculosis.

stro'bic [G. *strobos*, whirling round]. Resembling, or pertaining to, a top.

stro-bi'la [G. *strobilos*, anything twisted]. 1. The segmented body of the adult tapeworm. 2. The whole adult tapeworm including the scolex.

strob"i-la'tion [*strobilus*]. The formation of scolids, disks, or joints by metameric division, gemmation, or fission.

strob'ile (strob'il, -ile, stro'bil, -bile) [*strobilus*]. 1. A multiple fruit whose seeds are enclosed by prominent scales, as a pine cone. 2. A strobila.

strob'il-oid, stro'bil-oid [*strobilus*; G. *eidos*, form]. Like a strobile.

stro-bi'lus [*strobilus*]. The adult tapeworm.

stro'bo-scope, strob'o-scope [*strobos*; G. *skopein*, to examine]. A device by which a moving object may appear to be at rest; a rapid motion may appear to be slowed, or motion can be depicted by a series of still pictures. The effect depends upon an accurately controlled, intermittent source of light or periodically interrupted vision. —stroboscop'ic, *adj.*

strob"o-ster'e-o-scope. See stereostroboscope.

Stroganoff, Vasilii Vasilievich [*Russian obstetrician*, 1857-1938]. Known for his important contributions to the knowledge of the pathology and treatment of puerperal eclampsia (1900). Advocated conservative measures and the use of narcotics to arrest convulsions; called *Stroganoff method*.

stroke [ME. *strok*]. 1. A sudden and severe seizure or fit of disease. 2. A popular term for apoplexy. apoplectic s. See apoplexy.

back s. The recoil of the ventricles of the heart at the moment the blood is discharged into the aorta.

heat s. See heat prostration.

light s. Narcosis or death due to exposure to light. paralytic s. Sudden loss of muscular power from lesion of the brain or spinal cord.

s. volume. The volume of blood ejected by the left ventricle during a single systole.

stro'ma [G., bed]. The supporting framework of an organ, including its connective tissue, vessels, and nerves as contrasted with the epithelial or other tissues performing the special function of the organ, the parenchyma. —stromal, *adj.*

stro"mal my-o-si'tis. See stromal endometriosis.

stro'ma-tin, stro-ma'tin. The protein of the stroma of erythrocytes.

stro"ma-to'sis. See stromal endometriosis.

Stromeyer, Georg Friedrich Ludwig [*German military surgeon*, 1804-76]. Advocated tenotomy of the Achilles tendon for clubfoot (1833). Described a hinged leg splint, called *Stromeyer's splint*. An operation for liver abscess in which the pus is located by a cannula is called *Stromeyer's operation*.

stro'muhr (stro'moor) [Ger.]. An instrument for measuring the velocity of blood flow.

Strong, Richard Pearson [*American physician and pathologist*, 1872-1948]. Author with F. R. Stitt, of a standard work on tropical diseases and parasitology. A bacillus belonging to *Shigella paradysenteriae* is called *Strong's bacillus*.

Strong method. See Foell-Strong method.

Stron"gy-loi'de-a [G. *strongylos*, curved; *eidos*, form]. A superfamily of roundworms, of the suborder Strongylata, order Rhabditida. The genera *Ancylostoma* and *Necator* are included.

Stron"gy-loi'des (stron"ji-loy'deez) [*strongylos*; *eidos*]. A genus of nematode worms.

S. stercoralis. An intestinal parasite of man with the same distribution as hookworm. Other species are parasites of lower animals. Also called *S. intestinalis*.

stron"gy-loi-di'a-sis [*strongylos*; *eidos*; NL. *-iasis*, condition]. Infestation with one of the roundworms of the genus *Strongyloides*. Formerly called *anguilluliasis*.

stron"gy-loi-do'sis. See *strongyloidiasis*.

stron"gy-lo'sis. See *strongyloidiasis*.

stron'ti-a (stron'shee-uh). Strontium oxide.

stron'ti-um (stron'shee-um, stron'tee-um) [from *Strontian*, Scotland]. Sr = 87.63. A silver white to pale yellow malleable, ductile metal decomposes in water and alcohol. Its salts color a nonluminous flame brilliant crimson. It is stored under petroleum or other liquids not containing oxygen. Strontium is used only as a carrier of therapeutically active acids.

s. bromide (*strontii bromidum*). $SrBr_2.6H_2O$; occurs as colorless crystals. 1 Gm. dissolves in about 0.35 cc. of water; soluble in alcohol. Used in the treatment of epilepsy and allied conditions. It depends for its action upon the bromide ion. Dose, 1-2 Gm. (15-30 gr.)

s. iodide. $SrI_2.6H_2O$; occurs as colorless crystals or white granular powder; soluble in water. Sometimes used as a substitute for other iodides. See also under angiography.

s. peroxide. SrO_2; occurs as a white, odorless powder; almost insoluble in water but decomposed by it gradually with the evolution of oxygen. Used externally as an antiseptic in the form of a dusting powder or an ointment.

s. salicylate (*strontii salicylas*). $(C_6H_4.OH.COO)_2Sr.2H_2O$; occurs as a white, crystalline powder; 1 Gm. dissolves in about 19 cc. of water and in about 61 cc. of alcohol. Its use is identical with that of sodium salicylate, over which it has no advantage. Dose, 0.3-2.0 Gm. (5-30 gr.)

stro-phan'thi-din. $C_{23}H_{32}O_6$; a cardioactive, steroidal aglycone obtained by hydrolysis of glycosides, found in varieties of *Strophanthus* and related plants. Strophanthin and cymarin are two such glycosides that yield strophanthidin.

stro-phan'thin (*strophanthinum*). A glycoside or mixture of glycosides obtained from *Strophanthus kombé*; occurs as a yellowish white powder; soluble in water and dilute alcohol. Strophanthin is extremely poisonous. It can be separated into two portions, a crystalline and an amorphous fraction. The crystalline fraction can be separated into the glycosides *K*-strophanthin-α, and *K*-strophanthin-β. The amorphous fraction consists of glycosides, and the mixture is referred to as amorphous *K*-strophanthin. It is a cardiac stimulant, used like digitalis, but principally in emergencies by intravenous injection. Dose, intravenously 0.25-0.5 mg. ($\frac{1}{250}$-$\frac{1}{120}$ gr.)

G-s. See ouabain.

s. injection (*injectio strophanthini*). A sterile solution of strophanthin in water for injection. The commercially available injections of strophanthin vary in potency from 0.25 mg. to 1 mg. per cc.

stro-phan"tho-bi'ose. Disaccharide present in strophanthus.

strophanthone. Trade-mark for a preparation containing the active principles of strophanthus.

stro-phan'thus [G. *strophos*, twisted band, *anthos*, flower]. The dried ripe seed of *Strophanthus kombé* or of *Strophanthus hispidus*, deprived of the awns. The activity of strophanthus is due to several glycosides. See strophanthin. Strophanthus

belongs to that group of cardiac drugs of which digitalis is the type. Its effects upon the circulation are similar to that drug. It is more rapid in its action and less permanent than digitalis. It is used solely for its influence on the circulation, especially in cases of chronic heart disease. In urgent cases, th effects of strophanthus can be btained almost immediately by intravenous injection of its active principles. It is absorbed from the intestinal tract with much less regularity than digitalis and is, therefore, less certain in its effects. Dose, 0.016–0.065 Gm. (¼ 1 gr) Also called *s. seed*.

streph"o-ceph a lus [*strephos*, G *kephalē*, head]. A monster exhibiting strophocephaly

stroph"o-ceph' ly [*strephos*; *kephalē*]. A form of cyclopia in which there is marked deformity of the lower face, with partial or complete agnathia and synotia, astomia, and severe disturbance in the maxillary sphenoid, and temporal regions.

streph u lus [dim. from *strophos*]. A form of miliaria occurring in infants, and often unilateral. Also called *red gum*.

s. pruriginosus. An eruption characterized by disseminated, intensely itching papules. Also called *prurigo*

struck. An acute disease of sheep occurring in England, caused by *Clostridium perfringens*, type C.

struc'ture [L. *structura*, from *struere*, to erect] 1 The manner or method of the building up, arrangement, and formation of the different tissues and organs of the body or of complete organism. 2. An organ, part, or complete organic body —**structural**, *adj*.

stru'ma [L., scrofulous tumor]. Goiter

cast iron s. A rare form of chronic thyroiditis characterized by extreme fibrosis and fixation of the surrounding tissues.

Hashimot 's s. See lymphomatosa

metastasizing s. See follicular *carcinoma* of thyroid.

Riedel' s. Chronic thyroiditis. Also called *ligneous thyroiditis*, *woody thyroiditis*, *Riedel' disease*.

s. aberrata. A goiter of an accessory thyroid gland.

s. androblastoma of ovary See adrenocorticoid *adenoma* of the ovary

s. cibaria. Goiter due to the ingestion of goitrogens, such as cabbage and rape seed.

s. congenita. Congenital goiter

s. li gualis. The presence of thyroid glandular tissue in the region of the foramen caecum (linguae)

s. lymphomatosa. A very rare type of diffuse thyroid enlargement of unknown origin characterized by atrophy of the thyroid parenchyma, fibrosis, and lymphoid hyperplasia. Also called *Hashimoto s. lymphadenoid goiter*

s. maligna. See follicular *carcinoma* of thyroid.

s. medicamentosa. Goiter due to medicine, as potassium thiocyanate.

s. ovarii. A rare teratoma of the ovary containing thyroid tissue

s. ovarii luteinocellularis. See *luteoma*.

Strumia, Max Maurice [*American pathologist*, 1896–]. Introduced modification of Giemsa stain. See universal *stain*

stru'mi form [*struma*; L. *forma*, form]. Having the ppearance of struma.

stru mi priv' l (st oo mi-pri l troo-mip n -ol) **stru mi pri vous** (strōō mi pry vus, stroo-mip ri-vus) [*struma*; L. *privare* to deprive]. Deprived of the thyroid; due to removal of the thyroid thyroprival.

stru mi'tis [*struma*; G *-itis*, inflammation]. Inflammation of goitrous thyroid gland.

stru'mous [*struma*]. 1. Goitrous. 2 Scrofulous. *Rare*.

Strümpell, Ernst Adolf Gustav Gottfried [*German physician*, 1853–1925]. Described ankylosing spondylitis, also called *Strümpell-Marie disease* Described acute encephalitis of infancy called *Strümpell'* or *Strümpell-Leichtenstern disease*. Described pseudosclerosis, called *Strümpell-Westphal pseudosclerosis*. See also Strümpell' *sign*.

strych' ni a (strik'nee-uh) See *strychnine*.

strych'nine (strik nin, -neen, -nyne) (*strychnina*). $C_{21}H_{22}O_2N$ an alkaloid obtained chiefly from nux vomica; occurs as white, crystalline powder or as colorless, transparent crystals 1 Gm. dissolves in about 6420 cc. of water and in about 136 cc. of alcohol. Strychnine is powerful stimulant to the central nervous system, especially to the spinal cord and medullary centers. The effects on the cerebrum are relatively slight. Used as stimulant in cases of poisoning by the respiratory depressants. As circulatory stimulant, it is used in wide variety of conditions, such as surgical shock, poisoning by depressants as ether or alcohol, etc. Like other bitters, strychnine improves the appetite and digestion, but its use in this respect has been abused. Dose, 1 3 mg. ($\frac{1}{60}$–$\frac{1}{20}$ gr.)

s. nitrate (*strychninae nitras*). $C_{21}H_{22}O_2N_2 \cdot HNO_3$; occurs as colorless needles or white, crystalline powder; 1 Gm. dissolves in about 45 cc. of water and in about 150 cc. of alcohol.

s. phosphate (*strychninae phosphas*) $C_{21}H_{22}N_2O_2 \cdot H_3PO_4 \cdot 2H_2O$ occurs as white crystals or white powder; 1 Gm. is slowly soluble in about 30 cc. of water; it is slightly soluble in alcohol

s. sulfate (*strychninae sulfas*) $(C_{21}H_{22}N_2O_2)_2 \cdot H_2SO_4 \cdot 5H_2O$; occurs as colorless or white crystals or white, crystalline powder; 1 Gm. dissolves in 35 cc. of water and in 85 cc. of alcohol. Dose, 1–4 mg. ($\frac{1}{60}$–$\frac{1}{15}$ gr.)

strych"nin i za'tion (strik nin-i-zay'shun, -ny-zay'shun) [G *strychnos*, sleepy nightshade] 1. The condition produced by large doses of strychnine or nux vomica. 2. Topical application of strychnine to areas of the central nervous system to increase nervous excitability and thus facilitate the study of neuron connections. See also physiological *neuronography*.

Strych nos (strik'nos) [*strychnos*]. A genus of the Loganiaceae of which the most important is *S.* nux-vomica. See nux vomica.

stul ti'ti a (stul-tish ee-uh) [L.]. Foolishness; dullness of intellect. *Obs*.

stump [ME. *stumpe*]. The extremity pedicle, or basis of the part left after surgical amputation, excision, or blation.

s. of eyeball. The remainder of the globe after excision of an anterior staphyloma or after other capital operation on the globe that deprives it of vision.

s. of tooth. That part remaining after removal or destruction of the crown.

stun [OF *estoner*]. Render temporarily insensible, as by blow

stunt'ing. The arrest of the normal growth and development of an organism. See also *dwarf*

stupe [G *stypē*, the coarse fiber of hemp] A cloth used for applying heat or counterirritation; especially cloth wrung out of hot water and sprinkled with counterirritant, as turpentine-stupe.

stu"pe-fa cient [L. *stupefacere*, to make senseless]. Narcotic.

stu pe fac'tion [*stupefacere*]. 1 Stupor 2 The process of succumbing t stupor

stu"pe-ma ni-a [L. *stupere*, to be struck senseless; G. *mania*, madness]. Mental stupor *Obs*.

stu·pid'i·ty See *amentia*.
stu'por [L.]. 1. The condition of being but partly conscious or sensible; a condition of insensibility. 2. Mutism without lack of sensorial clarity. —**stuporous**, *adj.*
 anergic s. Stupor with immobility. Syn., *stuporous insanity*.
 delusional s. Melancholic dullness of mind, with delusions.
 epileptic s. The stupor following an epileptic convulsion.
 lethargic s. See *trance*.
 s. formicans. Formication.
 s. melancholicus. The stupor found in association with melancholia.
 s. militaris. Paresthesia of the fingers and toes in connection with military fever.
 s. vigilans. Catalepsy.
stur'dy See *staggers*.
Sturge-Weber-Dimitri disease. See *nevoid amentia*.
Sturgis, Cyrus Cressey [American physician, 1891–]. Demonstrated, with Raphael Isaacs, that the stomach contains a factor which is of benefit in the treatment of pernicious anemia (1929).
stu·rine (stew'reen, -rin). A protamine obtained from the spermatozoa of the sturgeon.
Sturmdorf, Arnold [American gynecologist, 1861–1934]. Introduced an operation for diseased endocervix, by conical excision of the diseased area. Called *Sturmdorf's operation*.
stut'ter·er [ME. *stutten*]. One who stutters. The interiorized stutterer wants to avoid stuttering; the exteriorized stutterer wants to express himself. —**stut'ter**, *v.*
stut'ter·ing [*stutten*]. A hesitation in speech due to an inability to enunciate the syllables without repeated efforts. See *stammering*.
 urinary s. Hesitancy and involuntary interruptions in urination.
Stuttgart disease. See under *disease*.
sty, stye. See *hordeolum*.
sty'let (sty'lit, sty·let') [G. *stylos*, pillar]. 1. A wire inserted into a soft catheter or cannula to secure rigidity. 2. A fine wire inserted into a hollow hypodermic needle or other hollow needle to maintain patency.
sty'lo-, styl- [*stylos*]. A combining form meaning *pillar*; used to denote *connection with the styloid process of the temporal bone*.
sty"lo·glos'sus [*stylos*; G. *glōssa*, tongue]. A muscle arising from the styloid process of the temporal bone, and inserted into the tongue. See Table of Muscles in the Appendix. —**styloglossal**, *adj.*
sty"lo·hy'oid [*stylos*; G. *hyoeidēs*, shaped like the letter upsilon]. Pertaining to the styloid process of the temporal bone and the hyoid bone, as the stylohyoid muscle. See Table of Muscles in the Appendix.
sty"lo·man·dib'u·lar [*stylos*; L. *mandibula*, jaw]. Pertaining to the styloid process and the mandible, as stylomandibular ligament.
sty"lo·mas'toid [*stylos*; G. *mastoeidēs*, like a breast]. Relating to the styloid and mastoid processes.
sty"lo·pha·ryn'ge·us (sty"lo·fa·rin'jee·us, -far"injee'us) [*stylos*; G. *pharynx*, pharynx]. A muscle arising from the styloid process of the temporal bone and inserted into the pharynx. See Table of Muscles in the Appendix.
sty'lus [*stylos*]. A pointed device in the form of a holder for applying medicines, as caustic potash. —**styloid**, *adj.*
sty'ma. See *priapism*. *Obs.*
sty"ma·to'sis [G. *styma*, priapism; *-ōsis*, condition]. A violent erection of the penis attended with hemorrhage. *Obs.*

styph'nic ac'id. $(NO_2)_3C_6H(OH)_2$; 2,4,6-trinitroresorcinol; yellow crystals, soluble in water; used for identification of various organic compounds through formation of styphnates.
styp'tic [G. *styptikos*, astringent]. An agent that checks hemorrhage by causing contraction of the blood vessels, as alum, tannic acid.
stypticin. Trade-mark for cotarnine chloride.
styptol. Trade-mark for cotarnine phthalate.
styr'a·cin (stirr'uh·sin, sty'ruh·sin). Cinnamyl cinnamate, a constituent of storax and Peruvian balsam.
sty'rax. See *storax*.
sty'rol. $C_6H_5CH{=}CH_2$. Phenylethylene. A liquid hydrocarbon found in storax; also called *styrene*, or *cinnamene*.
sty'ro·lene. Styrol.
sub- [L., under]. 1. A prefix denoting *under*, *beneath*, *deficient*. 2. *In chemistry*, a prefix denoting the *lower of two compounds of the same element or basic*.
sub"ab·dom'i·nal [*sub*; L. *abdomen*, belly]. Beneath the abdomen.
sub·ac'e·tate (sub·ass'i·tayt). A basic acetate, as lead subacetate.
sub"a·cro'mi·al [*sub*; G. *akrōmion*, point of the shoulder]. Beneath the acromion, as the subacromial bursa.
sub"a·cute' [*sub*; L. *acutus*, pointed]. The stage of disease when it is intermediate between an acute and a chronic form.
sub·al"i·men·ta'tion [*sub*; L. *alimentum*, food]. Inadequate or deficient nourishment.
sub·an"co·ne'us. A variable muscle arising from the posterior distal surface of the humerus and inserted into the posterior aspect of the capsule of the elbow joint.
sub·ap'i·cal (sub·ap'i·kul, -ay'pi·kul) [*sub*; L. *apex*, summit]. Beneath an apex.
sub"ap·o·neu·rot'ic [*sub*; G. *aponeurōsis*, end of the muscle]. Beneath an aponeurosis.
sub·a·que'ous [*sub*; L. *aqua*, water]. Occurring beneath the water.
sub"a·rach'noid (sub"a·rack'noyd) [*sub*; G. *arachnoeidēs*, like a cobweb]. Beneath the arachnoid membrane, as the subarachnoid space.
sub"a·re'o·lar [*sub*; L. *areola*, small, open space]. Situated, or occurring, beneath the mammary areola.
sub"as·trin'gent [*sub*; L. *astringere*, to draw together]. Only slightly astringent.
sub"a·tom'ic [*sub*; G. *atomos*, uncut]. Pertaining to the structure or components of atoms.
sub·au·di'tion (sub"aw·dish'un) [*sub*; L. *auditio*, from *audire*, to hear]. The act or ability of comprehending what is not expressed.
sub·au'ral. Subauricular.
sub"au·ric'u·lar [*sub*; L. *auricula*, external ear]. Below the auricle or external ear.
sub·brach"y·ce·phal'ic (sub·brack"i·si·fal'ick, sub·bray"ki-) [*sub*; G. *brachys*, broad; *kephalē*, head]. *In craniometry*, once used to characterize the mild degree of brachycephaly embracing cephalic indexes between 80.00 and 83.33; in *cephalometry*, indexes between 82.01 and 85.33.
sub"cal·ca're·ous [*sub*; L. *calcarius*, pertaining to lime]. Somewhat calcareous.
sub·cal'ca·rine (sub·kal'kuh·rin, -ryne, -reen) [*sub*; L. *calcar*, spur]. Situated beneath the calcarine fissure, as the subcalcarine gyrus.
sub·cal·lo'sal [*sub*; L. *callosus*, hard-skinned]. Below the corpus callosum.
sub·cap'su·lar [*sub*; L. *capsula*, small box]. Beneath a capsule.
sub·car'bon·ate. A basic carbonate.
sub·chlo'ride. That chloride of a series which contains relatively the least chlorine.

sub-chon'dral Situated beneath cartilage.

sub chron'ic [*sub*; G *chronikos*, of time] More nearly chronic than is indicated by the term subacute.

sub cla 1-an [*sub*; L. *clavis*, key]. Lying under the clavicle, as the subclavian artery See Table of Arteries in the Appendix.

sub cla vi us [*sub*; *clavis*]. A small muscle attached to the clavicle and the first rib. See Table of Muscles in the Appendix.

s. posterior A variant of the subclavius.

sub-clin'i cal [*sub*; G *klinikos* of bed]. Pertaining to disease, in which manifestations are so slight as to be unnoticeable and even not demonstrable.

sub col lat'er l [*sub*; L. *cum*, with *lateralis* of the side]. Ventrad of the collateral fissure of the brain.

sub con junc ti'val (sub kon junk-ty'vul, kon-junk'ti-vul) [*sub*, L. *conjunctivus*, serving to connect]. Situated beneath the conjunctiva.

sub-con'scious [*sub*; L. *conscius*, knowing something with another] *I psychiatry* pertaining to material outside the range of clear consciousness, but which is capable of producing or determining conscious mental or physical reactions.

sub con scious. *I psychoanalysis* that portion of th unconscious containing mental experiences which are ot in th focus of immediate ttention, but which may be recalled to consciousness.

sub-con scious ness [*sub*; *conscius*]. Imperfect consciousness that state in which mental processes take place without the mind being distinctly conscious of its own activity

sub"con tin u-ous [*sub*; L. *continuus*, continuous]. Almost continuous.

sub-cor' coid [*sub*; G *korakoeides*, like raven]. Situated below the coracoid process, as subcoracoid dislocation of the h merus

sub-cor'ti-cal [*sub*; L. *cortex*, bark]. Beneath the cortex of the cerebrum.

sub-cos'tal [*sub*; L. *costa*, rib]. Lying beneath rib or the ribs.

sub-cos'tal. Any of certain variable small muscles associated with the lower ribs

sub cos tal'gi a [*sub*; *costa*, G *algos*, pain]. Pain beneath the ribs, or over subcostal nerve.

sub-crep'i tant [*sub*; L. *crepitare*, to creak]. Almost crepitant, as subcrepitant rale.

sub"crep i ta'tion [*sub*; *crepitare*]. An indistinctly crepitant sound.

sub-cru're-us. Old name for the articularis genus muscle.

sub cul'ture [*sub*; L. *cultura*, cultivation] *I microbiology*, the procedure of transferring organisms from one culture to fresh culture medium; also, the resulting culture.

sub cu ta ne-ous [*sub*; L *cutis*, skin]. Beneath the skin; hypodermic.

sub cu tic u lar [*sub*; L. *cuticula*, skin]. Beneath the epidermis, as subcuticular suture.

sub-cu'tis [*sub*; L. *cutis*, skin]. The superficial fascia below the skin or cutis. Also called *hypodermis*, *tela subcutanea*.

sub de lir'i-um [*sub*; L. *delirium*, madness]. A slight or muttering delirium, with lucid intervals.

sub del'toid [*sub*; G. *deltoeides*, delta-shaped]. Beneath the deltoid muscle, as subdeltoid bursa.

sub-den'tal [*sub*, L. *dens*, tooth]. Situated beneath the teeth.

sub-der'mal. See *subcutaneous*.

sub-der mic [*sub*; G *derma*, skin]. Hypodermic.

sub di phrag mat'ic (sub dye-uh-frag mat ick) [*sub*; G *diaphragma*, diaphragm] Under the diaphragm, as subdiaphragmatic abscess.

sub di-vi ded [*sub*; L. *dividere*, to divide]. Redivided making secondary or smaller divisions.

sub dol"i-cho-ce-phal'ic (sub-dol"i ko si fal'ik) [*sub*; G *dolichos*, long; *kephalē*, head]. *I craniometry* once used to characterize the lower range of the mesocephali group, with cephalic indices between 75.00 and 77 76 *in cephalometry*, indices between 77 01 and 79.77

sub duct' [L. *subducere*, to withdraw]. Draw downward.

sub duc'tion [*subducere*]. Maddox term for deorsumduction.

sub du'ral [L. *sub*, under *durus*, hard]. Beneath the dura mater

sub pen dy mo ma. A tumor found in the fourth ventricle of the brain, and believed to be derived from the subependymal cell plate. Macroscopically this tumor is similar to an ependymoma, but microscopically it is composed of nest of small polygonal cells surrounded by fibroglial bands.

su ber'ic ac'id. $COOH(CH_2)_6COOH$; octanedioic acid metabolic product of capric acid, also btained by heating castor oil or cork with nitric acid.

su'ber in [L. *suber* cork-tree]. A waxy substance found in the cork cells of plants.

sub f mi'l y [L. *sub*, under *familia*, family]. In th classification of plants or animals, lower division of family

sub fas'cial (sub fash ul, -fash ee-ul) [*sub*; L *fascia*, band]. Beneath fascia.

sub ga'le-al [*sub*, L. *galea*, helmet]. Beneath the galea poneurotica.

sub-gal'late. A basic salt of gallic acid. See bismuth subgallate.

sub ger'mi nal [*sub*; L. *germen*, sprout]. Situated beneath germinal structure or blastoderm.

sub gle noid [*sub*; G *glēnoeidēs*, like socket] Beneath the glenoid fossa, as subglenoid dislocation of the humerus.

sub"glos-si'tis [*sub*; G. *glōssa*, tongue -*itis*, inflammation]. Inflammation of the tissues under the tongue. See ranula.

sub gran-da'tion [F *subgrandation*]. The intrusion f on fragment of cranial bone beneath another part in fracture.

su bic"u lum [L] The dorsal part of the hippocampal gyrus near the hippocampal fissure. —**subicular** *adj*

s. promontorii. (a) Support of the promontory (b) Posterior boundary of the fenestra cochleae

sub"in ci'sion (sub"in-sizh un) [L. *sub*, under *incisio*, from *incidere* to cut into]. Making permanent opening into the urethra through the under surface of the penis, practice common some primitive tribes, especially those of central Australia. It does not impair coitus or cause sterility

sub"in fec'tion [*sub*; L. *infectus*, from *inficere*, to infect]. A slight degree of infection.

sub"in vo-lu'tion [*sub*; L. *involutio*, from *involvere* to roll up]. Imperfect return to normal size after functional enlargement.

s. f the uterus. The imperfect involution of the uterus after delivery

sub-i' -dide. That iodide of series containing the least iodine.

sub ja cent [L. *subjacere*, to lie under]. Lying beneath.

sub jec'tive [L. *subjectivus*, subjective]. 1 Pertaining to the individual himself 2. Referred to the patient himself symptoms, experienced by the patient and not amenable to physical exploration.

sub jec'to-scope [*subjective*; G. *skopein*, to examine]. An instrument for examining subjective visual sensations.

sub-la'tion [L. *sublatio* removal]. Removal, ablation

sub le'thal [L. *sub*, under; *letalis*, deadly]. Less than fatal, as sublethal dose of poison.

sub'li mate [L. *sublimare*, to elevate]. A solid or condensed substance obtained by heating material, which passes directly from the solid to the vapor phase and then back to the solid state. **corrosive s.** Mercury bichloride.

sub'li mate. *In* psychiatry to express or externalize instinctual impulses in socially acceptable or conventional manner; to purify instinctual modes of expression.

sub"li ma'tion [*sublimare*]. 1. The transformation of solid to the gaseous state, followed by condensation to the solid state. It is used to purify substances such as iodine, mercuric chloride. 2. *In* psychiatry, psychic device whereby undesirable primitive cravings and impulses gain outward expression by converting their energies into socially acceptable activities.

sub-lime [*sublimare*]. To successively volatilize and condense solid.

sub lim'i nal [L. *sub* under; *limen*, threshold]. Below the threshold of consciousness or of sensation. See *threshold*.

sub-lim'i nal fringe. Neurons that are in close functional association with active neurons so that their excitability is momentarily increased even though they are not directly stimulated.

sub-li'mis [L.]. Elevated superficial, qualification applied to certain muscles, as the flexor digitorum sublimis.

sub-lin gual [L. *sub*, under; *lingua*, tongue]. 1. Lying beneath the tongue. 2. Pertaining to the parts lying beneath the tongue.

sub"lin gui'tis [*sub*; *lingua*, G. *-itis*, inflammation] Inflammation of sublingual gland.

sub"lux 'tion [*sub*; L. *luxatio*, dislocation]. Incomplete dislocation sprain.

sub mal le'o-lar [*sub*; L. *malleolus*, small hammer]. Under the malleoli, as submalleolar amputation, removal of the foot at the ankle joint.

sub man-dib'u-lar [*sub*; L. *mandibula*, jaw]. Below or beneath the mandible as the submandibular gland

sub ma-rine, sub ma-rine' [*sub*; L. *marinus*, of the sea] A dental term applied to conditions or materials which may be employed effectively while in contact with oral fluids.

sub max"il lar i'tis [*sub*, L. *maxilla*, jaw; G *-itis*, inflammation]. Inflammation of submaxillary gland.

sub-max'il-lar"y (sub-mak si ler"ee) [*sub* maxilla] 1 Lying beneath the lower maxilla (O T) or mandible as the submaxillary gland. 2. Pertaining to the submaxillary gland. Syn., *submandibular* (*B.R.*)

sub men'tal [*sub*; L. *mentum*, chin]. Situated under the chin.

sub meso ti-ce-phal'ic [*sub*; G. *mesatos*, midmost *kephalē*, head]. The lower division in the category mesaticephalic, of Paul Topinard" (1885) classification of human head form, embracing cephalic indices of 75 to 76.

sub me-tal'lic [*sub*; G *metallon*, mine]. Metallic to certain extent.

sub mi'cron [*sub*; G *mikros*, small]. A colloid particle visible by aid of the ultramicroscope

sub mi-cro scop'ic (sub migh kro skop ick) [*sub*, *mikros* G *skopein*, to examine]. Pertaining to particle which is below the limit of resolution of he optical microscope.

sub mor'phous [*sub*; G. *morphē* form]. Having structure intermediate between amorphous and true crystalline Often applied to the indefinite, partially crystalline structure of calculi.

sub mu-co sa [*sub*; L. *mucosus*, mucous]. The layer of fibrous connective tissue that attaches mucous membrane to its subjacent parts. —**submu'cous**, *adj*

sub nar cot'ic [*sub*; G *narkōtikos*, benumbing]. Moderately narcotic.

sub ni'trate. A basic nitrate.

sub nor'mal [*sub*; L. *norma*, rule]. Below normal.

sub"nor mal'i ty [*sub*; *norma*]. The condition of being subnormal.

sub-no"to-chor'dal (sub-no to-kor'dul) [*sub*; G *nōton*, back; *chordē*, chord]. Below the notochord.

sub-nu'cle us [*sub*; L. *nucleus*, kernel]. Any one of the smaller groups of cells into which large nerve nucleus is divided by the passage through it of nerve bundles. *O T*

sub nu tri'tion (sub new-trish un) [*sub*; L. *nutrire* to nourish]. Defective nutrition.

sub"oc-cip'i tal (sub ock sip'i tul) [*sub*; L. *occiput*, back part of the head]. Situated beneath the occiput, as suboccipital triangle.

sub"o per'cu lum [*sub*; L. *operculum*, lid]. A gyrus of the brain between the presylvian and subsylvian fissures; the orbital operculum.

sub-or"di na'tion [*sub*, L. *ordinatio*, an arranging]. The condition of being under subjection or control; the condition of organs that depend upon or are controlled by other organs.

sub-ox'ide. That oxide of an element which contains the lowest proportion of oxygen.

sub-pap'u lar [*sub*; L. *papula*, pustule]. Indistinctly papular

sub par"a lyt'ic [*sub*; G. *paralytikos*, paralytic]. Slightly paralytic.

sub"per i-os'te-al [*sub*; G. *periosteos*, round the bones]. Beneath the periosteum.

sub"per i to ne'al [*sub*; G. *peritonaion*, membrane which contains the lower viscera]. Beneath the peritoneum.

sub-phren'ic. See *subdiaphragmatic*.

sub"pla-cen'ta [*sub*; L. *placenta*, cake]. Th decidua parietalis.

sub"pla-cen'tal [*sub*; *placenta*]. 1. Situated beneath the placenta. 2. Pertaining to the decidua parietalis.

sub plan'ti grade [*sub*; L. *planta*, sole *gradi*, to walk] Incompletely plantigrade; walking with the heel slightly elevated.

sub-pu'bic [*sub*; L. *pubes*, private parts]. Situated beneath the pubic arch or symphysis.

sub sar to'ri-al [*sub*; L. *sartor* patcher]. Situated beneath the sartorius muscle, as the subsartorial plexus.

sub-scap u lar [*sub*; L. *scapula*, shoulder]. 1. Beneath the scapula, as the subscapular muscle, or subscapularis. 2. Pertaining to the subscapular muscle.

sub scap-u-la ris [*sub*; *scapula*]. A muscle arising from the anterior surface of the scapula and inserted on the lesser tubercle of the humerus. See Table of Muscles in the Appendix.

sub-scrip'tion [L. *subscriptio*, anything written underneath]. That part of prescription containing the directions to the pharmacist, indicating how the ingredients are to be mixed and prepared.

sub sen sa'tion [L. *sub*, under; *sensus*, sense]. A subordinate sensation.

sub-se rous [*sub*; L. *serum*, whey]. Beneath serous membrane.

sub sib'i lant [*sub*; L. *sibilare*, to hiss]. Having sound like muffled whistling.

sub-si'dence, sub si-dence [L. *subsidere* to settle down]. The gradual cessation and disappearance of the manifestations of disease.

sub sig moid [L. *sub*, under; G *sigmoeidēs* of t shape of sigma]. Under the sigmoid flexure.

sub-sist ence [L. *subsistentia*, from *subsist*

subsist]. That which nourishes or gives support food.

sub spi'nous [L. *sub*, under; *spina*, thorn]. 1. Beneath spine, as subspinous dislocation, luxation of the head of the humerus below the spine of the scapula. 2. Beneath the spinal column.

sub stage [*sub*, L. *stare*, to stand] The parts beneath the stage of microscope, including the diaphragm, condenser mirror and other accessories.

sub stance [L. *substantia*, material]. 1. The material of which anything is composed. 2. A tissue. 3. A factor

anterior perforated s. A depressed area of gray matter at the base of the brain, rostral to the optic tract, containing numerous small foramens transmitting arteries to the basal ganglions; also called *olfactory area*.

anterior pituitarylike s. Chorionic gonadotropin hormone derived from the chorionic villi of the placenta, similar to the gonadotropic hormone of the pituitary gland; but active only in the presence of the pituitary gland and having chiefly luteinizing effect on the ovaries. Also called *pregnancy urine hormone* (*P U*) See also *A.P.L.*

antiketogenic s. A substance which, when ingested, is antagonistic to the production of ketone bodies.

central gelatinous s. See *substantia grisea centralis*.

chromophil s. A nucleoprotein in the cytoplasm of many cells staining deeply with base dyes also called *chromidial substance, tigroid bodies*

depressor s. One whose pharmacodynamic action results in lowering of arterial pressure.

dedicated ovarian s. See *ovary* 2.

gonadotropic s. See *gonadotropin*.

gray s. That part of the central nervous system composed of nerve cell bodies, their dendrites, and the proximal and terminal unmyelinated portions of axons gray matter

ground s. Homogeneous matrix or intercellular substance of tissue in which the cellular elements and fibers are imbedded.

group-specific s. 1 A substance, isolated from a tryptic digest of hog gastric mucin, which reduces the anti-A antibody in group O and B bloods. 2. A substance, btained from the glandular portion of the horse gastric mucosa, which can reduce the anti-B agglutini in group O and A bloods. Syn *Witebsky' substances*.

G s. Giant molecular complexes of cholesterol with proteins and lipids which may be productive of or associated with development of atherosclerosis.

intercellular s. That part of tissue which lies between the cells.

interprismatic s. The cementing substance between enamel prisms.

interstitial s. The intercellular and interfibrillar substance of the connective tissue

intertubular s. The matrix of dentin, containing the dentinal tubules.

isotelic s. One which owes its physiologic action to the occurrence in the molecule of certain strategic grouping of atoms.

ketogenic s. A foodstuff from which ketone bodies are produced.

Nissl s. The chromophil substance of nerve cells.

perforated s. A part of the base of the brain pierced with many small holes for the passage of blood vessels.

posterior perforated s. A depressed area at the base of the brain, posterior to the mammillary bodies, containing umerous foramens for the passage of blood vessels.

posterior pituitary s. Extracts of the neurohypophysis contain three principles as oxytocic, pressor and an antidiuretic. The oxytocic principle stimulates the uterus, the pressor principle produces peripheral vasoconstriction, and the antidiuretic principle inhibits the renal tubules.

pressor s. One whose pharmacodynamic action results in an elevation of arterial pressure.

proteic s. See *protein*.

reticular s. Mixed white and gray matter in the central nervous system; in the cervical region of the spinal cord, located in the angle between the anterior and posterior columns; *reticular formation*.

slow-reacting s. A substance having muscle-contracting properties released during anaphylactic shock.

specific soluble s. (SSS) A soluble, type-specific, polysaccharide hapten btained from the capsule of the pneumococcus.

standard s. A substance used to standardize volumetric solutions.

s. Fa (Reichstein's) Cortisone.

vasodilator s. A chemical compound capable of dilating blood vessels

white s. That part of the central nervous system composed of myelinated nerve fibers white matter

Witebsky's substances. See *group-specific*

sub stan'ti a (sub-stan shee-uh) (pl. *substantiae*) [L.]. Substance.

s. adamantina. Dental enamel.

s. alba. See white substance.

s. compacta. Compact bone.

s. eburnea. Dentin.

s. gelatinosa Rolandi. Translucent, gelatinous gray matter forming the apex of the posterior column of the spinal cord, crescentic or inverted V-shaped in section. A synaptic region for peripheral nerves conveying thermal and pain sensibilities.

s. grisea. See *s. grisea centralis*.

s. grisea. See gray substance.

s. grisea centralis. A condensation of neuroglia around the central canal of the spinal cord Syn *central gray matter central gelatinous substance, substantia gliosa*.

s. nigra. A broad, thick plate of large, pigmented nerve cells separating the basis pedunculi from the tegmentum and extending from the border of the pons through the mesencephalon into the hypothalamus.

s. ossea. Cementum.

s. propria of the cornea. The central, transparent, lamellated layer of dense connective tissue in the cornea.

s. reticularis. Reticular substance.

s. spongiosa. Cancellous bone.

sub ster'nal [L. *sub*, under; G. *sternon*, breast]. Beneath the sternum, as substernal pain.

sub"sti tu'tion [L. *substitutio*, from *substituere*, to put in place of]. 1 The replacement of one thing by another 2. *I chemistry*, the replacing of one or more elements or radicals in compound by other elements or radicals. 3. *I psychiatry*, defense mechanism whereby alternative or substitutive gratifications are secured to reduce tension resulting from frustration. The substitutes are generally comparable to the pleasures and satisfactions which the individual was frustrated in obtaining.

sub sti tu"tive [L. *substitutivus*, from *substituere*]. Effecting change in symptoms. *Rare*.

sub strate [L. *substratus*, spreading under]. 1 An under layer 2. A substance upon which an enzyme acts.

sub-sul'fate. A basic sulfate.

sub-sul'to-ry [L. *subsultare*, to leap]. Leaping; twitching.

sub-sul'tus [*subsultare*]. A morbid jerking or twitching.

s. tendinum. Involuntary twitching of the muscles, especially of the hands and feet, seen in low fevers; also called *s. clonus*.

sub-tee'o-lin. An antibiotic substance derived from *Bacillus subtilis*, active in vitro against several bacterial species.

sub"ten to ri-al [L. *sub*, under; *tentorium*, tent]. Below or beneath the tentorium cerebelli.

sub"te tan'ic [*sub*; G. *tetanos*, convulsive tension]. Pertaining to convulsions which are not distinctly clonic or tonic.

sub-thal' a mus [*sub*; G. *thalamos*, chamber]. The ventral, motor portion of the thalamus. —**sub-thalam'ic,** *adj.*

sub thy'roid ism [*sub*; G. *thyreoeidēs*, shield-shaped]. Obsolete term for hypothyroidism.

sub'ti-lin. An antibiotic substance obtained from *Bacillus subtilis*, active against Gram-positive bacteria.

sub-til'y-sin. An antibiotic substance obtained from *Bacillus subtilis*, active against Gram-negative and Gram-positive bacteria.

subtosan. Trade-mark for polyvinylpyrrolidone.

sub to'tal [*sub*; L. *totus*, all]. Less than complete.

sub-tro-chan ter'ic. Below a trochanter.

sub-trop'i-cal [*sub*; G. *tropikos*, of the solstice]. Pertaining to regions almost tropical in climate.

sub-u'ber-es (sub-yoo'ber-eez) [*sub*; L. *uber*, breast]. Children at the breast; suckling children.

sub-un gual [*sub*; L. *unguis*, nail]. Beneath the nail.

sub vir'ile (sub-virr'il, -ry'nl) [*sub*; L. *virilis*, manly]. Deficient in virility.

sub-vi'ta min-o sis B. See *beriberi*.

sub"vo-lu'tion [*sub*; L. *volvere*, to roll]. A method of operating for pterygium, in which a flap is turned over so that an outer or cutaneous surface comes in contact with a raw dissected surface. Adhesions are thus prevented.

sub wa'king [*sub*; AS. *wacan*]. Pertaining to the condition between sleeping and complete wakefulness.

sucaryl calcium. Trade-marked name for cyclamate calcium.

sucaryl sodium. Trade-marked name for cyclamate sodium.

suc"ce da ne-ous (suck si-day'nee-us) [L. *succedaneus*, that follows after]. 1. Relating to, or acting as, a substitute. 2. Pertaining to that which follows after, as a permanent tooth that replaces a deciduous tooth.

suc"cen tu'ri-ate [L. *succenturiare*, to substitute]. Old term for accessory.

suc cif'er ous [L. *succus*, sap; *ferre*, to bear]. Producing sap.

suc ci nate. A salt of succinic acid.

suc" cin chlo ri mide. $C_4H_4O_2NCl$. Occurs as white crystals or a crystalline powder soluble in water with decomposition forming hypochlorous acid. Possesses powerful germicidal activity. Used as a water disinfectant.

suc cin'ic ac'id. COOH.CH₂.CH₂.COOH. A dibasic, crystalline acid occurring in amber and certain other resins; the sodium salt has been used as an analeptic in counteracting barbiturate poisoning. Succinates may possess protective action against depression of tissue metabolism by various noxious agents.

suc"cin im'ide. $\overline{CH_2\,CO\,NH\,CO\,CH_2}$, an interaction product of succinic acid and ammonia, occurring in colorless crystals, soluble in water.

suc-cin"o-de-hy'dro-gen-ase. The enzyme which catalyzes the oxidation of succinic acid to fumaric acid.

suc"cin-yl-cho'line chlo'ride.

$$\begin{array}{l}CH_2COOCH_2CH_2N(CH_3)_3Cl\\ |\\ CH_2COOCH_2CH_2N(CH_3)_3Cl\end{array}$$

A powerful inhibitor of neuromuscular transmission which on intravenous injection produces complete muscular relaxation in about 1 minute, the effect lasting only 2 to 4 minutes because of rapid destruction of the agent in the body by esterases. It is useful clinically in conditions requiring profound but brief muscular relaxation.

suc"cin-yl sul"fa thi'a zole (*succinylsulfathiazolum*). $HOOC.(CH_2)_2CO.NH.C_6H_4.SO_2.NHC_3H_2NS.H_2O$; 2-(*p*-succinylaminobenzenesulfonamido) thiazole monohydrate; occurs as a white or yellowish white, crystalline powder; 1 Gm. dissolves in about 4800 cc. of water; soluble in solutions of sodium bicarbonate and alkali hydroxides; sparingly soluble in alcohol. Exerts a sulfonamide bacteriostatic action, chiefly on the intestinal contents, as it is poorly absorbed. Used for preoperative and postoperative treatment of intestinal operations, prophylaxis and treatment of bacillary dysentery and carriers. Dose, 0.05 Gm. per kg. of body weight, four times daily for one or two weeks.

suc"cor-rhe'a, suc"cor-rhoe'a [*succus*; G. *rhoia*, flow]. An excessive flow of a secretion.

pancreatic s. A pathologic increase of the pancreatic juice when the secretory activity of the gland is exaggerated.

suc'cu bus [L. *succuba*, one who lies under]. 1. Nightmare. Obs. 2. A heavy mental burden. 3. A female demon said to have sexual intercourse with sleeping men. Obs. See *incubus*.

suc'cu lent [L. *succulentus*, full of juice]. Juicy.

suc-cur'sal [L. *succurrere*, to assist]. Subsidiary.

suc'cus (pl. *succi*) [L.]. 1. A vegetable juice. 2. An animal secretion.

s. entericus. The intestinal juice, secreted by the glands of the intestinal mucous membrane. It is thin, opalescent, alkaline, and has a specific gravity of 1.011. It contains an amylolytic and proteolytic ferment.

s. gastricus. The gastric juice.

s. intestinalis. See s. entericus.

s. pancreaticus. The pancreatic juice.

s. prostaticus. The prostatic fluid, a constituent of the semen.

s. spissatus. Any extract prepared by evaporation of the natural juice of a plant.

suc-cuss' [L. *succutere*, to fling up from below]. To make succussion.

suc-cus'sion (suh kush un) [L. *succussio*, from *succutere*]. A shaking, especially of the individual, from side to side, for the purpose of determining the presence of fluid in a cavity or hollow organ of the body.

s. sound. The splashing sound heard when the patient is shaken; occurs in hydropneumothorax, pyopneumothorax, or in cases of dilated stomach containing fluid.

suck [AS. *sūcan*]. To take nourishment at the breast.

suck'er ap pa-ra'tus. A contrivance for evacuating fluid from body cavities, operating by means of negative pressure. Syn. *suction apparatus*.

suck'ing [*sūcan*]. Nursing; drawing with the mouth.

suck'le [freq. from *sūcan*]. To nurse at the breast.

suck'ling [*sūcan*]. A nursling.

cross s. Reciprocal foster nursing.

su'crase. See *saccharase*.

su'crate. A salt of saccharic acid.

su'crol. Trade name for *dulcin*.

su crose (*saccharum*) $C_{12}H_{22}O_{11}$. A sugar btained from *Saccharum officinarum*, *Beta vulgaris*, and other sources occurs as colorless or white crystals, crystalline masses or blocks, or white, crystalline powder 1 Gm. dissolves in 0.5 cc. of water and in 170 cc. of alcohol. Used as sweetening agent and preservative in syrups and other preparations. Also called *saccharum*, *sugar*

s. octaacetate. $C_{28}H_{38}O_{19}$ white, hygroscopic powder sparingly soluble in water soluble in alcohol used as denaturant for alcohol.

su"cro-su'ri a [*saccharum*, G *ouron*, urine]. A rare condition in which sucrose is not metabolized in the intestin and is excreted in the urine.

suc tion [L. *suctum*, from *sugere*, to suck]. The act of sucking.

Bier' s. A first-aid treatment for snakebites which employs suction tubes over the wound to draw out the toxic material.

posttussive s. A sucking sound heard on auscultation over certain pulmonary cavities during th brief interval between cough and the succeeding inspiration.

suc'tion ap pa ra'tus. See *sucker apparatus*.

Suc-to ri [*sugere*]. 1 A synonym for *Siphonaptera*, the fleas. 2. A class of Protozoa, closely related to the Ciliata, without cilia in the mature stage, but possessing processes called tentacles, some of which are suctorial in function. A few species are parasitic on fish and other aquatic animals.

suc t ri l [*sugere*]. Pertaining to, or suitable for sucking.

su-da men (pl. *sudamina*) [L. *sudare*, to sweat]. An eruption of translucent, whitish vesicles, due to noninflammatory disturbance of the sweat glands, consisting in collection of sweat in the ducts of the sweat glands. Is very transitory and occurs after excessive sweating. Syn., *miliaria crystallina*. —**suda mi'nal**, *adj*.

Su dan Any of umber of chemically related biological stains.

S. II $(CH_3)_2C_6H_3N{:}N.C_{10}H_6OH$. A fat stain. Also called *oil scarlet*, *fat ponceau*.

S. III (C C) C_6H_5N N $C_6H_4N{:}N$ $C_{10}H_6OH$. A fat-sol ble, diazo dye used as fat stain. Also called *fat ponceau G* *oil red*, *Sudan G*

S. IV (C C) CH_3 C_6H N N $C_6H_3(CH_3).N{:}N$ $C_{10}H_6OH$. A dimethyl derivative of Sudan III fat stain, more intense than Sudan III Also called *fat ponceau*, *oil red IV*

S. R CH_3O C_6H_4N N $C_{10}H_6OH$ stain suggested for use in the Kahn reaction for syphilis also called *oil vermilion*.

su dan phil. A leukocyte which, owing to fatty degeneration, is stained readily by Sudan III.

su da'tion [L. *sudatio*, from *sudare*, to sweat]. The act of sweati g

su"da t ri a. Hyperhidrosis.

su"da to ri um [L., sweating-room]. 1 A hot-air bath. 2. A room for the administration of hot-air bath.

Sudeck, Paul Hermann Martin [German surgeon, 1866–1938] Known for his description of acute bone atrophy or aseptic necrosis following injury called *Sudeck' atrophy* *traumatic osteoporosis*.

su do"ker rhe a. See *dermatitis seborrheica*.

su"do-mo'tor [L. *sudor* sweat *motor* from *movere* to move] Sudoriferous

su dor [L.]. Sweat. —**sudoral**, *adj*

s. nocturnus. Night sweat

s. sa guineus. See *hematidrosis*.

su do re sis [*sudor*]. Excessive sweating.

su"dor if'er-ous [*sudor*; L. *ferre* to bear]. Producing sweat.

su"dor if'ic. Inducing sweating.

su dor if'ic. An agent inducing sweating

su dor i ker"a to'sis [*sudor*; G. *keras*, horn -*osis*, condition]. Keratosis of the sweat glands.

su dor ip a-rous [*sudor*; L. *parere*, to bring forth] Secreting sweat.

su et [L. *sebum*, tallow suet] 1. The internal fat of the abdomen of sheep or cattle. 2. Prepared suet.

mutton s. See prepared s.

prepared s. (*sebum praeparatum*). The internal fat of the abdomen of the sheep, *Ovis aries*, purified by melting and straining occurs as white, solid fat, having when fresh slight characteristic odor and bland taste. It becomes rancid on exposure to air; insoluble in water and cold alcohol. It consists approximately of 70% of stearin and palmitin and 30% of olein. Used an ointment base. Syn., *mutton*

suf'f -cat [L. *suffocare*, to choke]. Asphyxiate.

suf"fo-ca'tion [L. *suffocatio* from *suffocare*] Interference with the entrance of air into the lungs.

suf frag'i nis (suh-fradj'i-nis) [L. *suffrago*, hock]. The large pastern or proximal phalangeal bone of the horse. Contraction of *os suffraginis*

suf fu sion [L. *suffusio*, from *suffundere*, to suffuse]. 1 A spreading or flow of any fluid of the body into surrounding tissue an extensive superficial extravasation of blood. 2. The pouring of water upon patient as remedial measure

sug'ar [OF *sucre*, from Skr *sarkara*]. 1. Any carbohydrate having sweet taste and the general formula $C_nH_{2n}O_n$ or $C_nH_{2n-2}O_{n-1}$. 2. Sucrose.

acid of s. Oxalic acid.

acorn s. Quercite.

beet s. Sucrose.

blood s. The carbohydrate of the blood, chiefly glucose.

brain s. Cerebrose; galactose.

brown s. Partially refined cane sugar

cane s. Sucrose.

corn s. Glucose.

date s. The sugar from the fruit of the date, *Phoenix dactylifera*.

fruit s. Levulose or fructose.

grape s. Glucose.

gum s. Arabinose.

honey s. Glucose.

invert s. A mixture of approximately equal parts of glucose and levulose obtained by hydrolysis of sucrose.

lead s. See *lead* acetate.

liver s. Glycogen.

malt s. Maltose.

maple s. The mixture of carbohydrates, chiefly sucrose, obtained from the sap of the sugar maple.

meat s. Inositol.

milk s. Lactose.

mucin s. Levulose.

muscle s. Inositol.

pectin s. Arabinose.

refined s. Purified cane sugar

wood s. Xylose.

sug'ar ine (shoog'ur-een, in) Methylbenzol-sulfonide. compound said to have 500 times greater sweetening power than sugar

sug gest"i bil'i ty [L. *suggerere*, to suggest] The condition of being readily influenced by another an bnormal state when the individual conforms with unusual readiness, as patients who too readily accept ideas of health or illness.

negative s. Active negativism.

sug gest'i ble [*suggerere*]. Amenable to suggestion.

sug ges'tion [L. *suggestio*, from *suggerere*]. 1. The artificial production of certain psychic state in which the individual experiences such sensations as are suggested to him or ceases to experience

those which he is instructed not to feel. 2. The thing suggested.

hypnotic s. A suggestion made to an individual in the hypnotic state.

posthypnotic s. The command to do certain acts given the subject while in the hypnotic stage, and causing him to execute these acts after his return to his normal condition.

self-s. See *autosuggestion*.

sug·ges'tion·ist [*suggerere*]. One who treats disease by means of suggestion. —**suggestionize**, *v.t.*

sug"gil·la'tion (sug"ji-lay'shun, sud") [L. *suggillatio*, black-and-blue mark]. An ecchymosis or bruise.

su'i·cide [L. *sui*, of oneself; *caedere*, to kill]. 1. Self murder; intentionally taking one's own life. 2. One who takes his own life. —**suicid'al**, *adj.*

su'int (swee int, swint) [L. *sudare*, to sweat]. A soapy substance rich in potassium salts of higher fatty acids and in cholesterol, derived from sheep's wool. Also called *wool-soap*.

sulamyd. Trade-mark for *sulfacetamide*.

sul'cus (pl. *sulci*) [L., furrow]. A furrow or linear groove, as in bone. When applied to linear depressions on the cerebral hemisphere, the term indicates a less deep depression than a fissure. Sulci in the brain separate the convolutions or gyri. See also *fissure*. See Plate 18. —**sulcal**, **sulcate**, *adj.*

ampullary s. The external transverse groove on each membranous ampulla for the entrance of the ampullary nerve.

angular s. See *angular incisure*.

anterior longitudinal cardiac s. A groove situated on the sternocostal surface of the heart, separating the ventricles.

anterolateral spinal s. A broad, shallow groove on the anterolateral surface of the spinal cord, corresponding to the line of the origin of the ventral nerve roots.

anterolateral s. of the medulla oblongata. The continuation cephalad of the anterolateral spinal sulcus, from which emerge the roots of the hypoglossal nerves.

aortic s. A vertical groove on the medial aspect of the left lung lodging the thoracic aorta.

atrioventricular s. See *coronary s.*

basilar s. A groove along the median line of the ventral surface of the pons lodging the basilar artery.

bulboventricular s. The groove formed by the loop of the embryonic cardiac tube in the pericardial cavity.

calcaneal s. The groove along the medial aspect of the calcaneus adjacent to the posterior articular surface lodging the interosseous talocalcaneal ligament.

calcarine s. See *calcarine fissure*.

callosal s. The groove separating the corpus callosum from the overlying cingulate gyrus.

callosomarginal s. See *cingulate s.*

central s. A groove situated about the middle of the lateral surface of the cerebral hemisphere, separating the frontal from the parietal lobe. Also called *Rolando's sulcus*, *fissure of Rolando*. See Plate 18.

chiasmatic s. The optic groove of the sphenoid bone.

cingulate s. One on the medial aspect of the cerebral hemisphere separating the superior frontal gyrus and paracentral lobule from the cingulate gyrus below. It terminates by dividing into subparietal and marginal portions. Also called *callosomarginal s.* or *fissure*, *cingulate fissure*.

circular s. A limiting furrow surrounding the base of the insula, separating it from the operculum. Formerly called *limiting s. of Reil*.

collateral s. See *collateral fissure*.

coronary s. A groove separating the atria from the ventricles, containing the trunks of the nutrient vessels of the heart. Also called *atrioventricular s.*

costal s. The groove along the inferior aspect of the *rib* for the intercostal vessels and nerves.

cruciate s. One of the grooves on the dorsal surface of the mesencephalon between the corpora quadrigemina.

cutaneous s. One of many little furrows on the skin which intersect so that they bound polygonal areas. Also called *s. cutis*.

diagonal s. A short, oblique furrow traversing the opercular portion of the inferior frontal gyrus.

dorsolateral s. See *posterolateral spinal s.*

fimbriodentate s. A groove on the superior medial aspect of the temporal lobe, separating the hippocampal fimbria from the dentate gyrus.

frontal s. One of three longitudinal grooves separating the superior, middle, and inferior frontal gyri. See Plate 18.

gingival s. The space between the free gingiva and the surface of a tooth. Formerly called *gingival crevice*.

gluteal s. See *gluteal fold*.

hemispheric s. A shallow circular groove separating the embryonal telencephalon from the diencephalon.

hippocampal s. See *hippocampal fissure*.

horizontal cerebellar s. A deep groove encircling the cerebellum and separating the superior and inferior surfaces.

hypothalamic s. A groove on the lower medial surface of each thalamus at the level of the third ventricle. Formerly called *s. of Monro*.

interatrial s. The superficial groove separating the two embryonic atria.

intermediate s. A slight groove on the greater curvature of the stomach, opposite the angular incisure, separating the pyloric antrum and vestibule.

interparietal s. See *intraparietal s.*

intertubercular s. See *bicipital groove*.

intraparietal s. A well-marked furrow separating the superior and inferior parietal lobules. This furrow has a complex and variable form having the following subdivisions: superior postcentral sulcus, inferior postcentral sulcus, and transverse occipital sulcus. Formerly called *interparietal s.* See Plate 18.

lacrimal s. See *nasolacrimal groove*.

lateral cerebral peduncular s. A longitudinal furrow on the lateral surface of each peduncle separating it from the tegmentum dorsally. Also called *lateral mesencephalic s.*

lateral occipital s. The longitudinal groove dividing the lateral surface of the occipital lobe into a superior and an inferior gyrus. Syn., *s. lunatus*. See Plate 18.

malleolar s. A shallow groove on the posterior border of the medial malleolus for the passage of the tendons of the tibialis posterior and flexor digitorum longus muscles.

marginal s. A branch of the cingulate sulcus which comes off at the level of the splenium and goes to the dorsal margin of the hemisphere behind the central sulcus.

medial lingual s. A narrow median groove on the dorsum of the tongue.

median posterior s. A longitudinal groove incompletely dividing the spinal cord posteriorly into two symmetrical parts.

median s. The longitudinal groove in the floor of th fourth ventricle of the brain.
nasofrontal s. The groove between the frontal process and nasal process in the developing face.
nymphocaruncular s. A groove between the labium minus and the hymen.
oculomotor s. A longitudinal furrow on the medial surface of the cerebral peduncle from which emerge the roots of the oculomotor nerve.
olfactory s. A well-defined anteroposterior groove on the medial orbital gyrus for the passage of the olfactory tract.
orbital s. An H-shaped groove on the inferior surface of the frontal lobe dividing it into four orbital gyri.
paracentral s. A branch of the cingulate sulcus, sometimes reaching the dorsal margin of the cerebral hemisphere.
paraglenoidal s. One of many slight grooves inferior to and in front of the auricular surface of the iliac bone for the attachment of th sacroiliac and interosseous ligaments.
parallel s. Synonym for superior temporal sulcus.
paramedial s. A series of irregular furrows on the lateral surf ce of th superior frontal gyrus, dividing it into superior and an inferior part.
parieto-occipital s. The upper limb of the calcarine fissure between the precuneus of the parietal lobe and the cuneus of the occipital lobe. Also called *parieto-occipital fissure.* See Plate 18.
parolfactory s. The anterior parolfactory sulcus separates the superior frontal gyrus from the parolfactory area and the **posterior parolfactory sulcus** separates the subcallosal gyrus from the parolfactory area.
polar s. One of several small grooves at the distal end of the calcarine fissure.
postcentral s. The first sulcus of the parietal lobe lying behind and roughly parallel to the central sulcus.
posterior longitudinal cardiac s. A groove situated on the diaphragmatic surface of the heart, between the ventricles.
posterior median s. of spinal cord. A narrow groove extending the entire length of the spinal cord posteriorly in the midline.
posterolateral spinal s. A narrow deep groove on the posterolateral surface of the spinal cord, corresponding to the line of origin of the dorsal nerve roots
posterolateral s. of the medulla oblongata. The extension cephalad of the posterolateral spinal sulcus.
postolivary s. A deep groove on the dorsolateral border of the inferior olive it may be considered as the laterally shifted continuation of th posterolateral sulcus.
precentral s. A groove separating the horizontal frontal gyri from the anterior central gyrus. See Plate 18.
prenodular s. A groove on the posterolateral surface of the embryonal cerebellum separating the vermis from the flocculus.
prepyramidal s. of the cerebellum. A groove lying between the middle lobe of the cerebellum and the pyramids.
pterygopalatine s. A groove on the perpendicular part of the palatine bone, which, with the corresponding groove in the maxilla, forms the pterygopalatine canal
radial s. A groove on the lateral surface of the shaft of the humerus for the transmission of the radial nerve and profunda brachii artery
Rolandic s. See central
sagittal s. A shallow groove in the midline on the cerebral surface of the frontal squama, lodging the superior sagittal sinus.
scleral s. A shallow groove at the junction of the sclera and the cornea.
semicircularis s. See terminal s.
sigmoid s. A deep, S-shaped groove on the inner surface of the mastoid portion of the temporal bone, lodging part of the transverse sinus; also called *sigmoid groove.*
spiral s. A concave groove below the membrana tectoria of the floor of the cochlear duct. Sometimes called *inner spiral s.* A groove where the basilar membrane is attached to the bony cochlear canal is called *outer spiral s.*
subclavian s. A shallow groove on the upper surface of the first rib, lodging the subclavian artery
subparietal s. A groove separating the precuneus of the parietal lobe from the cingulate gyrus. Syn. *suprasplenial s.*
s. brevis. One of several short furrows seen on the insula of the cerebrum.
s. carpi. The broad groove seen in the articulated carpal bones on the anterior aspect of the wrist between the pisiform and hamulus of the hamate
s. cinguli. See cingulate s.
s. limitans. A longitudinal groove on the middle of the inner surface of the lateral wall of the neural tube, dividing it into dorsal alar plate and ventral basal plate.
s. lunatus. See lateral occipital s.
s. of auditory tube. A groove between the petrous part of the temporal bone and the great wing of the sphenoid, lodging the cartilaginous part of the auditory tube.
s. primarius. See primary *fissure.*
suprasplenial s. See subparietal
talar s. A deep groove on the inferior surface of the body of the talus, separating the posterior and middle calcaneal articular surfaces.
temporal s. One of the three grooves (superior, middle, and inferior), dividing the temporal lobe into superior middle, inferior and fusiform gyri. See Plate 18.
terminal cardiac s. A groove on the external surface of the right atrium, extending from the right side of the superior vena cava to the right side of the inferior vena cava, the embryonic right boundary of the sinus venosus.
terminal lingual s. The shallow V-shaped groove, with its apex directed backward, on the dorsum of the tongue, it separates the oral and pharyngeal parts of the organ.
terminal s. A furrow between the dorsal surface of the thalamus and caudate nucleus, lodging the terminal vein and stria terminalis. Syn. *semicircular s.*
transverse occipital s. The groove continuous with the posterior end of the occipital ramus of the intraparietal sulcus, extending over the superior portion of the occipital lobe. See Plate 18.
transverse sulci (of nail) Transverse grooves in the nails resulting from disease.
tympanic s. The groove in the osseous portion of the external uditory meatus in which the circumference of the tympanic membrane is attached; it is deficient superiorly at the tympanic notch.
uvulonodular s. One separating the uvula from the nodulus of the cerebellum.
ventrolateral s. See anterolateral spinal
ventrolateral s. of the medulla. See anterolateral of th medulla oblongata.
vermicular s. The groove between the vermis and cerebellar hemisphere.
sulf't cet mide. NH C₆H SO₂NH.CH₃CO. Para-aminobenzenesulfonacetamide; crystalline powder sol ble in bout 100 parts of water. Used in variety of infections, particularly those of

the urinary tract; its sodium derivative is used for treatment of ophthalmic infections because of rarity of sensitization reactions. Dose, 3-4 Gm. (45-60 gr.) daily. Also called *sulfacetamide*. See *albucid*, *sulamyd*.

sulf ac'id. 1. A thioacid. 2. A sulfonic acid.

sul fac'tin. An antibiotic substance derived from species of *Actinomyces*, active in vitro against a number of bacterial species.

sulfactol. Trade-mark for a brand of sodium thiosulfate used in the prevention and treatment of toxic reactions during arsenic, bismuth, and mercury administration, and in poisoning by these metals, as well as in eczema.

sul"fa-di'a zine (sul fuh-dye'uh-zeen, -zin, -dye-az'een, -in, -dye y'zeen, -zin) (*sulfadiazinum*). $NH_2C_6H_4SO_2NHC_4H_3N$; p-amino-N 2-pyrimidylbenzene sulfonamide or 2-sulfanilylamidopyrimidine; occurs as white or slightly yellow powder; 1 Gm. dissolves in about 13,000 cc. of water; it is sparingly soluble in alcohol. An anti-infective agent of the sulfonamide group, effective against a variety of organisms; it is used in the treatment of pneumococcic pneumonia, hemolytic streptococcus infections, staphylococcic infections, and meningococcic meningitis. It causes fewer toxic reactions than sulfanilamide, sulfapyridine, or sulfathiazole. Dose, oral, 0.1 Gm. per kg. of body weight initially, then 1.0 to 1.5 Gm. every 4 hours until temperature becomes normal.

sterile s. sodium (*sulfadiazinum sodicum sterile*). Sterile sulfadiazine sodium contained in tight containers so closed that the sterility of the product is maintained until the container is opened for use. This is intended for preparing solutions for intravenous injection. Average dose, intravenous, 2 Gm. (30 gr.). Also called *sterile sodium sulfadiazine*.

s. sodium (*sulfadiazinum sodicum*). $C_{10}H_9N_4O_2SNa$. Occurs as a white powder; 1 Gm. dissolves in about 2 cc. of water; it is slightly soluble in alcohol.

sul"fa-di'me tine. Generic name for N'-(2,6-dimethyl-4-pyrimidyl)-sulfanilamide, a sulfonamide characterized by a very low degree of acetylation in the body and by maintenance of high blood and urine levels with moderate dosage. See *elkosin*.

sul'fa drugs. A family of drugs of the sulfonamide type which have marked bacteriostatic properties. The more important sulfa drugs are sulfanilamide, sulfathiazole, sulfaguanidine, and sulfadiazine. All are soluble in dilute acid or acetone, insoluble in ether.

sul"fa guan'i dine (sul"fuh-gwan'i-deen, -din, gwah'ni-deen, -din) (*sulfaguanidinum*). $NH_2C_6H_4SO_2NHC(NH)NH_2 \cdot H_2O$; p-aminobenzenesulfonylguanidine monohydrate; occurs as a white, needlelike crystalline powder; 1 Gm. dissolves in about 1000 cc. of water; it is sparingly soluble in alcohol. Used primarily in the treatment of certain intestinal bacillary infections. Dose, 0.05 Gm. per kg. of body weight initially, then 0.05 Gm. per kg. every 4 to 8 hours. Also called *sulfanilylguanidine monohydrate*.

sul"fa mer'a zine (sul fuh-merr'uh-zeen, -zin) (*sulfamerazinum*). 2-Sulfanilamido-4-methylpyrimidine; the 4-(mono)methyl derivative of sulfadiazine; it is more soluble in water than sulfadiazine. Its therapeutic uses are similar to those of sulfadiazine. Adult dose, oral, 2 to 4 Gm. initially, followed by 1 Gm. every 8 hours.

sul"fa meth'a-zine (sul fuh-meth'uh-zeen, -zin). 2-Sulfanilamido-4,6-dimethylpyrimidine; the dimethyl derivative of sulfadiazine. Used like sulfadiazine, but its acetyl derivative is more soluble than that of sulfadiazine.

sul"fa-meth'i-thi'a zole (sul"fuh-meth'ih-thee, -thin). Sulfamethazine.

sul fam'ic ac'id. $HOSO_2NH_2$. A colorless, crystalline acid; has been used in the treatment of cholera.

sulfamidyl. Trade-mark for a brand of sulfanilamide.

sul"fa nil'ic ac'id. Sulfanilic acid.

sulfamylon. Trade-mark for the hydrochloride of marfanil.

sul"fa-nil'a mide (*sulfanilamidum*). $NH_2C_6H_4SO_2NH_2$; p-aminobenzenesulfonamide; occurs as white crystals, granules, or powder; 1 Gm. dissolves in about 125 cc. of water and in about 37 cc. of alcohol. It exerts a potent antibacterial effect against many organisms, being of chemotherapeutic value in treating infections caused by beta hemolytic streptococci, meningococci, and gonococci. Other less toxic sulfonamides are now preferred. Sulfanilamide has been supplied under various names, including sulfamidyl, sulfonamide-P, prontylin, prontosil album, streptamide, streptocone, streptocide, stramid, colsulanyde, lysococcine. It may act as an allergen. Dose, oral, 0.1 Gm. per kg. of body weight initially, followed by one-sixth this amount every 4 hours until temperature becomes normal.

sul-fan'i late. A salt of sulfanilic acid.

sul"fa nil'ic ac'id. $NH_2C_6H_4SO_3H$. Para-aminobenzene sulfonic acid, occurring in colorless, water-soluble crystals. Used as a reagent for bile pigments and other substances, also in organic synthesis.

sul"fa pyr'a zine (sul fuh-pirr'uh-zeen, -zin). $NH_2C_6H_4SO_2NHC_4H_3N_2$; p-Amino-N 2-pyrazinylbenzenesulfonamide, isomeric with sulfapyrimidine; 1 Gm. dissolves in about 20,000 cc. of water. Appears to be as effective as sulfadiazine in pneumococcal, hemolytic streptococcal, and *Escherichia coli* infections; it also appears to be effective against *Shigella paradysenteriae*. Dose, for adults, 2-4 Gm. (30-60 gr.) initially, then 1 Gm. every 4-6 hours.

sul"fa-pyr'i dine (sul fuh-pirr'i-deen, -din) (*sulfapyridinum*). $NH_2C_6H_4SO_2NHC_5H_4N$; 2-(p-aminobenzenesulfonamido) pyridine. Occurs as white or faintly yellowish white crystals, granules, or powder; 1 Gm. dissolves in about 3500 cc. of water and in about 440 cc. of alcohol. Originally it was used especially in lobar pneumonia and in gonorrheal infections; it is now little used except in treating dermatitis herpetiformis. The range of dose is 0.5-1 Gm.

sul"fa-quin-ox'a line. $C_{14}H_{12}N_4O_2S$. 2-sulfanilamidoquinoxaline, practically insoluble in water but soluble in alkaline solutions; used in veterinary medicine to control outbreaks of cecal and intestinal coccidiosis of chickens and turkeys.

sulfarsenol. A trade-mark for a brand of sulfarsphenamine.

sulf ars phen a mine' (sulf-ars fen-uh-meen, -ars fen-am een, -in, -ars-fen uh-meen, -min) (*sulfarsphenamina*). Consists chiefly of disodium 3,3'-diamino-4,4'-dihydroxyarsenobenzene-N-dimethylenesulfonate; it contains not less than 19% of arsenic; occurs as a yellow powder; it is very soluble in water but slightly soluble in alcohol. Used in the treatment of syphilis. Dose, 0.25-0.45 Gm. (4-7 gr.) intravenously or intramuscularly at about one-week intervals.

s. bismuth. See *bismarsen*.

sulfasuxidine. Trade-mark for a brand of succinylsulfathiazole.

sul'fa tase. Any enzyme which hydrolyzes an ethereal sulfate (ester sulfate).

sul'fate. A salt of sulfuric acid of the type M_2SO_4

are produces radiations ranging in wavelength from infrared to visible and ultraviolet. A quartz bulb absorbs all ultraviolet radiations shorter than 2800 angstroms which are not present in sunlight.

sun spots. See *lentigo*.

sun stroke [*sunna*; M.E. *strok*]. A form of heat stroke occurring on exposure to the sun. The body temperature rises because of faulty heat dissipation due to high environmental temperature and humidity as well as absorption of solar radiant energy. Rectal temperatures may go from 106° F to 110° F. Syn., *insolation*.

su per [L., above]. A prefix denoting *above*, *upon*, or *excess*.

su″per ab duc tion [*super*; L. *abductio*, a forcible carrying off]. Excessive abduction; hyperabduction.

su″per ac′id [*super*; L. *acidus*, sour]. 1. Excessively acid. 2. More acid than normal, as gastric contents.

su″per a cid′i ty. Hyperacidity.

su″per ac tiv′i ty [*super*; L. *activus*, active]. Hyperactivity.

su″per a-cute′ [*super*; L. *acutus*, pointed]. Extremely acute.

su″per-al bu mi nu sis [*super*; L. *albus*, white; *-osis*, condition]. The overproduction of albumin.

su″per al″i men ta tion [*super*; L. *alimentum*, food]. Overfeeding; feeding beyond ordinary metabolic requirements.

su″per al″ka lin′i ty [*super*; Ar. *al-qili*, ashes of saltwort]. Excessive alkalinity.

su per bus. Old name for the rectus lateralis muscle.

su″per-cer″e-bel′lar [*super*; L. *cerebellum*, small brain]. Situated in the upper part of the cerebellum.

su per cil′i um [L., eyebrow]. The eyebrow. —**superciliary**, *adj.*

su″per di-crot′ic (-dye-krot′ick) [L. *super*, above; G. *dikrotos*, double-beating]. Hyperdicrotic.

su″per-dis ten′tion [*super*; L. *distentio*, from *distendere*, to stretch out]. Excessive distention; hyperdistention.

su″per-duct [L. *superducere*, to lead over]. Elevate; lead upward.

su″per duc tion [L. *superductio*, from *superducere*]. Maddox' term for sursumduction.

su″per-e go [L. *super*, above; *ego*, I]. In *psychoanalysis*, that subdivision of the psyche which acts as the conscience of the unconscious. Its components are derived from both the id and the ego.

su″per-e-vac u a′tion [*super*; L. *evacuare*, to evacuate]. Excessive evacuation.

su″per-ex″ci ta tion [*super*; L. *excitatio*, from *excitare*, to rouse up]. Excessive excitement.

su″per ex ten sion [*super*; L. *extensio*, from *extendere*, to stretch out]. Excessive extension; hyperextension.

su″per fa mi′ly [*super*; L. *familia*, household]. In *biology*, a classification group which ranks next above a family.

su″per fe cun-da′tion [*super*; L. *fecundus*, fertile]. The fertilization of two or more ova, ovulated more or less simultaneously, by two or more successive coital acts not necessarily involving the same male.

su″per fe cun di ty [*super*; L. *fecunditas*, fertility]. Superabundant fertility.

su″per fe-ta′tion, su″per foe-ta tion [*super*; L. *fetus*, fetus]. The production or development of a second fetus after one is already present in the uterus.

su″per fi′cial (soo per-fish′al) [L. *superficies*, outer surface]. Confined to or pertaining to the surface, as superficial fascia, a sheet of fatty areolar tissue under the skin.

su″per fi′ci-es (soo per-fish′ee-eez, -fish′eez) [L.]. The outer surface.

su″per im preg na′tion [L. *super*, over; *in*-, in; *praegnans*, pregnant]. 1. Superfetation. 2. Superfecundation.

su″per in duce [*super*; L. *inducere*, to bring into]. Add a new factor or a complication of a condition already existing.

su″per in fec tion [*super*; L. *infectio*, from *inficere*, to infect]. A second or subsequent infection by the same microorganism, as seen in tuberculosis.

su″per in vo-lu′tion [*super*; L. *involutio*, from *involvere*, to roll up]. Hyperinvolution, excessive rolling up; return of the uterus after labor to less than normal size.

su pe ri-or [L., higher]. In *anatomy*, higher; denoting the upper of two parts; toward the vertex.

su pe ri or′i ty com′plex. A general attitude or character trait, often pathologic and usually arising out of an underlying feeling of inferiority, which is characterized by the occurrence of some form of real or assumed ascendancy and by feelings of conceit, vanity, envy, jealousy, or revenge.

su″per lac ta′tion [L. *super*, over; *lactare*, to give suck]. 1. Excess of the secretion of milk. 2. Excessive continuance of lactation.

su″per le′thal [*super*; L. *letalis*, deadly]. Highly lethal or death dealing.

su per mo ron [*super*; G. *mōros*, dull]. A person whose mentality is slightly below normal, but who is of higher grade than a moron.

su′per nate [L. *supernans*, swimming above]. The fluid which remains after the removal of suspended matter by centrifugation or other physical or chemical means. —**superna′tant**, *adj.*

su per nor′mal [L. *super*, over; *normalis*, according to rule]. 1. Pertaining to a faculty or phenomenon which is beyond the level of ordinary experience. 2. Superior to the average.

su″per nu′mer ar″y (soo per-new′mer err ee) [L. *supernumerarius*, supernumerary]. Existing in more than the usual number, as supernumerary mammary gland.

su″per nu tri′tion [L. *super*, over; *nutrire*, to nourish]. Excessive nourishment; hypernutrition. Nourishment in excess of ordinary metabolic requirements.

su′per-ol. See *oxyquinoline sulfate*.

su″per ox′i-dized. Having an excess of oxygen above the usual amount which satisfies the combining capacities of the other elements of a body.

superoxol. Trade-mark for a 30% solution of hydrogen peroxide.

su″per-ox″y gen-a′tion. Excessive oxygenation.

su″per par a site [*super*; G. *parasitos*, parasite]. In *biology*, a parasite of parasites.

su″per par″a sit′ic [*super*; *parasite*]. Pertaining to superparasitism.

su″per par′a-si tism (soo per-par′uh-sigh tiz um) [*super*; *parasites*]. The infestation of parasites by other parasites.

su″per phos phate. An acid phosphate.

su″per pig″men ta′tion [*super*; L. *pigmentum*, color]. Excessive pigmentation.

su′per-salt″ (soo per-sawlt″). An acid salt.

su″per-sat u rate. Saturate to excess; add more of a substance than a liquid can normally and permanently dissolve.

su″per-scrip′tion [L. *superscriptio*, superscription]. The sign ℞ (abbreviation of Latin *recipe*, take) at the beginning of a prescription.

su″per-se-cre′tion [L. *super*, over; *secretio*, from *secernere*, to separate]. Excessive secretion.

su″per sen si tive [*super*; L. *sentire*, to feel]. Abnormally sensitive.

su″per sen″si ti za′tion [*super*; *sentire*]. Excessiv

susceptibility to the action of a protein following its injection.

su"per-son'ic, su"pra-son'ic [*super*; L. *sonus*, sound]. Referring to waves of too high frequency to produce sound that is audible to the human ear.

su"per-spi-na'tus (spy-nay'tus) [*super*; L. *spina*, thorn]. *In veterinary medicine*, an extensor of the humerus which has no exact homolog in man.

su"per-ten'sion [*super*; L. *tendere*, to stretch]. Extreme tension. See *hypertension*.

su"per-ve-nos'i-ty [*super*; L. *venosus*, venous]. The condition in which the blood has become venous to a high degree.

su"per-ven'tion [L. *superventio*, from *supervenire*, to come upon, to be added to]. That which is added; a new, extraneous, or unexpected condition added to another, as the supervention of septicemia, or other complication in disease.

su"per-ver'sion. See *sursumversion*.

su'per-vi"sor. A supervising or head nurse.

su"pi-na'tion. 1. The turning of the palm of the hand upward. 2. See *inversion* of the foot. 3. The condition of being supine; lying on the back. —**su'pinate**, v.

su'pi-na"tor, su"pi-na'tor [*supinare*]. A muscle of the forearm, which turns the radius outward. See Table of Muscles in the Appendix.

s. brevis. Old name for the supinator muscle.

su-pine' [L. *supinus*, thrown backward]. Lying on the back, face upward; or of the hand, palm upward; the opposite of prone.

sup"pe-da'ne-ous [L. *sub*, under; *pedaneus*, of the size of a foot]. Pertaining to the sole of the foot.

sup"pe-da'ne-um [L., footstool]. An application to the sole of the foot.

sup"ple-men'tal [L. *supplementum*, filling up]. Additional.

sup-port' [L. *supportare*, to carry]. 1. The act of holding anything in its position. 2. Any appliance acting as a support, as an arch support.

sup-port'er [*supportare*]. An apparatus intended to hold in place a low-hanging or prolapsed organ, as the uterus, the scrotum and its contents, the abdomen, etc., or to limit the use of certain joints, as the knee, ankle. See *pessary*, *jockey strap*, *bandage*, *suspensory*.

sup-pos'i-to"ry (suh-poz'i-tor"ee) [L. *suppositorium*, that is placed underneath]. A medicated solid body of varying weight and shape, intended for introduction into different orifices of the body. Usually suppositories melt or are softened at body temperature; in some instances release of medication is effected through use of a hydrophilic vehicle. Typical vehicles or bases are theobroma oil, *glycerinated gelatin*, sodium stearate, and propylene glycol monostearate. Rectal suppositories weigh about 2 Gm. and are tapered. Urethral suppositories are pencil-shaped, pointed at one end, and are either 7 cm. in length, weighing about 2 Gm., or 14 cm. in length, weighing about 4 Gm. Vaginal suppositories are globular or oviform in shape and weigh about 5 Gm.

glycerin s. (*suppositoria glycerini*). Contains glycerin, 90 Gm., sodium stearate, 9 Gm., to make about 30 adult *rectal suppositories* or 50 infant rectal suppositories. Used to produce *local discharges* in constipation. They act by locally irritating the mucous membranes of the rectum.

sup-pres'sion [L. *suppressio*, from *supprimere*, to press down]. 1. A sudden cessation of secretion, as of the urine, or of a normal process, as the menses. 2. *In psychiatry*, a mode of adjustment to urges and desires that are considered to be unacceptable, untenable, or unworthy through attempting, consciously and thoughtfully, to control or prevent their occurrence or expression in consciousness. Also see *repression*.

sup'pu-rant [L. *suppurare*, to suppurate]. Promoting suppuration. —**sup'pu-rant**, n.

sup"pu-ra'tion [L. *suppuratio*, from *suppurare*]. The formation of pus. —**sup'purate**, v.

sup'pu-ra"tive [*suppurare*]. Producing pus. —**suppurative**, n.

su'pra- [L., above]. A prefix signifying upon or above.

su"pra-cho'roid (sue"prah-kor'oyd) [*supra*; G. *chorioeidēs*, choroid]. Situated above or upon the choroid coat of the eye.

su"pra-cla-vic'u-lar [*supra*; L. *clavicula*, little key]. Above the clavicle, as supraclavicular nerves. See Table of Nerves in the Appendix.

su"pra-cla-vic"u-la'ris pro"pri-us. A rare muscle extending from the acromial end of the clavicle and lying superficial to the trapezius and sternocleidomastoid muscles.

su"pra-cla-vic'u-lar mus'cle. A rare muscle, better called cleido-occipital muscle.

su"pra-con'dy-lar [*supra*; G. *kondylos*, knuckle]. Above a condyle, as the supracondylar ridge of the femur.

su"pra-con"dy-lism [*supra*; *kondylos*]. Upward deviation of the mandibular condyles.

su"pra-cos-ta'lis. One of a number of rare variant muscles associated with the serratus muscles; they may be anterior or posterior.

su"pra-gle'noid [*supra*; G. *glēnoeidēs*, like a socket]. Above the glenoid cavity, as the supraglenoid tubercle of the scapula.

su"pra-glot'tic [*supra*; G. *glōtta*, tongue]. Above the glottis.

su"pra-hy'oid [*supra*; G. *hyoeidēs*, shaped like the letter upsilon]. Above the hyoid bone, as a suprahyoid muscle.

su"pra-lim'i-nal [*supra*; L. *limen*, threshold]. Lying above a threshold.

su"pra-mar'gin-al [*supra*; L. *margo*, edge]. Above an edge or margin, as the supramarginal gyrus of the brain.

su"pra-mas-toid' [*supra*; G. *mastoeidēs*, like a breast]. Above the mastoid process of the temporal bone.

su"pra-oc-clu'sion [*supra*; L. *occludere*, to close up]. That condition created by the abnormal elongation of teeth in their sockets.

su"pra-om-pha"lo-dy'mi-a [*supra*; G. *omphalos*, navel; *didymos*, twin]. A form of conjoined twins in which the union is in the superior umbilical region. Syn., *gastropagus*.

su"pra-or'bit-al [*supra*; L. *orbita*, track]. 1. Above the orbit, as the supraorbital nerve. See Table of Nerves in the Appendix. 2. Pertaining to the supraorbital nerve.

su"pra-pa-tel'lar [*supra*; L. *patella*, small pan]. Above the patella.

su"pra-pu'bic [*supra*; L. *pubes*, private parts]. Above the pubes, as *suprapubic prostatectomy*.

su"pra-ren- . For words beginning with suprarren- not found here, see words beginning adren-.

su"pra-re'nal [*supra*; L. *renalis*, of the kidneys]. 1. The suprarenal gland. See adrenal gland. 2. (*suprarenalum*.) The dried, partially defatted and powdered suprarenal gland of cattle, sheep, or swine; occurs as a light yellow to brown amorphous powder; it is only partially soluble in water. Various investigations have led to the isolation of over twenty crystalline *derivatives* from adrenal cortical extracts. These compounds have been demonstrated to be steroid derivatives which are closely related to the hormones derived from the reproductive system. Among the more potent

aldosterone, desoxycorticosterone, and corticosterone. Also called *desiccated suprarenal*, *dried adrenal substance*.

su″pra·re·nal·ec′to·my [*supra*; *renalis*; G. *ektomē*, excision]. Adrenalectomy; removal of an adrenal or suprarenal gland.

su″pra·ren′al·in (sue″pruh·ren′ul·in, ·ree′nul·in). Epinephrine.

su″pra·re·na′lis ab·er·ra′ta of the o′va·ry. See adrenocorticoid *adenoma* of the ovary.

su″pra·re′nal·ism. See *adrenalism*.

su″pra·re″nal·op′a·thy [*supra*; *renalis*; G. *pathos*, disease]. A disordered condition resulting from disturbed function of the adrenal glands.

suprarenin. Trade-mark for a brand of epinephrine.

su″pra·scap′u·la [*supra*; L. *scapula*, shoulder blade]. An anomalous bone occasionally found between the superior border of the scapula and the spines of the lower cervical or first thoracic vertebras, present in some cases of congenital elevation of the scapula; also called *omovertebral bone*.

su″pra·scap′u·lar [*supra*; L. *scapula*, shoulder]. Above or in the upper part of the scapula, as the suprascapular nerve. See Table of Nerves in the Appendix.

su″pra·scle′ral [*supra*; G. *sklēros*, hard]. Situated at or upon the outer surface of the sclera.

su″pra·sel′lar [*supra*; L. *sella*, seat]. Situated upon or above the sella turcica of the sphenoid bone.

su″pra·sen′ic. See *suprarenic*.

su″pra·spi·na′tus (sue″pruh·spy·nay′tus) [*supra*; L. *spina*, thorn]. A muscle originating above the spine of the scapula and inserted on the greater tubercle of the humerus. See Table of Muscles in the Appendix.

su″pra·spi′nous [*supra*; *spina*]. Above the spinous process of the scapula or of a vertebra.

su″pra·ster′nal [*supra*; G. *sternon*, breast]. Above the sternum, as suprasternal notch.

su″pra·ster′ol, su″pra·ste′rol. A type of sterol produced by the irradiation of ergosterol. Suprasterols are toxic.

su″pra·ton′sil·lar [*supra*; L. *tonsillae*, tonsils]. Above a tonsil, as supratonsillar abscess.

su″pra·troch′le·ar (sue″pruh·trock′lee·ur) [*supra*; L. *trochlea*, case containing pulleys]. Above the trochlea or pulley of the superior oblique muscle.

su″pra·ver′gence [*supra*; *vergere*]. Divergence of the two eyes in a vertical plane, measured by a prism of 2°–3°; also called *sursumvergence*. —**supraverge′nt**, *adj.*

right s. The ability to overcome prisms, base down before the right eye, or base up before the left eye.

su″pra·vi′tal stain′ing. A method whereby cells may be stained and studied in the living state, of especial value in studying the immature leukocytes found in leukemia. Janus green, brilliant cresyl blue, and neutral red are stains commonly employed.

su′ra [L.]. The calf of the leg. —**su′ral**, *adj.*

sur″al·i·men·ta′tion [F. *sur* from L. *super*, above; *alimentum*, food]. The method of forced feeding or overalimentation sometimes employed in pulmonary tuberculosis and other diseases.

su′ra·min, su′ra·min. $C_{51}H_{34}N_6O_{23}S_6Na_6$. British Pharmacopoeia title for the substance originally introduced as Bayer 205. It is the symmetrical urea of the sodium salt of *m*-benzoyl-*m*-amino-*p*-methylbenzoyl-1-aminonaphthalene-4,6,8-trisulfonic acid. A white or faintly cream-colored powder used in various trypanosome infections, especially African sleeping sickness, and in pemphigus. Toxic degeneration of the liver, spleen, kidneys, and adrenals has been reported from its use, as has agranulocytosis. Dose, 0.5 Gm. (7½ gr.) intravenously every other day increased cautiously to 1 Gm. (15 gr.). Trade names are germanin, Fourneau 309, naganol, moranyl, and Bayer 205.

s. sodium. Name used in the United States for suramin. See *naphuride sodium*.

sur′di·tas. See *deafness*.

s. verbalis. See *aphasia*.

sur·di′ty [L. *surditas*, deafness]. Deafness.

sur″ex·ci·ta′tion (sur·eck·sigh·tay′shun) [*sur*; L. *excitatio* from *excitare*, to rouse up]. Excess excitement.

sur′face [F. from L. *superficies*, surface]. 1. The exterior of a body. 2. The face or faces of a body; a term frequently used in anatomy in the description of various structures.

buccal s. That of the crown of a tooth next the cheek.

contact s. That of a tooth facing an adjacent tooth mesially or distally; proximal surface.

distal s. That of the crown of a tooth away from the midline.

fixation s. A curved surface the points of which occupy in the two monocular fields, positions which are identical horizontally regardless of vertical disparity.

labial s. That of the crown of a tooth toward the lips.

lingual s. That of the crown of a tooth next the tongue.

mesial s. That of the crown of a tooth toward the midline.

occlusal s. That of the crown of a tooth toward its antagonists.

respiratory s. The entire surface of pulmonary tissue coming in contact with the respired air.

sur′face ten′sion. The contractile surface of a liquid by which it tends to assume a spherical form and to present the least possible surface (as in the formation of a meniscus). Abbreviated, S.T.

sur′geon [G. *cheirourgos*, working by hand]. 1. One who practices surgery. The term implies the possession of a medical degree and license and is used irrespective of the field or limitation of practice. 2. In the United States Army, the ranking officer of the Medical Corps in a military command.

attending s. One associated with the staff of a hospital, visiting the patients at specific times, performing major surgical operations, and supervising the postoperative care through directions to the house surgeon.

aural s. An otologist.

chief s. 1. The senior surgeon of a hospital or of a surgical team. 2. In U. S. Army medicine, the senior medical officer assigned to a general headquarters or to an expeditionary force as staff officer.

contract s. In military medicine, a civilian who performs the professional and administrative functions of a medical officer but without military rank or commission.

dental s. (a) One who limits his field to the surgery of the mouth and jaws. (b) In U. S. Army medicine, the military staff officer of the Dental Corps in charge of the dental service of an area, command, unit, or installation. He performs his staff, professional, command, and administrative duties under the commanding officer or general of such area, unit, or installation to which he is assigned, and advises in matters of dental supply, operation, and training.

house s. A resident surgeon in a hospital.

plastic s. One who specializes in plastic surgery.

s. general. In the United States Armed Forces and Public Health Service, the ranking officer and

head of the Medical Service or Department. In foreign armies, in some cases, the title denotes the chief medical officer of a department or command.
veterinary s. One whose practice is limited to the treatment of domestic, large and small animals, or to meat and food inspections on behalf of the national or state governments.
visiting s. A surgeon whose duties require regular attendance at a hospital or dispensary as well as emergency visits to operate upon or care for patients himself or to supervise the care given by house surgeons.

sur'ger·y [G. *cheirourgia*, a working by hand]. The branch of medicine dealing with diseases requiring operative procedure, including manipulation. See also *chemosurgery*. —**surgical**, *adj.*
antiseptic s. The application of antiseptic methods in the treatment of wounds.
aseptic s. Operative procedure in the absence of germs, everything coming in contact with the wound being sterile.
aural s. That pertaining to the ear.
battle s. Urgent surgery during active military operations in a forward area.
brain s. That pertaining to any part within the cranium.
cautery s. Use of cautery in surgical procedures, usually applied to benign and malignant growths of the skin.
clinical s. The practice of surgery in teaching.
conservative s. Measures directed to the preservation rather than the removal of a part.
dental s. That pertaining to the teeth and jaws.
general s. Surgery as a whole and not confined to a particular specialty.
major s. That in which the operations are important and involve risk to life.
military s. That pertaining to gunshot wounds and other injuries peculiar to military life.
minor s. That part of surgery including procedures not involving serious hazard to life and usually not requiring general anesthesia; examples are bandaging, application of splints and casts, suturing of superficial lacerations, excision, incision, and drainage of superficial structures.
operative s. That which refers to the performance of operations.
ophthalmic s. That pertaining to the eye and its appendages.
oral s. That branch of dental science which is concerned with surgical procedures involving structures concerned with the oral cavity, particularly the teeth and jaws.
orthopedic s. The remedy of skeletal deformities by manual and instrumental measures.
pelvic s. Surgery limited to the pelvic area.
plastic s. Repair of lost or defective tissue by transference of tissue from another part or person.
reparative s. Plastic surgery.
veterinary s. The surgery of animals.

sur'gi·cal team. 1. The group of individuals that carries out a surgical operation. It usually consists of a chief surgeon, assistants, surgical nurses, and anesthesiologist. 2. A team of doctors working as a unit who are proficient in various surgical procedures.

Su"ri·nam bark (soor"i·nahm", ·nam"). Cabbage tree bark; the bark of *Andira retusa*, which has been used as an anthelmintic in the West Indies.

surital sodium. Trade-mark for thiamylal sodium.

sur'ra (soor'uh, surr'uh) [Marathi *sūra*, wheezing sound]. A term applied to those trypanosomiases of domestic animals in southeastern Asia which are caused by *Trypanosoma evansi*.

sur'ro·gate [L. *surrogare*, to substitute]. Any medicine used as a substitute for a more expensive one, or for one to which there is a special objection in any particular case.

sur"sum·duc'tion [L. *sursum*, upward; *ducere*, to lead]. 1. The power of the two eyes of fusing two images when one eye has a prism placed vertically before it. 2. See *supravergence*. 3. A movement of either eye alone upward.
right s. The absolute power that the right eye has to rotate upward.

sur"sum·ver'gence [*sursum*; L. *vergere*, to turn]. The turning of the eyes upward; supravergence. Anoopsia.

sur"sum·ver'sion [*sursum*; L. *vertere*, to turn]. The upward movement of both eyes.

sur·vi'vor·ship [L. *supervivere*, to survive]. In *legal medicine*, the living of one of two or more persons after the death of the other or others.

SUSA firing field. See under *firing field*.

sus·cep"ti·bil'i·ty [L. *suscipere*, to take up]. The opposite of immunity. A characteristic rendering an individual liable to acquire a disease if exposed to the causative agent. Susceptibility may be increased by certain traits, as racial, familial.

sus·cep'ti·ble [*suscipere*]. Sensitive to impression or influence. In *immunology*, said especially of one who has neither natural nor acquired immunity to a disease.

sus"cep·tiv'i·ty. Susceptibility.

sus'ci·tate [L. *suscitare*, to arouse]. Increase activity; stimulate.

sus·pend'ed [L. *suspendere*, to hang]. 1. Hanging; applied to any structure attached to or hanging from another structure, and attached by a pedicle or cord. 2. Interrupted.

sus·pen'sion [L. *suspensio*, from *suspendere*]. 1. Hanging or fixation in a higher position; a method of treatment, as suspension of the uterus. 2. In *chemistry* and *pharmacy*, a dispersion of solid particles throughout the body of a liquid.
tendon s. Tenodesis.

sus·pen'soid. An apparent solution which is seen, by the microscope, to consist of small particles of the solute in active Brownian movement.

sus"pen·so'ri·um [*suspendere*]. Old term for that upon which anything hangs for support.
s. hepatis. The coronary ligament of the liver.
s. testis. The cremaster muscle.
s. vesicae. The superior false ligament of the urinary bladder.

sus·pen'so·ry [*suspendere*]. Serving for suspension or support, as suspensory ligament, or suspensory bandage.

sus·pen'so·ry. 1. A device for suspending a part, as the scrotum. 2. A jockey strap.

sus"pi·ra'tion [L. *suspiratio*, from *suspirare*, to sigh]. 1. A sigh. 2. The act of sighing.

sus"ten·tac'u·lum [L., support]. A support. —**sustentacular**, *adj.*
s. tali. A process of the calcaneus supporting the talus.

su"sur·ra'tion [L. *susurratio*, from *susurrare*, to murmur]. A murmur or susurrus.

su·sur'rus [L., a murmuring]. A soft murmur in aneurysm, cardiac diseases, contracting muscle, etc.
s. aurium. See *tinnitus*.

Sutton, Henry Gawen [English physician, 1837–1891]. Described arteriocapillary fibrosis. Generalized arteriosclerosis is called *Gull and Sutton disease*.

Sutton, Richard Lightburn [American dermatologist, 1878–]. With his son, R. L. Sutton, Jr., author of standard works in dermatology. Described a type of leukoderma called *Sutton disease*, *leukoderma acquisitum centrifugum*.

su·tu'ra (pl. *suturae*) [L., a sewing together]. A suture.

s. dentata. One with toothlike interlocking processes, as the suture between the parietal bones.

s. harmonia. One in which there is simple apposition of contiguous rough surfaces.

s. limbosa. An interlocking suture, with beveling and overlapping of the articular surfaces, as in the coronal suture.

s. notha. A false suture includes sutura squamosa and sutura harmonia.

s. serrata. One in which the edges of the bones are saw-toothed.

s. squamosa. One formed by the overlapping of contiguous bones by broad, beveled margins.

s. vera. A true suture, one in which the margins of the bones are connected by series of processes and indentations interlocked together.

su'tur al *(soo chur-al) [sutura].* Pertaining to, or having the nature of, a suture.

su'ture. T close a wound by sewing.

su'ture *[sutura].* 1. *I osteology* line of junction or closure between bones, as cranial suture. 2. *I surgery* fine, cordlike structures used to close wound. The term may mean either the material used, as gut, silk, etc., or the method of using the suture, as interrupted, mattress, etc. There are two main types of materials, absorbable, such as catgut, which are placed in deep tissue, and nonabsorbable, which usually are removed, as silk, linen, wire, etc., though some are used and left in deep tissue. See Plate 40.

approximating s. One placed in deep tissue to pull together the edges of the wound.

basilar s. That formed by the junction of the basilar process of the occipital bone with th posterior surface of the body of the sphenoid.

bulb s. Technic employed where, after resection, the nerve cannot be sutured without undue tension. The neighboring joint is flexed and the untrimmed nerve ends are laid side by side with as much overlap as possible, and united by strong sutures; the wound is closed, and gradual extension is then effected with elongation of th nerve.

buried s. One completely covered by and not involving the skin.

button s. A mattress suture which includes button on either side of the wound to prevent cutting of the skin by the suture.

catgut s. One in which the material employed is catgut.

chainstitch s. One made with the sewing machine stitch.

circular s. One that is pplied to the entire circumference of divided part, as the intestine.

coapting s. One which brings the divided skin edges accurately together.

continuous s. One in which the suture material is continued from one end of the wound to the other; may be of several types, the plain over-and-over sewing stitch being most common. See Plate 40.

coronal s. The union of the frontal with the parietal bones transversely across the verte of the skull.

Czerny's s. See Vincenz Czerny.

dentat s. An irregular notched suture, as that between the parietal bones.

dermal s. A fine linen suture impregnated with various chemicals used when fine scar is desired.

ethmofrontal s. The union between the frontal and ethmoid bones.

ethmolacrimal s. The union between the lacrimal and ethmoid bones.

thmosphenoidal s. See sphenoethmoidal s.

false s. Any suture in which there is interlocking of the bones without serration.

frontal s. A suture which at birth joins the two frontal bones from the vertex to the root of the nose, but which afterward becomes obliterated. Syn., *metopic s.*

frontoethmoidal s. One between the frontal and ethmoid bones.

frontomalar s. The union between the frontal and zygomatic bones.

frontomaxillary s. The union between the maxillary and the frontal bones.

frontonasal s. The union between the nasal and frontal bones.

frontoparietal s. See coronal s.

frontosphenoid s. See sphenofrontal.

frontotemporal s. The union between the temporal and frontal bones.

frontozygomatic s. The union between the frontal and zygomatic bones.

harelip s. One in which the edges of the wound are transfixed with pins and approximation secured by twisting or wrapping the ends of the pins with thread.

incisive s. That between the premaxilla and maxilla in the embryo and fetus; union usually occurs before birth. It is rarely visible the adult.

intermaxillary s. The union between the maxillary bones.

internasal s. The union between the nasal bones.

interparietal s. The sagittal suture, or that formed by the approximation of the parietal bones.

interrupted s. A type in which each stitch is tied and cut individually. See Plate 40.

lambdoid s. The union between the two superior borders of the occipital and the parietal bones.

longitudinal s. See sagittal s.

mattress s. One in which the needle, after being drawn through both skin edges, is reinserted on the same side and drawn through the original side again. This may be continuous or interrupted. See Plate 40.

maxillolacrimal s. The union between the lacrimal and maxillary bones.

metopic s. The frontal suture, between the two vertical halves of the frontal bone. Syn., *frontal*

nasofrontal s. The frontonasal suture.

nasomaxillary s. The union between the maxillary and nasal bones.

occipital s. See lambdoid s.

occipitomastoid s. The union between the mastoid portion of the temporal bone and the occipital bone.

occipitoparietal s. See lambdoid.

palatine s. The union between the palate bones.

palatomaxillary s. A suture between the horizontal part of the os palatinum and the palatine process of the maxilla.

parietomastoid s. The union between the mastoid portion of the temporal bone and the parietal bone.

petro-occipital s. The union between the occipital bone and the petrous portion of the temporal.

petrosphenoid s. The union between the great wing of th sphenoid bone and the petrous portion of the temporal, also called *sphenopetrosal*.

plicating s. A running stitch which is pulled together as gathering string to shorten the distance between two points.

primary s. One done at the time of injury or operation.

purse-string s. A running stitch placed in circle and pulled together to close an opening.

q ill s. Similar t button suture except that the sutures are tied over quill or roll of cotton.

relaxing s. One placed deep to and at distance from the wound to relieve tension.

rhabdoid s. The sagittal suture.

sagittal s. The union between the superior borders of the parietal bones.
secondary s. One done some time after the time of injury or operation. Also called *delayed s.*
shotted s. One in which each end of the suture is passed through a perforated shot and then drawn tight.
sphenoethmoidal s. The union between the sphenoid and ethmoid bones.
sphenofrontal s. The union between great wing of the sphenoid bone and the frontal bone.
sphenomalar s. The union between the zygomatic bone and the great wing of the sphenoid.
sphenopalatine s. A cranial suture between the sphenoid and palatine bones.
sphenoparietal s. The union between the great wing of the sphenoid bone and the parietal bone.
sphenosquamosal s. That between the great wing of the sphenoid and the squamous portion of the temporal bone.
sphenotemporal s. The union between the temporal and the sphenoid bones.
sphenozygomatic s. The union between the zygomatic bone and the great wing of the sphenoid.
squamoparietal s. The union between the squamous portion of the temporal bone and the parietal bone. Also called *squamosal s.*
squamosphenoid s. The union between the great wing of the sphenoid and the squamous portion of the temporal bone also called *spheno-squamosal s.*
subcuticular s. A buried, continuous suture in which the needle is passed horizontally into the true skin back and forth until the wound is closed.
tension s. One made at a distance from the wound edge and through the deeper tissues, to lessen the strain on the skin suture.
transfixion s. A method of closing wound by the use of pin or needle which is placed through both wound edges and held by winding suture material over both ends in figure-of-eight fashion. Also called *figure-of-eight s.*, *harelip s.* Rare.

Svedberg, Theodor (1884–) Swedish chemist who developed an ultracentrifuge and procedure for determining large molecular weights of organic substances, e.g. proteins and resins, by measuring the sedimentation equilibrium in the ultracentrifuge. Nobel laureate in chemistry 1926. See Svedberg flotation unit, Folin and Svedberg method.

swab [D. *zwabber*]. A piece of cloth, sponge, or cotton upon the end of stick, used in feeding the sick, making applications to the throat, cleansing the mouth and teeth, etc.
NIH s. A small square of cellophane folded around the end of glass rod and held in place by rubber band, developed by the National Institutes of Health and used in collecting the ova of *Enterobius* or other ova from the perianal region.
swab stick. A rod or shaft, one extremity of which is to be wound with cotton cotton stick.

swage [OF. *souage*]. A counter-die used in shaping thin metal. See swaging. —swage, v.

swag'ing [swage]. Conforming thin metal plate to the shape of model, cast, or die by the aid of counter-die the swage.

swal'low ing [AS. *swelgan*]. Deglutition; the act of taking into the stomach through the esophagus.
air s. See *aerophagia*.
tongue s. A condition in which there is an abnormal flaccidity of the tongue, so that it falls backward, giving rise to danger of suffocation.

Swammerdam, Jan [Dutch physician and naturalist, 1637–80]. Pioneer microscopist, said to have been the first to observe the red blood cells. Discovered the valves of the lymphatics (1664). Made important entomologic studies.

sway'-back'' See *lordosis*.

sweat [AS. *swǣtan*]. The secretion of the sudoriferous glands, consisting of transparent, colorless, aqueous fluid, holding in solution neutral fats, volatile fatty acids, traces of albumin and urea, free lactic acid, sodium lactate, sodium chloride, potassium chloride, and traces of alkaline phosphates, sugar, ascorbic acid, etc. Its excretion, largely by the cooling effect of evaporation, helps regulate the temperature of the body.
bloody s. See *hemathidrosis*.
blue s. Perspiration which has blue color.
colliquative s. A profuse clammy sweat.
colored s. Chromhidrosis.
excessive s. Hyperhidrosis.
fetid s. See *bromhidrosis*.
green s. Sweat having bluish or greenish color seen mainly in copper workers; may be due to copper taken into the system.
night s. Drenching perspiration occurring at night or whenever the patient sleeps, in the course of pulmonary tuberculosis or other diseases.
phosphorescent s. A very rare peculiarity of the sweat, in which it becomes phosphorescent; it has been observed in some cases of malaria and after eating fish containing phosphorescent microorganisms.
red s. A peculiar red perspiration noted in the axillae and genital region, and due to microorganisms which have developed on the hairs of these warm, moist parts. See *trichomycosis rubra*.

Swediaur, François Xavier [Austrian physician, 1748–1824]. Described inflammation of the Achilles bursa, called achillodynia, *Albert's disease*, *Swediaur's disease*.

Swe dish move'ments. Gymnastics according to system originating in Sweden and adapted to the health needs of individuals, especially for those having postural deformities.

swee'ny [perhaps from Ger. dial. *schweine*]. A wasting or atrophy of the scapular muscles of the horse, usually due to an injury of the nerve supply. Also called *sweeney*.

swell'ing [AS. *swellan*]. 1. Any morbid enlargement, inflation, or abnormal protuberance. 2. In embryology, small eminence or ridge.
arytenoid s. An eminence on either side of the primitive embryonic glottis that fuses with the hypobranchial eminence.
bulbar s. One of the endocardial ridges of the embryonic bulbus cordis.
Calabar swellings. Edematous, egg-shaped, distended areas occurring in different parts of the body of natives of Calabar and other parts of West Africa. It is thought to be produced by the action of *Filaria loa* in the subcutaneous tissues.
cloudy s. Parenchymatous degeneration; retrogressive change in cytoplasm of parenchymatous cells, as glandular epithelium, endothelial cells, and leukocytes, whereby the cell enlarges, the outline becomes irregular. In fresh tissue the nucleus is obscured, and the cytoplasm becomes coarsely granular. The basic change is imbibition of water with agglomeration of protein particles and dispersal of lipid protein combinations.
genital s. See *labioscrotal s.*
glassy s. Amyloid degeneration.
labioscrotal s. The eminence or ridge on either side of the base of the embryonic phallus that is the primordium of half the scrotum in the male or of labium majus in the female. Also called *labial s.*, *torus genitalis*.
lateral lingual s. One of the paired swellings of

sym"phy·si·ot'o·my (sim"fi·see·ot'o·mee) [*symphysis*; G. *tomē*, a cutting]. The dividing of the symphysis pubis for the purpose of increasing the diameters of the pelvic canal and facilitating labor. *Obs.*

sym'phy·sis (sim'fi·sis) (pl. *symphyses*) [G., a growing together]. A synarthrosis, especially one in the sagittal plane. —**symphys'eal**, *adj.*

s. cartilaginosa. Synchondrosis.

s. ligamentosa. Syndesmosis.

s. mandibulae. The midline osteochondral union of the halves of the mandible.

s. pubis. The fibrocartilaginous union (synchondrosis) of the pubic bones. See Plates 2, 12.

sym"phy·so·dac·tyl'i·a (sim"fi·so·dack·til'ee·uh, sim"fi·so-). See *syndactyly*.

sym"phy·sop'si·a (sim"fi·sop'see·uh). See *cyclopia*.

sym"phy·so·ske'li·a [*symphysis*; G. *skelos*, leg]. The condition in which the lower extremities are united. See *sympus*.

sym'plasm. A multinucleate protoplasmic mass resulting from the coalescence of originally separate cells, as in certain giant cells.

sym·po'di·a [G. *sympous*, with the feet together]. The condition of united lower extremities. See *sympus*.

symp'tom [G. *symptōma*, anything that happens]. A phenomenon of disease which leads to complaints on the part of the patient; a subjective sign in contrast to one which is objective.

accessory s. A minor symptom. Also called *accident s.*

accidental s. One intervening in the course of disease without having any connection with it.

concomitant symptoms. Accessory phenomena occurring in connection with the essential phenomena of a disease.

constitutional s. One produced by the effect of the disease on the whole body. Also called *general s.*

delayed s. See *shock*, 1.

direct s. One depending directly upon disease.

dissociation s. Anesthesia to pain and to heat and cold, with preservation of tactile sensibility and of the muscular sense; observed in syringomyelia.

equivocal s. One of doubtful significance.

focal s. One occurring at a given site.

halo s. The colored circles seen around lights in glaucoma.

indirect s. One only indirectly due to disease.

labyrinthine symptoms. A group of symptoms due to lesion or disease of the internal ear.

local s. One indicating the concentration of disease in a certain part of the body.

negatively pathognomonic s. One which never occurs in a certain disease and therefore by its presence shows the absence of that disease.

passive s. See *static s.*

pathognomonic s. A symptom which exhibits itself only in a certain disease and therefore undeniably proves its presence.

signal s. The first disturbance of sensation preceding a more extensive convulsion, as the aura heralding an attack of epilepsy.

static s. A symptom which indicates the condition in a single organ without reference to the rest of the body.

sympathetic symptoms. Symptoms for which no adequate cause can be given other than so-called sympathy.

withdrawal symptoms. See *withdrawal syndrome*.

symp"to·mat'ic [G. *symptōmatikos*, accidental]. 1. Pertaining to, or of the nature of, a symptom. 2. Affecting symptoms, as symptomatic treatment.

symp"tom·a·tog'ra·phy [G. *symptōma*, anything that happens; *graphein*, to write]. A written or printed description of symptoms.

symp"tom·a·tol'o·gy [*symptōma*; G. *logos*, word]. 1. The science of symptoms. 2. In common usage, the symptoms of disease taken together as a whole. —**symptomatolog'ic**, *adj.*

symp'tom com'plex. The ensemble of symptoms of a disease. Also see *syndrome*.

Avellis' s. c. Paralysis of one half of the soft palate, associated with a recurrent laryngeal nerve paralysis on the same side.

Bernhardt-Roth's s. c. See *meralgia paresthetica*.

Erb-Goldflam's s. c. Myasthenia gravis.

Koeberlé's s. c. See *pseudoileus*.

Friedmann's vasomotor s. c. A train of symptoms following injury to the head, consisting of headache, vertigo, nausea, and intolerance of mental and physical exertions and of galvanic excitation; it is occasionally associated with ophthalmoplegia and mydriasis. These phenomena may subside and recur with greater intensity with fever, unconsciousness, and paralysis of the cranial nerves, ending in fatal coma. They are probably due to an encephalitis of slow development with acute exacerbations.

Hoppe-Goldflam s. c. Old term for myasthenia gravis.

Putnam-Dana's s. c. Subacute combined degeneration of the spinal cord.

Roth's s. c. See *meralgia paresthetica*.

Wilks's s. c. Old term for myasthenia gravis.

symp'tom group'ing, symp'tom group. See *symptom complex*.

symp·to'sis [G., a falling together]. Wasting; emaciation, collapse.

sym'pus [G. *sympous*, with the feet together]. A monster characterized by greater or less fusion of the legs, rotation of the legs, and marked deficiencies of the pelvic region and genitalia. Also called *sirenoform fetus*, *sympodia*, *symmelus*, *siren*, *mermaid fetus*.

s. apus. One lacking feet. Syn., *sirenomelus*.

s. dipus. A sympus with two more or less complete feet.

s. monopus. One with but one more or less complete foot. Syn., *uromelus*.

syn·sep'a·lous [G. *syn*, with; NL. *sepalum*]. In biology, having the sepals united.

syn- [G.]. A prefix signifying *with* or *together*.

syn·ac·to'sis [G. *synaktos*, collected; -*ōsis*, condition]. Malformations caused by the abnormal growing together of parts.

syn"a·del'phus [G. *synadelphos*, from *syn*, *adelphos*, brother]. Equal conjoined twins having eight limbs with but one head and trunk. Not observed in man. Also called *cephalothoracoiliopagus*.

syn·al'gi·a [G. *synalgein*, to share in suffering]. Pain felt in a distant part from an injury or stimulation of another part. —**synalgic**, *adj.*

syn"an·as"to·mo'sis [G., supposed communications between arteries and veins]. The joining of several blood vessels. *Rare.*

sy·nan'che (si·nang'kee, sigh·nang'kee) [G. *synanchē*, sore throat]. Severe sore throat with choking, often caused by diphtheria organisms. Syn., *diphtheria*.

syn·an·the'ma (si·nan'thi·muh, sin·an·theem'uh) [G. *synanthein*, to blossom together]. A group of elementary skin lesions of the same type.

syn·an'throse. See *levulose*.

syn'apse (sin'aps, si·naps') [G. *synapsis*, contact]. 1. The region of communication between neurons; the point at which an impulse passes from an axon of one neuron to a dendrite or to the cell body of

another. The relation between the neurons is probably one of contiguity of plasma membranes, rather than one of continuity of protoplasm. A synapse is polarized, that is, nerve impulses are transmitted only in one direction, and is characterized by fatigability. Also spelled *synapsis*. 2. The fusion of the male and female chromosome pairs. This occurs either side-to-side or end-to-end without either univalent chromosome losing its identity. A bivalent chromosome results and is responsible for transmitting mixed characteristics from the parents to the offspring. Also spelled *synapsis*.

axodendritic s. A type in which the end-feet of the axon of one nerve are in contact with the dendrites of another neuron.

axosomatic s. A type in which the end-feet of the axon of one nerve are in contact with the cell body of another neuron.

syn'apse. To make a connection with a neuron.

syn-ap'tase (si-nap'tace, -taze). See *emulsin*.

syn-ap'tene. See *amphitene*.

syn-ap"to-lem'ma [G. *synaptos*, fastened together; *lemma*, that which is peeled off]. The membrane at the synapse, separating the axonal ending from the body of the nerve cell.

syn"ar-thro'di-a. See *synarthrosis*. —**synarthrodial**, *adj.*

syn"ar-thro-phy'sis [G. *syn*, with; *arthron*, joint; *physis*, growth]. Progressive ankylosis of the joints.

syn"ar-thro'sis [syn-; G. *arthrōsis*, jointing]. A form of articulation in which the bones are immovably bound together without any intervening synovial cavity. The forms are suture, in which processes are interlocked; schindylesis, in which a thin plate of one bone is inserted into a cleft of another; and gomphosis, in which a conical process is held by a socket.

syncaine. Trade name for procaine hydrochloride.

syn-can'thus [syn-; G. *kanthos*, corner of the eye]. Adhesions between the orbital tissues and the eyeball.

syn-car'y-on [syn-; G. *karyon*, nut]. See *synkaryon*.

syn-ceph'a-lus [syn-; G. *kephalē*, head]. Conjoined twins united by their heads. This group includes the various types of craniopagus (cephalopagus) and cephalothoracopagus.

s. asymmetros. See *iniops*.

syn-chi'li-a, syn-chei'li-a (sin-kigh'lee-uh) [syn-; G. *cheilos*, lip]. Fusion of the lips.

syn"chon-dro'sis (sing"kon-dro'sis) [G. *synchondrōsis*, junction of two bones by cartilage]. A joint in which the surfaces are connected by a plate of cartilage. —**synchondrosial**, *adj.*

sacroiliac s. The union between the sacrum and the ilium.

syn-chon-drot'o-my (sing"kon-drot'o-mee) [G. *syn*, with; *chondros*, cartilage; *tomē*, a cutting]. A division of the cartilage uniting bones, especially of that of the symphysis pubis.

syn"chro-nous'i-a (sing"kro-pock'see-uh). See *tachycardia*.

syn"chro-cy'clo-tron. Modification of the cyclotron to produce particles of higher kinetic energy in discontinuous streams. The frequency of the electric field is varied as the orbit of the particle increases in diameter.

syn'chro-nism, syn-chro'ni-a [G. *synchronos*, contemporaneous]. Concurrence in time of two or more events. —**synchronous**, *adj.*

syn'chro-tron. Instrument in which electrons or protons are accelerated first by the betatron principle and then by the cyclotron principle, to gain more kinetic energy.

syn"chy-sis scin'til-lans (sing'ki-sis sin'ti-lanz, sin-til'anz). The presence of bright, shining particles in the vitreous body of the eye.

syn"ci-ne'sis. See *synkinesis*.

syn'ci-put. Sinciput.

syn-clei'sis (sin-kly'sis) [G. *syn*, with; *kleisis*, closing]. Obsolete term for occlusion.

syn'cli-tism [G. *synklinein*, to lean]. A condition marked by parallelism or similarity of inclination; parallelism between the pelvic planes and those of the fetal head. —**synclit'ic**, *adj.*

syn'clo-nus [G. *syn*, with; *klonos*, agitation]. 1. Tremor or clonic spasm, of several muscles at the same time. 2. A disease thus characterized, as chorea.

s. ballismus. Paralysis agitans.

s. tremens. General tremor.

syn'co-pe (sing'ko-pee) [G. *synkopē*, sudden loss of strength]. Swooning or fainting; temporary suspension of consciousness from cerebral anemia. —*syncopal*, *syncop'ic*, *adj.*

cardiac s. One due to extreme bradycardia and asystole, or to tachycardia.

carotid sinus s. Spontaneous attacks of unconsciousness and convulsions caused by a hyperactive carotid sinus. See also carotid sinus syndrome.

laryngeal s. Spasm of the larynx associated with vertigo and loss of consciousness.

local s. Sudden pallor and insensibility of a part.

s. anginosa. Synonym of angina pectoris.

tussive s. Fainting following a severe coughing episode.

vasovagal s. That developing in persons with unstable vasomotor systems; emotional strain or pressure on the vagus causes a lowering of blood pressure and slowing of the pulse. Also see carotid sinus s.

syn"co-pex'i-a, syn'co-pex"y. See *tachycardia*.

syncurine. A trade-marked name for decamethonium bromide.

syn-cyt"i-o-ly'sin (sin sit"ee-o lye'sin, sin-sish"ee-o- sin sit"ee-ol' sin, sin-sish ee-) [G. *syn*, with; *kytos*, cell; *lysis*, loosing]. A cytolysin produced by injections of an emulsion made from placental tissue.

syn-cyt"i-o'ma. See *chorioncarcinoma*.

syn-cyt"i-o-tox'in (sin-sit"ee-o-tock'sin, sin-sish"ee-o-) [syn-; *kytos*; G. *toxikon*, poison]. A cytotoxin with specific action on syncytial cells.

syn-cyt"i-o-troph'o-blast (-tro'fo-blast, trof'o-blast) [syn-; *kytos*; G. *trophē*, nourishment; *blastos*, germ]. Syncytial trophoblast. An irregular sheet or net of deeply staining cytoplasm in which nuclei are irregularly scattered; it lies outside of the cytotrophoblast. Also called *syncytium*, *plasmoditrophoblast*.

syn-cyt'i-um (sin-sish'ee-um, sin-sit'ee-um) [syn-; *kytos*]. A mass of cytoplasm with numerous nuclei. —**syncyt'ial**, *adj.*

syn-dac'tyl [syn-; G. *daktylos*, finger]. Having the fingers or toes joined together.

syn-dac'ty-lus [syn-; *daktylos*]. A person with webbed fingers or toes.

syn-dac'ty-ly, syn-dac'tyl-ism, syn"dac-tyl'i-a [syn-, *daktylos*]. Adhesion of fingers or toes; webbed fingers or webbed toes. —**syndactylous**, *adj.*

syn'de-sis, syn-de'sis [G., a binding together]. The state of being bound together.

syn-des"mec-to'pi-a (sin-dess mek-to pee-uh, sin-des-) [G. *syndesmos*, bond; *ektopos*, away from a place]. Ligamentous displacement.

syn"des-mi'tis (sin dess-my'tis, sin des-) [*syndesmos*; G. -*itis*, inflammation]. 1. Inflammation of a ligament. 2. Conjunctivitis.

syn-des"mo-cho'ri-al (sin-dess mo-kor'ee-ul, sin-dez mo-) [*syndesmos*; G. *chorion*, membrane that encloses the fetus]. Pertaining to maternal connective tissue and chorionic ectoderm. See *placenta*.

syn·des″mo·di·as′ta·sis (-dye-ass tuh-sis) [*syndesmos*; G. *diastasis*, separation]. Separation of ligaments.

syn″des·mol′o·gy [*syndesmos*; G. *logos*, word]. The study of ligaments.

syn·des′mo·pe y [*syndesmos*; G. *pēxis*, fixing]. The ttachment of ligament in new position.

syn·des·mor·rha·phy [*syndesmos*; G. *rhaphē*, suture]. Suture or repair of ligaments.

syn·des·mo·sis [*syndesmos*; G. *-ōsis*, condition]. A form of articulation in which the bones are connected by fibrous connective tissue.

tympanostapedial s. The joint between the foot plate of the stapes and fenestra vestibuli (oval window).

syn·des·mot· my [*syndesmos*; G. *tomē*, cutting]. The division of ligament.

syn·det. Generic name for synthetic detergents.

syn·drome (sin drohm, sin′dro-mee″) [G. *syndromos*, running together]. A group of symptoms and signs, which, when considered together characterize disease or lesion. —**syndrom′ic,** *adj.*

For any syndrome not listed here, see the individual name and under *disease*.

abstinence s. See withdrawal s.

Achard-Thiers s. Diabetes of bearded women rare condition in which features of the adrenogenital and Cushing' syndromes are combined.

Adai -Dighton s. A familial symptom complex characterized by fragility of the bones, blue scleras, and deafness.

Adams-Stokes s. See Stokes-Adams s.

Adie's s. Impairment of pupillary reaction to light and of accommodation associated with decrease or loss of the deep reflexes of the extremities also called *pupillotonic pseudotabes*. See Adie s pupil.

adiposogenital s. See adiposogenital *dystrophy*.

drenal s. See W terhouse-Friderichsen s.

adrenogenital s. A clinical condition associated with hypersecretion of androgenic hormones by adrenal cortical tissue Effects vary with tim of development. I the *female*, in fetal life, pseudohermaphroditism results in childhood, precocious puberty in sexual maturity virilism I the *male*, the conditio is usually recognizable only if it occurs before puberty and is characterized by sexual and somatic precocity Also called *corticosexual*.

adrenosympathetic s. Episodes of paroxysmal hypertension, glycosuria, tachycardia, pallor or flushing or both, headache, nausea, vomiting: occurs at irregular intervals and resembles the effects of toxic doses of epinephrine associated with pheochromocytoma. Hypertension is rarely persistent.

adversive s. A type of motion sickness in which there are compulsive pivoting and circling motions Dramamine (dimenhydrinate) acts in an atropinelike fashion to control t.

Albright McCune-Sternberg s. See Fuller *Albright*, fibrous *dysplasia*.

mnestic s. A syndrome observed in organic brain disorders, characterized by retro- and anterograde amnesia, defects in retention and recall of ideas or facts, disorientation, and confabulation, seen in varying degrees of severity Common causes are senile sclerosis, alcoholic (Korsakoff's) psychosis, electroshock therapy and bilateral prefrontal lobotomy Syn. *amnestic-confabulatory*.

amyostatic s. See hepatolenticular *degeneration*.

anginal s. Retrosternal pain during exercise, emotion, digestion, or exposure to cold due to decreased coronary artery circulation.

angiospastic s. One characterized by segmental spasm of peripheral blood vessels, as Raynaud' phenomenon or acroparesthesia frequently associated with psychogenic factors. Syn vasospastic s. See also *angioneurosis*.

anterior cornual s. Muscular atrophy due to motor paralysis caused by lesions of the anterior horn of the spinal cord.

anterior tibial s. Traumatic necrosis of and hemorrhage into pretibial muscles following vigorous exercise, clinically characterized by acute swelling of the muscles involved, pain, and even paralysis.

Anton's s. A form of anosognosia in which the patient denies his blindness. usually accompanied by confabulation, with the patient claiming to see bjects in the blind field.

Apert s. See *acrocephalosyndactylia*.

auriculotemporal s. A local redness and sweating of the cheek with pain anterior to the tragus produced during mastication of food or tasting following suppuration and fistulation of the parotid gland. Also called *Frey*

Avellis's s. See ambiguospinothalamic *paralysis*.

Ayerza's s. See Ayerza *disease*.

Banti's s. See chronic congestive *splenomegaly*. See also Guido *Banti*.

Bardet-Biedl s. See Lawrence-Moon-Biedl

Behcet' s. Recurrent retinitis or iridocyclitis, phthous ulcers of the mouth and ulcerations of the genitalia, and in some cases erythema nodosum also called *triple symptom complex of Behcet*.

Benedikt s. Hemianesthesia and involuntary movements of choreiform nature in the extremities on the side opposite to the lesion which caused by occlusion of the vessels and subsequent softening in the medial lemniscus and region of the red ucleus. Also called *tegmental mesencephalic paralysis*.

Bernheim s. Partial occlusion of the right ventricle of the heart, caused by deviated interventricular septum.

Bertolotti's s. Sacralization *Obs*

Bland-White-Garland s. Anomalous origin of the left coronary artery from the pulmonary artery accompanied by hypertrophy and dilatation of the left ventricle and severe myocardial necrosis and fibrosis. Attacks simulate angina pectoris; the ECG is abnormal, death occurs in the first year of life.

Blount-Barber s. See *osteochondrosis deformans tibiae*.

blue-sclera s. Blue sclerotics occurring in osteogenesis imperfecta See also Van der Hoeve's

Bouillaud' s. See *rheumatic fever*.

Brown-Séquard s. See Charles Edward *Brown-Séquard*.

Budd-Chiari s. Thrombosis of the hepatic veins associated with right upper quadrant abdominal pain, hepatomegaly splenomegaly ascites, edema of the lower extremities, and formation of collateral venous channels.

Burnett' s. See pathologic *calcification* (a).

Caffey's s. See infantile cortical *hyperostosis*.

capsular thrombosis s. Hemiplegia with sensory resulting from a lesion of the internal capsule due to occlusion of striatal branches of the middle cerebral artery.

capsul thalamic s. Hemianesthesia and partial hemiplegia with emotional instability following lesions in the thalamus and internal capsule.

carotid sinus s. Overirritability of the carotid sinus causing attacks of dizziness, fainting, and sometimes convulsions. During the attack there is fall in arterial blood pressure and marked slowing or standstill of the heart. Attacks may come on spontaneously may follow an emotional upset, or

may be caused by pressure over the carotid sinus.
carpal tunnel s. A symptom complex due to compression of the median nerve within the carpal tunnel, characterized by disturbances of sensation in the area of skin supplied by the median nerve, edema of the fingers, tense and shiny skin, and atrophy of the thenar muscles.
cavernous sinus s. A group of symptoms produced by thrombosis of the cavernous sinus and marked by palsy of the muscles supplied by the third, fourth, and sixth cranial nerves, with edema of the face and eyelids.
celiac s. A syndrome in which intestinal malabsorption of fat results in bulky, loose, foul-smelling stools, high in fatty acid content. Failure to gain weight, weakness, anorexia, and consequent vitamin deficiencies with their accompanying symptoms result. Causes may be (in addition to primary defects in intestinal absorption of fat) obstruction of digestive and absorptive pathways, as in Whipple's disease, giardiasis, and tuberculous and lymphomatous infiltration of mesenteric nodes.
cerebellopontine-angle tumor s. The progressive manifestations of neoplastic growth at the cerebellopontine angle. Varying with the site of the lesion and direction of growth, the signs include tinnitus, impairment and loss of hearing, ipsilateral paralysis of the sixth and seventh cranial nerves, involvement of the trigeminal (fifth cranial) nerve, vertigo and nystagmus, and signs of cerebellar disturbances, such as vomiting and ataxia. Also see acoustic nerve tumor.
cervical radicular s. A syndrome similar to the shoulder-hand syndrome, due to radiculitis of the lower cervical nerves and the first thoracic, and characterized by neuralgia, alterations in sensation, and muscle weakness and atrophy in the corresponding dermatomes. Syn., *shoulder-neck s.* See also shoulder-girdle s.
Charlin's s., of the nasal nerve. A triad of inflammation of the anterior segment of the eye, neuralgic pain at the inner angle of the eye, and profuse rhinorrhea.
Chauffard-Minkowski s. Congenital form of hemolytic jaundice.
chiasma s. A group of symptoms due to a lesion in the optic chiasma and marked by impaired vision, headache, vertigo, and limitation of the visual field.
compression s. Crush s.
corpus striatum s. See status marmoratus.
corticoadrenal s. Cushing's s.
corticogenital s. Adrenogenital s.
Costen's s. See temporomandibular s.
cough s. Giddiness (not true vertigo) or sometimes unconsciousness following strenuous coughing. This usually occurs in middle-aged obese men with a tendency towards chronic laryngitis or bronchitis, and in men who smoke and/or use liquor to excess. Syn., *laryngeal vertigo.*
crocodile-tears s. See crocodile tears.
crus s. Hemiparetic symptoms homolateral with a cerebral lesion, usually found when a chronic subdural hematoma, brain tumor or brain abscess has caused dislocation of the brain stem in such a manner as to force the contralateral crus cerebri against the tentorium. Also called *Kernohan-Woltman s.*
crush s. Lower nephron nephrosis consequent to crush injuries of the extremities.
Cruveilhier-Baumgarten s. Distention of the periumbilical veins of the abdominal wall, accompanied by a bruit, associated with portal hypertension and usually with a patent umbilical vein.
Cushing's s. A clinical condition characterized by obesity confined chiefly to the trunk and face, thin plethoric skin with purplish striae in areas of tension, easy bruisability, osteoporosis, hypertension, and impairment of glucose tolerance frequently associated with glycosuria, polycythemia, hirsutism, and amenorrhea in females or impotence in males. It appears to result from a prolonged excess of adrenocortical hormones, particularly the 17-hydroxycorticosteroids. It may be associated with diffuse hyperplasia of the adrenal cortex, benign or malignant tumors of the adrenal cortex, basophilic adenoma of the pituitary, or prolonged administration of large doses of adrenocorticotropic hormone (ACTH), cortisone, or hydrocortisone.
Da Costa's s. See neurocirculatory asthenia.
Danlos s. See Ehlers-Danlos s.
Debré-de Toni-Fanconi s. See amino diabetes.
Debré-Semelaigne s. A symptom complex observed in cretinous children, characterized by enlarged muscles, reduced strength, easy fatigability, and slowness of movements.
Dejerine-Roussy s. See thalamic s.
de Lange's s. A form of congenital muscular hypertrophy accompanied by signs of extrapyramidal motor disturbances and mental deficiency. Death usually ensues early. At autopsy polygyria, microgyria, and failure of basal ganglia to develop have been noted.
de Toni-Fanconi s. See amino diabetes.
diencephalic s. A syndrome characterized by disturbances of consciousness and of the autonomic nervous system, emotional upheavals, and frequently by epilepsylike seizures. This condition is difficult to distinguish from other psychic disturbances, such as the schizophrenic reaction, manic-depressive reactions, or epilepsy.
Dresbach's s. 1. Ovalocytosis. 2. Erroneously, sickle-cell anemia.
Duane's retraction s. See Alexander Duane.
dumping s. A symptom complex of a feeling of warmth, weakness, sweating, vertigo, tightness or pain in the epigastrium, nausea, palpitation, and in some cases collapse, seen in patients who have had partial or complete removal of the stomach.
duodenal loop triad s. A symptom complex seen in cases of duodenitis with associated disease of the gallbladder and pancreas, characterized by indigestion, a feeling of fullness in the epigastrium, gaseous eructations and heartburn, often biliary colic or a tender gallbladder and sometimes umbilical pain radiating to the left shoulder, nausea, vomiting, and weakness.
dyskinetic s. Symptoms associated with congestive heart failure.
effort s. A group of reactions evoked by moderate physical exercise and consisting principally of an abnormal degree of dyspnea, rapid heart action, palpitation, substernal oppression, and sometimes pain. It is usually described in connection with neurocirculatory asthenia, but is manifest also in other cardiac disorders.
egg-white s. See egg-white injury.
Ehlers-Danlos s. See Meekren-Ehlers-Danlos s.
Eisenmenger's s. See Eisenmenger's complex.
Ellis-van Creveld s. See chondroectodermal dysplasia.
epiphyseal s. See Pellizzi's s.
exhaustion s. A somewhat ill-defined syndrome with the characteristics of muscular, nervous, and circulatory asthenia and poor appetite. It has been ascribed to hypoadrenia. Also called *Å... s.*

exophthalmic s. A condition of unknown cause, not necessarily associated with hyperthyroidism or thyroid hyperplasia, in which there is unilateral or bilateral exophthalmos. When progressive to severe degree the condition is termed *malignant exophthalmos.* Also called *hyperophthalmopathic Graves' disease.*
facet s. A form of traumatic arthritis involving the articular facets of the spinal column, usually in the lumbar region. The symptoms are sudden in onset, with low back pain relieved in certain postures and exaggerated in others, the pain being described as of the locking type.
Felty' s. Splenomegaly leukopenia, and chronic atrophic arthritis of the rheumatoid type; form of hypersplenism.
floccülonodular s. Cerebellar deficiency characterized by disturbances in gait and the tendency to lose balance.
Frey's s. Auriculotemporal s.
Froehlich' s. See adiposogenital *dystrophy.*
Froin s s. See loculation *s.*
Ganser s. A mental syndrome in which questions are given nonsensical answers, from which hidden relevancy may be inferred. Observed in prisoners who wish to gain leniency by simulating mental clouding; may be deliberate, neurotic, or both.
Garcin's s. The collection of signs and symptoms when all the cranial nerves of one side are affected by tumor
general adaptation s. The sum of all nonspecific systemic reactions of the body which ensue upon long-continued exposure to systemic stress. It is divided into three stages (1) *Alarm reaction,* the sum of all nonspecific phenomena elicited by sudden exposure to stimuli which affect large portions of the body and to which the organism is quantitatively or qualitatively not adapted. This stage is divided into phases of *shock* and *countershock* and is of short duration, usually more than 24 hours. (2) *Stage of resistance,* th sum of all nonspecific systemic reactions elicited by prolonged exposure to stimuli to which the organism has acquired adaptation; it may last weeks to months. (3) *Stage of exhaustion,* the sum of all nonspecific systemic reactions which ultimately develop as result of prolonged over exposure to stimuli to which adaptation has been developed but can no longer be maintained. It is of indefinite duration. Term introduced by Hans Selye.
Godtfredsen's s. A symptom complex consisting of total ophthalmoplegia, amaurosis, trigeminal neuralgia, and symptoms referable to paralysis of the twelfth cranial nerve. See Jacod *triad.*
Gougerot-Houwers-Sjögren s. See Sjögren s.
Groenblad-Strandberg s. See *pseudoxanthoma elasticum.*
Guillain-Barré s. A spreading paralysis, sometimes reversible, due to involvement of nerves, nerve roots, cord, brain, and meninges, separately or combined. Th unique symptom is bilateral peripheral facial palsy Other symptoms besides paralysis include painful, tactile, and thermal hyperesthesia, usually aural in distribution, or hypesthesia and tenderness of muscles Cerebrospinal fluid shows elevated protein without corresponding increase in cells. Syn *infective meningomyeloneuritis.* Also called *polyradiculoneuritis, infective neuritis* or *neuronitis.*
gynecomastia-and-small-testes s. See Klinefelter's s.
Hallervorden-Spatz s. A symmetrical glial proliferation and demyelination of the globus pallidus and zona incerta which may extend into the central nucleus of the thalamus, dentate nucleus, and ventral nucleus of the thalamus, with increased pigmentation in these structures; heredofamilial condition producing symptoms of progressive bilateral rigidity speech difficulties, dementia, and sometimes optic atrophy and hyperkinesis. Syn., *status dyspigmentatus*
hand-shoulder s. See shoulder-hand
Harada s s. Vogt-Koyanagi syndrome, complicated by retinal detachment.
Hedblom's s. Acute primary diaphragmatitis. Rare.
Heller-Nelson s. A rare form of hypogonadism due to anorchism or a destructive lesion of the interstitial cells and spermatic tubules, exhibiting some of the changes seen in prepuberal eunuchoidism and Klinefelter' syndrome, but characterized by the absence of eunuchoidal skeletal changes and th presence of high titer of urinary gonadotropins.
hepatorenal s. Renal failure allegedly due to hepatic injury term widely used without adequate pathologic basis.
Hoffman's s. A symptom complex similar to the Debré-Semelaigne syndrome, seen in myxedematous adults.
Horner's s. Unilateral ptosis, miosis, enophthalmos, diminished sweating, and flushing of the face, due to destruction of the cervical sympathetics of th same side.
Horton's s. Histaminic cephalalgia unilateral intense headache believed to be due to the release of histamine and its action on cerebral arteries
Howship-Romberg s. Pain on the medial aspect of the thigh down to and usually most marked at the knee, as result of pressure on the obturator nerve by an obturator hernia.
Hurler's s. See *gargoylism.*
Hutchinson's s. See Hutchinson *triad* See also Jonathan *Hutchinson.*
hyperabduction s. See Wright s.
hyperkinetic s. Effort syndrome.
hyperventilation s. Respiratory alkalosis occurring as result of overbreathing. It may be due to intense psychological stimuli (as in anxiety reactions) anesthetics or other drugs, organic brain disease, or excessive artificial respiration. The condition is clinically characterized by cerebral symptoms, including dizziness or even loss of consciousness, by peripheral signs such as tingling and numbness, and by tetanic or clonic motor responses.
hypokinetic s. One in which various forms of acute circulatory failure occur regardless of cause
inferior mediastinal s. See inferior vena cava
inferior vena cava s. Edema of the lower extremities and distention of the superficial veins of the legs and abdomen, or hepatic congestion, as result of obstruction of the vena cava inferior as by thrombosis, neoplasm, aneurysm, or adhesions.
internal derangement s. See internal *derangement of the knee.*
Jackson's s. See John H *Jackson.*
Jeghers-Peutz s. See hereditary multiple polyposis.
Kartagener's s. A hereditary symptom complex consisting of complete transposition of the viscera, sinusitis, and bronchiectasis. also called *K.'s triad.*
Kast s. Multiple cavernous hemangiomas associated with chondromas or dyschondroplasia. Some patients show pigmentary skin changes. It thought to be variant of Maffucci' syndrome
Kimmelstiel-Wilson s. See *intercapillary glomerulosclerosis.*
Klinefelter's s. A form of testicular dysfunction

of unknown cause associated with hyalinization of the seminiferous tubules and characterized by the presence of gynecomastia, aspermia, and elevated urinary excretion of gonadotropin.

Klippel-Feil s. Congenital fusion of the bodies of two or more cervical vertebrae; the spines are small, deficient, or bifid; atlanto-occipital fusion is common. As result the neck is short and head movements are markedly limited.

Korsakoff's s. Polyneuritis with loss of memory, retrograde amnesia associated with tendency to confabulation, caused by alcohol and severe deficiency of food intake.

labyrinthine s. See Ménière's s.

laryngeal-vertigo s. See cough s.

Laurence-Moon-Biedl s. An inherited endocrine disturbance of the pituitary or other hypothalamic structures characterized by girdle-type obesity, hypogenitalism, mental retardation, polydactyly, and pigmentary retinal degeneration.

Leriche s. Intermittent claudication of the lower extremities with pain extending to the hips and buttocks, easy fatigability of the lower extremities, and in males, impotence, due to arteriosclerotic thrombotic obliteration of the abdominal aorta at its bifurcation or of the iliac arteries.

Lermoyez s. Attacks or episodes of diminished hearing followed by attacks of vertigo, after which hearing improves or returns to normal. Cause and mechanism are unclear.

Leschke's s. A group of symptoms, which may be found in hemochromatosis or xanthoma diabeticorum, characterized by hyperglycemia, many brown macules on the skin, and general weakness. Also called *dystrophia pigmentosa*.

Lévy-Roussy s. One exhibiting the classical signs and symptoms of peroneal muscular atrophy plus scoliosis and mild degree of cerebellar ataxia. These cases are considered to be transitional forms between peroneal muscular atrophy and Friedreich ataxia.

Libman-Sacks s. See atypical verrucous endocarditis.

loculation s. A change in the consistency and circulatory activity of the lumbar spinal fluid in which yellow color appears attended by rapid coagulation, large amounts of globulin, and increased number of lymphocytes. Characteristic of isolation of the lumbar spinal fluid from communication with the ventricles of the brain. Also called *Froin s.*

Loeffler's s. A disease of unknown cause characterized by extensive pulmonary infiltration of eosinophils and eosinophilia of peripheral blood. Syn. *eosinophilic pneumonia*.

Looser-Milkman s. See Milkman s.

Lorain-Levi s. Panhypopituitarism occurring before puberty: dwarfism or infantilism in association with destructive lesions of the pituitary gland. Rare.

lower-leg s. See post-thrombotic s.

lower nephron s. See lower nephron nephrosis.

low-salt s. A clinical syndrome characterized by low serum sodium concentration, occurring acutely in heat exhaustion or water intoxication, also in chronic cardiac or renal disease, especially with prolonged restriction in sodium chloride intake. There may be oliguria, azotemia, muscle cramps, and prostration.

Lubarsch-Pick s. Atypical amyloidosis frequently associated with diffuse enlargement of the tongue (amyloid macroglossia), involvement of the skeletal muscles, and scleroderma.

Luetscher s. A form of hyperosmolarity of body fluids occurring in occasional patients during recovery from the anuric stage of lower nephron nephrosis resulting from sulfathiazole administration. See *hyperosmolarity*, *hypernatremia*.

Maffucci's s. Cutaneous hemangiomas associated with dyschondroplasia. Involvement is unilateral or extremely asymmetric. See Kast s.

Mallory-Weiss s. Gastrointestinal hemorrhage caused by lacerations of the cardiac orifice of the stomach induced by protracted retching and vomiting, or even violent hiccuping. Common associated factors are alcoholism, atrophic gastritis, and nutritional cirrhosis.

Marchiafava-Micheli s. Nocturnal hemoglobinuria.

Mauriac s. Hepatomegaly, retarded growth, and obesity in association with diabetes mellitus. Its cause is not understood.

Mediterranean hemolytic syndromes. Thalassemia major and minor.

Meekrin-Ehlers-Danlos s. One including hyperelastic skin, hyperflexible joints, fragile skin and blood vessels, subcutaneous nodules, and pseudotumors following trauma.

Meigs' s. Ovarian fibroma with ascites and hydrothorax.

Melkersson's s. A disease, usually of young people, characterized by recurrent peripheral facial paralysis, swelling of the face and lips, and deep furrows in the tongue. Prognosis is good.

Ménière's s. A disease of the internal ear characterized by deafness, vertigo, and tinnitus, frequently accompanied by nausea, vomiting, and nystagmus. The process may be an allergy because the mechanism is similar to angioneurotic edema. Also called *labyrinthine s.*

menstruation s. See segmentary s.

middle-lobe s. Inflammatory disease, bronchiectasis, or atelectasis, secondary to extrinsic obstruction of middle-lobe bronchus. The obstruction is usually secondary to severe lymphadenitis.

milk-drinker's s. See pathologic *calcification* (c).

Milkman's s. A condition occurring frequently when skeletal bones have been sufficiently decalcified, particularly in osteomalacia. There are bone pain and tenderness, and x-ray examination reveals multiple incomplete pseudofractures, often characterized by Looser's zones, with tendency to be bilateral and symmetrically placed. Also called *Looser-Milkman's s.*

Millard-Gubler s. See Auguste L. J. *Millard*.

Morgagni-Stewart-Morel s. See metabolic *craniopathy*.

Morgagni-Stokes-Adams s. Stokes-Adams s.

Morton's s. A condition characterized by tenderness at the base of the second metatarsal bone, callosities beneath the second and third metatarsals, and hypertrophy of the second metatarsal, due to short first metatarsal bone; described by Dudley J. Morton.

Moschkowitz's s. See thrombotic thrombocytopenic *purpura*.

motor s. One due to lesion of Brodmann area four of the cerebral cortex, with resulting flaccidity of the affected muscles, sometimes exaggerated tendon reflexes, and loss of motor power.

Müller's s. A symptom complex characterized by hypercholesterolemia, xanthelasma, xanthomas, and angina pectoris.

Naffziger s. See scalenus anterior s.

neocerebellar s. Cerebellar deficiency characterized by hypotonia, intention tremor, and disorders of range, direction, and timing of movements.

neuroanemic s. The various nervous symptoms associated with pernicious anemia.

neurocutaneous s. The formation of skin

associated with skeletal deformities and symptoms indicative of degenerative lesions of the nervous system.

neurepituitary s. See adiposogenital *dystrophy*.

nitritoid s. A severe reaction with dyspnea, flushed face, cough, and precordial pain following the administration of arsphenamine, named from its resemblance to the symptoms following the administration of a toxic dose of amyl nitrite. Also called *nitritoid crisis*.

Nonne-Marie s. See hereditary cerebellar *ataxia*.

orbital apex s. The irregular paresis and neuralgia resulting from invasion of the apex of the orbit and associated branches of the cranial nerves by a malignant tumor of the nasopharynx.

organic brain s. A generalized disturbance of cerebral function, residual to widespread brain damage, usually of traumatic, toxic, or degenerative origin. Commonest manifestations are emotional instability, deterioration of intellect, gross defects in memory, judgment, and orientation, undue mental and physical fatigability, paroxysmal headache, and dizziness on exertion. Preexisting neurotic reactions contribute to greatly increased severity of these symptoms.

Osler-Libman-Sacks s. Disseminated lupus erythematosus.

Osler-Rendu-Weber s. See hereditary hemorrhagic *telangiectasia*.

ovarian short-stature s. See Turner's s.

paleostriatal s. Parkinsonism in juveniles.

Pancoast s. The combination of malignant or nonmalignant (e.g., tuberculous) invasion of the thoracic inlet and Horner's syndrome, osteolytic involvement of the first two ribs and sometimes of vertebral bodies, pain, sensory and motor disturbances of the upper extremities, and sometimes vocal-fold paralysis. Syn., *superior pulmonary sulcus s.*

paratrigeminal s. A rare syndrome due to lesion of the semilunar ganglion and related sympathetic fibers from the carotid plexus, characterized by trigeminal neuralgia, often followed by sensory loss on the affected side of the face, weakness and atrophy of the muscles of mastication, miosis, and ptosis of the upper eyelid.

Parinaud's s. Conjunctivitis associated with palpable preauricular lymph nodes.

Parkes Weber s. Hypertrophy of a limb due to congenital hemangiectasis.

Parkinson's s. Parkinsonism.

Pautrier-Woringer s. (1937) A form of chronic hyperplastic lymphadenitis (called *lipomelanotic reticulosis*) accompanying certain generalized dermatoses. See dermatopathic *lymphadenopathy*.

Pellizzi's s. A tumor of the pineal gland occurring usually in male children, occasionally accompanied by precocious genital development and adiposity or general overgrowth, which, with symptoms of internal hydrocephalus, make up the syndrome designated by Pellizzi as *macrogenitosomia precox*. Syn., *epiphyseal syndrome*.

Peutz-Jeghers s. See hereditary multiple *polyposis*.

petrosphenoidal s. The collection of symptoms caused by the infiltration of certain cranial nerves or their branches by a malignant tumor of the nasopharynx, characterized by ipsilateral deafness without objective signs in the ear, temporofacial neuralgia, and palatal paresis. Syn., *Potter's triad*.

pineal s. A rare syndrome due to a pinealoma or other pathological condition in or about the pineal body, resulting in increased intracranial pressure and associated neurologic disturbances, and at times in precocious sexual development.

Plummer-Vinson s. The syndrome of dysphagia, glossitis, and hypochromic anemia which probably is due to an iron deficiency; also called *sideropenic dysphagia*.

pontocerebellar-angle tumor s. See cerebellopontine-angle tumor s.

postconcussion s. Symptoms chiefly of a subjective nature which follow brain concussion, mainly headache, head noises, dizziness, insomnia, irritability, and an aversion to commotion or emotional excitement. Also called *posttraumatic constitution*, *Meyers' head-wound s.*

postphlebitic s. A syndrome following thrombophlebitis of deep veins. See post-thrombotic s.

post-thrombotic s. A condition resulting from deep venous thrombosis of the lower extremity characterized by edema, pain, stasis dermatitis, stasis cellulitis, varicose veins, pigmentation of the skin, and eventually chronic ulceration of the lower leg.

premotor s. One due to a destruction of the cerebral cortex in Brodmann's area six, with disturbances of skilled movements, spasticity and forced grasping, and vasomotor disturbances of the involved extremity.

Putnam-Dana s. See subacute combined *degeneration* of spinal cord.

pyloric s. Gastritis in which the symptoms are like those of chronic peptic ulcer. Ulceration does not occur.

radiation s. See radiation *sickness*.

Raynaud's s. A syndrome of unknown cause, characterized clinically by pallor, cyanosis, and engorgement and pain of the extremities, especially the digits, usually bilateral and symmetrical. It occurs commonly in females who exhibit emotional and autonomic instability. Attacks may be brought on by cold or emotional upsets. In advanced cases pain and necrosis may become prominent.

Reiter's s. See under Hans *Reiter*.

release s. See crush s.

retrolenticular capsule s. Hemiplegia, hemianesthesia and hemihypalgesia, and hemianopia due to occlusion of the branch of the posterior cerebral artery which supplies the posterior part of the internal capsule.

retroparotid s. See Maurice *Villaret*.

Riley-Day s. See *dysautonomia*.

Rothmund's s. A genodermatosis appearing in infancy with disturbances limited to ectodermal structures. There is erythema, telangiectasis, and pigmentation and atrophy of the skin. Moreover ... tion of the skin and cataracts occur. There ... linkage to congenital ectodermal dysplasia and bony deformities.

scalenus anterior s. A symptom complex due to compression of the brachial plexus by the scalenus anterior muscle, characterized by pain, numbness or weakness of the arm; described by H. C. Naffziger. Also called *scalenus anticus* s.

scapulocostal s. One characterized by the insidious onset of pain in the superior or posterior aspect of the shoulder girdle with radiation into the neck, occiput, upper or lower arm, or chest, and often accompanied by tingling and numbness in the fingers. It is due to long-standing alterations in the relationships between the scapula and the posterior thoracic wall. Also called *fatigue-postural paradox*.

Schmidt's s. See vagoaccessory s.

Schüller-Christian s. See Hand-Schüller-Christian *disease*.

Seabright-Bantam s. A phenomenon, first observed in the Seabright-Bantam rooster, in which there is unresponsiveness of the target organ to a hormone sometimes applied to human physiology.

ology as in the case of pseudohypoparathyroidism.

segmentary s. Signs and symptoms which indicate a lesion of the spinal cord at a certain level.

Selye's s. See general adaptation s.

Senear-Usher s. See pemphigus erythematosus.

Sheehan's s. Postpartum pituitary deficiency, generally associated with severe hemorrhage and shock during or following childbirth, which produces, apparently by thrombosis, an extensive necrosis of the adenohypophysis; also called *postpartum pituitary necrosis*.

shock s. See shock.

short-stature s. See Turner's s.

shoulder-girdle s. Atrophy of the shoulder girdle accompanied by sudden onset of acute pain in the shoulder which may radiate to the arm or neck; also called *acute brachial radiculitis*.

shoulder-hand s. A syndrome characterized by severe constant intractable pain in the shoulder and arm, limited joint motion, diffuse swelling of the distal part of the upper extremity, fibrosis and atrophy of muscles, and demineralization of underlying bones. The cause is not well understood. It is similar to and may be identical with, or may be a form of, causalgia (reflex sympathetic dystrophy). Syn., *hand-shoulder s.*

shoulder-neck s. See cervical radicular s.

Sicard's s. See Jean A. Sicard.

Sjögren's s. A symptom complex described by Sjögren (1933) as consisting of keratoconjunctivitis sicca, laryngopharyngitis sicca, rhinitis sicca, xerostomia, enlargement of the parotid gland, and polyarthritis; also called *xerodermosteosis*.

Spiller's s. See epidural ascending spinal paralysis.

splenic-flexure s. Left-upper-quadrant abdominal pain, referred heart pain, dyspnea, palpitations, and feelings of apprehension; probably psychogenic in origin.

Stein-Leventhal s. A group of symptoms and findings characterized by amenorrhea and/or abnormal uterine bleeding, enlarged polycystic ovaries, hirsutism frequently and occasionally retarded breast development and obesity; first described by I. F. Stein and M. L. Leventhal (1935).

Stevens-Johnson s. A severe form of erythema multiforme, characterized by constitutional symptoms and marked involvement of the conjunctiva and oral mucosa.

Stewart-Morel s. See metabolic craniopathy.

Stewart-Treves s. See postmastectomy lymphangiosarcoma.

Stokes-Adams s. A slowed pulse with syncopal attacks or convulsive seizures, usually epileptiform in character. The slowed cardiac action is a result of heart block; the cerebral symptoms are a direct result of the bradycardia.

Sturge-Weber s. Nevoid amentia.

superior pulmonary sulcus s. See Pancoast's s.

superior vena cava s. Blockage of the superior vena cava, as by thrombosis, neoplasm, aneurysm, or mediastinitis, resulting in elevation of venous pressure of the upper extremities, head, and neck.

sweat-retention s. Inability to sweat because of plugging of sweat pores, followed by the classic clinical and histological signs of prickly heat, which may persist after heat rash has subsided; also called *thermogenic anhidrosis*, *tropical anhidrotic asthenia*.

s. of rudimentary ovaries. See Turner's s.

Taussig s. A congenital heart condition with transposed aorta, large pulmonary artery arising primarily from the right ventricle and partially overriding the ventricular septum, high ventricular septal defect, and right-ventricular hypertrophy; also called *Taussig-Bing s.*

Treacher Collins s. Mandibulofacial dysostosis.

tegmental s. An old term for hemiplegia associated with disturbance of eye movements, indicative of a lesion in the tegmentum of the midbrain.

temporomandibular s. A rare degenerative disease of the temporomandibular joint, manifested as tinnitus, deafness, pain in the ear, and headache; also called *Costen's s.*

thalamic s. A symptom complex produced by a lesion of the posterior portion of the lateral nuclear mass of the thalamus. It includes contralateral partial hemianesthesia and hemiplegia, contralateral severe paroxysmal pain over the entire half of the body, contralateral increased response to stimuli, slight hemiataxia, and occasional hemichorea. Also called *Dejerine-Roussy s.*, *thalamic hyperesthetic anesthesia*.

Tietze's s. A benign, self-limiting disease of unknown etiology characterized by painful nonsuppurative swelling of the costal cartilages, frequently preceded or accompanied by upper respiratory tract infection. The tenderness disappears in a few days or weeks, but the swelling may persist for months or even years.

traumatic vasospastic s. A form of Raynaud's phenomenon resulting from the use of vibrating tools, unilateral at first and sometimes precipitated by exposure to cold. Syn., *pneumatic-hammer disease*.

Turner's s. A syndrome associated with ovarian agenesis, short stature, webbing of the neck, and cubitus valgus. Other congenital defects, e.g., coarctation of the aorta, may be present. Also called *ovarian short-stature s.*, *s. of rudimentary ovaries*, *short-stature s.*

vagoaccessory s. Homolateral paralysis of the soft palate, pharynx, and larynx, with flaccidity and atrophy of the sternocleidomastoid and part of the trapezius muscle of the same side, due to lesion of the nucleus ambiguus and nucleus of the spinal accessory nerve or their root fibers; also called *Schmidt's s.*

Van der Hoeve's s. Osseous fragility, blue sclerotics, and deafness. See also *osteogenesis imperfecta*.

vasospastic s. Angiospastic s.

Villaret's s. See Maurice Villaret.

Vogt-Koyanagi s. Bilateral uveitis, poliosis, vitiligo, alopecia, and dysacousia.

Vogt s. See double athetosis.

Waldenström's s. See macroglobulinemia.

Waterhouse-Friderichsen s. A syndrome of acute collapse associated with hemorrhages into the adrenal glands, occurring in fulminating infections, particularly in acute meningococcemia. It is also associated with acute trauma, asphyxia, or heparin therapy.

Weber's s. See Hermann D. Weber.

Werner's s. Progeria of adults.

Wernicke's s. Presbyophrenia.

withdrawal s. The physical and psychological disturbances observed in addicts upon complete withdrawal of the addicting agent. Severity of the autonomic and psychomotor disturbances varies in part with length of addiction and size of dosage.

Wittmaack-Ekbom s. See *restless legs* under *leg*.

Wolff-Parkinson-White s. A usually benign condition in which there exists one or several accessory muscular bridges, in addition to the normal bundle of His, for transmission of excitation from atria to ventricles. In the electrocardio-

gram it is diagnosed by short P-R interval and a prolonged QRS complex. Patients with this syndrome may be subject to paroxysmal atrial tachycardia, probably due to reentry phenomenon.

Wright's s. A neuromuscular syndrome produced by prolonged hyperabduction of the arms causing pinching of the subclavian artery and the trunks of the brachial plexus, which produces paresthesias, numbness, and tingling, followed by gangrene in protracted cases.

syn·ech'i·a (si-neck'ee-uh, si-nee'kee-uh, sin"i-kigh'uh) [G. *synecheia*, continuity]. A morbid union of parts; especially adhesion of the iris to a neighboring part of the eye.

annular s. Exclusion of the pupil.

anterior s. Adhesion between the iris and transparent cornea.

posterior s. Adhesion between the iris and crystalline lens.

total s. Adhesion of the entire surface of the iris to the lens. See *iris bombé*.

syn·ech'o·tome (si-neck'o-tome) [G. *synecheia*, to hold together; *tomos*, cutting]. An instrument for the division of adhesions, particularly of the tympanic membrane.

syn"ech·ot'o·my (sin"i-kot'o-mee) [*synechia*; G. *tomē*, a cutting]. The division of synechia.

syn"en·ceph'a·lo·cele [G. *syn*, with; *enkephalos* brain; *kēlē*, hernia]. An encephalocele with adhesions.

syn·er'e·sis [G. *synairesis*, drawing together]. 1. Contraction of clot (as blood, milk). 2. *In colloid chemistry*, the exudation of the liquid constituent of gels irrespective of the vapor pressure imposed upon the system. Lowered vapor pressure aids the process.

syn"er·get'ic [G. *synergētikos*, cooperative]. Exhibiting synergy; working together; synergic.

syn·er·gism (sin'ur-jiz-um, si-nur'jiz-um) [G. *synergos*, working together]. 1. The harmonious and cooperative action of two or more agents or organs, as two muscles cooperating to produce a movement which neither alone could effect. 2. The joint action of two types of microorganisms on carbohydrate medium, leading to the production of gas that is not formed by either organism when grown separately. 3. The production of therapeutic effect, with combination of two or more drugs, which is more intense or more prolonged than that obtained when any component is used alone. Sometimes the term is used to designate an effect greater than the sum of the effects when the components are used separately, which is more generally referred to as *potentiation*. —**synergis'tic**, *adj.*

syn'er·gist [*synergos*]. An agent cooperating with another.

syn'er·gy [*synergos*]. The cooperative action of two or more agents or organs. —**syner'gic**, *adj.*

syn·es·the'si·a, syn"es·the'si·a (sin-ess-thee'zhuh, -zee-uh) [G. *synaisthēsis*, joint sensation]. A secondary sensation or subjective impression accompanying an actual perception, as a sensation of color or sound aroused by a sensation of taste.

syn·es·the"si·al'gi·a, syn·es·the·si·al'gi·a (sin-ess-thee"zee-al'juh, -jee-uh) [*synaisthēsis*; G. *algos*, pain]. A painful sensation secondary to and of different quality from, that of primary irritation.

Syn·ga·mus [G. *syngamos*, married]. A genus of nematode worms of the family Syngamidae which inhabits the upper respiratory tract of fowl and mammals.

S. laryngeus. A species which is usually parasite of ruminants; incidental infestation of man has occurred.

S. trachealis. A species which causes gapes in chickens.

syn'ga·my [*syngamos*]. Conjugation or union of gametes in fertilization. —**syngamous, syngam'ic**, *adj.*

syn·gen·e·si·o·plas"ty [illegible]. Plastic surgery employing homografts taken from parents, siblings, or offspring. —**syngenesioplas'tic**, *adj.*

syn"ge·ne·sious [G. *syn-*, together; *genesis*, generation]. Of, or derived from, an individual of the same family or species, as these transplants. See also *homograft*, *homotransplantation*, [illegible]*plasty*.

syn·gig'no·scism (sin-jig'no-siz-um, sin-jig'[illegible]) [G. *syngignōskein*, to know together with]. Hypnotism.

syn·hex'yl. 1-Hydroxy-3-n-hexyl-6,6,9-trimethyl-7,8,9,10-tetrahydro-6-dibenzopyran, synthetic analog of tetrahydrocannabinol; pale yellow, translucent, viscous and odorless resin, insoluble in water but soluble in organic solvents. Employed as euphoriant in the thalamic syndrome in doses of 15 to 90 mg. Syn., *parahexyl*, *pyrahexyl*.

syn"hi·dro·sis [G. *synidrōsis*, excessive perspiration]. Concurrent sweating; the association of perspiration with another condition.

syn"i·ze·sis [G. collapse]. Closure.

s. pupillae. Closure of the pupil.

synkamin. Trade-mark for 2-methyl-4-amino-1-naphthol hydrochloride; referred to as vitamin K_5, water-soluble, active vitamin-K compound. See *menadione*.

syn·kar'y·on [G. *syn*, with; *karyon*, nut]. The diploid zygotic nucleus formed by the fusion of two haploid nuclei, especially in the lower fungi. Also spelled *synkaryon*.

synkavite. Trade-mark for menadiol sodium diphosphate.

syn"ki·ne'si·a, syn"ki·ne·sis [G., [illegible]]. Coincidental movement of muscles or limb [illegible] with the leading or essential movements, such as the swinging of the arms while walking. Syn., *associated automatic movement*, *accessory movement*, *synkinetic movement*. —**synkinet'ic**, *adj.*

syn·oph'rys [G., with meeting eyebrows]. Meeting of the eyebrows.

syn·oph·thal'mi·a [G. *syn*, with; *ophthalmos*, eye]. A condition characterized by fused orbits and various degrees of fusion of the eyes. Also called *cyclopia*.

syn"oph·thal'mus [*syn*, *ophthalmos*]. A monster exhibiting synophthalmia.

synophylate. Trade-mark for theophylline sodium glycinate.

syn·op'si·a [G. *synopsis*, seeing all together]. Congenital fusion of the eyes. See *cyclopia*.

syn·or'chid·ism (sin-or'kid-iz-um), **syn·or'chism** (sin-or'kiz-um) [G. *syn*, with; *orchis*, testis]. Partial or complete fusion of the two testes within the abdomen or scrotum.

syn·os·che·os (sin-os'kee-os) [*syn*, G. *oscheon*, scrotum]. A condition of adherence between the skin of the penis and that of the scrotum. [illegible]

syn·os'te·o·phyte [*syn*; G. *osteon*, bone; *phyton*, plant]. Congenital bony ankylosis. Syn., *synostosis congenita*.

syn·os"te·o'sis. See *synostosis*.

syn'os·tosed (sin'os-tozed, -tosed, si-nos'tozed) [*syn*, *osteon*]. Joined in bony union.

syn·os·to'sis [*syn*, *osteon*, G. *-osis*, condition]. A union of originally separate bones by osseous material. —**synostot'ic**, *adj.*

s. congenita. See *synosteophyte*.

tribasilar s. Shortening of the base of the skull

and consequent curvature of the basal parts of the brain caused by fusion in infancy of the three bones at the base of the skull.

syn·o'ti·a (si-no'shee-uh) [syn-; G. *ous*, ear]. Approximation or union of the ears in the anterior cervical region in the absence, or marked reduction, of the lower jaw.

syn·o'tus [syn-; *ous*]. A monster characterized by fused ears.

syn·o·vec'to·my (sin"o-veck'to-mee, sigh"no-) [NL. *synovia*; G. *ektomē*, excision]. Excision of synovial membrane.

syn·o'vi·a (si-no'vee-uh, sigh-no'vee-uh) [NL.]. The clear fluid which is normally present in joint cavities. See *synovial fluid*. —**synovial**, *adj.*

syn·o'vi·al·o'ma (si-no"vee-uh-lo'muh, sigh-no"). See *synovioma*.

syn·o"vi·o·en"do·the"li·o'ma. See *synovioma*.

syn·o"vi·o'ma (si-no"vee-o'muh, sigh-no") [*synovia*; G. *-ōma*, tumor]. A tumor of the synovial membranes of joints, tendon sheaths, and bursas. Affects younger age groups, especially in the knee, ankle, metatarsal joints, and elbow. It grows slowly and may metastasize. Accordingly it is often named *synovial sarcoma*. Microscopically it is composed of spindle, cuboidal, and round cells of fairly large size, arranged in sheets, papillary structures, and pseudoacini, sometimes accompanied by production of hyaluronic acid. When benign it is also called *fibroendothelioma of joint, synovialoma, synovioendothelioma*, and *synovioma*; when malignant, *synovial sarcoendothelioma* or *sarcomesothelioma*.

syn"o·vi'tis (sin"o-vye'tis, sigh"no-) [*synovia*; G. *-itis*, inflammation]. Inflammation of synovial membrane.

acute suppurative s. A very acute, purulent form of infectious or traumatic origin. Syn., *pyarthrosis*.

chronic purulent s. Fungous arthritis.

chronic serous s. Hydrarthrosis.

dry s. Synovitis with little if any exudate.

exanthematous s. Synovitis secondary to the exanthemas.

fibrinous s. See dry *s*.

fungous s. Fungous arthritis.

gonorrheal s. Gonorrheal arthritis.

lipomatous s. Synovitis in which there is fatty degeneration.

metritic s. A synovitis secondary to uterine infection.

puerperal s. Synovitis occurring after childbirth, and due to septic infection.

purulent s. Synovitis with suppuration.

scarlatinal s. Synovitis occurring in an attack of scarlet fever.

s. hyperplastica. Fungous arthritis.

syphilitic s. Synovitis due to syphilitic inflammation.

tendinous s. Inflammation of the synovial sheath surrounding tendon.

tuberculous s. Synovitis due to tuberculosis.

urethral s. Synonym of gonorrheal arthritis.

villous s. A type of synovitis in which villous growths develop within the articular cavity.

syn'ta·sis [G. tension]. A stretching, or tension.

syn·tax'is [G. putting together]. 1. Articulation. *Obs.* 2. Reduction; taxis. *Obs.*

syn'tha·lin. $NH_2C(:NH)NH(CH_2)_{10}NHC(:NH)NH_2.2HCl$. The dihydrochloride of decamethylene biguanidine, having hypoglycemic action through stimulation of insulin secretion by pancreas. Its use has been abandoned because of harmful effects.

syn'the·sis [G. putting together]. 1. In chemistry, the processes and operations necessary to build up compound. In general, reaction, or series of reactions, in which complex compound is obtained from elements or simple compounds. 2. The formation of complex concept by the combination of separate ideas. 3. In psychiatry, the process in which the ego accepts unconscious ideas and feelings and amalgamates them within itself more or less consciously.

syn·thet'ic [G. *synthetikos*, skilled in putting together]. Produced by artificial means.

synthobilin. Trade-mark for choleretic consisting of the diethanolamine salt of the camphoric ester of p-tolylmethylcarbinol.

syn·tho'rax. See *thoracopagus*.

syn·ton'ic [G. *syntonos*, strained tight]. Pertaining to type of personality in which there is an appropriate harmony of thinking, feeling, and behavior.

syn'to·nin. 1. A metaprotein obtained by the action of dilute acid on more complex proteins. 2. The specific metaprotein thus obtained from the myosin of muscle.

syntopherol acetate. Trade-mark for the acetate ester of alpha-tocopherol.

syntrogel. Trade-mark for tablet containing aluminum hydroxide, syntropan, bismuth subcarbonate, calcium carbonate, and flavored with peppermint oil. The drug is used to neutralize excess gastric acidity to relieve flatulence, and to overcome spasm and hypersecretion.

syntropan. Trade-mark for the phosphate of the dl-tropic acid ester of 3-diethylamino-2,2-dimethyl-1-propanol. The substance occurs as white, crystalline powder; freely soluble in water slightly soluble in alcohol. It is used for its antispasmodic action on smooth muscle.

syn·tro·pho'blast. See *syncytiotrophoblast*.

syn'tro·phus [G. *syntrophos*, brought up together]. A congenital disease.

syn·u·lo'sis [G. *synoulōsis*, complete cicatrization]. Cicatrization; cicatrix. *Obs.*

syn"u·lot'ic [G. *synoulōtikos*, promoting cicatrization]. Promoting cicatrization.

Sy·pha'ci·a (sigh-fay'see-uh). A genus of nematode worms belonging to the family Oxyuridae.

S. obvelata. A species commonly found in rats and mice; man is very rarely infested.

syph"i·li'on [NL. *syphilis*, from the title of poem by Fracastoro, 1530, the hero of which was the shepherd Syphilus; G. *helkos*, wound]. Syphilitic ulcer; chancre; also spelled *syphilelcos*.

syph"i·le'mi·a [*syphilis*; G. *haima*, blood]. The presence of *Treponema pallidum* in the blood stream.

syph'i·lid, syph'i·lide [*syphilis*]. A skin eruption due to syphilis. Nearly any type of skin lesion can be produced by *Treponema pallidum*.

secondary s. Any syphilid occurring during the early stage of syphilis.

tertiary s. Any syphilid occurring during the late stage of syphilis.

syph"i·lid·oph·thal'mi·a [*syphilis*; G. *ophthalmia*,]. Syphilitic ophthalmia. *Obs.*

syph"i·li·on'thus [*syphilis*; G. *ionthos*, eruption on the face]. Any copper-colored scaly eruption in syphilis.

syph'i·lis [NL.]. A prenatal or acquired chronic, systemic infection with *Treponema pallidum*, most often contracted in sexual intercourse. Lesions may occur in any tissue or vascular organ of the body and the disease may give rise to symptoms characteristic of other diseases. Hence syphilis is called the great imitator. When untreated the clinical course of the infection progresses through early (primary and secondary) stages, exhibiting the primary lesion or chancre and skin eruption, latency period of variable duration, and the late (tertiary) phase called *lues*. See Plates 31, 32.

acquired s. The reaction of man to *Treponema pallidum*, most commonly acquired by sexual intercourse, in which there is tissue reaction at the inoculation site known as *primary syphilis* or the chancre. This is followed in about six weeks by a generalized skin eruption, *syphiloderm*. The mucous membranes, the eyes, and the central nervous system are often diseased in these early stages (under four years from the onset of the infection). Late acquired syphilis (over four years after infection) is characterized by greater localization of the lesions and destruction of the tissues. Benign late syphilis includes disease of the skin, bones, and mucous membranes. Late disabling syphilis of more vital organs includes disease of the central nervous system, eye, heart, and large blood vessels.

cardiovascular s. One of the late disabling lesions of acquired syphilis. Definite clinical signs appear usually from 20 to 30 years after infection. The first lesion is aortitis. Destruction of the elastic tissue leads to dilation of the aorta, which produces aortic insufficiency or aneurysm. The root of the aorta is involved and may effect occlusion of the coronary arteries. This in turn produces symptoms of angina pectoris and coronary insufficiency.

congenital s. See prenatal *s.*

early s. Primary, secondary, or latent infection of less than four years' duration. See acquired *s.*

extragenital s. Syphilis in which the first lesion is situated elsewhere than on the genital organs.

late s. Infection, latent or active, of greater than four years' duration; formerly called *tertiary s.* See acquired *s.*

latent s. Absence of clinical disease in syphilis, which occurs after spontaneous healing of early syphilis. The period of latency varies from a few months to a lifetime, during which there is no overt evidence of infection and the existence of the disease is recognized only by serologic or spinal-fluid tests.

marital s. Syphilis acquired in lawful wedlock.

meningovascular s. Syphilis of the central nervous system involving the leptomeninges and the cerebral arteries causing the formation of large or small gummas and an endarteritis; parenchymatous changes in brain or spinal-cord tissue occur only secondary to vascular disease.

nonvenereal s. Syphilis not acquired during sexual intercourse.

prenatal s. Infection of a fetus with *Treponema pallidum* by placental transfer from the mother. If the fetus dies, it is usually a macerated one. If born alive, it may, when untreated, progress through the various lesions seen in acquired syphilis, both early and late, except for the absence of the chancre and cardiovascular syphilis. Syn., *congenital s.*, *s. hereditaria.*

primary s. The first tissue reaction of early syphilis, usually characterized by the hard ulcer or chancre and regional adenopathy.

secondary s. Early syphilis; formerly any of the manifestations of the disease after the primary complex and up to the end of the fourth year of infection, most often the syphiloderm.

s. alopecia. A patchy loss of hair in syphilis.

s. d'emblée. The invasion of syphilis without local lesion.

s. hereditaria. See prenatal *s.*

s. insontium. Syphilis acquired in an innocent manner; nonvenereal syphilis.

s. technica. Syphilis acquired in following one's occupation, as by physicians, midwives, nurses.

tertiary s. Late syphilis, including all the symptoms of disease occurring after the fourth year of infection. See acquired *s.*

tests for s. See under *test.*

venereal s. Syphilis acquired in sexual intercourse.

syph″i·lit′ic [*syphilis*]. Pertaining to, or affected with, syphilis. Syn., *luetic.*

syph″i·li·za′tion [*syphilis*]. 1. Inoculation with *Treponema pallidum.* 2. The state produced by inoculation with the *Treponema pallidum.*

syph′i·lo-, syphil- [*syphilis*]. A combining form for *syphilis.*

syph′i·lo·derm, syph″i·lo·der′ma [*syphilis*; G. *derma*, skin]. Skin manifestations of syphilis. They are common, of many forms, and often diagnostic problems. While occurring in any stage of the disease, they are more frequent during the first two years of the infection. Early lesions are usually of a dull- to ham-red color and appear symmetrically over the body, palms, and soles. —**syphiloder′matous,** *adj.*

syph″i·lo·gen′e·sis [*syphilis*; G. *genesis*, production]. The origin or development of syphilis.

syph″i·log′ra·pher [*syphilis*; G. *graphein*, to write]. One who writes about syphilis.

syph″i·log′ra·phy [*syphilis*; *graphein*]. A treatise on syphilis; any writing about the disease.

syph′i·loid [*syphilis*; G. *eidos*, form]. Resembling syphilis.

syph′i·loid. A disease resembling syphilis.

syph″i·lol′o·gist [*syphilis*; G. *logos*, word]. One who has made a study of syphilis; an expert in the diagnosis and treatment of the disease.

syph″i·lol′o·gy [*syphilis*; *logos*]. The sum of knowledge regarding the origin, nature, and treatment of syphilis.

syph″i·lo′ma [*syphilis*; G. *-ōma*, tumor]. 1. A syphilitic gumma. 2. Tumor due to syphilis. —**syphilom′atous,** *adj.*

cylindrical s. A rare growth in a segment of the urethra due to syphilis, occurring as a regular cylindrical mass composed mainly of sclerotic tissue.

syph″i·lo·ma′ni·a [*syphilis*; G. *mania*, madness]. A mental disorder resulting from syphilophobia.

syph″i·lo·nych′i·a (sif″i·lo·nick′ee·uh) [*syphilis*; G. *onyx*, nail]. An onychia of syphilitic origin.

s. exulcerans. Syphilitic onychia with ulceration.

s. sicca. Syphilis of the nail bed.

syph″i·lop′a·thy [*syphilis*; G. *pathos*, disease]. Any syphilitic disease.

syph′i·lo·phobe [*syphilis*; G. *phobos*, fear]. One affected with syphilophobia.

syph″i·lo·pho′bi·a [*syphilis*; *phobos*]. Morbid fear of syphilis.

syph″i·lo·phy′ma [*syphilis*; G. *phyma*, growth]. 1. Syphiloma of the skin. 2. Any growth due to syphilis.

syph″i·lo·ther′a·py. Treatment for syphilis.

syr. *Syrupus*, syrup.

syrette. Trade-mark for a small hypodermic syringe containing a dose of the drug to be administered.

sy·rig″mo·pho′ni·a [G. *syrigmos*, sound of a pipe; *phōnē*, sound]. 1. A piping or whistling state of the voice. 2. A sibilant rale.

sy·rig′mus [*syrigmos*]. Any subjective hissing, murmuring, or tinkling sound heard in the ear.

syr″ing·ad″e·no′ma [G. *syrigx*, pipe; *adēn*, gland; *-ōma*, tumor]. A sweat-gland tumor.

syr″ing·ad″e·no′sus [*syrigx*; *adēn*]. Pertaining to the sweat glands.

syr′inge [*syrigx*]. An apparatus of metal, glass, or plastic material, consisting of a nozzle, barrel, and plunger or a rubber bulb; used to inject liquid into a cavity or under the skin.

aural s. One used to wash out the external auditory canal.

hypodermic s. One used to administer drugs, as opiates, under the skin.

penile s. See *urethral s.*

rectal s. A large syringe used to administer an enema.

urethral s. One adapted to force liquid into the male urethra.

sy·rin"go·bul'bi·a [*syrinx*; L. *bulbus*, bulb]. The presence of cavities in the medulla oblongata similar to syringomyelia.

sy·rin"go·car"ci·no'ma. Sweat-gland tumor.

sy·rin'go·cele, sy·rin"go·coe'li·a (si·ring'go·see'lee·uh) [*syrinx*; G. *koilia*, hollow]. Old term for the cavity or central canal of the spinal cord.

sy·rin"go·cyst"ad·e·no'ma. Syringoma.

sy·rin"go·cys·to'ma. Syringoma.

sy·rin'goid [*syrinx*; G. *eidos*, form]. Like a tube.

syr"in·go'ma. A multiple nevoid tumor of sweat glands, occurring most often in females and developing after puberty. Histologically the *dermis contains numerous small cystic ducts* with commalike tails of epithelium. Also called *syringocystadenoma, syringocystoma.*

sy·rin"go·my·e·lo·cele. See *syringomyelocele.*

sy·rin"go·my·e'li·a (si·ring"go·migh·ee'lee·uh) [*syrinx*; G. *myelos*, marrow]. A chronic disease characterized pathologically by the presence of long cavities surrounded by gliosis, which are situated in relation to the central canal of the spinal cord and frequently extend up into the medulla (syringobulbia).

sy·rin"go·my'e·lo·cele [*syrinx*; *myelos*; G. *kēlē*, hernia]. Spina bifida with protrusion of a meningeal sac containing a portion of the spinal cord whose central canal is greatly distended with cerebrospinal fluid.

syr'inx [*syrinx*]. 1. Old term for a fistula or tube. 2. The posterior larynx of birds, found within the thorax at the tracheal bifurcation; the organ of voice in birds.

syr'up [Ar. *sharāb*, drink] (*syrupus*). 1. A concentrated solution of sugar in aqueous fluids, with the addition of medicating or flavoring ingredients. 2. The U.S.P. preparation containing sucrose, 850 Gm., purified water a sufficient quantity to make 1000 cc. Used in the preparation of other medicated or flavored syrups and preparations and in pharmaceutical operations where sucrose in solution is required. Abbreviated, syr. Syn., sirup. Also called *simple* —. —**syr'up·y**, *adj.*

sys·sar·co'sis [G. *syn*, with; *sarkōsis*, growth of flesh]. The failure of union of bones after fracture by the interposition of muscular tissue. —**syssarcot'ic**, *adj.*

sys'so·ma [*syn*; G. *sōma*, body]. A double monstrosity with two separate heads, but with the bodies fused in more or less intimate union. —**sysso'mic**, *adj.*

sys·so'mus [*syn*; *sōma*]. A double monster joined by the trunks.

sys·tal'tic [G. *systaltikos*, depressing]. Pulsatory; contracting; having a systole.

sys'ta·sis [G., a bringing together]. Consistency; density. Obs.

sys'tem [G. *systēma*, system]. 1. A methodical arrangement. 2. A combination of parts into a whole, as the digestive system, the nervous system. 3. The body as a whole. —**systemic'ic**, **systemat'ic**, *adj.*

alimentary s. The alimentary canal with its accessory glands.

arch-loop-whorl s. of fingerprints. See *fingerprint s.*

autonomic nervous s. An aggregation of ganglia, nerves, and plexuses through which the viscera, heart, blood vessels, smooth muscles, and glands receive their motor innervation. It is divided into the *craniosacral* or *parasympathetic system*, and the *thoracolumbar* or *sympathetic system*. Also called *systema nervosum s.*

Bertillon s. of identification. See under *identification.*

brain stem activating s. See *reticular activating s.*

cardiovascular s. The heart and blood vessels.

centimeter-gram-second s. The system based upon the use of the centimeter, gram, and second as units of length, mass, and time, respectively.

central nervous s. The brain and spinal cord, including the dorsal root ganglions. Abbreviated, C.N.S.

cerebrospinal s. The central nervous s.

corticopontocerebellar s. See *extrapyramidal s.*

corticostrionigral s. See *extrapyramidal s.*

craniosacral s. That part of the autonomic nervous system composed of nerve fibers in cranial nerves III, VII, IX, X, and sacral nerves *II, III, and IV* which go to the *outlying parasympathetic ganglions*, and which in turn send motor fibers to the effector organs. Syn., *parasympathetic s.*

digestive s. The digestive tract from mouth to anus and usually considered as the alimentary canal.

endocrine s. The ductless glands or glands of internal secretion considered as a whole.

extero-effective s. That part of the nervous system that is concerned with adapting the body to changes in its external environment.

extrapyramidal s. A widespread and complicated system of descending fiber tracts arising in the cortex and subcortical motor centers; in the widest sense it includes all nonpyramidal motor tracts, such as corticopontine tracts and tracts from globus pallidus to the midbrain nuclei. It acts as a servomechanism for the control and adjustment of the final common pathway.

fingerprint s. A scientific system for the identification of persons in the military service, for the apprehension of criminals, and for the identification of the dead. A modern development of the Bertillon system.

Galton s. of identification. See under *identification.*

genital s. See *reproductive s.*

Haversian s. The concentric layers of bone about the blood vessels in the Haversian canals of compact bone.

hematopoietic, hemopoietic s. The system concerned with the formation of blood cells. It includes the marrow and lymphatic organs.

hepatic duct s. The biliary tract including the hepatic ducts, gallbladder, cystic duct, and common bile duct.

hexaxial reference s. In electrocardiography, a six-line star coordinate graft formed by the triaxial reference system on which is superimposed a similar star in relative rotation of 30°; used for plotting the bipolar and unipolar limb-lead voltages of the electrocardiogram.

His-Tawara s. The conduction system of the heart, composed of the atrioventricular node (of Tawara) and the atrioventricular bundle (of His).

hydrophilic colloidal s. A colloidal solution whose external phase is water and which has affinity for water.

hydrophobic colloidal s. A colloidal suspension whose external phase is water but which shows no affinity for water.

integumentary s. That pertaining to the body covering, as the skin, hair, nails, etc.

locomotor s. The extremities and their parts, as the bones, muscles, and joints concerned with locomotion, or the motor activities of the body.
lymphatic s. A system of vessels and nodes accessory to the blood vascular system, conveying lymph. It begins as innumerable capillaries in interspaces of tissues. These form plexuses studded with lymph nodes that act as filters and finally all those below the diaphragm unite in the cisterna chyli on the second lumbar vertebra. From this the thoracic duct leads upward to empty into the junction of the left subclavian and internal jugular veins. The lymph from the upper left half of the body also empties here. The lymph from the upper right half of the body and head enters the right lymphatic duct, which empties into the junction of the right internal jugular and subclavian veins. See Plate 11.
lymphoreticular s. See reticuloendothelial *s.*
orthosympathetic s. The thoracolumbar system, in contrast to the craniosacral or parasympathetic system.
osseous s. The bony skeleton of the body.
parasympathetic nervous s., parasympathetic s. See craniosacral *s.*
portal s. The portal circulation, 1 specifically the portal vein and its tributaries. See portal *circulation*. 2. See also hypophyseoportal *circulation*.
projection systems. The name given to the pathways connecting the cerebral cortex with the periphery.
Purkinje s. See *Purkinje fibers* under *fiber*.
pyramidal s. The corticospinal and corticobulbar tracts.
redox s. (reductant-oxidant) A simple oxidation-reduction system in which two substances react reversibly with each other. The oxidized material is reductant, the reduced material, an oxidant.
renal pressor s. The interaction of renin and renin substrate with formation and coincident destruction of angiotonin.
reproductive s. The generative apparatus, as whole, consisting in man of the penis, testes, deferential ducts, seminal vesicles, and prostate, and in woman of the vagina, uterus, uterine tubes (oviducts) and ovaries.
respiratory s. All the passages by which air is conducted to, and including, the parts of the lungs where an exchange of oxygen and carbon dioxide takes place, such as the nasal cavities, pharynx, larynx, trachea, bronchi, bronchioles, and the pulmonary lobules with their alveoli. Other accessory structures, for example the diaphragm and muscles concerned with respiration, are included.
reticular activating s. The reticular formation of the superior levels of the brain stem and the adjacent subthalamus, hypothalamus, and medial thalamus, which has been shown in animal experiments to play basic role in regulating the background activity of the rest of the central nervous system. It is connected by collaterals in parallel with long afferent and efferent nervous pathways, and is thus stimulated by and acts upon them caudal influences upon spinal cord levels contribute to optimum motor performance; cephalic influences upon the cerebral hemispheres form the basis of the initiation, maintenance, and degree of the state called wakefulness on which higher nervous functions depend. Many hypnotics block transmission of impulses from this area, and lesions of it result in states similar to coma in man. See also arousal reaction.
reticular s. See reticuloendothelial *s.*
reticuloendothelial s. The macrophage system, which includes all the phagocytic cells of the body except the leukocytes. These cells, diverse morphologically all have the capacity for the electric storage of certain colloidal dyes. They include the histiocytes and macrophages of loose connective tissue, the reticular cells of lymphatic and myeloid tissues, the endothelium-like littoral cells lining lymphatic sinuses and sinusoids of bone marrow the Kupffer cells of hepatic sinusoids, the cells lining the sinusoids of the adrenal and hypophysis, and the dust cells of the lungs. Abbreviated, RES.
supraopticohypophysial s. Supraoptic nuclei with the supraopticohypophyseal tract to the neurohypophysis. A dual neuroglandular mechanism whose normal function is control of water balance in the tissues and secretion of urine.
sympathetic nervous s., sympathetic s. 1. The thoracolumbar system. 2. Formerly the autonomic nervous system as whole.
s. of Batson. The vertebral venous *s.*
thoracicolumbar s., thoracolumbar s. The part of the autonomic nervous system composed of nerve fibers in the thoracic and the upper two lumbar nerves which go to the ganglia of the sympathetic trunk and which in turn send motor fibers to the effector organs. Syn. *sympathetic s.* Also called *orthosympathetic*.
triaxial reference s. A means for the determination of the mean electric axis of any wave of depolarization or repolarization from the electrocardiogram.
urinary s. The system made up of the kidneys, ureters, urinary bladder and urethra, whose function is the elaboration and excretion of urine.
urogenital s. The combined urinary and genital systems which are intimately related embryologically and anatomically.
vascular s. See cardiovascular *s.*
vasomotor s. The nerve supply of the blood vessels.
vegetative nervous s. The autonomic nervous system.
vertebral venous s. A group of venous anastomoses which pass through the intervertebral foramens to connect the veins of the pelvic cavity, of the pelvic girdle, of the shoulder girdle, and of the body wall with the vertebral veins and those with the sinuses of the dura. Also called *s.* of *Batson*.

sys'tem oid [*systema*; G. *eidos*, form]. A term applied to tumors composed of number of tissues resembling system of organs.

sys'to le (sis'to lee) [G. drawing together]. The contraction phase of the cardiac cycle.
aborted s. A premature cardiac systole. Systolic ejection is small because of the short preceding diastolic filling.
arterial s. The expansion and elongation of the arteries following cardiac systole.
auricular s. Atrial contraction.
electric s. QT interval.
premature s. A systole resulting from premature impulse discharged by the nerve node.
ventricular s. The contraction of the ventricles.

sys tol'ic [*systole*]. Pertaining to the systole; occurring during systole.

sys-trem'ma (pl. *systremmata*) [G., anything twisted up together]. Cramp in the muscles of the leg.

syz'y gy (siz'i-jee) [G. *syzygia*, yoked]. End-to-end union of the sporonts of certain gregarines. —**syzyg'ial** *adj.*

Szabo's sign. See under *sign*.
Szent-Györgyi, Albert (1893-). Hungarian

biochemist, known for his isolation of ascorbic acid (vitamin C) and postulation of vitamin P. He performed miscellaneous studies on cellular oxidation, including the discovery of the catalytic role of C₄-dicarboxylic acids in tissue respiration, which eventually gave rise to present knowledge of the tricarboxylic acid cycle, and won the Nobel prize in physiology and medicine (1937). His later studies of cellular-structure proteins culminated in the discovery of the contractility of actomyosin. *See also Szent-Györgyi test.*

Szymanowski, Julius von [Russian surgeon, 1829-68]. Developed a form of blepharoplasty called *Szymanowski's operation.* Developed operations for the restoration of the auricle, for ectropion, for restoration of the upper lip by lateral flaps brought together in the midline; also called *Szymanowski's operations.*

T

T Tension, temperature.

T Symbol for transmittance.

T 1824 See *Evans blue.*

T. A. Toxin-antitoxin.

Ta Chemical symbol for tantalum.

tab"a·co'sis (*Tabacosis, tabacum, roll of tobacco leaves*; G. *-osis, condition*). A toxic state produced by the excessive use of tobacco, or by the inhalation of tobacco dust.

ta·ba·cum. See *tobacco.*

tab"a·gism (tab ah-gis em). T. tabacosis.

tab'a·nid (L. *tabanus*, gadfly). Any representative of the family Tabanidae.

Ta·ban'i·dae (ta-ban'i dee) [tabanus]. A family of the Diptera, which includes the horseflies, deer flies, and gadflies. They are medium to large size, robust flies, world-wide in distribution. The females of the well-known species are blood suckers which attack man and warm-blooded animals generally. Certain species distribute diseases such as anthrax among cattle and sheep; others transmit the trypanosomes of animals, especially the *Trypanosoma evansi*, the cause of surra in horses and cattle. The important genera are Chrysops, [illegible], Tabanus, and Pangonia.

ta"bar·dil'lo (tah bahr-deel'yo). Term used in Mexico for both epidemic and murine typhus.

ta"ba·tière' ana"to·mique' [illegible]. See *anatomist's snuffbox.*

ta·bel'la [L. little table]. A medicated troche or tablet.

ta'bes (tay'beez) [L.]. A wasting or consumption; used as a synonym for tabes dorsalis.

diabetic t. A peripheral neuritis affecting diabetics.

optic t. Old term for optic atrophy resulting from syphilis.

spastic t. Combined cord disease or posterolateral cord disease producing ataxia and spasticity of the lower extremities.

t. coxaria. Wasting from hip disease.

t. diuretica. See *diabetes mellitus.*

t. dolorosa. A form in which pain is the dominating feature.

t. dorsalis. Locomotor ataxia, a disease dependent upon sclerosis of the posterior columns of the spinal cord. The symptoms are lightning pains, unsteadiness and incoordination of voluntary movements extending to the upper extremities; disorders of vision, as the Argyll Robertson pupil; cutaneous anesthesia; pain crises in the gastric, laryngeal, and rectal areas; trophic disorders of the joints; abolition of the patellar reflex; diminution of sexual desire, and disturbance of the sphincters.

t. ergotica. A tabesoid resulting from the use of ergot. Its symptomatology closely simulates that of tabes dorsalis.

t. mesenterica. Tuberculous mesenteric lymphadenitis.

ta·bes'cence [L. *tabescere*, to waste away]. Wasting; marasmus; emaciation. Obs. —**tabescent**, *adj.*

ta·bet'ic [L. *tabes*, wasting]. 1. Affected with tabes *of* or pertaining *to*, tabes. 2. Pertaining to, or affected with, tabes dorsalis.

ta·bet'i·form [*tabes*; L. *forma*, form]. Resembling tabes.

tab'ic, tab'id. Obs. See *tabetic.*

ta'ble [L. *tabula*, board]. 1. A flat-topped piece of furniture, as an operating table, examining table. 2. A flat plate, especially one of bone, as the inner or outer table (of compact bone) of flat bones of the cranium. 3. A presentation of numerical data in the form of rows and columns.

ta'ble·spoon" [*tabula*; AS. *spōn*, chip]. A large spoon, holding about ½ oz. or 4 fluidrachms. Abbreviated, tbsp.

tab'let [dim. from *tabula*]. A friable solid dosage form. Hypodermic tablets must be readily soluble in water.

tabloid. Trade-mark for a compressed or other medicinal tablet.

ta"bo·pa·ral'y·sis [L. *tabes*, wasting; G. *paralysis*, paralysis]. A condition in which tabes is associated with general paralysis and with primary optic atrophy.

ta"bo·pa·re'sis (tay"bo-pa-ree sis, par'i-sis). See *taboparalysis.*

tab'u·lar [L. *tabula*, board]. Having the form of a table, as tabular bone.

tac"a·ma·hac, [illegible] [Sp. *tacamahaca*, from the Nahuatl]. Common name for poplar bud.

TACE Trade-mark for *tri-p-anisylchloroethylene* or chlorotrianisene, a synthetic estrogen employed in the treatment of prostatic carcinoma.

tache (tahsh) (pl. *taches*) [OF.]. A spot.

t. [illegible]. A spot of delicate blue tint, sometimes observed in the skin of typhoid fever patients.

t. [illegible]. The red line made when the finger nail is drawn over the skin, due to vasomotor reaction and occurring especially in connection with meningeal irritation. Also called *t. meningeale.*

t. motrice. An eminence of sarcoplasm within the sarcolemma where the nerve fibers pierce the latter; a motor end-plate.

t. noire. The primary painless lesion of the tick bite fever of Africa, manifested by a raised red area with typical black necrotic center which appears at the site of the tick bite.

taches blanches. Certain white spots described by Hanot as occurring on the liver, especially on its convex surfaces, in infectious diseases. Microscopically they present a leukocytic infiltration and bacteria.

taches de café au lait. See *café au lait spot* under *spot.*

t. spinale. A bullalike spot seen in certain diseases of the spinal cord.

tach″e·om′e·ter (tack ee-om′l-tur) *See haemotachometer.*

ta·chet′ic (ta ket′ick) [*tache*]. Relating to the formation of reddish blue or purple patches (taches).

ta·chis′to·scope (ta kis′to-scope) [G *tachistos*, swiftest; *skopein*, to examine]. An instrument used in psychophysiology to observe the time rate and time conditions for apperception; also an instrument used in orthoptics for visual training, especially to overcome the suppression area in amblyopia ex anopsia. —**tachistoscop′ic**, *adj.*

tach′o·gram (tack′o-gram) [G *tachos*, swiftness; *gramma*, letter]. The record made in tachography.

ta·chog′ra·phy (ta kog′ruh-fee) [*tachos*; G *graphein*, to write]. The estimation of the rate of flow of arterial blood by means of a flowmeter or tachygraph.

ta·chom′e·ter (ta kom′i-tur) *See haemotachometer.*

tach′y- (tack′i-) [G *tachys*, swift]. A combining form meaning *swift.*

tach″y·aux·e′sis [*tachys*; G *auxēsis*, increase]. Heterauxesis in which the part grows more rapidly than the whole organism.

tach″y·car′di·a [*tachys*; G *kardia*, heart]. Excessive rapidity of the heart action.

atrial t. Rapid and regular succession of P waves which are normal or are abnormal in form. The QRS group may be normal, or slightly or markedly aberrant. The rate is usually 160–200 per minute.

atrioventricular t. Rapid and regular succession of systoles arising from the atrioventricular node at a rate over 100 per minute; may be as fast as 270 per minute. In some records the P waves cannot be recognized. In others there is retrograde block and the basic atrial rhythm is undisturbed. (His bundle tachycardia or idioventricular tachycardia.)

auricular t. See atrial *t.*

essential t. That occurring in paroxysms, and due to functional disturbance of the cardiac nerves.

His′ bundle t. Atrioventricular paroxysmal tachycardia with retrograde block.

idioventricular t. Atrioventricular paroxysmal tachycardia with retrograde block.

junctional t. Paroxysmal tachycardia originating in the A V node.

paroxysmal sinus t. Paroxysm of rapid heart action due to ectopic focus in or near the sinoatrial node.

paroxysmal supraventricular t. Paroxysm of rapid heart action due to ectopic focus in the atria or atrioventricular node.

paroxysmal t. Tachycardia occurring periodically in paroxysms.

reflex t. Tachycardia due to causes other than those producing essential tachycardia.

supraventricular t. One in which the origin of the P waves cannot be classified definitely and the pacemaker is above the point where the bundle of His branches. The main characteristics are the same as those in atrial tachycardia.

t. strumosa exophthalmica. The tachycardia occurring in exophthalmic goiter.

ventricular t. A rapid succession of beats, each with the characteristics of ventricular systole, occurring at rates from 150–250 per minute, regular or slightly irregular. The atrial rhythm, if recognized, is not disturbed.

tach″y·car′di·ac [*tachys*; *kardia*]. Pertaining to, or suffering from, tachycardia.

tach′y·graph [*tachys*; G *graphein*, to write]. An instrument for measuring the rate of blood flow.

ta·chyg′ra·phy (ta kig′ruh-fee) [*tachys*; *graphein*]. The estimation of the rate of flow of arterial blood by means of the tachygraph.

tach″y·i·a′tri·a (tack ee-eye-ay′tree-uh, -ee-ah′ree-uh) [*tachys*; G. *iatreia*, healing]. The art of curing quickly. Obs.

tach″y·la′li·a [*tachys*; G. *lalia*, talk]. Morbid rapidity or volubility of speech; occurs in the manic phase of manic-depressive psychosis. Syn., *logorrhea, tachyphrasia, tachyphemia.*

ta·chym′e·ter (ta-kim′i-tur) [*tachys*; G. *metron*, measure]. An instrument for measuring the rate of speed of a moving object.

tach″y·pha′gi·a [*tachys*; G. *phagein*, to eat]. Rapid eating.

tach″y·phe′mi·a. See *tachylalia.*

tach″y·pha′si·a. See *tachylalia.*

tach″y·phra′si·a. See *tachylalia.*

tach″y·phre′ni·a [*tachys*; G *phrēn*, mind]. Morbidly accelerated mental activity.

tach″y·phy·lax′is, tach″y·phy·lax′i·a [*tachys*; G *phylaxis*, watching]. Injection of small quantities of toxic organ extracts which will protect animals; also, doses of the same extract administered shortly afterward. The protection is transitory and lasts for a few hours only. Also called *skeptophylaxis, skeptophylaxia.*

tach″yp·ne′a, tach″yp·noe′a [*tachys*; G. *pnoē*, breathing hard]. Abnormal frequency of respiration.

nervous t. Respiration of 40 or more to the minute accompanying neurotic disorders, particularly hysteria and neurasthenia.

tach″y·rhyth′mi·a [*tachys*; G. *rhythmos*, rhythm]. 1. Tachycardia. 2. In electroencephalography, increase in the normal brain wave frequency up to 12–50 per second.

ta·chys′ter·ol (ta kis′tur-ole, -ol, -awl, tack″i-steer″ol). The precursor of calciferol in the irradiation of ergosterol. It is an isomer of ergosterol.

tach″y·sys′to·le (tack″i-sis′to-lee) [*tachys*; G *systolē*, contraction]. Tachycardia.

tac′tile (tack′til) [L. *tactilis*, that may be touched]. Pertaining to the sense of touch.

tac′toid. A type of colloidal structure showing intense birefringence in which elongated particles are oriented in a group and parallel to a central axis; a cigar-shaped colloidal particle.

tae′di·um vi′tae (tee′dee-um vy′tee) [L.]. Weariness of life, a symptom occurring in many cases of depressive reactions. It is sometimes a precursor of suicide.

Tae′ni·a (tee′nee-uh) [G *tainia*, band, tapeworm]. A genus of parasitic worms of the class Cestoda; they are ribbonlike segmental flatworms. The adult is an intestinal parasite of vertebrates; the larvae parasitize both vertebrate and invertebrate tissues. The adult consists of a scolex, an unsegmented germinal neck, and two or more hermaphroditic segments or proglottids which contain fertile ova when mature.

T. coenurus. A tapeworm occurring in the small intestine of the dog. The intermediate stage, *Multiceps multiceps*, develops in the brain and spinal cord of sheep, goats, cattle, horses, and has also been found in man.

T. echinococcus. See *Echinococcus granulosus.*

T. nana. See *Hymenolepis nana.*

T. saginata. A tapeworm which passes its larval stages in cattle, its adult stage in the intestine of man. The human infestation is acquired by eating insufficiently cooked infested beef. Syn., *beef tapeworm.*

T. solium. The larval stages occur in hogs; the adult is found in the intestine of man. Ingestion of ova may result in larval infestation in man; the larvae are then called *Cysticercus cellulosae*. ...

tation is usually acquired by ingestion of viable larvae in pork. Syn., *pork tapeworm*.

tae'ni (pl. *taeniae*) [*taenia*]. 1 A band or bandlike structure. 2. See *tapeworm*.

mesocolic t. The longitudinal muscle band corresponding to the insertion of the mesocolon.

t. chorioidea. The bands appearing at the lateral boundaries of the fourth or third ventricle when their telae chorioideae are removed, respectively called *t. of fourth ventricle* and *t. of third ventricle* or *t. thalami*.

t. coli. One of the three tapelike bands of the longitudinal layer of the tunica muscularis of the colon. See Plate 13.

t. of fourth ventricle (*t. ventriculi quarti*). See *t. chorioidea*.

t. of third ventricle (*t. ventriculi tertii*). See *t. chorioidea*.

t. pontis. See *filum lateralis pontis*.

t. thalami. See *t. chorioidea*.

tae·ni·a·cide" [*taenia*; L. *caedere*, to kill]. Destructive of tapeworms. —tae"niacidal, *a.*

tae·ni·a·fuge [*taenia*; L. *fugere*, to flee]. Expelling tapeworms. —tae"niafuge, *n.*

tae·ni'·a·sis (tee-nigh'uh-sis, ti-nigh') [*taenia*; NL. *-iasis*, condition]. The symptoms caused by infestation with any of the species of *Taenia*.

tae'ni·form [*taenia*; L. *forma*, form]. Having a segmented, ribbonlike form; resembling a tapeworm.

tae·ni·oid [*taenia*; G. *eidos*, form]. Taeniform.

tae·ni·o·pho'bi·a [*taenia*; G. *phobos*, fear]. Morbid dread of becoming the host of a tapeworm.

Taenzer, Paul [*German dermatologist*, 1858–1919]. Described ulerythema ophryogenes (1889); also called *Taenzer's disease*, *keratosis pilaris*.

tag [prob. Scand. in origin]. A flap or appendage.

epithelial t. A mass of epithelial cells projecting from the urethral groove on the glans of the embryonic phallus. Syn., *epithelial tubercle*.

tagathen citrate. Trade-marked name for the antihistaminic substance chlorothen citrate.

Tagliacozzi, Gaspare [*Italian surgeon*, 1546–99]. He developed a form of rhinoplasty in which he formed a new nose from a pedicle flap taken from the arm. Called Italian or Tagliacotian *operation*.

tag'ma [G., arrangement]. An aggregate of molecules.

tail [AS. *taegel*]. 1 The caudal extremity of an animal. 2. Anything resembling a tail.

tai'lor's spasm. See under *spasm*.

taint [L. *tingere*, to dye]. 1. Hereditary predisposition to disease; affection by disease without outspoken manifestations. 2. Putrefaction or infection, as tainted meat. 3. Local discoloration, blemish.

tai'pan. *Pseudechis scutellatus*; giant brown snake, largest venomous snake of Australia and New Guinea, belonging to the Elapidae.

Tait, Robert Lawson [*English surgeon and gynecologist*, 1845–99]. One of the first to operate for ruptured ectopic pregnancy (1883). Believed that all cases of dangerous or crippling pelvic or abdominal lesions should be surgically explored; called *Tait's law*. Introduced a flap-splitting procedure for plastic repair, especially of the perineum (1891); called *Tait's operation* or *Tait's method*.

taka-diastase. Trade-mark for a powdered vegetable diastase, obtained by the action of *Aspergillus oryzae* on wheat bran; the substance is capable of hydrolyzing 450 times its weight of starch in 10 minutes. Used in cases of faulty starch digestion.

Takaki, Kanehiro [*Japanese physician*, 1849–1915]. One of the first to demonstrate the dietary origin of Japanese beriberi or kakke (1884).

Takamine, Jokichi [*Japanese chemist in the United States*, 1854–1922]. Isolated epinephrine in crystalline form (1901). Takadiastase is named for him.

Takata reaction. See under *reaction*.

Takata-Ara test. See under *test*.

Takayama solution. See under *solution*.

takazyme. Trade-mark for an antacid and starch digestant consisting of calcium carbonate, magnesium carbonate, bismuth subcarbonate, and taka-diastase.

take [AS. *tacan*]. In *medicine*, a successful inoculation, as by a vaccine.

ta·lal'gi·a [L. *talus*, ankle; G. *algos*, pain]. Pain in the ankle.

Talbot's solution, diluted. See iodine and zinc iodide glycerite.

talc, tal'cum. A native, hydrous magnesium silicate sometimes containing a little aluminum silicate. It occurs in various grades and degrees of purity as potstone, soapstone, steatite, French chalk.

purified t. (*talcum purificatum*). Talc, purified by acid washing. A fine, white, crystalline powder unctuous to the touch. Used as filtering medium and as dusting powder.

tal'i·pes (tal'i·peez) [L. *talus*, ankle; *pes*, foot]. Any one of a variety of deformities of the human foot, especially those of congenital origin, such as clubfoot or equinovarus. Also embraces paralytic deformities and the numerous simple varieties of foot distortion, according to whether the *forefoot* is inverted or everted and whether the Achilles tendon is shortened or lengthened. Combinations of the various types occur called talipes equinovalgus, talipes equinovarus, talipes calcaneovalgus, talipes calcaneovarus, etc.

equinocavus t. A deformity of the foot characterized by fixed plantar flexion and a high longitudinal arch.

equinovarus t. A deformity of the foot characterized by fixed plantar flexion and turning inward of the foot.

flaccid t. A foot in which there is a complete flaccid type paralysis.

t. arcuatus. See *t. cavus*.

t. calcaneocavus. A calcaneus deformity of the foot in which there is also a cavus; dorsal rotation of the calcaneus with a relative plantar tilting of the forefoot.

t. calcaneovalgus. A calcaneus deformity of the foot with associated valgus deviation.

t. calcaneus. Talipes in which the patient walks upon the heel alone.

t. cavus. An increased curvature of the arch of the foot.

t. equinus. Talipes in which the heel is elevated and the weight thrown upon the anterior portion of the foot.

t. percavus. Excessive plantar curvature.

t. planus. Flatfoot; splay foot.

t. spasmodica. Noncongenital talipes due to muscular spasm.

t. valgus. Talipes in which the outer border of the foot is everted, with inward rotation of the tarsus and flattening of the plantar arch. Also called *flatfoot*, *splay foot*, *pes planus*, *weak foot*.

t. varus. A variety in which the foot is inverted, the weight falling on the outer border. If the inversion is extreme, with rotation of the forefoot, the condition is known as clubfoot.

tal"i·po·ma·nus (tal"i·po·mah'nus, tal"i·po·may'nus) [*talipes*; L. *manus*, hand]. Clubhand.

Tallerman, Lewis A. [*English inventor*, contemporary]. Devised an apparatus for the local application of superheated dry air in the treatment of joint diseases, the affected part being enclosed in

cylinder. Called *Tallerman's apparatus*. Treatment using the pparatus is called *Tallerman treatment*.

tal'low [ME. *talgh*] The fat extracted from suet, the solid fat of cattle, sheep, and other ruminants. It consists largely of stearin and palmitin.

Tallqvist, Theodor Waldemar [*Finnish physician*, 1871–1927]. Remembered for his description of method for hemoglobi determination. *Tallqvist' method*, or *scale*, is only approximate.

Tallqvist hemoglobin measurement. The measurement of hemoglobin concentration in whole blood. The test solution is compared with a series of color-saturation standards. Th measurement is not very precise, and is most useful as screening test.

Talma, Sape [*Dutch surgeon*, 1847–1918]. Independently of Morison, described omentopexy to relieve ascites associated with cirrhosis of the liver called *Talma operation* or *Talma-Morison operation*.

ta'lo- [L. *talus*, ankle]. A combining form denoting *pertaining to the talus* or *astragalus*.

tal'ose. $C_6H_{12}O_6$. A monosaccharide isomeric with dextrose.

ta'lus [L.]. The bone of the ankle which articulates with the bones of the leg. The old term is *astragal s*. See Table of Bones in th Appendix.

ta ma tama [L.]. Swelling of the feet and legs.

tam -rind [Ar. *tamr hindi*, Indian date] The fruit of the *Tamarindus indica*, tree of the Leguminosae. The preserved pulp of the fruit (tamarindus) is laxative and refrigerant.

tam'bour (tam'boor tam-boor') [F.]. A drum; drumlike instrument used in physiologi experiments for recording. It consists of metal cylinder over which is stretched an elastic membrane, and to which passes tube for transmitting changes in air pressure. Recording is done optically by means of small mirror on the membrane, or mechanically by stylus attached to the membrane.

tam pan. *Ornithodorus moubata*; parasitic tick infesting birds, small mammals, domestic animals, and occasionally man; an important vector of relapsing fever. Also called bibo, mabata.

tampax. Trade-mark for an intravaginal, absorbent menstruation plug.

tam pi cin. A purgative resin, $C_{34}H_{54}O_{14}$ from the root of the Mexican plant, *Ipomoea simulans*, or Tampico jalap.

tam pon [F.]. A plug of cotton, sponge, or other material inserted into the vagina, nose, or other cavity.

tam'pon. T plug with tampon.

tam"pon ade' [tampon] The act of plugging with tampon.

cardiac t. Symptoms due to large accumulation of pericardial fluid, pyo- or hemopericardium, or to extensive compression scar of the pericardium. Pressure on lungs, mediastinal contents, superior and inferior venae cavae, and the mouths of the hepatic veins results in quiet heart, small-volume paradoxical pulse, enlarged liver and high venous pressure.

tam pon ing, tam'pon ment (tam pon-ment, tam-pon mint) [tampon]. The act of inserting pack or plug within cavity for checking hemorrhage, etc.

tan [OF *tanner*]. T color th kin by exposure to sun or wind (or rtificially by use of sun lamp)

tan -ce'tin (tan uh-see'tin, tan-ass'i tin) A bitter principle, $C_{11}H_{16}O_4$ in the seeds, leaves, and flowers of *Tanacetum vulgare* or tansy.

tan -ce'tone (tan uh-see'tone tan ass'i tone) The chief constituent in th volatile oil of tansy. It is identical with thujone.

tanersin. A proprietary antiseptic tannic acid ointment.

tan ghi nin (tang ghi nin, tan-ghin in) [Malagasy *tanghin*]. The toxic neutral principle of the ordeal bean *Tanghinia madagascariensis*, Apocynaceae. Its action resembles that of strophanthin.

tannalbin. Trade-mark for an albumin tannate, an astringent in diarrhea.

tan nase (tan ace, -ase) An enzyme found in cultures of *Penicillium* and *Aspergillus* which converts tannic acid to gallic acid.

tan'nic ac'id (*acidum tannicum*) A tannin usually btained from nutgalls, the excrescences formed on the young twigs of *Quercus infectoria* and allied species. Yellow to light brown powder of astringent taste; very soluble in water alcohol, or glycerin. A styptic and astringent; local dressing for burns, chemical antidote for poisoning by alkaloids and heavy metals; in diarrhea it lessens secretion. Syn., *gallotannic acid*, *tannin*, *digallic acid*.

t. a. glycerite (*glyceritum acidi tannici*) A stable 20% solution in glycerin with sodium citrate and exsiccated sodium sulfite. Also called *tannin glycerite*.

t. a. ointment (*unguentum acidi tannici*) A 20% ointment used as an astringent.

tannigen. Trade-mark for *acetyltannic acid*.

tan'nin. 1. Tannic acid. 2. Any one of group of astringent plant principles characterized by their ability to precipitate collagen and to produce dark-colored compounds with ferric salts. The source frequently identified by prefix, as gallotannin, quercitannin, etc.

tannismut. Trade-mark for *bismuth bitannate*.

tannoform. Trade-mark for condensation product of tannin and formaldehyde formerly used internally in diarrhea and enteritis and as an astringent local pplication in powder or ointment form.

Tanret reagent. See under *reagent*.

Tanret Mayer test. See under *test*.

tan'sy (tan'zee) [G *athanasia*, immortality]. 1. A perennial herb, *Tanacetum vulgare*, of the family Compositae. 2. An aromatic bitter and irritant narcotic; has been used in malaria, in hysteria, and as an emmenagogue and anthelmintic. In overdoses it produces abdominal pain, vomiting, epileptiform convulsions, and death from failure of respiration. Dose, 2–4 Gm. (30–60 gr.) See *tanacetin*, *tanacetone*.

tan'ta lum [named for the Phrygian king *Tantalus* because of the difficulties in isolating it]. Ta = 180.95. A rare metal element; silver-white, very hard, malleable, and ductile. Unaffected by water acids, or alkalies, and useful wherever resistance to corrosion is important. It is used in surgery implants of the metal being used to cover skull defects and the foil being employed as wound covering. Tantalum oxide has been used as dusting powder for wounds.

tan'trum. An expression of uncontrollable rage sometimes accompanied by acts of violence.

tap [ME. *tappen*]. 1. A sudden slight blow. 2. Withdrawal of fluid by the use of trocar or hollow needle.

dry t. A *tap*, 2, in which no fluid can be obtained.

taparole. Trade-marked name for *methionamide*.

ta pe'tum (pl. *tapeta*) [L. *tapete*, carpet]. 1. The layer forming the roof of the posterior horn of the lateral ventricle of the brain. It is composed of fibers from the corpus callosum. 2. The layer of nocturnal animals layer that makes the eyes of nocturnal animals visible by reflected light at night. —**tapet'al**, *adj.*

t. alveoli. The alveolar periosteum.

tape worm" [AS. *taeppe*; *wyrm*] Any of the parasitic segmented, ribbonlike flatworms of the class Cestoidea

worms which are parasites of man and other animals. See *Bertiella, Diphyllobothrium, Dipylidium, Echinococcus, Hymenolepis, Multiceps, Raillietina, Sparganum, Taenia.*
beef t. See *Taenia saginata.*
broad t. See *Diphyllobothrium latum.*
dog t. See *Dipylidium caninum.*
dwarf t. See *Hymenolepis nana.*
fish t. See *Diphyllobothrium latum.*
mouse t. See *Hymenolepis diminuta.*
pork t. See *Taenia solium.*

taph"e·pho'bi·a [G. *taphos*, tomb; *phobos*, fear]. Morbid fear of being buried alive.

Tapia, Antonio García [*Spanish physician*, b. 1875]. Described palatopharyngolaryngeal hemiplegia (1905); also called *Tapia's syndrome.* The tongue, larynx, and sternocleidomastoid muscle on the same side are involved.

tap"i·no·ceph'a·ly [G. *tapeinos*, low-lying; *kephalē*, head]. Flatness of the top of the cranium; flat top. —**tapinocephal'ic**, *adj.*

tap"i·o'ca [Tupi and Guarani, *typyóca*]. A variety of starch obtained from the cassava or manioc plant, *Jatropha manihot.* Used as a food.

ta'pir mouth, lip. The peculiarly loose, thickened, protruding lips of facies myopathica. The patient is unable to smile or whistle.

ta·pir·oid (tay'pur·oyd, tap'ur·) [Tupi *tapyra*, any large mammal; G. *eidos*, form]. Referring to an elongated cervix uteri, so called from its resemblance to a tapir's snout.

ta·pote·ment' (tah·pot·mahng'. See Notes § 35) [F.]. In massage, the operation of percussing. See *percussion movements* under *movement.*

tap'ping [AS. *taeppa*]. 1. Paracentesis of the abdomen, pleural cavity, hydrocele sac, etc. 2. In massage, percussion movements in which the tips of the fingers are used.

tap root [*taeppa*; AS. *rōt*]. The main root or downward continuation of a plant axis.

tar [AS. *teru*]. A thick brown to black liquid consisting of a mixture of hydrocarbons and their derivatives obtained by the destructive distillation of many kinds of carbonaceous matter.
coal t. (*pix carbonis*). A thick, nearly black, complex liquid of characteristic odor and taste; slightly soluble in water and incompletely soluble in organic solvents. An antipruritic. Prolonged application may lead to dermatitis, and, eventually, to precancerous or cancerous lesion.
juniper t. (*pix juniperi*). The empyreumatic volatile oil from the wood of the prickly juniper, *Juniperus oxycedrus.* A thick, dark brown liquid, slightly soluble in water, soluble in 9 volumes of alcohol. It is used in skin diseases. Syn., *cade oil.*
pine t. (*pix pini*). Obtained by the destructive distillation of the wood of species of *Pinus.* A viscid brownish black liquid of terebinthinate odor and sharp taste. A stimulating expectorant in bronchitis; externally it is used in skin diseases. Also called *Stockholm t.*
rectified t. oil (*oleum picis rectificatum*). The volatile oil of pine tar rectified by steam distillation. It contains chiefly phenolic constituents. Used internally in chronic bronchitis and externally in skin diseases.
t. weed. Grindelia.
wood t. A product obtained by destructive distillation of wood. See *pine t.*

tar'ba·gan. The marmot *Arctomys bobac*, a disease carrier among fur-bearing animals. Also called *tarbagan.*

Tar"ak·tog'e·nos (tar·ack·todj'i·nos) [G. *taraktos*, disturbed; *genos*, race]. A genus of trees of India. *T. Kurzii.* A species from the seeds of which chaulmoogra oil is obtained.

tar'ant·ism, tar"an·tis'mus (tarr"un·tis·mus) [It. *tarantismo*, from *Taranto*, city in southern Italy]. A choreic affection, ascribed to the bite of a tarantula, and supposed to be cured by dancing.

ta·ran'tu·la [*Taranto*]. A large, hairy spider of the family Aviculariidae. The bite may be very painful, but is seldom dangerous to man, although small animals may be killed.

ta·ran'tu·lism. See *tarantism.*

ta·rax'is [G. *tarassein*, to disturb]. Hysteria occurring in the male. *Obs.*

ta·rax'a·cum. Dandelion root. The dried rhizomes and roots of *Taraxacum officinale* or *T. laevigatum*, family Compositae. Formerly used as a cholagogue and diuretic.

ta·rax'is [G., irritation of the eye]. A slight conjunctivitis, or eye trouble.

tar'bag·an plague (tahr'bag·an). A local name for bubonic plague in Siberia and Mongolia; derived from local name of a rodent. See *tarabagan.*

tarbonis cream. A proprietary ointment of solution of coal tar and menthol in a vanishing-cream base, used in dermatitis.

Tarchanoff, Ivan Romanovich (Tarkhanoff) [*Russian physiologist*, 1846–1909]. Described the psychogalvanic reflex (1890).

Tardieu, Auguste Ambroise [*French physician*, 1818–79]. Known as a medicolegal writer especially upon the legal aspects of poisoning (1867). Best remembered for his description of ecchymotic spots found beneath the pleura after death from strangulation or suffocation (1859); called *Tardieu's ecchymoses.*

tard'ive. Tending to be late; tardy.

tare [Ar. *ṭarḥah*, that which is thrown away]. 1. A counterweight. 2. A deduction made for the weight of a container. 3. Counterbalance.

tared [*ṭarḥah*]. 1. Allowed for as a tare or deduction; having the weight previously ascertained, as a tared filter. 2. Counterbalanced. Used in pharmacy and chemistry.

targesin. Trade-mark for an antiseptic and astringent product prepared from silver and diacetyltannin-albumin.

tar'get [OF. *targette*, of Teutonic origin]. 1. The point of metal in a roentgen-ray tube upon which the electrons are directed and from which the roentgen rays arise. 2. Mire.

targot. Trade-mark for a tyrothricin emulsion for veterinary use, especially in mastitis.

Tarin, Pierre [*French anatomist*, ca. 1725–61]. Described a number of anatomic structures, the best known being the fascia dentata or gyrus dentatus, also called *Tarin's fascia*, and the interpeduncular fossa, also called *fossa of Tarin.*

ta·rir'ic ac'id. $CH_3(CH_2)_{10}C{\equiv}C(CH_2)_4COOH$. An unsaturated acid occurring as a glyceride in the fat of tariri seeds.

Tarnier, Étienne Stéphane [*French obstetrician*, 1828–97]. Remembered for his early adoption of antiseptic measures in the practice of obstetrics. The inventor of axis-traction forceps (1877), called *Tarnier's forceps.* Described a sign of inevitable abortion—effacement of the angle between the upper and lower segments of the uterus; called *Tarnier's sign.*

ta'ro (tah'ro) [Tahitian and Maori]. The starchy root of *Colocasia antiquorum* or Indian kale. Used as a food in certain Pacific islands.

tars"ad"e·ni'tis [G. *tarsos*, edge of the eyelid; *adēn*, gland; *-itis*, inflammation]. Inflammation of the tarsal glands and tarsal plate.

tar·sal'gi·a [G. *tarsos*, flat of the foot; *algos*, pain]. Pain, especially of neuralgic character, in the tarsus of the foot.

tar·sec'to·my [*tarsos*; G. *ektomē*, excision]. Excision of tarsal bone or bones.

tar·si'tis [G. *tarsos*, edge of the eyelid; *-itis*, inflammation]. 1. Inflammation of the tarsus of the eyelid. 2. See *blepharitis*. 3. Inflammation of the tarsus of the foot.

syphilitic t. Syphilitic infection of tarsal bone.

tuberculous t. Tuberculous infection of tarsal bone.

tar'so-, tars- [G. *tarsos*, flat of the foot, edge of the eyelid]. A combining form denoting *pertaining to tarsus*.

tar"so·chei'lo·plas"ty (tahr"so-kigh'lo-plas-tee) [G. *tarsos*, edge of the eyelid; *cheilos*, lip; *plassein*, to form]. Plastic surgery of the edge of the eyelid.

tar"so·ma·la·ci·a (tahr"so-ma-lay'shee-uh, -see-uh) [*tarsos*; G. *malakia*, softness]. Softening of the tarsus of the eyelid.

tar"so·met"a·tar'sal [G. *tarsos*, flat of the foot; *meta*, between; *tarsos*]. Relating to the tarsus and the metatarsus.

Tar"so·nem'i·dae (tahr"so-nem'i-dee) [*tarsos*; G. *nēma*, thread]. A family of soft-bodied mites which are parasites of plants.

tar"so·phy'ma [G. *tarsos*, edge of the eyelid; *phyma*, tumor]. Any morbid growth or tumor of the tarsus of the eye.

tar"so·pla'si·a (tahr"so-play'zhuh, -zee-uh, -shuh, -see-uh) [*tarsos*; G. *plassein*, to form]. Tarsoplasty.

tar'so·plas"ty [*tarsos*; *plassein*]. Plastic surgery of the eyelid; blepharoplasty.

tar"sop·to'si·a (tahr"sop-to'shuh, -see-uh, -zhuh, -zee-uh) [G. *tarsos*, flat of the foot; *ptōsis*, falling]. Flatfoot.

tar·sor'rha·phy [G. *tarsos*, edge of the eyelid; *rhaphē*, a suture]. 1. The operation of sewing the eyelids together for part or the whole of their extent. Also called *blepharorrhaphy*. 2. Suture of tarsal plate.

tar·sot'o·my [*tarsos*; G. *tomē*, cutting]. Operation upon the tarsal plate.

tar"sot'e·my [G. *tarsos*, flat of the foot; *tomē*]. Operation upon the tarsus of the foot.

tar'sus (pl. *tarsi*) [*tarsos*]. 1. The instep, or ankle, consisting of the calcaneus, talus or astragalus, cuboid, navicular or scaphoid, first, second, and third cuneiform bones. See Table of Bones in the Appendix. 2. The dense connective tissue forming the support of an eyelid; the tarsal plate. See Plate 19. —**tarsal**, *adj.*

tar'tar [ML. *tartarum*]. 1. A hard deposit on the inside of wine casks, consisting mainly of acid potassium tartrate (cream of tartar). 2. That accretion, properly termed *dental calculus*, which is deposited on the surface of the teeth. Its composition varies, but it consists of organic secretion and food particles into which are deposited various salts, as calcium carbonate, calcium phosphate, and ferric phosphate.

cream of t. Potassium bitartrate.

soluble t. Potassium tartrate.

t. emetic. Antimony potassium tartrate.

tar·tar'ic ac'id (tahr-tar'ick, tah; tahr'ick) (*acidum tartaricum*). Any of four substances of the composition COOH(CHOH)$_2$COOH, differentiated as follows: (1) Dextrotartaric acid or *d*-tartaric acid (in accordance with new rules of nomenclature known as L(+)-tartaric acid, COOH.HCOH.HOCH.COOH) is ordinary tartaric acid, dextrorotatory in aqueous solution. (2) Levotartaric acid or *l*-tartaric acid (known also as D(−)-tartaric acid, COOH.HOCH.HCOH.COOH) has the same properties as the preceding, but is levorotatory in solution. (3) Racemic tartaric acid or *dl*-tartaric acid, a mixture of (1) and (2), differs in several physical properties, and is optically inactive in solution. Syn., *racemic acid*. (4) Mesotartaric acid, an optically inactive form, in which the dextrorotatory tendency of one of the asymmetric carbon atoms is compensated by the levorotatory tendency of the other; it is not resolvable into optically active components.

(1) Ordinary tartaric acid, (1) is white crystalline powder soluble in 0.8 part of water. It is prepared from the argol and lees formed in the manufacture of wine. It is not oxidized in the body, but appears in the urine unchanged. The acid is used in preparing effervescent medicinal preparations and various salts, and has wide industrial usage.

tar'trate. Any salt or ester of tartaric acid.

tar'tra·zine (tahr'truh-zeen, -zin). $C_{16}H_9N_4$-S_2Na_3. Water-soluble yellow color suitable for use in foods, drugs, and cosmetics.

tar·tron'ic ac'id. COOH.CHOH.COOH. Hydroxymalonic acid, a product of oxidation, under certain conditions, of dextrose and several other substances.

Tashkend ulcer. See *oriental sore*.

taste [OF. *taster*, to feel]. A sensation produced by stimulation of special sense organs in the tongue and pharynx by sweet, sour, bitter, or salty substances.

aftertaste. A secondary taste perceived after the immediate taste has ceased.

contrast t. Greater sensitivity to one form of taste stimulus when presented immediately after or simultaneously with, another form, as sour substance following sweet substance.

metallic t. A sensation recognized by some in addition to the usual categories of sweet, sour, bitter, and salty tastes.

taste blind'ness. Inability to recognize the ... bitter, salty, or sweet flavor of substances, ... detected by others; especially the inability to detect the bitter flavor of phenylthiocarbamide. Syn., *ageusia*.

tat·too'ing [Polynesian in origin]. The production of permanent colors in the skin by the introduction of foreign substances, vegetable or mineral, directly into the corium.

electrolytic t. The treatment of skin diseases by introducing the negative pole of galvanic current into the lesions. Drugs may be driven into the skin to treat certain diseases.

t. of the cornea. A method of hiding leukomatous spots.

Tauber test. See under *test*.

Tauber and Kleiner modification of Barfoed's test. See under *test*.

tau'rine (taw'reen, -rin). Aminoethanesulfonic acid, $NH_2.CH_2.CH_2.SO_2.OH$. Occurs in bile combined with the cholic acids. Found also in small quantities in lung and muscle tissue. White or yellowish crystals.

tau'ro-, taur- [L. *taurus*, bull]. A combining form meaning *bull*.

tau"ro·chol·an·o·poi·e'sis (taw"ro-ko-lan-o-poy-ee'sis). The synthesis of taurocholic acid, which is dependent on supply of amino acids containing sulfur.

tau"ro·cho'lic ac'id (taw"ro-ko'lick, -kol'ick). $C_{26}H_{45}NSO_7$. An acid resulting from the conjugation of cholic acid with taurine and found in bile.

tau'ryl. The univalent radical, $H_2NCH_2CH_2SO_2$-, of taurine.

Taussig, Helen Brooke (1898–). American pediatrician, known for her work in congenital malformations of the heart, and for her association with Alfred Blalock in the development of the operation for congenital malformations of the heart with pulmonary stenosis or atresia, called

Blalock operation, Blalock-Taussig operation. See Alfred *Blalock.* She also described a congenital heart condition, called *Taussig syndrome.*

tau"to·me'ni·al [G. *to auto,* the same; *mēn,* month]. Relating to the same menstrual period.

tau·to·mer'ic [G. *to auto;* G. *meros,* part]. Applied to neurons of the spinal cord, the axons of which pass into the white matter of the cord on the same side in which they are located.

tau"to·mer'ic [*to auto; meros*]. 1. Relating to tautomerism. 2. Tautomeral.

tau·tom'er·ism [*to auto; meros*]. The property of existing in a state of equilibrium between two isomeric forms and capable of reacting as either one.

Tawara, Sunao (1873-) Japanese pathologist who first described the atrioventricular node, also called *Tawara node.*

tax'ine (tack'seen, -sin) A poisonous alkaloid from the leaves and seeds of the *Taxus baccata,* or yew tree. Formerly used in epilepsy.

tax'is [G. arrangement]. 1. A manipulation of an organ whereby it is brought into normal position; specifically, the reduction of a hernia by manual methods. 2. The involuntary response of an organism involving change of place toward (positive taxis) or away from (negative taxis) stimulus. Also see *tropism.*

tax·o·di'um [G. *taxos,* yew; *eidos,* form]. The common bald or black cypress of the southern United States and Mexico; said to be useful in hepatic diseases, in rheumatism, and as a diuretic.

tax'on (pl. *taxa*) Taxonomic group.

tax·on'o·my [G. *taxis,* arrangement; *nomos,* law]. The science of the classification of organisms. —**taxonom'ic,** *adj.*

Tax'us [G. *taxos,* yew]. A genus of cone-bearing trees, the yews.

T. baccata. The common European yew tree. Its leaves and seeds are poisonous and said to have sedative qualities.

Tay, Warren [*English physician,* 1843–1927]. Remembered for his description of the ocular changes (choroiditis guttata) in amaurotic familial idiocy called *Tay's choroiditis.* The disease is called *Tay-Sachs disease;* see amaurotic familial idiocy. The cherry-red spot edged with white which is seen at the macula lutea in this condition is called *Tay's spot.*

Taylor, Charles Fayette [*American orthopedist,* 1827–99]. Introduced a steel back brace for support in cases of tuberculosis of the spine, called *Taylor brace* or *apparatus.*

Taylor, Robert William [*American dermatologist,* 1842–1908]. Remembered for his description of idiopathic localized atrophy of the skin (1875); called *Taylor's disease.* The same condition was described (1902) by Herxheimer and Hartmann as acrodermatitis atrophicans chronica.

TB Tuberculosis.

Tb Chemical symbol for terbium.

t. b. Tubercle bacillus, *Mycobacterium tuberculosis.*

tbsp. Tablespoon.

Tc Chemical symbol for technetium.

Te 1. Chemical symbol for tellurium. 2. Abbreviation for tetanic contraction.

tea [from the Chinese]. 1. The leaves of *Camellia sinensis* (*Thea sinensis*), family Theaceae. Tea contains 1–5% of caffeine, 5–15% of tannin, and a fragrant volatile oil. An infusion is used as a stimulating beverage. 2. An infusion or decoction prepared from the leaves of C. *sinensis.* 3. Any vegetable infusion or decoction used as a beverage.

black t. Prepared by exposing the dried leaves to air at a temperature of 35–40° C. for about 12 hours, to permit a partial fermentation to occur whereby the characteristic color is developed. Some of the aromatic principle is volatilized and some tannin is destroyed.

green t. Prepared by heating the leaves in open pans with agitation.

teamster's t. A decoction prepared from *Ephedra nebradensis.* Formerly used in urogenital diseases.

t. oil. The expressed oil from the seeds of several species of *Camellia.* Also called *t. seed oil.*

TEAB Tetraethylammonium bromide.

tea'ber"ry See *gaultheria.*

teach'ers' nodes. Singer's nodes.

Teal test. See under *test.*

Teale, Thomas Pridgin [*English surgeon,* 1801–67]. Best remembered for his amputations in which he used a long anterior and a short posterior rectangular flap (1858); called *Teale's method* or *amputation.*

tears [AS. *tēar*]. 1. The secretion of the lacrimal gland. 2. Hardened lumps, or drops, of any resinous or gummy drug.

crocodile t. A profuse, paroxysmal flow of tears observed in certain patients with facial paralysis, when they taste food. Also called *gustolacrimal reflex.*

tease [AS. *tǣsan*]. Tear or gently separate into its component parts, by the use of needles, a tissue which it is desired to examine microscopically.

tea'spoon" [*tea;* AS. *spōn*]. A spoon commonly assumed to hold about 4 cc or 1 fluidrachm, but usually holding about 5 cc. Abbreviated, tsp.

teat [OF. *tete*]. A nipple.

tech·ne'ti·um (teck·nee'shee·um) [G. *technētos,* artificial]. Tc. Element number 43, prepared in 1937 by neutron or deuteron bombardment of molybdenum and later found among the fission products of uranium. Formerly called *masurium.*

tech'nic Technique.

tech·ni'cian [G. *technikos,* skillful]. A person trained and expert in the technical details of certain medical fields, as bacteriology, pathology, roentgenology.

tech·nique', **tech·nic'** (teck·neek') The method of procedure in operations or manipulations of any kind.

Engström t. Roentgen absorption histospectroscopy. See under *histospectroscopy.*

tec'no·cyte [G. *teknon,* child; *kytos,* cell]. A young metamyelocyte; also called *juvenile metagranulocyte.*

tec'ti·form [L. *tectum,* roof; *forma,* form]. Roof shaped.

tec"to·ceph'a·ly [*tectum;* G. *kephalē,* head]. The condition of having a roof-shaped skull.

tec·to'ri·al [L. *tectorium,* covering]. Serving as a roof or covering, as a tectorial membrane, a membrane in the cochlear duct.

tec"to·spi'nal [NL. *tectospinalis*]. Pertaining to the spinal cord and the corpora quadrigemina, as tectospinal tract.

tec'tum [L.]. A roof or covering.

te'di·ous [L. *taediosus,* tedious]. Unduly protracted, as tedious labor.

tedral. A proprietary tablet containing ephedrine hydrochloride, phenobarbital, and theophylline.

teel oil. See *sesame oil.*

teeth'ing [AS. *tōth*]. The eruption of the deciduous teeth; the process of dentition.

Teevan, William Frederick [*English surgeon,* 1834–87]. Enunciated a law that skull fracture occurs in the line of expansion and not of compression, called *Teevan's law.*

tegin. Trade-mark for a brand of glyceryl monostearate used as an emulsifying agent in ointments, lotions, or similar substances.

teg'men [L., covering]. A cover.

t. mastoideum. The roof of ...

t. tympani. The roof of the tympanic cavity

t. ventriculi quarti. The roof of the fourth ventricle.

teg·men·tum (pl. *tegmenta*) [L., covering]. A covering; specifically, the dorsal portion of the midbrain, exclusive of the corpora quadrigemina and the central gray substance. —**tegmental,** *adj.*

tegosept. Trade-mark for a brand of preservatives, consisting of esters of parahydroxybenzoic acid.

Teichmann, Ludwig T. Stawiarski [German histologist, 1825–95]. Described hemin crystals, also called *Teichmann crystals.* See Teichmann test.

tei·chop·si·a (tye-kop'see-uh) [G. *teichos,* wall; *opsis,* vision]. Temporary amblyopia, with subjective visual images.

tek'no·cyte. See *tecnocyte.*

te'la (pl. *telae*) [L., web]. A web or tissue.

t. adiposa. Adipose tissue.

t. choroidea. The membranous roof of the third and fourth ventricles of the brain including the choroid plexuses.

t. subcutanea. The subcutaneous connective tissue; the superficial fascia.

t. submucosa. The layer of connective tissue which lies between a mucous membrane and subjacent tissues. Also called *tunica submucosa.*

tel·al'gi·a [G. *tēle,* far off; *algos,* pain]. Referred pain.

tel·an·gi·ec'ta·sis, tel·an"gi·ec·ta'si·a (tel-an-jee-eck tay'shuh, -see-uh, -shuh, -see-uh) [G. *telos,* end; *aggeion,* vessel; *ektasis,* extension]. Dilatation of groups of capillaries. They form elevated, dark red, wartlike spots, varying in size from 1 to 7 mm. —**telangiectat'ic,** *adj.*

hereditary hemorrhagic t. A hereditary disease characterized by multiple telangiectases and tendency to habitual hemorrhages, most commonly epistaxis, described by Rendu (1896), Osler (1901), and Frederick Parkes Weber (1907).

t. faciei. Acne rosacea.

t. lymphatica. Lymphangiectasis.

tel·an"gi·ec'to·des (tel-an"jee-eck-to-deez) [*telos, aggeion, ektasis;* G. *eidos,* form]. Characterized by telangiectasis.

tel·an"gi·i'tis [*telos; aggeion;* G. *-itis,* inflammation]. Inflammation of capillaries.

tel·an"gi·o'ma [*telos; aggeion;* G. *-ōma,* tumor]. A tumor composed of dilated capillaries.

tel·an'gi·on [*telos; aggeion*]. A terminal arteriole.

tel·an"gi·o'sis [*telos; aggeion;* G. *-ōsis,* condition]. Disease of minute blood vessels.

tel"·an·gi·ec'ta·sis. See *telangiectasis.*

tel"e·car'di·o·gram [G. *tēle,* far off; *kardia,* heart; *gramma,* letter]. Telelectrocardiogram.

tel"e·car'di·o·phone" [*tēle; kardia;* G. *phōnē,* sound]. An apparatus amplifying heart sounds.

tel"e·cep'tor. A sense organ which receives stimuli from distant objects, e.g., nose, eye, and cochlea. Syn., *teleceptor.*

tel"e·ci·ne'sis. See *telekinesis.*

tel"e·den'drite. See *telodendron.*

tel"·di"as·tol'ic [G. *telos,* end; *diastolē,* dilatation]. Relating to the last phase of a diastole.

tel"e·flu"or·os'co·py. The procedure by which the usual distortion of a fluoroscopic picture by divergence of the roentgen rays is eliminated by placing the source of the rays two meters or more from the area to be fluoroscoped.

te·leg'o·ny [G. *tēle,* far off; *gonē,* offspring]. The erroneous belief that a male once mated with a female will affect the subsequent progeny of the same female mated with a different male.

tel"e·ki·ne'si (tel-ek-i-nee-sis, kigh-nee-sis) [*tēle;* G. *kinēsis,* movement]. The power claimed by some people of causing objects to move without touching them.

tel"e·lec"tro·car'di·o·gram" [*tēle;* G. *ēlektron,* amber; *kardia,* heart; *gramma,* letter]. An electrocardiogram taken in a laboratory, the galvanometer being connected by a wire with the patient who is elsewhere.

tel"e·lec"tro·ther"a·peu'tics (tel"ee-leck"tro-therr-uh-pew'ticks) [*tēle; ēlektron;* G. *therapeutikos,* inclined to serve]. The treatment of hysterical paralysis by a series of electric discharges near the patient without actual contact.

tel"en·ceph'a·lon [G. *telos,* end; *egkephalos,* brain]. The anterior subdivision of the primary forebrain that develops into olfactory lobes, cerebral cortex, and corpora striata. Syn., *endbrain.* —**telencephal'ic,** *adj.*

tel"e·neu'rite [*telos;* G. *neuron,* nerve]. Old term for one of the terminal filaments of the main stem of an axis cylinder process.

tel"e·neu'ron [*telos; neuron*]. Old term for a neuron forming the terminus of an impulse in a physiologic act involving the nervous system.

tel"·den·dron. See *telodendron.*

tel"e·ol'o·gy (tel·ee·ol'o·jee, tee"lee-) [*telos;* G. *logos,* word]. The doctrine that explanations of phenomena are to be sought in terms of final causes, purpose, or design in nature. —**teleolog'ic,** *adj.*

tel"·op·si·a [G. *tēle,* far off; *opsis,* vision]. A disorder in visual perception of space characterized by an excess of depth, or the illusion that distant objects are far away.

tel"·e·roent'gen·o·gram" (tel·ee-rent'ghen-o-gram, tee"lee-o-) [*tēle;* Röntgen; G. *gramma,* letter]. A radiograph, usually of the heart, taken at a distance of about 6 feet, to avoid distortion.

teleostol. Trade-mark for a biologically standardized mixture of fish liver oils used as a source of vitamins A and D.

tel"e·o·ther"a·peu'tics (tel·ee-o-therr-uh-pew'ticks, tee"lee-o-) [*tēle;* G. *therapeutikos,* inclined to serve]. Suggestive therapeutics.

telepaque. Trade-mark for *iopanoic acid.*

te·lep'a·thist [*tēle;* G. *pathos,* disease]. One who is versed in telepathy.

te·lep'a·thy [*tēle; pathos*]. The direct awareness of what is taking place in another person's mind.

tel"·ra·di·og'ra·phy [*tēle;* L. *radius,* ray; G. *graphein,* to write]. Radiography with the tube about 6 feet from the body to avoid distortion.

tel"e·ra·di·um [*tēle; radium*]. Radium which is used in a radium cannon for accurate directing of the emanations on a region. See *teleradium therapy.*

tel"·re·cep'tor. See *teleceptor.*

tel'er·gy [*tēle;* G. *ergon,* work]. Automatism.

tel"e·roent"gen·og'ra·phy (tel"i-rent-ghen-og'ruh-fee) [*tēle;* Röntgen; G. *graphein,* to write]. Teleradiography.

tel"e·ster"e·o·roent"gen·og'ra·phy (tel"i-sterr"ee-o-rent-ghen-og'ruh-fee, tel"i-steer"ee-o-) [*tēle;* G. *stereos,* solid; Röntgen; *graphein*]. A stereoroentgenogram made with the tube about 6 feet from the object.

tel"es·the'si·a, tel"aes·the'si·a (tel"ess-theez'zhuh, -zee-uh) [*tēle;* G. *aisthēsis,* perception]. 1. Distant perception. 2. A perception of objects or conditions independently of the recognized channels of sense. See *telepathy.*

tel"e·sys·tol'ic [G. *telos,* end; *systolē,* contraction]. Pertaining to the last phase of systole.

tel"e·ther'a·py [G. *tēle,* far off; *therapeia,* treatment]. Absent treatment.

tel·lu'ri·um [L. *tellus,* earth]. Te = 127.61. A rare metallic element of bluish white color obtained chiefly as a by-product in the refining of copper and lead. Salts of the element have been used for their antisyphilitic effect; certain of its compounds are bactericidal. Absorbable salts are poisonous. Prolonged use leads to a garlicky breath.

Tellyesniczky, Kálmán (*Hungarian histologist*, 1868–1932). Introduced tissue-hardening fluid containing 3% potassium dichromate solution in water to which 5% glacial acetic acid is added just before use; called *Tellyesniczky's fluid*.

tel'e-coele. Cavity of the telencephalon.

tel"e-den'dron [G. *telos*, end; *dendron*, tree]. The terminal arborization of an axon.

tel'e-gen. See under *telomerization*.

tel"eg-no-sis. Diagnosis by telephone-transmitted roentgenograms.

tel"e-lec'i-thal (tel"e-less'i-thal) [*telos*; G. *lekithos*, yolk]. An ovum having a large mass of yolk placed eccentrically.

tel"e-lem'ma [*telos*; G. *lemma*, sheath]. The membrane over a motor end-plate of a skeletal muscle fiber.

tel'e-mer. See under *telomerization*.

tel-om"er-i-za'tion. A type of polymerization reaction in which a compound XY dissociates and unites with another compound R, containing unsaturated groups, to form a large molecule X(R) Y. The compound XY is called a *telogen*; the large polymerized compound is a *telomer*.

tel'o-phase (tel'o-faze) [*telos*; G. *phasis*, appearance]. 1. The final stage of mitosis in which the chromosomes reorganize to form an interstage nucleus. 2. The final phase of any process.

tel"e-re-cep'tor. See *teleceptor*.

Tel"o-spo-rid'i-a [*telos*; G. *sporá*, seed]. A subclass of Sporozoa, characterized by spore formation after the sporozoon has completed its growth. The orders included are Gregarinida, Coccidia, and Haemosporidia.

tel"o-syn-ap'sis [*telos*; G. *synapsis*, contact]. The end-to-end union of homologous chromosomes at the time of the maturation of the germ cells, in contrast to the side-by-side union as in parasynapsis.

TEM. Abbreviation for triethylene melamine.

tem'per [AS. *temprian*]. Make metals hard and elastic by heating them and then suddenly cooling them.

tem'per. The hardness or brittleness of a metal, as induced by heating and suddenly cooling.

spring t. A quality induced in steel by hardening and tempering in the ordinary way and then reheating until the steel assumes a bright blue color (about 570° F.), which increases the upper limit of elasticity of the steel.

tem'per-a-ment [L. *temperamentum*, a mixing in due proportion]. In *constitutional medicine*, the mixture of motivational drives in a personality. The level of personality just above physiologic function and just below acquired attitudes and beliefs. The quantitative patterning of viscerotonia, somatotonia, and cerebrotonia in a personality.

tem'per-ance [L. *temperantia*, moderation]. Moderation in satisfying desire, especially in the use of alcoholic beverages.

tem'per-ate [L. *temperare*, to be moderate]. Moderate; without excess.

tem'per-a-ture [L. *temperatura*]. The degree of intensity of heat of a body, especially as measured by the scale of a thermometer. Abbreviated, T.

absolute t. That reckoned from the absolute zero, estimated at −273° C.

basal t. That of the healthy body after a sufficient period of rest, usually obtained in the fasting state before arising after at least eight hours of relaxed sleep; used particularly in the detection of ovulation.

body t. The temperature of the body. Elevation above normal constitutes fever.

critical t. The temperature at which a gas can, by pressure, be reduced to a liquid.

dry-bulb t. The actual air temperature, with the exclusion of variations due to radiation or conduction.

inverse t. Variations of body temperature through the day opposite to normal, so that the morning temperature is higher than the evening temperature.

maximum t. The temperature above which bacterial growth does not occur.

mean t. The average temperature for a given period of time.

minimum t. That below which bacterial growth ceases.

normal t. The temperature of the body in health (37° C. or 98.6° F.).

optimum t. That most favorable for cultivating microorganisms.

wet-bulb t. That obtained when a current of air is passed over a thermometer bulb which is enclosed by a damp jacket. Increasing moisture impedes evaporation, and the cooling effect decreases.

tem'ple [L. *tempora*, temples, plural of *tempus*]. The portion of the head anterior to the ear and above the zygomatic arch.

tem'pli oil. A volatile oil obtained from the cones of *Pinus mugo*.

tem'po-ral [*tempora*]. 1. Pertaining to the temple, as the temporal bone, the temporal artery. See Tables of Arteries, of Bones, and of Muscles in the Appendix. 2. Pertaining to time. 3. Pertaining to the temporal lobe.

tem'po-ra'lis su"per-fi-ci-a'lis. A portion of the auricularis anterior muscle.

tem'po-rar"y [L. *temporarius*, lasting but for a time]. Not permanent.

tem"po-ri-za'tion [L. *tempus*, time]. The expectant treatment of disease.

tem'po-ro- [L. *tempora*, plural of *tempus*]. A combining form denoting *pertaining to the temple or to the temporal lobe of the cerebral hemisphere*.

tem"po-ro-man-dib'u-lar [*tempora*; L. *mandibula*, jaw]. Pertaining to the temporal bone and the mandible, used specifically for a ligament of the mandibular joint.

tem"po-ro-oc-cip'i-tal (tem"po-ro-ock-sip'i-tul). Pertaining to the temporal and occipital bones, regions, or lobes of the cerebrum.

tem"po-ro-pa-ri'e-tal [*tempora*; L. *paries*, wall]. 1. Pertaining to the temporal and parietal bones. 2. Pertaining to the temporal and parietal lobes of the brain.

tem"po-ro-pon'tile (-pon'tile, -til) [*tempora*; L. *pons*, bridge]. Pertaining to the temporal lobe and the pons.

tem'u-lence, tem"u-len'ti-a [L. *temulentia*, intoxication]. Inebriety; drunkenness. *Obs.*

te-na'cious [L. *tenax*, holding fast]. 1. Tough. 2. Cohesive.

te-nac'i-ty (ti-nass'i-tee) [L. *tenacitas*, a holding fast]. Toughness.

te-nac'u-lum [L., an instrument for holding]. A slender hook-shaped instrument with a long handle for seizing and holding parts, approximating incised edges, etc., during surgical operations.

te-nal'gi-a. See *tenodynia*.

t. crepitans. See *tenosynovitis crepitans*.

ten'der-ness [L. *tener*, soft]. The condition of abnormal sensitiveness to touch; soreness.

ten'di-no-plas"ty [L. *tendere*, to stretch; G. *plassein*, to form]. Plastic surgery of tendons. Also see *tenoplasty*. —**tendinoplas'tic**, *adj.*

ten'di-nous [*tendo*]. Pertaining to, or having the nature of, a tendon.

ten'do (pl. *tendines*) [ML., from *tendere*].

t. achillis. The Achilles tendon or

don of the gastrocnemius and soleus muscles inserted into the heel. Also called *tendo calcaneus*.

ten·dol·y·sis, ten·do·ly·sis. [*tendere*; G. *lysis*, loosing]. The freeing of adhesions about a tendon.

ten·do·mu·cin, ten"do·mu'coid [*tendere*; L. *mucus*, mucus]. A mucoid found in tendons.

ten·don [*tendere*] A band of dense fibrous tissue forming the termination of a muscle and attaching the latter to a bone. See Plate 2.

central t. The aponeurosis in the center of the diaphragm.

conjoined t. The fused tendon of insertion of the internal oblique abdominal and transverse abdominal muscles into the pubis. In many bodies muscle fibers are present and a tendon as such is not demonstrable.

cricoesophageal t. The tendon of origin of the longitudinal and part of the circular striated musculature of the esophagus, attached to the posterior medial surface of the cricoid cartilage.

patellar t. See patellar *ligament*.

slipped t. A deficiency disease of growing poultry characterized by a deformity of the tibia-metatarsal joint causing the tendon of the gastrocnemius muscle to slip from its normal position. The principal factor is manganese deficiency although lack of biotin, niacin, or choline may also be involved. Also called *perosis*.

t. of conus arteriosus. A band of fibrous tissue extending from the fibrous trigone of the heart and fibrous ring about the right atrioventricular opening to the posterior surface of the conus arteriosus.

trefoil t. Old term for the central tendon of the diaphragm.

ten·do·syn"o·vi'tis (ten·do·sin·o·vy'tis, ·sigh·no·) See *tenosynovitis*.

ten·do·vag"i·ni'tis (·vadj·i·nigh'tis) [*tendere*; L. *vagina*, sheath; *-itis*, inflammation]. Inflammation of a tendon and its sheath; tenosynovitis.

t. crepitans. See *tenosynovitis* crepitans.

t. granulosa. Tuberculosis of tendon sheaths, the sheaths being filled with granulation or fungous tissue.

t. stenosans. See Frits de Quervain.

Te·neb·ri·o [L., one who shuns the light]. A genus of beetles.

T. molitor The meal worm. The larva of this species acts as an intermediate host for the tapeworm, *Hymenolepis diminuta*.

te·nec'to·my [G. *tenōn*, tendon; *ektomē*, excision]. 1. Excision of a lesion, as a ganglion or xanthoma, of a tendon or tendon sheath. 2. Tenoplasty.

te·nes·mus (tuh·nes·mus, tuh·nez·mus) [*teinesmos*] A straining, especially the painful straining to empty the bowels or bladder without the evacuation of feces or urine. —**tenes·mic,** *adj.*

teni-. For words beginning with *teni-* not found here, see words beginning *taeni-*.

te·ni·a (ti·nigh·uh, ti·nee·uh) (dim. from G. *tainia*, ribbon) A small ribbon.

t. cinerea. A thin, grayish ridge separating the striae of the fourth ventricle from the cochlear division of the acoustic nerve. O.T.

ten·nis arm, ten'nis el'bow An acute or chronic synovitis of the radiohumeral articulation common in tennis players. Radiohumeral bursitis.

ten·o-, ten- [G. *tenōn*, tendon]. A combining form meaning *pertaining to a tendon*.

ten"o·de'sis [*tenōn*, G. *desis*, a binding together]. Fixation of a tendon, as to a bone.

ten·o·dyn'i·a (ten·o·din·ee·uh, ·dye·nee·uh) [*tenōn*, G. *odynē*, pain]. Pain in a tendon.

ten·o·fi'bril [*tenōn*; L. *fibra*, fiber]. A small, delicate fibril connecting one epithelial cell with another; tonofibril.

ten"o·my'o·plas"ty [*tenōn*, G. *mys*, muscle; *plassein*, to form]. Tenontomyoplasty.

ten"o·my·ot'o·my (ten·o·migh·ot·o·mee) [*tenōn*; *mys*; G. *tomē*, a cutting]. In *ophthalmology*, a procedure for the treatment of squint, devised to enfeeble the action of one of the rectus muscles by incising portions of its tendon near the sclerotic insertion.

Tenon, Jacques René [*French anatomist and surgeon*, 1724–1816]. Instrumental in bringing about hospital reform in eighteenth century Paris. See also Tenon's *capsule*, *space* of Tenon.

ten"o·nec'to·my [G. *tenōn*, tendon; *ektomē*, excision]. Excision of a portion of a tendon.

ten"on·i'tis [after J. R. Tenon; G. *-itis*, inflammation]. Inflammation of Tenon's capsule.

ten·on·i'tis [G. *tenōn*, tendon; *-itis*]. Inflammation of a tendon sheath.

ten"o·nom'e·ter [G. *teinein*, to stretch; *metron*, measure]. An instrument for measuring the tension of the eyeball.

ten"o·nos·to·sis. See *tenostosis*.

te·non"to·my"o·plas"ty [G. *tenōn*, tendon; *mys*, muscle; *plassein*, to form]. Reparative surgery involving both tendon and muscle; used particularly for hernia.

te·non·to·my·ot'o·my (ti·non"to·migh·ot·o·mee) [*tenōn*, *mys*; G. *tomē*, a cutting]. Surgical division of tendons and muscles.

te·non·to·the·ci'tis. See *tenosynovitis*.

t. prolifera calcarea. Necrobiosis of the tendons in their sheaths with calcareous deposit.

ten·o·phyte [*tenōn*, G. *phyton*, plant]. A bony or cartilaginous growth on a tendon.

ten'o·plas"ty [*tenōn*, G. *plassein*, to form]. Reparative or plastic surgery of a tendon. —**teno·plas'tic,** *adj.*

ten·or'rha·phy [*tenōn*; G. *rhaphē*, suture]. The uniting of a divided tendon by sutures.

ten"os·to'sis [*tenōn*; G. *osteon*, bone; *-ōsis*, condition]. Ossification of a tendon.

ten·o·su'ture. Tenorrhaphy.

ten·o·syn·o·vec'to·my (ten·o·sin·o·veck'to·mee, ·sigh·no·) [*tenōn*; NL. *synovia*, synovia; G. *ektomē*, excision]. Excision of a tendon sheath.

ten"o·syn·o·vi·o'ma. See *synovioma*.

ten"o·syn"o·vi'tis (·sin·o·vy'tis, ·sigh·no·) [*tenōn*; *synovia*; G. *-itis*, inflammation]. Inflammation of a tendon and its sheath.

adhesive t. An inflammatory reaction of a tendon sheath which produces adhesions between tendon and tendon sheath.

t. crepitans. That form associated with crackling sounds during muscular activity.

tuberculous t. A slow and progressively destructive tuberculosis of the sheaths of the tendons. The tendons of the wrist are the ones most commonly involved. Treatment is synovectomy and excision of the surrounding tuberculous tissue.

villous t. A chronic inflammatory reaction of a tendon sheath producing hypertrophy of the lining with the formation of redundant folds and villi.

ten·o·tome [*tenōn*, G. *tomos*, cutting]. A small, narrow-bladed knife mounted on a slender handle; tenotomy knife.

te·not·o·mize [*tenōn*; *tomos*]. Perform tenotomy.

te·not·o·my [*tenōn*, G. *tomē*, cutting]. The operation of cutting a tendon.

graduated t. Specifically cutting a part of the fibers of the tendon of an ocular muscle for heterophoria or slight degrees of strabismus.

tarsal t. Division of the peroneal tendon in the horse for the relief of spavin.

ten·o·vag"i·ni'tis (ten·o·vadj·i·nigh'tis) [*tenōn*; L. *vagina*, sheath; G. *-itis*, inflammation]. Inflammation of the sheath of a tendon.

tensilon chloride. Trade-marked name for (3-hydroxyphenyl) dimethylethylammonium chloride, specific anticurare agent.

ten si·om′e·ter [L. *tensio*, from *tendere*, to stretch; G. *metron*, measure]. An apparatus for measuring tension, as in the eyeball or blood vessels.

ten′sion [*tensio*]. 1. The act of stretching; the state of being stretched or strained. 2. In *electricity*, the power of overcoming resistance. Abbreviated, T. 3. The partial pressure exerted by a gas.

arterial t. The strain in the arterial walls at the height of the pulse wave.

elastic t. Stretching by means of an elastic material.

gaseous t. The tendency of a gas to expand, due to the mutual repulsion of its molecules.

interfacial t. A measure of the work which must be done in increasing the interface between two phases by a given unit of surface. When one of the phases is gas, then the interfacial tension is commonly called the surface tension.

intraocular t. The tension of the coats of the eyeball, produced by the pressure of the intraocular fluid. It may be estimated by means of an instrument called a tonometer or by palpation with the fingers.

intravenous t. The strain to which the wall of a vein is subjected by the pressure of the blood.

muscular t. The state of muscular contraction which occurs when muscles are passively stretched.

premenstrual t. The increased emotional tension and nervous or circulatory symptoms associated with the period in the human menstrual cycle which precedes menstruation.

surface t. The force operating at surfaces (commonly at the interface of a liquid and a gas) which is due to the unequal molecular attraction on either side of the molecules at the surface. The contractile force in the surface of a liquid by virtue of which the surface tends to shrink and assume the smallest area possible. The surface tension of water against air at 20° C. is 72.8 dynes per centimeter. Abbreviated, S.T.

ten′si·ty [L. *tensus*, from *tendere*]. Tenseness, the condition of being stretched.

ten′sive [*tensus*]. Giving the sensation of stretching or contraction.

ten′sor [*tensus*]. A muscle that serves to make a part tense, as the tensor tympani. See Table of Muscles in the Appendix.

t. capsularis articulationis metacarpophalangei digiti quinti. A variant of the opponens digiti quinti muscle.

t. laminae posterioris vaginae musculus recti abdominis. Rare variant insertion of certain fibers of the transversus abdominis muscle.

t. ligamenti annularis. Variant parts of the supinator muscle. There may be anterior or posterior bands.

ten′sure [L. *tensura*, a stretching]. Tension, stretching or straining.

tent [OF. *tente*, from L. *tendere*, to stretch]. 1. A plug or stuffing of soft material, such as gauze, sponge, or lint, that increases in volume by wetting. It is used for dilating an orifice or canal and for keeping a wound or sinus open. Except in gynecologic practice, the term in its strictest sense has almost disappeared from medical literature. 2. A portable shelter or covering.

laminaria t. A cone-shaped plug made from *Laminaria digitata*, a seaweed. When wet, the plug dilates; sometimes used in gynecologic and surgical procedures.

oxygen t. An airtight chamber enclosing the patient's head and shoulders, in which the oxygen content of the atmosphere can be maintained at a higher than normal level.

sponge t. One made of compressed sponge, for dilating the os uteri.

ten′ta·tive [L. *tentare*, to try]. Empirical; experimental.

tenth′me″ter. One ten-millionth of a millimeter or one angstrom.

ten·tig′i·nous (ten-tidj′i-nus) [L. *tentigo*, lust]. Characterized by insane lust.

ten·ti′go [L.]. Lust, satyriasis.

t. prava. See *lupus*.

t. venerea. See *nymphomania*.

ten·to′ri·al pres′sure cone. See pressure cone.

ten·to′ri·um (pl. *tentoria*) [L., tent]. A partition of dura mater roofing over the posterior cranial fossa, separating the cerebellum from the cerebral hemispheres. Also called *t. cerebelli*. See Plate 17. —**tentorial**, *adj.*

t. of the hypophysis. Old term for the diaphragm of the sella, the circular fold of dura mater attached to the margins of the hypophyseal fossa. It covers the hypophysis and has an opening in the center through which passes the stalk of the hypophysis.

ten′u·ate [L. *tenuare*, to make thin]. Make thin.

te·nu′i·ty [L. *tenuitas*, thinness]. Thinness; the condition of being thin.

ten′u·ous [L. *tenuis*, thin]. Thin; minute.

teph″ro·my″e·li′tis [G. *tephros*, ash-colored; *myelos*, marrow; *-itis*, inflammation]. Inflammation of the gray matter of the cord; poliomyelitis.

tep′id [L. *tepidus*, lukewarm]. About blood heat.

TEPP Tetraethylpyrophosphate.

ter- (tur) [L., thrice]. A combining form meaning *three* or *threefold*.

ter″ab·del′la (terr″ab-dell′uh) [G. *terein*, to bore; *bdella*, leech]. An artificial leech.

ter″a·mor′phous (terr″uh-mor′fus) [G. *teras*, monster; *morphē*, form]. Of the nature of a monstrosity.

te′ras (teer′as, terr′as) (pl. *terata*) [G.]. A monster. For terata listed by name, see Table of Representative Monstrosities and Anomalies in the Appendix. See Plate 25. —**terat′ic**, *adj.*

ter′a·tism [*teras*]. A congenital anomaly or monstrosity.

acquired t. Deformity which is the result of disease, violence, or operation.

atresic t. Deformity in which the natural openings are occluded.

ceasmic t. Deformity in which parts which should be united remain in their primitive, fissured state.

ectogenic t. One in which certain parts of the body are absent or defective.

ectopic t. One in which there is displacement of one or more parts.

hypergenetic t. One in which certain organs are disproportionately large.

symphysic t. One in which certain organs or parts are abnormally fused.

ter″a·to·blas·to′ma [*teras*; G. *blastos*, germ; *-ōma*, tumor]. See *teratoma*.

ter″a·to·car″ci·no′ma. A malignant teratoma.

t. of testis. See embryonal carcinoma of testis.

ter″a·tog′e·ny (terr″uh-todj′i-nee), **ter″a·to·gen′e·sis** [*teras*; G. *genesis*, production]. The formation, or bringing forth, of monsters.

ter′a·toid [*teras*; G. *eidos*, form]. Resembling a monster.

ter″a·tol′o·gy [*teras*; G. *logos*, word]. The science of malformations and monstrosities. —**teratolog′ic**, *adj.*; **teratologist**, *n.*

ter″a·to′ma (pl. *teratomata*, *teratomas*) [*teras*; G. *-ōma*, tumor]. A true tumor or neoplasm composed of multiple tissues, as teeth, hair, or other material not found in the part where it grows, and resulting from an embryonic misplacement.

tissue or from the enclosure of parts of a rudimentary fetus also called **bidermoma**, *chalestetoma of ovary dermoid cyst, hairy cyst, mixed cyst, teratoid cyst, teratomatous cyst, dermoid, dysembryoma, embryoma, monodermoma, teratoblastoma, tridermoma, compound ovarian tumor ectopic ovarian tumor Nelaton tumor teratoid tumor* —**teratom'atous**, *adj*

malignant t. The malignant variation, usually involving all components, but occasionally only one also called *embryonic carcinoma, teratocarcinoma, teratoid carcinoma.*

ter" to-pho'bi a [*teras*; G *phobos*, fear]. 1 Morbid fear of monsters or of deformed people. 2. Morbid dread, on the part of pregnant woman, of giving birth to monstrosity

ter"a to sis [*teras*; G -*osis*, condition]. 1. A congenital deformity 2. Teratism.

ter"a to zo-o-sper'mi a. Abnormal sperm morphology

ter'bi um [*Ytterby* in Sweden]. Tb = 158.93. A rare metallic element.

terchlorethylene. Tetrachloroethylene.

tercinin. A brand of clavacin.

te're [L., imperative of *terere*, to rub]. Rub. Used in writing prescriptions.

ter'e-bene. A mixture of hydrocarbons, chiefly dipentene and terpinene, prepared by the action of sulfuric acid on turpentine oil followed by steam distillation. A pale yellow liquid of terebinthinate taste soluble in 3 volumes of alcohol A stimulant expectorant. Useful in flatulence and dyspepsia.

ter" bin thi nate [G *terebinthos*, turpentine]. Containing or resembling turpentine.

ter" bin'thism (terr r-binth'is-um) [*terebinthos*]. Poisoning with turpentine oil.

ter" bra-chi'sis (terr"l bra kee sis) [L. *teres*, round G. *brachys* short]. The operation of shortening th round ligament of the uterus.

ter"e-phthal'l ac'id. COOH.C_6H_4 COOH p-phthalic acid, occurring in crystals, insoluble in water used as an analytical reagent.

te res (teer ees) (pl. *teretes*) [L.] Cylindrical.

te'res. A muscle having cylindrical shape, as teres major teres minor See Table of Muscles in the Appendix.

ter in die [L.]. Three times day abbreviated, t.i.d.

term [L. *terminus*, boundary]. 1 A limit the time during which anything lasts. 2. The time of expected delivery

Terman, Lewis Madison [*American psychologist*, 1877–]. Known for his modification of the Binet-Simon tests for measuring intelligence, called *Terman collective test, Stanford revision of the Binet-Simon test.* H has also contributed genetic studies on genius.

ter'mi nal [L. *terminalis*, of boundary]. 1 Pertaining to the end placed at or forming the end.

ter'mi-nal. The pole of battery or other electric source, or the end of the conductors or wires connected thereto.

Wilson central t. *I electrocardiography* an indifferent electrode of near zero potential btained by connecting the three limbs of the subject to central terminal through resistances of 5000 ohms each.

ter'mi nal crest. See *crista terminalis.*

ter"mi na tion [L. *terminatio*, fixing of limits]. Cessation, the end or ending

ter"mi nol'o-gy [L. *terminus*, boundary G *logos*, word]. Nomenclature system of technical names or terms.

terms [*terminus*] The menses.

ter'na ry Of chemical compounds, made up of three elements or radicals.

Ter'nl dens (tur ni-dens) [L. *terni*, three; *dens*, tooth]. A genus of strongyloid nematode worms, species of which, T diminutus, sometimes infests man.

teropterin. A trade-mark for sodium pteroyltriglutamate, derivative of folic (pteroylglutamic) acid, investigated for possible usefulness in the treatment of leukemia.

terpacene. Eucalyptol.

ter'pene. Any hydrocarbon of the general formula $C_{10}H_{16}$ sometimes represented as condensation of two isoprene (C_5H_8) units. By extension the term may includ compounds representing any multiple of C_5H_8 units. Terpenes occur naturally *in volatile oils and other plant sources*; they are generally insoluble in water but soluble in alcohol and other organic liquids. **Sesquiterpenes** are hydrocarbons of the formula $C_{15}H_{24}$ or $(C_5H_8)_3$; **diterpenes** are hydrocarbons of the formula $C_{20}H_{32}$ or $(C_5H_8)_4$ **triterpenes** are hydrocarbons of the formula $C_{30}H_{48}$ or $(C_5H_8)_6$ **polyterpenes** are hydrocarbons of the formula $(C_5H_8)_n$. The term **hemiterpene** is sometimes applied to the hydrocarbon of the formula C_5H_8 (isoprene).

ter'pen ism. Poisoning by terpenes from internal use or inhalation.

ter'pi lene di"hy-dro-chlo'ride (dye"high-dro-klor'ide) Eucalypteol.

ter-pin'e-ol. $C_{10}H_{17}OH$. A colorless, viscous liquid of lilac odor occurring in many volatile oils and prepared from terpin hydrate used in perfumes.

ter'pin hy'drate (*terpini hydras*) $C_{10}H_{20}O_2.H_2O$ Colorless crystals prepared by the action of nitric acid on turpentine oil in the presence of alcohol. Soluble in 200 parts of water or in 13 of alcohol. An expectorant. Dose, 0.13–0.33 Gm. (2–5 gr.).

t. h. elixir (*elixir terpini hydratis*) Contains 1.7% of terpin hydrate. Dose, 4–8 cc. (1–2 fluidrachms)

ter'pin-ol. An oily liquid, chiefly $C_{10}H_{16}$ and $C_{10}H_{18}O$ obtained by the action of dilute mineral acids on terpin hydrate with heat soluble in alcohol. Formerly used in bronchial affections.

ter'ra (pl. *terrae*) [L., land]. Earth.

t. alba. Kaolin.

t. sigillata. Sealed earth kaolin. In medieval Europe, earth guaranteed to be genuine through the use of seal.

terramycin. Trade-mark for the antibiotic substance oxytetracycline, marketed in the form of the hydrochloride salt.

Terry's method. See under *method.*

ter'tian [L. *tertianus*, tertian]. Recurring every other day as tertian fever

double t. Quotidian.

ter'ti-ar ism (tur shee ur-iz"um) [L. *tertiarius*, containing third part] Tertiary syphilis.

ter'ti-ar"y [*tertiarius*]. Third in order

ter'ti ar"y l'co-hol. An alcohol which contains the trivalent group COH.

ter tip a ra [L. *tertius*, third *parere*, to bring forth]. A woman who has borne three children.

ter va'lence. See *trivalence.*

Tesla current. See under *current.*

test [L. *testum*, earthen vessel] 1 A trial or examination. 2. A procedure to identify constituent, to detect changes of function, or to establish the true nature of condition. 3. The reagent for producing special reaction. For methods of performing quantitative tests, see *method.* For any test not listed here, see under *method* or *reaction*, or under the proper name

Abderhalden's t. (*for pregnancy*) A test depending upon certain changes occurring in the blood serum in pregnancy *Obs.*

bertin t. See bromsulfalein *t.*

Abridged A. O. color vision t. (Abridged

sion of American Optical Company's Charts.) A group of pseudo-isochromatic plates designed to detect color-vision deficiency.

absorption t. (*for differentiating bacteria*) The test consists of adding separately to agglutinative serums the various bacteria in the group in order to remove separately the partial agglutinins. Often used to differentiate between typhoid and paratyphoid fevers.

acetic acid and boiling t. See heat and acid *t.*

acetoacetic acid t. See Gerhardt's *t.*, Rothera's *t.*

acetone t. See Behre's *t.*, Legal's *t.*, Lieben's *t.*

acetylmethylcarbinol t. A test for the differentiation of the aerogenes group and colon group of bacteria. An equal volume of the reagent (copper sulfate, ammonium hydroxide, sodium hydroxide, and distilled water) is added to the culture. The development of a red color in 10 to 20 minutes is a positive test, indicating the presence of the aerogenes group.

acid serum phosphatase t. A measurement of the activity of phosphatase in an acid substrate either by its ability to liberate phenol from disodium phenylphosphate or phosphorus from glycerophosphate. Highly elevated values are diagnostic for prostatic carcinoma with metastases.

acrolein t. (*for glycerol and fats*) The suspected substance is heated with an equal quantity of potassium bisulfate. If glycerin or fats are present, acrolein is given off and is recognized by its characteristic irritating odor.

Addis and Shevky's t. (*for kidney function*) A concentration test based upon the specific gravity of urine passed during the last 12 hours of a 24-hour period of fluid deprivation.

adhesion t. (*for infectious jaundice*) The serum of the patient is added to a mixture of *Leptospira icterohaemorrhagiae* and either bacilli or blood platelets. It is examined after a short time with the dark-field microscope. The test is considered positive when the bacilli or platelets are found adherent to the spirochetes.

afterimage t. (*In ophthalmology*) A measurement of abnormal retinal correspondence in strabismus. The patient looks at a horizontal luminous filament with the left eye and at a vertical one with the right. If the afterimages cross, correspondence is normal and binocular vision probably can be restored following correction of the strabismus.

agglutination t. (a) A test in which an agglomeration or clumping of particles produces masses which may be seen either with the unaided eye (macroscopic agglutination test) or with the aid of a microscope (microscopic agglutination test). The test also may be used for the identification of bacteria. (b) A test for the presence of specific antibodies (agglutinins) in the blood serum of infected individuals which will produce clumping of the specific bacteria causing the infection.

albumin t. See Heller's *t.*, Nonne-Apelt *t.*, Osgood-Haskins *t.*, Parnum's *t.*, Purdy's *t.*, Roberts' *t.*, Spiegler's *t.*, sulfosalicylic acid *t.*

alcohol-turbidity t. A flocculation test for liver function.

Alexander's t. See *Hemophilus influenzae* antibody *t.*

alkaline serum phosphatase t. A measurement of the activity of phosphatase in an alkaline substrate either by its ability to liberate phenol from disodium phenylphosphate or phosphorus from glycerophosphate. Elevated values are found in obstructive liver disease, malignant bone tumors, rickets, pregnancy and Paget's disease.

Allen's t. (*for phenol.*) To 2 parts of the unknown add 6 parts of hydrochloric acid and 1 part nitric acid. A cherry red color indicates the presence of phenol. (*for tinea versicolor.*) Paint the skin lesion with compound solution of iodine. The diseased portion will stain deep brown or mahogany color if the eruption is tinea.

allergy t. Any test used to demonstrate the presence of allergy, such as the conjunctival test, nasal test, patch test, or skin test.

alpha t. A series of eight types of intelligence tests designed for group application and for rapid scoring; first used by the U. S. Army in World War I.

Althausen t. See galactose tolerance *t.*

Althausen-Mancke's t. See insulin-glucose-water tolerance *t.*

amino-acid tolerance t. (*for liver function*) A test based upon the theory that in liver disease there is a significant delay in the removal from the blood of injected amino acids.

ammonium sulfide t. (*for lead*) A drop or two of residue from evaporated urine is allowed to fall into a tall glass full of ammonium sulfide. If lead is present, a white trail will develop in the fluid as the drop descends.

amylase t. See Fabricius-Moller urine *t.*, Somogyi's *t.*

amyloid t. See Congo red *t.*

Andersen-Nightingale dilution t. (*for vitamin A*) The material to be tested is diluted with chloroform until the blue color formed after addition of antimony trichloride, is just visible.

aniline t. (*for vitamin D*) Liver oils and irradiated provitamin D give a red color with a mixture of aniline and hydrochloric acid.

animal protection t. A test of aid in the diagnosis of certain diseases, performed by injecting tissue extract or wound secretion and various antiserums into a series of animals. The animals protected by the specific antiserums indicate the nature of the organism to be identified. Also see serum protection *t.*

anoxemia t. See hypoxemia *t.*

antiglobulin t. A test originally developed for the detection of univalent Rh antibodies. It depends on the fact that the univalent antibodies coating the erythrocytes consist of human serum globulins. A potent precipitating rabbit antihuman serum is used. It will detect human globulin coating a particle (examples: erythrocytes, brucella organisms). Syn., *direct Coombs t.*, *direct developing t.*, *Race-Coombs t.*

antimony t. See Marsh's *t.*

antimony t. *for kala-azar* A test in which a solution of a pentavalent antimony compound is stratified beneath a mixture of blood and potassium acetate. A flocculent precipitate forms immediately in advanced cases of kala-azar but may take as long as 15 minutes in new cases.

antimony trichloride t. (*for provitamin D*) Provitamin D dissolved in chloroform and mixed with a solution of antimony trichloride in chloroform yields a red color.

antitrypsin t. A test based on the ability of blood serum to inhibit the action of trypsin. It is said to be of value in the diagnosis of carcinoma, nephritis, and other conditions.

aptitude t. A psychologic test given to determine a student's aptitude or ability for medicine or other pursuits. Also see Oseretsky *t.*, Stanford scientific aptitude *t.*

arm deviation t. Test for disease of the nervous system. The patient stands with his arms outstretched in front of him, and the examiner stands the same way with his fingertips supporting those of the patient. The patient then closes his eyes, with his arms still outstretched and the

examiner moves away. The following deviations may occur: if pyramidal lesion is present, the arms move downward; if extrapyramidal lesion, the arms move downward and inward; if cerebellar lesion, the arms move strongly outward and upward; if parietal lobe lesion, the arms move slightly downward, and the fingers exhibit involuntary athetoid movements.

arm-lung time t. One in which the time is measured from the injection of ether into a vein until the odor of ether appears in the breath.

arm-tongue time t. One in which the time is measured from the injection of a substance into a vein until the taste of it is noticed in the mouth.

arsenic t. See Bettendorff's *t.*, Fleitmann *t.*, Gutzeit *t.*, Marsh *t.*, Reinsch *t.*

Aschheim-Zondek t. (*for pregnancy*) Urine from a woman is injected subcutaneously into immature white mice. If the woman is pregnant the ovaries of the mice will be enlarged, hyperemic, and hemorrhagic, and will show maturation of the ovarian follicles.

Ascoli t. A precipitin test for the detection of anthrax bacilli in meat, performed by overlaying antianthrax serum with the meat extract. A white ring of precipitation is a positive test.

associated movement of thumb t. A test for spastic paralysis of the hand. If the thumb is adducted when the patient tightly grasps with his four fingers those of the examiner, the test is positive. Also called *associated movements t.*

association t. In *psychoanalysis*, the procedure used in the diagnosis of certain abnormal mental states, sometimes used in crime detection. The test is oral and consists of presenting the patient with a predetermined series of words and noting his word associations and his reaction time.

auditory acuity t. The determination of the threshold of a person hearing by the use of tuning forks or preferably an audiometer.

Ayala t. (*for cerebrospinal fluid*) A test, expressed as a quotient, used to determine whether the spinal fluid is in a large reservoir as in hydrocephalus, or in a small reservoir as in subarachnoid block. Also called *Ayala quotient.*

azorubin S t. (*for liver function*) A delay in the appearance of injected azorubin S in the bile or prolonged urinary excretion indicates impaired liver function.

Babcock-Levy t. An examination designed to measure intellectual deterioration by testing vocabulary, general information, symbol substitution, and the copying of designs with respect to correctness, speed, and accuracy; useful in organic cerebral deteriorative conditions.

Bachman t. (*for trichinosis*) A solution of powdered trichina larvae is injected intradermally. If the patient has trichinosis an area of edema at the site of injection develops in 1 to 2 weeks.

Bacillus proteus pregnancy t. A test based upon the fact that the serum from a pregnant woman will agglutinate *B. proteus* strain OX19.

Bárány's pointing t. The patient points with finger or toe at a fixed object alternately with eyes open and closed. A constant error in pointing with the eyes closed in the presence of vertigo indicates peripheral labyrinthine disease or an intracranial lesion.

Bárány's t. See caloric *t.*

Barberio's t. (*for semen*) A drop of spermatic fluid or an aqueous extract of spermatic stain, when treated with a saturated aqueous solution of picric acid, shows a precipitate of yellow refractile crystals.

Barfoed's t. (*for monosaccharides*) A copper reduction test formerly used for glucose in urine.

basophilic aggregation t. (*for lead poisoning*) Stippled erythrocytes normally do not constitute more than 1% of the total number of erythrocytes, but in lead poisoning they may constitute 2% or more of the total.

Bauer's t. See galactose tolerance *t.*

Baumann and Goldmann's t. (*for cystine*) If a solution of cystine is shaken in caustic soda with benzoyl chloride, a voluminous precipitate of benzoyl cystine will be produced.

Beer dye t. A test for renal function in which methylene blue, given orally or intravenously, is normally cleared after many hours. In chronic pyelonephritis, coincident with rupture of the dye-stained abscesses, the urine becomes blue periodically after original clearance is reached.

beer t. One in which the patient drinks a quantity of beer or other alcoholic drink in order to encourage reactivation of a chronic gonorrhea.

Behre's t. (*for acetone*) Vapor from hot urine containing acetone reacts with salicylic aldehyde and sodium hydroxide to produce a pink to red color.

Bence Jones protein t. A test in which a precipitate, appearing when urine is heated to 50° to 60° C., disappearing at the boiling point, and reappearing on cooling, indicates Bence Jones protein.

Bender's t. Injection of epinephrine causes, in normal persons, an *outpouring of young cells* from the marrow, but in aplastic anemia it has no such effect; monocytes, however, may arise.

Bender gestalt t. A diagnostic and experimental psychological test in which the subject reproduces a series of designs. Deviations from the originals are interpreted in terms of Gestalt laws of perception and organization. Syn., *Bender visual motor gestalt t.*

Benedict's quantitative t. See Benedict's *method for glucose.*

Benedict's t. (*for glucose*) Eight drops of urine are added to 5 cc. of Benedict's qualitative sugar reagent (sodium citrate, copper sulfate, sodium carbonate, distilled water). Boil vigorously for 2 minutes. A green, yellow, or red precipitate indicates glucose.

Bennhold's t. See Congo red *t.*

benzidine t. (*for blood*). To 2 cc. of saturated solution of benzidine in glacial acetic acid add 1 cc. of 3% hydrogen peroxide and 1 cc. of the unknown. A blue or green color indicates blood.

benzodioxane t. (*for pheochromocytoma*) Benzodioxane, an adrenergic blocking agent, is injected intravenously over a two-minute period in dosage of 10 mg per square meter of body surface. A hypotensive effect for ten minutes or longer is characteristic of pheochromocytoma.

Bernreuter personality inventory. A test designed to measure neurotic tendency, self-sufficiency, introversion, dominance, sociability, and confidence.

betahydroxybutyric acid t. See Black's *t.*

beta t. An intelligence test used, instead of the alpha test, for illiterates, carried out with signs and pictures.

Bettendorff's t. (*for arsenic*) The suspected liquid is mixed with hydrochloric acid and stannous chloride solution and a piece of tinfoil are added. A brown color or precipitate indicates arsenic.

Bial's t. (*for pentose*) Glucose must be removed from the urine by fermentation. Add 1 ... strength acidified solution of orcinol to urine and, if pentose is present, a green flocculent precipitate of furfural is formed.

bile acid t. See Pettenkofer's *t.*, Hay's *t.*, Bischoff's *t.*

bile pigment t. See Gmelin t., Huppert t., iodine t. (for bile pigments) Rosenbach t.

bile solubility t. (*for Diplococcus pneumoniae*) A test for identifying pneumococci based on the fact that they dissolve in bile or bile salts.

bilirubin clearance t. (*for liver function*) A test based upon the ability of the liver to remove injected bilirubin from the blood.

bilirubin t. See Gmelin t., Huppert's t., iodine t. (for bile pigments) Rosenbach t., van den Bergh's t.

Binet Simon t. A method of estimating the intellectual capacity or measuring intelligence and expressing it as an intelligence quotient (IQ) also called *Binet* test.

biologic t. See serum t.

biological t. of Wiener The comparison of the icterus index of blood plasma or serum of the patient before and one hour after the injection of 50 cc of blood to test for blood compatibility

Bischoff's t. (*for bile acids*) Bile acids heated with dilute sulfuric acid and cane sugar produce red color

bitterling t. (*for pregnancy*) A test made by placing bitterling (small carplike fish of Japan) in water to which some of the woman urine has been added. If pregnancy is present, there is an outgrowth of the oviduct from the body of the fish.

biuret t. (*for proteins*) Add concentrated potassium hydroxide solution and few drops of dilute copper sulfate solution to the unknown. A violet color indicates the presence of proteins.

Black' t. (*for betahydroxybutyric acid*) Black' reagent (ferric chloride, ferrous chloride, water) and hydrogen peroxide are added to an extract of urine which has been treated with plaster of Paris, ether hydrochloric acid, and barium carbonate. The development of rose color is positive test.

bleeding time t. See Duke t Ivy t.

blind t. A comparison of two methods of treatment in which both the patient and the bserver are ignorant of the identity until the results have been recorded.

blood t. See benzidine t., Gregersen t., guaiac t., phenolphthalein t., Rattan and Hardisty's t., serum t., Teichmann t.

blood urea clearance t. See urea clearance t.

Blyth's t. (*for lead in water*) The addition of 1% alcoholic tincture of cochineal to water containing lead results in the formation of precipitate

Boas' t. (*For intestinal atony.*) In cases of intestinal atony splashing sound can be obtained on pressure upon the abdominal wall after the injection of small quantity (200–300 cc.) of water into the bowel. (*For hydrochloric acid in the gastric contents*) A glass rod dipped in the solution (alcohol, resorcinol, and sucrose) is applied to drop of the filtrate from the stomach and deep scarlet streak is produced if hydrochloric acid is present.

Boerner Jones, and Lukens t. A flocculation test for syphilis.

Boerner-Lukens t. (*for syphilis*) A modification of the Wassermann test.

bone conduction t. The testing of hearing threshold by placing tuning fork or audiometer oscillator directly against the mastoid process. The absolute bone conduction test is similar test done when the external auditory meatus is blocked by any of several means.

Bordet's t. See serum t.

bromsulphalein t. (*for liver function*) A test based upon the ability of the liver to remove injected bromsulphalein from the blood. Delayed removal indicates hepatic dysfunction.

Brown personality inventory A psychologic test designed for the detection of psychoneurotic problem children.

Brown's t. See cold pressor t.

Brown's t. (*for arteriovenous fistula*) Blood withdrawn from surface vein containing considerable admixture of oxygenated arterial blood indicates arteriovenous fistula.

brucellergin t. An allergic skin test of aid in the diagnosis of brucellosis, made by the intradermal injection of brucellergin.

brucellosis t. See brucellergin t., Huddleson's t., opsonocytophagic t.

Bufo arenarum Hensel t. See male-toad t.

cadmium sulfate t. A flocculation test for the determination of liver damage.

calcium t. See Sulkowitch's t.

Calmette t. A tuberculin test in which dilute tuberculin is applied to the conjunctiva. rarely used.

caloric t. In the normal individual, nystagmus is produced by irrigating the external ear canal with hot (110° 120° F.) or cold (68° F.) water When the vestibular nerve or labyrinth is destroyed, no nystagmus is produced upon testing the diseased side.

cancer t. See Schuller t.

candle t. (*for diplopia*) One performed by placing red glass ver one eye of the patient and green one over the other eye, then noting what the patient sees as he looks at candle in all the cardinal positions of gaze. Also see red lens t.

capillary resistance t. A test of the tendency for blood capillaries to break down and produce petechial hemorrhages. Two general procedures are used, tourniquet t and suction t.

carbon monoxide t. See tannic acid t.

Casoni's t. (*for echinococcus disease*) Sterile hydatid fluid from echinococcic cysts of lung or liver of sheep is injected intracutaneously An urticarial wheal surrounded by zone of erythema appearing rapidly and an area of erythema and edema lasting 2–3 days is indicative of echinococcic disease.

catatorulin t. (*for vitamin B_1*) A test which measures in vitro the uptake of oxygen by brain tissue from vitamin-deficient pigeons. Addition of vitamin B_1 proportionally increases the amount of oxygen consumed.

catoptric t. The diagnosis of cataract by means of the reflection of the Purkinje images from the cornea and lens capsules.

Cattell Infant Intelligence scale. A modification of the revised Stanford-Binet test adapted for infants from 3–30 months of age.

cat t. (*for staphylococcus enterotoxin*) A test to determine the production of enterotoxin produced by micrococci recovered in cultures of foods. The production of characteristic signs in cat injected intravenously with the culture indicates the presence of enterotoxin.

cephalin-cholesterol flocculation t. (*for liver function*). A test which measures the capacity of serum of persons with hepatic disease to flocculate colloidal suspension of cephalin cholesterol complex. The result, if positive, is expressed in graded form.

Cherry and Crandall's t. (*for lipase*) A test in which pancreatic lipase in serum is allowed to act on substrate of olive oil, lipase then being determined by the amount of fatty acid liberated.

Chi-square t. A test used to determine the probability that the difference between an actual and theoretical distribution or between two or more distributions is the result of chance alone.

chloral hydrate t. (*for prothrombin D*) Crystals of

provitamin D when heated slowly with crystals of chloral hydrate, melt above 50° C. and the mixture becomes first red, then green, and finally deep blue.

cholesterol t. See Liebermann-Burchard *t.*

Chopra's t. See antimony *t.* for kala-azar

cinchophen oxidation t. (*for liver function*) A test based on the 24-hour excretion of oxycinchophen in the urine after the ingestion of standard oral dose of 0.45 Gm. of cinchophen. Patients with hepatic dysfunction show higher excretion than normal.

circulation time t. See arm-lung time *t.*, arm-tongue time *t.*

clearance t. (*For kidney function.*) A test of the excretory efficiency of the kidneys based upon the amount of blood cleared of substance in 1 minute as determined by the ratio of the substance in the blood to the amount excreted in the urine during fixed time. (*For liver function.*) A test based on the ability of the liver to remove substance from the blood.

coagulase t. One used to determine the virulence of staphylococci, performed by incubating the bacteria in citrated or oxalated blood plasma. The development of coagulation is positive test.

coccidioidin t. An allergic skin test of aid in the diagnosis of coccidioidomycosis made by the intradermal injection of coccidioidin which is prepared from cultures of *Coccidioides immitis*.

coin t. The use of silver coins as plexor and pleximeter in percussion while the examiner auscults the opposite side of the hemithorax. A clear silver bell note indicates the presence of pneumothorax. A dull, muffled ote is the normal sound.

cold gglutination t. (*for primary atypical pneumonia*) A test for the detection of the autohemagglutinins or so-called cold agglutinins which may occur in high titer in the serums of individuals with primary atypical pneumonia.

cold pressor t. The rise in blood pressure is observed after the immersion of one hand in ice water for 1 minute. Individuals showing an xcessive rise or unusual delay in return to ormal are called hyperreactors and are thought likely to develop hypertension.

colloidal benzoin t. A colloidal suspension of Sumatra benzoin resin is added to varying saline dilutions of cerebrospinal fluid. The degree of precipitation in the various tubes is read in 24 hours. The principle and interpretation of the test are the same as for Lange colloidal gold test.

colloidal gold t. See Lange *t.*

colloidal red t. A liver function test which gives results almost identical with the colloidal gold test. The reagent is prepared from alcoholic Scharlach red

color threshold t. A lantern type test of the bility of color vision-deficient individuals to identify colored light signals at intensities ranging from the normal chromatic thresholds to 100 times as great.

color vision t. See Abridged A. O. color vision *t.*, color threshold *t.*, Ishihara *t.*

colostrum t. (*for pregnancy*) One in which 0.02 cc. of equal parts of human colostrum and saline solution are injected intradermally N areola or slight areola under 1 inch in diameter indicates pregnancy

complement-fixation t. A test based on the complement-fixation reaction in which antigen uniting with its antibody combines with the complement and th inactivates or fixes it.

completed t. (*for Escherichia coli in water*) Organisms from atypical colonies of confirmed test are transferred to lactose broth and agar slants. The formation of gas in the lactose broth and the demonstration of Gram-negative non-spore-forming bacilli in the agar culture is positive test

concentration t. (*for kidney function*) A test of kidney function based upon their normal ability to concentrate or dilute urine. See Addis and Shevky's *t.*, Fishberg' *t.*, Lashmet and Newburgh *t.*, Mosenthal *t.* Volhard's and Fale's *tests*.

confirmed t. (*for Escherichia coli in water*) Eosin-methylene blue plates are incubated with water from a positive presumptive test. The development of typical colonies in 24 hours is positive test, but in the case of atypical colonies completed test is performed.

confusion t. A test to detect malingering used in eye injuries and based upon the fact that vision in the injured eye is recorded while the patient thinks the healthy eye is being examined.

conglutination t. An antigen-antibody reaction in which conglutinin is added.

Congo red t. (*for amyloidosis*) Congo red is injected intravenously In normal persons, 30% of the dye disappears from the blood within an hour, but in amyloid disease from 40 to 100% disappears.

conjunctival t. A test for allergy in which the antigen is instilled into the conjunctival sac. A positive test consists of injection of the conjunctival vessels with itching and lacrimation. Syn. *ophthalmic t.*

contact t. See patch *t.*

contrast t. A test performed or reaction elicited in one area and contrasted with the response of another area to simultaneous and identical application of excitant.

Coombs t. See antiglobulin *t.*, Rh blocking *t.*

Cowie's t. See guaiac *t.*

cross-match t. See *cross-matching*.

cutaneous t. See skin *t.*

Cutler-Power-Wilder t. A test of aid in the diagnosis of adrenal insufficiency (Addison's disease) The patient is given additional potassium in the diet with restriction of sodium and water. In the presence of the disease, the urinary excretion of chlorides is much higher than normal.

Cutting's colloidal mastic t. See mastic *t.*

cyanide t. See Liebig *t.*, Prussian blue *t.*, Schoenbein's *t.*

cyanine dye t. (*for vitamin B₁*) A color reaction btained by converting vitamin B into pyridinium compound. On heating this product with potassium hydroxide and chloroform, violet cyanin dye is obtained.

cystine t. See Baumann and Goldmann's *t.*, Liebig' *t.*, Müller's *t.*

cytoplasm-modifying t. See dye *t.*

Davidsohn differential t. (*for infectious mononucleosis*) A test to determine if the heterophil antibodies (antisheep agglutinins) in the serum are bsorbed by suspension of guinea pig kidney. The heterophil antibodies produced in infectious mononucleosis are not bsorbed, hereas those produced in serum disease are readily bsorbed.

Davidsoh presumptive t. (*for infectious mononucleosis*) An agglutination test for the presence of heterophil agglutinin which is characteristically produced in the serum of patients with infectious mononucleosis.

dermal t. See scratch *t.*

dextrose t. See Barfoed's *t.* Benedict's *t.*, Fehling' *t.*, fermentation *t.*, Folin-McEllroy *t.*, Haines *t.* Moore *t.*, Nylander *t.* phenylhydrazine *t.*

dextrose tolerance t. See glucose tolerance *t.*

diacetic acid t. See Gerhardt's *t.*, Rothera's *t.*

diagnostic t. An examination or trial in which

certain responses or reactions are present, diagnosis of specific disease may be presumed.

Dick t. (*for susceptibility or immunity to scarlet fever*) An immunologic skin test in which development of local area of redness of the skin 18 to 24 hours after the intracutaneous injection of the filtrate of culture of specific hemolytic streptococcus indicates susceptibility and the absence of redness indicates immunity to scarlet fever

dilution t. (*for kidney function*) See concentration *t.*

dilution turbidity t. A flocculation test for liver function.

diodrast clearance t. (*for kidney function*) The rate of renal excretion of diodrast in relation to the blood level is used as test of renal function and as an approximate measure of renal blood flow

direct Coombs t. See antiglobulin *t.*, Rh blocking *t.*

direct developing t. See antiglobulin *t.*, Rh blocking *t.*

Doerfler-Stewart t. A test for psychogenic deafness performed by measuring the amount of background noise required to reduce the speech intelligibility threshold of deafened person by 50%.

Donath-Landsteiner t. (*for paroxysmal hemoglobinuria*) A test based upon thermolabile isohemolysin occurring in the blood of patients with paroxysmal hemoglobinuria which unites with the red cells at low temperatures and causes hemolysis after the cells are warmed to 37° C. also called *Donath-Landsteiner phenomenon*.

Donné's t. (*for pus in urine*) Decant, filter or centrifuge urine and put small piece of sodium hydroxide on the sediment. If pus is present, the sediment will become slimy and tough.

Duke t. (*for bleeding time*) A test performed by puncturing the lobe of the ear and determining the time which elapses until bleeding stops

dye t. (*for toxoplasmosis*) A test based on the observation that the cytoplasm of *Toxoplasma*, when acted on by specific antibody and complement-like accessory factor loses is affinity for methylene blue at pH 11. Serial dilutions of serum are made, and to given amount an equal aliquot of heparinized *Toxoplasma*-accessory factor dye mixture is added. After incubation one drop from each tube is examined microscopically and the number of extracellular *Toxoplasma* with stained or unstained cytoplasm determined. The highest dilution of serum leaving 50% or more of the organisms unstained is the titer Syn., *dye-stabilities t.*

Eagle t. (a) A complement-fixation test for syphilis. (b) A flocculation test for syphilis.

echinococcus t. See Casoni' *t.*

Ehrlich's t. (*for urobilinogen*) Bilirubin-free, undiluted urine is added to solution of paradimethylaminobenzaldehyde in hydrochloric acid A deep cherry-red color indicates urobilinogen.

electrophoresis t. See electrophoresis method.

Ellsworth-Howard t. A test to distinguish pseudohypoparathyroidism from hypoparathyroidism. Failure of injected parathyroid extract to produce phosphate diuresis is positive reaction, indicating pseudohypoparathyroidism.

epinephrine hypersensitiveness t. See Emil Goetsch.

epinephrine t. See Bonda's *t.*

erythrocyte fragility t. A measure of the resistance of red blood cells to osmotic hemolysis in hypotonic salt solutions of graded dilutions.

erythrocyte sedimentation t. When citrated or oxalated blood is allowed to stand in column, the erythrocytes settle to the bottom. The rate of this sedimentation varies in different pathologic conditions and may be determined by any of the different methods, such as Cutler s, Westergren s, Smith s, Wintrobe s, etc.

estrogen t. See Fluhmann *t.*

exercise tolerance t. (*for angina pectoris*). A test performed in constant temperature room in which the patient climbs and descends standard two-step staircase until an attack of angina pectoris is precipitated.

Exton's t. (*for albumin*) Equal volumes of clear urine and Exton reagent (sodium sulfate, sulfosalicylic acid, bromphenol blue, water) are mixed in test tube. Cloudiness appearing upon heating indicates albumin.

Exton and Rose's t. A modification of the glucose tolerance test.

Fabricius-Møller urine t. (*for amylase*) Urine is incubated with graded dilutions of starch solution. The amount of digestion is then determined by using iodine as an indicator

Falls's t. See colostrum *t.*

fat t. See acrolein *t.*

Fehling's t. (*for glucose*) Equal volumes of copper sulfate solution and alkaline tartrate solution are mixed. Equal volumes of this mixture (Fehling' solution) and urine are boiled. In the presence of glucose the solution turns green, yellow or red depending on the amount present.

fermentation t. (*for glucose*) A test based on the production of carbon dioxide and alcohol when yeast is added to glucose solution. Commonly applied to urine.

ferric chloride t. (*for diacetic acid*) See Gerhardt' *t.*

ferric chloride t. for vitamin A. Ferric chloride reacts with vitamin A to give characteristic color which can be compared colorimetrically

finger-finger t. A cerebellar function test in which the patient is asked to bring his index fingers together from position in which the arms are outstretched, or to place his index finger on the examiner' index finger with eyes open. Normally this is carried out smoothly

finger-nose t. A cerebellar function test in which the patient is asked to put the index finger of each hand on the nose alternately in rapid succession with eyes open. Normally this is carried out smoothly

Fishberg's t. (*for kidney function*) A concentration test in which urinary specific gravity is determined 12 hours after fluid deprivation.

five-glass t. See glass *t.*

Fleck's lethergy t. See lethergy *t.*

Fleitmann' t. (*for arsenic*) Hydrogen generated from zinc and potassium hydroxide is passed through the suspected solution and then over filter paper moistened with solution of silver nitrate. Upon heating, the filter paper will turn black if an inorganic arsenic compound is present.

flicker fusion t. A test of the minimal frequency of standard flashes of light which will be seen as steady illumination; used as test for fatigue and for tolerance to anoxia also used for diagnosing high blood pressure and some forms of heart disease, as angina pectoris.

flocculation t. A test in which the antibody reacts directly with the antigen to produce floccull rather than to form combination for the inactivation of complement as in a complement-fixation test.

Florence's t. (*for semen*). Semen treated with strong solution of iodine and potassium iodide yields brown crystals in the shape of needles or plates.

Fluhmann's t. A test for the blood estrogen

level performed by injecting blood serum into spayed mice, and using the degree of histologic change in the vaginal epithelium as guide.

foam t. (*for bile pigments*) T 5 ml. of diluted bile add 3–4 drops of very dilute aqueous solution of furfural. Shake the t be until thick foam is formed, then add 2–3 drops of concentrated sulfuric acid to the foam and dark pink coloration is produced.

Foerster's cutaneous numeral t. A method of drawing numerals on various areas of body skin for the patient to identify test of topognostic sensibility

Folin-McEllroy t. (*for glucose*) A copper reduction test used for glucose in the urine.

Folin-Wu t. A method for the quantitative estimation of urea in the blood, utilizing urease.

formol-gel t. See Napier' aldehyde *t.*

Foshay's t. (*for tularemia*) A skin test of aid in diagnosis of tularemia made by the intradermal injection of dilute suspension of *Pasteurella tularensis.* A local erythema is considered posi tive reaction.

fragility t. See erythrocyt fragility *t.*

Francis t. An immunologic skin test for the presence or absence of antibody in pneumococcal pneumonia performed by the intradermal injection of the type specific capsular polysaccharide.

Frei t. An allergic skin test of aid in the diagnosis of venereal lymphogranuloma made by the intradermal injection of an antigen obtained from bubo, the brain of an infected mouse, or infected chick embryo.

Friedman t. (*for pregnancy*) The intravenous injection of urine from pregnant woman into female rabbit will bring about the form tion of corpora hemorrhagica and corpora lutea in the ovaries of the rabbit.

frog t. (*for pregnancy*) If urine from pregnant woman is injected into the female African frog (*Xenopus laevis*) five or more eggs will be deposited within 12 hours.

fructose t. See Seliwanoff's *t.*

fundus reflex t. See *retinoscopy*

galactose t. See Tollens *t.*, mucic acid *t.*

galactose tolerance t. (*for liver function*) A test of the glycogenic function of the liver performed by administering 40 Gm. of galactose to fasting individual. The elimination of more than 3 Gm. of galactose over 5-hour period indicates hepatic dysfunction.

gallbladder function t. See sodium tetraiodophenolphthalein *t.*

Garrod's t. for porphyrins in urine. T 100 cc. of urine add 20 cc of 10 per cent sodium hydroxide. Separate the precipitat by centrifugation or filtration, wash thoroughly with water and dissolve in 5 cc. of alcohol containing 5 to 10 drops of hydrochlori acid. A pink to red solution indicates the presence of acid hematoporphyrin which may be confirmed by spectroscopic examination for the characteristic bsorption bands.

Georgi-Sachs t. A method for testing anticomplementary serums as part of serodiagnostic test for syphilis.

Gerhardt's t. (*for diacetic acid*) Urine containing diacetic acid produces Bordeaux red color when ferri chloride is added.

Gesell developmental sched le. A test of the mental growth of the preschool child which includes motor development, adaptive behavior language development, and personal-social behavior

Gibbon-Landis t. See Landis-Gibbon *t*

Gibbs's t. (*for vitami B*) A vitamin B_6 solution mixed with barbiturate buffer and butanol solution of 2,6-dichloroquinone chlorimide ; with blue color which may be compared colorimetrically

glass t. A gross test for infection of the urinary tract in which the urine is voided in fractions into two or more glass containers for the purpose of localizing the site of inflammatory disease

globulin t. See Nonne-Apelt *t.*

glucose t. See Barfoed *t.*, Benedict's *t.*, Fehling *t.*, fermentation *t.*, Folin-McEllroy *t.*, Haines's *t.*, Moore *t.*, Nylander's *t.*, phenylhydrazine *t.*

glucose tolerance t. (*for liver function*). A test based on the ability of the liver to convert glucose to glycogen. It is useful in measuring the approximate severity of diabetes mellitus.

glycerol t. See acrolein *t.*

glyoxylic acid t. Given by most proteins The solution is treated with small amount of solution containing salt of glyoxylic acid For Benedict modification of this reagent suspension of powdered magnesium in distilled water is treated under cooling with an excess of saturated oxalic acid solution and the mixture is filtered to remove magnesium oxalate. The filtrate is acidified with acetic acid and diluted. The mixture of protein solution and glyoxylate is stratified above concentrated H_2SO A positive reaction is the formation of violet ring at the zone of contact. The reaction is due to the presence of the indole group the tryptophan residues of the protein. Proteins lacking tryptophan give no color in this reaction. Also called *Hopkins-Col* reaction

Gmelin's t. (*for bile pigment*) Urine is stratified over concentrated nitric acid. In the presence of bile pigment various colored rings are seen at the junction of the two fluids

Gofman t. An ultracentrifuge analysis of the low-density beta-lipoproteins of serum, based on the relationship of specific classes of serum cholesterol-bearing lipoproteins and [illegible] used as an index of atherosclerogenic potentialities.

Goldstein-Scheerer t. A test hich measures the impairment of brain function with respect to abstract and concrete thinking; useful for studying patients with brain injuries.

gonorrhea t. See Schwartz-M Neil *t.*, two glass *t.*

Gordon t. (*for Hodgki disease*) The intracerebral inoculation of rabbits with suspensions of the lymph nodes from patient with Hodgkin's disease produces encephalitis. The reaction may be due to the presence of eosinophils. The test seldom used.

Graham-Cole t. See *cholecystography* See also sodium tetraiodophenolphthalein *t.*

Gregersen t. (*for occult blood*) A modification of the benzidine test used for testing feces

guaiac t. (*for blood*) An acetic acid or alcohol solution of guaiac resin and hydrogen peroxide is mixed with the unknown. The development of blue color is positive test.

Gudernatsch's t. (*for thyroid activity*). If active thyroid is fed to young frogs, metamorphosis is accelerated, resulting in dwarf frogs.

gum mastic t. See mastic *t.*

Günzberg t. (*for free hydrochloric acid*) A stirring rod moistened in the unknown solution is drawn through dried Günzberg reagent which turns purplish red color in the presence of free hydrochloric acid.

Gutzeit t. (*for arsenic*) Zinc, stannous chloride, and sulfuric acid are added to the sample in container If present, arsenic is reduced to arsine and volved as gas which imparts characteristic stain to paper previously impregnated with silver nitrate or mercuric chloride.

Haines's t. A copper reduction test used for glucose in the urine.
Hamburger's t. A tuberculin skin test which consists of rubbing tuberculin ointment over the skin of the sternum. A positive result is indicated by crop of papules in from two to seven days.
Ha ger's t. See cephalin-cholesterol flocculation *t.*
Harrison spot t. (*for bilirubin*) Bilirubin is concentrated on filter paper by precipitating it with barium chloride and filtering. A drop of Fouchet reagent (ferric chloride in dilute solution of trichloracetic acid) is added. A green color indicates the presence of bilirubin, which is oxidized to biliverdin.
Harrower-Erickson t. A modification of the Rorschach test.
Hay's t. (*for bile acids*) Finely pulverized sulfur is sprinkled upon the surface of urine. If the sulfur sinks to the bottom, bile acids are present.
head-bending t. Test for infection of the meninges or the nerve roots. While the patient is sitting, his head is bent forward by the examiner. The test is positive if the patient feels pain. Th location of the pain indicates the area affected.
head-dropping t. A test for early parkinsonism. The patient lies on table, and the examiner lifts his head suddenly and allows it to drop. I the normal person, the head falls quickly; but in patient with parkinsonism the tightened neck muscles cause the head to drop slowly
hearing t. See bone conduction *t.*, Rinne *t.*, Schwabach *t.*, Teal *t.*, Weber' *t.*
heat and acid t. (*for protein*) Urine is boiled in test tube for 1 or 2 minutes and then 3 to 5 drops of 5% acetic acid are added. A white precipitate indicates protein.
Hecht Schlaer night vision t. A low brightness adaptometer for measuring both light and form discrimination below the cone threshold.
heel-to-knee-to-toe t. A test for nonequilibratory coordination in which the patient is asked to place the heel of one foot on the opposite knee then push the heel along the shin to the big toe. Normally this is done smoothly and accurately
Heller's t. (*for albumin*) Stratify clear urine over concentrated nitric acid in test tube. A white zone t the junction of the fluids indicates albumin.
hemagglutination t. Any test in which hemagglutination is used as an indicator
hemin t. See Teichmann *t.*
hemolysis t. One used for identification of streptococci performed by incubating the bacteria with blood agar and then noting the type of hemolysis produced.
Hemophilus influenzae antibody t. An immunologic skin test for the presence or absence of antibody in influenzal infections such as meningitis or pneumonia.
Hench nd Aldrich's t. (*for urea*) A test for retention of urea i the blood by measuring the mou of urea in the saliva.
Henry' melano-flocculation t. (*for malaria*) A test which depends pon changes in the serum proteins, especially an increase in euglobulin. The test gives high percentage of positive reactions in malaria, but sometimes is positive in syphilis and other diseases.
hepati function t. See liver function *t.*
heterophil ntibody t. See P ul-Bunnell *t.*
Hines and Brown t. See cold pressor *t.*
Hinton t. A macroscopic flocculation test for yphilis.
hippuric acid t. (*for liver function*) A test based upon the ability of the liver to synthesize gl) cine and to conjugate it with benzoic acid to form hippuric acid. Given 6 Gm. of sodium benzoate, in 4 hours a normal person will eliminate 3 or more Gm. of hippuric acid in the urine, whereas per son with liver dysfunction will eliminate less than 3 Gm.
histamine cutaneous t. Intradermal injections of histamine are made at various points along limb. Normally wheal with an erythematous areola appears within 5 minutes. Absence of these phenomena indicates insufficient pressure in skin vessels or arterial spasm or nonfunctioning sensory nerves of the skin.
histamine t. (a) The subcutaneous injection of histamine stimulates the gastric secretion of hydrochloric acid. (b) The precipitation of an ttack of histaminic cephalalgia (vasomotor headache) by the injection of histamine done for purposes of diagnosis.
histidine t. (*for pregnancy*) A test for the diagnosis of pregnancy based on the amount of histidine in the urine not specific and rarely used.
histoplasmin t. Cutaneous injection of histoplasmin will effect positive skin reaction if the subject has been or is infected with *Histoplasma capsulatum* and has been sensitized to the organism. Cross reaction may also occur in cases of blastomycosis and coccidioidomycosis.
Hoffmann's t. (*for tyrosine*) The brilliant red color given by tyrosine when treated with Millon's reagent.
Hogben t. See frog *t.*
Holmgren t. A test for color vision in which the subject is required to separate number of pieces of wool yarn according to their color
hormone t. See Abderhalden's *t.*, Aschheim-Zondek *t.*, bitterling *t.*, Fishmann *t.*, Friedman *t.*, frog *t.*
Howard-Dolman depth perception t. A test of the verage error in setting moving rod equidistant to fixed rod at distance of 20 feet. All clues to depth perception other than those furnished by binocular vision are eliminated.
Huddleson' t. (*for brucellosis*) An agglutination test for brucellosis in humans or cattle, using *Brucella abortus* as an antigen.
Huggins t. See iodoacetate *index.*
Huggins-Miller Jensen t. See iodoacetate *index.*
Hunt's t. See spermocytophagic *t.*
Huppert's t. A test for bile pigments based upon their oxidation by concentrated hydrochloric acid to produce green-colored derivative.
Hurtley's t. (*for diacetic acid*) Concentrated hydrochloric acid, sodium nitrite, ammonium hydroxide, and ferrous sulfate are added to urine. The development of violet or purple color indicates diacetic acid.
hydrochloric acid t. See Boas *t.*, Töpfer' *t.*
hydrostati t. A live birth is indicated if the lungs of dead infant float in water
hypoxemia t. An electrocardiographic (ECG test to determine the functional capacity of the coronary circulation by having the subject breathe mixture of 10% oxygen and 90% nitrogen.
icterus index t. A colorimetric test in which blood serum is compared with standard solution of sodium dichromate.
indican t. See Obermayer's *t.*
indigo carmine t. A test of kidney function. Indigo carmine should appear in urine minutes after intravenous injection if the kidney is functioning normally
indirect Coombs t. See Coombs *t.*
indirect developing t. See Coombs *t.*

iridale t. See oxalic acid paper *t.*
infectious mononucleosis t. See Davidsohn differential *t.*, Davidsohn presumptive *t.*, Paul-Bunnell *t.*
inkblot t. See Rorschach *t.*
inositol t. See Scherer' *t.*
insulin-glucose-water tolerance t. (*for liver function*) A test in which 20 units of insulin, 50 Gm. of glucose, and 1500 cc. of water are administered. Terminal hypoglycemia within 3 hours is said to be indicative of liver damage.
insulin tolerance t. (*for liver function*) A test based pon the comparison of depression of blood sugar levels and rapidity of recovery from relative hypoglycemia following standard intravenous dose of insulin as compared to the response of normal individuals.
intelligence t. See alpha *t.*, Babcock Levy *t.*, beta *t.*, Binet-Simon *t.* Cattell infant intelligence scale (under *test*) Gesell developmental schedule (under *test*) Goldstein-Scheerer *t.*, Kent mental *t.*, Minnesota preschool scale (under *test*) Stanford-Binet *t.*, Wechsler Bellevue intelligence scale (under *test*)
intradermal vitamin-C t. One based upon the length of time that an intradermal injection of dichlorophenolindophenol takes to decolorize.
iodine t. (*for bile pigments*) Tincture of iodine is slowly poured into urine. The development of greenish blue color indicates bile pigments.
iodine t. (*for starch*) A potassium iodide solution of iodine reacts with starch to produce blue color
iodine tolerance t. (*for hyperthyroidism*) A test based on the observation that in patients with hyperthyroidism the total blood iodine is only slightly increased as compared to normal by the oral administration of iodine.
iodoform t. (*for acetone*) See Lieben *t.*
Ishihara t. A color vision test made by using series of plates upon which are printed round dots of various sizes, colors, and combinations.
Ito-Reenstierna t. An allergic skin test of aid in the diagnosis or exclusion of chancroid performed by the intradermal injection of a vaccine of killed *Hemophilus ducreyi*.
Ivy t. (*for bleeding time*) A test performed by making small puncture wound in relatively vascular forearm and determining the time which elapses until bleeding stops.
Jaffé t. Creatinine forms red compound with picric acid in alkaline solution.
Jezler Takata t. See Takata-Ara *t.*
Kahn t. A macroscopic flocculation test for syphilis.
Kajdi t. A test for scurvy used for infants the vitamin-C storage capacity is determined by noting the difference between the fasting plasma ascorbic acid level and the plasma level four hours after the intramuscular injection of 200 mg. of ascorbic acid. A rise to 0.2 mg. per cent is considered positive.
kala-azar t. See antimony *t.* for kala-azar N pier aldehyde *t.*, Sia *t*
Kasanin-Vigotsky t. A psychologic test used to demonstrate difficulty in conceptual thinking which may indicate organic cerebral disease or schizophrenic disorder
Kay-Graham pasteurization t. The destructive effect of heat on the natural phosphatase in raw milk is used as basis for testing the efficiency of pasteurization. Phosphatase activity is measured by the hydrolysis of disodium phenyl phosphate and colorimetric estimation of the released phenol by means of Folin-Ciocalteu's reagent.
Kelling's t. (*for lactic acid*) Ferric chloride added to gastric juice produces deep yellow color if lactic acid is present.
Kent mental t. An oral test for intelligence consisting of 25 questions for emergency use in clinics.
kidney function t. See Addis and Shevky's *t.*, clearance *t.*, concentration *t.*, diodrast clearance *t.*, Fishberg' *t.*, indigo carmine *t.*, Mosenthal *t.*, Lashmet and Newburgh *t.*, phenolsulfonphthalein *t.*, urea clearance *t.*, Volhard' and Fahr's tests
Kingsbury's t. A test for albumin concentration performed by adding 3% sulfosalicylic acid to urine and comparing turbidity with set of standards.
Kline t. A microscopic flocculation test for syphilis.
knee-dropping t. A simple test for the early detection of hemiplegia. The relaxed patient lies supine on hard surface with legs drawn into flexed position (slightly more than 45° at the knees); on the side of the pyramidal lesion the knee drops continuously and evenly with speed proportionate to severity of lesion, until the leg lies flat. The knee-drop should occur on successive examinations before the test may be considered positive.
Kolmer's t. (a) A complement-fixation test for syphilis. (b) A complement-fixation test for bacterial, spirochetal, viral, protozoal, or metazoal diseases.
Kossel' t. (*for hypoxanthine*) The unknown solution is treated with hydrochloric acid, zinc, and sodium hydroxide. A ruby red color indicates the presence of hypoxanthine.
Kunkel t. A test for the estimation of gamma globulin in serum, in which the turbidity resulting on addition of zinc sulfate solution is compared with suitable standards.
Kveim t. See Nickerson-Kveim *t.*
lability t. A test for glaucoma in eyes of normal pressure It consists of placing one of the patient' hands in ice-cold water and simultaneously raising the venous pressure in the head and maintaining it t 40 mm. Hg for one minute. The results are positive when ocular pressure increases, or [illegible] creases and levels off, negative when it decreases, and indeterminate when it is already normal and neither increases nor decreases.
labyrinthine t. See Bárány pointing *t.*, caloric *t.*
lactic acid t. See Kelling' *t.*, Maclean's *t.*, Strauss *t.*, Uffelmann *t.*
lactic cid tolerance t. See sodium dlactate clearance *t.*
lactose t. See Rubner's *t.*
Landis-Gibbon t. A test for the evaluation of vasospasm in peripheral vascular disease, based on reflex vasodilatation. After the patient has reached temperature stability in cool room, one of his uninvolved extremities, his trunk, or abdomen is exposed to heating, and the skin temperature of the digits of the involved extremity is recorded. In the presence of obliterative vascular disease, little or no rise in temperature occurs.
Landolt's broken C t. A test for visual acuity described by Landolt (1888) wherein the subject is to determine in which segment the gap in the ring (or letter C) lies, factor which is determined by th size of the image of the gap on the retina.
Lange' t. A test based on the fact that normal cerebrospinal fluid does not visibly precipitate colloidal gold suspension but that in syphilis of the central nervous system and other affections of the central nervous system precipitation may occur
laryngeal mirror t. A tuberculin test used to

replace the usual sputum test where the patient swallows the sputum. A laryngeal mirror is placed in the back of the throat so that the vocal folds may be seen. The patient coughs, and the sputum on the mirror is examined for acid-fast bacilli.
Lashmet and Newburgh' t. (*for kidney function*) A concentration test based upon the specific gravity of urine voided during the day with the patient on special diet with no fluids.
Lassaigne t. (*for organic nitrogen*) The organic compound containing nitrogen is fused with sodium to form sodium cyanide. This, when heated with ferrous sulfate in alkaline solution, forms sodium ferrocyanide. The sodium ferrocyanide reacts with ferric ion, to form the blue ferric ferrocyanide.
Laughlen t. A flocculation test for syphilis.
Leach t. (*for formaldehyde*) 10 ml. of the solution to be tested is mixed with 10 ml. of concentrated hydrochloric acid containing about 1 ml. of 10% ferric chloride solution to each 500 ml. of acid. The temperature of the mixture is raised, on water bath, nearly to boiling and if formaldehyde is present violet color is produced. A brown color develops in the absence of formaldehyde.
lead t. See Blyth's *t.*, ammonium sulfide *t.*
Lee's t. (*for rennin*) A test for rennin in gastric juice based upon its ability to coagulate the protein of milk.
Legal' t. (*for acetone*) An alkaline urine distillate containing acetone produces red color in the presence of sodium nitroprusside.
leishmania t. An intradermal test of great practical value to indicat past or present infection with *Leishmania braziliensis* or *L. tropica*.
lepra t. An intradermal test with vaccine used as a diagnostic procedure in leprosy
lepromin t. The intradermal injection of lepromin as skin test, useful in the classification and prognosis of leprosy generally positive in the tuberculoid and negative in the lepromatous form. First described by Mitsuda (1916)
L.E. t. See under *lupus erythematosus*.
leukergy t. Increased agglomeration of leukocytes in citrated blood, as test for rheumatic disease Syn., *Fleck' leukergy t.*
Levinson t. (*for tuberculous meningitis*) A test based on the observation that characteristic ratio may be obtained between the alkaloidal precipitate formed by sulfosalicylic acid and the metallic precipitate formed by mercuric chloride in tuberculous meningitis.
levulose t. See Seliwanoff' *t.*
levulose tolerance t. (*for liver function*) A test based on the observation that the blood sugar level is normally unaffected by the oral administration of levulose, whereas it is increased in the presence of hepatic disease.
lid vibration t. (*for facial paralysis*) Diminished vibration of the upper lid of the closed eye against resistance, as an index of facial paralysis.
Lieben's t. (*for acetone in urine*) T urine distillate sodium hydroxide and Lugol' iodine solution are added. Turbidity changing to yellow precipitate of iodoform is positive test.
Liebermann-Burchard t. (*for cholesterol*) Dissolve the unknown in acetic anhydride and add concentrated sulfuric acid. A violet color turning to green indicates the presence of cholesterol.
Liebig's t. (*for cyanide*) T distillate prepared from the suspected material, add yellow ammonium sulfide and evaporate to dryness. Add hydrochloric acid and ferric chloride solution to the residue. A deep red color indicates the presence of cyanide.
Liebig's t. (*for cystine*) Boil the substance with caustic alkali containing lead oxide. In the presence of cystine precipitate of black lead sulfide is formed.
line t. Developed to study the progress of rickets. The bone is split lengthwise, immersed briefly in 3% $AgNO_3$ washed in water and exposed to bright light. A black deposit of metallic silver appears in the epiphyseal region and is proportional to the degree of calcification. In extreme rickets no silver will appear in the epiphysis but when healing has begun the calcium deposits are so located that the corresponding silver stain appears along distinct line.
lipase t. See Cherry and Crandall's *t.*
liver function t. See amino-acid tolerance *t.*, azorubin S *t.*, bilirubin clearance *t.*, bromsulfalein *t.*, cephalin-cholesterol flocculation *t.*, cinchophen oxidation *t.*, galactose tolerance *t.*, glucose tolerance *t.*, hippuric acid *t.*, insulin tolerance *t.*, insulin-glucose-water tolerance *t.*, levulose tolerance *t.*, phenoltetrachlorophthalein *t.* rose bengal *t.*, Rosenthal-Rowntree *t.*, sodium *d*-lactate clearance *t.*, sodium tetraiodophenolphthalein *t.*, Takata-Ara *t.*
MacLean's t. (*for lactic acid*) T gastric juice, add reagent containing ferric chloride, mercuric chloride, and hydrochlori acid. A yellow color indicates lactic acid.
malaria t. See Henry's melano-flocculation *t.*, Proske and Watson's *t.*
male-toad t. A biologic pregnancy test. When urine containing chorionic gonadotropin is injected into the toad (*B fo arenarum Hensel*) spermatozoa migrate into the urinary bladder and are demonstrable in the toad urine within three hours after injection.
mallein t. An intradermal test used in the detection of chronic and latent glanders.
Maucke-Sommer t. (*for liver function*) A modification of the Takata-Ara *t*
manometric t. See Queckenstedt-Stookey *t.*
Mantoux t. A tuberculin test in which the substance is injected intradermally Also called intracutaneous tuberculin *t.*, Mendel's t.
Marsh's t. (*for arsenic or antimony*) Introduce the substance into flask with dilute sulfuric acid and zinc. Light jet, and permit it to impinge on cold porcelain, or heat the delivery tube, when steel-white mirror of metallic arsenic is deposited This may be distinguished from similar deposit of antimony by the solubility of the arsenical mirror in potassium hypochlorite.
mastic t. A test similar in principle to Lange colloidal gold test but using colloidal suspension of gum mastic as the reagent with varying dilutions of cerebrospinal fluid.
Mazzini t. A microscopic flocculation test for syphilis.
mechanical fragility t. A test of th susceptibility of erythrocytes to hemolysis by mechanical trauma. Trauma is induced arbitrarily by rotating small volume of blood in flask with glass beads for an arbitrary period of time. Mechanical fragility is always increased when osmotic fragility is increased, and is increased in some clinical conditions (sickle-cell anemia) when the osmotic fragility is normal or decreased.
median nerve t. A test for loss of function of the median nerve. A pyramid is formed by placing th fingertips in contact, with the thumbs abducted and t right angles to the palms. If there is loss of function of the median nerve the patient is unable to abduct the thumb on the affected side as far downward as that on the normal side.
medicolegal tests for blood. (a) Microscopic identification of the erythrocytes. (b)

scopic identification of blood solutions, (c) the guaiac or benzidine reaction, (d) preparation of hemin crystals, and (e) precipitin and other immunologic tests.

Meinicke's t. A flocculation test for syphilis.

melanin t. See von Jaksch-Pollak' *t.*, Zeller' *t.*

Mendel t. See Mantoux *t.*

mercury t. See Reinsch's *t.* (for mercury)

methylene blue reduction t. A simple method of assessing the general hygienic quality of raw mixed milk by measuring the reducing substances produced by the organisms present in the milk.

methylene blue t. (*for renal permeability*) An injected solution of methylene blue normally appears in the urine in about 30 minutes. A longer interval indicates impaired renal permeability. Also called *Achard-Castaigne method.* (*For vitamin C*) Vitamin C in the unknown is extracted with trichloroacetic acid or sulfosalicylic acid and then determined by its capacity to reduce methylene blue to th leuko-compound. (*For urinary bilirubin*) T 5 ml of urine are added 5 drops of 0.2% queous methylen blue solution. Green color with transmitted light is positive indication of bilirubin ormal urine is blue not an absolutely specific test, but valuable as screening test.

methyl red t. A test for the differentiation of the aerogenes group and the colon group of bacteria performed by incubating the bacteria in special medium and testing with methyl red indicator.

Michailow' t. (*for protein*) Add ferrous sulfate to the suspected solution and underlay with concentrated sulfuric acid; then add drop or two of nitric acid. A brown ring and red coloration indicate the presence of protein.

Middlebrook-Dubois t. A test for antibodies in human serum against the products of the tubercle bacillus. Washed sheep erythrocytes are sensitized with aqueous extracts of *Mycobacterium tuberculosis.* The treated cells are thereby mad agglutinable by th antibodies in th serum of tuberculous patients.

Minnesota multiphasic personality inventory A psychologic test designed to provide, in single interview scores on all the more important traits of personality consisting of over 500 questions which the subject places into three categories as they pply to him. Abbreviated, MPI

Minnesota preschool scale. A test for measuring the learning ability of children from 18 months to 6 years of age. Being both verbal and nonverbal, it is particularly valuable in differentiating between the specific kinds of intellectual abilities.

Mitsuda s t. See lepromin *t.*

Molisch's t. (*for glucose*) (a) An alcoholic solution of naphthol and concentrated sulfuric acid is added to the unknown The development of deep violet color and, upon the addition of water the formation of violet precipitate indicate the presence of glucose. (b) If solution of thymol is used instead of naphthol, the color produced is ruby red which changes to carmine on dilution with water

Möller Mcintosh, nd Van Slyke's t. See urea clearance *t.*

M loney t. A test to determine hypersensitivity to diphtheria toxoid performed by the intradermal injection of small amount of the toxoid. A positive reaction consists in the development of characteristic patch about 2 cm. in diameter

Montenegro t. (*for leishmaniasis*) An intradermal test of aid in the diagnosis of leishmaniasis.

Moore's t. (*for reducing sugars*) Equal volumes of sugar solution and concentrated sodium hydroxide are boiled. If reducing sugar is present, the solution darkens and finally becomes brown.

Mörner's t. A test for tyrosine, hich consists the development of green color on heating with H_2SO containing formaldehyde See Mörner reagent.

Moro t. A skin test performed by inunction of 50% O T Koch, in an ointment base A local erythematous reaction appearing in from 24 to 48 hours indicates present or past infection with tubercle bacilli.

Mosenthal t. (*for kidney function*) A test which the variability of specific gravity of the urine is measured through 24-hour period of controlled dietary intake.

mucic acid t. (*for galactose*) T the unknown add concentrated nitri acid and heat. Let stand overnight. If galactose is present crystalline precipitate of mucic acid is formed.

Mulder's t. (*for proteins*) See xanthoproteic *t.*

Müller's t. (*for cystine*) Boil the substance with potassium hydroxide when cold, dilute with water and add solution of sodium nitroprusside A violet color changing rapidly to yellow is produced if cystine is present.

murexide t. Guanine or uric acid treated with HNO_3 gives yellow compound which turns purple upon the addition of KOH or NH_4OH Adenine does not respond to this test. See murexide.

Mylius modification of Pettenkofer's t. (*for bile acids*) T 5 ml. of diluted bile in test tube add 3 drops of very dilute aqueous solution of furfural. Carefully pour 2–3 ml. of concentrated sulfuri acid down the side of the tube and note the red ring at the point of contact.

Naegeli t. Described by Naegeli of Berne, by Jaeger and by Tucker and Thomas in the United States. Consists essentially of the application of patch tests to lightly scarified or abraded skin areas, instead of to normal skin Often produces reactions when the patch test is negative.

Naffziger's t. Pressure on the jugular veins increases the intraspinal tension which increases the pain in cases of herniated nucleus pulposus.

Nagel's t. A test for color vision performed by using an instrument in which the patient attempts to match spectral yellow by mixture of red and green.

Nelsman's t. (*for vitamin* B_1) A test depending upon the production of an orange-red product with vitamin B when bismuth potassium iodide is added.

Napier's aldehyde t. (*for kala-azar*) A test based upon the increase of euglobulin which occurs in kala-azar Solidification and opacity of serum to which formalin has been added is positive test

nasal t. An allergy test in which the allergen applied to the nasal mucosa.

Neill-Mooser t. A test demonstrating the occurrence of forms, often within cells, closely resembling *Rickettsia prowazekii*, in the exudate on the surface of the testes in guinea pigs and rats, when the virus inoculated is from the typhus of Mexico, southeastern United States, or Europe

Nelson t. *Treponema pallidum* immobilization *t.*

Neufeld quellung t. Capsular swelling of pneumococci ppearing as sharply outlined halo, observed microscopically when pneumococci in dilute suspension are mixed with specific antiserum in the presence of Loeffler's alkaline methylene blue generally employed for rapid pneumococcus typing directly from sputum.

Nickerson-Kveim t. (*for sarcoidosis*). 0.1 cc of Kveim antigen is injected intradermally and skin biopsies are made from 3 to 6 week [illegible]

positive finding of typical tubercles with giant cells indicates sarcoidosis. Emulsion of normal human spleen has been used for injection, and frequently gives the same reaction.

nitric acid t. (*for protein*) See Heller's t.

nitrobrucine t. (*for vitamin C*) Nitrobrucine (cacotheline) produces in hydrochloric acid solution a lilac color with vitamin C and other reducing agents. Not a specific test.

nitroprusside t. (*For acetone.*) See Legal's t. (*For diacetic acid.*) See Rothera's t.

Noguchi's t. (*for syphilis*) Luetin injected intradermally into a syphilitic patient results in the development in 6 to 24 hours of a papule surrounded by a bluish red area. Unreliable.

Nonne-Apelt's t. A test for excess albumin or globulin in spinal fluid in which saturated ammonium sulfate is used as the reagent.

nuclei t. (*for pancreatic function*) A test based on the fact that cell nuclei are digested by pancreatic juice and not gastric juice. See Schmidt nuclei t.

Nylander's t. A bismuth reduction test used for glucose in the urine.

Obermayer's t. (*for indican*) Urine is treated with ferric chloride and concentrated hydrochloric acid and then extracted with chloroform. A pale blue to deep blue or violet color indicates indican.

occult blood t. See benzidine t., Gregersen t., phenolphthalein t., Ruttan and Hardisty's t.

Ochsner-Mahorner t. Test for demonstration of incompetent valves in perforating veins lying between the deep and superficial venous systems of the leg.

oidiomycin t. An intradermal test with oidiomycin vaccine said to be of aid in the diagnosis of infections due to *Monilia albicans*, but often positive in other fungous infections.

ophthalmic t. Conjunctival t.

opsonocytophagic t. (*for brucellosis and tularemia*) A test in which the capacity of the leukocytes to phagocytize the causative organisms of tularemia and brucellosis is determined. If the phagocytosis is marked, the patient is supposedly immune to the disease.

orcinol t. See Bial's t.

orthotolidine t. (*for blood*) See Ruttan and Hardisty's t.

osazone t. (*for sugars*) See phenylhydrazine t.

Oseretsky t. A psychologic test designed to measure the motor proficiency of an individual.

Osgood-Haskins t. (*for albumin*) Add one volume of 50% acetic acid and 2 volumes of saturated sodium chloride solution to 5 volumes of urine. A precipitate appearing after addition of the acid indicates bile salts, urates, or resin acids. A precipitate appearing after adding the salt solution suggests Bence-Jones protein. Heat, and Bence-Jones protein, if present, will dissolve; if albumin or globulin is present, a precipitate will form.

osmotic fragility t. See erythrocyte fragility t.

Ott precipitation t. (*for nucleoprotein*) A solution of 25 ml is mixed with an equal volume of saturated solution of sodium chloride; Almen's reagent is slowly added. In the presence of nucleoprotein, a precipitate forms.

oxalic acid paper t. (*for indole in cultures*) Filter paper impregnated with oxalic acid is suspended over the medium in a culture tube. A pink color on the paper indicates the production of indole.

oxygen debt t. A determination of the amount of excess oxygen absorbed after cessation of exercise. A B.M.R. is taken both before and after exercise. The exercise is standardized, i.e., the patient climbs a stairway one meter high at the rate of 100 steps per minute. The percentage increase in oxygen is the oxygen debt. From 2% to 45% is normal.

oxyphenylsulfonic acid t. (*for protein*) Urine is added to an aqueous solution of oxyphenylsulfonic acid and salicylsulfonic acid. A white transparent precipitate indicates the presence of protein.

pancreatic function t. One of several pancreatic function tests. The two most common are a study of the pancreatic and gastric juices aspirated from the duodenum and stomach by means of a double-lumened tube to keep them separate, and an analysis of the stool.

Pandy's t. (*for protein*) One cc. of the reagent (phenol and distilled water) is placed in a test tube and one drop of spinal fluid is added. If increased protein is present, a bluish white ring or cloud is formed.

Pangborn t. A flocculation test for syphilis.

para-aminohippuric acid t. (*for renal clearance*) Given in its sodium salt form, para-aminohippuric acid is well adapted to measurement of effective renal plasma flow, the clearance being identical with diodrast. It does not penetrate the red cells in man even after prolonged infusion and is nontoxic. Chemical determination is extremely simple.

parallax t. One used to locate opacities in the cornea, lens, and vitreous. It is used with the plane mirror at 10 to 12 inches. A body situated anterior to the plane of the pupil will move in the direction taken by the eye, while one posterior to the plane of the lens will move against the direction taken by the eye. Bodies lying about the same plane as the pupil will show little if any movement.

parentage t. See paternity t.

Parnum's t. (*for albumin*) To filtered urine add one-sixth of its volume of a concentrated solution of magnesium or sodium sulfate. On acidifying with acetic acid and boiling, albumin is precipitated.

passive transfer t. A method of demonstrating allergic antibodies in the blood of a patient, performed by sensitizing a local area of the skin of a nonallergic individual by the intracutaneous injection of the serum of an allergic individual. Also called *Prausnitz-Küstner reaction*.

patch t. An allergy test in which material is applied to an intact skin surface in order to demonstrate tissue sensitivity.

paternity t. The determination of the blood groups of an identified mother, an identified child, and a putative father in order to determine hereditary blood characters and to establish nonpaternity.

patting t. A cerebellar function test in which the patient pats with each hand his knee or the examiner's hand. Normally this is carried out with even amplitude and a smooth rhythm.

Paul's t. (*for smallpox*) The scarified cornea of a rabbit is inoculated with material from a suspected lesion. If the lesion is smallpox, a typical keratitis develops in about 50% of the cases.

Paul-Bunnell t. A test for the presence of heterophil antibodies in the serum produced in infectious mononucleosis.

P[illegible]-Macht t. The phytopharmacological method of testing the toxicity of human serum for plant protoplasm, of historical interest.

pendulousness of the legs t. See Wartenberg sign.

penicillin sensitivity t. A test to determine what bacteria are inhibited by penicillin. The usual method is to place a disk of penicillin in an agar plate. The growth of penicillin-sensitive bacteria will be inhibited in the area around the disk where the penicillin has diffused into the agar

pentose t. See Bial *t.*
percussion t. (*for varicose veins*) See Schwartz *t.*
personality t. See Bernreuter personality inventory Brown personality inventory Minnesota multiphasic personality inventory (all under *test*) Rorschach *t.*, thematic apperception *t.*
Perthes t. One testing the patency of the deep veins of the leg.
Pettenkofer's t. (*for bile acids*) Urine containing bile acids, mixed with sucrose and sulfuric acid, produces red color
phenolphthalein t. (*for occult blood*) Add a boiled suspension of feces to phenolphthalein reagent (phenolphthalein, potassium hydroxide, powdered zinc, and distilled water) Add hydrogen peroxide; resulting pink to red color is a positive test.
phenolsulfonphthalein t. (*for kidney function*) A test based upon the bility of the kidneys to excrete phenolsulfonphthalein which has been injected intravenously or intramuscularly Abbreviated, P.S.P
phenol t. See Allen *t.* (for phenol)
phenoltetrachlorophthalein t. (*for liver function*) After the intravenous injection of phenoltetrachlorophthalein, the feces have a bright color Delay in the ppearance f brightness of the color is said to indicate deficiency of liver function.
phenylhydrazine t. (*for sugars*) A test in which sugar combines with phenylhydrazine to produce an osazone of definite crystalline form which is typical for that sugar Commonly used to identify glucose in urine.
phlorhizin t. If no sugar appears in the urine within half an hour after the injection of phlorhizin, it is probable that renal insufficiency is present.
phloroglucinol-hydrochloric acid t. See Tollens *t.*
phytopharmacologic t. A test of the toxicity of blood serum on plant seedlings.
Pirquet t. See von Pirquet *t.*
plasma L.E. t. A test for disseminated lupus erythematosus. From th cellular layer of a preparation containing 0.5 cc of the patient plasma and 1 cc heparinized dog bone-marrow smears are made and stained with Wright stain; rosettes of clumped leukocytes and/or L.E. cells indicate a positive test. The patient's own peripheral blood may also be used by remixing th cells with the plasma. See *L.E. cell* under *l* pus.
platelet antibody t. An in-vitro test for antibodies which agglutinate or dissolve platelets used to distinguish idiopathic thrombocytopenic purpura from other purpuric disorders.
pneumococcus antibody t. See Francis *t.*
pneumococcus type t. A precipitation test performed by layering centrifuged or filtered pneumococcus exudate over immune serum A turbid ring will form at the junction of the fluids in the t be containing serum homologous with the pneumococcus type causing the infection Also see Neufeld quellung *t.*
Pohl's t. (*for globulins*) The suspected solution is treated with ammonium sulfate which precipitates the globulins.
pointing t. See Bárány' pointing *t.*
potassium tolerance t. (*for Addison disease*) A test based on the observation that person with hypoadrenalism shows an increased rise and duration of the serum potassium as compared to normal after the oral ingestion of potassium salt.
Prausnitz-Küstner t. Local passive sensitization of huma skin by intracutaneous injection of human serum containing particular antibody The site so sensitized shows an immediate type of reaction (wheal and flare) when tested with the respective allergen.

precipitation t. A test in which positive reaction depends upon the formation of precipitate.
precipitin t. See precipitation *t.*, serum *t.*
pregnancy t. Any procedure, usually biologic or chemical, used to determine the presence of pregnancy state. Biologic tests usually depend upon the level of chorionic gonadotropin in the pregnant woman. See Abderhalden *t.*, Aschheim-Zondek *t.*, *Bacillus proteus* pregnancy *t.* [illegible] *t.*, Friedman *t.*, frog *t.*, male toad *t.*, Pergo-Pollatschek *reaction*, Q *t.* (a), prostigmine *t.*
presumptive t. (*for Escherichia coli in water*) Fermentation tubes containing lactose broth are inoculated with the water to be tested. If more than 10% of the fermentation tube contains gas at the end of 24 hours, the test is positive and *confirmed test* should be performed.
Preyer's t. A spectroscopic test for the presence of carbon monoxide in the blood.
pronation-supination t. A cerebellar function test in which the arms, extended in front, are rapidly pronated and supinated. Normally the movements are of equal amplitude, smooth and even.
Proske and Watson's t. (*for malaria*). A turbidimetric colorimetric test used to measure the increase of euglobulin which occurs in malaria.
prostigmine t. (*for pregnancy*) The failure of injected prostigmine to bring about menstrual bleeding in the presence of amenorrhea is indicative of pregnancy
protein t. See Bence-Jones protein *t.* [illegible] heat and acid *t.*, Pandy *t.*, Ross-Jones *t.*
prothrombin time t. See Quick's *t.*
provitamin D t. See antimony trichloride *t.*, chloral hydrate *t.*
Prussian blue t. (*for cyanide*) Sodium hydroxide, ferrous sulfate, ferric chloride, and hydrochloric acid are added to distillate of the suspected material. If cyanide is present, precipitate of Prussian blue develops. (*For vitamin C*) Vitamin C converts an acid ferricyanide solution to Prussian blue which may be compared colorimetrically (*For ferric iron*) Ferric iron converts ferrocyanide to Prussian blue.
psychologic t. A planned situation in which an individual's behavior can be characterized by numerical value or score. Also see aptitude *t.*, intelligence *t.*, personality *t.*
psychomotor t. An apparatus test, in contrast to paper and pencil test, usually measuring some form of muscular coordination and speed of reaction and often requiring certain perceptual abilities.
Pugh's t. A visual test for fusion which uses stereoscope by means of which pictures seen separately by each eye are superimposed.
Purdy's t. (*for albumin*) T test tube two-thirds full of urine, add one-sixth of its volume of saturated solution of sodium chloride and 5 to 10 drops of 50% acetic acid. Mix, boil the upper portion, and watch for white cloud.
pus t. See Donné *t.*, guaiac *t.*
push t. (*for parkinsonism*). The patient stands feet part, and the examiner gives him gentle backward push. The normal person lifts his toes to maintain balance, but the person with parkinsonism keeps his feet entirely on the floor
pyridoxine t. See cyanine dye *t.*, Gibbs's *t.*
Q t. (a) A pregnancy test in which small amount of sterile colostrum is injected intracutaneously; inflammation after 1 hour indicates nonpregnancy (b) Abbreviation also used for Quick's prothrombin test. See Quick's *t.*
Queckenstedt-Stookey t. Pressure on the jugular veins normally causes prompt rise in cerebro-

spinal fluid pressure not seen in partial or total subarachnoid block or lateral sinus thrombosis.

quellung t. See Neufeld quellung *t.*

Quick's hippuric acid synthesis t. See hippuric acid *t.*

Quick t. (*for prothrombin*) Oxalated plasma is added to an excess of thromboplastin and then recalcified with definite quantity of calcium chloride. The coagulation time is then an inverse measure of prothrombin concentration.

Race-Coombs t. See antiglobulin *t.*, Rh blocking *t.*

Ramon's flocculation t. See Gaston *Ramon.*

Raygat's t. See hydrostatic *t.*

Rayleigh t. A test for red-green colorblindness.

reactive hyperemia t. (*for arterial occlusion*) After temporary circulatory arrest there is an increase in the normal flow of blood which is complete within 3 seconds. A lengthened interval indicates arterial occlusion of the involved extremity.

recruitment t. *In otology* the measurement of the span between the threshold of deafened person hearing and the level of discomfort. This span is much shorter in perception cases than in conduction cases, and explains the greater problem in fitting perception case with hearing aid.

red lens t. A test for diplopia and suppression utilizing red lens and a light source of 75 cm. in all cardinal positions of gaze.

red t. See phenolsulfonphthalein *t.*

reduction t. A test indicating the presence of substance (glucose) by its property of reducing the oxides of heavy metals in alkaline solution. Examples are Benedict's test and Fehling test.

Reinsch's t. (*For arsenic.*) A piece of bright copper foil is placed into acidified urine which is then heated to the boiling point. If arsenic is present it is deposited on the copper. The copper is then dried, placed in test tube, and heated, whereupon the arsenic volatilizes and is condensed upon the upper portion of the tube in the form of arsenic trioxide crystals which may be recognized. (*For mercury*) Similar to the test for arsenic except that the mixture is not heated to boiling and the end product is metallic mercury.

renal function t. See kidney function *t.*

rennin t. See Lee's *t.*, Riegel' *t.*

reversed Prausnitz-Küstner t. An urticarial reaction appearing t an injection site when reagin-containing serum is injected into the skin of person in whom the allergen is already present the reaction which appears when Prausnitz-Küstner antibody is administered, not before, but after the administration of the antigen.

Rh blocking t. A test for the detection of Rh antibody in plasma wherein erythrocytes having the Rh antigen are incubated in the patient serum so that the antibodies may be adsorbed on these cells, which are then employed in the antiglobulin test. Syn., *indirect developing t.*, *indirect Coombs t.*

Rh testing. Examination of blood for the Rh factor using either anti-Rhesus serum or anti-Rho serum alone.

Riegel' t. (*for rennin*) Neutralized gastric juice is incubated with fresh milk. Coagulation will occur in 10-15 minutes if rennin is present in normal amount.

Rinne's t. A hearing test which compares the duration of bone conduction with that of air conduction. Normally air conduction is longer than bone conduction (Rinne positive symbol, +R) Alteration in this relationship (Rinne negative symbol, −R) indicates a lesion of the sound-conducting apparatus.

Roberts' t. (*for albumin*) Overlay urine upon Roberts reagent (saturated solution of magnesium sulfate and concentrated nitric acid) A white ring at the zone of contact indicates albumin.

Robinson-Kepler-Power t. A test for adrenal cortical insufficiency or Addison disease by measuring the urea clearance, chloride clearance, and water diuresis.

Rorschach t. A psychologic test in which the subject describes what he sees on series of 10 standard ink blots. The subject responses indicate personality patterns, special interests, general intelligence deviations of affect, and neurotic or psychotic tendencies. Also called *Rorschach diagnosis.*

rose bengal t. (*for liver function*) A test based on the ability of the liver to remove injected rose bengal (tetraiodotetrachlorfluorescein) from the blood. Delayed removal indicates hepatic dysfunction.

Rosenbach t. (*for bile pigment*) Filter urine and put drop of concentrated nitric acid on the filter paper If bile pigment is present succession of colors will be seen as in Gmelin s test.

Rosenheim bismuth t. (*for choline*) Prepare an alcoholic extract of the fluid under examination and after evaporation apply Rosenheim's iodo-potassium iodide solution to littl of the residue. In short time dark brown plates and prisms of choline periodide begin to form and may be detected by means of the microscope.

Rosenthal-Rowntree t. (*for liver function*) A modification of the phenoltetrachlorophthalein test in which the amount of dye remaining in the blood is measured.

Ross-Jones t. (*for protein*) Spinal fluid is stratified over saturated ammonium sulfate reagent. A turbid ring at the junction of the fluids indicates increased protein.

rotation t. The study of the reaction of the semicircular canals by rotating the patient with the head fixed in certain planes.

Rothera's t. (*for diacetic acid*) To urine saturated with ammonium sulfate, add concentrated ammonium hydroxide and sodium nitroprusside The appearance of a purple tinge is positive test.

Roth-Kvale t. (*for pheochromocytoma*) A test employing the intravenous injection of histamine phosphate, which, in cases of pheochromocytoma, is followed by very marked elevation in blood pressure and the acute paroxysm typical of the condition. Infrequently used.

Rubin t. (*for tubal patency*) See tubal *insufflation.*

Rubner's t. (*for lactose*) To urine saturated with lead acetate add concentrated ammonium hydroxide and boil. If lactose is present, the solution turns brick-red with precipitate.

Ruttan and Hardisty' t. (*for blood*) Blood in the presence of an acetic acid solution of orthotolidine and hydrogen peroxide yields blue color Used for testing urinary sediment.

Sakaguchi t. A color reaction of arginine, using α-naphthol and NaOBr

salicylic aldehyde t. (*for acetone*) See Behre's *t.*

Salkowski t. (*for cholesterol*) Dissolve a few crystals of cholesterol in little chloroform and add an equal volume of concentrated sulfuric acid. A play of colors from bluish-red to cherry red and purple is noted in the chloroform, while the acid assumes marked green fluorescence.

salt t. An intradermal test to determine the deficiency in the peripheral circulation of the extremities. Injections of 0.2 cc. of physiological saline are made and the wheals observed by inspection and palpation. Under normal conditions they disappear in one hour The disappearance in 5 to 10

minutes suggests an area of gangrene, while 10- to 20-minute interval indicates deficient circulation.

Sanford's t. See erythrocyte fragility *t.*

Sarine t. (*for renal fixity*) A pyelographic examination made after complete expiration and then after complete inspiration, to determine renal fixation. Perirenal inflammatory diseases fix the kidney and the roentgenogram is not blurred.

Sawyer and Lloyd serum protection t. A test used in epidemiologic investigations to determine whether individuals have ever had yellow fever or whether vaccinated persons have been successfully immunized.

scarification t. See scratch *t.*

scarlet fever t. See Dick *t.*, Schultz-Charlton blanching *t.*

Scherer's t. (*for inositol*) Ammonium hydroxide and calcium chloride are added to partially evaporated oxidized urine and the whole is evaporated. In the presence of inositol bright red color is obtained.

Schick t. (*for immunity to diphtheria*) An immunologic skin test performed by the intracutaneous injection of an amount of diluted diphtheria toxin equal to one-fiftieth of the minimal lethal dose. A positive reaction is interpreted on the fifth to seventh day. It consists of local erythema with edema, and indicates the lack of immunity.

Schiller's t. A test using aqueous iodine and potassium iodine solution to delineate areas of epithelium which do not contain glycogen and therefore do not take the stain. It aids in localizing areas of the uterine cervix where biopsy studies should be taken to exclude malignancy.

Schirmer t. Test for deficiency of tear formation. A strip of filter paper 5 mm × 30 mm is hooked over the lower lid; tears in normal individuals moisten at least 15 mm in 5 minutes.

Schlesinger's t. (*for urobilin*) Lugol solution and saturated alcoholic solution of zinc acetate are added to urine which is then filtered. A greenish fluorescence in the filtrate under strong light indicates urobilin.

Schmidt nuclei t. (*for pancreatic sufficiency*) A test in which beef or thymus, hardened in alcohol is passed through the intestinal tract. If the nuclei are undigested on microscopic examination, pancreatic insufficiency may be assumed.

Schmidt's t. (*for urobilin*) A test based upon the formation of hydro-bilirubin-mercury with the production of a red color.

Schoenbein's t. (*for cyanide*) A strip of filter paper impregnated with guaiac and copper sulfate is suspended over the distillate of the suspected material. No change in color of the paper indicates the absence of cyanide; a blue color indicates that cyanide may be present and a specific test is then performed.

Schultz-Charlton blanching t. An immunologic skin test of aid in the diagnosis of scarlet fever performed by the intracutaneous injection of convalescent scarlet fever serum. A positive reaction which occurs in scarlet fever consists of blanching of the rash in a zone surrounding the point of injection.

Schultz-Dale t. The specific production of contraction of an excised intestinal loop (Schultz) or of the excised (virginal) uterine strip (Dale) of the anaphylactic guinea pig, when the excised tissue is exposed to the anaphylactogen. The intestinal or uterine preparation must also be shown to be susceptible to specific desensitization.

Schultz t. (*for cholesterol*) A histochemical adaptation of the Liebermann-Burchard *t.*

Schwabach's t. A hearing test which compares the duration of bone conduction appreciation of the pathologic ear to the normal.

Schwartz-McNeil t. (*for gonorrhea*) A complement-fixation test for gonorrhea using an antigen which is an autolysate of a number of strains of gonococci.

Schwartz t. (*for varicose veins*) With the patient standing, the examiner puts one hand along the inner surface of the groin, and percusses the vein in the calf with the other hand. A wave of fluid is palpated at the groin if the vein is varicose. Syn *percussion t.*

scratch t. An allergic skin test performed by scratching the epidermis and then applying the allergen to the scratch. Syn *dermal t.*

Seashore t. One designed to measure musical talent with respect to pitch, loudness, time, timbre, rhythm, and tonal memory.

sedimentation t. See agglutination *t.*, erythrocyte sedimentation *t.*

Seliwanoff's t. (*for fructose*) To resorcinol hydrochloric acid mixture add urine. The production of a red color and the separation of a red precipitate indicate fructose.

semen t. See Barberio *t.*, Florence's *t.*

serologic t. One for testing blood serum.

serology t. (*for syphilis*) Any test on serum for the diagnosis of syphilis.

serum cholinesterase t. A test to determine the amount of cholinesterase in serum. Since hepatic cells elaborate cholinesterase, its level in the serum is indicative of liver function.

serum colloidal gold t. The addition of an electrolyte (NaCl) to a colloidal suspension of gold chloride will precipitate the gold chloride with characteristic color changes. The colloids in normal cerebrospinal fluid exert a protective action on the gold which prevents precipitation. In many pathological states, however, the fluid loses this protective power so that precipitation of the gold follows.

serum protection t. A test in which each animal of a group is given a known immune serum. This is followed by inoculation of these and an equal number of control animals with an organism, the identity of which it is desired to establish. If the animals receiving the immune serum survive, the identifies the organism. The test may also be used to determine the virulence of organisms and to demonstrate specific antibodies in serum. Also see animal protection *t.*

serum t. (*for blood, meat, etc.*) An antigen is injected at intervals into a rabbit. The serum of the rabbit is then added to a saline solution of the suspected material. The solution becomes cloudy if the suspected material is of the same species as the antigen used. Also called biologic *t.*, Bordet's *t.*, precipitin *t.*, Uhlenhuth's *t.*

seven-glass t. See glass *t.*

shadow t. See *retinoscopy.*

Sherman and Chase assay t. (*for thiamine hydrochloride*) Rats, depleted of their thiamine hydrochloride reserves by means of a vitamin B₁-free basal diet, are fed graded supplements of thiamine hydrochloride in the form of the standard or test materials. The relative growth responses to the doses of assay material and of pure thiamine hydrochloride constitute the basis for evaluation.

shoulder-shaking t. A test for extrapyramidal rigidity and cerebellar lesions. When the examiner swings the patient's arms from the shoulders, the swinging is lessened by extra-pyramidal rigidity and increased by cerebellar affections.

Shuman t. (*for methemalbumin*). To a volume of plasma covered with ether 1 volume of concentrated ammonium sulfide is added and mixed

presence of methemalbuminemia is indicated by the appearance of the sharp band of hemochromogen at 558μ on spectrometric examination.

Sia's t. (*for kala-azar*) A test in which the patient's blood is mixed with distilled water. The formation of a precipitate constitutes a positive reaction.

Sims-Huhner t. An examination of sperm obtained from the vaginal fornix and cervical canal during a certain interval following coitus; used in fertility studies.

skin t. Any test depending upon the production of an inflammatory or irritative reaction in the skin, usually performed for immunologic or allergic purposes.

Snellen t. One testing central vision in which the subject stands a certain distance from a standard chart and reads the letters on the chart. It is based upon the fact that objects may be seen by the normal eye when they subtend an angle of one minute.

sodium benzoate t. See hippuric acid *t.*

sodium d-lactate clearance t. (*for liver function*) A test based on the ability of the liver to convert injected sodium *d*-lactate into glycogen. Delayed conversion indicates hepatic dysfunction.

sodium tetraiodophenolphthalein t. (*for liver and gallbladder function*) Normal persons have less than 15% of 2.5 Gm. of injected sodium tetraiodophenolphthalein in the blood at the end of 30 minutes and less than 5% at the end of 60 minutes. Retention of more than this may indicate liver damage. Also, the concentration of the dye in the gallbladder with its subsequent evacuation may be determined by x-ray examination. Also called *Graham-Cole t.*

Somogyi t. (*for amylase*) See Somogyi method.

space perception t. Psychological test used to measure the ability to estimate space differences.

Sparkman' t. (*for urobilinogen in feces and urine*) A modification of Ehrlich's test based on the development of a red color on the addition of an acid solution of paradimethylaminobenzaldehyde to solutions containing urobilinogen.

spectroscopic t. A procedure for the detection of compounds by observing the characteristic absorption spectrums that they produce.

Spiegler's t. (*for albumin*) Overlay clear acidulated urine upon Spiegler's reagent (mercuric chloride, tartaric acid, glycerin, distilled water). Opalescence at the junction of the fluids indicates albumin.

Spies t. (*for pellagra*) A chemical test performed on the urine that is positive in pellagra and certain other intestinal-tract dysfunctions.

spot t. Any test using small quantities of reagent and substance tested, as on a plate or sheet of paper, for the determination of the presence of a substance.

Stanford achievement t. A group test covering achievement in a variety of school grades; named for Stanford University.

Stanford-Binet t. A modification of the original Binet intelligence test; considered the standard individual test for pre-adult levels.

Stanford revisions of Binet-Simon t. Revisions of the Binet-Simon test (1916, 1937). The last revision provides for more adequate sampling of intelligence at upper and lower levels by employing two new scales, by procedures for the administration and scoring of the test which have been defined more meticulously, and by standardization based upon larger and more representative samples of the population.

Stanford scientific aptitude t. A test to detect the traits which comprise an aptitude for science.

starch t. See iodine *t.* (for starch)

star t. A test for determining whether under- or overcorrection exists in the microscope system, and for determining the proper tube length for a microscope.

Stein t. (*for bile pigments*) A histochemical method, staining with iodine reagent, decolorizing with sodium hyposulfite, and counterstaining with alum carmine. Bile pigments appear emerald green.

Stilling's t. A color vision test now used as Ishihara's modification.

straight-leg-raising t. See Laségue's sign.

Strauss t. The development of an acute orchitis in male guinea pigs after the intraperitoneal inoculation of diseased tissues from a case of glanders.

Strauss's t. (*for lactic acid*) To an ether extract of gastric juice, add a solution of ferric chloride. A light green or yellow color indicates lactic acid.

suction t. A test for capillary resistance in which suction is applied to the skin for a measured interval of time, and the number of petechiae which result are counted. Syn., *Dalldorf method.*

sugar t. See Barfoed's *t.*, Benedict's *t.*, Bial's *t.*, Fehling's *t.*, fermentation *t.*, Folin-McEllroy *t.*, Haines' *t.*, Moore's *t.*, mucic acid *t.*, Nylander's *t.*, phenylhydrazine *t.*, Seliwanoff's *t.*, Tollens' *t.*

sulfosalicylic acid t. (*for albumin*) 1 cc. of urine is put into a test tube with 1 cc. of sulfosalicylic acid reagent. Cloudiness developing after 10 minutes indicates albumin.

Sulkowitch' t. (*for calcium*) Equal parts of clear urine and Sulkowitch's reagent (oxalic acid, ammonium oxalate, glacial acetic acid, distilled water) are mixed. A fine white precipitate indicates normal serum calcium; no precipitate indicates reduced calcium, and a milky precipitate indicates increased serum calcium.

Sullivan's t. (*for cystine*) With sodium-β-naphthoquinone-4-sulfonate, cystine develops a red color in the presence of alkali.

surface fixation t. A test for brucellosis, utilizing the diffusion of the patient's serum in blotting paper.

sweating t. An objective, easily elicited test of sympathetic innervation. The skin of the entire body, or the area to be tested, is covered with a mixture of iodine and starch which, on becoming moist, turns blue-black (see iodine *test* for starch). Other nontoxic powders, or cobalt blue paper changing color when moist, are used less frequently. Sweating may be produced by heat, emotional disturbances, by highly spiced foods, drugs, and by other methods. In areas where there is impairment of innervation or absence of sweat glands, no color change is marked.

syphilis t. See Boerner-Jones, and Lukens *t.*, Boerner-Lukens *t.*, colloidal benzoin *t.*, Eagle *t.*, Hinton *t.*, Kahn *t.*, Kline *t.*, Kolmer's *t.* (a), Lange's *t.*, Laughlen *t.*, mastic *t.*, Mazzini *t.*, Meinicke's *t.*, Noguchi's *t.*, Pangborn *t.*, Wassermann's *t.*

Szent-Györgyi t. (*for vitamin C*) A test based on the violet coloration upon the addition of ferrous sulfate to an alkaline solution of ascorbic acid (vitamin C).

Takata-Ara t. (*for liver function*) A test based on the assumption that in hepatic dysfunction there is a diminution of the colloid protective action in the blood serum due to an increase in the globulin content.

tannic acid t. (*for carbon monoxide in blood*) Blood is mixed with distilled water and a tannic acid solution is added. The development of a cherry red color indicates the presence of carbon monoxide.

Tanret-Mayer t. One for determining the presence of quinine in the urine.

Tauber t. (*for pentose*) To 0.1 ml. of urine add 0.5 ml. of a 4% solution of benzidine in glacial acetic acid. Heat to vigorous boiling, cool under the cold water tap, and add 1 ml. of water. The presence of pentose is indicated by the immediate appearance of a pink to red color. If pentoses are absent, the mixture has a yellowish brown color.

Tauber and Kleiner modification of Barfoed's t. A monosaccharide, heated with copper reagent in a boiling water bath, will yield a blue color when Benedict's or Folin's phosphomolybdic reagent is added.

Teal t. A hearing test to determine actual or simulated air conduction loss when normal bone conduction is admitted. It is done with two similar tuning forks, one inactive on the mastoid and the other active close to the tested ear. The patient admitting hearing tone actually hears by air and this is evidence of simulated deafness.

Teichmann's t. (*for blood*) A crystal of sodium chloride and glacial acetic acid are added to the suspected liquid under a cover glass and the whole is heated without boiling and then cooled. The appearance of rhombic crystals of hemin indicates blood.

tendon palpation t. Decreased resistance to palpation of a tendon as an index of cerebellar or peripheral nervous system disease.

t. for atabrine. One which determines the presence of atabrine in the urine; devised by Tropp and Weise.

t. meal. See *test meal*.

tetraiodophenolphthalein t. See sodium tetraiodophenolphthalein *t.*

thematic apperception t. (TAT) A test using a set of pictures from which the subject constructs a story designed to reveal to the trained interpreter some of the dominant drives, emotions, sentiments, complexes, and conflicts of personality; one of the projective-type tests.

therapeutic t. A test in which the response to specific therapy is used to aid in the establishment of a diagnosis, such as liver extract in pernicious anemia and Lugol's solution in hyperthyroidism.

Thorn t. (*for adrenal cortex activity*) A test of adrenocortical reserve, as manifested by changes in circulating eosinophils, following administration of adrenocorticotropic hormone (ACTH).

three glass t. See glass *t.*

thymol flocculation t. A modification of the thymol turbidity test in which the mixture is allowed to stand overnight and the amount of flocculation is measured. Normal limits are 0–+.

thymol turbidity t. A test for liver function, particularly useful in determining biliary obstruction. 0.1 cc serum are added to 6.0 cc thymol reagent. The result is read in units on a colorimeter, 0 to 2 units being normal.

tinea versicolor t. See under Allen's *t.*

toad t. See frog *t.*, male toad *t.*

Tobey-Ayer t. See George Loring Tobey, J.

tolerance t. See clearance *t.*

Tollens' t. (*for galactose*) To equal volumes of the unknown and hydrochloric acid, add phloroglucinol, and heat the mixture. Galactose, pentose, or glycuronic acid will be indicated by the appearance of a red color. Differentiate by means of spectroscopic examination.

tolidine t. (*for blood*) See Ruttan and Hardisty *t.*

Töpfer's t. (*for free hydrochloric acid in gastric content*) A few drops of a 1% alcoholic solution of p-dimethylaminoazobenzene give a cherry-red color to a fluid containing free hydrochloric acid.

tourniquet t. (*for capillary resistance*). A blood pressure cuff about the upper arm is used to occlude the veins effectively for a measured number of minutes, after which the skin of the forearm and hand is examined for petechiae. In various techniques the pressure applied, the duration of its application, and the number of petechiae which result in the normal individual vary.

toxoplasmin t. A cutaneous test for toxoplasmosis by the intradermal injection of toxoplasma. Observation of a hypersensitivity reaction with a negative reaction in a control injection indicates past or persistent infection.

TPI t. See *Treponema pallidum* immobilization *t.*

Trendelenburg's t. (a) One designed to demonstrate the incompetence of the saphenous vein valves and the efficiency of the communicating veins at different levels. (b) A dipping of the pelvis to the opposite side when the patient stands on the affected limb; seen in congenital dislocation of the hip and certain other conditions.

Treponema pallidum immobilization t. (*for syphilis*) An immunologically specific in vitro reaction employing *Treponema pallidum* in a special maintenance medium, antibody and complement resulting in immobilization and death of the spirochetes. The reaction may be employed for the specific serological diagnosis of syphilis. The antibody involved apparently is distinct from that detected in the Wassermann type of reaction.

Trommer's t. A test for reducing sugars involving $CuSO_4$ in a solution of KOH. Fehling's test is similar but can detect smaller concentrations of sugar.

tryptophan t. (*for tuberculous meningitis*) Sodium nitrate solution is overlaid on a mixture of spinal fluid, hydrochloric acid, and formalin. A violet ring at the junction of the fluids is a positive reaction.

t test. A test of significance of differences between statistical constants calculated from small samples.

tuberculin t. The introduction of measured quantities of tuberculin into superficial tissues of the body to establish the presence or absence of infection by the tubercle bacillus. A positive tuberculin reaction which may consist of erythema, edema, or necrosis indicates infection. Also see Calmette *t.*, Mantoux *t.*, Moro *t.*, Vollmer patch *t.*, von Pirquet *t.*

tuning fork t. See bone conduction *t.*, Rinne's *t.*, Schwabach's *t.*, Teal *t.*, Weber's *t.*

two glass t. See glass *t.*

two-step t. Repeated ascents over two nine-inch steps as a simple exercise test of cardiovascular function; also called *Master's two-step t.*

Tzanck t. The demonstration of degenerative changes in epidermal cells in bullae of pemphigus by microscopic examination of a smear made from the base of an early intact bulla and stained with Giemsa stain.

Uffelmann's t. (*for lactic acid*) To gastric juice add a reagent consisting of ferric chloride solution and phenol. Lactic acid produces a canary yellow color whereas hydrochloric acid decolorizes the reagent.

Uhlenhuth's t. See serum *t.*

urea clearance t. (*for kidney function*). The excretory efficiency of the kidneys is tested by the amount of blood cleared of urea in 1 minute as determined by the ratio of the blood urea to the amount of urea excreted in urine during a fixed time.

urobilinogen t. See Ehrlich's *t.*, Sparkman's *t.*

urobilin t. See Schlesinger's *t.*, Schmidt's *t.*

vaccine t. A skin test made with suspension of killed bacteria in measured concentration.

van den Bergh's t. (*The direct test.*) Diluted serum is added to diazo reagent. A bluish violet color becoming maximal in 10 to 30 seconds is an *immediate direct reaction* supposedly indicating *unconjugated bilirubin and therefore the presence of obstructive jaundice.* A red color beginning after 1 to 15 minutes and gradually turning to violet is *delayed direct reaction*, indicating impaired liver function. A red color appearing at once and changing to violet is biphasic direct reaction. (*The indirect test.*) Alcohol is added to serum which is then centrifuged. The diazo reagent is added to the supernatant fluid. An immediate violet-red color supposedly indicates bilirubin combined with protein and signifies hemolytic jaundice. The tests are now used as a modification in which diazotized serum or plasma is compared with standard solution of diazotized bilirubin.

Verhoeff depth perception t. A small portable test of stereopsis in which the separation of the test objects is constant. Given at different distances, the difficulty varies as the square of the testing distance. False monocular size clues are introduced.

vestibular t. A series of tests and observations on the vestibular system, including observations on postural *nystagmus*, vertigo, and tendency to fall, plus such other tests as the caloric and rotation tests. Although not absolutely diagnostic of brain tumors, this test is often used to aid or supplement such diagnosis.

Vineland social maturity scale. A psychologic test designed to measure social maturity.

vision t. See Abridged A. O. color vision *t.*, after image *t.*, candle *t.*, color threshold *t.*, confusion *t.*, Hecht-Schlaer night vision *t.*, Holmgren *t.*, Ishihara *t.*, Nagel' *t.*, Pugh's *t.*, red lens *t.*, Snellen *t.*, Stilling *t.*, Verhoeff depth perception *t.*

Visscher Bowman t. (*for pregnancy*). See Frank Evert Visscher.

vital capacity t. A test of pulmonary function. See vital *capacity*.

vitamin-A t. See Anderson-Nightingale dilution *t.*, ferric chloride *t.* for vitamin A.

vitamin-B t. See catatorulin *t.*

vitamin-B t. See cyanine dye *t.*, Gibbs's *t.*

vitamin-C t. See intradermal vitamin-C *t.*, methylene blue *t.* (for vitamin C), nitrobrusine *t.*, Prussian blue *t.* (for vitamin C).

vitamin-D t. See aniline *t.*

vitamin-K t. A liver-function test in which 2 mg. of menadione are administered intramuscularly. If the prothrombin level rises more than 20% in 24 hours, liver function is normal.

Volhard's and Fahr's tests. (a) Test of the kidney' ability to concentrate urine. After withholding all fluids for 32 hours and giving dry food for 24 hours, urine samples are collected t three-hour intervals for 12 hours and one 12-hour sample is collected. Normally at least one sample will have specific gravity of at least 1.025. With progressive renal impairment, concentrating power is reduced until the specific gravity usually becomes fixed at about 1.010. (b) Test of the kidney ability to secrete dilute urine. I a fasting state, the patient drinks 1500 cc. of water and urine specimens are collected at 30-minute intervals. Normally at least one specimen will have specific gravity as low as 1.003. In severe kidney disease, the specific gravity becomes fixed at about 1.010.

Vollmer patch t. A tuberculin test in which gauze saturated with tuberculin is applied to an intact skin surface under adhesive plaster.

von Aldor's t. (*for proteose*) Phosphotungstic acid is added to urine and the precipitate is washed with absolute alcohol, dissolved in potassium hydroxide, and the biuret test is applied.

von Jaksch-Pollak s t. (*for melanin*) Ferric chloride is added to urine. If melanin is present, there develops gray color and dark precipitate of phosphates and adhering melanin.

von Pirquet t. A tuberculin test in which the substance is applied to superficial abrasion of the skin.

von Udránszky t. See foam *t.*

Vulpian t. Epinephrine gives green color with $FeCl_3$ in slightly acid solution.

Wang's t. (*for indican*) Indican, if present, is converted into indigosulfonic acid and titrated with potassium permanganate solution.

Wassermann's t. A complement-fixation test for syphilis now used only as modification of the original test.

water-drinking t. A test for glaucoma in which the patient drinks water. Increase in ocular pressure of more than 6 mm. Hg when the initial tension is 30 mm., or of more than 9 mm. Hg when initial tension is less than 30 mm., is indicative of positive reaction. Osmotic changes in blood serum are responsible for the amount of ocular tension.

wate -gargle t. The swallowing of water causes gurgling sound heard on auscultation in cases of stricture of the esophagus.

water-pitressin t. A combination of water intoxication induced by forced liquid intake, with administration of pitressin to detect the existence of epilepsy in patient. A seizure will be produced in bout 80% of all persons predisposed to convulsions. The test is valuable in differentiating hysteria from idiopathic epilepsy.

water t. (*for Addison disease*) A test based on the fact that patients with Addison disease do not have normal diuresis following the rapid intake of large quantity of water.

Waugh-Ruddick t. A procedure reported to test tendency toward thromboembolic disease in which the clotting time of mixture of whole blood and serial dilutions of heparin is measured.

Weber's t. A hearing test in which the vibrations from tuning fork placed on the forehead of normal person are referred to the midline and heard equally in both ears. In unilateral middle-ear deafness, the sound is heard in th diseased ear. In deafness due to disease of the uditory nerve on one side, it is heard better in the normal ear.

Wechsler Bellevue intelligence scale. A verbal and performance test of information, comprehension, arithmetical reasoning, digit memory, similarities, configurational grasp, visual completion, object assembly and vocabulary.

Weil-Felix t. An agglutination test used in the diagnosis of certain rickettsial diseases, based upon the fact that the serum of patient with rickettsial disease will agglutinate certain strains of *Proteus vulgaris*.

Weisz t. (*for urochromogen*) A 1% solution of potassium permanganate is added t diluted urine. In the presence of urochromogen yellow tint will appear due to the oxidation of the urochromogen.

Wells-Stenger t. A test for determining actual or simulated unilateral deafness. A tuning fork stem is inserted into 30-in. length of rubber tubing having an earpiece at the other end. The fork is set in vibration. The earpiece is i

into the deaf ear and the fork is approximated to the good, or normal, ear If it is not heard until much closer than was the case in previous tests indicating ormal hearing distance, the deafness is simulated.

Weltmann t. A serum coagulation test used to indicate whether lesion is of an exudative in flammatory nature or fibrotic nature of diag nostic aid in subacute bacterial endocarditis and acute rheumatic endocarditis

Weyl's t. (*for creatinine*) Ruby-red color then yellow when solution containing creatinin is treated with sodium nitroprusside and sodium hydroxide.

Widal t. (*for typhoid fever*) An agglutination test for typhoid fever using living agglutinable culture of the typhoid bacillus as an antigen. The test is now performed by using H (formalized) and O (alcoholic) antigens.

Wilder t. See Cutler Power Wilder *t.*

Windaus digitonin t. A histochemical method for 3-cis-OH sterols, such as cholesterol, vitamin-D compounds, and isoandrosterone, using digitonin solution to produce needle-shaped birefringent crystals observed under th polarizing microscope.

Wolff-Eisner t. See Calmette *t.*

worsted t. See Holmgren *t.*

Wurster's t. (*For hydrogen dioxide.*) Paper saturated with sol tion of tetramethylparaphenylenediamine turns bluish violet if hydrogen dioxide is present. (*For tyrosine.*) Dissolve the suspected substance in boiling water and add quinone. A ruby red color changing slowly to brown indicates tyrosine.

xanthoproteic t. (*for proteins*) Nitric acid which turns proteins yellow is added to the suspected substance. Upon alkalinizing the color turns to an orange yellow

Xenopus pregnancy t. See frog *t.*

Yensen aliness t. A psychologic test to determine to what extent an individual tends to react in an all-or-none fashion.

Yvon' t. (*for acetanilid*) Urine is extracted with chloroform and the residue heated with mercurous nitrate. A green color indicates acetanilid.

Zeller' t. (*for melanin*) Equal volumes of urine and bromine water are mixed. In the presence of melanin yellow precipitate will form and gradually become black.

zinc sulfate turbidity t. A flocculation test for liver function, resembling the thymol turbidity test but using zinc sulf te as the precipitating agent and buffer of lower ionic strength. It reliably differentiates obstructive and hepatocellular jaundice in the early stages Normal limits are 0-4 units.

Zondek-Aschheim t. See Aschheim-Zondek *t.*

Zwemer' t. See potassium tolerance *t.*

tes ta ceous [L. *testaceus* consisting of bricks or tiles]. Pertaining to shell.

tes'ti-cle [L *testiculus*, testis] See *testis.*

tes ti u lar [*testiculus*] Pertaining to the testis.

tes'tis (pl. *testes*) [L.]. On of the pair of male reproductive glands, after sexual maturity the source of the spermatozoa male gonad. See Plates 44, 45.

abdominal t. One which is undescended and remains in the abdominal cavity

displaced t. A testis in an abnormal situation, as in the pelvic cavity

femoral t. One which ha nearly descended into the scrotum, but remains in the inguinal canal near or over the femoral ring

i guinal t. An undescended testis remaining in the inguinal canal.

inverted t. A testis which is so placed in the scrotum that the epididymis is attached to the anterior part of the gland.

migrating t. A freely movable inguinal testis which may be moved even into the abdominal cavity and predisposes to torsion of the spermatic cord.

perineal t. One that is situated outside the scrotum in the perineal region.

pubescrotal t. One that is situated over the pubic tubercle.

undescended t. The condition in hich testis remains either in the pelvis or in the inguinal canal

tes ti'tis. See *orchitis.*

test meal. A specified quantity and type of food which, at certain interval after ingestion, removed from the stomach by means of tube the contents are studied chemically to ascertain the function of the stomach.

motor t. m. A test for pyloric obstruction. When the stomach is empty the patient eats meal consisting of 100 Gm. each of boiled potato, spinach carrots, raw pple, an egg. slice of bread, pat of butter 15 Gm. of dried tea leaves, and beverage. Upon aspiration several hours later, the stomach should normally yield only 60 cc. of liquid and some tea leaves

Rehfuss t. m. See Martin Emil Rehfuss

tes'toid. Pertaining to any substance, natural or synthetic, which is androgenic, i capable of producing secondary male-sex characters

tes-tos'te-rone. C $H_{28}O_2$. Δ^4-Androstene-17(α)-ol-3-one. An androgenic hormone isolated first from the testis of the bull; also obtained by synthesis white crystalline powder insoluble in water used therapeutically principally in the treatment of deficiency or absence of the testicular hormone, also in palliation of metastatic carcinoma of the female breast. Administration is by intramuscular injection, subcutaneous implantation, or by buccal absorption. See Table of Hormones in the Appendix.

tes-tos'te rone pro pi-o-nate (*testosteroni propionas*) The propionic acid ester of testosterone white or slightly yellow crystals, insoluble water but soluble in organic solvents and vegetable oils; the form of testosterone commonly used in preparing solutions in oil for injection.

test type. See under *type.*

te'ta ine. An antibiotic substance produced by strain of *Bacillus pumilus.*

tet'a nal, te tan'ic [G. *tetanos*, convulsive tension, tetanus]. 1 Pertaining to, or resembling, tetanus. 2. Producing tetanus.

te ta ni a. See *tetany*

t tan'i form [*tetanos*; L. *forma*, form]. Resembling tetanus.

tet a nig' nous (tet ah-nidj nus) [*tetanos*; G *gennethei*, from *gignesthai*, to be produced] Causing tetanus or tetanic spasms.

tet a nil'la [dim. from *tetanos*]. A mild form of tetanus.

tet nin. C $H_{30}N_2O$ A ptomaine obtained from cultures of the bacillus of tetanus in beef broth and from the tissues of patients suffering from tetanus.

tet' nism [*tetanos*]. A more or less continuous hypertonicity of m scle.

tet' ni za tion [*tetanos*]. Production of tetanus or of tetanic spasms. —**tet'anize,** *v.*

tet no- [*tetanos*]. A combining form denoting relating to tetanus.

tet"a no-ca na bi [*tetanos*; G *kannabis*, hemp] A substance found in some samples of cannabis or hemp, producing strychninelike symptoms.

tet' node [G *tetanodes*, of the nature of tetanus

The quiescent interval in tetanus, between the tonic spasms.

tet'a·noid [G. *tetanos*, convulsive tension, tetanus; *eidos*, form]. A spastic condition producing symptoms like tetanus.

tet"a·no·ly'sin (tet"ah·no·lye'sin, tet"ah·nol'i·sin) [tetanos; G. *lysis*, a loosing]. The lytic toxin of *Clostridium tetani*.

tet"a·no·ly·sis. Lysis of erythrocytes in vitro by one of two exotoxins produced by tetanus bacilli.

tet"a·nom'e·ter [tetanos; G. *metron*, a measure]. An instrument for measuring tetanic spasms.

tet"a·no·mo'tor [tetanos; L. *motor*, from *movere*, to move]. An instrument for stimulating a nerve mechanically and producing tetanus of the supplied muscle.

tet"a·no·pho'bi·a [tetanos; G. *phobos*, fear]. A morbid fear of tetanus.

tet"a·no·spas'min (tet"ah·no·spas'min) [tetanos; G. *spasmos*, spasm]. A toxin produced by the tetanus bacillus which causes tetanic convulsions.

tet'a·nus [*tetanos*]. 1. An infectious disease, usually fatal, characterized by tonic spasm of the voluntary muscles, an intense exaggeration of reflex activity, and convulsions. It is due to the toxin produced by the tetanus bacillus, *Clostridium tetani*, which enters through a wound. Since the tetanus bacillus can grow only in the absence of oxygen, the character of the wound is important, the most dangerous being puncture, penetrating, and crushing injuries. Commonly called lockjaw. 2. A tense, contracted state of a muscle, especially when caused experimentally.

acoustic t. Tetanus produced in a muscle-nerve preparation by rapidly repeated induction shocks, the period of which is determined by a tuning fork.

artificial t. That produced by a drug.

ascending t. A type in which the muscular spasms are first noted at the site of injury, then spread to the rest of the body.

cephalic t. A special form of tetanus occasionally observed following head injuries, especially those in the neighborhood of the eyebrow; trismus and facial paralysis occur at the site of the injury; there are dysphagia and epileptiform seizures, an early appearance of the disease, and usually a rapid fatal termination. Also called *cerebral t.*, *head t.*

chronic t. That occurring when a latent infection in a healed wound is reactivated by reopening the wound. Also called *delayed t.*

descending t. A type in which the muscle spasms are first noted about the jaw and throat, later spreading to the rest of the body.

hydrophobic t. Tetanus characterized by violent spasm of the muscles of the throat.

idiopathic t. Tetanus in which there is no history of injury.

imitative t. Hysteria which simulates tetanus.

localized t. Tetanic spasm of a part.

puerperal t. That following labor.

remittent t. See *tetany*.

Ritter's t. The series of contractions, or apparent tetanus, observed on the opening or interrupting of an electric current which has been passing through the nerve for some time; opening tetanus.

surgical t. That following operation, from contamination by infected catgut or forms.

t. antitoxin. Antitoxin produced in man or animals by the injection of tetanus toxin or tetanus toxoid. For therapeutic use a refined concentrated antitoxin obtained from the serum of immunized horses is given at the time of injury to prevent the development of tetanus. Dose, 1500 units, or in larger and repeated doses for treatment of the disease.

t. neonatorum. That due to infection of the umbilical stump; also called *t. infantum*.

t. toxoid. Inactivated tetanus toxin used to produce active immunity against the disease. Dose, 1 cc. repeated after four to six weeks and as booster shot at the time of a subsequent injury.

toxic t. Tetanus produced by an overdose of nux vomica or its alkaloids.

traumatic t. Tetanus following an injury.

Wundt's t. A prolonged tetanic contraction induced in a frog's muscle by injury or the passage of a strong current.

tet'a·ny [*tetanos*]. A disease characterized by intermittent, bilateral, painful, tonic spasms of the muscles, in children and young adults. It is due to an abnormal calcium metabolism. Occurs in deficiency of parathyroid secretion, alkalosis, vitamin-D deficiency, and after extirpation of the parathyroid glands.

duration t. A continuous tetanic spasm occurring in degenerated muscles when a strong continuous current is applied. Abbreviated, D t.

epidemic t. A form seen in large portions of Europe, especially in the winter season. It is acute, lasting only two or three weeks, and rarely proves fatal.

grass t. Tetany in lactating cows first turned out to pasture. Probably due to magnesium deficiency. Also called *lactation t.*

gutturotetany. A stammering due to tetanoid spasm of the laryngeal muscles.

hyperventilation t. Tetany due to alkalosis from washing out of carbon dioxide from the blood following hyperventilation. See respiratory *alkalosis*.

parathyreoprival, parathyroprival t. See parathyroid *t.*

parathyroid t. Tetany following removal of the parathyroid glands.

rheumatic t. See epidemic *t.*

thyreoprival, thyroprival t. A form following removal of the thyroid gland when the parathyroids have also been removed.

tet'ar·cone. Tetartocone.

te·tar"ta·no·pi·a, te·tar"ta·nop·si·a [G. *tetartos*, fourth; *opsis*, vision]. Loss of vision in a homonymous quadrant in each field of vision.

te·tar'to·cone [tetartos; G. *kōnos*, cone]. Distolingual cone; the fourth or distolingual cusp of an upper molar tooth.

te·tar"to·co'nid (te·tahr"to·ko'nid, ·kon'id) [tetartos; *kōnos*]. Distolingual or fourth cusp of a lower molar tooth.

tet·i"o·thal'ein so'di·um. Iodophthalein sodium.

tet'mil. Ten millimeters.

tet'ra-, tetr- [G. *tetra-*, four]. A combining form meaning *four*.

tet"ra·ba'sic [tetra-; G. *basis*, base]. Having four atoms of replaceable hydrogen.

tet"ra·bo·ric ac'id. $H_2B_4O_7$. An acid obtained from boric acid by heating. Syn., *pyroboric acid*.

tet"ra·bra'chi·us (tet"ruh·bray'kee·us) [tetra-; G. *brachiōn*, arm]. Having four arms.

tet"ra·bro"mo·phthal'ein so'di·um (tet"ruh·bro"mo·thal'in, ·thal'ee·in, ·thal'ee·in) Sulfobromophthalein sodium.

tet'ra·caine hy"dro·chlo'ride. $C_4H_9NH.C_6H_4CO.O.CH_2.CH_2.N(CH_3)_2.HCl$. The hydrochloride of the p-n-butylaminobenzoic ester of β-dimethylaminoethanol; very soluble in water. A powerful local anesthetic similar in its action to, but more potent than, procaine hydrochloride, employed in the eye, nose and throat, and also intraspinally. Recognized by the B P as amethocaine hydrochloride. See also *pontocaine*, *pontocaine hydrochloride*.

tet"ra·chei'rus (tet"ruh·kigh'rus) [G. *tetracheir*, four-handed]. Having four hands.

tet″ra-chlo″ro-eth′ane. $CHCl_2CHCl_2$. A highly toxic solvent for fats, oils, waxes, resins, etc. **sym.-tet″ra-chlo″ro-eth′ane.** Acetylene tetrachloride.

tet″ra-chlo″ro-eth″yl-ene (*tetrachloroethylenum*). $Cl_2C:CCl_2$. Clear colorless liquid of characteristic ethereal odor used as an anthelmintic, especially for the hookworm. Dose, 1-3 cc. (15-45 min.) in capsule, followed by saline cathartic. Also called *ethylene tetrachloride, perchloroethylene.*

tet″ra-chlo″ro-meth′ane. Carbon tetrachloride.

tet″ra-coc′cus [*tetra-*; G. *kokkos*, berry]. A coccus which divides in two planes and forms a group of four cells.

tet″ra-cy′cline. Generic name for the four-ring skeleton common to the antibiotic substances chlortetracycline and oxytetracycline, better known under their trade-marked names *aureomycin* and *terramycin*, respectively. Tetracycline, prepared by reductive dehalogenation of chlortetracycline, is itself a potent antibiotic. In the form of the hydrochloride it is supplied under the trade-marked names *achromycin, panmycin, polycycline, steclin, tetracyn.*

tetracyn. Trademark for *tetracycline.*

tet′rad [*tetra-*]. 1. An element having a valence of four. 2. A group of four chromatids which arises during meiosis from the pairing and splitting of maternal and paternal homologous chromosomes.

tet″ra-dac′tyl [G. *tetradaktylos*, four-toed]. Having four digits on each limb.

tet″ra-eth″yl-am-mo′ni-um. The univalent cation $(C_2H_5)_4N^+$, used in the form of the bromide or chloride salt, which on intramuscular or intravenous injection produces reversible blockade of impulses of both sympathetic and parasympathetic divisions of the autonomic nervous system. Used diagnostically or therapeutically in treating peripheral vascular diseases, hypertension, and other disorders in which peripheral circulation is disturbed. See *etamon chloride, TEAB.*

tet″ra-eth′yl lead. A poisonous liquid, $Pb(C_2H_5)_4$, used in gasoline as an antiknock agent.

tet″ra-eth″yl py″ro-phos′phate. $(C_2H_5)_4P_2O_7$. A synthetic substance having the power to inhibit cholinesterases, for which reason it is used as an insecticide and also clinically, especially in treatment of myasthenia gravis. A colorless, hygroscopic liquid, both water-soluble and lipid-soluble, it is probably the predominant active component of hexaethyltetraphosphate. Abbreviated, TEPP.

tet″ra-eth″yl-thi″u-ram di-sul′fide. $(C_2H_5)_2N$-CS.S.S.CS.$N(C_2H_5)_2$. A white or slightly yellow powder insoluble in water; useful in treating alcoholism. Ingestion of alcohol following oral use of drug produces a series of disagreeable symptoms, including nausea, through increased conversion of alcohol to aldehyde. Available under trade-marked name *antabuse.*

tet″ra-gen′ic [G. *tetra-*, four; *gennethai*, from *gignesthai*, to be produced]. Referring to genotypes of polysomic or polyploid organisms which contain four different alleles for any given locus.

te-trag′e-nous (teh-tradj′i-nus) [*tetra-*; *gennethai*]. In *bacteriology* pertaining to organisms which divide in two planes and form groups of four cells.

tet″ra-hy′dric. Containing four replaceable atoms of hydrogen.

tet″ra-hy″dro-can-nab′in-ol. Any one of a group of substances obtained from cannabis possessing to a great degree the activity of that drug.

β-tet″ra-hy″dro-naph′thyl-a-mine (-naf′thil-uh-meen, -min, -naf″hil-am′een, -in, -naf″thil-uh-meen′). $C_{10}H_{11}NH_2$. A substance causing a rise in body temperature when injected subcutaneously.

tet″ra-i″o-do-eth′yl-ene. See *diiodoform.*

tet″ra-i-o″do-phe″nol-phthal′ein. Iodophthalein.

tet″ra-i-o″do-phthal′ein so′di-um. Iodophthalein sodium.

tet″ra-i-o″do-thy′ro-nine. Thyroxin.

tetralin. Trade-mark for tetrahydronaphthalene, $C_{10}H_{12}$, a colorless liquid of penetrating odor used as a solvent for fats, oils, waxes, etc., and a cleaning and degreasing fabrics.

tetralogy of Fallot. A quadruple malformation of the heart, consisting of a high ventricular septal defect, dextroposition of the aorta so that it overrides and receives blood from both ventricles, stenosis of the pulmonary artery or atresia of the pulmonary valve, and hypertrophy of the right ventricle.

tet″ra-mas′ti-a [*tetra-*; G. *mastos*, breast]. The condition of having four breasts.

tet″ra-mas′ti-gote [*tetra-*; G. *mastix*, whip]. Having four flagella.

tet″ra-ma′zi-a [*tetra-*; G. *mazos*, breast]. The presence of four breasts.

te-tram′e-lus. Tetrascelus.

te-tram′er-ism [*tetra-*; G. *meros*, part]. In *biology*, division into four parts. —**tetramerous**, *adj.*

tet″ra-meth″yl-ene-di-am′ine (tet″ruh-meth″il-een-dye-am′een, -in, -dye-ah-meen′, -min, -dye″ah-meen′). $NH_2(CH_2)_4NH_2$. Putrescine.

tet″ra-meth″yl-pu′tres-cine (-pew-tres′een, -in). $C_8H_{20}N_2$. A poisonous base from putrescine.

tet″ra-ni′trol. Erythrityl tetranitrate.

tet″ra-nop′si-a [*tetra-*; G. *a-*, not; *opsis*, vision]. A contraction of the field of vision limited to one quadrant.

tet″ra-nu′cle-o-tide. The name sometimes given to nucleic acid from yeast from the fact that it contains four constituent nucleotides.

tet″ra-oph-thal′mus, tet″roph-thal′mus [*tetra-*; G. *ophthalmos*, eye]. Having four eyes. See *diprosopus.*

tet″ra-o′tus. See *tetrotus.*

tet″ra-pep′tide. A polypeptide composed of four amino-acid groups.

tet″ra-ple′gi-a. See *quadriplegia.*

tet′ra-ploid [G. *tetraploos*, fourfold; *eidos*, form]. Having four haploid sets of chromosomes.

tet′ra-pus [G. *tetrapous*, four-footed]. Having four feet.

tet″ra-sac′cha-ride (tet-ruh-sack′uh-ride, -rid). A polysaccharide hydrolyzable into four molecules of monosaccharide.

te-tras′ce-lus (teh-tras′i-lus) [G. *tetra-*, four; *skelos*, leg]. Having four legs.

tet″ra-so′mic [*tetra-*; G. *soma*, body]. Having four chromosomes of a given kind, but only two of each of the other chromosomes of a haploid set, hence an individual with 2n + 2 chromosomes.

te-tras′ter [*tetra-*; G. *astēr*, star]. The achromatic figure in an abnormal mitosis when four centrosomes are present, as in dispermic eggs.

tet″ra-sti-chi′a-sis (tet″ruh-sti-kigh′uh-sis) [G. *tetrastichos*, in four rows; NL. *-iasis*, condition]. Arrangement of the eyelashes in four rows.

tet″ra-thi′o-nate. The bivalent ion $S_4O_6^{=}$. See *tetrathionic.*

tet″ra-thi′o-nate re-duc′tion. The reduction of tetrathionate compound; used in bacteriologic isolations. The chemistry may be represented thus:

$$S_4O_6^{--} + 2H = 2S_2O_3^{-} + 2H^+$$

It is valuable for isolating typhoid-paratyphoid organisms from feces.

tetrathione. Trade-mark for a brand of sodium tetrathionate, $Na_2S_4O_6.H_2O$, used in the treatment of certain peripheral circulatory diseases.

tet"ra tom'ic. 1. Containing four atoms. 2. Having four hydroxyl radicals.

tet"ra vac cine (tet ruh vack'seen, -sin, tet'ruh-vack seen, -sin) [G. tetra-, four; L. vaccinus, of cows]. A polyvalent vaccine containing four different cultures, as one containing typhoid, paratyphoid A and B, and cholera.

tet"ra va'lent. See quadrivalent.

tet'ra-zole. 1. Either of two isomeric heterocyclic compounds in which three nitrogen atoms and one CH and one NH are joined in a ring. 2. Any derivative of the preceding.

tet"ra zo'li um salts. Generic term for certain salt-type derivatives of tetrazole some are water-soluble, colorless compounds which are reduced to highly pigmented, water-insoluble compounds in the presence of metabolic activity of living cells.

tet-rate [F dim. of tette, nipple]. An appliance for enabling a weakly infant to obtain milk from its mother. It consists of a nipple shield and two tubes the mother sucks one of the latter and the milk flows to the infant's mouth through the other. Obs.

tet-rod'o-toxine (tet rod'o-teen, -tin, tet ro den sen, -in) Poisonous principle of the fish roe of Tetrodon.

tet ro-nal. $(C_9H_{20}O_4S_2)$; diethylsulfone-diethylmethane white crystalline powder insoluble in water used as a hypnotic.

tet'rose. A monosaccharide whose molecule contains only four atoms of carbon, as erythrose, $C_4H_8O_4$.

te-tro'tus [G. tetra-, four; ous, ear]. Having four ears. See d prosopus.

te-trox'ide, te trox'id. A binary compound containing four atoms of oxygen.

tet ryl. 1 See butyl. 2. Tetranitromethylaniline, picrylmethyl-nitramine $C_7H_5N_5O_8$. Yellow powder used as explosive and as pH indicator. Also called tetralite.

tet'ter [AS. teter] Any of various skin eruptions, particularly herpes, eczema, and psoriasis.

tex'is [G.]. Childbearing.

text blind'ness. See alexia.

tex'til form [L. textum, web; forma, form]. Reticular forming mesh.

tex"to blas'tic [textum, G. blastos, germ]. Forming regenerative tissue.

tex ture [L. textura, web, texture]. 1. Any organized substance or tissue of which the body is composed. 2 The arrangement of the elementary parts of tissue. O T —textural, adj.

tex'tus. A tissue. O T

Th Chemical symbol for thorium.

Thackrah, Charles Turner [English physician, 1795–1833]. First to investigate brass founders' ague dust diseases Author of first systematic English book on industrial disease (1831)

Thaddeus 1 Florence. See Alderotti.

thal" amen ceph a-lon. See thalamus.

thal amo- [G thalamos chamber]. A combining form denoting relating to the thalamus.

thal" amo-cor'ti-cal [thalamus; L. cortex, bark]. Pertaining to the thalamus and the cortex of the brain as thalamocortical fibers, sensory projection fibers to the cerebral cortex

thal" amo-len tic'u-lar [thalamus; L. lenticula, lentil] Pertaining to the thalamus and the lenticular nucleus

thal" amo mam mil lar"y (thal ah-mo mam'i-lerr ee) [thalamus; L. mamilla, breast]. Pertaining to the thalamus and the mammillary bodies.

thal" amo teg men'tal [thalamus; L. tegmentum, covering]. Relating to the thalamus and tegmentum

thal" amot o-my [thalamus; G tomē, cutting]. Bilateral destruction of the medial thalamic nuclei for treatment of depressive states, such as manic depression.

thal'a-mus (pl. thalami) [thalamos]. A mass of gray matter at the base of the brain, developed from the wall of the vesicle of the third ventricle, and forming part of the wall of the latter cavity The posterior part is called the pulvinar The thalamus sends projection fibers to the primary sensory areas of the cortex. The thalamus receives fibers from all parts of the cortex, and is also connected with the tegmentum and with fibers of the optic tract. —thalam'ic, adj

tha las sa ne'mi [G. thalassa, sea; anaimia, want of blood]. Thalassemia.

tha las-se'mi a. A chronic hemolytic anemia, with erythroblastosis, occurring in Mediterranean families and due to a specific gene influencing hemoglobin production. The classic condition thalassemia major due to homozygous genes and first described by Thomas B. Cooley is characterized by insidious onset commencing in early life, underdevelopment, mongoloid facies, and splenomegaly The blood picture shows hypochromic microcytic anemia, bizarre cells, many target cells, reticulocytosis, erythroblastosis, leukocytosis, stippling, decreased osmotic fragility of the erythrocytes, and slight bilirubinemia. Thalassemia minor carrier state due to a heterozygous condition, is characterized by hypochromic and microcytic erythrocytes exhibiting marked morphologic abnormalities (stippling, target cells) but no erythroblastosis and rarely anemia. Also called thalassanemia, Mediterranean disease hemolytic syndrome. Syn. thalassanemia, Cooley's anemia or disease (major and minor) familial erythroblastic or microcytic anemia, target-cell anemia, hereditary leptocytosis.

tha las"so-pho'bi [thalassa; G. phobos, fear]. A morbid fear of the sea.

tha las"so-ther'a-py [thalassa; G. therapeia, treatment]. Treatment of disease by sea voyages, sea bathing, sea air

thal'grain [G thallos, young shoot L. granum, grain]. Grain mixed with thallium sulfate and used as a poison for the destruction of rodents.

tha lic'trine (tha lick'treen, -trin, thal'ick) A poisonous alkaloid obtained from Thalictrum macrocarpum.

Tha-lic'trum [G thaliktron, meadow-rue] A genus of plants of the Ranunculaceae. Some species are cardiac poisons

thal lei' quin. The green substance produced when quinine or its salts is treated with a solution of chlorine or bromine followed by ammonia (called the thalleioquin reaction) Sometimes spelled thalleoquin, thalleoquine.

thal'line (thal'een, -in) A synthetic alkaloid, tetrahydro-para-methoxyquinoline, $C_{10}H_{13}NO$ having antiseptic and antipyretic action but not used because of its toxicity

thal'li um [G. thallos, young shoot]. Tl = 204.39. A bluish white metallic element; used in the manufacture of alloys, special glasses, and artificial gems. Salts of the metal have been used for epilation and for destruction of rodents; both uses are dangerous to humans since thallium is highly toxic.

Thal loph y ta [thallos; G. phyton, plant]. The phylum of plants having a thallus and no true roots, stems, and leaves It includes the algae and the fungi.

thal'lo-spore [thallos; G. spora, seed]. An asexual reproductive spore formed by the thallus or mycelium of lower plants. Types of thallospores include arthrospores, blastospores, and chlamydospores.

thal"lo-tox"i-co si [thallos; G. toxikon,

-*sis*, condition]. Poisoning by thallium or its derivatives.

thal'lus [*thallos*]. The simple type of plant structure without root, stem and leaf, characteristic of members of the phylum Thallophyta.

tha mat'ri a [G *thama*, often; *ouron*, urine]. Frequent urination.

than a to- [G *thanatos*, death]. A combining form meaning *death*.

than a to-bi" log'ic (than uh to-buy"o-lodj'ick) [*thanatos*; G *bios*, life; *logos*, word]. Pertaining to life and death.

than a to gno-mon'ic (than uh-to-no-mon ick, than uh-tog no-) [*thanatos*; G *gnômôn*, interpreter]. Indicative of death.

than" tog'ra phy [*thanatos*; G *graphein*, to write]. 1 A dissertation on death. 2 A description of symptoms and feelings while dying.

than'a toid [*thanatos*; G *eidos*, form]. Resembling death.

than"a tol'o-gy [*thanatos*; G *logos*, word]. The study of the phenomena of somatic death.

than"a to-ma'ni-a [*thanatos*; G. *mania*, madness]. Death by autosuggestion, as in individuals who believe they are under the spell of sorcerer.

than a to-pho'bi a [*thanatos*; G *phobos*, fear]. A morbid fear of death.

than top-sy [*thanatos*; G *opsis*, vision]. Autopsy necropsy. *Obs.*

than'a tos [G]. *I* *psychoanalysis*, all the instinctive tendencies which lead the organism toward death or senescence. Also called *death instinct*.

Thane George Dancer [*English anatomist*, 1850–1930]. Remembered for his contributions to human anatomy. Described his method of locating the central sulcus preparatory to cerebral operation, in which he used the middle point of an imaginary line passing from the root of the nose to the occipital protuberance. The upper extremity of the fissure lies one-half inch beyond this point.

thantis lozenge. A proprietary lozenge containing mercurochrome and saligyl alcohol.

Thap'si a [G deadly carrot]. A genus of plants of the Umbelliferae. The resin of various species has been used as counterirritant and vesicant.

thas sa no mal a. See *thalassemia*.

thau'ma trope [G *thauma*, wonder; *tropos*, to turn]. A device containing figures, on opposite sides of rotating board, which blend when in motion. It shows the duration of visual impressions.

thau mat'ro py. See *metaplasia*.

Thayer Sidney Allen [*American physician* 1902–]. Known for his isolation, with Edward Adelbert Doisy and C. D Veler of crystalline varian hormone from the urine of pregnant women. See also mouse unit.

Thayer William Sydney [*American biochemist*, 1864–1932]. Discovered, with G A. Blumer that the gonococcus may cause ulcerative endocarditis and septicemi (1896). Best remembered for his clinical study of trichinosis, typhoid fever and cardiology t all of which he contributed material knowledge.

Thaysen, Thorvald Einar Hess [*Danish physician*, 1883–1936]. Studied nontropical sprue, or celiac d sease, which he called idiopathic steatorrhea.

The a [G *thea*, goddess]. A genus of plants, now more properly named *Camellia*, from species of which tea is obtained. See *tea*.

theamin. Trade-mark for theophylline monoethanolamine, vasodilator and diuretic. See *theophylline*.

the ba'ic [G *Thêbaikos*, of Thebes]. Pertaining to, or derived from, opium. *Obs.*

the'ba ine (theeb uh-een, thi bay een, -in). $C_{19}H_{21}NO_3$. An alkaloid found in opium; it causes spasms like strychnine. Also called *paramorphine*.

Thebesius, Adam Christian [*German physician*, 1686–1732]. Gave the first description of the coronary valves, also called *Thebesian valve*. See also *Thebesian veins* under *vein*.

the ca (pl. *thecae*) [G *thêkê*, chest, case]. A sheath, especially one of tendon.

t. folliculi. The capsule of growing or mature ovarian (Graafian) follicle consisting of an inner vascular cellular layer the theca interna, and an outer fibrous layer the theca externa. —**thecal** *adj*

the ci'tis [*thêkê*; G -*itis*, inflammation]. Inflammation of the sheath of tendon.

the co-dont [*thêkê*; G *odous*, tooth]. Characterizing tooth which is fixed in separate socket, or dentition composed of such teeth.

the-co ma [*thêkê*; G -*ôma*, tumor]. A tumor of the ovary composed of cells derived from the ovarian stroma, in some instances resembling the theca elements of the follicle also called *thelioma*.

the co-ma ma, the"co-ma mata. See *Schulze*.

the co-steg no sis [*thêkê*; G. *stegnôsis*, making watertight]. The shrinking or contraction of the sheath of tendon.

the e-lin (thee uh-lin, thee'lin). See *estrone*.

the ol (thee uh lohl, lol, lawl). See *estriol*.

Theiler Max (1899–) South African physician and bacteriologist known for his extensive research on yellow fever proving it is virus disease, on dengue fever spirochetal jaundice, and J panese encephalitis. In 1951 he received the Nobel prize in medicine and physiology for the development of two vaccines against yellow fever.

Theiler virus. See under *virus*.

Thei le'ri (thigh-leer ee-uh) [after Arnold Theiler, Swiss bacteriologist, 1867 1936]. A genus of Protozoa, parasites of cattle, transmitted by tick.

thei"le ri'a sis (thigh"li-rye uh-sis) [*Theileria*; NL -*iasis*, condition]. Infection with *Theileria*. A disease of cattle in South Africa. Also called *East Coast fever Rhodesian tick fever*.

the'ine (thee een, -in, tee') [G. *thea*, goddess]. Caffeine.

Theis method. See Benedict and Theis's method.

Theis and Benedict's method for blood phenols. See under *method*.

the'ism [*thea*]. Old term for the toxic condition produced by the excessive use of tea.

the lal'gi [G *thêlê*, nipple *algos*, pain]. Pain in nipple.

the-las'is, the-las'mus (thi las mus) [*thêlê*]. The act of suckling.

The-la zi-a. A genus of threadlike nematodes with predilection for the eye of their hosts. A few cases have been reported in man.

T californiensis. A parasite of dogs and cats which is found on the west coast of the U S A.

T callipaeda. A parasite of dogs which is found in India and China.

the"la zi'a-sis [*Thelazia*; NL -*iasis*, condition]. An affection of the eye produced by infestation by worms of the genus *Thelazia*.

the'le plas"ty thel'y plas"ty [G. *thêlê*, nipple *plassein*, to form]. Plastic surgery of nipple.

the ler' thism [*thêlê*; G *erethismos*, provocation]. Erection of nipple.

thelestrin. Trade-mark for preparation of estrogenic substances in sesame oil.

the"li oma. See *thecoma*.

the li'tis [*thêlê*; G. -*itis*, inflammation]. Inflammation of nipple also called *mammillitis*.

puerperal t. Postpartum inflammation of the nipple of the breast.

the'li-um [*thêlê*]. 1. A papilla. 2. The nipple

the·lon·cus [*thel*-; G. *onkos*, tumor]. Tumor of nipple.
the"le·phleb"e·stem'ma [*thel*-; G. *phleps*, vein; *stemma*, wreath]. Venous circle around nipple.
the"lor·rha·gi·a (theel"ray'juh, -jee uh, -radj uh, -radj ee-uh) [*thel*-; G. *rhēgnynai*, to burst forth]. Hemorrhage from nipple.
the'le·thism [*thel*-; G. *thlismos*, pushing]. Projection of nipple, caused by contraction of its smooth muscle.
thel"y·ot'o·ky [G. *thēlys*, female; *tokos*, childbirth]. Parthenogenetic reproduction of females only. Also called *thelytocia*.
the'nar [G. palm]. 1. The palm of the hand. 2. The fleshy prominence of the palm corresponding to the base of the thumb.
the'nar. Pertaining to the palm, as thenar muscles.
Thénard, Baron Louis Jacques [French chemist, 1777–1857]. Known for his discovery of hydrogen peroxide (1818).
thenardol. Trade-mark for glycerin solution of urea peroxide which slowly liberates urea and hydrogen peroxide when applied to wounds and infected areas. The hydrogen peroxide is germicidal, the urea stimulates wound healing, and the glycerin draws plasma from deeper parts of the wound.
thenfadil hydrochloride. Trade-marked name for *thenyldiamine hydrochloride*.
then"yl·di'a·mine hy"dro·chlo'ride. 2-[(2-Dimethylaminoethyl)-3-thenylamino]pyridine hydrochloride, $C_{14}H_{19}N_3S.HCl$; an antihistaminic substance. See *thenfadil hydrochloride*.
thenylene hydrochloride. A trade-marked name for *methapyrilene hydrochloride*.
then yl·pyr' amine (then il-pirr'ah-meen, min) N,N-dimethyl-N'(2-thenyl)-N'(2-pyridyl)-ethylenediamine, $(CH_3)_2NCH_2CH_2N(C_5H_4N)(CH_2C_4H_3S)$, or methapyrilene, used in the form of its hydrochloride salt as an antihistaminic agent.
then yl·pyr' amine hy"dro·chlo'ride. Methapyrilene hydrochloride.
The"o·bro'ma [G. *theos*, god; *brōma*, food]. A genus of trees of the Sterculiaceae. The seeds of *T. cacao* yield a fixed oil (theobroma oil) and contain the alkaloid theobromine. The seeds are used in the preparation of chocolate and cocoa.
the·o·bro·ma oil (*oleum theobromatis*). A yellowish white solid consisting chiefly of the glycerides of stearic, palmitic, oleic, and lauric acids, obtained from the roasted seeds of *T. cacao*. It melts between 30° and 35° C. and is used in the preparation of suppositories, in ointments, and as an emollient. Also called *cacao butter*, *cocoa butter*.
the·o·bro'mine (thee"o-bro'meen, -min). An alkaloid, 3,7-dimethylxanthine, $C_7H_8N_4O_2$, differing from theophylline only in the position of the methyl groups, found in cacao beans and kola nuts and usually obtained as a by-product in the manufacture of cocoa and chocolate. A diuretic and myocardial stimulant. Dose, 0.3–0.6 Gm. (5–8 gr.)
t. calcium salicylate. A mixture of theobromine calcium and calcium salicylate, representing 44% of theobromine; more soluble than theobromine.
t. sodium acetate. An approximately equimolecular mixture of theobromine sodium and sodium acetate representing from 55–65% of theobromine. It is a white, crystalline, hygroscopic powder which absorbs carbon dioxide from the air with the liberation of theobromine. One Gm. dissolves in about 1.5 cc. of water. See *thesodate*.
t. sodium salicylate. An approximately equimolecular mixture of theobromine sodium and sodium salicylate representing about 46.5% of theobromine. See *diuretin*.
theocalcin. Trade-mark for a brand of theobromine calcium salicylate.
theocin. Trade-mark for *theophylline*.
theocin soluble. Trade-mark for *theophylline sodium acetate*.
theoglycinate. Trade-mark for *theophylline sodium glycinate*.
the"o·ma'ni·a [*theo*-; G. *mania*, madness]. 1. Religious mania. 2. Mental disorder in which the individual believes himself to be a divine being. —**theomaniac**, *n*.
theominal. Trade-mark of a tablet containing luminal and theobromine.
the"o·pho'bi·a [*theo*-; G. *phobos*, fear]. Morbid fear of God.
the"o·phyl'line (thee o-fil'een, -in, thee-off'il-een, -in, thee o-fil'een'). An alkaloid, 1,3-dimethylxanthine, $C_7H_8N_4O_2.H_2O$, obtained from tea leaves and also prepared synthetically. It differs chemically from theobromine only in the position of the methyl groups. It is a white, crystalline, odorless, bitter-tasting powder soluble in about 120 parts of water; freely soluble in alkali hydroxides and ammonia. It is a diuretic and vasodilator; it also relaxes bronchial spasms. Dose, 0.2–0.3 Gm. (3–5 gr.)
t. calcium salicylate. An approximately equimolecular mixture of theophylline calcium and calcium salicylate, representing about 48% of theophylline.
t. diethanolamine. A compound of 1 mol of theophylline with 1 or 2 mols of diethanolamine.
t. ethylenediamine. Aminophylline.
t. isopropanolamine. Represents approximately 70% of theophylline. Dose, 0.06 Gm. (1 gr.) t.i.d. See *theopropanol*.
t. methylglucamine. A mixture of theophylline and methylglucamine.
t. monoethanolamine. A white, crystalline powder representing about 75% of anhydrous theophylline. Dose, 0.2–0.3 Gm. (3–5 gr.)
t. sodium acetate. An approximately equimolecular mixture of theophylline sodium and sodium acetate, representing about 60% of theophylline.
t. sodium glycinate. An equilibrium mixture containing theophylline sodium $(C_7H_7N_4NaO_2)$ and glycine in approximately molecular proportions buffered with an additional mole of glycine. It has the actions of theophylline but is less irritating than other soluble derivatives. See *clarophyl*, *dorsaphyllin*, *glynazan*, *glytheonate*, *synophylate*, *theoglycinate*.
the"o·ple'gi·a [*theo*-; G. *plēgē*, stroke]. Apoplexy.
theopropanol. Trade-mark for theophylline isopropanolamine. See under *theophylline*.
the·o·ret'i·cal [G. *theōrētikos*, speculative]. Based on theory; speculative.
the'o·ry [G. *theōria*, beholding, speculation]. The abstract principles of a science. Also, a reasonable supposition or assumption, generally better developed and more probable than a mere hypothesis.
alternation t. A theory on the nature of antigen-antibody reactions which assumes that the antigen is multivalent and the antibody is bivalent. According to the theory, the secondary phase of antigen-antibody reactions, such as agglutination and precipitation, is due to the action of specific chemical forces operating between the antigen and antibody molecules. The theory assumes that the primary and secondary stages of antigen-antibody reactions are produced by the same phenomena, for example, chemical. Therefore, aggregates of antigen and antibody molecules would be bound together by specific chemical linkages. One antibody molecule would be united with two or more

body molecules within the mass, or one molecule of antibody would be united with one or at the most two molecules of antigen. Also called *lattice t.*, *framework t.*, *multivalent t.*

antichromatic t. A theory proposed by Hartridge, postulating suppressor mechanism in the retina or brain which depresses the sensitivity t both blue and yellow to explain the correction of chromatic aberrations, i.e., th blue and yellow fringes surrounding images on the retina.

backward failure t. An ttempt to explain th origin of the symptoms and signs of congestive heart failure by increased peripheral and pulmonary venous pressures.

cell t. The theory that the cell is the unit of organic structure, and that cell formation is the essential process of lif and its phenomena. Also called *cell doctrine*.

closed circulati n t. The theory that in the spleen blood moves directly from the arteries of the ellipsoids, through capillaries, int th venous sinusoids. Blood escapes into th pulp through openings in th walls of the sinusoids.

Cohnheim t. A classical theory f the origin of tumors. Rests of embryonic cells are misplaced, remain dormant, and later may go on to produce neoplasms. Also called *fetal rest-cell t.*, *embryonal t.*

cytocrine t. The postulated transfer of pigment granules from melanocytes directly into epidermal cells opposed to *eccrine* or *endocrine* transfer

dichromatic t. According to Hering, when two of the four basic-color sensations are missing, most frequently the red-green, wavelength is discriminated along th visible spectrum in terms of two-color processes.

dualist t. of hematopoiesis. A polyphyletic theory of hemopoesis involving tw stem cells, myeloblast and lymphoblast, each having differ ent potencies.

d plicity t. See *duplicity theory*.

electrosome t. Regaud theory that the mitochondria are the centers of specific chemical ction l cells, capable of synthesizing certain substances from m terials selected from the cytoplasm.

embryonal t. See Cohnheim *t.*

extravascular t. of erythrocyte formation. A theory that erythrocytes are formed in the reticular mesh of bon marrow outside of the circulatory system and enter it through sinusoids

fetal rest-cell t. See Cohnheim *t.*

Folin t. The bulk of excreted nitrogen is of exogenous origin and does not arise by the metabolism of tissue protein.

germ-layer t. A young embryo establishes three superimposed cellular plates, the primary germ layers, which are called ectoderm, mesoderm, and entoderm. According to the germ-layer theory the kin, ervous system and sense organs are derived from ectoderm, the inner lining of the primitive digestive canal from entoderm, and muscles, blood vessels, connective tissues and organs of excretion and reproduction from mesoderm.

germ t. The theory that all contagious nd infectious diseases are caused by microorganisms.

intravascular t. of erythrocyte formation. A theory that erythrocytes are formed inside delicate blood essels in bone marrow from the lining of these vessels.

Knoop's t. The theory that fats are metabolized by β-oxidation.

lock and key t. An enzyme to be effective must fit th molecule of the substrate somewhat as key fits into lock. Some enzymes appear to be m ster keys in that they fit into considerable number of substrates. This analogy of enzyme pecificity was suggested by Emil Fischer

Meyer-Overton t. An explanation of the [illegible] of anesthetics. The intensity of narcotic [illegible] an anesthetic may depend on the physical [illegible] between the anesthetic, the lipids, and other [illegible] constituents, particularly water. It is the partition coefficient which indicates how substance [illegible] seminates in an emulsion of fat and water.

monochromatic t. A theory postulating [illegible] blindness, absence of color perception, [illegible] of arrested development of receptors at [illegible] age. Th red-green and yellow-blue mechanisms are blocked in otherwise intact cones with [illegible] luminosity mechanism.

monophyletic t. of hematopoiesis. [illegible] theory

neounitarian t. of hematopoiesis. A [illegible] that the lymphocyte of normal blood does not develop into all other cell types but that, under proper environmental conditions as in tissue cultures or in pathologic states, the lymphocyte cells that morphologically resemble lymphocytes can become multipotent.

neuron t. See *neuron doctrine*.

omega oxidation t. A theory predicting that oxidation of certain fatty acids of medium chain length occurs at the end methyl group, originally postulated to explain the formation of dicarboxylic acids from monocarboxylic acids in vivo.

open circulation t. The theory that in the spleen blood moves from the arteries of the ellipsoids into the tissue of the pulp cords, and is translated back into the vascular system through openings in the walls of the venous sinusoids.

open-closed circulation t. The theory that the spleen the circulation of blood can be either open or closed, depending on circumstances

Petzval t. A theory which states that the sum of the product of the refractive indexes and focal lengths of two thin lenses must equal zero [illegible] t attain fairly flat field free from astigmatic conditions.

place t. f heari g. The theory that each frequency of sound is detected by structure [illegible] specific location on the basilar membrane of the inner ear Also see *resonance t. of hearing*.

polychromatic t. A theory of color vision, advanced by Hartridge (1941) postulating [illegible] types of receptors possessing eight [illegible] curves. (1) crimson, (2) orange, (3) yellow [illegible] green, (5) blue-green, (6) blue, (7) blue-violet.

polyphyletic t. of hematopoiesis. A hypothesis concerning the mode of origin of blood cells which assumes the development of specific [illegible] for each cell type.

quantum t. According to Max Planck, [illegible] energy is given off from atoms or molecules [illegible] small discrete lots called quanta, and is absorbed in like manner The discharge of energy from an atom accompanies the passing of an electron from high energy level to lower level (from larger t smaller orbit) and the passage of an electron from smaller t greater orbit is accompanied by an bsorption of energy. The energy discharged is equal to *h* where *h* is the Planck constant and is the frequency of the radiated energy. See *quantum constant*.

quantum t. of color vision. The theory that retinal cone when stimulated by light, [illegible] the power of transmitting along its nerve fiber impulses of different kinds, depending upon the quantum umber or wavelength of the light [illegible] is, light from the violet end of the spectrum [illegible] evoke nerve impulses different from those generated by rays from the red end of the spectrum.

recapitulation t. The theory that the [illegible] organism in its development from the ovum [illegible]

through series of stages which resemble series of ancestral types through which the species passed in its evolutionary history. This is also called the *biogenetic law*. Haeckel recognized differences between those structures which are adaptive to the embryonic, larval, or fetal mode of life and those which may be regarded as inherited from the ancestral types. The former he included under cenogenesis and the latter under palingenesis.

Reed-Frost t. (*of epidemics*) *In epidemiology*, theory intended to cover acute communicable diseases, based on an expression of the probable number of cases at time $T + 1$ in terms of known facts at time T. The theory is one that proceeds stepwise in time and does not give continuous time curve; it is not expected to describe the course of particular epidemic, but allows the exploration of variety of epidemiologic principles.

resonance t. of hearing. The theory that the inner ear contains tuned resonators that stimulate specific nerve endings when tone of their resonant frequency enters the ear. Usually associated with place theory of hearing.

Shaffer's t. of oxidation catalysis. A theory advanced by P. A. Shaffer to explain why catalytic amounts of certain ions are needed to establish steady potential in electromotively sluggish systems. In its broader aspects it has important implications for the mechanism of biological oxidation-reduction systems.

side-chain t. A chemical theory explaining the phenomena of immunity by the action of antibodies which, when circulating in an organism, unite with and render harmless the antigen and thereby prevent the antigen from attaching itself to the chemical system of the protoplasm.

sound pattern t. The basilar membrane is supposed to vibrate as whole, but with nodes, or lines of rest, in different places according to the pitch of the note.

static t. Goltz theory that every position of the head causes the endolymph of the semicircular canals to exert greatest pressure upon some part of the canals, thus in varying degree exciting the nerve endings of the ampullae.

telephone t. of hearing. The theory that the auditory nerve transmits nerve impulses to the brain having the same frequency as the sound waves striking the ear.

theories of hematopoiesis. The dualist, neounitarian, polyphyletic, trialist, and unitarian theories of hematopoiesis. See extravascular and intravascular *t. of erythrocyte formation*.

trialist t. A polyphyletic theory of hemopoiesis involving three stem-cells, each having different potencies: usually lymphoblast, myeloblast, monoblast.

trituberculer t. The theory of Cope, later modified by Osborn, that mammalian molar teeth are derived phylogenetically from primitive three-cusped teeth.

unitarian t. A theory of blood-cell formation which supposes that all blood cells come from single parental blood cell, the hemocytoblast. Syn. *monophyletic t. of hematopoiesis*.

unitarian t. of antibodies. One opposed to the belief that each different serologic reaction is based on separate antibody, maintaining to the contrary that the same antibody can perform all or most of these functions. Of necessity it holds that the number of hypothetical entities is limited.

Wieland t. of hydrogen activation. Certain hydrogen atoms of the metabolite (substance oxidized) are activated by an enzyme (dehydrogenase) so that they may be removed by hydrogen-acceptor which can be molecular oxygen or other oxidizing agent.

the" ther' py [G. *theos*, god; *therapeia*, treatment]. The treatment of disease by prayer and religious exercises.

thephorin. A trade-mark for brand of the antihistaminic substance phenindamine.

thephyldine. A trade-mark for *aminophylline*.

theramates. A trade-mark for tonic preparation containing mixed glycerophosphates and thiamine hydrochloride.

ther" peu'sis (therr"uh-pew'sis) [G., treatment]. Therapeutics.

ther" peu'tic [G. *therapeutikos*, inclined to serve]. Pertaining to therapeutics, curative.

ther" -peu'tics [*therapeutikos*]. The branch of medical science dealing with the treatment of disease. Also see therapy *treatment*.

ther"a-peu'tist [*therapeutikos*]. One skilled in therapeutics.

the ra-pi'a ste-ril'i-sans mag'na (therr ah-pye uh stl-ril'l-sans mag nuh, thi-ray pee-uh) [L.]. Ehrlich's aim of treatment by destruction of the parasites in the body of patient without doing serious harm to the patient; it is accomplished by the administration, in one large dose, of sufficient quantity of drug having special affinity for the parasite causing the disease.

ther' pist. Therapeutist.

physical t. An individual professionally trained in the utilization of physical agents for therapeutic purposes.

ther'a-pist-vec'tor *In psychoanalysis*, the mature affect expressed by person in response to the immature needs of another person.

ther' py [G. *therapeia*, treatment]. Treatment. Also see *treatment*.

anticoagulant t. The use of drugs that prevent the clotting of blood, such as heparin and dicoumarin, in the treatment of thrombosis.

biologic t. The use of biologic products such as serums, vaccines, antitoxins, and antibiotics.

Chaoul t. See contact *t*.

chemical t. See *chemotherapy*.

cold t. The use of cold in any form as a therapeutic agent.

collapse t. The treatment of pulmonary tuberculosis by any surgical procedure designed to decrease lung volume, such as artificial pneumothorax, extrapleural thoracoplasty, or interruption of the phrenic nerve.

contact t. Superficial -ray therapy which is delivered by special low-voltage -ray tube. The beam is emitted generally from one end of th tube. Th tube is shockproof and small, and may be placed in direct contact with the skin or introduced into body cavities.

corrective t. *I physical medicine*, medically supervised program of physical exercise and activities for the purpose of improving or maintaining the health of the patient through individual or group participation. Specifically techniques have been designed to conserve and increase neuromuscular strength and skill, to reestablish or improve ambulation, to improve habits of personal health, and to promote relaxation by adjustment to physical and mental stresses.

Curie t. Treatment of diseases with rays emanating from radioactive substances.

diathermic t. Use of electromagnetic radiation. See *diathermy*.

electroshock t. Treatment of mental patients, particularly those suffering with melancholia, mania, or catatonia, by passing current through the brain (temple to temple), 85 to 110 volts and

500 milliamperes for 1/10 to 1/5 of second. The patient does not recall the treatment. Better and safer than the metrazol shock therapy

endocrine t. The treatment of disease by the administration of extracts of the endocrine glands.

fangotherapy Treatment of the extremities by immersing them in hot mud.

fever t. Treatment of disease by artificially induced fever

fluid t. Administration of fluids to dehydrated patients determinations must be made as to th degree of dehydration and amount of electrolyte imbalance. Fluids may be given orally or intravenously depending upon circumstances; subcutaneous administration is rarely used.

fluorine t. The use of fluorine, as fluoride, for the control of dental caries. The term covers topical application of fluorine to th teeth, the addition of fluorine to water supplies, o the internal administration of fluorine.

glandular t. The treatment of disease by glandular extracts, especially those obtained from organs which furnish internal secretions necessary to the bodily economy

gold t. The injection of various preparations of gold such as inorganic or organic salts or as colloid for the treatment of lupus erythematosus, various dermatologic tuberculids, and rheumatoid arthritis.

group t. *I psychoanalysis*, the therapy given to group of patients by professional therapist, and based on the effect of the group upon the individual and his teractio with the group

heat t. The treatment of disease with heat by means of hot baths, short-wave electric fields, heat lamps, hot-air cabinets.

hormone t. The treatment of disease with hor mones.

immunization t. Use of vaccines or antiserums to produce immunity against specific disease.

insulin shock t. Treatment of nervous disease by large doses of insulin

I terstitial irradi tion t. Radium therapy with various types of implants or seeds filled with radium salts or radon.

intracavitary irradiation t. Radium therapy by means of tubes, single or in strings of two or more, inserted into cavity of the body

intravenous t. Introduction of therapeutic agents into the blood stream through vein.

isotope t. Therapy with substances made artificially radioactive by bombardment with positive ions or neutrons.

maggot t. The treatment of osteomyelitis by the introduction of live larvae of the bluebottle fly into the open wound. The larvae clean the wound by eating the necrotic material. Also called *Baer treatment.*

malarial t. The artificial induction of malaria for its therapeutic effect in central nervous system syphilis.

metrazol shock t. Treatment of persons suffering with melancholia and with catatonic form of schizophrenia with an intravenous injection of metrazol, which causes convulsions d produces temporary brain changes resulting in elevation of the mood t normal levels and promotion of or real mental animation Also see electroshock *t.*

metri occupational t. A form of occupational therapy in which the amount of work patient does in given time is measured to help form basis for an estimate of the amount of ork he can or should d (*work tolerance*) most useful with chronically ill patients with limited physical capacities. *Syn., measured work t.*

mucin t. The administration of mucin to protect the gastric mucosa against the action of pepsin and hydrochloric acid by protecting coating of the neutralization of the hydrochloric acid.

multiple t. *I psychoanalysis*, the therapy given to one patient by a group of therapists.

musical t. The use of music for therapeutic effect, especially in treating mental disorders.

neutr n t. Irradiation with neutrons for therapeutic purposes.

nonspecific protein t. The therapeutic use of any protein which causes a response in the body other than one to which the patient allergic

nonspecific t. That used for its general constitutional effect instead of removing or neutralizing the etiologic agent.

occupational t. Any prescribed mental physical activity such as hobbies, crafts, household tasks, gardening, or simple tasks designed to aid the patient in his recovery from or during the chronic course of, any disabling condition.

oxygen t. The administration of oxygen by means of nasal catheter face mask, or oxygen tent. It has also been given subcutaneously and intravenously.

physical t. The treatment of disease and injury by physical means, such as light, heat, cold, water, electricity massage, and exercise, performed by trained personnel under the prescription of physician.

protein shock t. The injection of foreign protein subcutaneously or intravenously for the therapeutic effect of the resulting reaction.

radiant light t. The use in physical therapy of curative rays derived from the sun or artificial sources as ultraviolet and infrared radiation.

radiation t. The treatment of disease with any type of radiation, but most commonly with ionizing radiation, including use of roentgen rays, radium, or other radioactive substances; such use of ionizing radiation is usually called radiotherapy.

radi on t. Exposure of part to high-intensity radium emanations, usually for their destructive effect on malignant tissues.

replacement t. The use of endocrine tissue to replace function which has been destroyed surgically or has ceased naturally

roentgen t. Treatment with roentgen rays. See *x-ray t.*

rotation t. A type of radiation therapy in which either the patient or the source of radiation is in conti nous rotation during exposure.

shock t. The treatment of psychiatric patients by inducing coma, with or without convulsions, by means of drugs as insulin or metrazol or by passing an electric curre t through the brain. Also see electroshock *t.*, insuli shock *t.*, metrazol shock *t.*

solar t. Treatment of disease by exposing the body to the direct rays of the sun or by the use of sun lamp; heliotherapy

specific t. One having proved destructive effect against specific etiologic factor or having definite curative effect upon particular disease.

substitutional t. The use in treatment of substances the secretion of which has failed in whole or in part, or which, being formed, are unavailable to the body

suggestion t. Treating disordered states by means of suggestion.

supplementary x-ray t. The irradiation of the affected areas with x-ray in addition to the use of radium in the treatment of carcinoma.

telecurie t. Therapy in which the radioactive substance is located t some distance from the lesion to be treated.

teleradium t. External radium therapy with the radium source t some distance from the skin.

tissue t. of Filatov. Implantation of small pieces of refrigerated placentas from mothers with negative Wassermann reactions in the subconjunctiva of patients with various eye diseases useful for keratitis and iridocyclitis.
vaccine t. The attempt to produce active immunity against disease by the use of specific antigens. See *vaccination*.
work t. See occupational *t*.
x-ray t. Therapy with roentgen rays.

ther″en-ceph′ -lous [G. *thēr*, beast of prey; *enkephalos*, brain]. A term applied to skull in which the lines from the inion and nasion to the bregma make an angle of from 116° to 129°.

the-ri′a-ca [G. *thēriakos*, concerning venomous beasts]. Treacle.
t. Andromachi. Venice treacle, compound containing nearly 70 ingredients, and used as an antidote against poisons. *Obs.*

The ri di′i dae (theer′ dye′i-dee) [G. *thēridion*, small animal]. A family of spiders which includes the genus *Latrodectus* or black widow spider.

the″ri-od′ic [G. *thēriōdēs*, full of wild beasts, malignant]. Malignant.

the″ri-o ma [G. *thērion*, wild animal; -*ōma*, tumor]. A malignant ulcer or tumor.

the″ri-o-mim′e-ry [*thērion*; G. *mimos*, mime]. Imitation of animals.

therm [G. *thermē*, heat]. Small calorie.

ther′mal [*therm*]. Pertaining to heat.

ther″mal ge′si a [*therm*; G. *algēsis*, sense of pain]. Pain caused by heat.

ther-mal′gi a. See *causalgia*.

therm-an″al ge si-a. See *thermoanalgesia*.

therm-an es-the′si-a. See *thermoanesthesia*.

ther″ma-tol′o-gy [*therm*; G. *logos*, word]. The scientific use or understanding of heat or of the waters of thermal springs in the cure of disease. —thermatolog′ic, *adj.*

therm″es the si-a (therm ess thee zhuh, -zee-uh) [*therm*; G. *aisthēsis*, sensation]. 1. Temperature sense for heat. 2. Sensitiveness to heat.

therm″es-the″si-om e-ter (therm ess-thee zee-om′ ter, sen-si-) [*therm*; *aisthēsis*; G. *metron*, measure]. An instrument for measuring the sensibility to heat of different regions of the skin.

ther′mic [*therm*]. Pertaining to heat.

ther′min. Tetrahydro-β-naphthylamine hydrochloride, C H NH HCl. A white, crystalline compound once used as mydriatic. It is pyrogenic.

ther′mite. Finely powdered aluminum mixed with iron oxide and capable of being ignited with magnesium ribbon the resulting reaction produces temperature of about 3000° C. used in welding.

ther′mo- [*therm*]. A combining form meaning *heat*.

ther″mo-al ge′si-a. See *thermalgesia*.

ther″mo-an″al ge si-a (thur″mo-an al-jee′zee uh, zee uh) [*therm*; G. *analgēsia*, want of feeling]. Insensibility to heat or to contact with heated objects.

ther″mo an es the′si-a (thur mo an ess thee zhuh, see uh) [*therm*; G. *anaisthēsia*, lack of sensation]. Loss of the perception of thermal impressions, condition sometimes present in syringomyelia several nerve diseases and leprosy.

ther″mo-cau′ter y [*therm*; G. *kautērion*, branding-iron]. A cautery which depends for its action upon heat delivered the metal end of the instrument, either by direct action of flame aided by the pressure of current of hot air as in the Paquelin cautery or by the passage of electric current.

ther″mo-chem′is try [*therm*; G. *chymos*, juice]. That branch of chemical science which treats of he mutual relations of heat and chemical changes.

ther″mo-chro′ism [*therm*; G. *chroia*, color]. The property of transmitting some thermal radiations while absorbing or changing others.

ther″mo-co ag″u-la′tion [*therm*; L. *coagulare*, to cause fluid to curdle]. 1. A method of destroying tissue by means of electrocautery or high-frequency current. 2. A method by which one or several layers of the cerebral cortex in a desired area can be destroyed without alteration of the surrounding tissue.

ther′mo-cou ple (thur′mo-cup el) [*therm*; L. *copula*, bond]. A pair of metallic plates or wires forming junction, in which thermoelectromotive force is formed under the influence of heat. Thermocouple principle is also applied in the measurement of skin temperature.

ther″mo-dur′ic [*therm*; L. *durus*, hard]. Capable of resisting high temperatures.

ther″mo-dy nam′ics (thur mo-dye-nam′icks, -dinam icks) [*therm*; G. *dynamis*, power]. The science which treats of the relations of heat and other forms of energy.

ther″mo-es the si-a. See *thermesthesia*.

ther″mo-es the″si-om e ter. See *thermesthesiometer*.

ther″mo-ex-ci′ta-to-ry [*therm*; L. *excitare*, to rouse up]. Exciting the production of heat.

ther″mo-gen′ic, ther″mo-ge-net′ic [*therm*; G. *genethos*, from *gignesthai*, to be produced]. Pertaining to thermogenesis; producing heat.

ther″mo-gen′ics [*therm*; *genethos*]. The science of the production of heat.

ther-mog′e-nous (thur-modj′i-nus) [*therm*; *genethos*]. Thermogenic.

ther″mo-hy″per al-ge′si-a (-al-jee zee uh, -see-uh) [*therm*; G. *hyper*, over; *algēsis*, sense of pain]. The condition in which the application of heat causes excessive pain.

ther″mo hy″per-es the si-a (-ess-thee zh h, -zee-uh) [*therm*; *hyper*; G. *aisthēsis*, sensation]. Abnormal sensitiveness to the application of heat.

ther″mo hy pes-the′si a [*therm*; G. *hypo*, under; *aisthēsis*]. Abnormal indifference or insensibility to heat or to contact with heated objects.

ther″mo-hy″po-es the si a. See *thermohypesthesia*.

ther″mo-in-hib′i to ry [*therm*; L. *inhibere*, to restrain]. Inhibiting the production of heat.

ther″mo-la′bile (thur′mo lay′bil) [*therm*; L. *labilis*, slipping]. Destroyed or changed by heat.

ther mol′y sis [*therm*; G. *lysis*, loosing]. 1. Dissipation of animal heat. 2. Chemical decomposition by means of heat. —thermolyt′ic, *adj.*

ther″mo-mas-sage (thur mo-ma-sahzh′) [*therm*; F. *massage*]. Massage with application of heat.

ther mom e ter [*therm*; G. *metron*, measure]. An instrument for measuring temperatures or thermal states, generally consisting of substance capable of expanding and contracting with different temperatures, and graduated scale by means of which variations in the expansion of the substance can be determined.

air t. One in which the expansive substance is air.
alcohol t. One in which the expansive substance is alcohol.
centigrade t. One in which the freezing point for water is at 0° and the boiling point at 100°. The interval is divided into 100 parts of 1° each. Also called Celsius t.
clinical t. One used to ascertain the body temperature so constructed that the maximum reading remains stationary after removal of thermometer from the patient.
electric t. A clinical thermometer consisting of resistance thermometer or thermocouple with calibrated indicating or recording meters.

Fahrenheit t. One in which the interval between the freezing point and the boiling point for water is divided into 180 equal parts, each called degree. 32° F represents the freezing point and 212° F the boiling point of water

fever t. A clinical thermometer

hemigrade t. A thermometer which is not now in use, which is so calibrated that zero represents freezing, 100° represents normal body temperature (98.6° F or 37° C.) and 270° the boiling point.

kata t. See *katathermometer*

maximum and minimum t. One which registers the maximum and minimum temperatures to which it has been exposed.

mercurial t. One in which the expansive substance is mercury

Réaumur t. One in which the freezing point of water is 0° and the boiling point 80° with an interval of 80 points or degrees.

self-registering t. See maximum and minimum *t.*

spirit t. One in which alcohol or ether is used.

surface t. One for registering the surface temperature of any portion of the body

wet and dry bulb t. A device for determining the relative humidity It consists of two thermometers, the bulb of one of which is kept saturated with water vapor The evaporation of water vapor has cooling effect which depresses the temperature. The temperature difference between the two thermometers depends upon the relative humidity

ther"mo met'ric [*therm*; *metron*]. Pertaining to thermometer or to thermometry

ther mom try [*therm*; *metron*]. Measuring temperature with the thermometer

ther"mo-neu ro sis [*therm*; G *neuron*, nerve *-osis*, condition] Pyrexia of vasomotor origin.

ther moph a gy [*therm*; G *phagein*, to eat]. The habit of swallowing very hot food.

ther'mo phile (thur mo-file, -fil) [*therm*; G. *philein*, t love]. A microorganism for which the optimum temperature for growth is between 50°–55° C.; found in soil and water especially hot springs.

ther mo-phil'ic [*therm*; *philein*]. Pertaining to microorganism which grows best t high temperatures.

ther"mo-pho'bi-a [*therm*; G *phobos* fear]. Morbid dread of heat.

ther'mo-phore [*therm*; G. *phoros*, bearing]. Any appliance adapted to hold heat as used in local treatment, receptacle for hot water

ther"mo-phyl'ic, ther"mo-phy'lic [*therm*, G. *phylassein*, to guard]. Resistance to the effect of heat.

ther'mo-pile [*therm*; L. *pila*, pillar]. An instrument for measuring temperatures; it consists of series of thermocouples which permit measurement of minute temperature effects.

ther"mo ple'gi [*therm*; G *plēgē* stroke]. Sunstroke

ther"mo pol'yp ne [*therm*; G *polys*, many *pnein*, breathing hard]. Rapid respiration due to high temperature. —**thermopolypneic**, *adj*

ther"mo-reg"u la'tion [*therm*; L. *regulare*, t regulate]. The regulation of heat production and heat loss to maintain normal temperature, as of the human body

ther"mo reg u la tor See *thermostat*.

ther'mo-scope [*therm* G *skopein*, to examine]. An instrument for detecting hanges or differences in temperature.

ther"mo sta'ble [*therm*; L. *stabilis* stable]. Resistant to temperatures bove certain critical temperature, 50° C —**thermostabil'ity** n.

ther'mo-stat [*therm*; G *statos*, standing]. A device for automatically regulating and maintaining constant temperature.

ther"mo-ste-re sis [*therm*; G *sterēsis*, deprivation]. Deprivation of heat.

thermostromuhr of Rein. A flowmeter which measures the changes in the temperature of the blood resulting from its passage over an heated coil surrounding vessel.

ther"mo-sys tal'tic [*therm*; G. *systaltikos*, drawing]. Contracting under the influence of heat; pertaining t muscular contraction due to heat. —**thermosys taltism**, n.

ther"mo tac'tic op'ti mum. That part of room, cage, or floor which is most preferable in temperature, and to which an animal ill go for comfort, the assumption is that the temperature stimuli on the skin of the feet control the response.

ther"mo tax'is [*therm*; G. *taxis*, arrangement]. 1 The regulation and correlation of heat production and heat dissipation. 2. Thermotropism —**thermotactic, thermotaxic**, *adj*.

ther"mo-ther'a py [*therm*; G *therapeia*, treatment]. Treatment of disease by heat of any kind.

ther mo to-nom e-ter [*therm*; G. *tonos*, stretching *metron*, a measure]. An apparatus for determining the amount of muscular contraction produced by thermic stimuli.

ther"mo-tox'in [*therm*; G. *toxikon*, poison]. A poison produced by heat in the body

ther"mo-tra che-ot o-my (thur mo tray"kee-ot'o-mee) [*therm*; G *trachys*, rough; *tomē*, cutting]. Tracheotomy by means of the actual cautery

ther mot'ro pism [*therm*; G *tropos*, to turn]. That property possessed by some cells and organisms of moving or growing toward, or away from, heat.

the ro-morph [G. *thēr* beast of prey; *morphē*, form] 1 On of an extinct order of reptiles, the Theromorpha, possible ancestors of the mammals. 2 A monster resembling an animal.

the"ro mor phi a the ro mor'phism [*thēr*; *morphē*]. Apparent reversion, in a human subject, to an animal form of lower type.

the sau"ris-mo sis [G. *thēsauros*, treasury -osis condition]. A storage disease, characterized by excess deposition of exogenous or endogenous substances within the body

the si [G placing]. A *dissertation*. Usually the essay presented by the candidate for degree.

theosodate. Trade-mark for brand of theobromine sodium acetate.

the'tin, the'tine. Any of group of sulfur compounds, structurally resembling the betaines having the general formula R SCH COO, where R is commonly an alkyl group, as directly bound.

thev'e tin [after André *Thevet*, French author and traveler 1502–90]. A poisonous glucoside with digitalislike action, from the seed of *Thevetia neriifolia*.

thi"a-cs ta-zone, thi"a-cet'a-zone. Brand or generic name for *amithiozone*

thiaillir A proprietary thiamine hydrochloride brdr

thi' min thi'a mine. See *thiamine hydrochloride*

thi min-ase. An enzyme, present in raw fish and in certain bacteria, which catalyzes cleavage of thiamine into pyramin (pyrimidine derivative) and thiazole derivative.

thi' min chlo ride Thiamine hydrochloride.

thi mine hy"dro- hlo ride (thigh a) meen -min) (*thiaminae hydrochloridum*). $C_{12}H_{17}ClN_4OS$ HCl. White crystals or powder soluble in water An essential vitamin occurring in many natural sources, especially the seed coats of cereal grains; frequently it occurs in the form of the pyrophosphoric acid ester known as cocarboxylase. Commercial thiamine hydrochloride is largely synthetic. A deficiency of this vitamin is evidenced

chiefly in the nervous system, the circulation, and the alimentary tract. Among the symptoms are irritability, emotional disturbances, multiple neuritis, increased pulse rate, dyspnea, edema, loss of appetite, reduced intestinal motility. A normal adult requires about 3 mg. (1/20 gr.) daily. Syn., *thiamin chloride, vitamin B_1, aneurin, aneurine hydrochloride.* Also called *thiamin* and *thiamine*, although these names are sometimes given to the base form of the vitamin. See Table of Vitamins in the Appendix.

t. h. unit. Three micrograms of thiamine hydrochloride represent one International Unit.

thia mine mon"o-ni'trate. $C_{12}H_{17}N_5O_4S$; salt of thiamine, soluble in water, having in certain formulations greater stability than the hydrochloride; aqueous solutions are neutral; those of the hydrochloride are acid.

thi a mine py"ro-phos'phate. Cocarboxylase.

thi-am'y-lal so'di-um. Generic name for sodium 5-allyl-5-(1-methylbutyl)-2-thiobarbiturate, $C_{12}H_{17}N_2NaO_2S$, an intravenously administered, ultra-short-acting barbiturate, supplied under the trade-marked name *surital sodium*.

thiantoin. Trade-marked name for phethenylate.

thi' zine. Any of a group of heterocyclic compounds containing one nitrogen atom and one sulfur atom in the ring.

thi' zole. 1. Either of two isomeric heterocyclic compounds in which a sulfur atom, a nitrogen atom, and three CH groups are joined in the ring. 2. Any derivative of the preceding.

Thibierge, Georges [*French dermatologist*, 1856-1926]. Described calcinosis, called *Thibierge-Weissenbach syndrome*.

thick"wind" See *heaves*.

Thiers, Joseph [*French physician*, 1885-]. Described, with E. C. Achard, the syndrome of hirsutism associated with diabetes (1921), called *Achard-Thiers syndrome*.

Thiersch, Carl [*German surgeon*, 1822-95]. Studied cancer and advanced a theory of its epithelial origin (1865). Introduced a method of skin grafting in which strips of epithelium are shaved off by a razor and transferred directly to a granulating area; called *Thiersch* or *Ollier-Thiersch graft*. Contributed numerous procedures to plastic surgery including repair of epispadias and closure of defect of the hard palate, each called *Thiersch operation*.

thigenol. Trade-mark for a solution of the sodium salts of sulfo-oleic acids; the solution is used as a mild antiseptic and antipruritic, usually as 20% ointment.

thigh [AS. *thēoh*]. That part of the lower extremity from the pelvis to the knee.

thig"mes the'si a. Superficial touch sensibility.

thig"mo tax'is. See *stereotaxis*.

thig mot'ro pism. Stereotropism.

thi mer'o-sal. $C_6H_4(COONa)SHgC_2H_5$; sodium ethylmercurithiosalicylate; a light cream-colored crystalline powder, freely soluble in water; bacteriostatic and fungistatic; used for disinfecting tissue surfaces and as a preservative of biological preparations. See *merthiolate*.

thi'o-, thi- [G. *theion*, brimstone]. A combining form denoting the presence of *sulfur*.

thi'o ac'id. An organic acid in which sulfur replaces oxygen.

thi' al' o-hol. An alcohol in which sulfur replaces oxygen; mercaptan.

thi" ur'in. A crystalline antibiotic substance isolated from cultures of an unclassified *Streptomyces*. It inhibits Gram-positive and Gram-negative bacteria, but shows little promise as a chemotherapeutic agent.

thi"o-bac te'ri [*theion*; G. *baktērion*, little staff]. Bacteria which grow where decaying organic material releases hydrogen sulfide. Found in stagnant water and at the bottom of the sea. They are not pathogenic to man or animals.

thi" bar'bi tal. 5,5-Diethylthiobarbituric acid; $C_8H_{12}N_2O_2S$; has been suggested for the control of hyperthyroidism.

thi"o-bar bit'u rate. A derivative of thiobarbituric acid, differing from the barbiturates only in the replacement of one oxygen atom by sulfur; they are analogous in their effects.

thi"o bar"bi tu'ric ac'id. $C_4H_4N_2O_2S$; malonyl thiourea, the parent compound of the thiobarbiturates. It represents barbituric acid in which the oxygen atom of the urea component has been replaced by sulfur.

thio-bismol. Trade-mark for sodium bismuth thioglycollate, of the approximate formula $Bi(SCH_2COONa)_3$, containing about 38% of bismuth; used as an antisyphilitic by intramuscular injection.

thi"o-car bam'ide (thigh o-kahr-bam id, -ide thigh kahr'bah-mid, -mide). See *thiourea*.

thi"o-car ban'i-lide. Any of a class of compounds of the general formula $R.C_6H_4.NH.CS.NH.C_6H_4.R'$ where R and R' are various substituent groups. Several such compounds have antituberculous activity.

thi'o-chrome. $C_{12}H_{14}N_4OS$. A fluorescent oxidation product of thiamine hydrochloride or other derivatives of the base form of the vitamin.

t. assay. A procedure for the analysis of thiamine hydrochloride or other derivatives of the basic form of the vitamin based on the intensity of the fluorescence produced by the thiochrome obtained by oxidation of the sample.

thiocol. Trade-mark for a brand of potassium guaiacolsulfonate.

thiocresol. p-Thiocresol, $C_6H_4SH.CH_3$. Crystalline leaflets of unpleasant odor, practically insoluble in water, soluble in alcohol; has been used as a cell proliferant in wounds, ulcers.

thi-oc'tic ac'id. Any of several dithio-n-octanoic acids, particularly 6-thioctic acid which is 6,8-dithio-n-octanoic acid (also called *lipoic acid*), all of which are more or less able to promote oxidative decarboxylation of pyruvic acid by certain bacteria.

thi"o-cy' nate. Any compound containing the monovalent radical, —SCN. The sodium and potassium salts are used in the control of hypertension, but not without danger.

thi" cy-an'ic ac'id. HCNS; an unstable liquid acid, the potassium salt of which is employed therapeutically; several of its salts are useful analytical reagents. Syn., *sulfocyanic acid*.

thiodine. Trade-mark for certain antiseptic preparations containing ammonium ichthosulfonate, iodine tincture, boric acid, hydrastine, phenol, and glycerin.

thi' 'ther. An ether containing sulfur instead of oxygen.

thi"o-glyc'er-ol (thigh o-glis'ur-ole, -ol, -awl). $CH_2OH.CHOH.CH_2SH$. Yellowish, viscous liquid, slightly soluble in water, miscible with alcohol; has been applied to wounds or ulcers as a 1:1000 suspension in tragacanth mucilage or in glycerin to promote healing.

thi'ol. 1. The univalent radical —SH when occurring in organic compounds. 2. Any organic compound containing the —SH radical.

thi l his' ti-dine. $C_6H_9SN_2.CH_2.CH(NH_2)COOH$. Histidine in which a hydrogen atom in the imidazole group is replaced by an —SH (thiol) group. See *thioneine*.

thi ol prive. A substance reacting or interfering with the thiol activity of biologically functional molecules.

thi″o·lu′tin. An antibiotic substance isolated from several strains of *Streptomyces albus*; it inhibits, in vitro Gram-negative and Gram-positive bacteria and many fungi

thiomerin sodium. Trade-marked name for the mercurical diuretic *mercaptomerin sodium*.

thi″o·ne′ine. $C_9H_{15}N_3O_2S$. An amino-acid derivative, the betaine of thiolhistidine, which was first isolated from ergot and later shown to be normal constituent of blood and especially of blood cells. Also known as *ergothioneine*.

thi·on′ic (thigh·on′ick) [*theion*]. Pertaining to sulfur

thi′o·nine (thigh o-neen, -nin) **thi′ nin.** $C_{12}H_{10}N_3S$ HCl. A dark green powder solutions of which are purple used as stain in microscopy Has been suggested for use in methemoglobinemia.

thi″o·pan′ic ac′id. Pantoyltaurine.

thi″o·pen′tal so di um. The U S. Pharmacopeia title for the barbiturate vailable under the trade-marked name pentothal sodium.

thi″o·pen′tone so di um. The British Pharma copoei title for the barbiturate vailable under the trade-marked name pentothal sodium.

thi phene. C_4H_4S; heterocyclic substance in coal tar and technical benzene liquid of slightly aromatic odor insoluble in water

t. diiodide. $C_4H_2I_2S$ has been used as an antiseptic dusting powder or ointment.

thi phile (thigh o-file, -fil) [*theion*, G *philein*, to love]. Loving sulfur applied to microorganisms which require sulfur compounds for metabolism.

thi″o·phil′ic [*theion*, *philein*]. 1 Pertaining to or characteristic of thiophile. 2. Thriving in sulfur

thi″o·sem″i·car′ba·zone. A condensation product of an aldehyde or ketone with thiosemicarbazide, NH NH.CS.NH Certain thiosemicarbazones, such as amithiozone, possess chemotherapeutic effect against tuberculosis.

thi″o·sin·am′ine (thigh o-sin am een, in, sin uh-meen, min, -sin uh-meen′) Allyl thiourea, CH CH CH NH.CS.NH White crystals of bitter taste and garlic odor soluble in about 30 parts of water It has been used to promote absorption of cicatrices Syn., *rhodalline* See *fibrolysin*.

thi″ sul′fate. Any salt containing the divalent radical, SO

thi″o·sul fur′ic ac′id. $H_2S_2O_3$. An unstable acid, readily decomposing to sulfurous acid and sulfur

thi″ u ra·cil. NH.CS NH.CO CH CH White, crystalline powder odorless, sol ble in 2000 parts of water readily soluble in alkalies. Used in the treatment of thyrotoxicosis It interferes with the formation of th roxin See also *propylthiouracil*.

thi″o·u re a. H_2N CS.NH White crystals soluble in 11 parts of water Has been used in the treatment of thyrotoxicosis A photographic fixative. Syn., *thiocarbamide* Also called *sulfocarbamide*.

thirst [AS. *thurst*] A sensation associated with the need of the body for water The sensory nerve endings for thirst are principally in the mucous membrane of the pharynx, and less than normal water content in this region supposedly produces thirst Prolonged deprivation with dehydration of tissues produces severe unpleasant sensations probably of wide origin There are more than thirst

Thiry Ludwig [*Austrian physiologist*, 1817–97]. Remembered for his production of fistula, usually in dog, for obtaining intestinal juices by means of separated segment of gut, closed at one end and communicating with the exterior at the other (1864) A somewhat similar but not identical, method was described by Luigi Vella (1881) called *Thiry fistula*, *Thiry-Vella fistula*

thix·ot′ro·py [G *thixis*, touching; *trepein*, to turn] The property of some gels, when mechanically agitated, to undergo reversible isothermal solution and reconversion to gel when allowed to stand. The tobacco mosaic virus has this property of thixotropy —**thixotrop′ic**, *adj*.

thizodrin. Trade-mark for nasal bacteriostat and vasoconstrictor containing sodium sulfathiazole and desoxyephedrine.

thlip″sen ceph′a lus [G. *thlipsis*, crushing; *kephalos*, brain]. A type of anencephalus in which the cranial vault is lacking; there is some degree of cervical spina bifida, and the brain is merely spongy vascular mass.

Thoma, Richard [*German histologist*, 1847–1923] Invented an instrument for counting red and white cells, consisting of chamber ruled into squares on glass slide called *Thoma-Zeiss counting chamber* or *cell*, *hemacytometer* *Abbe-Zeiss counting cell*. Developed pipet with an ampulla for collecting and diluting blood, called *Thoma pipet*. Described the supposed dilatations at the terminations of the penicillar arteries of the spleen, called the *ampullae of Thoma*.

Thomas, André. See André Thomas' sign.

Thomas, Hugh Owen [*English orthopedist*, 1834–91]. Founder of orthopedic surgery in Great Britain and renowned internationally for his inventiveness in constructing orthopedic apparatus. Invented number of iron splints, adapted to immobilizing tuberculous hip and knee joints, as Thomas splint. See also Thomas' sign.

Thomas, James William Tudor [*English ophthalmologist*, contemporary]. Known for his research, including experimental work, on transplantation of the cornea (1930) *Thomas' operation* for corneal transplantation consists of outlining disk on the cornea with trephine, and removing it with trephine and scissors in such way that the endothelial surface is smaller than the epithelial. A clear disk is removed from the donor eye in the same way and is then sutured into place

Thomas, Theodore Gaillard [*American gynecologist*, 1832–1903]. Author of an outstanding textbook on diseases of women (1868) He is said to have performed the first vaginal oophorectomy (1870).

Thomas skin reaction test. See Naegeli test

Thompson, Henry [*English surgeon*, 1820–1904]. Eminent urologist and teacher Described an operation for urinary bladder tumors (1884), called *Thompson operation*.

Thompson stain. See Dunn-Thompson stain.

Thomsen, Asmus Julius Thomas [*Danish physician*, 1815–96]. Described myotonia congenita (1876); also called *Thomsen disease*.

Thomson, Allen [*Scottish anatomist*, 1809–84] Described fascia of yellow fibers which covers the inner half of the subcutaneous inguinal ring, called *Thomson fascia*.

Thomson, Elihu [*American physicist and inventor*, 1853–1937]. Made the first practical application of the stereoscope to roentgenology (1896)

Thomson, Frederick Holland [*English physician*, 1867–1938]. Described sign in scarlet fever which two or three pink or red lines are present the fold of the elbow the lines first appear in the preeruptive stage, continuing through the course of the disease called *Thomson* or *Pastia sign*.

Thomson, Willi See *Kelvin*.

Thomso after Samuel Thomson Ame

only

thon·zyl'a·mine hy"dro·chlo'ride. 2-[[2-(Dimethylamino)ethyl](p-methoxybenzyl)amino]pyrimidine hydrochloride; $C_{16}H_{22}N_4O.HCl$, an antihistaminic substance. See *neohetramine hydrochloride*.

tho·ra·cec'to·my [G. *thōrax*, thorax; *ektomē*, excision]. Resection of a rib.

tho"ra·cen·te·sis [*thōrax*; G. *kentēsis*, a pricking]. Aspiration of the chest cavity for removal of fluid, usually for hydrothorax or empyema.

tho·rac'ic. Pertaining to the thorax.

tho·rac·i·co·lum'bar. Same as *thoracolumbar*.

tho·rac"i·co·lum'bar sys'tem. See under *system*.

tho·ra·co-, thorac-, tho·rac'i·co- [*thōrax*]. A combining form denoting *the thorax*.

tho·ra·co·a·ceph'a·lus [*thōrax*; G. *a-*, not; *kephalē*, head]. Thoracopagus parasiticus in which the parasite has no head. See *heteradelphus*.

tho·ra·co·a·cro'mi·al [*thōrax*; G. *akrōmia*, point of the shoulder]. Pertaining to the acromion and the chest, as thoracoacromial artery.

tho·ra·co·ce·lo·schi'sis (·si·los'ki·sis) [*thōrax*; G. *koilia*, cavity; *schisis*, cleavage]. Congenital fissure of the chest and abdomen. Syn., *thoracogastroschisis*.

tho"ra·co·cen·te'sis. See *thoracentesis*.

tho·ra·co·cyl·lo'sis [*thōrax*; G. *kyllōsis*, from *kyllos*, to crook]. Deformity of the thorax.

tho·ra·co·cyr·to'sis (·sur·to'sis) [*thōrax*; G. *kyrtōsis*, convexity]. Excessive curvature of the thorax.

tho·ra·co·del'phus. See *thoradelphus*.

tho·ra·co·did'y·mus [*thōrax*; G. *didymos*, twin]. Thoracopagus.

tho·ra·co·dyn'i·a [*thōrax*; G. *odynē*, pain]. Pain in the chest.

tho·ra·co·gas"tro·did'y·mus [*thōrax*; G. *gastēr*, belly; *didymos*, twin]. A twin monstrosity united by the thorax and abdomen.

tho"ra·co·gas·tros·chi'sis (thor"a·ko·gas·tros'ki·sis, thor·a)"ko·) [*thōrax*; *gastēr*; G. *schisis*, cleavage]. Congenital fissure of the thorax and abdomen. Syn., *thoracoceloschisis*.

tho"ra·co·lap·a·rot'o·my [*thōrax*; G. *lapara*, soft part of the body between the ribs and the hip; *tomē*, a cutting]. An operation in which both the thorax and the abdomen are opened. Obs.

tho"ra·co·lum'bar [*thōrax*; L. *lumbus*, loin]. Pertaining to the thoracic and lumbar portions of the spine, or to thoracic and lumbar ganglions and fibers of the autonomic nervous system.

tho·ra·col'y·sis. See *pneumonolysis*.

tho·ra·co·mel'us [*thōrax*; G. *melos*, limb]. A parasitic limb attached to the thorax of the host.

tho·ra·com'e·try [*thōrax*; G. *metron*, a measure]. Measurement of the chest.

tho·ra·cop'a·gus [*thōrax*; G. *pagos*, that which is fixed]. Conjoined twins united by their thoraxes or epigastric regions. See Plate 25. —**thoracopagous**, *adj.*

t. parasiticus. A more or less complete parasitic twin united with the thorax or epigastrium of the host.

t. tribrachius. Conjoined thoracopagous twins with two of the upper limbs coalescent.

t. tripus. Conjoined thoracopagous twins with two of the lower limbs coalescent.

tho·ra·co·par"a·ceph'a·lus [*thōrax*; G. *para*, beside; *kephalē*, head]. A thoracopagus parasiticus in which the parasite has a rudimentary head.

t. pseudoacormus. A thoracopagus parasiticus in which the parasite is little more than a head. See *heteradelphus*.

tho·ra·co·par"a·si'tus [*thōrax*; G. *parasitos*, parasite]. Taruffi's term for thoracopagus parasiticus.

tho·ra·co·plas"ty [*thōrax*; G. *plassein*, to form]. The mobilization of the chest wall by the resection of any number of ribs, wholly or in part, in order to produce collapse of the chest wall and obliteration of the pleural cavity. The operation is commonly extrapleural and may be partial or complete, the latter involving segments of the first to eleventh ribs. It is also referred to by location, as anterior, lateral, posterior, apical, etc.

tho·ra·co·pneu"mo·plas"ty. See *thoracoplasty*.

tho·ra·cos·chi'sis (thor"ah·kos'ki·sis) [*thōrax*; G. *schisis*, cleavage]. Congenital fissure of the thorax.

tho·ra·co·scope, tho·rac'o·scope [*thōrax*; G. *skopein*, to examine]. An electrically lighted, tubular instrument designed for insertion between ribs into a pneumothorax space. Used for visual examination of the pleural surfaces and for the severance of pleural adhesion bands by electrocautery.

tho"ra·cos'co·py [*thōrax*; *skopein*]. Examination of the pleural cavity in the presence of a pneumothorax by means of a thoracoscope. Syn., *pleuroscopy*.

tho·ra·cos'to·my [*thōrax*; G. *stoma*, mouth]. Opening the chest; particularly, the removal of some ribs for drainage or for access to the pleural cavity.

tho·ra·cot'o·my [*thōrax*; G. *tomē*, a cutting]. Incision of the thoracic wall.

tho·ra·del'phus [*thōrax*; G. *adelphos*, brother]. A double monster united above the umbilicus, with one head, four lower and two upper extremities. Also called *cephalothoracopagus dibrachius*.

Thoraeus filter. See under *filter*.

tho'rax (pl. *thoraxes, thoraces*) [G.]. The chest; that portion of the trunk above the diaphragm and below the neck; the framework of bones and soft tissues bounded by the diaphragm below, the ribs and sternum in front, the ribs and thoracic portion of the vertebral column behind, and above by the structures in the lower part of the neck, and containing the heart enclosed in the pericardium, the lungs invested by the pleura, and the mediastinal structures. —**thorac'ic**, *adj.*

thorazine hydrochloride. A trade-marked name for *chlorpromazine hydrochloride*.

Thorek, Max (1880–). American surgeon known for his technique of mammaplasty with free transplantation of the nipple, called *Thorek's mammaplasty*, and his operation for electrosurgical obliteration of the gallbladder.

tho'ri·um [*Thor*, Norse god of thunder]. Th = 232.05. A radioactive, grayish white, lustrous metal, the parent of a series of radioactive elements.

t. formate. Has been used in diarrhea and dysentery. See *thoroxyl*.

t. nitrate. $Th(NO_3)_4.4H_2O$. Has been used as local astringent and antiparasitic.

t. oxide. ThO_2, white powder used as contrast medium for roentgenography. It may cause tissue damage. See *thorotrast, umbrathor*.

t. sodium citrate. Employed as a radiopaque medium for the preparation of cystograms.

t. sodium tartrate. Has been suggested as diagnostic agent for the gastrointestinal tract.

t. X. An isotope of radium formed in the disintegration of thorium, used in dermatology in treatment of superficial conditions where irradiation is indicated.

Thorn, Wilhelm [German gynecologist, 1857–1913]. Described his method of converting a face presentation into a vertex by combined external and internal version; called *Thorn's method*.

thorn·ap"ple. See *stramonium*.

Thornwaldt. See *Tornwaldt*.

tho'ron [*Thor*, Norse god of thunder]. Tn = 220. A gaseous, radioactive element evolved from

rium X, one of the disintegration products of thorium. Also called *thorium emanation*.

thorotrast. A proprietary stabilized suspension of thorium dioxide injected for radiologic visualization of the blood vessels, brain ventricles, liver and spleen.

thor'ough joint" Diarthrosis or arthrodia. *Obs.*

thor ough pin" [ME. *thoru*, AS. *pinn*]. A bursitis occurring over the tuber calcis of the hock joint of horses.

thor'ough wort. See *Eupatorium*.

thorexyl. Trade-mark for brand of thorium formate.

thor'ter ill. See *louping ill*.

thought read'ing. See *telepathy*

thought trans fer'ence. See *telepathy*

thread [AS. *thræd*]. The spun and twisted fibers of cotton, linen, silk, etc.

mycelial threads. The hyphae of mycelium.

nuclear threads. Chromatin fibrils of the cell nucleus.

Simonart's threads. See amniotic band.

thread ed wire. Wire with screw threads also called *Kirschner wire*.

thread'worm" See *Nematoda, Trichuris, Enterobius*.

threm"ma tol'o-gy [G *thremma*, nursling; *logos* word]. The breeding of plants and animals under domestication. *Obs.*

thre o-nine (three o-neen, -nin) α-Amino-β-hydroxybutyric acid, $CH_3CHOH.CHNH_2.COOH$. An amino acid essential to human nutrition.

thre nyl. The univalent radical, $CH_3CH(OH)$-$CH(NH_2)CO$— of the amino acid threonin

thre ose. $CHO.HOCH.HCOH.CH_2OH$. A monosaccharide having spatial configuration similar to that of threonine, the latter having for this reason been named after the former substance.

threp-sol gy [G *threpsis*, nourishing; *logos*]. The science of nutrition.

thresh old [AS. *therscwald*]. 1. The lower limit of stimulus capable of producing an impression upon consciousness or of evoking response in an irritable tissue. 2. The entrance of canal.

absolute t. *The lowest limit of perception of* sensation.

auditory t. Th minimum perceptible sound.

differential t. The lowest limit at which two stimuli can be discriminated.

double point t. The smallest distance part at which two points can be felt as two.

excretion t. The critical concentration of substance in the blood, bove which the substance is excreted by the kidneys.

flicker-fusion t. The minimal frequency of standard flashes of light which will be seen as steady illumination. See *flicker-fusion test*

ketosis t. The critical ratio at which ketone substances can be oxidized by the tissues as they are put forth by the liver Ketosis occurs when the ketosis threshold has been passed and the liver is spilling out ketone substances faster than they can be oxidized by the tissues.

neuron t. See *neuron*.

pain t. The lowest limit of perceiving the sensation of pain.

relational t. The ratio of two stimuli when their difference is just perceptible.

stimulus t. See absol t t.

thrill [ME. *thrillen*, t *pierce*]. *A fine vibration felt* by the hand. A thrill may be felt on palpation ver an aneurysm, over heart which is the seat of valvular disease, and over certain cysts.

diastolic t. The vibration felt in the region of the heart during the diastole of the ventricle.

presystolic t. A thrill which can sometimes be felt before the systole when the hand is placed over the pex beat (mitral stenosis)

purring t. A thrill resembling that felt when the hand is placed on the back of a purring cat.

thrix an nu la ta. Hairs with alternating light and dark segments.

throat [AS. *throte*]. The pharynx and the fauces.

sore t. Pharyngitis and/or tonsillitis.

throb [ME. *throbben*, imitative in origin]. A pulsation or beating.

throe [AS. *thrawu*]. A violent pang, as in parturition.

throm'base [G *thrombos*, lump]. Thrombin.

throm"bas-the ni-a [*thrombos*; G *asthenes*, weakness]. Hemorrhagic disease dependent on an abnormality of the blood platelets.

hereditary hemorrhagic t. See hereditary hemorrhagic *diathesis*.

throm bec'to-my [*thrombos*; G ektomē, excision]. Excision of thrombus.

throm'bin [*thrombos*]. An enzyme elaborated shed blood from an inactive precursor, prothrombin. It induces clotting by converting fibrinogen to fibrin, possibly by proteolysis, and is used therapeutically as topical hemostatic agent. Also called *thrombase*; formerly called *fibrin ferment*.

throm bin o-gen. See *prothrombin*.

throm'bo-, thromb- [*thrombos*]. A combining form denoting *pertaining to thrombus*.

throm"bo-an gi i'tis [*thrombos*; G. *angeion*, vessel; *-itis*, inflammation]. Thrombosis with inflammation *of the intima of vessel*.

t. obliterans. A disease characterized by minute widespread, fugitive phlebitis with perivascular fibrosis involving the accompanying arteries and nerves. Seen chiefly in young or middle-aged males. Also called *Buerger's disease*.

throm"bo ar"te-ri'tis [*thrombos*; G. *artēria*, artery; *-itis*]. Inflammation of an artery associated with thrombosis.

t. obliterans. See *thromboangiitis obliterans*.

throm'bo-blast [*thrombos*; G *blastos*, germ]. The precursor of the thrombocyte megakaryocyte.

throm bo'lo-sis [*thrombos*; G. *klasis*, breaking] Breaking up or destruction f thrombus, thrombolysis. —**thromboclas'tic,** *adj*.

throm'bo-cyt [*thrombos*; G. *kytos*, cell]. Blood platelet; small, colorless disk in the circulating blood of all mammals It contains thromboplastin and is important in the clotting of blood. Normally 1 cu. mm. of blood contains 250,000 to 500,000 platelets. Syn., *platelet*, *blood platelet*. —**thrombocyt'ic,** *adj*

throm"bo-cy the mi a. See *thrombocytopenia*

throm"bo-cyt'l se ries. The series of cells concerned in the origin of blood platelets (thrombocytes) including the megakaryoblasts and megakaryocytes which occur normally in bone marrow

throm"bo-cy't -crit [*thrombos*; *kytos*; G. *krinein* to distinguish]. A glass tube introduced by Van Allen for counting blood platelets. Blood diluted with sodium oxalate is centrifuged in special spherical sedimentation chamber so that the platelets are seen layered above the red cells. This volume can be measured. Normal is 0.35 to 0.67 per cent.

throm"bo-cy"to-ly'sis. A substance which disrupts platelets.

throm"bo-cy"to path'l a. A hemorrhagic state in which the blood platelets are functionally abnormal.

throm"bo-cy"to-pe l [*thrombos*; *kytos*; G. *penia*, want]. A condition in which there is decrease in the umber of blood pl telets below normal —**thrombocytopenic,** *adj*

tropical t. See *sprue*.

throm"bo·cy·to'sis (throm"bo-sigh-to'sis) [*thrombus*; *kytos*; G. *-sis*, condition]. A condition marked by the presence of a large number of thrombocytes in the blood.

throm"bo·em"bo·li·za'tion [*thrombus*; G. *embolē*, putting in]. The occlusion of a blood vessel by the lodgment of a portion of a thrombus.

throm"bo·en·dar·ter·ec'to·my. See *endarterectomy*.

throm"bo·en"do·car·di'tis [*thrombus*; G. *endon*, within; *kardia*, heart]. Bacterial or nonbacterial thrombotic vegetations on heart valves.

throm'bo·gen. See *prothrombin*.

throm"bo·gen'ic [*thrombus*; *genesthai*]. 1. Producing thrombi. 2. Relating to thrombogen.

throm"bo·kin'ase (throm"bo-kin-ase, -kigh-nase) A substance, probably an enzyme, obtainable from plasma globulins and also found in some crude tissue extracts, having the capacity of activating prothrombin to thrombin. It is considered by some to be identical with thromboplastin, but the latter may instead be an important accessory factor, along with calcium ions, in converting prothrombin to thrombin. Thrombokinase appears to exist in an inactive form called *prothrombokinase*. See *thrombogen*.

thrombol. Trade-mark for a hemostatic containing blood-clotting principles extracted from fresh tissues. The substance is used locally in hemorrhage.

throm"bo·lym·phan·gi'tis [*thrombus*; L. *lympha*, water; G. *angeion*, vessel; *-itis*, inflammation]. Lymphangitis with thrombosis.

throm·bol'y·sis [*thrombus*; G. *lysis*, loosing]. Destruction or dissolution of a thrombus; thrombolysis. —**thrombolyt'ic**, *adj.*

throm·bop'a·thy [*thrombus*; G. *pathos*, disease]. Disease characterized by disturbance of platelet formation and consequent interference with the formation of blood clots.

constitutional t. See hereditary hemorrhagic *diathesis*.

throm"bo·pe'ni·a [*thrombus*; G. *penia*, want]. A decrease in platelets. —**thrombopenic**, *adj.*

throm"bo·phil'i·a [*thrombus*; G. *philein*, to love]. A tendency to form thrombi.

essential t. Diffuse thrombosis of the arteries and veins not accounted for by infection, stasis, or local inflammatory lesions. An increase of the coagulability of the plasma seems to be the primary factor.

throm"bo·phle·bi'tis [*thrombus*; G. *phleps*, vein; *-itis*, inflammation]. Inflammation of a vein associated with thrombosis.

throm"bo·plas'tic [*thrombus*; G. *plassein*, to form]. Causing or hastening the coagulation of the blood.

throm"bo·plas'tin [*thrombus*; *plassein*]. Commonly any of a group of diverse preparations, obtained from blood platelets or fixed tissue (including brain phosphatide) extracts, which accelerate appearance of thrombin in prothrombin-containing systems, regardless of mode of action. Some consider thromboplastin to be the factor which activates prothrombin, thereby making it identical with thrombokinase. Also called *thromboplastic substance*.

throm"bo·plas·tin'o·gen. A protein precursor in plasma which is necessary for the elaboration of plasma thromboplastic activity distinct from plasma thromboplastin antecedent (PTA) and plasma thromboplastin component (PTC). Syn. *antihemophilic globulin*, *globulin substance antihemophilic factor*.

throm"bo·plas"tin·o·pe'ni·a [*thrombus*; *plassein*; G. *penia*, want]. A deficiency of thromboplastin in the blood.

throm"bo·poi·e'sis [*thrombus*; G. *poiēsis*, production]. The production of blood platelets and other elements necessary for thrombus formation.

throm'bose. To form or become a thrombus.

throm'bosed [*thrombus*]. 1. Affected with thrombosis. 2. Clotted.

throm'bo·sin [*thrombus*]. Old term for thrombin.

throm·bo'sis [G., a becoming curdled]. The formation of a thrombus. —**thrombot'ic**, *adj.*

atrophic t. That due to general malnutrition.

cardiac t. Thrombosis in the heart.

cavernous sinus t. Inflammation of a cavernous sinus with thrombus formation, usually secondary to staphylococcus infection of the nares and upper lip.

coagulation t. That caused by fibrin coagulation.

compression t. That due to compression of a vessel, as by a tumor.

coronary t. Thrombosis of the coronary arteries of the heart.

dilatation t. That which results from the slowing of the blood current next to the vessel walls as the result of dilatation of a vessel (as in aneurysms, varices) or of the heart.

intervillous t. Coagulation of blood in the intervillous spaces of the placenta, usually seen near the end of pregnancy; also called *placentosis*.

lateral sinus t. Thrombosis of a lateral sinus due to extension of infection from mastoid air cells. The thrombus may be attached to the wall (mural thrombus) or it may completely obliterate the sinus.

marantic t. See atrophic *t.*

marasmic t. See atrophic *t.*

placental t. That of the uterine veins at the site of a placenta.

plate t. See blood plate *thrombus*.

puerperal venous t. Puerperal thrombosis of pelvic veins.

throm"bo·sta'sis [G. *thrombos*, lump; *stasis*, standing]. Stasis of blood leading to formation of thrombus.

throm'bo·zym. A substance, occurring in plasma and in tissue extracts, which is active in bringing about the clotting of blood. It may be identical with, or contain, thrombokinase.

throm'bus (pl. *thrombi*) [*thrombos*]. A clot of blood formed within the heart or blood vessels, due usually to a slowing of the circulation or to alteration of the blood or vessel walls. —**thrombo'id**, *adj.*

annular t. One involving the whole circumference of a vessel but not entirely occluding it.

ante-mortem t. An intravascular blood clot which occurs before death.

autochthonous t. See blood plate *t.*

ball t. A small or large, rounded, ante-mortem clot found in the heart, especially in an atrium.

ball-valve t. See ball *t.*

blood plate t. That ascribed by Eberth to agglutination of blood plates.

coronary t. One that affects a branch of coronary artery.

currant-jelly t. A soft, reddish, postmortem clot.

fibrolaminar t. See stratified *t.*

globoid t. See ball *t.*

hyaline t. One found in the smaller blood vessels, as a glossy fibrinous mass. Probably due to toxic injuries to the intima.

Laennec's t. A globular thrombus formed in the heart, especially in cases where the latter is the seat of fatty degeneration.

lateral t. A clot attached to a vessel wall, and not completely obstructing the lumen.

marantic t. One occurring in an area of retarded flow as the atria.

mixed t. See stratified t.

mural t. One attached to the wall of a blood vessel or mural endocardium; also called *lateral t.*, *parietal t.*

obstructing t. One completely obstructing the lumen of vessel.

parietal t. One adherent to the wall of vessel or the heart and not entirely occluding the lumen.

progressive t. One that grows into the lumen of vessel.

red t. One composed principally of red cells and fibrin intimately mixed, commonly formed by clotting of blood in an occluded vessel.

saddle t. A Y-shaped clot straddling the bifurcation of vessel; also called *riding t.*

stratified t. One in which there are successive layers of fibrin and red cells to produce mixture of colors. Syn., *fibrolaminar t.*, *mixed t.*

t. neonatorum. See *cephalhematoma.*

t. vulvae Hematoma of labium majus.

white t. One composed principally of deposit of fibrin, such as those seen on the chordae tendina in th heart.

throt'tle [dim. from AS. *throte*]. The throat.

throt'tle. To choke to suffocate.

through drain age A method of drainage in which perforated tube is carried through the cavity to be drained, so that the latter can be flushed through and through by the injection of fluid into one end of the tube.

throw'back" [ME. *throwen*, AS. *bacc*]. A reversion to an ancestral type. See *atavism.*

thrush [D *tröske*] 1 A form of moniliasis due to infection by *Candida albicans*. It occurs most often in children and is characterized by small, whitish spots on the tip and sides of the tongue and the buccal m cous membrane. Syn., *mycotic stomatitis, parasitic stomatitis.* 2. A diseased condition of the frog of the horse's foot, with fetid discharge.

sheep t. See *orf*

thrush f n gus. *Candida albicans*. A fungus of low pathogenicity which inhabits the mucous membranes.

Thu'ja (thew'jah, thew'yah) [G *thyia*, odorous cedar]. A genus of trees of the Pinaceae. The leafy young twigs of T occidentalis were once used as an antipyretic, expectorant, and anthelmintic.

thu"ja pli cin. C H CH(CH$_3$) O (OH) any of three isomeric substance, designated α-, β-, and γ-thuj plicin, being isopropyl derivatives of tropolone. They occur aturally in various woods, and have antibiotic properties against organisms harmful to trees.

thu'jic ac'id. C$_7$H$_4$(CH$_3$)$_2$COOH substance, characterized by 7-membered cyclic structure, isolated from *Th ja plicata*, the so-called western red cedar which is antibiotic to wood-destroying fungi and is presumably responsible for the great durability of the wood.

thu'jone A cyclic ketone, C H O found in th ja, tansy wormwood, and sage oils. It is convulsant in large doses.

thu'li um [L. *Thule*, northernmost limit of the habitable world]. Tm = 168.94 A rare earth metal.

thumb [AS. *thūma*]. The digit on the radial side of the hand, differing from the other digits in having but two phalanges, and in that its metacarpal bone is freely movable.

thumps [imitative in origin] 1 A disease of swine caused by the larvae of *Ascaris lumbricoides* in the lungs. 2. An affection in the horse, similar to hiccup in man, due to spasmodic contraction of the diaphragm.

Thu berg and Ahlgren method. See under method.

thus [L.]. 1. True frankincense or olibanum. 2 Turpentine of pine trees.

thydroen. A proprietary syrup and tablet containing ferrous sulfate and thiamine hydrochloride.

thy"la ken'trin (thigh"lah-ken'trin) Follicle-stimulating hormone: old term.

thyloquinone. Trade-mark for brand of menadione.

thyme (time) [G. *thymon*, thyme]. The dried leaves and flowering tops of *Thymus vulgaris* (family Labiatae) yielding not less than 1.5% of volatile oil. A diaphoretic and carminative used in cough and as condiment.

t. camphor Thymol.

t. oil (*oleum thymi*) The volatile oil from the flowering plant. It yields not less than 20% of phenols, chiefly thymol. A germicide.

thy mec'to-my (thigh-meck'to-mee) [G. *thymos*, mind, soul, *ektomē*, excision]. Excision of the thymus. —**thymectomize**, v.

thy'mene (thigh meen, tigh meen). C$_{10}$H$_{16}$. A terpene in thyme oil, identical with ... found in turpentine oil from certain species of *Pinus*.

thy"mer ga si a (thigh mer-gay zhuh, ...) [*thymos*; G *ergasia*, work]. In psychiatry, Meyer' term for the affective-reaction psychoses such as manic-depressive psychosis and involutional melancholia. —**thymergastic**, adj.

-thy mi-a [*thymos*]. A combining form denoting condition of mind.

thy'mic (tigh mick) [G *thymon*, thyme]. Pertaining to, or contained in, thyme.

thy mic (thigh mick) [G. *thymos*, mind, soul]. Pertaining to the thymus.

thy mic nu-cle'ic ac'id. See deoxyribonucleic acid.

thy"mi-co-lym phat'ic [*thymos*; L. *lympha*, water]. Affecting the thymus and lymphatic structures such as spleen, lymph nodes, and lymphoid aggregates, as thymicolymphatic state.

thy'mi dine. C$_{10}$H$_{14}$N$_2$O$_5$ thymine-2-deoxyriboside nucleoside btained from thymonucleic acid, essential for growth of certain organisms in medi devoid of vitamin B$_{12}$ and folic acid.

thy'mine (thigh meen, -min) 2,4-Dihydroxy-5-methylpyrimidine; substance, first isolated from the thymus, which may be of value in nutritional macrocytic anemia.

thy'mi-on [G large wart]. A wart; condyloma.

thy mi'tis [G *thymos*, mind, soul; *-itis*, inflammation]. Inflammation of the thymus

thy'mo-, thym- [G *thymos*, thyme]. A combining form denoting *thymol*, also referring to *thymus*.

thy mo-cres'cin [G *thymos*, mind, soul; L. *crescere*, to grow]. A principle, claimed to be present in extracts of the thymus, that has growth-promoting properties.

thy'mo-cyte [*thymos*; G *kytos*, cell]. A lymphocyte formed in the thymus.

thy"mo hy"dro-qui none (thigh mo high dro-kwi-nohn kwin ohn) A substance occurring in the urine after the ingestion of thymol, producing greenish color of the urine.

thy"mo-ke sis [*thymos*]. Abnormal persistence or enlargement of the thymus

thy'mol (thigh mole, -mol, -mawl, tigh). Methyl-propyl-phenol. A crystalline phenol, C$_{10}$H$_{14}$O, obtained from the volatile oils of many plants including *Thymus vulgaris*, *Monarda punctata*, *Trachyspermum ammi*, and others. It is also synthesized. It is bactericide and fungicide, and has been used as an intestinal antiseptic. As an anthelmintic its therapeutic dose too closely approximates the toxic dose.

t. blue Thymolsulfonphthalein. C$_{27}$H$_{30}$O$_5$S. Brownish green, crystalline powder soluble in ...

hol. An indicator covering the pH ranges 1.2 to 2.8 and 8.0 to 9.6.

t. carbonate. $(C_{10}H_{13}O)_2CO$ formerly used as an anthelmintic.

t. iodide (*thymolis iodidum*) A mixture of iodine derivatives of thymol, chiefly dithymoldiiodide, $(C_6H_2CH_3C_3H_7OI)_2$. A reddish yellow powder affected by light; insoluble in water, slightly soluble in alcohol. Soluble in fixed and volatile oils. Used as an antiseptic dusting powder. See *aristol*.

thy″mol·phthal′ein (-thal′in, -thal′ee·in, -fthal′) A compound, analogous to phenolphthalein, used as an indicator; it is colorless below pH 9.3 and blue at pH 10.5.

thy″mol·sul″fon·phthal′e·in, **thy″mol·sul″fone·phthal′e·in.** Thymol blue.

thy·mo′ma (thigh·mo′muh) [*thymos*; G. *-ōma*, tumor]. A primary tumor of the thymus. Frequently associated with myasthenia gravis, but no clear interrelationship is established. Also see thymic carcinoma, thymic sarcoma.

thy″mo·no′ic [*thymos*; G. *nous*, mind]. Pertaining to thoughts and ideas which are strongly influenced by deviations in mood.

thy″mo·nu·cle′ic ac′id. Desoxyribonucleic acid.

thy·mop′a·thy (thigh·mop′uth·ee) [*thymos*; G. *pathos*, disease]. Any disease of the thymus.

thy′mo·pex″y [*thymos*; G. *pēxis*, fixing]. The fixation into a new position of thymus. *Obs.*

thy″mo·pri′vic [*thymos*; L. *privus*, deprived of]. Related to, or caused by removal of or premature involution of the thymus.

thy·mop′ri·vous. See *thymoprivic*.

thy′mus [*thymos*]. An organ situated in the anterior superior mediastinum. It continues to develop until the second year of life, afterward remains stationary until about the fourteenth, and then undergoes fatty metamorphosis and atrophy. It consists of lobules largely composed of lymphatic tissue in which are found minute concentric bodies, the remnants of epithelial structures, or thymic corpuscles. See Plate 45.

thy′mus nu·cle′ic ac′id. See *desoxyribonucleic acid*.

thyractin. Trade-mark for a preparation from the thyroid gland containing about 0.6% iodine and used in conditions where thyroid medication is indicated.

thy′re·o-. For words beginning with thyreo- not found here, see words beginning *thyro-*.

thy″re·o·a·pla′si·a con·gen′i·ta (thigh″ree·o·a·play′zhuh, -zee·uh, -shuh, -see·uh) Anomalies found in congenital defects of the thyroid gland and in deficient thyroid secretion.

thy″re·o·gen′ic. Of thyroid origin, as thyreogenic obesity (obesity due to thyroid deficiency).

thy′ro- [G. *thyreoeidēs*, shield-shaped]. A combining form signifying *thyroid*.

thy″ro·ad″e·ni′tis [*thyreoeidēs*; G. *adēn*, gland; *-itis*, inflammation]. Inflammation of the thyroid gland.

thy″ro·ar″y·te′noid [*thyreoeidēs*; G. *arytainoeidēs*, shaped like a ladle]. Pertaining to the thyroid and arytenoid cartilages, as the thyroarytenoid ligaments, thyroarytenoid muscle.

thy″ro·car′di·ac [*thyreoeidēs*; G. *kardia*, heart]. Pertaining to thyroid disease with cardiac symptoms predominating.

thy′ro·cele [*thyreoeidēs*; G. *kēlē*, tumor]. A tumor affecting the thyroid gland; goiter.

thy″ro·chon·drot′o·my (thigh″ro·kon·drot′o·mee) [*thyreoeidēs*; G. *chondros*, cartilage; *tomē*, cutting]. Incision of the thyroid cartilage; laryngotomy.

thy″ro·cri·cot′o·my (thigh″ro·cry·cot′o·mee, kri·cot′o·mee) [*thyreoeidēs*; G. *krikos*, ring; *tomē*]. Tracheotomy performed through the cricothyroid membrane.

thy″ro·ep″i·glot′tic [*thyreoeidēs*; G. *epiglōttis*, epiglottis]. Pertaining to the thyroid cartilage and the epiglottis, as the thyroepiglottic muscle.

thy·rog′en·ous, **thy″ro·gen′ic.** Thyreogenic.

thy″ro·glob′u·lin [*thyreoeidēs*; L. *globulus*, little ball]. The iodine-protein of the thyroid, secreted by it and lodged in the colloid substance. See Table of Hormones in the Appendix.

thy″ro·glos′sal [*thyreoeidēs*; G. *glōssa*, tongue]. Pertaining to the thyroid and the tongue.

thy″ro·hy′al [*thyreoeidēs*; G. *hyoeidēs*, shaped like the letter upsilon]. The greater cornu of the hyoid bone.

thy″ro·hy′oid [*thyreoeidēs*; *hyoeidēs*]. Pertaining to the thyroid cartilage and hyoid bone, as the thyrohyoid membrane.

thy′roid [*thyreoeidēs*]. 1. Shield-shaped. 2. Pertaining to the thyroid gland. 3. Pertaining to the thyroid cartilage. See Plates 13, 44.

thy′roid. 1. The thyroid gland. See Plates 13, 45. 2. The cleaned, dried, and powdered thyroid gland previously deprived of connective tissue and fat; it is obtained from domesticated animals that are used for food by man. Contains 0.17 to 0.23 per cent iodine in thyroid combination, especially as thyroxin. Administered orally in the treatment of thyroid deficiency states. Dose, 60 mg. (1 gr.)

thy″roid·ec′to·my [*thyreoeidēs*; G. *ektomē*, excision]. Partial or complete excision of the thyroid gland.

thy′roid·ism [*thyreoeidēs*]. 1. Disturbances produced by hypertrophy of the thyroid gland. 2. A series of phenomena due to continued use of thyroid preparations.

thy″roid·i′tis [*thyreoeidēs*; G. *-itis*, inflammation]. Inflammation of the thyroid gland. See Riedel struma.

thy″roid·i·za′tion [*thyreoeidēs*]. Treatment with thyroid gland preparations.

thy″roid·ot′o·my [*thyreoeidēs*; G. *tomē*, cutting]. Incision of the thyroid gland.

thy·roid″o·tox′in (thigh·roy″do·tock′sin) [*thyreoeidēs*; G. *toxikon*, poison]. A substance specifically toxic for the cells of the thyroid gland.

thy″ro·i′o·dine (thigh″ro·eye′o·dyne, -deen, -din) A substance now known not to be a chemical entity formerly thought to be the active principle of thyroid. Syn., *iodothyrine*.

thy′ro·nyl. The univalent radical, p-(p-HOC_6H_4O)-$C_6H_4CH_2CH(NH_2)CO$— of thyronine, the amino acid resulting when the iodine atoms in thyroxine are replaced by hydrogen atoms.

thy″ro·par″a·thy″roid·ec′to·my. Excision of the thyroid and parathyroid glands.

thy″ro·pha·ryn′ge·us. A portion of the inferior constrictor muscle of the pharynx.

thy″ro·pri′val (thigh″ro·pry′val, thigh·rop′ri·val) [*thyreoeidēs*; L. *privus*, deprived of]. Pertaining to loss of function, or removal, of the thyroid gland.

thy″ro·pri′vus [*thyreoeidēs*; *privus*]. Deprived of the thyroid gland.

thy″ro·pri′via. A disease due to loss of thyroid activity.

thy″ro·pro′te·in (thigh″ro·pro′tee·in, -pro′teen) [*thyreoeidēs*; G. *prōteios*, of first rank]. A protein from the thyroid gland.

thy″rop·to′sis [*thyreoeidēs*; G. *ptōsis*, falling]. Displacement of a goitrous thyroid so that it is partially or completely concealed in the thorax.

thy·ro′sis (thigh·ro′sis) [*thyreoeidēs*; G. *-ōsis*, condition]. Any disorder caused by abnormal function of the thyroid gland.

thy″ro·ther′a·py [*thyreoeidēs*; G. *therapeia*, treat-

ment]. Treatment of disease by thyroid gland preparations.

thy rot'o my (thigh-rot o-mee) [*thyreoides*; G *tomē*, cutting]. Incision or splitting of the thyroid cartilage.

thy"ro-tox'i [*thyreoides*; G *toxikon*, poison]. Pertaining to disease caused by excessive activity of the thyroid gland or excessive thyroid hormone action.

thy"ro-tox"i co sis [*thyreoides*; *toxikon*, G *-ōsis*, condition]. Hyperthyroidism of any type.

thy"ro tox'in [*thyreoides*; *toxikon*]. Any substance which is toxic to the thyroid cells.

thy rot'ro-phin (thigh rot ro-fin) *See thyrotropin.*

thy rot'ro-pin. A thyroid-stimulating hormone (TSH) produced by the adenohypophysis formerly spelled *thyrotrophin.*

thy rox'in (thigh-rock sin) **thy rox'ine** (thigh-ck seen, -sin) $HOC_6H_2I_2OC_6H_2I_2CH_2CH(NH_2)COOH$. An active physiologic principle obtained from the thyroid gland or prepared synthetically; contains about 64 per cent iodine. Occurs as white crystals, insoluble in water It is used for the same purposes as thyroid, but the latter is preferred. Dose, 0.5 mg. (1/128 gr.) U til recently the synthetic form was the racemic product; now the L-form, identical with natural thyroxin, is prepared by synthesis and advocated for therapeutic use. See Table of Hormones in th Appendix.

thy-rox"in-so di um. Thyroxin treated with sodium. Also spelled *thyroxine-sodium.*

Ti Chemical symbol for titanium

ti ba'tin, tib a tin. 4,4'-Diaminodiphenylsulfone bis-*d*-galactoside said to be effective against β-hemolytic streptococci. It has been used experimentally to combat tuberculosis.

tib'i a [L]. The larger of the two bones of the leg, commonly called the shinbone, articulating with the femur fibula, and talus. See Table of Bones in the Appendix. See Plates 1 2. —**tibial,** *adj.* **saber t.** Anterior bowing and thickening of the tibia due to periostitis caused by congenital syphilis or yaws. Also called *saber shin, boomerang leg*

tib"i al'gi-a [*tibia*; G *algos*, pain]. Pain in the tibia.

tib"i-a'lis (tib ee-ah'lis, -ay'lis) [L., of the shinbone]. One of two muscles of the leg, **tibialis anterior** and **tibialis posterior** See T ble of Muscles in the Appendix.

t. secun dus. An occasional small muscle arising from the lower third of the body of the fibula and inserted into th capsule of the ankl joint.

tib'i-o- [L *tibia*, shinbone]. A combining form signifying *tibia.*

tib"i o fib'u lar [*tibia*; L. *fibula*, clasp]. Pertaining to the tibia and the fibula.

tibione. Trade-mark for amithiozone.

tic [F.]. A twitching, especially of the facial muscles; a habit spasm.

convulsive t. Spasm of the facial muscles.

diaphragmatic t. Rapid regular contraction of the diaphragm, often mimicking angina pectoris. Syn., *diaphragmatic flutter*

painless t. The occurrence, at intervals, of sudden rapid involuntary contraction in muscle or group of muscles.

t. douloureux. Paroxysmal neuralgi of the trigeminal nerve.

t. rotatoire. Spasmodic torticollis, spinal accessory spasm; spasm of certain muscles by which the head and neck are forcibly rotated to one side or from one side to the other

Tichy Vladimir Leslie [*American surgeon*, 1899-]. With Claude Schaeffer Beck, performed cardiomyopexy and cardiopericardiopexy as an experimental study in providing collateral circulation to the heart (1935)

tick [ME. *tike*]. An arthropod of the order Acarina infesting vertebrate animals. They are important vectors and reservoirs of rickettsial diseases. They also transmit many viral, bacterial, and protozoal diseases. Toxins produced by the female before oviposition produce tick paralysis. The important genera are *Amblyomma*, *Argas*, *Boophilus*, *Dermacentor* *Haemaphysalis*, *Hyalomma*, *Ixodes*, *Ornithodoros*, and *Rhipicephalus.*

tick'ling. A rapid series of light, tactile stimulations of skin or mucous membrane creating tingling sensation.

tic"po lon ga. See *V pera russellii.*

ti tol' gy (G *tiktein*, to bring forth *logos*, word. Obstetrics.

t. i. d. *Ter in die*, three times a day

ti dal drain'age. Drainage of paralyzed urinary bladder with an automatic irrigation apparatus.

tide [AS. *tid*]. A definite period of time.

acid t. A period of increased excretion of acid radicals by the kidney after meals, while excess alkali is secreted into the duodenum.

alkaline t. The transient increase in the alkalinity of the urine during gastric digestion, presumably related to the secretion of hydrochloric acid in the stomach and the resulting relative excess of base i the blood. It is diminished or absent in achlorhydria.

Tiedemann, Friedrich [*German anatomist*, 1781-1861]. Remembered for his description of the greater vestibular glands; also called *Tiedemann's glands*, but more often *Bartholin's glands.* Described plexus of nerve fibers derived from the ciliary nerves and surrounding the central artery of the retina called *Tiedemann's nerve.*

Tietze, Alexander [*German surgeon*, 1864-1927]. Described painful, nonsuppurative swelling of the rib cartilages, called *Tietze's disease.*

ti'ger lil'y ap pear'ance. The speckled appearance of the myocardium observed in pernicious anemia.

ti gog'e-nin (ti-godj'i-nin) The aglycone of tigonin.

tig'o-nin. A saponin from *Digitalis purpurea.* On acid hydrolysis it yields the steroid aglycone tigogenin, glucose, galactose, and rhamnose.

ti'groid [G *tigroeidēs*, like tiger]. A term applied to masses of chromophil substance in nerve cells.

ti groi'y-sis (tye-grol'i sis) [*tigroeidēs*; G. *lysis*, loosing]. Disintegration of the chromophil substance in nerve cell.

ti'ki ti'ki (tee'kee-tee'kee) *See rice polishings.*

Tilbury Fox. See William Tilbury *Fox.*

Til'i [L., linden]. A genus of trees—the lindens or basswood.

til i cin [*tilia*]. A glucoside found in the leaves of the linden tree.

Tillaux, Paul Jules [*French surgeon*, 1834-1904]. With B. G Phocas, described form of chronic mastitis associated with small, fibrous nodules called *Tillaux-Phocas disease, Phocas disease.*

tim'bre. Th peculiar quality of tone other than pitch and intensity that makes it distinctive It depends upon the overtones of the vibrating body

time [AS. *tima*]. The duration of an event or phenomenon. For specific time measurements see under the qualifying noun or adjective.

inertia t. In the stimulation of muscle or organ the latent time required to overcome the inertia of the muscle or organ after the reception of the stimulus through the nerve.

L D 50 t. Median lethal time.

median lethal t. Th amount of time required for 50 per cent of the organisms in large group to die following specific dose of drug infective agent, or radiation.

persistence t. Time that responses to stimuli may persist, as persistence of retinal image

recognition t. The time required for the recognition of the kind of stimulus after its application.
thermal death t. The time required to kill microorganisms when kept at a given temperature.
utilization t. (*temps utile*) The period of time during which a given stimulus is effective in causing excitation of a tissue.

tim'o·thy [after *Timothy* Hanson, who brought the seed to Carolina from New York about 1720]. A common name for the most important meadow grass in America. It flowers during June and July shedding quantities of pollen which is one of the more common causes of hay fever.

tin [AS.] (*stannum*) Sn = 118.70. An element and silver-white metal; used in alloys and the manufacture of tin salts.
t. chloride. Stannous chloride, $SnCl_2.2H_2O$; used in chemical procedures as a reducing agent.
t. oxide. Stannic oxide, SnO_2, used in combination with metallic tin for the treatment of furunculosis.

tin cal. Crude or native borax.

tinc to ri·al [L. *tinctorius*, of dyeing]. Pertaining to staining or dyeing.

tinc tu'ra [L., a dyeing]. Tincture. Abbreviated, tr.

tinc'ture [L. *tinctura*, a dyeing]. Alcoholic or hydroalcoholic solutions of medicinal substances, generally representing 10% or 20% (w/v) of drug and usually prepared by maceration or percolation of the drug with suitable menstruum. Abbreviated, tr
ammoniated t. One prepared with aromatic ammonia spirit as the menstruum.
ethereal t. One prepared with ether spirit as the menstruum.
mother t. In *homeopathy* a tincture, usually representing 10% of the drug, from which the standard dilutions are made.

tine [AS. *tind*]. A fine pointed instrument, used in dentistry to explore fine crevices and cavities commonly called an *explorer*.

tin·e·a [L., a gnawing worm]. The lesions of dermatophytosis; ringworm.
t. amiantacea. A chronic scalp condition characterized by areas of dry heavy scales binding together the bases of the hairs. It is not a fungus infection.
t. barbae. Ringworm of the bearded areas of the face and neck, caused by various species of *Trichophyton* and *Microsporum*; also called barbers' itch, t. sycosis.
t. capitis. Fungus infection of the scalp and hair Caused by several species of *Trichophyton* and *Microsporum*. Also called *t. tonsurans*.
t. corporis. A fungus infection involving the glabrous skin. Caused by various species of *Trichophyton* and *Microsporum*. Also called *t. circinata*, *t. glabrosa*.
t. cruris. A fungus infection involving the skin of the groin, perineum, and perianal regions. Caused by *Epidermophyton floccosum* and several species of *Trichophyton*. Also called *gym itch*, *jockey itch*, *laundryman's itch*.
t. favosa. A chronic fungus infection which usually is limited to the scalp. Caused by *Trichophyton schoenleini* and *T. violaceum*. Also called *favus*, *honeycomb ringworm*.
t. imbricata. A superficial fungus disease of the tropics characterized by the presence of concentric rings of papulosquamous patches scattered over the body. Caused by *Trichophyton concentricum*. Also called *gogo*, *scaly ringworm*, *Tokelau ringworm*, *tropical tinea circinata*.
t. kerion. See *kerion celsi*.
t. manuum. Fungus infection of the hand, usually chronic, due to *Trichophyton purpureum*.
t. nigra. A contagious cutaneous fungus infection caused by *Cladosporium mansoni* in the East and *Cladosporium wernecki* in the Americas, clinically characterized by its black or dark-brown coloration and its predominant occurrence on the trunk, neck, or palmar regions, though other sites may be involved. Also called *keratomycosis*, *keratomycosis nigricans palmaris*, *cladosporiosis epidermica*, *pityriasis nigra*, *microsporosis nigra*.
t. nodosa. See *piedra*.
t. pedis. A fungus infection of the feet, especially the webs of the toes and the soles. Caused by *Epidermophyton floccosum*, various species of *Trichophyton*, and rarely by *Microsporum*. Also called *athlete's foot*.
t. unguium. A chronic fungus infection involving the nails of the hands and feet. Caused by *Epidermophyton floccosum*, various species of *Trichophyton*, and *Candida albicans*.
t. versicolor. A chronic superficial fungus infection of the skin, usually of the trunk. It is caused by *Malassezia furfur*.

Tinel, Jules [French neurosurgeon, 1879–1952]. Author of a treatise on gunshot wounds of the nerves (1916). Described a sign of nerve regeneration, in which percussion over the course of a regenerating nerve trunk causes sensations up to, but not beyond, the actual site of regeneration, called *Tinel's sign*.

tin gle. A pricking or stinging sensation; the feeling of a slight, sharp, and sudden thrill, as of pain; paresthesia.

tin·ni'tus, tin ni tus [L.]. A ringing in one or both ears. It may also be like a roaring or hissing sound. Syn., *tinnitus aurium*.
objective t. Tinnitus audible to the examiner as well as to the subject, usually caused by organic vascular disease in the head or neck, such as an arteriovenous aneurysm or a venous hum. Syn., *pseudotinnitus*.
subjective t. Tinnitus audible only to the subject.
telephone t. That believed to be caused by continual use of the telephone.
t. cranii. A subjective sound in the head, poorly localized and lacking the specific character of true ear noises.

tin tom e·ter An apparatus used in hemoglobinometry. A film of whole blood is arranged between two glass plates, and compared with a series of tinted glasses mounted on a disk.

tin tom'e·try [L. *tinctus*, from *tingere*, to dye; G. *metron*, a measure]. Estimation of the amount of coloring matter in a liquid.

tip [ME.]. The point or summit of anything.
Woolner's t. The apex of the helix of the ear.

Ti·pu'li·dae (ti pew'li·dee) [L. *tipula*, water spider]. A family of the order Diptera, the crane flies. Their importance as disease vectors is not established.

ti"queur' (tee"kur') [F.]. One exhibiting tics.

tire [AS. *tiorian*]. Weary; become exhausted; fag. The term is used extensively by the medical profession and laymen alike in reference to muscular and brain fatigue, general bodily and mental exhaustion, etc.

tires. See *trembles*.

Tirmann–Schmelzer method for ionic iron. See under *stain*.

ti·sane' (ti·zan, tee zahn. See Notes § 35) [F.]. Any decoction or beverage having slight curative or restorative qualities. Obs.

Tisdall method. See Kramer-Tisdall method.

Tiselius, Arne [Swedish biochemist, 1902–]. Described a method for the separation of proteins from body fluids by means of electrophoresis. The

apparatus used is called *Tiselius apparatus.* Nobel laureate (1948).

Tissot spirometer A large bell-type spirometer (capacity 100 liters or more) used for basal metabolism determination. Th subject inspires atmospheric air and expires into the spirometer. At the end of the test period the total volume of expired air is measured and samples analyzed for CO_2 and O_2. The apparatus can be used to measure maximum breathing capacity (MBC). *Syn.*, *Tissot gasometer.*

tis sue [OF *tissu*, from L. *texere*, to weave]. An aggregation of similar cells and their intercellular substance.

adenoid t. Old term for lymphatic tissue.

adipose t. A form of connective tissue consisting of fat cells lodged in areolar tissue and arranged in lobules along the course of small blood vessels.

areolar t. A form of loose connective tissue composed of cells and delicate collagenous and elastic fibers interlacing in all directions.

blubbery tissues. The distended tissues of the extremities found in filariasis and formed by blockage of lymphatic drainage.

cartilaginous t. See *cartilage.*

cavernous t. Erectile tissue.

***cellulo-adipose* t.** Tissue infiltrated by fat but retaining some of its original cellular structure.

chondroid t. Embryonal cartilage.

cicatricial t. Scar tissue.

connective t. A general term for all those tissues of the body that support the specialized elements or parenchyma. The most important varieties are adipose tissue, areolar tissue, osseous tissue, cartilaginous tissue, elastic tissue, fibrous connective tissue, and lymphatic tissue.

elastic t. Connective tissue which is composed predominantly of yellow elastic fibers.

embryonic connective t. Mucoid tissue.

epithelial t. See *epithelium.*

erectile t. A spongelike system of vascular spaces in the penis and clitoris which becomes filled with blood causing enlargement and rigidity of the organ.

***fibrous connective* t.** *The densest connective* tissue of the body. Collagenous fibers form the main constituent and are arranged in parallel bundles between which are rows of connective-tissue cells. It includes tendons, ligaments, and fibrous membranes, as the dura mater.

gelatinous t. See mucoid t.

glandula t. A group of pithelial cells which elaborate secretions.

***granulation* t.** The mixture of newly formed capillaries and fibroblasts in inflammation, especially of exudative character representing the early stages of healing. Followed by growth into exudate or destroyed tissue, the process becomes one of organization. As t progresses to cicatrization by atrophy of blood vessels and maturation of connective tissue, inflamm tory foci are cicatrized, or such foci or foreign bodies are encapsulated; on surfaces, especially serous, fibrous adhesions are formed wounds are healed.

hematopoietic t. Blood-cell-forming tissue consisting of reticular fibers and primitive reticular cells which can be converted into all types of blood and connective-tissue cells.

hemopoietic t. See hematopoietic *t.*

homologous tissues. Those identical in type of structure.

indifferent t. U differentiated tissue.

inflammatory t. Tissue in which there is exudation or proliferation as result of injury.

interstiti l t. The intercellular connective tissue.

keratinized t. Tissue found in the ails, hair or epidermis.

lymphatic t. Tissue consisting of networks of *reticular and collagenous fibers and lymphocytes.*

lymphoid t. Lymphatic tissue, especially that occurring where it is not normally present.

mesenchymal t. Undifferentiated embryonic tissue composed of branching cells between which is ground substance of coagulable fluid. *See also mesenchyme.*

metanephrogenic t. The caudal part of the nephrogenic tissue giving rise to the metanephros or definitive kidney.

mucoid t. A form of loose connective tissue found in many parts of the embryo, as in the umbilical cord of the human fetus. The tissue is characterized by the presence of large, stellate fibroblasts surrounded by soft, homogeneous intercellular substance which takes a basic stain.

mucous t. Old term for mucoid tissue.

muscular t. The tissue of which muscles are composed. See *muscle*, 1.

myeloid t. Red bone marrow consisting of reticular cells attached to argyrophile fibers which form wide meshes containing scattered fat cells, erythroblasts, myelocytes, and mature myeloid elements.

nephrogenic t. The tissue of the nephrogenic cord derived from the nephrotome plate that forms the blastema or primordium from which the embryonic and definitive kidneys develop.

nervous t. The nerve cells, their processes and accessory cells, such as the neuroglia.

nodal t. The sinoatrial node, the atrioventricular node and bundle and its branches, which serve for the origin and transmission of impulses in the heart. This system is made up of dense network of Purkinje fibers.

osseous t. See *bone.*

parenchymal t. The epithelial components of an organ or in the case of lymphatic organs the lymphatic tissue, as contrasted with the supporting and nutritive framework of the organ, the stroma.

pseudoerectile t. The submucosa of the nasal conchae, with its rich venous plexus.

***reticular* t.** Connective tissue in which reticular fibers are the conspicuous element, forming branching nonelastic network.

scar t. Contracted dense connective tissue, the end result of healing.

shock t. See shock *organ.*

subcutaneous t. The layer of loose connective tissue under the dermis. Also called *hypodermis.*

white fibrous t. See fibrous connective t.

***yellow elastic* t.** *See elastic t.*

tis'sue throm"bo-plas'tin fac'tor. See *thromboplastin.*

ti ta ni um (tye-tay'nee-um, ti ta nee um) [L. *Titanes*, Titans, sons of the earth]. Ti = 47.90. A very hard, dark gray lustrous, metallic element used in certain alloys to impart toughness.

t. dioxide. TiO_2; extensively used as white pigment in paints, plasters, etc.

ti'ter ti'tre (ty'tur tee'tur) 1. *In chemistry,* titration figure. 2. An expression of the strength of volumetric solution, usually grams of reacting constituent per cubic centimeter of solution. 3. The amount of one substance which corresponds to, reacts with, or is otherwise equivalent to stated quantity of another substance.

tit"il la tion [L. *titillatio*, from *titillare*, to tickle]. The act of tickling; the sensation produced by tickling.

ti tra'tion. An operation involving the measurement of the concentration or volume of a standard solution required to react chemically or immunologically with substance being analyzed or standardized. —**ti'trate**

electrometric t. A method of titration in which the end point is detected by measuring the change in potential of suitable electrode or the change of electric conductance during titration.

ti'tre. See titer

tit"u ba tion [L. titubatio, from titubare, to stagger]. A staggering gait seen especially in diseases of the cerebellum.

lingual t. Stammering; stuttering.

Tit'y-us. A genus of Scorpionida.

T. serrulatus. A poisonous species of Brazil.

T. trinitatis. A poisonous black scorpion of Trinidad.

thvriet. A proprietary multivitamin and mineral product comprising minerals in water form and encapsulated vitamins.

TKD Abbreviation for tokodynamometer

TKG Abbreviation for tokograph.

Tl Chemical symbol for thallium.

Tm Chemical symbol for thulium.

Tn Chemical symbol for thoron.

TNT Abbreviation for trinitrotoluene.

T O Original, or old, tuberculin. Also abbreviated O T

toad'head" [AS. tadie; heafod]. The head of an anencephalus.

toad poi'sons. Toxic constituents of the skin glands of various toads, chiefly bufotoxins, bufagins, and bufotalins, all closely related to the digitalis principles in structure and action. Some contain the alkaloids bufotenin, bufotenidine, and bufothionine. Several tropical species yield epinephrine.

toad'skin" [tadie; ON skinn]. Abnormal dryness, scaling, and fissuring of the skin resulting from vasomotor disturbances. Seen in vitamin deficiencies and syringomyelia.

to bac'co [Taino tabaco, roll of tobacco leaves]. A plant, Nicotiana tabacum, of the family Solanaceae, the dried leaves of which contain an alkaloid, nicotine. It was formerly employed as an enema to overcome intestinal obstruction.

Indian t. Lobelia.

Tobey George Loring Jr [American otolaryngologist, 1881–1947]. With J B. Ayer devised test for lateral sinus thrombosis, based on changes in the pressure of the spinal fluid during compression of one or both jugular veins; called Tobey-Ayer test.

Tobruk plaster A combination of the long Thomas splint with plaster fixation of the thigh, leg, and foot for the emergency transportation of patients with wounds and fractures of the lower extremity

toco-, See toko-.

tocopherex. Trade-mark for distillate of vegetable oils containing mixed tocopherols.

to-coph er ol [G. tokos, birth; pherein, to bear]. Any one of four substances, α-, β-, γ- and δ-tocopherol, possessing vitamin-E activity the α-variety being the most potent. Wheat-germ oil is rich source contained also in cottonseed oil and lettuce.

alpha t. ... pherol 5 7 8-T im thyltocol $C_{29}H_{50}O_2$, sometimes referred to as vitamin E although the latter substance probably has multiple nature Obtained from natural sources or prepared synthetically Light yellow viscous, odorless, oily liquid, miscible with alcohol. It is destroyed by light and air See Table of Vitamins in the Appendix.

alpha tocopherol acetate. The acetate ester of alpha-tocopherol, more stable than the free alcohol also spelled alpha-tocopheryl acetate.

toc'o-sine (tock' seen, -sin) Tyramine hydrochloride.

to cus [tokos]. Childbirth.

Todd, John Lancelot [English physician, 1876–1949]. With J. E. Dutton, demonstrated that the cause of relapsing fever in monkeys is spirillum, Spirillum duttoni (1905)

Todd' paralysis. See under paralysis.

toe [ME. too]. A digit of the foot.

hammer t. See hammertoe.

Morton's t. See metatarsalgia.

overlapping t. A congenital variation characterized by dorsal displacement of the fifth toe over the fourth.

tofaxin. Trade-mark for distillate of vegetable oils containing mixed tocopherols.

Toison, J. [French histologist, 1858–1950]. Introduced stain for red blood cells made with 0.025 Gm. of methyl violet (6B) 1.0 Gm. of sodium chloride, 8.0 Gm. of sodium sulfate, 30 cc. of glycerine in 300 cc. of water

To"ko-la u sing'wesen (to"kah-lah ...) See tinea imbricata.

t 'ko- to co- [G. tokos, birth] Combining form meaning birth.

tok o-dy"na mom'e-ter [G. tokos, birth; dynamis, power metron, measure]. An instrument for measuring the amplitude, duration, and frequency of uterine muscular contraction, as during labor Abbreviated, TKD

tok'o-graph [tokos; graphein, to write]. A record taken by tokodynamometer Abbreviated, TKG

to-kog'ra phy The making and interpreting of graphic recordings of the amplitude, duration, and frequency of uterine muscular contractions during labor

to-kol'o-gy [tokos; G logos, word]. The science of obstetrics.

tok"o-ma ni (tock o-may'nee uh, to"ko) [tokos; G mania, madness]. Puerperal insanity; psychosis in woman at the time of childbirth.

to-kom' try A study of the amplitude, duration, and frequency of the uterine muscular contractions, as during labor with tokodynamometer —tokom'eter a.

tokophin. Trade-mark for brand of synthetic alpha-tocopherol.

tok"o-pho'bi-a (tock'o-fo'bee-uh, to"ko-) [tokos; G. phobos, fear]. Undue dread of childbirth.

to'kos. Childbirth.

tol az'o-line. Official generic name for 2-benzylimidazoline or benzazoline, an adrenergic-blocking agent, the hydrochloride of which is supplied under the trade-marked name priscoline (formerly priscol) hydrochloride

tol'er-ance, tol"er-a'tion [L. tolerantia, from tolerare, to endure]. The ability of enduring the influence of drug or poison, particularly when acquired by continued use of the substance.

sugar t. The tolerance of diabetic patient for ingested sugar It is measured by the maximum amount of sugar intake which does not produce glycosuria.

work t. I medicine the amount of work certain category of chronically ill patient can or should do, e.g most patients are discharged from t berculosis sanatoriums with daily work tolerance of four hours.

tol'er ant [tolerare]. Withstanding the action of drug without harm.

tol"er-a'tion. Tolerance.

Tollens test. See under test.

to-lo ni-um chlo ride. Generic nam for the antiheparin-active dye toluidine blue O. See blutene chloride.

tolserol. A trade-marked name for mephenesin

to-lu' bal'sam (to LO. bawl'sum) (balsamum tolutanum) Obtained from Myroxylon Balsamum South American tree of the Leguminosae. It tains cinnamic and benzoic acids, esters of

acids and resins. A mild stimulant expectorant used in the form of tincture or syrup.

tol'u·ene. Methylbenzene. $C_6H_5CH_3$. A colorless liquid obtained chiefly from coal tar. Used as solvent and reagent.

tol"u·ene·sul"fon di"chlor am"ide (para). Dichloramine-T. Also spelled *p-toluenesulfondichloramide*, *p-toluenesulfonedichloramide*, *p-toluenesulfonedichloroamide*.

to·lu'ic ac'id. Any of four isomeric, crystalline acids, *o*-toluic, *m*-toluic, *p*-toluic, all represented by the formula $CH_3C_6H_4COOH$, and α-toluic, of the formula $C_6H_5CH_2COOH$, better known as phenylacetic acid.

to·lu'i·dine (to·lew'i·deen, -din). Aminotoluene. $H_2NC_6H_4CH_3$. The *o*- and *m*- varieties are liquids; the *p*- is solid.

t. blue O (C.C.). $C_{15}H_{16}ClN_3S$. 3-amino-7-dimethylamino-2-methylphenazathionium chloride; basic thiazine dye, used as nuclear stain, for Nissl substance in the staining of nerve cells, and for bacteriologic staining. Systemic administration reduces bleeding tendency in certain hemorrhagic conditions associated with excessive amounts of heparinoid substances in the blood. It has been used also for detection of corneal defects. Syn., *tolonium chloride*. See *blutene chloride*.

tol'u·ol. Toluene.

tol'u·yl·ene, tol·u'yl·ene. Stilbene.

t. red. Aminodimethylaminotoluphenazine hydrochloride. $C_{15}H_{16}N_4.HCl$. An indicator covering the pH range 6.8–8.0. Suggested for use in test of gastric function. Syn., *neutral red*.

tol'yl. The univalent radical $C_6H_4CH_3$.

tolysin. Trade-mark for a brand of *neocinchophen*.

to·mat'i·dine. The aglycon portion, chemically steroid secondary amine, resulting from hydrolysis of tomatine.

to·ma·tine. A glycosidal alkaloid, isolated from the tomato plant, having antifungal activity.

-tome [G. *tomē*, cutting; *tomos*, cutting]. 1. A combining form denoting part or a section. 2. A combining form denoting an *instrument for cutting*.

to·men'tum [L.]. *A lock of wool.*

t. cerebri. The network of small blood vessels of the pia penetrating the cortex of the brain.

Tomes' fibers. See under *fiber*.

Tomes's granular layer. See under *layer*.

Tomes's process. See amelaoblastic *process*.

Tommaselli, Salvatore [*Italian physician*, 1830–1902]. Described syndrome of hematuria and pyrexia due to overdose of quinine called *Tommaselli's syndrome*.

to·mo·gram [*tomos*; G. *gramma*, letter]. A roentgenogram obtained by sectional radiography.

to·mog'ra·phy. See sectional *radiography*.

to·mo·to·ci·a (to·mo·to·shee·uh, -see·uh, tom·o-) [*tomos*; G. *tokos*, birth]. Cesarean section.

-tomy [G. *tomē*, cutting]. A combining form denoting a *cutting operation*.

tonal islands. Isolated areas in the range of human hearing in which some persons with practically no hearing have an appreciation of pure tones at maximum intensity.

to·na·pha·si·a (to·nuh·fay'zhuh, -see·uh, ton·uh) [G. *tonos*, tone; *aphasia*, speechlessness]. Loss of the ability to sing (due to cerebral lesion).

tone [*tonos*]. 1. A distinct sound. 2. The normal state of tension of a part or of the body.

summational tones. Supposed production of new tones by the summation or addition of the number of vibrations of existing tones.

to·neph'in. See *pitressin*.

ton·ga. A mixture of barks, formerly used in the treatment of neuralgia.

tongue [AS. *tunge*]. The movable muscular organ attached to the floor of the mouth, and concerned in tasting, masticating, swallowing, and speaking. It consists of a number of muscles, and is covered by mucous membrane from which project numerous papillae, and in which are placed the terminal organs of taste. See Plate 12.

bifid t. A tongue the anterior portion of which is cleft in the median line.

black, hairy t. A tongue with a brown, black patch on the dorsum, due to hypertrophied filiform papillae and the presence of pigment. Also called *hyperkeratosis linguae*, *lingua nigra*.

black t. 1. In dogs, a deficiency disease. See *blacktongue*. 2. Black, hairy tongue.

cleft t. See bifid *t*.

fern-leaf pattern t. One presenting a well-marked median sulcus with lateral branches.

filmy t. One with whitish, symmetrical patches on both sides.

fissured t. A condition of the tongue in which there are deep furrows in the mucous membrane. Also called *furrowed t.*, *lingua plicata*.

frog t. Ranula.

furred t. A tongue the papillae of which are coated, giving the mucous membrane the appearance of a whitish fur.

geographic t. One with localized thickening of the epithelium, giving to the surface the appearance of a map.

hairy t. One with a hyperplasia of the papillae giving rise to hairlike projections.

magenta t. The rosy-colored glossitis of ariboflavinosis in which lesions of the mucosa of the lip develop, redness and swelling of the mucosa follow, and the papillae of the tongue become lower and assume a mushroom appearance.

parrot t. A shriveled, dry tongue that cannot be protruded, found in typhus.

scrotal t. Fissured tongue, lingua plicata.

strawberry t. A hyperemic tongue, the fungiform papillae of which are very prominent. It is seen especially in scarlet fever.

wooden t. One which is the seat of actinomycosis.

tongue'-ti[e]. A congenital abnormality of the frenulum of the tongue, interfering with its mobility. Syn., *ankyloglossia*.

ton'ic [G. *tonikos*, of stretching]. 1. Pertaining to tone; producing normal tone or tension. 2. Characterized by continuous tension or contraction, as tonic spasm, tonic convulsion.

ton'ic. An agent or drug given to improve the normal tone of an organ or of the patient generally.

cardiac t. One which strengthens the heart muscle.

to·nic'i·ty (to·nis'i·tee) [tonikos]. The condition of normal tone or tension of organs.

ton"i·co·clon'ic (ton"i·ko·klon ik, to·nik"o-) [tonikos, G. *klonos*, confused motion]. Both tonic and clonic, pertaining to muscular spasms.

ton"i·tro·pho'bi·a (ton"i·tro·fo'bee·uh, to·ni"tro-) [L. *tonitrus*, thunder; G. *phobos*, fear]. Morbid fear of thunder. Also called *astraphobia*.

ton'ka bean. The seed of *Dipteryx odorata*, tree of South America; it contains coumarin, and is used as a flavoring agent.

ton"o·clon'ic. See *tonicoclonic*.

to·no·fi'bril (to·no·figh'bril, ton·o-) [G. *tonos*, tension; dim. from L. *fibra*, fiber]. Delicate fibrils found particularly in epithelial cells, between which they run across intercellular bridges.

to·no·gram (to'no·gram, ton·o-) [*tonos*; G. *gramma*, letter]. A record made by a tonograph.

to·no·graph (to'no·graf, ton·o-) [*tonos*; G. *graphein*, to write]. A term formerly applied to a device for determining or recording blood pressure.

to·nom·e·ter [*tonos*; G. *metron*, a measure]. An instrument to measure tension, as that of the eyeball, or an instrument used to equilibrate samples of fluid, as blood, with gases at known tensions.

Gaertner's t. One used for estimating blood pressure.

Musket's t. One used for measuring the tonicity of the Achilles tendon.

to·no·plasts (to'no-plasts, ton'o-) [*tonos*; G. *plassein*, to form]. Small intracellular bodies which build up strongly osmotic substances within themselves and in this way swell to small vacuoles.

to·nos"cil·lo·graph·y [*tonos*; L. *oscillare*, to swing; G. *graphein*, to write]. Method of automatic blood-pressure recording of extremities.

to·no·scope (to'no-scope, ton'o-) [*tonos*; G. *skopein*, to examine]. An instrument for examination of the interior of the cranium by means of sound.

ton·qua bean (tong'kia). Tonka bean.

ton'sil [L. *tonsillae*, tonsils]. 1. Aggregated lymph nodules and associated lymph vessels surrounding crypts or depressions of the pharyngeal mucosa. 2. A small lobe of the cerebellar hemisphere, on its inferior medial aspect. —**tonsillar**, *adj.*

Gerlach's tubal t. See tubal *t.*

lingual t. Accumulations of lymphatic tissue more or less closely associated with crypts which serve also as ducts of the mucous glands of the base of the tongue.

Luschka's t. See pharyngeal *t.*

nasal t. Old term for pharyngeal tonsil, which is located in the nasopharynx.

palatine t. One found on each side of the isthmus of the fauces and between the glossopalatine and pharyngopalatine arches, in the tonsillar sinus; almond-shaped and separated from the pharyngeal musculature by a well-defined thin capsule.

pharyngeal t. An unpaired tonsil found on the posterior wall of the nasopharynx, in folds of the mucosa, with grooves between, which simulate crypts; more prominent during childhood; when hypertrophied forms the adenoids. See Plate 12.

tubal t. Minor and variable aggregations of lymphatic tissue about the pharyngeal orifice of each pharyngo-tympanic (auditory) tube. Also called *Gerlach's tubal tube.*

ton·sil'la (pl. *tonsillae*) [*tonsillae*]. Tonsil.

t. cerebelli. Tonsil of the cerebellum.

ton sil lec'tome [*tonsillae*; G. *ektomē*, excision]. An instrument for the performance of tonsillectomy.

ton·sil·lec'to·my [*tonsillae*; *ektomē*]. Removal of the palatine tonsils.

ton"sil·li'tis [*tonsillae*; G. *-itis*, inflammation]. Inflammation of the tonsils. —**tonsillit'ic**, *adj.*

acute t. Inflammation of the tonsils with sudden onset, pyrexia, constitutional symptoms, and intense sore throat.

follicular t. A form in which the crypts are involved and their contents project as whitish spots from the surface of the tonsil.

herpetic t. A form characterized by an eruption of herpetic vesicles, which soon rupture, leaving small, circular ulcers that coalesce and become covered with a fibrinous exudation. The disease has an acute onset, continuous fever and critical decline; affects those subject to herpes elsewhere, and tends to recur.

lacunar t. See follicular *t.*

mycotic t. Tonsillitis due to fungi.

pustular t. A form characterized by the formation of pustules, as in smallpox.

ton sil'lo·lith, ton·sil·lo·lith [*tonsillae*; G. *lithos*, stone]. A concretion within the tonsil.

ton·sil'lo·tome, ton·sil·lo·tome [*tonsillae*; G. *tomos*, cutting]. An instrument for removing tonsils.

ton"sil·lot'o·my [*tonsillae*; G. *tomē*, cutting]. The operation of cutting away the whole or a part of a tonsil.

ton·sil"lo·ty'phoid (ton-sil"o-ty'foyd, ton"sil-o-) [*tonsillae*; G. *typhōdēs*, delirious]. Typhoid fever complicated with a membranous or pseudomembranous deposit on the tonsils.

ton"sil·sec'tor [*tonsillae*; L. *sector*, cutter]. A tonsillotome consisting of a pair of circular or oval scissor blades moving inside a guarding ring.

ton·sure [L. *tonsura*, a shearing]. The shaving or removal of the hair from the crown of the head.

to'nus [G. *tonos*, a stretching]. The slight degree of contraction usually present in muscles when not undergoing active movement. In skeletal muscles, tonus is a reflex response to motor nerve impulses of low frequency. In smooth muscle, it is an inherent property of the muscle cells.

Tooth, Howard Henry [*English physician*, 1856–1925]. Described a peroneal type of progressive neuropathic muscular atrophy (1886); sometimes called *Tooth's muscular atrophy.* See also Charcot-Marie-Tooth disease.

tooth (pl. *teeth*) [AS. *tōth*]. One of the calcified organs supported by the alveolar processes and gums of both jaws, serving to masticate food, aid speech, and influence facial contour. Each tooth consists of (1) a main mass of dentin surrounding a pulp cavity which contains the dental pulp with its nerves and vessels, (2) a coronal portion (crown) covered by enamel, (3) a radicular portion (root) which may be single, bifid, or trifid, covered by bone called cementum, (4) a cervical portion (neck) at the junction of crown and root.

antagonistic t. One which meets a tooth or teeth of the opposite dental arch during mastication or in occlusion.

artificial teeth. A denture or bridgework; dental prosthesis; the porcelain, acrylic, or metallic imitations of the crowns of teeth used in dental prosthesis.

auditory teeth. The toothlike projections on the edge of the limbus laminae spiralis of the ear. They extend between the epithelial cells and give the limbus an uneven, highly refracting surface.

bicuspid t. See premolar *t.*

buck t. A protruding tooth.

canine t. A tooth with a conical crown, situated between the lateral incisor and the first premolar in each quadrant of the jaws. Also called *cuspid t.*

cheek teeth. The molar teeth.

cheoplastic teeth. Artificial teeth without pins, but with undercuts adapted to the reception and retention of molten metal as a means of attachment to a cheoplastic base.

Corti's teeth. See *auditory teeth*, under *tooth.*

cuspid t. See canine *t.*

deciduous teeth. The 20 temporary or milk teeth; those replaced by succedaneous permanent teeth. There are eight incisors, four canines, and eight molars. See Plate 21.

Huschke's teeth. See *auditory teeth* under *tooth.*

Hutchinson's teeth. See Jonathan *Hutchinson.*

impacted t. See *impacted*, 2.

incisor t. One of the two cutting teeth nearest the midline in each quadrant of the dentition.

milk teeth. The deciduous teeth.

molar t. A multicuspidate tooth used for crushing, grinding, or triturating food. In the human deciduous dentition there are two in each quadrant immediately behind the canine; in the permanent dentition, three, behind the premolars.

multicuspid teeth. The molar teeth.

notched teeth. Those with irregular incisal edges due to imperfect fusion or hypoplasia of the developmental lobes.

permanent t. One of the 32 teeth of the second dentition. There are eight incisors, four canines, eight premolars, and 12 molars. See Plate 42.

pivot t. An artificial crown doweled to the root of a natural tooth.

premolar t. One of the two teeth with two cusps situated between the canine and the first molar in each quadrant of the permanent dentition. Also called *bicuspid t.*

sectorial t. One of the cutting teeth of the Carnivora.

stomach t. The lower canine tooth.

succedaneous t. One of the permanent teeth which takes the place of a deciduous tooth.

supernumerary t. One which is additional to the normal complement.

temporary teeth. (a) The teeth of the first dentition; milk teeth; deciduous teeth. (b) A provisional set of artificial teeth.

wisdom t. The third molar tooth in man; formerly called *dens serotinus, dens sapientiae.*

tooth'ache" [AS. *tōth*; AS. *ece*]. Any pain in or about a tooth; odontalgia.

tooth'ache" tree. A tree whose bark, xanthoxylum, has been used as a masticatory in toothache.

toothed [*tōth*]. Having teeth or indentations; dentate.

tooth paste. See *dentifrice.*

top"ag·no'si·a [G. *topos*, place; *agnōsia*, unknown]. Loss of localization sensibility.

to·pal'gi·a [*topos*; G. *algos*, pain]. Localized pain, common in neurasthenia and hysteria; often appears suddenly after emotional disturbances.

to·pec'to·my [*topos*; G. *ektomē*, excision]. Excision of a portion of the cerebral cortex, usually in the frontal area, as applied in the treatment of certain mental disorders or intractable pain.

top"es·the'si·a, top·aes·the'si·a (top"es·thee'zhuh, ·zee·uh, to·pes-) [*topos*; G. *aisthēsis*, sensation]. Local tactile sensibility.

Töpfer's reagent. See under *reagent.*

Töpfer's test. See under *test.*

to·pha'ceous [L. *tophus*, tufa]. Of the nature of tophi; sandy or gritty.

to'phus (pl. *tophi*) [L.]. A mineral concretion in the body, especially about the joints. A sodium urate deposit in the skin about a joint, in the ear, or in bone, in gout.

top'ic, top'i·cal [G. *topos*, place]. Local.

topicillin. Trade-mark for a brand of penicillin preparations for topical use.

Topinard, Paul [French anthropologist, 1830–1911]. Described the angle formed at the anterior nasal spine by lines from the glabella and the auricular point; called *Topinard's angle.*

top'o- (top·o-, to'po-), **top-** [G. *topos*, place]. A combining form meaning *place*; used to signify *localized.*

top·o·al'gi·a. See *topalgia.*

top·o·an"es·the'si·a (·an·es·thee'zhuh, ·zee·uh) [*topos*; G. *anaisthēsia*, lack of sensation]. Inability to locate exactly a cutaneous sensation.

top·o·gen'e·sis, to·po·gen'e·sis. See *morphogenesis.*

top·og·no'sis. See *topesthesia.*

top"og·nos'tic [*topos*; *gnōsis*, recognizing]. Pertaining to the recognition of changes, positions, or symptoms of parts of the body, as topognostic sensibility.

to·pog'ra·phy [*topos*; G. *graphein*, to write]. A study of the regions of the body or its parts, as cerebral topography. —**topograph'ic,** *adj.*

to·pol'o·gy [*topos*; G. *logos*, word]. 1. Topographic anatomy. 2. The relation of the presenting part of the fetus to the pelvic canal.

top·o·nar·co'sis [*topos*; G. *narkōsis*, benumbing]. Local insensibility or anesthesia.

top·o·neu·ro'sis [*topos*; G. *neuron*, nerve; *-ōsis*, condition]. A localized neurosis.

top"o·pho'bi·a [*topos*; G. *phobos*, fear]. Morbid dread of certain places.

top'o·phone [*topos*; G. *phōnē*, sound]. An instrument to determine the direction of a source of sound.

toramin. A proprietary histaminase-containing tablet prepared from desiccated kidney and extract of intestinal mucosa of hogs. Used in prophylaxis and treatment of allergies.

tor'cu·lar He·ro·phi'li (hi·rof'i·lye). Old term for confluens sinuum, or confluence of the sinuses.

Torek, Franz [American surgeon, 1861–1938]. Remembered for his ingenuity in devising a technic of orchiopexy (1909), called *Torek's operation.* Performed the first successful resection for cancer of the esophagus, also called *Torek's operation.*

Torkildsen procedure. See *ventriculocisternostomy.*

tor·men'tum [L., an engine for hurling missiles]. An old name for various obstructive disorders of the intestine.

t. intestinorum. See *dysentery.*

tor'mi·na (sing., *tormen*) [L., griping of the bowels]. Griping pains in the bowel.

post partum t. The afterpains of parturition.

t. alvi. Colic.

t. Celsi. Dysentery.

t. intestinorum. Dysentery.

t. ventriculi nervosa. See *hyperperistalsis.*

tor'mi·nal, tor'mi·nous [*tormina*]. Affected with tormina.

Tornwaldt, Gustav Ludwig (Thornwaldt) [German physician, 1843–1910]. Described nasopharyngeal bursitis, accompanied by the formation of a cystic cavity in the pharyngeal mucosa containing pus or mucopus (1885); called *Tornwaldt's bursitis.* This had been described by Hermann Wendt as an inflammation of the pharyngeal tonsil (1874).

toroseal. A proprietary tablet containing bile salts, cascara sagrada extract, phenolphthalein, and capsicum oleoresin. Used as a cholagogue cathartic.

Toronto unit. The anticoagulant activity of 10 mg. of a standard barium heparin employed at the University of Toronto.

tor·pes'cence [L. *torpescere*, to grow stiff]. Numbness; torpidity. Rare.

tor'pid [L. *torpidus*, benumbed]. Affected with torpor.

tor·pid'i·ty. See *torpor.*

tor'por [L., numbness]. Sluggishness; inactivity.

t. intestinorum. Constipation.

t. retinae. Dulled perceptive power of the retina.

torque [L. *torquere*, to twist]. The measure of the effectiveness of a force in producing the rotation of a body about an axis; the moment of force. It is the magnitude of the force times the perpendicular distance from the axis to the line of action of the force.

Torricellian vacuum. See under *vacuum.*

tor"si·om'e·ter [L. *torquere*, to twist; G. *metron*, measure]. An instrument for measuring ocular torsion.

tor'sion [*torquere*]. 1. A twisting; also, the rotation of the eye about the visual axis. 2. The tilting of the vertical meridian of the eye.

t. of an artery. Twisting of the free end of an artery to check hemorrhage.

t. of teeth. The forcible turning of teeth in their alveoli for the purpose of correcting irregularity in position.

t. of the umbilical cord. The spontaneous twisting of the umbilical cord. From eight to ten twists are normal; great torsion may occur after the death of the fetus.

tor'sive (tor'siv) [*torquere*]. Twisted; twisting.

tor si ver'sion. Rotated position of a tooth in its alveolus.

tor'so [It.]. The trunk; the body without head or limbs.

tor"so-clu'sion [L. *torquere*, to twist; *occludere*, to shut]. Occlusion, 4, occurring when a tooth is rotated on its long axis.

tort [*torquere*]. To tilt the vertical meridian of the eye. **extort**, to tilt the vertical meridian outward. **intort**, inward.

Torti, Francesco [*Italian physician*, 1658–1741]. Said to have introduced the term malaria. Probably the first in Italy to use cinchona bark for its treatment.

tor"ti-col'lar [L. *torquere*, to twist; *collum*, neck]. Affected with wryneck, or torticollis.

tor"ti-col'lis [*torquere*; *collum*]. Wryneck, a contraction of the sternocleidomastoid muscle, usually of one side, resulting in an abnormal position of the head.

hysterical t. See psychogenic *t.*

intermittent t. See spasmodic *t.*

psychogenic t. Spasmodic torticollis associated with an anxiety reaction, with spread often beyond the sternocleidomastoid muscle, resulting in blepharospasm and spasm of other facial or shoulder muscles.

rheumatic t. Old term for stiff neck, a form due to myositis of the sternocleidomastoid or other muscle of the neck.

spasmodic t. Spasmodic contraction of the muscles of the neck of one side, especially the sternocleidomastoid, causing a drawing of the head toward the opposite side. The spasm may be tonic or clonic. Also called *torticollis spastica*.

tor'tu-ous [L. *tortuosus*, twisting]. Twisted, sinuous.

Tor'u-la [L. *torulus*, small elevation]. A genus of fungi which reproduce by budding.

T. histolytica. See *Cryptococcus histolyticus*.

torutilin. Trade-mark for a proprietary vitamin-B complex capsule.

Tor"u-lop sis ne"o-for'mans (nee o for'manz). See *Cryptococcus histolyticus*.

tor u lo'sis. See *cryptococcosis*.

tor'u lus [*torulus*]. An elevation.

to'rus (pl. *tori*) [L., a bulging]. 1. A surface having a regular curvature with two principal meridians of dissimilar curvature at right angles to each other. 2. An elevation or prominence.

buccal t. An inconstant slight ridge along the buccal raphe.

mandibular t. Ridge of the mandible situated in the anterior portion of the inner aspect of the bone approximately at the junction between the body and the alveolar process in the region of the incisors, canines, and premolars, rarely in the molar region, due to an overgrowth of the bone.

occipital t. See transverse occipital *t.*

supraorbital t. Extreme development of the supraorbital region.

t. levatorius. An elevation of the lateral part of the upper surface of the soft palate caused by the underlying levator veli palatini muscle.

t. palatinus. A nodular elevation along the median suture of the hard palate; due to an exostosis.

t. pubicus. A low vertical elevation overlying the pelvic margin of the fibrocartilaginous disk of the pubic symphysis.

t. tubarius. The arcuate elevation of the mucous membrane of the pharynx over the medial end of the cartilage of the auditory tube, above and behind the pharyngeal orifice of the tube. Also called *Eustachian cushion*, *tubal elevation*.

t. uretericus. A ridge in the urinary bladder wall connecting the ureteral orifices.

t. uterinus. A transverse fold on the posterior aspect of the cervix of the uterus formed as an extension of the uterosacral ligaments.

transverse occipital t. An occasional elevation found on the occipital bone which includes the external occipital protuberance and the adjacent area.

tos"yl chlor am id so di um. International Pharmacopoeia name for chloramine-T.

to'ta-quine (to tah kween, kwin) (*totaquina*). A mixture of alkaloids from the bark of species of *Cinchona*. It contains not less than 10% of anhydrous quinine and a total of 70–80% of the anhydrous alkaloids cinchonidine, cinchonine, quinidine, and quinine. Yellowish white to gray powder affected by light. An antimalarial. Dose, 0.13–0.6 Gm. (2–10 gr.)

Toti, Addeo [*Italian otolaryngologist*, b. 1861]. Described his operation of dacryocystorhinostomy; also called *Toti's operation*.

to tip o-tence [L. *totus*, whole; *potentia*, power]. The capacity of a cleavage cell to give rise to a complete embryo. —**totipo'tent**, *adj.*

touch [F. *toucher*]. 1. Tactile sense. 2. Judging by the tactile sense; palpation. 3. *In obstetrics*, digital examination of the internal genitalia through the vagina.

abdominal t. Application of the hands to the abdomen for the diagnosis of intraabdominal conditions.

after t. The sensation which persists for a short time after contact with an object has ceased.

double t. Combined vaginal and abdominal or vaginal and rectal palpation.

rectal t. Examination made by the finger in the rectum.

royal t. The laying on of the hands by a king, formerly believed to be efficacious in scrofula or king's evil.

vaginal t. Digital examination of the genital organs through the vagina.

vesical t. Examination through the urinary bladder.

tour de maî'tre (toor de may'truh. See Notes §34) [F.]. A method of passing a catheter into the male urinary bladder in which it is introduced into the urethra with the convexity upward. The shaft lies obliquely across the left thigh of the patient, and as the point enters the bulb, the handle is swept around toward the abdomen, when the beak passes into the membranous urethra. It is carried into the urinary bladder by depressing the shaft between the patient's thighs.

Tourette. See Georges *Gilles de la Tourette*.

Tournay's sign. Unilateral dilatation of the pupil of the abducted eye in extreme lateral fixation.

tour'ne-sol' (toorn sawl'. See Notes § 35). Litmus.

tour'ni-quet [F.]. Any apparatus for controlling hemorrhage from, or circulation in, a limb or part of the body where direct pressure can be brought upon the blood vessels by means of straps, cords, rubber tubes, or pads. Tourniquets are made in a multiplicity of forms, from the simplest emergency adaptation of a handkerchief or piece of clothing wound about the limb and tightened with a stick, to elaborate instruments where pressure is made by means of screws acting upon metal pads or where a rubber hose encircling the limb is distended with air by means of a pump.

tous-les-mois' (too-lay-mwah'). A variety of arrowroot starch prepared from *Canna edulis*; canna starch.

Touton cells. Multinucleated giant cells resembling those of epulis, sometimes containing fatty crystals or masses, observed in xanthoma.

permanent t. One of the 32 teeth of the second dentition. There are eight incisors, four canines, eight premolars, and 12 molars. See Plate 22.

pivot t. An artificial crown doweled to the root of tural tooth.

premolar t. One of the two teeth with two cusps situated between the canin and the first molar in each quadrant of the permanent dentition. Also called *bicuspid t.*

sectorial t. One of the cutting teeth of the Carnivora.

stomach t. The lower canine tooth.

succedaneous t. One of the permanent teeth which takes th place of deciduous tooth

supernumerary t. One which is additional to the normal complement.

temporary teeth. (a) The teeth of the first dentition; milk teeth; deciduous teeth. (b) A provisional set of artificial teeth.

wisdom t. The third molar tooth in man formerly called *dens serotinus, dens sapientiae.*

tooth'ache [*tōth*, AS. *ace*]. Any pain in or about tooth odontalgia.

tooth ache tree A tree whose bark, xanthoxylum ha been used as a masticatory f toothache.

toothed [*tōth*]. Having teeth or indentations dentate.

tooth paste See *dentifrice.*

top g no sis [G. *topos*, place *agnōsis*, unknown] Loss of localization sensibility

to pal'gi [*topos*; G *algos*, pai]. Localized pain, common in neurasthenia and hysteria often appears suddenly after emotional disturbances.

to-pec to-my [*topos*; G *ektomē*, excision]. Excision of portion of the cerebral cortex, usually in the frontal area, as applied in the treatment of certain mental disorders or intractable pain.

top es the si a, top aes the si a (top ess thee shuh, see-uh, to pess-) [*topos*; G *aisthēsis*, sensation]. Local tactile sensibility

Töpfer' reagent. See under *reagent.*

Töpfer's test. See under *test.*

to-pha ceous [L. *tophus*, tuf]. Of the nature of tophi sandy or gritty

to phus (pl. *tophi*) [L.]. A mineral concretion in the body especially bout the joints. A sodi m urate deposit i the skin about joint, in the ear or in bone, in gout.

top'ic, top'i-cal [G *topos*, place]. Local.

topicillin. Trade-mark for brand of penicillin preparations for topical use

Topinard, Paul [*French anthropologist*, 1830–1911] Described the angle formed at the anterior nasal spine by lines from the glabella and the auricular point called *Topinard' angl*

top'o- (top o- to po-) **top-** [G. *topos*, place]. A combining form meaning *place*; used to signify *localized.*

top al'gi-a. See *topalgia.*

top o-an"es-the si a (-an ess-thee zhuh, -zee-uh) [*topos*; G *anaisthēsia*, lack of sensation]. Inability to locate exactly cutaneous sensation.

top gen -sis, t po-gen e sis. See *morphogenesis*

top og no sis. See *topesthesia.*

top og nos'tic [*topos*; *gnōsis*, recognizing]. Pertaining to the recognition of changes, positions, or symptoms of parts of the body as topognostic sensibility

to pog'ra phy [*topos*; G. *graphein*, to write]. A study of the regions of the body or its parts, as cerebral topography —**topograph'ic,** *adj*

top ol' gy [*topos*; G *logos*, word] 1 Topographi anatomy 2. The relation of the presenting part of the fetus to the pelvic canal.

top nar-co sis [*topos*; G *narkōsis*, benumbing]. Local insensibility or anesthesia.

top o-neu ro sis [*topos*; G. *neuron*, nerve -*ōsis*, condition] A localized neurosis.

top o-pho'bi [*topos*; G. *phobos*, fear] Morbid dread of certain places.

top o phone [*topos*; G. *phōnē* sound] An instrument to determine the direction of [illegible] sound.

torantil. A proprietary histaminase-containing tablet prepared from desiccated kidney and extract of intestinal mucosa of hogs. Used in prophylaxis and treatment of allergies.

tor'cu lar He-roph'i li (hi rof'i lye) Old term for confluens sinuum, or confluence of the sinuses.

Torek, Franz [*American surgeon*, 1861–1938] Remembered for his ingenuity in devising [illegible] of orchiopexy (1909) called *Torek's operation.* Performed the first successful resection for cancer of the esophagus, also called *Torek' operation.*

Torkildsen procedure. See ventriculocisternostomy.

tor men tum [L., an engine for hurling missiles] An old name for various obstructive disorders of the intestine.

t. intestinorum. See dysentery.

tor'mi na (sing., *tormen*) [L., *griping of the bowels*] Griping pains in the bowel.

post-partum t. The afterpains of parturition.

t. alvi. Colic

t. Celsi. Dysentery

t. intestinorum. Dysentery

t. ventriculi nervosa. See *hyperperistalsis.*

tor'mi nal, tor'mi-nous [*tormina*]. Affected with tormina.

Tornwaldt, Gustav Ludwig (Thornwaldt) [German physician, 1843–1910]. Described nasopharyngeal bursitis, accompanied by the formation of cystic cavity in the pharyngeal mucosa containing pus or mucopus (1885); called *Tornwaldt's bursitis* This had been described by Hermann Wendt as an inflammation of the pharyngeal tonsil (1874)

torocol. A proprietary tablet containing bile salts, cascara sagrada extract, phenolphthalein, and capsicum oleoresin. Used as cholagogue cathartic.

Toronto unit. The anticoagulant activity of [illegible] mg. of standard barium heparin employed at the University of Toronto.

tor pes cence [L. *torpescere*, to grow stiff]. Numbness; torpidity *Rare.*

tor'pid [L. *torpidus*, benumbed]. Affected with torpor

tor pid'i ty See *torpor*

tor por [L., numbness]. Sluggishness; inactivity.

t. intestinorum. Constipation.

t. retinae. Dulled perceptive power of the retina.

torque [L. *torquere*, to twist]. The measure of the effectiveness of force in producing the rotation of body about an axis; the moment of force, is the magnitude of the force times the perpendicular distance from the axis to the line of action of the force.

Torricellian vacuum. See under *vacuum.*

tor"si-om ter [L. *torquere*, to twist; G. *metron*, measure]. An instrument for measuring ocular torsion.

tor'sion [*torquere*]. 1. A twisting; also, the rotation of the eye about the visual axis. 2. The tilting of the vertical meridian of the eye.

t. of an artery Twisting of the free end of an artery to check hemorrhage.

t. of teeth. The forcible turning of teeth in their alveoli for the purpose of correcting irregularity in position.

t. of the umbilical cord. The spontaneous twisting of the umbilical cord. From eight to ten turns are normal; great torsion may occur after the death of the fetus.

swelling]. A skin lesion due to the action of tuberculous toxin.

tox'o-, tox-. See *toxico-*.

Tox"o-ca ra (tock"so-kah rah) [G. *toxon*, bow; *kara*, head]. A genus of ascarid worms. A few species have been reported in cases of human infestation.

T. canis. The common ascarid of dogs.

T. cati. The common ascarid of cats.

tox'oid [G. *toxikon*, poison; *eidos*, form]. A toxin detoxified by moderate heat and chemical treatment (formaldehyde) but with antigenic properties intact. The toxoids of diphtheria and tetanus are used frequently for immunization.

aluminum hydroxide adsorbed t. One similar to alum precipitated toxoid except that aluminum hydroxide is used to adsorb the toxoid.

alum precipitated t. A detoxified toxin, precipitated with alum, effective in producing active immunity with even a single inoculation, due to its prolonged antigenic stimulus.

tox"o-in fec'tion. Toxinfection.

tox"o-lec'i thin (tock"so-less'i-thin) [*toxikon*; G. *lekithos*, yolk]. A mixture of a venom with lecithin, the latter behaving as a complement for the former.

tox"on-o sis [*toxikon*; G. *-osis*, condition]. An affection resulting from a poison.

tox'o-phil, tox'o-phile (tock'so-fil, -file) [*toxikon*; G. *philein*, to love]. Having an affinity for toxins or poisons.

tox'o-phore [*toxikon*; G. *phoros*, bearing]. That complex of atoms of a toxin unit which is the poisonous element of a toxin.

t. group. That part of the toxin molecule which exerts the poisonous effects. —**toxoph'orous,** *adj.*

Tox"o-plas'ma (tock"so-plaz'mah) [*toxikon*; G. *plasma*, anything formed]. A genus of parasitic protozoans.

T. gondii. The causative agent of toxoplasmosis.

tox"o-plas-mat'ic (tock"so-plaz-mat'ick) [*toxikon*; *plasma*]. Relating to infection with *Toxoplasma*.

tox"o-plas'min. The *Toxoplasma* antigen, usually derived from the sediment of the peritoneal fluid of mice highly infected with *Toxoplasma*, used in a cutaneous test for toxoplasmosis.

tox"o-plas-mo sis (tock"so-plaz-mo sis) [*toxikon*; *plasma*; G. *-osis*, condition]. The disease caused by infection with the protozoan, *Toxoplasma*. In infants and children the disease usually is characterized by an encephalomyelitis. In adults a form clinically resembling a spotted fever has been reported. Diagnosis is aided by biopsy studies and identification of *Toxoplasma*, skin tests, (toxoplasmin and dye tests).

congenital t. Toxoplasmosis in children, manifested as disseminated encephalomyelitis accompanied by ventricular enlargement, cerebral calcification, and bilateral focal retinochoroiditis.

tox s sis. See *toxemia*.

Toynbee, Joseph [*English otologist*, 1815–66]. One of the outstanding English otologists and author of a classic text on diseases of the ear (1860). Described the corneal corpuscles, also called *Toynbee's corpuscles*. Described the tensor tympani muscle and its sheath, also called *Toynbee's ligament*. Devised a special otoscope, called *Toynbee's otoscope*. See *Gull-Toynbee law* under William Withey Gull.

TPI *Treponema pallidum* immobilization. See under *test*.

TPN Triphosphopyridine nucleotide.

TPN.2H Abbreviation for the reduced form of triphosphopyridine nucleotide or dihydrocoenzyme II.

tr *Tinctura*; tincture.

tra-bec u-la (pl. *trabeculae*) [L., little beam]. 1. Any one of the fibrous bands extending from the capsule into the interior of an organ. 2. One of the variously shaped spicules of bone in cancellous bone. —**trabecular,** *adj.*

trabeculae carneae. The interlacing muscular columns projecting from the inner surface of the ventricles of the heart. Also called *trabeculae cordis*.

trace el'e-ments. Substances or elements essential to plant or animal life, but present in extremely small amounts. Also called *trace substances*.

tra cer [OF. *trace*, from L. *tractus*, a drawing]. An isotope which, because of its unique physical properties, can be detected in extremely minute quantity and hence is used to trace the chemical behavior of the natural element. As isotopes of the same element differ in physical properties only but have identical chemical properties (with a few exceptions), an isotope detectable by physical properties may be used to trace the pattern of biochemical reactions. Such use of isotopes is referred to as a tracer study. The isotope itself is a tracer. Stable (by measurement of isotopic ratios) or unstable (by detection of their ionizing radiation) isotopes may be used. Also called *t. element*.

tra che-a (tray'kee-uh, tra kee uh) [G. *tracheia*, rough]. The windpipe; the cartilaginous and membranous tube extending from the lower end of the larynx to its division into the two bronchi. See Plates 12, 13, 44. —**tracheal,** *adj.*

tra che-a-ec'ta-sy (tray"kee-uh-eck'tuh-see) [*tracheia*; G. *ektasis*, extension]. Dilatation of the trachea.

tra che-al'gi a [*tracheia*; G. *algos*, pain]. 1. Pain in the trachea. 2. Croup.

tra che i'tis [*tracheia*; G. *-itis*, inflammation]. Inflammation of the trachea.

trachel-. See *trachelo-*.

trach"e-lag'ra (track"i lag'rah) [G. *trachelos*, neck; *agra*, seizing]. Rheumatic or gouty pain in the neck.

trach"e-lec'to-my (track"i-leck'to-mee) [*trachelos*; G. *ektomē*, excision]. Excision of the neck of the uterus.

trach"e-le ma to ma [*trachelos*; G. *haima*, blood; *-ōma*, tumor]. A hematoma of the neck, or in the sternocleidomastoid muscle.

trach"e-lis'mus (track i-lis mus, lis mus) [G. *trachēlismos*, seizing by the neck]. Spasmodic contraction of the muscles of the neck.

trach"e-li'tis (track"i-lye tis) [G. *trachelos*, neck, *-itis*, inflammation]. Inflammation of the neck of the uterus. Also see *cervicitis*.

trach'e-lo- (track'i-lo-), **trachel-** [*trachelos*]. A combining form meaning neck.

trach"e-lo-cyl lo sis [*trachelos*; G. *kyllōsis*, from *kyllos*, crooked]. Torticollis.

trach e lo-dyn'i [*trachelos*; G. *odynē*, pain]. Pain in the neck.

trach"e lo-ky pho si (kigh fo sis) [*trachelos*; G. *kyphōsis*, being humpbacked]. An abnormal anterior curvature of the cervical portion of the spinal column.

tra"che-lo-mas'toid. Longissimus capitis muscle; old term.

trach"e-lo par" si'tus [*trachelos*; G. *parasitos*, parasite]. Taruffi's term for any parasitic growth upon the neck or jaws. See *dicranoius*, *epignathus*, *pleonotus*.

trach"e-lo-pex'i-a [*trachelos*; G. *pēxis*, fixing]. Surgical fixation of the neck of the uterus.

trach e-lo-plas"ty [*trachelos*; G. *plassein*, to form]. Plastic operation on the neck of the uterus.

trach"e-lor rha phy (track i-lor'uh-fee) [*trachelos*, G. *rhaphē*, suture]. Repair of a laceration of the cervix uteri.

trach"e·lor·rhec'tes (track"e·lo·reck'teez) [*trachelos*; G. *rhēktēs*, breaker]. An instrument for crushing the cervical vertebrae; used in embryotomy.

trach"e·los·chi'sis (track"el·os'ki·sis) [*trachelos*; G. *schisis*, cleavage]. A congenital fissure of the neck.

trach"e·lo·syr"in·gor'rha·phy [*trachelos*; G. *syrinx*, pipe; *rhaphē*, suture]. An operation for vaginal fistula with stitching of the cervix uteri.

trach"e·lot'o·my (track"e·lot'o·mee) [*trachelos*; G. *tomē*, cutting]. Incision into the cervix uteri.

tra'che·o- (tray'kee·o-, tra·kee'o-), **tra'che-** [G. *trachys*, rough]. A combining form denoting connection with, or relation to, the trachea.

tra"che·o·blen"nor·rhe'a [*trachys*; G. *blenna*, mucous discharge; *rhoia*, flow]. A profuse discharge of mucus from the trachea.

tra"che·o·bron'chi·al (·brong'kee·ul) [*trachys*; G. *bronchos*, windpipe]. Pertaining to the trachea and bronchus or the bronchi.

tra"che·o·bron·chi'tis (·brong·kigh'tis) [*trachys*; *bronchos*; G. *-itis*, inflammation]. Inflammation of the trachea and bronchi.

tra"che·o·bron·chos'co·py (tray"kee·o·brong·kos'ko·pee, tra·kee"o-) [*trachys*; *bronchos*; G. *skopein*, to examine]. Inspection of the interior of the trachea and bronchi.

tra'che·o·cele [*trachys*; G. *kēlē*, hernia]. A hernia of the mucous membrane of the trachea.

tra"che·o·fis'sure [*trachys*; L. *fissura*, fissure]. Congenital longitudinal cleft of the trachea.

tra"che·o·la·ryn'ge·al (·la·rin'jul, ·jee·ul, ·lar"in·jee'ul) [*trachys*; G. *larynx*, larynx]. Pertaining to the trachea and the larynx.

tra"che·o·lar"yn·got'o·my [*trachys*; *larynx*; G. *tomē*, cutting]. Incision into the larynx and trachea; combined tracheotomy and laryngotomy.

tra"che·o·path'i·a os"te·o·plas'ti·ca [L.]. A deposit of cartilage and bone in the mucosa of the trachea.

tra"che·oph'o·ny (tray"kee·off'o·nee) [*trachys*; G. *phōnē*, sound]. The sound heard over the trachea on auscultation.

tra'che·o·plas"ty [*trachys*; G. *plassein*, to form]. Plastic surgery of the trachea.

tra"che·o·py·o'sis (tray"kee·o·pye·o'sis, tra·kee"o-) [*trachys*; G. *pyōsis*, suppuration]. Purulent tracheitis.

tra"che·or·rha'gi·a [*trachys*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the trachea.

tra"che·or'rha·phy [*trachys*; G. *rhaphē*, suture]. Suturing of the trachea.

tra"che·os'chi·sis (tray"kee·os'ki·sis) [*trachys*; G. *schisis*, cleavage]. Congenital fissure of the trachea.

tra"che·os'co·py [*trachys*; G. *skopein*, to examine]. Inspection of the interior of the trachea by means of a laryngoscopic mirror and reflected light, or through a bronchoscope. —**tracheoscop'ic**, *adj.*

tra"che·o·ste·no'sis [*trachys*; G. *stenōsis*, a being straitened]. Abnormal constriction or narrowing of the trachea.

tra"che·os'to·my [*trachys*; G. *stoma*, mouth]. The formation of an opening into the trachea, and suturing the edges of the opening to an opening in the skin of the neck, as in laryngectomy.

tra'che·o·tome [*trachys*; G. *tomos*, cutting]. A cutting instrument used in tracheotomy; tracheotomy knife.

tra"che·ot'o·mist [*trachys*; *tomos*]. One skilled in tracheotomy.

tra"che·ot'o·mize [*trachys*; *tomos*]. Perform tracheotomy upon a living subject.

tra"che·ot'o·my (tray"kee·ot'o·mee) [*trachys*; G. *tomē*, cutting]. The operation of cutting into the trachea.

inferior t. One performed below the isthmus of the thyroid gland.

superior t. One performed above the isthmus of the thyroid gland. The cut may be extended to include the cricoid cartilage. See *laryngotomy*.

tra"chel·co'sis (tray"kee·el·ko'sis) [*trachys*; G. *helkōsis*, ulceration]. Ulceration of the trachea.

tra·chel'cus [*trachys*; G. *helkos*, ulcer]. A tracheal ulcer.

tra·chi'tis (tra·kigh'tis). See *tracheitis*.

tra·cho'ma (tra·ko'muh) [G.]. An infectious disease of the conjunctiva and cornea, producing photophobia, pain, and excessive lacrimation, caused by *Chlamydozoon trachomatis*. The lesion is characterized initially by inflammation and later by pannus and follicular and papillary hypertrophy of the conjunctiva. Syn., *Egyptian conjunctivitis*, *Egyptian ophthalmia*, *conjunctivitis granulosa*, *granular lids*. —**trachom'atous**, *adj.*

Arlt's t. Granular trachoma.

brawny t. A late stage in which the conjunctiva is thickened due to lymphoid infiltration.

diffuse t. A form in which large growths cover the tarsal conjunctiva.

granular t. The usual form of trachoma. Also called *follicular t.*

papillary t. That in which the granulations are red and papillary.

t. deformans. A form of trachoma vulvae at the stage when it results in diffuse scar tissue.

t. of the vocal cords. Nodular swellings on the vocal folds; singers' nodes.

Türck's t. See dry *laryngitis*.

tra"chy·chro·mat'ic [G. *trachys*, rough; *chrōma*, color]. Deeply staining, as certain nuclei.

tra"chy·o·nych'i·a. An inflammation of the proximal portion of the nail matrix causing the nail to become covered with an opaque, corrugated, lamellated, grayish superficial layer.

tra"chy·pho'ni·a (tray"ki·fo'nee·uh, track"i-) [*trachys*, G. *phōnē*, voice]. Rough or hoarse voice.

trac'ing [OF. *tracer*, from L. *tractus*, drawing]. A recording or marking out of a movement, design, or action.

gothic arch t. A registration of mandibular movement.

tract [*tractus*]. 1. A pathway or course. 2. A bundle or collection of nerve fibers. 3. Any one of the nervous pathways of the spinal cord or brain as an anatomic and functional entity. 4. A group of parts or organs serving some special purpose.

afferent t. A nerve tract of the spinal cord conveying impulses toward the brain. Also called *ascending t.*

alimentary t. The alimentary canal.

biliary t. The entire hepatic duct system, including hepatic ducts, gallbladder, cystic duct, and common bile duct.

central tegmental t. Nerve fibers which arise in the red nucleus and reticular formation and end in the inferior olives.

cerebellobulbar t. See *fastigiobulbar t.*

cerebellovestibular t. Efferent fibers arising in the fastigial nuclei and ending in the lateral vestibular nuclei; part of the fastigiobulbar tract.

colliculorubral t. See tectorubral *t.*

comma t. A tract, comma-shaped in cross section, in the dorsal funiculus of the spinal cord. Also called *fasciculus interfascicularis*.

commissurospinal t. Descending nerve fibers arising from the nucleus of the posterior commissure and entering the medial longitudinal fasciculus.

corticobulbar t. Fibers of the pyramidal system that originate in the motor cortex, pass through

the internal capsule, and terminate in the motor nuclei of the cranial nerves; also called *corticonuclear tract*.

corticocollicular t. Part of the posterior commissure; nerve fibers which arise in the cerebral cortex and go to the stratum zonale of the superior colliculus.

corticogeniculate t. Nerve fibers arising in the calcarine area of the cerebral cortex and ending in the lateral geniculate body.

corticohabenular t. See *fornix*, 2.

corticohypothalamic t. Nerve fibers which arise in the premotor and posterior orbital areas and end directly in the hypothalamus.

corticomammillary t. See *fornix*, 2.

corticonigral t. A component of the extrapyramidal system. fibers arise principally from areas four and six of the cortex, with some contribution from temporal and parietal lobes, and pass through the stratum intermedium of the cerebral peduncle to synapse with the cells of the substantia nigra.

corticonuclear t. See corticobulbar *t*.

corticopallidal t. Nerve fibers which arise in the premotor area of the cerebral cortex and end in the globus pallidus.

corticopontile t. Fibers of the frontopontile, temporopontile, parietopontile, and occipitopontile tracts which descend from the cortex, pass through the internal capsule, and terminate in the pontine nuclei. The fibers receive various designations depending on whether they arise in the frontal, temporal, parietal, or occipital lobes of the cerebrum. Also called *corticopontine tract*.

corticorubral t. A component of the extrapyramidal system. fibers arise principally from areas four and six, with some contribution from areas three and five of the parietal lobe of the cortex, pass through the posterior limb of the internal capsule, and enter the superior radiation of the red nucleus.

corticospinal tracts. Efferent tracts which descend from the frontal cortex through the internal capsule, cerebral peduncles, pons and medulla, where they undergo incomplete decussation to form the lateral and ventral corticospinal tracts. They are concerned in finely coordinated voluntary movements. The ventral corticospinal tract is also called *fasciculus of Türck*. Syn., *pyramidal tracts*.

corticothalamic t. See *thalamic radiations* under *radiation*.

dentatoreticular t. Nerve fibers which arise from the dentate nucleus, separate from the superior cerebellar peduncle just before and beyond its decussation, and descend as crossed and uncrossed fibers in the reticular formation.

dentatorubral t. Part of the superior cerebellar peduncle; nerve fibers which arise in the dentate nucleus and terminate in the contralateral red nucleus.

dentatothalamic t. The largest component of the superior cerebellar peduncle; nerve fibers which arise in the ventrolateral part of the dentate nucleus and end in the lateral ventral thalamic nucleus.

descending t. A collection of nerve fibers conducting impulses down the spinal cord. Syn., *efferent t.*

descending vestibular t. The descending branches of the vestibular root which end in the spinal and lateral vestibular nuclei; also called *spinal vestibular tract, descending* or *spinal vestibular root*.

digestive t. The alimentary canal.

direct cerebellar t. Old term for dorsal spinocerebellar tract.

dorsal longitudinal t. of Schütz. See periventricular *t*.

dorsal spinocerebellar t. A nerve tract which arises from the cells of the dorsal nucleus of Clark, ascends the spinal cord in the lateral funiculus, and reaches the cerebellum by way of the restiform body; it conveys subconscious proprioceptive impulses.

dorsal t. of Schütz. See periventricular *t*.

dorsolateral t. The narrow bridge of white substance between the apex of the dorsal horn and the periphery of the spinal cord; it is traversed by some of the root fibers. Syn., *Lissauer's t.*

efferent t. See descending *t*.

fastigiobulbar t. A tract arising in the fastigial nuclei, containing crossed and uncrossed fibers, which descends medial to the restiform body into the medulla oblongata; also called *cerebellobulbar tract*.

Flechsig's t. See Paul Emil *Flechsig*.

frontopontile t. See corticopontile *t*.

gastrointestinal t. The alimentary canal.

generative t. Old term for the female genital system which consists of ovaries, tubes, uterus, vagina, and the external genitalia. See Plate 41.

geniculocalcarine t. A nerve tract arising from the lateral geniculate body and terminating in the striate area or visual cortex. It conveys visual impulses. Also called *optic radiation*.

geniculotemporal t. See *auditory radiation*.

genitourinary t. The urogenital system.

Goll's t. Fasciculus gracilis.

Gowers' t. See William Richard Gowers.

[illegible] t. See *fasciculus retroflexus*.

Helweg's t. See olivospinal *t*.

hypothalamicohypophyseal t. A tract of nerve fibers, with cells of origin in the supraoptic and paraventricular nuclei of the hypothalamus and also in the tuber cinereum, which runs through the median eminence and infundibular stem to the neurohypophysis and which distributes fibers to these parts. Injury to this tract or its nuclei of origin is associated with diabetes insipidus. Its component parts are also referred to as *supraopticohypophyseal t., paraventriculohypophyseal t.,* and *tuberohypophyseal t.*, respectively.

iliotibial t. A thickened portion of *fascia lata* extending from the lateral condyle of the tibia to the iliac crest. Formerly called *Maissiat's band*.

interstitiospinal t. Descending nerve fibers which arise in the interstitial nucleus of Cajal and enter the medial longitudinal fasciculus.

lateral corticospinal t. Fibers of the corticospinal tract which have formed the pyramidal decussation and descend in the lateral funiculus of the spinal cord, terminating in the gray matter of the same side.

lateral spinothalamic t. A tract of nerve fibers which arise from cells of the posterior column, cross in the anterior white commissure, ascend in the lateral funiculus, and terminate in the thalamus. It conducts pain and temperature impulses.

lenticulothalamic t. Fibers from the lenticular nucleus to the thalamus.

Lissauer's t. See dorsolateral *t*.

Loewenthal's t. See tectospinal *t*.

mammillotegmental t. Nerve fibers which arise in the mammillary bodies and end in the tegmental nuclei of the midbrain.

mammillothalamic t. A tract of nerve fibers passing from the mammillary body to the anterior nucleus of the thalamus. Also called *Vicq d'Azyr's bundle* or *fasciculus*.

mesencephalic t. of trigeminal ne

fibers which arise in cells located in the lateral portion of the central gray matter of the upper fourth ventricle and the cerebral aqueduct and join the motor root of the trigeminal nerve.

motor t. Any descending tract of the central nervous system, terminating in primary motor nuclei.

nigroreticular t. Nerve fibers which arise in the substantia nigra and end in the reticular formation by way of the basis pedunculi and the tegmentum.

nigrorubral t. Nerve fibers which arise in the substantia nigra and end in the red nucleus by way of the tegmentum.

nigrostriatal t. Nerve fibers which arise in the substantia nigra and end in the corpus striatum.

occipitopontile t. See corticopontile t.

olfactohabenular t. Nerve fibers which arise in the basal olfactory nuclei, curve dorsally and, entering the stria medullaris thalami, go to the habenular nucleus of the same and opposite side.

olfactohypothalamic t. See basal olfactory *fasciculus*.

olfactory t. A narrow band of white substance originating in the olfactory bulb and extending posteriorly in the olfactory sulcus, to the anterior perforated substance where it enlarges to form the olfactory trigone and divides into two roots, the lateral and medial olfactory striae. See Plates 17, 18.

olfactotegmental t. See basal olfactory *fasciculus*.

olivocerebellar t. A tract of nerve fibers from the inferior and accessory olivary nuclei of the same and opposite sides, which reaches the cerebellum by way of the restiform body.

olivospinal t. A tract composed of fibers arising in the medulla oblongata, perhaps in the inferior olivary nucleus, and ending in the gray matter of the spinal cord; formerly called *Helweg's tract* or *bundle*.

optic t. A band of nerve fibers running around the lateral side of the cerebral peduncle from the optic chiasma to the lateral geniculate body and midbrain.

pallidohypothalamic t. Nerve fibers which arise in the globus pallidus and end in the hypothalamus.

pallidoreticular t. Nerve fibers which arise in the globus pallidus and end in the reticular formation of the midbrain, pons, and medulla.

pallidosubthalamic t. Nerve fibers which arise in the globus pallidus, traverse the basis pedunculi, and end in the subthalamic nucleus.

pallidothalamic t. Nerve fibers which arise in the globus pallidus and go to the anterior ventral nucleus and perhaps also to some of the medial thalamic nuclei.

paraventriculohypophyseal t. See hypothalamicohypophyseal *t.*

parietopontile t. See corticopontile *t.*

periependymal t. See periventricular *t.*

periventricular t. Nerve fibers which arise in the posterior hypothalamic nucleus and tuberal and supraoptic nuclei. Some end in the dorsomedial thalamic nucleus and in some of the midline nuclei. Some descend dorsally to the cerebral aqueduct and end in the tectum of the midbrain. Others descend ventrally to the aqueduct in the subependymal portion of the central gray matter and end in the vestibular nuclei and the dorsal nucleus of the vagus; these fibers form the periependymal tract. Also called *dorsal t. of Schütz* or *dorsal longitudinal t. of Schütz*.

pontocerebellar t. See middle cerebellar *peduncle*.

pyramidal tracts. See corticospinal and corticobulbar *tracts* under *tract*.

respiratory t. The respiratory organs in continuity. See Plate 12.

reticulobulbar t. Nerve fibers which arise in cells of the reticular formation and go to the motor nuclei of the cranial nerves in the medulla.

reticulo-olivary t. Part of the central tegmental tract; nerve fibers which arise in the reticular formation and end in the inferior olive.

reticuloreticular t. Nerve fibers which arise in the reticular formation and end in it at lower levels.

reticulospinal t. Nerve fibers descending from large cells of the reticular formation of pons and medulla into the spinal cord. It is a component of the extrapyramidal system mediating brain stem and spinal reflexes.

rubrobulbar t. Nerve fibers which arise in the red nucleus, cross in the ventral tegmental decussation, descend in the reticular formation, and go to the nuclei of the cranial nerves in the medulla.

rubro-olivary t. Nerve fibers which arise in the red nucleus and end in the homolateral inferior olive.

rubroreticular t. Nerve fibers descending from the red nucleus and terminating in the nuclei of the reticular formation.

rubrospinal t. A nerve tract descending from the red nucleus into the spinal cord which, in man, has been largely replaced in function by the phylogenetically newer reticulospinal tract. It is a component of the extrapyramidal system concerned with tonic and automatic associative control. Also called *Monakow's bundle, fibers, tract*.

rubrothalamic t. Nerve fibers which arise in the red nucleus and go mainly to the lateral ventral nucleus of the thalamus.

sensory t. Any tract of fibers conducting sensory impulses to the brain.

septomarginal t. A nerve tract composed of descending fibers of intraspinal and dorsal root origin, located in the posterior funiculus of the thoracic region.

solitary t. See *tractus solitarius*.

spinal t. of the trigeminal nerve. A nerve tract located in the medulla, composed of sensory fibers of the trigeminal nerve which terminate in the nucleus of the spinal tract of the trigeminal nerve.

spinal vestibular t. See descending vestibular *t.*

spinocerebellar t. See dorsal spinocerebellar *t.*, ventral spinocerebellar *t.*

spino-olivary t. A tract composed of fibers running from the spinal cord to the inferior olivary nucleus of the medulla oblongata; also called *spino-olivary fasciculus*.

spinospinal t. See *fasciculus proprius*.

spinothalamic t. See lateral spinothalamic *t.*, ventral spinothalamic *t.*

strionigral t. Nerve fibers which arise in the putamen and caudate nucleus and go to the substantia nigra.

striothalamic t. See lenticulothalamic *t.*

supraopticohypophyseal t. See hypothalamicohypophyseal *t.*

tectobulbar t. See tectospinal *t.*

tectocerebellar t. A bundle of fibers arising in the tectum or roof of the midbrain and descending to the cerebellum.

tectorubral t. Nerve fibers which arise in the superior colliculus and go to the red nucleus by way of the dorsal tegmental decussation. *Syn.* *colliculorubral t.*

tectospinal t. A nerve tract which descends from large cells in the tectum of the mesencephalon,

decussates, gives off fibers to the motor nuclei of the brain stem, and synapses with motor cells of the spinal cord, chiefly in the cervical region. It includes the tectobulbar tract. Also called *Loewenthal's t.*

tegmento-olivary t. A tract arising in the midbrain and terminating in the inferior olivary nucleus.

temporopontile t. See *corticopontile t.*

thalamocortical t. See *thalamic radiations* under *radiation*.

t. of Allen. The tractus solitarius.

t. of Schütz. See *periventricular t.*

trigeminothalamic t. Trigeminal lemniscus.

tuberohypophyseal t. See *hypothalamicohypophyseal t.*

urinary t. The passage for the urine, including the kidneys, renal pelves, ureters, urinary bladder and urethra.

urogenital t. Old term for urogenital system. See Plates 43, 44.

uveal t. The iris, ciliary body and choroid.

ventral corticospinal t. Fibers of the corticospinal tract which, without decussating, descend directly in the ventral funiculus, normally to the upper thoracic region.

ventral spinocerebellar t. A nerve tract which arises from cells of the dorsal columns of the same and opposite sides, and ascends in the lateral funiculus of the spinal cord to reach the cerebellum by way of the brachium conjunctivum.

ventral spinothalamic t. A tract of nerve fibers which arise from cells in the posterior columns, cross in the anterior white commissure, ascend in the ventral funiculus, and terminate in the thalamus. It conducts impulses from touch and pressure stimuli.

vestibulocerebellar t. A nerve tract of vestibular root fibers and secondary vestibular fibers which reach the fastigial nuclei in the cerebellum by way of the restiform body.

vestibulo-ocular t. A tract of homolateral and contralateral nerve fibers arising from the superior and medial vestibular nuclei, which ascends in the median longitudinal fasciculus to the nuclei of the oculomotor, trochlear, and abducens nerves; it mediates reflex movements of head and eyes.

vestibulospinal t. A nerve tract which originates principally from the lateral vestibular nucleus and descends in the anterior funiculus of the spinal cord. It mediates impulses concerned with static equilibrium.

trac'tion [tractus]. The act of drawing or pulling.

ambulatory t. That exerted by a walking splint or brace so that the pull is maintained upon the fractured limb or inflamed joint while the patient is up and about.

axis t. Traction in the axis or direction of a channel, as of the pelvis, through which a body is to be drawn.

bed t. Any form of traction in which the patient is of necessity confined to bed.

elastic t. Traction exerted by means of rubber bands, usually employed in phalangeal fractures treated with some form of wire frame or plaster splint, and in connection with certain dental splints.

head t. That exerted upon the head, usually employed in the treatment of injuries of the cervical spine.

weight t. That exerted by means of a weight, connected to the injured limb.

trac'to-graph [tractus; G. graphein, to write]. An apparatus used to make traction tests.

trac'tor [tractus]. An instrument for making traction.

trac-tot'o-my [tractus; G. tomē, a cutting]. The surgical resection of a nerve-fiber tract of the central nervous system, usually for relief of pain.

medullary t. Surgical incision of the spinothalamic tract in the medulla or of the descending or spinal root of the trigeminal nerve. Also called *bulbar t.*

mesencephalic t. See *mesencephalotomy*.

spinal t. See *chordotomy*.

trac'tus [L.]. Tract.

t. genitalis. See *genital cord*.

t. solitarius. The sensory fibers in the medulla of the seventh, ninth, and tenth nerves which bend caudally to form a descending bundle and terminate in the dorsal sensory nucleus of the vagus and the nucleus of the solitary tract. Also called *t. of Allen*.

Tracy method. See *Walker and Tracy method*.

trade-mark. A name or mark applied to a substance or product whereby its origin as of a particular producer is indicated; such a name or mark, which may or may not be officially registered, is the property of the producer. A name in this category is frequently called a *trade-marked name*.

trade name. A name, commonly not descriptive or invested with ownership rights, by which a substance or product is known in commerce and industry. If it is intended to indicate the origin of the substance or product as of a particular producer, it is preferably called a *trade-mark* or *trade-marked name*.

trag'a-canth [G. tragakantha, tragacanth]. A gummy exudation from various Asiatic species of *Astragalus*, of the family Leguminosae. Almost white ribbons or powder; swells with 50 parts of water to make a stiff opalescent mucilage. A soluble portion is said to consist chiefly of uronic acid and arabinose; the insoluble portion, which swells in water, is largely bassorin, $(C_{11}H_{20}O_{10})_n$. Used as a suspending agent for insoluble powders and in the manufacture of troches.

tra'gi (tray'jye) [G. tragos, goat]. Hairs of the external auditory meatus.

Tra'gi-a [NL.]. A genus of poisonous plants; some species have been used in folk medicine as purgative, diuretic, and emetic.

tra'gi-cus [G. tragos, goat]. Vestigial muscle associated with the tragus of the external ear.

trag"o-mas-chal'i-a (trag"o-mas-kal'ee-uh) [tragus; G. maschalē, armpit]. Bromhidrosis of one or both axillae.

trag"o-pho'ni-a, tra-goph'o-ny. See *egophony*.

tra'gus [tragos]. 1. The small prominence of skin-covered cartilage projecting over the meatus of the external ear. 2. One of the hairs at the external auditory meatus.

trail'er. See *trailing hand*.

train'ing [OF. trainer, to draw]. Systematic exercise for physical development or for some special attainment.

auricular t. The training of a person with handicapped hearing in the full use of the hearing that he has available.

train'ing school. A school of nursing.

trait [F., from L. tractus, a drawing]. Any characteristic, quality or property of an individual.

Cooley's t. Thalassemia minor.

sickle-cell t. See *sickle-cell anemia*.

trance [L. transire, to pass over]. 1. The hypnotic state; resembles sleep. See *hypnosis*. 2. A form of catalepsy characterized by a prolonged condition of abnormal sleep, in which the vital functions are depressed and from which the patients ordinarily cannot be aroused. The breathing is almost imperceptible and sensation abolished. The onset and awakening are both very sudden.

ecstatic t. Catalepsy.

hysterical t. The trancelike condition sometimes met with in hysteria.

trans- (trans-, tran-) [L., through, across]. A combining form denoting *through* or *across*.

trans"am i-na'tion. See *transdeamination*.

trans am'i nase. The enzyme that catalyzes the transfer of the amino group of a dicarboxylic amino acid to a keto acid, to form another amino acid.

trans"am i na'tion. 1. The transfer of one or *more amino groups from one compound to another.* 2. The transposition of an amino group within a single compound.

trans an"i ma'tion [*trans*; L. *animare*, to fill with breath]. The performing of artificial respiration on a newborn infant.

trans-au'di-ent [*trans-*; L. *audire*, to hear]. Allowing the transmission of sound.

trans-ca'lent [*trans-*; L. *calere*, to be warm]. Permeable to radiant heat rays.

trans-cav'i tar"y. Through or across a cavity, usually referring to metastases of tumor cells, most often in the peritoneal cavity.

trans-con dy lar [*trans-*; G. *kondylos*, knuckle]. Across or through condyles.

trans"de am"i na'tion. The transference of amino groups from amino acids to other molecules.

trans"de hy"dro-an dros'ter one. See *dehydroisoandrosterone*.

trans-duc'tion. The process of transferring energy from one system to another: the transferred energy may be of the same or of a different form, e.g., a steam engine converting thermal energy to mechanical energy. —**transduc'er**, *n.*

tran-sec'tion [*trans-*; L. *sectio*, a cutting]. A section made across the long axis of a part, as transection of the spinal cord.

trans fer'ence [L. *transferre*, to convey over]. *1 psychoanalysis*, that aspect of the patient's feelings and reactions toward the analyst, based upon *seeing in him the reimbodiment of some important* figure of his childhood, usually father or mother. Transference may be *positive*, when the feelings and reactions are affectionate, friendly or loving. It may be *negative*, when these feelings and reactions are hostile. Understanding of transference forms a basic part of psychoanalytic technique.

trans-fer'rin. Siderophilin.

trans fix'ion [L. *transfixum*, from *transfigere*, to pierce through]. 1. The act of piercing through and through. 2. A method of amputation in which the knife is passed directly through the soft parts, the cutting being done from within outward. —**transfix**, *v.*

trans"fo-ra'tion [L. *transforatio*, a boring through]. The act of perforating the fetal skull. —**trans'forate**, *v.*

trans'for a"tor [*transforatio*]. An instrument for perforating the fetal head.

trans"for-ma'tion [L. *transformatio*, from *transformare*, to transform]. A marked change in form, structure, or function.

trans-form'er. An electrical apparatus for the transformation of lower potentials to higher potentials or vice versa. It consists of a laminated iron core on which are wound two coils, a primary and a secondary core, properly insulated from each other. The primary coil is energized by alternating current at a given voltage which induces in the secondary coil a voltage related to that in the primary by the ratio of the number of windings in the two coils.

closed core t. Doughnut-shaped core of a high-voltage transformer with primary coil windings on one side and secondary coil windings on the opposite side.

filament t. A step-down transformer to provide current for the cathode filament in x-ray tubes.

step-down t. A transformer to decrease voltage.

step-up t. A transformer to increase voltage.

trans fuse' [L. *transfusum*, from *transfundere*, to transfuse]. Perform transfusion.

trans fu'sion [L. *transfusio*, from *transfundere*]. 1. A transfer of blood into the veins. 2. The introduction into a vessel of the body of blood, saline solution, or other liquid. 3. The pouring of liquid from one vessel to another.

arterial t. Transfusion of blood into an artery.

blood t. Transfer of blood from one individual to another. The blood of donor and recipient must be of the same type.

bone-marrow t. That into a bone-marrow cavity, usually of the sternum, femur or tibia.

citrate method of t. An indirect method of blood *transfusion*; the donor's blood is collected in a bottle and mixed with sodium citrate to prevent clotting.

direct t. The transfusion of blood from one person to another without exposure of the blood to the air. Also called *immediate t.*

indirect t. The introduction of blood that was first drawn into a vessel. Also called *mediate t.*

peritoneal t. Transfusion into the peritoneal cavity.

reciprocal t. The exchange of equal volumes of blood between a patient suffering from a febrile disease and one who is convalescent from that disease.

replacement t. A transfusion technic used in the newborn with erythroblastosis fetalis in which the greater part of the total blood volume is replaced in small amounts at a time with Rh-negative donor blood, the theory being that the Rh-positive antibodies remaining will be adsorbed.

sternal t. Bone-marrow transfusion into the sternum.

venous t. Transfusion into a vein.

trans fu sion ist [*transfusio*]. One skilled in the transfusion of blood.

trans-fu'so-vac ap pa ra'tus. A blood transfusion apparatus originating in Canada, and adapted especially to field use. It consists of a flask containing the appropriate amount of sodium citrate solution, in a partial vacuum, and a special perforation connected with a length of rubber tubing, to the distal end of which an intravenous needle is attached.

tran sient der"ma to-zo-o-no sis. Any skin disease in which the parasite attacks, but does not attach itself to, the skin; if its larvae are laid upon the skin to embed themselves within it, the resulting disease is classified as endodermatozoonosis. Syn., transito-zoonosis.

tran sient or'ange. An unstable carotenoid pigment formed by the breakdown of visual purple exposed to light, which is rapidly transformed to indicator yellow and then to retinene.

tran'sient sit"u-a'tion-al per"son-al'i ty disor'der. *1 psychiatry*, a form of personality disorder, more or less transient, and generally an acute symptom response to a specific situation without persistent personality disturbance. The acute symptoms, representing attempts to deal with overwhelming situations, generally recede as stress diminishes; repeated failure to do so indicates more severe disturbance. See gross stress, adult situational, adjustment reaction.

trans-il'i ac [L. *trans-*, across; *ilium*, flank]. Passing across from one ilium to the other, as the transiliac diameter or axis.

trans"il lu"mi na tion [*trans-*; L. *illuminare*, to illumine]. 1. Illumination of an object by transmitted light. 2. Illumination of the paranasal sinuses by means of light placed in the patient mouth. Also spelled *transluminatation.*

tran sis'tor A device, considerably smaller than vacuum tube used similarly for amplifying electric currents through utilization of the semiconductor property of germanium containing minute amounts of other elements.

tran-si'tion-al (tran-sish'un-al, tran-sizh) [L. *transitio*, going across]. Denoting change.

tran-si'tion-al. Ehrlich's name for monocyte having U-shaped nucleus, which he regarded as transitional form in the development of poly morphic granulocyte; now considered to be an older form of monocyte.

tran'si to-ry-e-ne sis. Transient-dermatosconosis.

trans-lu'cent [L. *trans-* through *lucere*, to shine]. Permitting partial transmission of light somewhat transparent.

trans lu'cid [*trans-*; L. *lucidus*, shining]. Semitransparent.

trans meth"yl a'tion. A type of metabolic chemical reaction in which methyl group is transferred from donor to receptor compound. Methionine and choline are important sources of methyl groups.

trans"mi gra'tion (trans migh-gray'shun, -migray shun, trans) [L. *transmigratio*, from *transmigrare*, to transmigrate]. A wandering across or through, as transmigration of an ovum, transmigration of white blood cells. See *diapedesis.*

external t. The passage of an ovum from one ovary to the opposite oviduct without traversing the uterus.

internal t. The passage of an ovum through its proper oviduct into the uterus and across to the opposite oviduct.

trans mis"si-bil'i ty [L. *transmissus*, from *transmittere*, to send across]. The capability of being transmitted or communicated from one person to another —**transmis sible,** *adj.*

trans-mis'sion [L. *transmissio*, from *transmittere*]. The communication or transfer of anything, especially disease, from one person or place t another

duplex t. The movement of impulses along nerve in two directions.

humoral t. Transmission of impulse over synapse by means of chemical substances secreted t the synapse.

placental t. The conveyance of drug and disease products through the placental circulation from mother to offspring.

saltatory t. See saltatory *conduction.*

trans-mit'tance. *I* *applied spectroscopy*, the ratio of the radiant power transmitted by sample to the radiant power incident on the sample, both measurements being made t the same spectral position and with the same slit width. Symbol, *T*

relative t. *I* *applied spectroscopy*, the ratio of the transmittance of the photographic image of spectrum line to the transmittance of an adjacent clear (unexposed but developed) portion of the photographic emulsion.

trans"mu ta'tion [L. *transmutatio*, from *transmutare* to change]. 1. The evolution of one species int another Obs. 2. *I* physics, any process by which an atomic nucleus is converted into another of different tomic number

trans-oc'u lar [L. *trans-* across; *oculus* eye]. Extending across the eye

trans -nance [*trans-*; L. *sonare*, to sound]. Transmitted resonance the transmission of sounds through an organ, as of the cardiac sounds through the lungs and chest wall.

trans-par ent [*trans-* L. *parere*, to ppear]. Permitting the passage of light rays without material obstruction, so that objects beyond the transpar ent body can be seen.

trans"phos-pho'ryl-ase. One of group of enzymes, widely distributed in living organisms, which catalyze transfer of phosphate from one compound to another

tran-spi'ra ble [*trans-* L. *spirare*, to breathe]. Capable of passing in gaseous state through the respiratory epithelium or the skin.

tran"spi ra'tion (tran spi-ray'shun, tran spyray'shun) [*trans-*; *spirare*]. 1 Exhalation of fluid through the skin. 2. The material exhaled.

pulmonary t. The exhalation of water vapor from the lungs.

trans'plant [L. *transplantare* to transplant]. Tissue removed from any portion of the body and placed in different site. —**transplant** v.

trans"plan-ta'tion [*transplantare*]. The operation of transplanting or of applying to part of the body tissues taken from another body or from another part of the same body Also see *graft.*

autoplastic t. The exchange of different parts within the same individual.

heteroplastic t. See *heterotransplantation.*

heterotopic t. That in which the graft is transplanted to different location in the host than it had in the donor

homoioplastic t. See *homotransplantation.*

homoiotopic t. See homotopic *t.*

homoplastic t. See *homotransplantation.*

homotopi t. That in which the graft is transplanted to the same location in the host that it had in the donor

isoplastic t. See *homotransplantation.*

tendon t. The removal of tendon from its nor mal location and its reinsertion in another place, used to substitute functioning muscle for paralyzed one by transplanting its tendon.

xenoplastic t. The exchange of parts from individuals belonging to widely different genera.

t. of cornea. See *keratoplasty.*

trans pose [L. *transpositus*, from *transponere*, to set across]. Displace, change bout, as tissue from one location to another by operation.

trans"po-si'tion (trans po-sish un) [*transponere*]. A change of position.

t. of the great vessels of the heart. A congenital abnormality which may vary from complete transposition, in which the aorta and pulmonary artery arise from reversed ventricles, to partial transposition, in which both large vessels arise from common ventricle but in reversed relation.

t. of the viscera. A change in the position of the viscera to the side opposite to that normally occupied.

trans"sub stan"ti ation (trans sub-stan shee-y'shun) [L. *trans-* over; *substantia*, substance]. The replacement of one tissue by another

tran su date [*trans-*; L. *sudare*, to sweat]. A liquid or other substance produced by transudation.

tra su-da'tion [*trans-*; *sudare*]. The passing of fluid through membrane, especially of blood serum through the vessel walls. —**transu'datory** *adj.*; **transude** v.

trans"u ra ic el'e-ment. An element with an atomic number greater than that of uranium (92)

trans"u-re'thral [*trans-* G. *ourēthra*, urethra]. Via the urethra, as transurethral operation.

trans vag'i nal (trans-vadj'i-nal, -va-jy nal, trans) [*trans-* L. *vagina*, vagina]. Across, or through, the vagina.

trans ver-sa'li (-vur sah'lis, -say'lis) [L. *transversus*, turned across]. Transverse, as ...

fascia, the fascia on the inner surface of the transversus abdominis muscle between the latter and the peritoneum.

t. sterni. Th transverse thoracis muscle.

trans verse [*transversus*] Crosswise; at right angles to the longitudinal axis f the body

trans"ver sec'to my [*transversus*; G *ektomē*, excision] Excision of transverse process of a vertebra specifically in orthopedic practice, the removal of the transverse process of the fifth lumbar vert bra for pain due to irritation of the lower spinal nerve roots.

trans ver sus [L.]. Transverse, as transversus b-dominis muscle, muscle of the anterior abdominal wall. See Table of Muscles in the Appendix.

t. nuchae. The occipitalis minor muscle.

trans-ves'ti tism [L. *trans-*, over; *vestire* to clothe]. The morbid desire to dress in the clothing of the opposit sex. See *eonism*, *sexo-esthetic inversion*.

trap [AS. *treppe*]. A device for preventing the foul vapors from sewers and wast pipes from entering house. It generally consists of ꝏ-shaped pipes, filled with water; some are provided also with valves.

trapadin. A proprietary high-potency multivitamin capsule.

tra pe zi um [G *trapezion*, small table]. The multangulum majus, the first bon of the second row of the carpal bones. See Table of Bones in the Appendix.

tra pe zi us [*trapezius*]. A muscle arising from the occipital bone, the nuchal ligament, and the spines of the thoracic vertebrae, and inserted into the clavicle, acromion, and spine of the scapula. See Tabl of Muscles in the Appendix.

trap zoid [G *trapezoeidēs*, table-shaped]. 1. A geometrical, four-sided figure having two parallel and two diverging sides. 2. The multangulum minus, the second bone of the second row of the carpus. See Table of Bones in the Appendix.

Trapp, Julius [*Russian pharmacist* 1818–1906]. Introduced formula for the determination of solids in the urine, called *Trapp formula*, *Trapp-Haeser formula*. Also see *Haeser*

trasentine. Trade-mark for brand of adiphenine; chemically diphenylacetyl-diethylaminoethanol hydrochloride, $(C_6H_5)_2CH\ CO\ O\ CH\ CH_2$. $N(C_2H_5)$ HCl. The substance is used as an antispasmodic in spasms of an involuntary muscle.

tras'si. A preparation of fermented fish used as food in eastern Asia.

t ratio. The ratio of statistical constant to its standard error Also called *t function*.

Traube, Ludwig (1818–1876) German physician who described phantom blood corpuscles, sometimes called *Traube' corpuscles*. A double sound heard over the peripheral arteries, especially the femoral, in aortic insufficiency or mitral stenosis is called *Traube' sign*. See also *Traube-Hering waves* under *wave*; semilunar *space*.

Traube s rule. See under *rule*.

Traugott, Carl [*German internist*, 1835–]. See Hans *Staub* for the *Staub-Traugott phenomenon*.

trau'ma (trou muh) (pl *traumas*, *traumata*) [G.]. A form of injury; commonly injury by any mechanical agents; broadly injury produced by any physical agent also, severe psychic injury

auditory t. Impairment of hearing due to degeneration in the middle or inner ear produced by unusual or prolonged sounds. Also called *acoustic t.*

occlusal t. Injury to the periodontium associated with bnormal or damaging forces of occlusion.

trau mat'ic (trou-mat'ick) [G *traumatikos*, of wounds]. Pertaining to, or caused by wound or injury

trau mat'ic ac'id. COOH.CH:CH(CH₂)₈COOH. A dibasic acid found in certain plants after they have been cut or bruised; stimulates resumption of division of mature cells.

trau mat'i-cin (traw-mat'i sin) A solution of gutta-percha in chloroform used for closing superficial wounds.

trau'ma tism (trou'muh-tis-um) [G. *trauma*, wound]. Th general or local condition produced by wound or injury —traumatize,

periodontal t. Injury of periodontium due to excessive occlusal, operative, accidental, or orthodontic stress.

trau"ma tol' gy [*trauma*, G. *logos*, word]. The science or description of wounds and injuries, especially as they occur in industry and transportation.

trau ma top thy [*trauma*; G. *pathos*, disease] Pathologic condition due to wounds or other violence

trau"ma top ne a [*trauma*; G. *pnoē*, breathing] The passage of respiratory air through wound in the chest wall.

trau ma t sis [*trauma*; G -*ōsis*, condition]. Traumatism.

Trautmann's triangle. See under *triangle*.

trav'ail (trav ail, trav ul) [F.]. Labor of childbirth.

travamin. Trade-mark for an enzymatic hydrolysate of bovine plasma used for the nutritive effect of the constituent amino acids. See plasma *hydrolysate*.

trav'el ra'tion. See under *ration*.

Travers, Benjamin [*English surgeon*, 1783–1858] Tied the common carotid artery for aneurysm of the orbit (1811) Made an early study of intestinal sutures. Author of an early treatise on diseases of the eye.

tray [AS. *trég*]. A flat, shallow vessel of glass, hard rubber or metal, for holding instruments during surgical operation.

impression t. I dentistry, metal receptacle used to hold wax or other plastic material used in making impressions of the teeth and gums.

tread (tred) [AS. *tredan*]. I veterinary medicine injury to the coronet of horse's hoof, due to striking with the shoe of the opposite side.

treat [L. *tractare*, to treat]. Combat disease by the pplication of remedies.

treat'ment [*tractare*]. The means employed in effecting the cure of disease the management of disease or f diseased patients. Also see *therapy*.

active t. That which is vigorously applied to the disease.

Ascoli t. One form of treatment for malaria which consists of daily injections of adrenalin. The treatment should be used in conjunction with cinchona alkaloids.

Baer's t. In an ankylosed joint, the adhesions are broken and sterile oil is then injected to prevent the re-forming of the adhesions.

Carrel-Dakin t. The frequent and regularly repeated irrigation of open wounds with solution of chlorinated soda and sodium bicarbonate.

causal t. That which is directed to the removal of the cause of disease.

closed plaster t. A general descriptive term for procedure in which plaster is used over recent operative wound, the cast complementing the operation in the treatment. The management of the wound is carried out without suture. Except over the prominent bony points, plaster is applied directly to the skin over petrolatum jelly gauze Joints proximal and distal to the wound are immobilized. Ordinarily the dressing is not changed before week or ten days.

conservative t. Treatment which is entirely

expectant and abstains from any interference until absolutely necessary; in surgical cases, it aims at preservation rather than mutilation.

crossfire t. A method of arranging treatment beams in roentgen-ray deep therapy in such manner that they overcross in the depth of the body at the site of the tumor without overloading the skin.

definitive t. Treatment which includes generally accepted procedures necessary to produce ultimately recovery of the patient, as the repair of perforated intestine.

dietetic t. That depending entirely on the control of the type and amount of *food*.

drip t. The continuous injection of fluid into the blood or body cavity so slowly that the rate is measured in drops.

drug t. That depending on the use of drugs.

electric light t. The therapeutic application of electric light by means of cabinets in which the patient sits with the light directed upon the affected part. Its therapeutic effect depends on heat. Used in rheumatism, neuralgia, etc.

electric shock t. See electroshock *therapy*.

Elliott t. Treatment of pelvic infections by use of special apparatus which delivers circulating hot water of the desired temperature to the vagina or rectum.

emergency medical t. Medical treatment administered by trained U. S. Army Medical Service personnel prior to definitive treatment.

empiric t. One based on practical observation rather than on scientific reasoning.

expectant t. Watching the progress of disease, and not interfering unless special symptoms arise.

fever t. See fever *therapy*.

holistic t. Treatment of the patient as whole.

hot air t. The local application of superheated dry air, the affected part being introduced into cylinder or chamber.

hypoglycemic shock t. Treatment used in certain types of mental diseases, in which shock and unconsciousness are produced by large doses of insulin.

light t. Treatment by sunlight or artificial light.

palliative t. That which is directed toward relief of symptoms rather than the cure of disease.

perennial t. Treatment carried on throughout the year as for seasonal hay fever in contradistinction to preseasonal or coseasonal treatment.

preseasonal t. Prophylactic treatment by injection of pollen extract before the onset of hay fever.

Proetz' t. See Arthur Walter *Proetz*.

rational t. One based on scientific reasoning rather than practical observation or empiricism.

Rogers' t. for cholera. This treatment employs solutions—hypertonic and alkaline saline—which are given intravenously in amounts proportional to the rise in specific gravity of the blood.

root canal t. The opening, cleansing, and sterilization of root canal preparatory to root canal filling.

specific t. A treatment having proved destructive effect against specific etiologic factor or having definite curative effect upon particular disease.

starvation t. In diabetes, certain days of fasting followed by limited diet with very little carbohydrate.

surgical t. One requiring manipulation or operative procedure.

Swift Ellis t. Treatment of central nervous system syphilis by injecting the patient's own serum into the subarachnoid space. For this purpose the blood is drawn one-half hour after an intravenous injection of arsphenamine.

tonic t. Treatment of disease by tonics.

vibration t. Massage by rapid shaking of the body or part, maintained by mechanical machine or oscillator.

Wagner Jauregg t. Treatment of central nervous system syphilis by fever of artificially induced malaria.

Winkelstein t. A method for controlling gastric acidity in ulcer patients. A fluid pabulum which contains an antacid is introduced into the stomach by means of the Penrose, latex nasogastric tube. This intragastric drip is continuous, and is prescribed for one, two, or three weeks.

treburon. Trade-mark for the sodium salt of sulfated polygalacturonic acid methyl ester methyl glycoside, an anticoagulant having heparinlike activity with the advantage of less toxicity; administered intravenously or intramuscularly.

tree [ME. *from* AS. *trēo*]. 1. A perennial woody plant with one main stem and numerous branches. 2. *In* medicine, structure resembling tree; system or organ with many branches.

bronchial t. The arborization of the bronchi of the lung, considered as structural and functional unit; also called *respiratory t.*

spindle t. See *euonymus*.

tre·ha'la (tri hah'luh, tri hay'luh) [*Turk.*]. Turkish manna; variety of manna derived from the cocoons of *Larinus maculatus*, an insect that feeds upon an Asiatic thistle, *Echinops persicus*.

tre'ha·lose (tree'huh lose, tri hal'ose). $C_{12}H_{22}O_{11}.2H_2O$; sugar found in trehala manna and widely distributed in fungi; 1-α-D-glucopyranosyl-α-D-glucopyranoside, yielding on hydrolysis two molecules of D-glucose.

Treitz, Wenzel [*Austrian physician and anatomist*, 1819–72]. Best known for his description of retroperitoneal hernia through the duodenojejunal fossa (1857), called *Treitz' hernia*. Described the inferior duodenal fossa, which is known as *Treitz' fossa*. Described fold of peritoneum extending from the duodenojejunal junction to the left crus of the diaphragm, called *ligament of Treitz*. See also *muscle of Treitz*.

tre'ma [G. *trēma*, hole]. 1. A foramen. 2. The vulva.

Trem"a·to'da (trem uh-to'duh) [G. *trēmatōdēs*, from *trēma*, hole; *eidos*, form]. A class of flatworms; the digenetic species are endoparasites of man. The life cycle is complex, involving sexual and asexual reproduction; two intermediate hosts are required. Some of the genera seen most often are *Clonorchis*, *Fasciola*, *Fasciolopsis*, *Opisthorchis*, *Paragonimus*, *Schistosoma*, and *Troglotrema*. Also called *fluke*. —**trem'a·tode**, **trem'a·toid**, *adj.*, *n.*

trem"a·to·di'a·sis [*trēmatōdēs*; NL. *-iasis*, condition]. Infestation with trematode.

trem'bles [L. *tremulus*, trembling]. A *disease* occurring in humans who have ingested milk, butter or possibly beef of animals with the disease. Animals are affected from eating white snakeroot, *Eupatorium urticaefolium*, or the rayless goldenrod, *Aplopappus heterophyllus*. The disease is afebrile, but there are weakness, anorexia, vomiting, and sometimes death. Also called *milk sickness*.

trem'bling [*tremulus*]. A tremor; quivering.

trem'u·lous. Affected with involuntary muscular agitation. —**tremble**, *v.*

trem'bling-ill" Louping-ill.

trem'el·loid, trem'el·lose [L. *tremere*, to tremble; G. *eidos*, form]. Gelatinous; resembling the spore-producing organs of the fungus, *Tremella*.

trem'e·tol [*tremere*]. A toxic unsaturated alcohol from white snakeroot; produces trembles in cattle and sheep that eat the plant.

trem gram (trem o-gram, tree mo-) [*tremor*; G *gramma*, letter] The tracing of tremor made by means of th tremograph.

trem graph (trem'o-graf, tree mo-) [*tremor*; G *graphein*, t write]. A device for recording tremor

tre mo la'bile (tree mo lay'bil, -lab il, trem o-) [*tremor*; L. *labilis*, slipping]. Easily inactivated or destroyed by agitation.

trem o-lo. An irregular exaggerated vibrato oice tremor symptomatic of psychogenic disturbance, old age, or diseases affecting the organs of respiration and phonation or their nervous control.

tre mo-pho'bi (tree mo f 'bee-uh, trem o-) [*tremor*; G *phobos*, fear]. A morbid fear of trembling.

trem or (trem ur tree mur) [L., from *tremere*]. A trembling of th voluntary muscles; involuntary rhythm movements, involving the entire muscle, or only circumscribed group of muscle bundles.

arsenical t. The result of arsenical intoxication.

asynergic family t. See essential *t.*

coarse t. One with ot more than six or seven vibrations per second.

continuous t. A form of tremor which resembles that of paralysis agitans It is, however likely to be remittent, and may be diminished or rrested by voluntary effort.

convulsive t. See *paramyoclonus multiplex*.

effort t. I tention tremor

epileptoid t. Intermittent clonus with tremor

essential t. A familial tremor associated with no other stigmas, which is exaggerated by action and emotional tension It begins in childhood or adolescence and becomes progressive in old age. Syn., *heredofamilial tremor*

fascicular t. See fibrillary *t.*

fibrillary t. Tremor caused by consecutive contractions of separate muscle fibers.

fine t. One with ten or twelve vibrations per second.

forced t. The convulsive movements persisting during repose after voluntary motion, due to an intermittent and rhythmic irritation of the nervous centers.

heredof milial t. See essential *t.*

Hunt's t. See striocerebellar *t.*

hysterical t. The tremor observed in hysteria, due to the irregularity of nervous mpulses.

intention t. A slow coarse tremor of the limbs which is intensified pon voluntary movement and may cease on rest. It is present in certain diseases of the nervous system, notably multiple sclerosis.

intermittent t. The tremor commonly bserved in hemiplegics on any attempt at voluntary motion.

lenticulostriate t. That which is caused by degenerative disease of the basal ganglions.

mercurial t. A peculiar form of tremor observed among smelters and others exposed to the fumes of mercury It is sudden or gradual in onset, and usually is unaccompanied by excessive salivation. The arms are first nvolved, and then the entire muscular system. If allowed to go on, paralysis and dementia may result.

Minor's t. See essential *t*

muscular t. Slight, oscillating, rhythmic muscular contractions.

passive t. A static tremor

physiologic t. A tremor in normal individuals, due to fatigue, apprehension, or overexposure to cold.

pill-rolling t. The behavior of the hand in parkinsonism or shaking palsy the action is due to static tremor and the exaggerated flexion f the metacarpophalangeal joints.

purring t. See purring *thrill*.

Rendu's t. A hysterical tremor provoked or increased by volitional movements.

resting t. A static tremor

senile t. Involuntary rhythmic, oscillatory movements developing with age moderate movements are apparently physiologic changes

static t. That which is present while the muscles involved are t rest, usually with three or four vibrations per second and disappearing when the muscles are moved voluntarily or with sleep anesthesia. Syn., *passive t.*, *resting t.*

striocerebellar t. That which is present while muscles are either at rest or in voluntary movement and which is associated with ataxia and hypotonia.

t. artuum. Paralysis agitans.

t. capitis. Tremor affecting the muscles of the neck and head.

t. coactus. See forced *t.*

t. cordis. A sudden rapid fluttering of the heart, the ordinary full pulse of health suddenly dropping to mere tremulous thread. A symptom often met in neurotic persons.

t. metallicus. See mercurial *t.*

t. potatorum. Delirium tremens.

t. saturninus. The tremor of lead poisoning

t. tendinum. See *subsultus tendinum*.

vibratile t. See *fremitus*.

volitional t. A trembling of the entire body during voluntary effort, as observed in multiple sclerosis. See intention *t.*

zinc pulsoning tremors. Brass founder's ague.

trem o-sta'ble [*tremor*; L. *stabilis*, stable] Not easily inactivated or destroyed by agitation.

trem u la tion [L. *tremulus*, shaking]. A tremulous condition.

trem u lous [*tremulus*]. Trembling, quivering. tremulous iris.

trench foot. A condition of the feet somewhat like frostbite; it occurs in those exposed in the trenches

trench mouth. See necrotizing ulcerative gingivitis.

Trendelenburg, Friedrich [German surgeon, 1844–1924]. Ligated the saphenous vein for treatment of varicose veins of the leg (1890) Proposed operation for relief of hydronephrosis. Attempted pulmonary embolectomy (1908) and led the way to its successful performance by Kirschner (1924) See also Trendelenburg's position, Trendelenburg's test

Trenner's automatic pipet. An automatic pipet of the glass bulb type used for collecting and diluting blood.

tre pan See *trephine*.

trep na tion [G. *trypan*, to bore]. The operation of trephining. *Obs.*

trep nize [*trypan*]. Trephine.

tre-pan ning [*trypan*]. Boring; using the trephine

tre-phine (tre-fine tre-feen') [*trypan*]. A circular instrument with sawlike edges for cutting out disk of bone, usually from the skull —trephine, v.

conical t. A trephine with truncated, cone-shaped crown, and provided with oblique ridges on its outer surface to stop its progress as soon as the bone is penetrated.

corneal t. A small cutting trephine used to remove circular section from the stroma of conical cornea.

nasal t. An instrument made of steel shaft ending in small, fenestrated tube, having knife or saw edge.

tympanic t. An instrument made of small steel shaft ending in small, polished tube, 3 mm. diameter with cutting edge.

tre-phin'ing (tre-figh ning, tre fee ning) [*trypan*]. The operation of cutting bone with trephine. The operation of cutting bone with trephine, usually applied to removing disk of cerebral bone by means of special sawlike instrument

sclerocorneal t. The removal of a portion of the sclera by means of a specially devised instrument, for the relief of excessive intraocular pressure in chronic simple glaucoma.

treph'one [G. *trephein*, to nourish]. A growth-promoting hormone produced by leukocytes, said to stimulate fibroblastic activity.

trep'i-dant [L. *trepidare*, to tremble at]. Trembling.

trep"i-da'ti-o (trep"i-day'shee-o) [L., from *trepidare*]. State of agitation.

t. cordis. Palpitation of the heart.

trep"i-da'tion [*trepidatio*]. 1. Trembling. 2. Fear; trembling anxiety.

Trep"o-ne'ma [G. *trepein*, to turn; *nēma*, thread]. A genus of spiral organisms of the family Treponemaceae. See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

oral T. Organisms, such as *T. macrodentium*, *T. microdentium*, and *T. mucosum*, of no proved pathogenicity which are found in the mouth.

T. carateum. The organism which causes pinta. Also called *T. americanum*, *T. herrejoni*, *T. pictor*, *T. pintae*.

T. cuniculi. The organism which causes a venereal disease of rabbits called pallidoidosis.

T. pallidum. The organism which causes syphilis.

T. pertenue. The organism which causes yaws.

Trep"o-ne"ma-ta-ce-ae (trep"o-nee-may-tay'see-ee) [*trepein*, *nēma*]. The family of spiral microorganisms which includes the genera *Borrelia*, *Leptospira*, and *Treponema*.

trep"o-ne"ma-to'sis [*trepein*; *nēma*; G. *-ōsis*, condition]. Infection caused by *Treponema*.

trep"o-ne-mi'a-sis [*trepein*, *nēma*, NL. *-iasis*, condition]. Infection caused by *Treponema*.

trep"o-ne"mi-cid'al (trep"o-nee"mi-sigh'dul, -nem"i-sigh'dul) [*trepein*, *nēma*; L. *caedere*, to kill]. 1. Destructive to any treponema. 2. Antisyphilitic.

trep"o-ne'min. An antigen prepared from formalin-killed *Treponema pallidum*, used in a skin test for syphilis.

trep-op'nea [*trepein*, G. *pnein*, to breathe]. A respiratory distress present in one recumbent posture and absent in another.

trep'pe (trep'eh) [Ger.]. See staircase *phenomenon*.

Tresilian, Frederick James [English physician, 1862–1926]. Described a sign of mumps, in which the opening of the parotid duct on the inner surface of the cheek, opposite the second upper molar, appears as a bright red papilla; called Tresilian's sign.

Treves's bloodless fold. See ileocecal *fold*.

tri- (trye-) [G. and L. *tri-*, three]. A combining form denoting three.

tri-ac'e-tin (trye-ass'e-tin). Glyceryl triacetate.

tri'ad [G. *trias*, the number three]. 1. A set of three related elements, objects, or symptoms. 2. In *chemistry*, a trivalent atom or radical.

Charcot t. Nystagmus, intention tremor, and staccato speech, occurring in multiple sclerosis.

chronic anal ulcer t. Hypertrophied papillae, ulcer, and sentinel pile.

Hutchinson's t. The combination of notched teeth, interstitial keratitis, and eighth nerve deafness, found in subjects with prenatal syphilis.

Jacod's t. A triad consisting of total ophthalmoplegia, amaurosis, and trigeminal neuralgia, caused by a tumor involvement of cranial nerves II, III, IV, V, and VI.

Kartagener's t. See Kartagener's *syndrome*.

Lucian's t. Asthenia, atonia, and ataxia as manifestations of cerebellar disease.

portal t. The three main structures found in each portal canal, a branch of the hepatic artery and of the portal vein, and a tributary to the common bile duct.

Potter's t. See peritubal *syndrome*.

t. of Schaffer. See Károly *Schaffer*.

t. of Whipple. The three conditions which together are diagnostic of hyperinsulinism: (1) attacks invariably occur after a meal, (2) fasting blood sugar is below 50 mg. per cent, (3) immediate recovery from an acute attack upon administration of glucose.

tri-age (tree-ahzh') [F.]. In military medicine, the process of sorting sick and wounded on the basis of urgency and type of condition presented, so that they can be properly routed to medical installations appropriately situated and equipped.

tri"-kai"de-ka-pho'bi-a (try"uh-ky"di-kuh-foh'bee-uh) [G. *treis kai deka*, thirteen; *phobos*, fear]. Superstitious fear of thirteen. Also called *triskaidekaphobia*.

tri'al [AF.]. The act of trying or testing.

tri-al"kyl-amines (trye-al-kil-uh-meens, trye-al-kil-am'in). See *alkylamine*.

tri-an"gle [L. *triangulus*, having three corners]. 1. A geometrical figure having three sides and three angles. 2. A three-sided area or region having natural or arbitrary boundaries. —**trian'gular**, *adj.*

anal t. One with the base between the two ischial tuberosities and the apex at the coccyx. Syn., *rectal t.*

anterior neck t. One bounded in front by the median line of the neck, behind by the anterior margin of the sternocleidomastoid, and above by the lower border of the body of the mandible and a line extending from the angle of the mandible to the mastoid process. It is divided into the inferior carotid, superior carotid, submaxillary, and suprahyoid triangles.

aortic t. One formed below by the upper border of the aortic arch, posteriorly by the upper thoracic spine, and anteriorly by the left subclavian artery, seen on the left antero-oblique view of the heart.

Assézat's t. See facial *t*.

bladder t. The triangle formed by the openings of the ureters and the urethra. Syn., *trigone*.

Bryant's t. See iliofemoral *t*.

cardiohepatic t. One in the right fifth intercostal space separating the heart and the upper surface of the liver.

carotid t. See superior carotid *t*.

Codman's t. The little trumpet-shaped cuff of reactive periosteal bone which surrounds the upper limit of a bone tumor and which appears in an x-ray as a triangular space beneath the uplifted periosteal edge. This signifies subperiosteal, extracortical involvement. Syn., *reactive t*.

digastric t. See submaxillary *t*.

Einthoven's t. Triangle used to show that the algebraic sum of the potential differences of electrocardiographic leads I and III equals that of lead II.

facial t. One bounded by lines between the alveolar point, the basion, and the nasion.

femoral t. One formed laterally by the medial margin of the sartorius, medially by the lateral margin of the adductor longus, and superiorly by the inguinal ligament. Also called *Scarpa's t*.

Garland's t. Area of relative resonance in the low back near the spine, found on the same side as pleurisy with effusion.

Grocco's t. See paravertebral *t*.

Hesselbach's t. One bounded laterally by the inferior epigastric artery, medially by the rectus abdominis, and inferiorly by the medial half of the inguinal ligament.

iliofemoral t. One formed by a line from the anterior superior iliac spine to the top of the

greater trochanter a horizontal line from the anterior superior iliac spine, and vertical line from the top of the greater trochanter. Also called *Bryant's t.*

inferior carotid t. One bounded by the median line of the neck, the sternocleidomastoid muscle, and the superior belly of the omohyoid muscle. Also called *t. of necessity, muscular t., tracheal t.*

Kiesselbach's t. See Wilhelm *Kiesselbach*.

Lesser's t. One bounded above by the hypoglossal nerve and below by the anterior and posterior bellies of the digastric muscle.

lumbar t. Lateral abdominal wall triangle bounded by the iliac crest below, the external oblique in front, the latissimus dorsi behind, and floored by the internal oblique. Also called *Petit's t., trigonum lumbale.*

lumbocostal t. (*of Bochdalek*) A area of potential weakness in the left half of the diaphragm bounded medially by the lateral margin of the lumbar part of the diaphragm, laterally by the posterior margin of the costal part, and posteriorly by the lateral arcuate ligament. In the embryo it is occupied by the left pleuroperitoneal canal. Also called *vertebrocostal t.*

Macewen's t. See suprameatal *t.*

muscular t. See inferior carotid *t.*

occipital t. One bounded in front by the sternocleidomastoid, behind by the trapezius, and below by the omohyoid.

paravertebral t. A triangular area of dullness on the back on the side opposite that containing pleural effusion. Also called *Grocco's t.*

pectineal t. One bounded anteriorly by the anterior abdominal wall, laterally by the external iliac vessels, and medially by the pelvic brim.

Petit's t. See lumbar *t.*

posterior neck t. One bounded in front by the sternocleidomastoid, behind by the anterior margin of the trapezius, its base being formed by the middle third of the clavicle, its apex by the occipital bone; divided by the omohyoid into the occipital and subclavian triangles.

reactive t. See Codman's *t.*

rectal t. See anal *t.*

Reinke's t. The space beneath the epithelial border of the vocal folds, allowing some freedom of motion of the margins of the true folds.

Scarpa's t. See femoral *t.*

subclavian t. One bounded above by the inferior belly of the omohyoid, below by the clavicle, and *in front by the posterior border of the sternocleidomastoid.*

submaxillary t. One bounded above by the lower border of the body of the mandible and line drawn from its angle to the mastoid process, below by the posterior belly of the digastric and the stylohyoid, and in front by the anterior belly of the digastric. Syn., *digastric t.*

submental t. See suprahyoid *t.*

suboccipital t. One bounded by the posterior major rectus capitis, the superior oblique, and the inferior oblique muscles.

superior carotid t. Triangle bounded above by the posterior belly of the digastric and the stylohyoid, behind by the sternocleidomastoid, and below by the omohyoid. Also called *t. of election, carotid t.*

suprahyoid t. A triangle limited behind by the anterior belly of the digastric, in front by the middle line of the neck, and below by the body of the hyoid bone. Syn., *submental t.*

suprameatal t. Area between the posterior wall of the external acoustic meatus and the posterior root of the zygomatic process. Also called *Macewen's t.*

surgical t. Any triangular area in which surgically important nerves and arteries are found.

tracheal t. The inferior carotid triangle.

Trautmann's t. One with its anterior angle at the labyrinthine prominence, limited behind by the lateral sinus and above by the temporal line.

t. of auscultation. Area limited above by the trapezius, below by the latissimus dorsi, and laterally by the vertebral border of the scapula.

t. of Calot. One bounded above by the cystic artery and on either side by the cystic and hepatic ducts, and found in about 60 per cent of cases in which the cystic artery arises from the right hepatic artery. Also called *cystic t.*

t. of election. See superior carotid *t.*

t. of necessity. See inferior carotid *t.*

t. of Philippe-Gombault. A small triangle in the dorsomedian border of the spinal cord at the sacral level, occupied by the septomarginal fasciculus.

urogenital t. One with the base between the two ischial tuberosities and the apex below the symphysis pubis.

vertebrocostal t. See lumbocostal *t.*

vesical t. The trigone.

tri·an·gu·la·ris. 1. Old name for triquetrum. See Table of Bones in the Appendix. 2. A muscle of facial expression. See Table of Muscles in the Appendix.

Tri·at'o·ma (trye-at'o-muh) [G. *tri-*, three; *atomos*, uncut]. A genus of bloodsucking Hemiptera, commonly called cone-nosed bugs. The most important species is *T. megista*, the chief vector of *Trypanosoma cruzi*. Other species are *T. sordida*, *T. dimidiata*, and *T. infestans*.

tri"a·tom'ic. 1. Consisting of three atoms. 2. Having three atoms of replaceable hydrogen.

tri·ax'i·al ref'er·ence sys'tem (trye-ack'see-ul). A simple means for determining the mean electrical axis of any wave of depolarization or repolarization from the electrocardiogram.

tri·a·zol 156. Cyclohexyl-ethyl-triazole. A substance related chemically to metrazol used as a convulsant in the treatment of schizophrenia.

trib·ade (trib'ade, trib'ad) [G. *tribas*, from *tribein*, to rub]. A woman who plays the role of the male in homosexual practices. —**tribadism**, *n.*

tri·ba·sic (trye-bay'sick). Having three hydrogen atoms replaceable by bases.

tri·bas'i·lar (trye-bas'i-lur) [G. *tri-*, three; *basis*, base]. Having three bases, as tribasilar synostosis.

tribe [L. *tribus*, tribe]. *In biology*, a division between genus and family.

tri"bo·lu·mi·nes'cence (try"bo-lew-mi-nes'unce, trib"o-) [G. *tribein*, to rub; L. *lumen*, light]. Luminosity induced by friction.

tri·bra·chi·us (trye-bray'kee-us) [G. *tri-*, three; *brachiōn*, arm]. Having three arms.

tri·bro·mo·an'i·line (trye-bro"mo-, try"bro-mo-an'i-leen, -lin). $C_6H_2Br_3NH_2 \cdot HBr$. Formerly used as antipyretic and analgesic.

tri·bro·mo·eth·a·nol (trye-bro"mo-eth'uh-nole, -nawl) (*tribromoethanol*). Tribromoethyl alcohol, Br_3CCH_2OH. White, crystalline powder of slight aromatic odor and taste, unstable in air and light. One gram dissolves in 35 cc of water; very soluble in amylene hydrate.

t. solution (*liquor tribromoethanol*). Each cc contains 1 Gm. of tribromoethanol in amylene hydrate. A clear, colorless liquid of camphoraceous odor. Used as basal anesthetic, it decreases the amount of inhalation anesthetic necessary for complete anesthesia. Dose, rectal, 0.06 cc. per kilogram of body weight. The solution should be diluted with 40 times its volume of water at

proximately body temperature before injection. Maximum total dose is 6-8 cc. for women and 9-10 cc. for men. See avertin with amylene hydrate.

tri·bro"mo·eth'yl al'co·hol. Tribromoethanol.

tri·bro"mo·meth'ane. Bromoform.

tri·bu'ty·ri (trye-bew'ti·rin) A constituent of butterfat. See butyrin.

tri·cal'cic (trye-kal'sick) Containing three atoms of calcium. Obs.

tri·cal'ci·um phos'phate. See tribasic calcium phosphate.

tri·car"bal·lyl'ic ac'id. COOH.CH₂.CH(COOH).CH₂.COOH; 1,2,3-propanetricarboxylic acid; colorless crystals, soluble in water; constituent of beet-sugar molasses.

tri·cel'lu·lar [L. tri-, three; cellula, small storeroom]. Having three cells.

tri·ceph'a·lus (trye·sef'uh·lus) [G. tri-, three; kephalē, head]. A monster with three heads.

tri'ceps [L., having three heads]. Three-headed.

tri'ceps. A muscle having three heads, as triceps brachii. See Table of Muscles in the Appendix.
t. extensor cubiti. Triceps mosel old term.

Tri"cer·om·o·nas. See Enteromonas.

trich- (trick-). See tricho-.

trich"an·gi·ec·ta'si·a (trick·an·jee·eck·tay'zhuh, ·see·uh, ·shuh, ·see·uh) [G. thrix, hair; angeion, vessel; ektasis, extension]. Dilatation of the capillaries.

trich"a·tro'phi·a [thrix; G. atrophia, want of food]. A brittle state of the hair from atrophy of the hair bulbs.

trich·es·the'si·a, trich"aes·the'si·a (trick"es·thee'zhuh, ·zee·uh) [thrix; G. aisthēsis, perception].
1. A peculiar form of tactile sensibility in regions covered with hairs. 2. See trichoesthesia.

trich·i'a·sis (trick·eye'uh·sis) [G., disease of the eyelids]. An abnormal position of the eyelashes which produces irritation by friction upon the globe. The acquired type usually follows an inflammatory condition that produces distortion.
t. of the anus. An incurvation of the hairs about the anus, consequently irritating the mucous membrane.

Tri·chi'na (tri·kigh'nuh). See Trichinella.

Trich"i·nel'la (trick"i·nel'uh) [G. trichinos, of hair]. A genus of nematode worms which are parasites of man, hogs, rats, dogs, cats, and many other mammals.
T. spiralis. The species found in man.

trich"i·nel·li'a·sis [trichinos; NL. -iasis, condition]. Trichinosis.

trich"i·nel·lo'sis [trichinos; G. -ōsis, condition]. Trichinosis.

trich"i·ni'a·sis. See trichinosis.

trich"i·no·pho'bi·a [trichinos; G. phobos, fear]. Morbid fear of trichinosis.

trich"i·no'sis [trichinos; G. -ōsis, condition]. A disease produced by the ingestion of pork containing Trichinella spiralis. It is characterized by nausea, vertigo, fever, diarrhea, prostration, stiffness and painful swelling of muscles, and edema of the face. The intestinal symptoms are due to the development of the adult stage. The muscular and mental symptoms are due to the larval migration through the tissues.

trich·i'tis [G. thrix, hair; -itis, inflammation]. Inflammation of the hair bulbs.

tri·chlo"ro·ac·et'al·de·hyde. Chloral, 1.

tri·chlo"ro·a·ce'tic ac'id (trye·klor"o·a·see'tick) (acidum trichloroaceticum) CCl_3COOH. Colorless, deliquescent crystals. One gram dissolves in about 0.1 cc. of water. A caustic in the pure state or in concentrated solution. Astringent in strengths of 0.1-1%.

tri·chlo"ro·bu'tyl al'co·hol. Chlorobutanol.

tri·chlo"ro·bu'tyl al'de·hyde. Butyl-chloral hydrate.

tri"chlo·ro·bu·tyl'i·dene gly'col. Butyl-chloral hydrate.

tri·chlo"ro·eth'yl·ene (trichloroethylenum) $CHCl{:}CCl_2$. A clear colorless liquid of characteristic odor. An anesthetic administered by inhalation in trigeminal neuralgia, migraine, and angina pectoris. It is available in frangible ampuls containing 1 cc. (15 min.) dose, one ampul crushed in handkerchief and the fumes inhaled.

tri·chlo"ro·meth'ane. Chloroform.

tri·chlo"ro·phe'nol. $C_6H_2Cl_3(OH)$. White crystals of pronounced germicidal power.

trich·o- (trick·o-), **trich-** [thrix]. A combining form meaning hair.

trich"o·be·zoar [thrix; Per. pād-zahr, protecting against poison]. A hair ball or concretion in the stomach or intestine. See aegagropilus.

Tri·cho·bil·har'zi·a oc"el·la'ta. A parasite of wild and domesticated ducks in Europe and North America whose cercaria (Cercaria elvae) may cause schistosome dermatitis.

trich"o·car·di'tis [thrix; G. kardia, heart]. Inflammation of the pericardium with pseudomembranous elevations.

trich"o·ceph"a·li'a·sis. See trichuriasis.

Trich"o·ceph'a·lus. See Trichuris.

trich·o·clā'si·a, trich·o·cla'si·a. See trichorrhexis nodosa.

trich"o·clas·ma'ni·a [thrix; G. klasis, breaking; mania, madness]. An affection characterized by an abnormal desire to break off the hair, usually that of the scalp.

trich"o·cryp·to'sis [thrix; G. kryptein, to hide; -ōsis, condition]. Any disease of the hair follicles.

trich'o·cyst [thrix; G. kystis, bladder]. In biology, small vesicle containing a thread, which can be shot out rapidly; found in the ectoplasm of the Infusoria and in some of the Flagellata.

Trich"o·dec'tes (trick"o·deck'teez) [thrix; G. dektēs, beggar]. A genus of the suborder Mallophaga or biting lice. They do not infest man.
T. canis. The dog louse; an intermediate host of the dog tapeworm, Dipylidium caninum.

Trich"o·der'ma [thrix; G. derma, skin]. A genus of fungi which is a common laboratory contaminant.

trich"o·ep"i·the"li·o'ma [thrix; G. epi, on; thēlē, nipple; -ōma, tumor]. A tumor characterized by many pin-headed to pea-sized, round, yellow or skin-colored papules chiefly on the central face. It may be associated with syringoma or cylindroma. Also called epithelioma adenoides cysticum, Brooke tumor, multiple benign cystic epithelioma, acanthoma adenoides cysticum.
t. papulosum multiplex. Multiple benign cystic epithelioma.

trich"o·es·the'si·a (trick"o·ess·thee'zhuh, ·zee·uh) [thrix; G. aisthēsis, perception]. The sensation received when a hair is touched.

trich"o·es·the"si·om'e·ter (·ess·thee"zee·om'i·tur, ·es·thee·zee·om'i·tur) [thrix; aisthēsis; G. metron, measure]. An electric appliance for determining the amount of sensation when a hair is touched.

trich'o·gen (trick'o·jen) [thrix; G. gennaein, from gignesthai, to be produced]. A substance that stimulates growth of hair.

trich"o·glos'si·a [thrix; G. glōssa, tongue]. Hairy tongue; lengthening of the filiform papillae, producing an appearance as if the tongue were covered with hair.

trich"o·hy'a·lin [thrix; G. hyalos, glass]. The hyalin of the hair which is like keratohyalin.

trich'oid (trick'oyd) [G. trichoeidēs, like hair]. Resembling hair.

trich″o-kryp″to-ma ni a [*thrix*; G. *kryptos* hidden, *mania*, madness]. Trichorrhexomania.

trich′o-lith [G *thrix* hair; *lithos*, stone]. A calcified hair ball within the stomach or intestines.

trich″o-lo gi a [*thrix*; G *legein*, to pick up]. 1 Carphology; floccillation. 2. The plucking out of one hair

tri-chol′o gy [*thrix*; *legein*]. Trichologia.

trich ol′ gy [*thrix*; G *logos*, word]. The science of the hair and its diseases.

trich-o ma [G growth of hair] 1 Trichomatosis. 2. Trichiasis.

tri-cho ma-de′sis. The falling out of hair which may lead to alopecia.

trich″o ma′ni a. See *trichotillomania*.

trich ma tose [*trichoma*]. Matted together

trich ma to sis [*trichoma*; G *-osis*, condition]. An affection of the hair characterized by matted condition, result of neglect, filth, and the invasion of parasites. See *plica* polonica.

trich′ome (trick′ohm) [*trichoma*]. A hair or other appendage of the epidermis.

t. dermatitis. Dermatitis due to irritation by spicules, hairs, and scales of the epidermis f plants.

trich″o-mo′na-cide. An agent effective in killing *Trichomonas*.

trich o mo nad (trick″o-mo nad, -mon ad) [G *thrix*, hair *monas*, unit]. Resembling the flagellates belonging to the genus *Trichomonas*. —**trichomo′nad, n.**

Trich o-mo nas (trick o-mo′nas) [*thrix*; *monas*]. A genus of flagellate protozoa, belonging to the class Mastigophora. Three to five flagella, thick rodlike axostyle extending throughout the pear-shaped body and an undulating membrane characterize members of the genus.

T hominis. The intestinal form found in man; it is not pathogenic.

T vaginalis. The vaginal form which has been implicated in vaginitis.

trich″o-mo-ni′a-sis [*thrix*; *monas*; NL. *-iasis*, condition]. The presence of *Trichomonas*.

Trich o-my ce tes (trick migh-see tees) [*thrix*; G *mykes*, fungus]. Fungi of the family Actinomycetaceae, having very narrow filaments, usually much longer than bacteria and often branched regarded as an intermediate group linking bacteria and higher fungi.

trich o my co sis (trick o-m gh k sis) [*thrix*, *mykes*; G *-osis*, condition]. A disease of the hair produced by fungi.

t. axillaris. Nodules formed on the axillary hairs by the saprophytic growth of species of *Nocardia* and bacteria. also called *trichonocardiosis axillaris*. Syn., *chromotrichomycosis*.

t. barbae. See *sycosis* parasitica.

t. capillitii. See *t. circinata*.

t. circinata. Ringworm of the scalp.

t. favosa. See *favus*.

t. flava nigra. A yellow-red variety of trichomycosis nodosa.

t. nodosa. A peculiar but common condition, generally nodose in character affecting the hairs of the axilla and scrotum and due to the growth of masses of fungous and bacterial material along the hair Also called *lepothrix*.

t. palmellina. A disease affecting the hairy parts of the trunk, trichomycosis nodosa.

t. pustulosa. A pustular parasitic disease affecting hairy regions.

t. rubra. A red variety of trichomycosis nodosa. Red cocci are found in the gelatinous nodules.

trich″o-no-car″di-o sis (trick″o-no-kahr dee-o sis) [*thrix*; after Edmond *Nocard*, *-osis*]. Nodular appearance of the hair due to species of *Nocardia*; axillary hair is most often affected.

t. axillaris. Trichomycosis axillaris.

trich o-no-do sis [*thrix*; L. *nodus*, knot, *-osis*] A pseudoknotting and fraying of the hair associated with thinning and breaking of the hair shaft. [illegible] times true knots occur and one case is described in which all were in half-hitch knots. Also called *knotting hair*

trich″o-no sis (trick″o-no sis) [*thrix*; G. *nosos*, disease]. Any disease of the hair

t. cana. See *canities*.

t. discolor See *canities*.

trich o-path″o-pho′bi-a [*thrix*; G *pathos*, disease; *phobos*, fear]. Undue anxiety and fear regarding the hair its growth, color or diseases

trich-op′a thy (trick-op uth-ee) [*thrix*; *pathos*]. Any disease of the hair —**trichopath′ic,** *adj.*

trich-oph a gy (trick-of′uh jee) **trich″o-pha gi** [*thrix*; G *phagein*, to eat]. The eating of hair.

trich o pho′bi-a [*thrix*; G *phobos*, fear]. 1. A morbid fear of hair 2. Trichopathophobia.

trich″o-phy′ta [*thrix*; G. *phyton*, plant]. A fungus of the genus *Trichophyton*.

trich o phy′tid, trich-oph y tid [*thrix*; *phyton*] A dermophytid caused by *Trichophyton* fungi. There are many varieties. It is due to the absorption of dead fungi or their end products.

trich″o-phy′tin, trich-oph′y tin [*thrix*; *phyton*] A fungous extract made from *Trichophyton* organisms. Used as antigen for skin test to show the presence of existing or previous infection with these fungi. It is thought by some to be specific and has been used to treat trychophytid eruptions.

trich o-phy″to be′zoar [*thrix*; *phyton*; Per *padzahr* protecting against poison]. A ball or concretion in the stomach or intestine, made of hair and fibers of vegetable matter and food detritus.

Trich phy′ton, Trich-oph′y ton [*thrix*; *phyton*] A genus of parasitic fungi which attack the hair skin, and nails, and are common allergens. Species are identified by the size and position of the spores and by the appearance of the colonies on artificial mediums. The lesions of these fungi are included in the dermatomycoses or ringworm infections. I dermatology, the genus is grouped into three main divisions Trichophyton ectothrix, species which invade the hair shaft but which also form persistent sheath of spores outside the shaft T endothrix, species which invade the hair shaft without forming persistent sheath of spores outside the shaft; T neo-endothrix, species intermediate in character between ectothrix and endothrix species. I medicine, the species of particular importance include T. acuminatum (T sabouraudi), T concentricum T crateriforme, T epilans (T cerebriforme) T rosaceum (T roseum) syn., *Achorion gallinae*) T mentagrophytes (T. gypseum) syn., *Achorion quinckeanum*) T schoenleini (syn., *Achorion schoenleini*) T sulfureum, T tonsurans, and T violaceum. Also see tinea.

trich″o-phy to′sis (trick″ figh to sis) [*thrix*; *phyton*, G *-osis*, condition]. A contagious disease of skin and hair occurring mostly in children, and due to skin invasion by the *Trichophyton* fungus. It is characterized by circular scaly patches and partial loss of hair

t. barbae. Tinea barbae.

t. cruris. Tinea cruris.

trich o-po″li-o sis. See *canities*.

trich″o-pti lo sis (trick o-tye-lo sis). See *trichorrhexis nodosa*.

trich or rhe a (trick″o-ree uh) [*thrix*; G. *rhoia*, flow]. Rapid loss of the hair

trich or rhex′is [*thrix*; G *rhexis*, breaking]. Brittleness of the hair

t. nodosa. An atrophic condition of the hair affecting more often the male beard, and characterized by irregular thickenings resembling nodes on the hair shaft that are really partial fractures of the hair. The hairs often break, leaving brush-like end a certain amount of alopecia is thus produced.

trich"or-rhex"o-ma'ni-a [thrix; rhexis; G. mania, madness]. A compulsion to break off hairs of the scalp or beard with the fingernails.

trich o'sis [thrix; G -osis, condition]. Any morbid affection of the hair.

Trich"o-spo'ron, Trich-os'po-ron (trick"o-spor on, trick-os'po-ron) [thrix; sporos]. A genus of fungi which grow on hair shafts. The causative agent of piedra. T beigelii, T giganteum, T glycophile, T ovale, and T ovoides have been recovered from nodules on the hair of persons with piedra.

trich -spo-ro sis [thrix; G. spora, seed; -osis, condition]. A fungous infection of the hair shaft. See piedra.

trich"o-sta sis spin"u-lo'sa (trick stay'sis) A condition characterized by dark comedone-like plugs in the hair follicles over the trunk. The plugs are composed of bundles of many tiny hairs.

trich"o-stron gy-li a-sis (trick"o-stron ji lye uh-sis) [thrix; G strongylos, round; NL. -iasis, condition]. Infestation with Trichostrongylus.

Trich" -stron gy lus [thrix; strongylos]. A genus of nematode worms which usually are parasites of ruminants. Man is infested by consuming raw plants grown in contaminated soil. The species identified from human cases are T colubriformis, T orientalis, T probolurus, T vitrinus.

trich"o-the cin. An antifungal substance produced in cultures of Trichothecium roseum.

trich o-til"lo-ma ni a [thrix; G. tillein, to pluck; mania, madness]. An uncontrollable impulse to pull out one' hair.

tri-chot'o-my (try-cot'o-mee) [G. tricha, in three parts; tomē, cutting]. Division into three parts.

trich" ro a. Animals with hair. Syn., pilifera.

tri'chro-ism [G tri- three; chroia, color]. The property of exhibiting three different colors when viewed in three different aspects. —trichro'ic, adj.

tri'chro mat [tri-; G. chrōma, color]. A person with normal color vision.

tri"chro mat'ic [tri-; G. chrōmatikos, of color]. Having three standard colors.

tri"chro-ma top si [tri-; G chrōma, color; opsis, vision]. Normal color vision; ability to see the three primary colors.

tri-chro'mic (try-kro mick) [tri-; chrōma]. Able to distinguish the three colors red, blue, and green.

trich"u-ri a sis (trick yoo-rye uh-sis) [G. thrix, hair; oura, tail; NL. -iasis, condition]. Infestation by Trichuris trichiura.

Trich-u'ris [thrix; oura]. A genus of nematodes of the superfamily Trichinelloidea.

T trichiura. The species infesting man. Transmission is from man to man by ingestion of mature ova. Also called Trichocephalus dispar, Trichocephalus trichiurus, whip worm.

tri-cre syl (try kres'sile, -sil, -seel) Cresyl.

t. phosphate. Pale yellow liquid, chiefly triorthocresyl phosphate, $(CH_3C_6H_4)_3PO_4$, used as plasticizer in lacquers and varnishes. Its ingestion causes degeneration of the nerve cells of the anterior horns of the spinal cord, leading to more or less permanent paralysis of the extremities.

tri cro-tism [G tricrotos, from tri- three; krotos, beat]. The condition of having three waves corresponding to one pulse beat. —tricrot'ic, tricrotous, adj.

tri-cus'pid (try-kus'pid) [L. tri- three; cuspis, point]. 1 Having three cusps, as tricuspid tooth, or the tricuspid valve. 2. Affecting, or produced at, the tricuspid valve.

tri-dac'tyl [G tri-, three; daktylos, finger]. Having three digits.

tri'dent [L. tridens, having three teeth]. Tridentate.

tri-den'tate (try-den'tayt) [tridens]. Three-pronged.

tri-der'mic [G. tri- three; derma, skin]. Derived from, or relating to, all germ layers of the embryo.

tri"der mo ma. See teratoma.

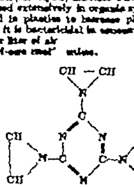
tridione. Trade-mark for trimethadione or 3,5,5-trimethyloxazolidine-2,4-dione,

$$(CH_3)_2\overline{C.O.CO.N(CH_3)\,CO}$$

The substance is white, crystalline powder soluble in about 50 parts of water. An anticonvulsant useful in petit mal and in myoclonic or akinetic seizures in epilepsy. Usually given orally but may be administered parenterally. Must be used with caution; it may produce aplastic anemia. Dose, 1–2 Gm. (15–30 gr.) daily.

trid'y mite. A very hard native silica occurring in volcanic rocks.

trid'y mus [G tridymos, triplet]. Triplet.



tri"en-ceph' lus. See triocephalus.

tri-eth a nol'am ine (try-eth uh-nol"uh-meen, -min) $N(CH_2CH_2OH)_3$; colorless, viscid, hygroscopic liquid miscible with water and alcohol. The commercial article contains up to 15% of diethanolamine and up to 2.5% of monoethanolamine. A solvent and emulsifying agent used in the preparation of emulsions, ointments, lotions, and detergents.

tri-eth"yl-a mine' (try-eth il-uh-meen -am een, -am in) $(C_2H_5)_3N$. A colorless liquid of strong ammoniacal odor. A ptomaine obtained from putrid haddock, also prepared synthetically.

tri-eth yl-ene gly'col. $HO.CH_2CH_2O.CH_2CH_2.O.CH_2.CH_2OH$. Colorless, hygroscopic, practically odorless liquid; miscible with water or alcohol. Used extensively in organic syntheses; incorporated in plastics to increase plasticity. As an aerosol it is bactericidal in concentration of 0.005 mg per liter of air.

tri-eth'yl-ene mel' mine.

2,4,6-Tri(ethylenimino)-s-triazine, white crystalline powder readily soluble in water. It is chemically related to the nitrogen mustard methyl-bis-(β-chlorethyl)amine by virtue of the ethylenimonium transformation the latter undergoes in the body. Triethylene melamine appears to be useful for palliative treatment of certain types of neoplastic disease. Abbreviated, TEM.

tri fa'cial nerve (try-fay'shul). Old term for the fifth cranial nerve, so called because it divides into three main branches that supply the face. See trigeminal nerve.

tri'fid [L. trifidus, cleft into three parts]. Three-cleft, tripartite.

tri-fo cal spec'ta-cles. See trifocal glasses.

tri-fo"li-o sis (try-fo"lee -sis) [L. trifolium, trefoil; G. -osis, condition]. In veterinary medicine,

superficial necrosis of the white markings, caused by exposure to the sun after the animals have been sensitized to light by eating certain substances, chiefly the legumes.

tri fo'li-um [L.]. A genus of herbs including the clovers.

T. pratense. Common red clover; used empirically in the treatment of whooping cough.

tri for'mol. Paraformaldehyde.

tri"fur-ca'tion. *Division into three prongs.* —**tri'furcate,** *adj.* [illegible]

tri gas'tric [G. *tri-*, three; *gastēr*, belly]. Having three fleshy bellies, as certain muscles.

tri gas tri cus. The digastric muscle: variant term.

tri gem'i nal [L. *trigeminus*, threefold]. Triple; dividing into three parts, as the trigeminal nerve.

tri gem'i nal nerve. The fifth cranial nerve with central attachment [illegible] t the lateral aspect of th pons. At the semilunar (Gasserian) ganglion it divides into three divisions: (1) *ophthalmic*, which gives sensory innervation to th conjunctiva, forehead, meninges, frontal, ethmoid and sphenoid sinuses, and [illegible] pper nose; (2) *maxillary*, which gives sensory innervation to the cheeks, upper lip, upper teeth and gums, soft and hard palates, nose, maxillary sinus, and meninges; (3) *mandibular*, which provides sensory innervation to the chin, lower teeth and gums, anterior two-thirds of the tongue, and meninges, and provides motor fibers for the muscles of mastication, the anterior belly of the digastric, mylohyoid, tensor veli palatini, and tensor tympani.

tri gem'i nus [L.]. The fifth cranial nerve.

tri gem'i ny [*trigeminus*]. Grouping of arterial pulse beats in groups of three.

tri gen'ic [G. *tri-*, three; *gennaein*, from *gignesthai*, to be produced]. Referring to genotypes of polysomic or polyploid organisms which contain three different alleles for any given locus.

trig"ger-ma to ri al. See [illegible] *phalar*

tri glyc'er ide. A [illegible] ester of glycerin in which all three hydroxyl groups of the latter are esterified with an acid: animal and vegetable fixed oils are composed chiefly of triglycerides of fatty acids.

tri'gone [G. *trigōnos*, three-cornered]. 1. Triangle. 2. The smooth triangular area on the inner surface of the urinary bladder between the orifices of th two ureters and the internal urethral orifice: also called *vesical t.*, *t. of the urinary bladder*; formerly called *t. of Lieutaud*. —**trig'onal,** *adj.*

collateral t. A triangular area at the junction of the posterior and inferior horns of the lateral ventricles.

femoral t. See *femoral triangle*.

fibrous t. of the heart. The triangular fibrous base of the heart. The *right trigone* is situated between the right and left [illegible] trioventricular openings; the *left*, between the *left side* of the opening of the aorta and the *left* [illegible] trioventricular opening.

habenular t. A small, medial, triangular area on the dorsal aspect of the thalamus between the stalk of the epiphysis and the superior colliculi, and overlying the habenular [illegible] ucleus; part of the epithalamus.

hypoglossal t. See *t.* of the hypoglossal nerve.

olfactory t. The lateral root of the olfactory tract.

t. of the hypoglossal nerve. The triangular area of the floor of the fourth ventricle overlying the nucleus of the hypoglossal nerve.

t. of the lemniscus. A slightly elevated area of the tegmentum overlying the lateral lemniscus.

t. of the urinary bladder. See *trigone*, 2.

vesical t. The trigone of the urinary bladder.

Trig"o-nel'la (trig"o-nel'uh, try"go-) [*trigonus*]. A genus of the Leguminosae.

T. foenum-graecum. Used in plasters and salves and in veterinary medicine.

T. [illegible] A decoction of the seeds has been used in Italy in various forms of diarrhea.

tri"go-nid (try"go-nid, trig'o- try-go'n id) [*trigonus*]. The first three cusps (viewed as one) of [illegible] lower molar tooth.

tri"go-ni'tis [*trigonum*; G. *-itis*, inflammation]. Inflammation of the trigone of the urinary bladder.

trig"o-no-ceph a lus (trig o-no-sef'uh lus, try-go-no-) [*trigonus*; G. *kephalē*, head]. An individual exhibiting trigonocephaly.

trig"o-no-ceph a ly [*trigonus*; *kephalē*]. Triangular or egg-shaped head, due to early synostosis of the metopic suture.

tri-go num (try-go num) [L., from *trigonus*]. Trigone. See *triangle*.

t. acusticum. See *area acustica*.

t. fibrosum cordis (*dextrum* and *sinistrum*). See fibrous *trigone* of the heart.

t. interpedunculare. See interpeduncular *fossa*.

t. lumbale. See lumbar *triangle*.

t. vagi. See *ala cinerea*.

t. vesicae. See *trigone*, 2.

tri"hex y-phen'i dyl. The generic name for [illegible] (1-piperidyl) 1-phenyl-1-cyclohexyl-1-propanol hydrochloride, [illegible] synthetic antispasmodic. Sometimes spelled *trihexyphenidyl*. See *artane*.

tri hy'brid (try hy'brid) [G. *tri-*, three; *hybrida*, violence]. The offspring of parents differing in three pairs of Mendelian characteristics.

tri hy dric. Containing three [illegible] toms of hydrogen replaceable by metals.

tri hy'drol. An associated form of water having the composition $(H_2O)_3$.

tri"hy dro [illegible] y an"thra qui none (try"hy-drock"see-an"thruh-kwi none"). See *anthragallol*.

tri"hy drox"y ben zo'ic ac'id. Gallic acid.

tri"hy drox"y-es'trin (-es'trin). See *estriol*.

tri"hy-drox"y pro pane. Glycerin.

tri in"i-od'y mus (try-in ee-od'i mus) [*tri-*; G. *inion*, occipital bone; *didymos*, twin]. A monster having three heads united posteriorly and attached to [illegible] single body.

tri i"o-do meth ane. Iodoform.

tri i"o-do-thy'ro nine. An amino acid isolated from human blood and prepared synthetically; similar to, but containing one less iodine atom than, thyroxin and with similar but more rapid biological action.

tri ke"to-cho-lan'ic ac'id (try-kee"to-ko lan ick). 3,7 12-Triketocholanic acid. The compound resulting from the oxidation of the three secondary alcohol groups of cholic acid to ketone groups.

tri ke"to pu rine. Uric acid.

tri'labe [*tri-*; G. *labē*, handle]. A three-pronged instrument for withdrawing small calculi or other foreign bodies from the urinary bladder, through the urethral passage. *Obs.*

tri lam'i nar (try-lam'i-nur) [*tri-*; L. *lamina*, plate]. Three-layered.

trilene. Trade-mark for [illegible] brand of trichloroethylene.

tri"li no'le-in. Glyceryl linoleate, $(C_{17}H_{31}CO_2)_3C_3H_5$, occurring in many vegetable oils.

tri lo'bate (try-lo'bayt) [*tri-*; G. *lobos*, lobe]. Three-lobed.

tri loc'u lar [L. *tri-*, three; *loculus*, little place]. In biology, having three chambers or cells, as trilocular heart, [illegible] congenitally defective heart with three chambers instead of four.

tri man u-al [*tri-*; L. *manus*, hand]. Accomplished by the aid of three hands.

tri mas'ti gate [G. *tri-*, three; *mastix*, whip]. Having three flagella; triflagellate.

trimax. Trade-mark for [illegible] brand of magnesium trisilicate.

tri·men·su·al [*tri*-; G. *mēn*, month]. Occurring at periods of three months.

Trim·er·e·su·rus [G. *trimerēs*, having three parts; *oura*, tail]. A genus of venomous snakes of the family Crotalidae, the pit vipers. *T. flavoviridis* or *habu* is found in the Ryukyu Islands; *T. gramineus* and *T. mucrosquamatus* are found in Formosa.

tri·mes·ter (try-mes'tur) [L. *trimestris*, of three months]. A stage or period of three months.

tri"meth·a·di'one. Generic name for the substance 3,5,5-trimethyloxazolidine-2,4-dione, available under the trade-marked name *tridione*.

tri·meth·yl·a·ce'tic ac'id. See under *valeric acid*.

tri·meth·yl·a·mine (try-meth·il·ah-meen, -am·een, -am'in) ($(CH_3)_3N$). Colorless gas of fishy ammoniacal odor, very soluble in water. Produced by bacterial action on decayed animal matter or synthesized. Used in organic synthesis. Also called *secaline*.

tri·meth·yl·ene. Cyclopropane.

tri·meth"yl·gly'cine (try-meth"il-gly·seen, -sin, -gly·seen'). See *betaine*.

tri·meth·yl·xan·thine (try-meth·il·zan·theen, -thin). Caffeine.

trimeton. Trade-mark for a brand of the antihistaminic substance prophenpyridamine.

tri·mor'phism (try-mor'fiz·um) [G. *tri*-, three; *morphē*, form]. 1. *In biology*, a term used to indicate the fact that hermaphrodite flowers of three different kinds (short-styled, mid-styled, and long-styled) are produced on the same species of plant. 2. Occurrence in three distinct forms, as certain insects. —**trimorphic**, *adj.*

trimsulcon. Trade-mark for a brand of magnesium trisilicate.

tri·ni"tro·phe·nol (*trinitrophenol*) $C_6H_2(NO_2)_3OH$. 2,4,6-Trinitrophenol, pale yellow crystals of intensely bitter taste; 1 Gm. dissolves in 80 cc. of water and in 12 cc. of alcohol. It is germicidal and astringent and is used locally for these effects. It has been used internally as a vermifuge, antipyretic, and antimalarial. Syn., *carbazotic acid*, *picric acid*.

t. poisoning. Poisoning by picric acid. Symptoms: dermatitis ("picric itch"), hemolytic anemia; gastric, intestinal, and renal irritation; hepatitis; icterus; darkened urine.

tri·ni"tro·tol'u·ene. $(NO_2)_3C_6H_2CH_3$; any of six isomers of this formula, but especially 1-methyl-2,4,6-trinitrobenzene, occurring as pale-yellow crystals used in explosives. Abbreviated, TNT.

tri"o·ceph'·a·lus [*tri*-; G. *kephalē*, head]. A monster characterized by an absence of the ocular, nasal, and oral apparatus, the head being merely a small spheroidal mass with no brain.

tri·o'le·in. See *olein*.

trional. Trade-mark for a brand of sulfonethylmethane.

tri'o·nym [*tri*-; G. *onyma*, name]. A name consisting of three terms.

tri"oph·thal'mos [*tri*-; G. *ophthalmos*, eye]. Characterizing that variety of diprosopus in which three eyes are present.

tri"o·pod'y·mus [*tri*-; G. *ōps*, face; *didymos*, twin]. A monster with three faces and but a single head.

tri·or·chid (try-or'kid) [*tri*-; G. *orchis*, testis]. Having three testes.

tri·or' hid. An individual having three testes. —**trior hidy** n.

tri·or'chis [*tri*-; *orchis*]. A person with three testes.

tri·or"tho·cres·yl phos'phate. See *tricresyl phosphate*.

tri·ose. A monosaccharide containing three carbon atoms in the molecule.

tri"ose·phos·phor'ic ac'id. Triose phosphate. A phosphorylated three-carbon sugar. Several of these compounds are intermediaries in the breakdown of glycogen to pyruvic acid in carbohydrate metabolism.

tri·o·tus [*tri*-; G. *ous*, ear]. Having three ears.

tri·ox"y·meth'yl·ene. Paraformaldehyde.

tri·ox"y·pu·rine (try-ock·si-pew'reen, -rin). Uric acid.

tri·pal·mi·tin. See *palmitin*.

trip·a·ra [L. *tri*-, three; *parere*, to bear]. A woman who has borne three children.

tri"pel·en·na·mine hy"dro·chlo'ride. Generic name for the antihistaminic substance N,N-dimethyl-N'-benzyl-N'-(α-pyridyl)ethylene-diamine. See *pyribenzamine*.

tri·pep'tide, tri·pep·tid. A protein hydrolysis product representing condensation of three molecules of amino acids.

triphal. Trade-mark for an ampuled product, principally sodium aurothiobenzimidazole carboxylate, $C_6H_3N_2NHCSAu.COONa$, used in lupus erythematosus.

tri"pha·lan'gi·a, tri"pha·lan·gy [G. *tri*-, three; *phalanx*, bone between two joints of the fingers and toes]. The presence of three phalanges in the thumb or great toe. Also called *hyperphalangy*.

tri·phar'ma·con, tri·phar'ma·cum [*tri*-; G. *pharmakon*, drug]. A medicine made up of three ingredients.

tri·pha·sic (try-fay·zick) [*tri*-; G. *phasis*, appearance]. Having three phases or variations.

tri·phen"yl·eth·yl·ene. $(C_6H_5)_2C\text{:}CH(C_6H_5)$. A proestrogen potentiated as estrogen by passage through the liver.

tri·phen·yl·meth·ane. Rosaniline dye.

2,3,5-tri·phen·yl·tet"ra·zo·li·um chlo·ride [$C_6H_5C\text{:}N.N(C_6H_5).N^+(C_6H_5)\text{:}N$]$Cl^-$; colorless crystals, soluble in water; when reduced, as by certain enzymes, it forms the red pigment 2,3,5-triphenyl formazan. See *formazan*. Abbreviated, TTC.

tri·phos·pho·pyr'i·dine nu'cle·o·tide. Coenzyme II. Abbreviated, TPN.

tri·ple·gi·a [*tri*-; G. *plēgē*, stroke]. Hemiplegia with the additional paralysis of one limb on the opposite side.

trip'l point. The single temperature and pressure at which the solid, liquid, and vapor forms of a substance may coexist.

trip'le re·sponse'. Thomas Lewis' term for three stages of normal vasomotor reaction resulting when a pointed instrument is drawn heavily across the skin. They are: reddening of the area stimulated, wide spreading of flush to adjacent skin, and development of wheals. The response is due to a histaminelike substance liberated from tissue by noxious stimulus.

trip'let [G. *triplous*, triple]. 1. One of three children born at one birth. 2. *In optics*, a system consisting of three lenses.

tri'plex (trip'leks, try'pleks) [L.]. Triple.

trip"lo·blas'tic [G. *triplous*, triple; *blastos*, germ]. Possessing three germ layers, ectoderm, entoderm, and mesoderm.

trip"lo·ko·ri·a [*triplous*; G. *korē*, pupil]. Having three pupillary openings in one eye.

trip·lo·pi·a [*triplous*; G. *ōps*, eye]. A disturbance of vision in which three images of a single object are seen.

tri·pro·so·pus [G. *tri*-, three; *prosōpon*, face]. A reputed monster in which there is a fusion of three faces in one.

trip·sis [G. a rubbing]. 1. Trituration. 2. Massage.

trip·ter'y·gine. An insecticidal alkaloid fraction from *Tripterygium wilfordi*.

Trip"te ryg'i um. A genus of twining vines the root bark of certain species of which, notably *T. wilfordi* Hook, or thunder-god vine, has long been used in China as an insecticide. The individual alkaloids are wilfordine, wilforgine, wilforine, wilfortrine, and wilforzine, all insecticidal.

tri-que'trum (try-kwee trum, try-kwet rum) [L. *triquetrus*, three-cornered]. 1. The third carpal bone from the radial side in the proximal row; formerly called *cuneiform bone of the carpus*. See Table of Bones in the Apendix. 2. Any one of the Wormian bones.

tri sac cha ride (try-sack'uh-ride, -rid) A carbohydrate which, on hydrolysis, yields three molecules of monosaccharides.

tris kai"dek pho'bi (tris kigh deek b f bee-uh) Triskaidekaphobia.

tris'mus (tris mus) [G., grinding]. 1. Tonic spasm of the muscles of mastication. 2. Old term for lockjaw. See *tetanus*, 1.

trisodarsen. Trade-mark for trivalent arsenic compound used as an antisyphilitic.

trisogel Trade-mark for an aqueous suspension of magnesium trisilicate and aluminum hydroxide used as an antacid.

tri so mic (try-so mick) [G. *tri-* three; *sôma*, body]. Having three chromosomes of given kind, but otherwise only two of each of the other chromosomes of haploid set, hence an individual with $2n + 1$ chromosomes.

trisomin. Trade-mark for brand of magnesium trisilicate.

tri so mus. More or less conjoined triplets from single ovum, as tricephalus.

t. omphaloangiopagus. Monochorionic triplets of which two are more or less normal autosites, the third an omphalosite.

tri-ste rin. See *stearin*.

tris"ti-chi' sis (tris ti kigh uh-sis) [*tri-* G. *stichos*, row NL. *-iasis*, condition]. The arrangement of the cilia (eyelashes) in three rows.

tris"ti ma'ni a [L. *tristis*, sad, and G. *mania*, madness]. Melancholia. Obs.

tris'tis [L.]. 1 Sad gloomy 2. Dull in color

trit"an-o pi (trit an-o'pee-uh, try tan) [G. *tritos*, third a- not; ôps, eye]. A defect in third constituent essential for color vision, as in violet blindness See *dichromatism*.

trit"i a'tion. The process of introducing into chemical compound on or more atoms of the hydrogen isotope tritium in place of like number of atoms of ordinary hydrogen (protium) commonly existing in the compound

tri ti ceous (tri-tish us) [L. *triticeus*, of wheat]. Having th shape of grain of wheat, as the triticeous cartilage.

trit'i cin [L. *triticum*, wheat]. 1 A gumlike substance found in *Triticum repens*. 2. A proprietary food preparation.

tri"ti-co nu-cle'ic ac'id. A nucleic acid from wheat and having ribose as the sugar component.

Trit'i-cum [L.]. A genus of the Gramineae. *T. sativum* is wheat.

trit'i cum [L.]. The dried rhizome and roots of *Agropyron repens*, family Gramineae. A diuretic formerly used in genitourinary ailments.

trit'i um (trit ee-um, trish ee-um) The hydrogen isotope with mass three. It is radioactive, displaying beta-activity with half-life of 31 years.

trit'o-cone (trit o-cone) [G *tritos*, third; *kônos*, cone]. The distobuccal cusp on premolar tooth of the upper jaw; not found in humans.

trit"o-co nid (trit ko nid) [*tritos*; *kônos*]. The distolingual cusp on premolar tooth of the lower jaw: not found in man.

tri'ton (try'ton) The nucleus of the tritium atom It contains two neutrons and one proton, and thus bears unit positive charge.

trit' pine (trit'o-peen, -pin, -pyne, try-to pin). An alkaloid, $C_{20}H_{23}NO$ of opium. Syn., *laudanine*

tri"to-tox'in [*tritos*; G *toxikon*, poison]. One of the third group into which Ehrlich classifies toxins, according to the avidity with which they combine with antitoxins, tritotoxin combining least readily. See *prototoxin*.

tri"tu ber'cu lar [L. *tri-* three; *tuberculum*, small swelling]. Having three tubercles or cusps; tricuspid.

trit'u ra ble [L. *triturare*, to thresh]. Capable of being powdered.

trit'u rate [*triturare*]. 1. Reduce to fine powder. 2. Mix powdered substances in mortar with the aid of pestle.

trit'u-rate. A finely divided powder.

tablet t. A molded tablet as distinguished from compressed tablet. Generally prepared in base of sucrose and lactose; easily friable.

trit"u ra'tion [L. *trituratio*, from *triturare*]. 1. The process of reducing a solid substance to powder by rubbing. 2. The product obtained by triturating together 10 Gm. of powdered medicinal substance and 90 Gm. of powdered lactose.

tri va'lence (try-vay'lunss, triv'uh lunss) [L. *tri*, three; *valere*, to be strong]. The quality of having valence of three. —**trivalent**, *adj*

tri'valve [*tri-* L. *valva*, leaf of door]. Having three valves or blades, as a speculum.

tri valv'u lar (try-valv yoo lur) [*tri-*; *valva*] Having three valves.

tro car [F *trocart*, from *trois*, three, *carre*, side of sword blade]. A surgical instrument for puncturing cavities for the removal of fluid contained therein. It consists of hollow tube or cannula within which is snugly fitting bayonet-pointed mandrel or perforating core whose point protrudes beyond the beveled cannula end. The entire instrument is used to puncture cavity the perforator being removed when it is desired to begin evacuation of the fluid.

troch. Trochiscus, troche.

tro-chan'ter (tro-can'tur) [G., runner]. One of two processes on the upper extremity of the femur below the neck. The greater trochanter is situated on the outer and the lesser trochanter on the inner side of the bone. See Plates 1, 2. —**trochanter'ic**, *adj*.

t. major The greater trochanter

t. minor The lesser trochanter

third t. An enlargement of the upper end of the gluteal tuberosity

tro-chan'tin (tro-can'tin) [*trochanter*]. 1. Obsolete term for lesser trochanter 2. The proximal segment of the trochanter of an insect's leg.

tro chan tin'i-an (tro can tin ee-un) [*trochantin*]. Pertaining to the trochantin.

tro che (tro'kee) [G *trochos*, wheel]. A lozenge Abbreviated, troch.

tro chi -ca'tion (tro'kis kay'shun) [G. *trochiskos*, small wheel]. The process of making troches from fine powder obtained by elutriation.

tro-chis'cus (tro-kis'kus) (pl. *trochisci*) [*trochiskos*]. Troche. Abbreviated, troch.

troch'le- (trok'lee-uh) (pl. *trochleae*) [L., mechanical contrivance for raising weights]. A part or process having the nature of pulley Old term for trochlea tali.

t. of the astragalus. Old term for trochlea tali.

t. of the femur The intercondylaid fossa of the femur

t. of the humerus. The medial portion of the distal articulation of the humerus; the surface which articulates with the semilunar notch of the ulna.

t. of the obliquus oculi superior. The fibrocartilaginous ring or pulley attached to the upper margin of the orbit, which transmits the tendon of the superior oblique muscle of the eye. See Plate 19.
t. tali. The surface of the talus articulating with the tibia.

troch'le-ar [*trochlea*]. Of the nature of, or pertaining to, a pulley.

troch'le-ar. The trochlear nerve, the fourth cranial nerve, whose fibers emerge from the brain on the dorsal surface and go to supply the superior oblique muscle of the eye.

troch"le-a'ris. The superior oblique muscle of the eyeball; old term.

troch"o-car'di-a (trock"o-kahr'dee-uh, tro"ko-) [G. *trochos*, wheel; *kardia*, heart]. Displacement of the heart by rotation on its long axis.

troch"o-ceph'a-lus [*trochos*; G. *kephalē*, head]. A rounded appearance of the head, due to early partial synostosis of the frontal and parietal bones.

troch"o-gin'gly-mus (trock"o-jing'gli-mus, -ghing'gli-mus, tro"ko-) [*trochos*; G. *ginglymos*, hinge]. A combination of a hinge joint and a pivot joint, as in the humeroradial articulation.

tro'choid (tro'koyd) [G. *trochoeidēs*, circular]. Serving as a pulley or pivot; involving a pivotal action.

troch'o-phore [G. *trochos*, wheel; *phoros*, bearing]. The typical, primitive larval form of annelids.

troch"or-i"zo-car'di-a (trock"o-rye"zo-kahr'dee-uh) [*trochos*; G. *horizōn*, horizon; *kardia*, heart]. Form of displacement of the heart characterized by rotation and change to horizontal position.

Trog"lo-tre'ma [G. *trōglē*, hole; *trēma*, perforation]. A genus of flukes which are common parasites of fish-eating mammals.
T. salmincola. The species which has been found in cases of human infestation.

Trog"lo-tre-mat'i-dae (trog"lo-tri-mat'i-dee) [*trōglē*; *trēma*]. A family of flukes which includes the genera *Paragonimus* and *Troglotrema*.

Troisier, Émile [French physician, 1844–1919]. Drew attention to the enlargement of the left supraclavicular lymph node, called *Virchow's node* or *gland*, *gland or node of Virchow-Troisier*. See also Troisier's sign. Described a syndrome of diabetic cachexia with bronzed skin, which is called *Troisier's syndrome*.

Troltsch, Anton Friedrich von [German otologist, 1829–90]. Remembered for his description of corpuscle-like spaces among the radial fibers of the tympanic membrane, called *Troltsch's corpuscles*. Described *two small pockets formed by the mucous membrane which envelops the chorda tympani*. One lies in front of and one behind the manubrium of the malleus, called *Troltsch's recesses or spaces*. He is credited with the invention of the modern otoscope.

Trom-bic'u-la. A genus of mites; the larvae are blood suckers and cause a severe dermatitis.
T. akamushi. A vector of *Rickettsia tsutsugamushi*, the cause of tsutsugamushi disease.
T. alfreddugesi. The species which causes an annoying dermatitis widely distributed in North America. Also called chigger, red bug, *T. irritans*.
T. holosericeum. A species of orange mites.
T. irritans. The chigger mite of eastern North America; attacks man and other mammals.

trom-bic"u-li'a-sis [*Trombicula*; G. *-iasis*, condition]. Infestation with Trombicula.

trom-bid"i-o'sis [*Trombicula*; *-osis*]. Infestation by a member of Trombidiidae.

Trom-bid'i-um. A genus of mites of the family Trombidiidae (the chiggers).

tromexan. A trade-marked name for bis-3,3'-(4-oxycoumarinyl)-ethyl acetate, also known as ethyl biscoumacetate, an anticoagulant.

Trommer's test. See under *test*.

tro"mo-ma'ni-a [G. *tromos*, trembling; *mania*, madness]. Delirium tremens.

tro'na. A native compound of sodium carbonate and sodium bicarbonate. $Na_2CO_3.NaHCO_3.2H_2O$

Tronchin, Théodore [Swiss physician, 1709–81]. Wrote one of the earliest accounts of lead colic (1757). A pupil of Boerhaave, he is said to have introduced his methods in France.

tro"pa-co-caine (tro"puh-ko-kayn, -ko'kayn, -ko'kuh-een, -in, ko-kay'in). Benzoyl-pseudotropine. $C_{15}H_{19}NO_2$. An alkaloid in Java coca leaves; also prepared synthetically.
t. hydrochloride. White crystals soluble in water. A local anesthetic somewhat like cocaine.

tro-pae'o-lin, tro-pe'o-lin. An indefinite name for several dyes used as pH indicators; so called because their colors resemble the flowers of *Tropaeolum*, the garden nasturtium.
t. D. Methyl orange.
t. G. Metanil yellow.
t. O. Sodium azoresorcinol-sulfanilate. $NaSO_3.C_6H_4.N:N.C_6H_3(OH)_2$. Brown powder used as indicator. Yellow at pH 11; orange-brown at pH 12.7. Also called *resorcinol yellow*.
t. OO. Sodium p-diphenylamine-azobenzenesulfonate. $NaSO_3.C_6H_4.N:N.C_6H_4.NH.C_6H_5$. Yellow powder used as indicator. Red at pH 1.4; yellow at pH 2.6.
t. OOO. Sodium azo-α-naphtholsulfanilate. $NaSO_3.C_6H_4.N:N.C_{10}H_6.OH$. Reddish brown powder used as color for foods, drugs, and cosmetics, and as indicator. Brownish yellow at pH 7.6; purple at pH 8.9. Also called *orange I*.
t. R. See t. O.

tro'pane. $C_8H_{15}N$; 2,3-dihydro-8-methylnortropidine; a two-ring heterocyclic liquid hydrocarbon from which tropine is derived. Many ester alkaloids, including atropine and cocaine, are referred to as belonging to the tropane group.

tro'pe-ine (tro'pee-een, -in). An ester of tropine and an organic acid, as atropine and homatropine.

tro-pe'sis [G. *tropē*, a turning]. Inclination.

troph"e-de'ma, tro"phoe-de'ma (tro"fi-dee'muh, trof"i-) [G. *trephein*, to nourish; *oidēma*, swelling]. Localized chronic edema due to damaged nourishment or nerve supply.
hereditary t. See hereditary *edema*.
t. of Bassedow. See circumscribed myxedema.

troph'e-sy [G. *trophē*, nourishment, from *trephein*]. Defective nutrition of a part from disorder of the nerves regulating nutrition; trophoneurosis. —**tro-phe'si-al, tro-phe'sic,** *adj.*

troph'ic [*trephein*]. Pertaining to the functions concerned in nutrition, digestion, and assimilation.

tro-phic'i-ty (tro-fiss'i-tee) [*trephein*]. Trophic influence or state.

troph'ism [*trephein*]. 1. Nutrition. 2. Trophicity.

tro'pho-, troph'o-, troph- [*trephein*]. A combining form denoting relation to nutrition or to nourishment.

tro'pho-blast (tro'fo-blast, trof'o-) [*trephein*; G. *blastos*, germ]. The outer ectodermal epithelium of the mammalian blastocyst or chorion and chorionic villi. See cytotrophoblast, syncytiotrophoblast. —**tro"pho-blas'tic,** *adj.*

tro"pho-blas"to'ma. See *chorionepithelioma*.

tro"pho-chro'ma-tin [*trephein*; G. *chrōma*, color]. The nutritional chromatin of the cell.

tro'pho-cyte [*trephein*; G. *kytos*, cell]. A Sertoli or sustentacular cell of the testis.

tro'pho-derm [*trephein*; G. *derma*, skin]. 1. The trophoblast or chorionic ectoderm. 2. The growing, active part of the trophoblast in the placental

region. Also called *placental trophoblast, ectoplacenta.* —**trophoder'mal,** *adj.*

tro pho-der ma to-neu ro sis [*trophein, derma;* G. *neuron,* nerve; -*osis,* condition]. Selter's term for acrodynia. See *erythredema polyneuropathy.*

tro pho-dy nam'ics (tro fo-dye-nam'icks, -di-nam icks, trof"o-) [*trophein,* G. *dynamis,* power]. That branch of medical science dealing with the forces governing nutrition.

tro phol'o-gy [*trophein,* G. *logos,* word]. The science of nutrition.

tro pho-neu ro sis [*trophein,* G. *neuron,* nerve; -*osis,* condition]. Any disease of a part due to disturbance of the nerves or nerve centers with which it is connected.

disseminated t. See *scleroderma.*

facial t. Progressive facial atrophy.

muscular t. Trophic changes in the muscles in connection with disease of the nervous system.

t. of Romberg. Unilateral atrophy of the face; hemiatrophy.

trophenine X. A proprietary liquid containing B-complex vitamins with amino acids and carbohydrate used as a food supplement.

tro pho-no sis. See *trophopathy.*

tro pho-nu'cle us [*trophein,* L. *nucleus,* kernel]. The nucleus which is concerned with the nutrition of unicellular organisms and not with its reproduction.

tro-phop a thy [*trophein;* G. *pathos,* disease]. A disorder of nutrition.

tro pho plasm [*trophein,* G. *plasma,* anything formed]. The alveolar nutritive protoplasm in contrast to the filar active kinoplasm of a cell. *Obs.*

tro pho-spon'gi a (tro pho-spon jee-uh, -spon jee-uh, troph"o-) [*trophein,* G. *spoggia,* sponge]. The vascular endometrium forming the outer or maternal layer of the placenta. *Obs.*

tro pho-spon gi um [*trophein, spoggia*]. Intracellular canals of unknown significance; the canalicular apparatus of Holmgren.

tro pho tax'is [*trophein,* G. *taxis,* arrangement]. Trophotropism.

tro pho-ther' a py [*trophein,* G. *therapeia,* treatment]. Dietotherapy.

tro pho-trop'ic [*trophein;* G. *trepein,* to turn]. Exhibiting trophotropism.

tro-phot'ro pism [*trophein, trepein*]. The attraction or repulsion exhibited by certain organic cells to various nutritive solutions.

tro pho-zo'ite [*trophein,* G. *zôion,* living being]. The final product of sexual multiplication of sporozoa of the genera *Coccidia* and *Plasmodium.* Found within the tissues of a host. See Plates 27, 28, 29.

-trop'ic [G. *tropikos,* from *trepein,* to turn]. A combining form denoting *turning.*

trop'ic a'cid. $CH_2OH.CH(C_6H_5).COOH$; α-phenyl-β-hydroxypropionic acid.

trop'i cal [*tropikos*]. Pertaining to the tropical zone of the earth, as the belt lying between the Tropic of Cancer and that of Capricorn.

trop'i cal sore. See *oriental sore.*

trop'in [G. *trepein,* to turn]. Any one of the substances in the blood serum which make bacteria susceptible to phagocytosis. See *bacteriotropin.*

tro pine (tro peen, -pin). $C_8H_{15}NO$; 3-tropanol; a crystalline alcohol derivative of tropane. It is a product of hydrolysis of atropine and certain other alkaloids.

tro pi none. $C_8H_{13}NO$. A substance formed by oxidation of tropine and used in the synthesis of atropine substitutes.

tro pism [*trepein*]. The involuntary bending, turning, or orientation of an organism toward (positive tropism) or away from (negative tropism) a stimulus. Various types, depending upon the directing influence, include *chemotropism, galvanotropism, geotropism, phototropism, rheotropism, stereotropism, thermotropism.*

-tro pism [*trepein*]. A combining form meaning *tendency to turn, an affinity for.*

tro po-chrome [*trepein,* G. *chrôma,* color]. A term applied to those special serous cells of the salivary glands not staining with mucin stains after fixation in a formalin-bichromate mixture. Also see *homeochrome.*

trop'o lone. 1. $C_7H_5O(OH)$; hydroxycycloheptatrienone; a 7-membered cyclic compound, certain derivatives of which occur naturally, notably in plants. 2. Any derivative of $C_7H_5O(OH)$.

tro-pom e ter [*trepein,* G. *metron,* measure]. 1. An instrument for measuring the various rotations of the eyeball. 2. One for estimating the amount of torsion in long bones.

trop'o-pause (trop o-pawz) [*trepein;* G. *pausis,* stopping]. The top of the troposphere, just below the stratosphere.

tro po sphere. The atmosphere which lies between the stratosphere and the earth's surface, a zone of marked changes in temperature, with ascending and descending air currents and cloud formations.

Trousseau, Armand [*French physician,* 1801-67]. Performed tracheotomy and intubation (1851). Hemochromatosis is also called *Trousseau's disease.* Drew attention to the congested streaks (taches cérébrales) produced by drawing a nail over the skin, in certain nervous and cerebral diseases; called *Trousseau's spots* or *marks.* See also Trousseau's *sign.*

trox'i done. British generic name for *trimethadione.*

troy weight. See Tables of Weights and Measures in the Appendix.

true [AS. *trêowe*]. Real; not false.

Trueta Raspall, José (contemporary). Spanish surgeon who developed a treatment of war wounds now combined with a method used by H. Winnett Orr. See Orr-Trueta *method.*

trun cat-ed (trung'kay-tid) [L. *truncare,* to mutilate]. 1. With the top cut off; shortened in height. 2. Deprived of limbs or accessory parts.

trun cus (pl. *trunci*) [L.]. Trunk.

t. arteriosus. The embryonic arterial trunk arising from the heart. It divides into the aorta and main pulmonary artery. It may persist as an anomalous cardiac defect in which the ventricular centrifugal vessel is placed over a ventricular septal defect, guarded by three to five semilunar valves.

t. costocervicalis. A branch of the subclavian artery; also called *costocervical trunk.* See Plate 8.

t. transversus. Duct of Cuvier.

trunk [*truncus*]. 1. The torso; the body without head or limbs. See Plate 4. 2. The main stem of a blood vessel, lymphatic, or nerve.

bronchomediastinal trunks. Two collecting lymph vessels, right and left, receiving lymph from the heart, lungs, thorax, and upper surface of the liver. The right bronchomediastinal trunk empties into the right lymphatic duct or into the angle of junction of the right subclavian and internal jugular veins; the left bronchomediastinal trunk empties into the thoracic duct or independently into the angle of junction of the left subclavian and internal jugular veins.

costocervical t. A main branch of the subclavian artery. It gives off the deep cervical artery and continues as the highest intercostal artery.

intestinal t. The collecting lymph trunk receiving lymph from the stomach, intestine, pancreas, spleen, and the lower and anterior part of the liver. It empties into the cisterna chyli.

jugular trunks. Two collecting lymph trunks, right and left, draining the head and neck. The right jugular trunk empties into the right lymphatic duct or into the right subclavian vein at its angle of junction with the right internal jugular vein; the left lymphatic trunk empties into the thoracic duct.

lumbar trunks. Two collecting lymph trunks, right and left, receiving lymph from the lower limbs, walls of the pelvis and abdomen, pelvic viscera, kidneys, and adrenal glands, and emptying into the cisterna chyli.

lumbosacral t. That formed by the anterior ramus of the fifth lumbar nerve and the smaller part of the anterior ramus of the fourth, contributing to the sacral plexus.

pulmonary t. The stem of the pulmonary artery.

subclavian trunks. Two collecting lymph vessels draining the upper extremities. The right subclavian trunk empties into the right lymphatic duct, or directly into the right subclavian vein; the left subclavian trunk, into the thoracic duct.

sympathetic t. The chain of interconnected sympathetic ganglions extending along each side of the vertebral column.

thyrocervical t. A main branch of the subclavian artery dividing into the inferior thyroid, transverse scapular and transverse cervical arteries.

truss [OF. *trusser*]. Any mechanical apparatus for preventing the recurrence of a hernial protrusion which has been reduced. The term includes simple devices such as a yarn truss for the control of infantile inguinal hernia, as well as complicated pieces of apparatus with pressure pads designed to hold large inguinal or abdominal hernias.

trych o-phy-to sis. See *trichophytosis*.

trypaflavin. Trade-mark for *acriflavine*.

acid t. Trade-mark for acriflavine hydrochloride.

tryp an blue (trip an, try'pan) $C_{34}H_{24}N_6Na_4O_{14}S_4$, sodium ditolyldiazobis-8-amino-1-naphthol-3,6-disulfonate; a bluish-gray powder forming deep-blue solutions. It has been used in various protozoan infections, being especially effective in piroplasmosis, and is also used as a vital stain.

tryp'a-nide [G. *trypanon*, auger]. Any eruption of the skin observed in trypanosomiasis.

try pan o-cide" (tri pan'o-side, trip ah-no-side, try pah-) [*trypanon*, L. *caedere*, to kill]. An agent that destroys trypanosomes. —**trypanoci'dal**, *adj.*

try pan -san (tri-pan san, try-pan). A dyestuff of trypanocidal properties when combined with arsenophenylglycine.

Tryp ne-so ma (trip ah no so mah, try"pah-no) [*trypanon*, G. *sōma*, body]. A genus of protozoa belonging to the class Mastigophora. They are slender elongate organisms with a central nucleus, posterior blepharoplast, and an undulatory membrane, from which a free flagellum projects forward. Transmitted by insect vectors.

T brucei. An organism which causes nagana in equines and other ungulate domestic animals in tropical Africa.

T cruzi. The cause of Chagas' disease in South America and of American trypanosomiasis.

T evansi. The cause of surra in horses and cattle.

T gambiense. The cause of mid-African sleeping sickness.

T hippicum. An organism which causes murrina.

T lewisi. A nonpathogenic trypanosome of rats which is transmitted by the rat flea.

T rhodesiense. An organism which causes East African sleeping sickness.

try pan o-some (tri pan o-sohm, try-pan o-) [*trypanon*, *sōma*]. One of any species of *Trypanosoma*. —**trypanosom'ic**, *adj.*

tryp"a no-so-mi'a-sis (trip ah-no-so-my'ah-sis, try"pah-no-) [*trypanon*, *sōma*, NL. *-iasis*, condition]. Any of several diseases due to infection with various species of *Trypanosoma*, characterized by irregular fever and palpable lymph nodes.

American t. That in which the causative agent is *Trypanosoma cruzi*. Also called *barbiero fever*, *Brazilian t.*, *Chagas' disease*, *South American t.*

Gambian t. That in which the causative agent is *Trypanosoma gambiense*. Also called *mid-African sleeping sickness*.

Rhodesian t. That in which the causative agent is *Trypanosoma rhodesiense*. Also called *East African sleeping sickness*.

try pan o-so-mide" (tri pan o-so-mide, -mid, -sosed, try-pan o-) [*trypanon*, *sōma*]. A skin lesion in any disease caused by a trypanosome.

tryp no-tox'yl (trip ah-no tock'sil, try"pah-no-) A substance (thought to be a reduced glutathione) in the liver or blood, which transforms atoxyl into a trypanocidal agent.

tryp an red (trip an, try'pan) A complex azo dye, occurring as a reddish brown powder recommended in the treatment of trypanosomiasis. Also used in vital staining.

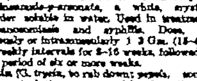
tryp an-roth. See *trypan red*.

tryp ars'a-mide (trip-ahr'sah mid) $(HO)OAs(ONa)C_6H_4.NH.CH_2.CO.NH_2$ Sodium N-phenylglycineamide-p-arsonate, a white, crystalline powder soluble in water. Used in treatment of trypanosomiasis and syphilis. Dose, intravenously or intramuscularly 1 3 Gm. (15–45 gr.) at weekly intervals for 8–16 weeks, followed by rest period of six or more weeks.

tryp sin [G. *trypsis*, to rub down; *pepsis*, cooking]. The proteolytic enzyme resulting from the action of the enterokinase of intestinal juice upon the trypsinogen secreted in the pancreatic juice. It catalyzes the hydrolysis of peptide linkages in proteins and partially hydrolyzed proteins, more readily on the latter. Syn., *tryptase*. —**tryptic**, *adj.*

serum t. See *plasmin*.

tryp-sin'o-gen [*trypsin*, *pepsis*; G. *gennathai*, from *gignesthai*, to be produced]. The zymogen of trypsin, occurring in the pancreatic juice and converted to trypsin by enterokinase in the small intestine. Syn., *protrypsin*.



tryp'ta-mine. $C_{10}H_{12}N_2$; the decarboxylation product of tryptophan; an intermediate substance in certain metabolic processes in plants and animals.

tryp'tase. Trypsin.

t. se rum. See *plasmin*.

tryp"to-lyt'ic [*trypsis*, *pepsis*, G. *lysis*, loosing]. Of, or pertaining to, the hydrolysis of proteins caused by trypsin.

tryp'to-phan, tryp'to-phane. α-Amino-β-indole propionic acid.

An essential amino acid widely distributed in animal and some plant proteins.

tryp"to-phan'ase. A bacterial enzyme which catalyzes degradation of tryptophan to indole, pyruvic acid, and ammonia.

tryp'to-phyl. The univalent radical, $C_8H_6NCH_2CH(NH_2)CO—$ of the amino acid tryptophan.

T S. Test solution.

Tschamer Anton [German physician, nineteenth century]. Said to have given the first description

of acute infectious erythema, the so-called fifth disease (1889) also called *Sticker disease* (1899)

Tscherning's theory of accommodation. See under *accommodation*.

tsetse fly (tset'see, tet'see) Any dipterous insect of the genus *Glossina*, almost wholly restricted to Africa. Glossina flies carry the flagellate trypanosomes, the causative agents of nagana in cattle, and of the African sleeping sickness in man.

TSH Thyroid-stimulating hormone.

tsp. Teaspoon.

Tsuchiya's reagent. See under *reagent*.

Tsuga [Jap. larch]. The generic name of the hemlock tree which belongs to the pine family (Pinaceae) Not to be confused with the poison hemlock (*Conium*) which is an herb (Umbelliferae)

tsutsugamushi disease See under *disease*.

TTC 2,3,5-Triphenyltetrazolium chloride.

tuamine. Trade-mark for the sympathomimetic amine known by the generic name *tuaminoheptane*.

tuamine sulfate (tew uh-meen, min) Trade-mark for 2-aminoheptane sulfate, $(C_7H_{15}NH_2)_2 \cdot H_2SO_4$, local vasoconstrictor used in 0.5–2.0% solution in the relief of nasal congestion. The base is employed in an inhaler for treatment of acute rhinologic conditions.

tuaminoheptane. Generic name for 1-methylhexylamine, also known as 2-aminoheptane $CH_3(CH_2)_4CH(CH_3)NH_2$; colorless to pale-yellow liquid, sparingly soluble in water It is sympathomimetic amine, and is used for its local vasoconstrictive action by inhalation of vapors of the base and by application of solution of the sulfate. See *tuamine*.

tu'a-tu a. See *Jatropha gossypifolia*.

tu'ba (pl. *tubae*) [L. trumpet]. A tube.

t. acustiva. The auditory or eustachian tube.

t. uterina. The uterine or fallopian tube.

tu'bage [F]. The introduction of tube or catheter **t. of the glottis.** See *intubation*. *Obs.*

tu'bal [L. *tuba*, tube]. Pertaining to tube, especially the uterine or the auditory

tube [*tubus*]. A hollow cylindrical structure, especially uterine tube or an auditory tube.

air t. A bronchial tube.

alimentary t. The alimentary canal.

auditory t. The canal, lined by mucous membrane, with partly bony partly cartilaginous support, connecting the pharynx with the tympanic cavity on each side. Also called *tuba auditiva* [BNA], *pharyngotympanic tube*, *eustachian tube*. See Plates 12, 20.

auricular t. The external auditory meatus.

auscultation t. One used to test the acuteness of hearing.

bronchial t. A bronchus, or one of its subdivisions.

capillary t. A tube with minute lumen.

cardiac t. The embryonic heart.

cathode t. An evacuated tube, frequently with a thin window opposite the cathode, to permit cathode rays to emerge from the tube.

Chaoul t. A special roentgen-ray tube used in contact therapy

Crookes t. A highly exhausted vacuum tube used in producing -rays.

digestive t. 1. That portion of the digestive system which includes the esophagus, stomach, intestines, and rectum [BNA]. 2. The entire alimentary tract from mouth to anus.

drainage t. A hollow tube of glass, rubber or other material inserted into wound or cavity to allow the escape of fluids.

embryonic digestive t. The digestive tube of the embryo. Sometimes used to include the portion of the alimentary canal between the stomodeum and the proctodeum Includes the fore- mid- and hindguts.

eustachian, Eustachian t. See auditory t. See Plates 12, 20.

fallopian, Fallopian t. A uterine tube. See *oviduct*. See Plate 41.

feeding t. One for introducing food into the stomach.

fermentation t. A glass tube used in the fermentation test for glucose.

Folin sugar t. A special tube for use in blood sugar determinations. It holds more than 25 and in its lower half has narrow portion (4 cm. long and 8 mm. in diameter) which ends in an expanded bulb holding bout 3.0 cc.

fusion t. Priestly Smith name for miniature stereoscope by which the two images formed by a straight and squinting eye may be fused together and seen simultaneously Also see *haploscope*.

gas t. Early roentgen-ray tube with relatively low vacuum.

Geiger-Müller t. A tube which, when attached to a potential source, will produce an electric pulse each time an ionizing particle penetrates its walls.

grenz ray t. A roentgen-ray tube for production of soft roentgen rays operated at low potentials, around 10 kilovolts.

hot cathode t. A modern highly evacuated roentgen-ray tube with hot filament cathode for the production of an abundant and controllable stream of cathode rays.

intubation t. A tube for insertion into the larynx through the mouth in laryngeal diphtheria, etc.

Levin t. See under Abraham Louis *Levin*.

Linzenmeier's blood sedimentation t. One 70 mm. long with 5-mm. lumen calibrated [illegible] and 6, 12, 18, and 24 mm. below the 1-ml. mark

Little' t. A curved glass tube 20 to 25 cm. long introduced by Döderlein and improved by H. M. Little, used to aspirate specimens of the lochia for laboratory study

Lyon' t. A glass tube sealed at one end and drawn out at the other end into capillary pipet with small hole in the side of the tube to allow the escape of air Used for collecting small quantities of blood from skin puncture wound

Miescher' t. The elongated tubelike sporocysts of th *Sarcosporidia*, in the connective tissue between the muscle fibers of the host.

Miller-Abbott t. An intestinal catheter, approximately 2.5 meters in length, having double lumen; the smaller lumen is for inflation of small balloon near the end of the tube which acts as bolus stimulating peristalsis to carry the tube to the desired location; the larger lumen for aspiration of intestinal contents. The tube is used for relief of distention due to obstruction in the small intestine.

nasotracheal t. A rubber tube or catheter inserted into the trachea by way of the nasal cavity and pharynx.

neural t. The embryonic tube formed from the ectodermal neural plate that differentiates into brain and spinal cord.

Patton-Johnston t. A four-lumen plastic tube for the treatment of bleeding from esophageal varices. There is one lumen to each of two balloons which inflate separately one lumen to aspirate the stomach, and one to administer thrombin solution.

Penrose latex nasogastri t. See *cigarette drain*.

Pflüger's t. One of the cellular cortical [illegible] or invaginations of the germinal epithelium of the embryonic ovary

pharyngotympanic t. See auditory t.

Pitot t. A device for measuring fluid flow by differences in pressure caused by a simple constriction in the tube; used in the construction of certain flowmeters.

polyethylene t. See *polyethylene*.

pus t. See *pyosalpinx*.

Rehfuss t. See Martin Emil *Rehfuss*.

roentgen t. An evacuated vessel containing a source of electrons and two electrodes, the positive anode and the negative cathode at a considerable potential difference; the cathode contains the source of electrons, as a hot filament, and the anode is of sturdy construction to withstand bombardment by the cathode rays. At the anode the energy of the cathode rays is converted into 98% of heat energy and 2% of roentgen rays.

Sanford and Magath centrifuge t. A graduated tube used in hematocrit readings.

sediment t. A glass cylinder constricted to a fine point at one end and having both ends open; used in precipitating urine.

Sengstaken-Blakemore t. A large three-lumen rubber tube for the treatment of bleeding from esophageal varices. There is one lumen to each of two balloons and a large central lumen for aspiration of the stomach and for feeding.

Southey' t., Southey-Leech t. A small cannula inserted subcutaneously into edematous tissues, usually of the lower extremities, for the purpose of draining fluid.

stomach t. A flexible tube used for irrigation or evacuation of the stomach.

test t. A cylindrical glass tube with one end open; used for growing cultures of bacteria, or for chemical analysis.

tracheotomy t. A metal tube placed in the opening made in a tracheotomy and through which breathing is carried on.

t-tube. A rubber or glass tube in the form of the letter T.

urogenital t. The ventral part of the cloaca after division by the urorectal septum. It comprises the vesicourethral primordium and the urogenital sinus. Also called *urogenital canal*.

uterine t. The tuba uterina [BNA]; oviduct.

vacuum t. A sealed glass tube out of which the air has been pumped and which has at each end a piece of platinum wire passed through the glass and entering the tube.

tu·bec'to·my [tube; G. *ektomē*, excision]. Salpingectomy; excision of a tube, specifically a uterine tube.

tube length. In a microscope, the distance between the upper focal point of the objective and the lower focal point of the eyepiece. The tube length of a monocular microscope is measured from the top of the eyepiece tube to the bottom of the nosepiece. In the binocular microscope, a correction is introduced to compensate for the distance added by the system of prisms.

tu'ber (pl. *tubera*) [L., swelling]. 1. A thickened portion of an underground stem. 2. Any rounded swelling. Also see *tuberosity*, *eminence*.

t. calcanei. The calcaneal tuberosity.

t. cinereum. An area of gray matter extending from the optic chiasma to the mamillary bodies and forming part of the floor of the third ventricle. The stalk of the neurohypophysis is attached to it. See *median eminence of the tuber cinereum*.

t. frontale. The frontal eminence.

t. ischiadicum. The ischial tuberosity.

t. maxillare. The maxillary tuberosity.

t. omentale hepatis. A prominence on the left lobe of the liver corresponding to the lesser curvature of the stomach.

t. omentale pancreatis. A prominence of the middle part of the pancreas, corresponding to the lesser omentum.

t. parietale. The parietal eminence.

t. vermis. The posterior end of the inferior portion of the vermis of the cerebellum.

tu'ber·cle [L. *tuberculum*, small swelling]. 1. A small nodule. 2. A rounded prominence on a bone. 3. The specific lesion produced by the tubercle bacillus, consisting of a collection of lymphocytes and epithelioid cells, at times with giant cells.

acoustic t. A prominence on the ventrolateral surface of the restiform body produced by the cochlear nuclei. Also called *acoustic eminence*.

adductor t. A slight protuberance at the lower end of the medial supracondylar line of the femur giving attachment to the tendon of the adductor magnus muscle.

amygdaloid t. A projection of gray matter from the roof of the descending cornu of the lateral ventricle, marking the site of the amygdaloid nucleus.

anal t. One of a pair of eminences lateral to the anal opening in the embryo.

anterior obturator t. An occasional projection on the obturator crest of the superior ramus of the pubis at the anterior margin of the obturator groove.

anterior t. A tubercle at the anterior part of the extremity of the transverse process of certain cervical vertebrae.

articular t. The projection upon the zygomatic process of the temporal bone which marks the anterior boundary of the mandibular fossa. Also called *articular eminence* [BR].

auricular t. One of six tubercles on the hyoid and mandibular arches which form the auricle of the ear. See also Darwin's t.

Carabelli' t. See Georg *Carabelli*.

carotid t. A prominence of the sixth cervical vertebra on the anterior part of its transverse process, against which the common carotid artery can be compressed. Also called *Chassaignac' t.*

cervical t. A prominence at the junction of the upper part of the neck of the femur and the greater trochanter. It marks the beginning of the intertrochanteric line.

cloacal t. See *genital t.*

condyloid t. A protuberance on the condyle of the mandible to which the temporomandibular ligament attaches.

conglomerate t. A large lesion of tuberculosis formed by the growth and fusion of miliary tubercles.

conoid t. The medial and posterior portion of the coracoid tuberosity to which the conoid portion of the coracoclavicular ligament is attached.

corniculate t. A rounded eminence on each side of the entrance to the laryngeal cavity lying over the corniculate cartilage.

costal t. A roughened elevation found on the dorsal margin of a rib at the junction of the neck and body. It articulates with the tip of the transverse process of the corresponding vertebra.

cuneate t. One of the two ovoid eminences in the caudal end of the fourth ventricle, representing continuations of the fasciculus cuneatus; subjacent to them is the cuneate nucleus.

cuneiform t. A rounded eminence on each side of the entrance to the laryngeal cavity lying over the cuneiform cartilage. Also called *tuberculum of Wrisberg*.

Darwin's t. A blunt tubercle projecting from the upper free margin of the helix toward the center of the auricle.

deltoid t. See *deltoid tuberosity*.

dental t. A cusp of a tooth.

distomolar t. See under *distomolar*.

ear t. See Darwin *t.*
epiglottic t. A slight convexity on the dorsal surface of the epiglottis.
epithelial t. The epithelial tag on the urethral groove of the embryonic phallus.
genial t. Mental spine.
genital t. A conical elevation in the midventral line between tail and umbilicus that develops into the embryonic phallus. Also spelled *genitural t.*
Ghon t. The primary t bercle of aerogenous tuberculosi formed in the periphery of the lung just beneath the pleura.
greater t. of humerus. A prominence on the upper lateral end of the shaft of the humerus into which are inserted the supraspinatus, infraspinatus, and teres minor muscles.
hyoid t. One of three auricular tubercles on the anterior surface of the hyoid arch of the embryo.
infraglenoid t. See infraglenoid *tuberosity.*
intercondyloid t. On of two sharp elongations on the summit of the intercondyloid eminence of the tibia.
intervenous t. A tubercle formed by the superior limbic band of cardiac muscle developing in the posterior wall of the sinus venosus between the superior and inferior caval openings. Also called *Lower' t.*
jugular tubercles. Paired eminences on the basilar portion of the occipital bone between the foramen magnum and the jugular foramen.
labial t. A small, inconstant median tubercle of the philtrum of the upper lip.
lacrimal t. One of the small papillary prominences at the margin of the eyelids in the center of which is the lacrimal punctum.
laminated t. The cerebellar nodulus.
lateral intercondylar t. The spine on the lateral side of the intercondylar eminence of the tibia.
lesser t. of humerus. A prominence on the pper anterior end of the shaft of the humerus into which is inserted the subscapularis muscle.
Luschka s t. An osteochondroma located t the superior angle of the scapula.
malar t. The blunt, thickened, inferior angle of the zygomatic bone.
mandibular t. One of three auricular tubercles on the posterior surface of the mandibular arch.
medial intercondylar t. The spine on the medial side of the intercondylar eminence of the tibia.
mental t. A raised area on each side of the mental prot berance of the mandible in the midline. See mental *spine.*
miliary tubercles. Tubercles of uniform size, approximating the millet seed, 1.0-2.0 mm. in diameter distributed rather uniformly throughout an organ or series of organs.
Montgomery's tubercles. The apocrin sweat glands in the areola of the nippl which appear more prominent during pregnancy and lactation. Also called *areolar glands of Montgomery.*
Müller' t. An eminence of the dorsal wall of the urogenital tube at the orifice of the mesonephric and later the Müllerian ducts.
nuchal t. An elevation projecting beneath the skin, produced by the long spinous process of the seventh cervical vertebra.
obturator tubercles. See anterior obturator *t.*, posterior obturator *t.*
olfactory t. A small, oval elevation of the anterior perforated substance lateral to the olfactory trigone.
palatine t. See *tuberosity* of the palatine bone.
papillary t. An extension of the caudate lobe of the liver into the portal fossa.
paramolar t. See under *paramolar*
peroneal t. The trochlear process of the calcaneus.
pharyngeal t. The ridge on the under surface of the basilar process of the occipital bone.
plantar t. A prominence at the base of the first metatarsal bone where the tendon of the peroneus longus muscle is inserted.
posterior obturator t. An occasional projection on the medial border of the ischium, immediately anterior to the acetabular notch, the posterior boundary of the obturator groove.
posterior t. A tubercle at the posterior part of the extremity of the transverse process of certain cervical vertebrae.
postglenoid t. A process of the temporal bone that descends behind the articular fossa and prevents backward displacement of the mandible during mastication.
preglenoid t. A small elevation at the base of the anterior root of the zygomatic process of the temporal bone.
prostatic t. The middle lobe of the prostate.
pterygoid t. A tubercle on the inner surface of the mandible; it gives ttachment to the internal pterygoid muscle.
pubic t. A prominent bony point on the superior ramus of the pubis for the attachment of the inguinal ligament.
satyr t. A rare pointed projection from the posterior superior aspect of the helix giving the appearance of pointed ear
scalene t. A tubercle on the upper surface of the first rib for the insertion of the scalenus anterior muscle. Also called *Lisfranc' t.*
supraglenoid t. See supraglenoid *tuberosity.*
vertebral tubercles. Three elevations, the superior inferior and lateral, subdividing the transverse process of the twelfth thoracic vertebra; similar rudimentary prominences are found on the transverse processes of the tenth and eleventh thoracic vert brae.

tu ber cu lar [*tuberculum*]. Characterized by the presence of small nodules or tubercles. often used erroneously for *tuberculous.*

tu ber'cu la"ted [*tuberculum*] Having tubercles tuberculose, tubercular

tu ber"cu la'tion [*tuberculum*]. 1. The formation, development, or arrangement of tubercles 2 The process of affecting part with tubercles.

tu ber'cu lid, tu ber'cu lide [*tuberculum*]. A group of varied skin manifestations from tuberculosis of viscera. The skin changes often begin with necrosis in the dermis; later there is involvement of the epidermis followed by ulceration. They are considered to be caused either by bacillary embolisms or by toxins from tubercle bacilli.
micropapular t. An id reaction characterized by many pinhead-sized indurated papules located in the face, usually brownish-red, although some ppear semitranslucent and almost colorless.
papulonecrotic t. An id reaction with the lesions tending to undergo central necrosis and scarring later The lesions are located on the face and extremities the trunk may be involved.

tu ber cu lin [*tuberculum*]. A material containing the proteins of the tubercle bacillus, or products derived from such proteins and capable of eliciting an inflammatory reaction in the tissues of human or animal body which has been sensitized either by tuberculosis or by inoculation with living or dead tubercle bacilli.
old t. A broth culture of tubercle bacilli, sterilized by heat, filtered, and concentrated by evaporation. Abbreviated, O T T O.

tu ber"cu lo-der ma [*tuberculum*; G. *derma*, skin]. A cutaneous manifestation of the action of tubercle bacilli; tuberculid.

tu·ber″cu·lo·fi′broid [*tuberculum*; L. *fibra*, fiber; G. *eidos*, form]. Relating to a tubercle, 2, that has undergone fibroid degeneration.

tu·ber′cu·loid [*tuberculum*; *eidos*]. Resembling tuberculosis or a tubercle.

tu·ber″cu·lo′ma [*tuberculum*; G. *-ōma*, tumor]. A conglomerate caseous tubercle, usually solitary, which has attained such a size as to suggest the appearance of a tumor.

t. en plaque. A rare type of chronic tuberculous meningo-encephalitis, characterized by a flat plaque of a granulomatous reaction.

tu·ber″cu·lo·ma′ni·a [*tuberculum*; G. *mania*, madness]. An unalterable and unfounded conviction that one is suffering from tuberculosis.

tu·ber″cu·lo·ma·sit′is. See *tuberculomania*.

tu·ber″cu·lo·pho′bi·a [*tuberculum*; G. *phobos*, fear]. Morbid fear of tuberculosis.

tu·ber″cu·lo·pro′te·in (-pro′tee·in, -pro′teen) [*tuberculum*; G. *prōteios*, of first rank]. A variety of protein not exerting appreciable toxic effect upon the normal body but highly toxic for the tuberculous, hypersensitive individual, leading to necrosis, fever, and severe constitutional symptoms.

tu·ber′cu·lose. Tuberculated.

tu·ber″cu·lo·sil″i·co′sis [*tuberculum*; L. *silex*, flint; *-ōsis*, condition]. Chronic inflammation of the lungs, caused by the combined action of tubercle bacilli and silicon dioxide. This term is preferred in South Africa to silicotuberculosis, which is in common usage. See *silicotuberculosis*.

tu·ber″cu·lo′sis [*tuberculum*; *-ōsis*]. An infectious disease caused by the *Mycobacterium tuberculosis*, commonly known as the tubercle bacillus. It may affect any organ or tissue of the body, but by far the most deaths are due to tuberculosis of the lungs. It is a leading cause of death. Since the time of Hippocrates it has been known as *phthisis*. The name *tuberculosis* was introduced in 1834 by Schönlein. The two characteristic types of tissue reaction are the exudative, consisting of acute inflammation, and the productive or proliferative, consisting of tubercle formation. Abbreviated, TB.

active t. That which is undergoing change, either progressive or retrogressive, causing, or threatening to cause, clinical symptoms or disability.

acute disseminated t. That in which miliary tubercles are widely distributed through the body as a result of transmission of tubercle bacilli in large numbers through the blood stream. Also called *acute generalized miliary t.*

avian t. A form found in birds.

bovine t. A form found in cattle, transmitted to man usually by raw milk from infected cows. Also see *glandular t.*, *t. of bones and joints*.

bronchogenic t. That resulting from extension of infection within the lung by way of the air passages. Also called *bronchogenous t.*

bronchopneumonic t. An exudative reaction in the lung caused by the tubercle bacillus, having the distribution of bronchopneumonia. Also see *pneumonia*.

caseous pneumonic t. Exudative tuberculosis of the lung which has undergone a characteristic type of necrosis, simulating cheese in its gross appearance.

chronic fibroid t. Slowly progressive pulmonary tuberculosis with extensive fibrosis and mild symptoms.

chronic miliary t. A condition in which healing or healed miliary tubercles are distributed through one or more organs as a result of transmission of tubercle bacilli in small numbers through the blood stream.

chronic ulcerative t. The most prevalent type of pulmonary tuberculosis in which necrosis has been followed by the formation of cavities surrounded by varying degrees of fibrosis. It represents a later stage in the evolution of either exudative or proliferative tuberculosis, and may coexist with lesions of either or both of these types.

closed t. Pulmonary tuberculosis not discharging tubercle bacilli; it is therefore not capable of transmission to other persons.

cutaneous t. See *t. cutis*.

endogenous t. That arising from a source within the body; especially disease caused by bacilli transmitted through lymphatic or blood vessels, or both, to another organ, usually to the lungs.

exogenous t. That arising from a source outside the body.

extrapulmonary t. Tuberculosis occurring in any part of the body outside the lungs; most commonly affected are bones, joints, the genitourinary tract, meninges, skin, and the intestines.

far advanced t. (According to the National Tuberculosis Association classification.) That in which there are lesions more extensive than moderately advanced.

fibroid t. Chronic tuberculosis, usually in the upper lobe of the lung, associated with extensive fibrosis.

glandular t. That affecting the lymph nodes, especially the cervical, bronchial, and mesenteric. Usually due to bovine tuberculosis.

hematogenous t. Any manifestation resulting from the transmission of tubercle bacilli through the blood stream.

inactive t. That which is in a state of partial or complete healing, causing no clinical symptoms or disability; it shows no change over a prolonged period of time.

incipient t. The earliest stage of pulmonary tuberculosis in point of time. Often confused with minimal tuberculosis which refers only to the extent of disease.

latent t. That which shows no change over a prolonged period of time, but is incompletely healed and potentially active.

lobar pneumonic t. An exudative reaction in the lung caused by the tubercle bacillus, having the characteristic distribution of lobar pneumonia. Also see *pneumonia*.

lymphogenic t. Metastasis from any focus to another by way of the lymph channels. Also called *lymphogenous t.*

minimal t. (According to the National Tuberculosis Association classification.) Tuberculosis in which there are slight lesions without demonstrable excavation confined to a small part of one or both lungs. The total extent of the lesions, regardless of distribution, shall not exceed the equivalent of the volume of lung tissue which lies above the second chondrosternal junction and the spine of the fourth or the body of the fifth thoracic vertebra on one side.

moderately advanced t. That in which both lungs may be involved, but the total extent of the lesions shall not exceed the following limits: slight disseminated lesions which may extend through not more than the volume of one lung, or the equivalent of this in both lungs; dense and confluent lesions which may extend through not more than the equivalent of one-third the volume of one lung. Any gradation within the above limits. Total diameter of cavities, if present, is estimated not to exceed 4 cm.

open t. Pulmonary tuberculosis in an infectious state; it is capable of transmission to other persons.

pelvic t. Tuberculosis of the uterine tubes which has spread to other pelvic structures or organs.

primary t. The reaction which follows the first implantation of tubercle bacilli in the body. It consists of a caseous focal reaction in the parenchyma of the organ and a similar reaction in the regional lymph node or nodes. Both foci usually run a benign course and undergo healing with calcification. The most frequent site is the lung. Also called *primary phase, primary infection, primary focus* or *complex, childhood type t.*

pulmonary t. Tuberculosis of the lungs.

reinfection t. That which includes all manifestations of tuberculosis other than the primary phase. It exhibits in varying degree the influence of two factors not operative in primary tuberculosis: acquired resistance, and hypersensitivity of the tissues to tuberculin. It is characterized especially by an increased capacity for destruction of tissue, and by acceleration of both the early exudative reaction and the subsequent, productive reaction. Also called *adult type t.*

t. cutis. That affecting the skin. It occurs in many forms and is more frequent in Europe than in America. Also see *lupus* **vegetans, t. lichenoides,** *tuberculid.*

t. cutis orificialis. Ulcerative tuberculosis of the skin at the body orifices.

t. lichenoides. A skin eruption consisting of groups of papules, usually on the trunk, seen in subjects suffering from tuberculosis, especially the glandular and bone types of the disease. Also called *lichen scrofulosus, chronic miliary t. of the skin.*

t. luposa. See *lupus vulgaris.*

t. of bones and joints. That affecting bones and joints, characterized by bone destruction and the formation of cold abscesses. Usually due to bovine tuberculosis.

t. verrucosa. A type of warty skin eruption, usually on the hands and arms, due to inoculation with the tubercle bacillus from handling meat of infected cattle or infected human material.

tu·ber″cu·lo·ste·a·r′ic ac′id. 10-Methylstearic acid, obtained from tubercle bacilli.

tu·ber′cu·lous [*tuberculum*]. Affected with, or caused by, tuberculosis.

tu·ber′cu·lum (pl. *tubercula*) [L.]. Tubercle.

t. acusticum. See *acoustic tubercle.*

t. anterius. (a) The conical prominence on the anterior arch of the atlas. (b) The frontal extremity of the thalamus.

t. articulare. Articular tubercle.

t. auriculae. Darwin's tubercle of the auricle.

t. caudatum. The caudate lobe of the liver.

t. cinereum. A longitudinal elevation between the cuneate fasciculus and tubercle on the one hand and the roots of the ninth, tenth, and eleventh cranial nerves on the other. It is formed by the expansion of the substantia gelatinosa extending into the medulla oblongata and descending fibers derived from the sensory root of the trigeminal nerve.

t. corniculatum. See *corniculate tubercle.*

t. costae. Tubercle of a rib. See *costal tubercle.*

t. cuneiforme. See *cuneiform tubercle.*

t. epiglotticum. Epiglottic tubercle or cushion of the epiglottis.

t. genitale. See *genital tubercle.*

t. impar. The unpaired mass of tissue between the anterior lingual swellings and the copula in the developing tongue.

t. intercondyloideum laterale. A lateral intercondyloid tubercle.

t. intercondyloideum mediale. Medial intercondyloid tubercle.

t. jugulare. See *jugular tubercle* under *tubercle.*

t. linguale laterale. The lateral lingual swelling in the embryo.

t. linguale mediale. See *t. impar.*

t. mentale. Mental tubercle. See *mental spine.*

t. obturatorium anterius. See *anterior obturator tubercle.*

t. obturatorium posterius. See *posterior obturator tubercle.*

t. pharyngeum. Pharyngeal tubercle.

t. posterius. The rudimentary spinous process of the atlas.

t. pubicum. See *pubic tubercle.*

t. scaleni. Scalene tubercle of Lisfranc.

t. sellae. Anterior boundary of the sella turcica.

tu′ber·in [L. *tuber*, swelling]. A simple protein of the globulin type which occurs in potatoes.

tu″ber·os′i·tas. Tuberosity.

tu″ber·os′i·ty [*tuber*]. A protuberance on a bone.

calcaneal t. The posterior extremity of the calcaneus. Syn., *tuber calcanei.*

coracoid t. A rough elevation on the inferior surface of the acromial end of the clavicle, which overhangs the coracoid process of the scapula, and to which the coracoclavicular ligament is attached.

costal t. A rough area on the under surface of the medial end of the clavicle, which gives attachment to the costoclavicular ligament.

deltoid t. A rough elevation about the middle of the anterolateral surface of the humerus for the insertion of the deltoid muscle.

gluteal t. The lateral and upward extension of the linea aspera, which gives attachment to part of the gluteus maximus muscle.

greater t. of femur. The greater trochanter of the femur.

iliac t. A rough, elevated area above the articular surface on the inner aspect of the ala of the ilium, which gives attachment to the posterior sacroiliac ligament, and from which the sacrospinalis and multifidus muscles take origin.

infraglenoid t. A rough impression below the glenoid cavity from which the long head of the triceps muscle arises.

ischial t. A protuberance on the posterior portion of the superior ramus of the ischium, upon which the body rests in sitting.

lesser t. of femur. The lesser trochanter of the femur.

malar t. See *malar tubercle.*

maxillary t. A protuberance on the lower part of the infratemporal surface of the maxillary bone; the medial side articulates with the pyramidal process of the palatine bone.

parietal t. The parietal eminence.

pyramidal t. See *t.* of the palatine bone.

radial t. The large eminence on the medial side of the upper extremity of the radius, into which the tendon of the biceps brachii muscle is inserted.

sacral t. A rough area on the posterior surface of the sacrum, bearing three deep, uneven depressions for attachment of the posterior sacroiliac ligament.

sciatic t. See *ischial t.*

supraglenoid t. A slight elevation on the upper margin of the glenoid cavity, which gives attachment to the long head of the biceps brachii muscle.

t. of the cuboid bone. An eminence on the lateral side of the cuboid bone. It bears an oval facet on which glides the sesamoid bone or cartilage often found in the tendon of the peroneus longus muscle.

t. of the fifth metatarsal. A rough projection from the lateral surface of the base of the bone giving attachment to the peroneus brevis muscle on its dorsal surface, and to the flexor digiti quinti brevis muscle on its plantar surface.

t. of the first metatarsal. An oval prominence

on the lateral side of the base of the bone, into which part of the tendon of the peroneus longus muscle is inserted.

t. of the navicular bone. A rounded eminence on the medial surface of the navicular bone of the foot, into which part of the tendon of the tibialis posterior muscle is inserted.

t. of the palatine bone. A backward and lateral projection from the junction of the horizontal and vertical parts of the palatine bone. Syn., *pyramidal process, pyramidal t.*

t. of the second rib. A rough eminence on the lateral surface of the second rib for attachment of part of the first and all of the second digitation of the serratus anterior muscle.

t. of the tibia. An oblong elevation on the anterior surface of the upper extremity of the tibia, to which the patellar ligament is attached.

t. of the ulna. A rough eminence below coronoid process on anterior surface of ulna, which gives insertion to part of the brachialis muscle.

ungual t. The expanded distal end of terminal phalanx.

tu"bo- [L. *tubus*, tube]. A combining form denoting *pertaining to tube.*

tu"bo-ab-dom'i nal [*tubus*; L. *abdomen*, belly]. Pertaining to uterine tube and to the abdomen.

tu"bo-ad nex' pex"y [*tubus*; L. *annexus*, from *annectere*, to tie to; G *pēxis*, fixing]. Surgical fixation of the uterine adnexa.

tu"bo-cu ra re (tew"bo-coorah ree) Curare so named because of its tube shape, the result of being packed in hollow bamboo canes.

tu"bo-cu-ra rine (-coo rah reen, -rin) An alkaloid, $C_{38}H$ NO in tubocurare prepared from *Chondodendron tomentosum.* It is responsible for the typical action of curare. Also called *d-tubocurarine.* See *intocostrin.*

tu"bo-lig" **men'tous** [*tubus*; L. *ligamentum*, tie] Relating to the oviduct and the broad ligament.

tu"bo-o-va'ri-an. Pertaining to the uterine tube and the ovary

tu"bo-o va ri-ot'o my Excision of uterine tube and ovary

tu"bo-per"i to-ne al [*tubus*; G *peritonaion*, membrane which contains the lower viscera]. Relating to the oviducts and the peritoneum.

tu"bo-u'ter ine [*tubus*; L. *uterus*, womb]. Pertaining to the uterine tube and the uterus.

tu"bo-vag'i nal [*tubus*; L. *vagina*, vagina]. Pertaining to uterine tube and the vagina.

tu'bu lar [L. *tubulus*, small tube]. 1. Shaped like tube 2 Pertaining to or affecting tubules, as tubular nephritis. 3. Produced in tube, as tubular breathing.

tu'bule [*tubulus*]. 1. A small tube. 2. *I* anatomy any minute, tube-shaped structure.

collecting tubules. The ducts conveying the urine from the renal tubules (nephrons) to the minor calyxes of the renal pelvis.

convoluted tubules. (a) The contorted tubules of the testis (b) The parts of the renal tubule which lie in the cortex, as the proximal and distal convoluted portions of the nephron.

dentinal tubules. Canals in the matrix of dentin occupied by odontoblastic processes.

epigenital t. A mesonephric tubule which becomes one of the ductuli aberrantes.

hepatic t. See *hepatic cords* under *cord.*

mesonephric t. A tubule of the mesonephros.

nephric t. See *uriniferous t.*

paragenital mesonephric tubules. Mesonephric tubules which become the efferent ductules of the testis, the appendix of the epididymis, and the paradidymis.

seminiferous t. Any of the tubules of the testes.

uriniferous t. One of the numerous winding tubules of the kidney; a nephron.

tu"bu li za tion [*tubulus*]. Protection of the ends of nerves, after neurorrhaphy by an absorbable cylinder

tu"bu lo-al ve'o-lar **tu"bu lo-ac'i nous** [*tubulus*; L. *alveolus*, dim. of *alveus*, *trough*]. Consisting of system of branching tubules which terminate in alveoli, as in the salivary glands.

tu"bu lo-cyst" [*tubulus*; G *kystis*, bladder]. A cystic dilatation in an occluded canal or duct.

tu"bu lo-rac e-mose (-rass'i-moce) [*tubulus*; L. *racemosus*, full of clusters]. Denoting gland that is both tubular and racemose.

tu'bu-lus (pl. *tubuli*) [L.]. A small, tubelike organ; tubule.

tubuli lactiferi. The excretory ducts of the mammae.

tubuli renales. Renal tubules.

tubuli renales contorti. Convoluted renal tubules.

tubuli renales recti. Straight renal tubules.

tubuli seminiferi contorti. Convoluted seminiferous tubules.

tubuli seminiferi recti. Straight seminiferous tubules.

tu'bus (pl. *tubi*) [L.]. A tube, canal.

t. digestorius. The digestive canal

t. medullaris. The vertebral canal.

t. vertebralis. The spinal or vertebral canal.

Tucker's test. See Naegeli test.

Tuffier Theodore [*French surgeon*, 1857–1929]. Remembered for his description of surgical operation which he introduced for chronic valvular heart disease (1914) H described mesenterio-parietal fold, portion of the mesentery extending into the right iliac fossa, called *T ffier' inferior ligament.* Spinal anesthesia was once referred to as *Tuffier'* method, because of his use of it before it received general acceptance. Described syndrome of general debility with relaxation and displacement of organs; once called *Tuffier syndrome.*

tug, tug'ging [ME. *toggen*]. A jerking, pulling, or drawing.

tracheal tugging. The downward tugging movement of the larynx, sometimes observed in aneurysm of the aortic arch.

tulisal. Trade-mark for mixture of equal parts of the substances known by the trade-marked names *acrosal sodium* and *sodium amytal*, supplied in capsules.

tu"la-re'mi-a [*Tulare County* California; G. *haima*, blood]. An infectious disease due to the bacterium, *Pasteurella tularensis*, and transmitted to man by the handling of infected rabbits or other rodents or by the bite of blood-sucking insect.

oculoglandular t. Infection by *Pasteurella tularensis* which, in addition to the usual symptoms of tularemia, causes swollen eyelids, conjunctivitis, swollen lymph nodes, and ulcers on the conjunctivae.

tu'lip-ine (tew'lip-een, -in) A poisonous alkaloid from the tulip.

Tulp, Nicholas [*Dutch physician and anatomist*, 1593–1674]. Author of an early description of beriberi (1652) Among the first to describe the ileocecal valve. A noted demonstrator of anatomy he is the central figure, the Demonstrator in Rembrandt *Lesson in Anatomy.*

tum'bu fly (tŏŏm'bŏŏ, tum'bōō) An African species of the Diptera, *Cordylobia anthropophaga*, whose larvae develop in the skin of man and various mammals, e., rats, dogs, cats, monkeys.

tu"me-fa cient (tew"mi fay'shunt) [L. *tumefacere* to swell]. Swelling; swollen, or tending to cause swelling.

tu"me·fac'tion [*tumefacere*]. 1. A swelling. 2. The act of swelling.

tu'me·fy To swell or cause to swell.

tu·men'ti·a (tew-men shee-uh) [L., a swelling]. Vasomotor disturbance characterized by irregular swellings in the legs and arms.

tu·mes'cence [L. *tumescere*, to begin to swell]. 1. The condition of growing tumid. 2. A swelling.

tu·mes'cent [*tumescere*] Swollen or enlarged.

tu'mid [L. *tumidus* swollen] Swollen.

tu·mid'i·ty [L. *tumidulus*, swelling]. The state of being swollen.

tu'mor [L.] 1. A swelling. 2. Specifically a new growth of cells or tissues characterized by autonomy that is, independent of the laws of growth of the host. It is progressive of unknown cause and in malignant form limited only by the nutrition provided by the host. —**tumorous, tumoral**, *adj*

Abrikosov's t. See granular-cell *myoblastoma*.

acoustic-nerve t. A neurilemmoma in which acoustic, and sometimes vestibular disturbances of the eighth cranial nerve are dominant and early clinical features. Syn., *acoustic neurinoma*.

adenomatoid t. Characteristic, small, benign neoplasms peculiar to the genital tracts of both male and female, composed of fibrous stroma in which are found numerous irregular spaces lined by cells which may resemble endothelium, epithelium, or mesothelium.

adipose t. Lipoma.

adrenal clear-cell t. of ovary See adrenocorticoid *adenoma* of ovary

adrenocortical t. of ovary See adrenocorticoid *adenoma* of ovary

alveolar (cell) t. See bronchiolar *carcinoma*.

amyloid t. A nonmalignant nodule situated usually on a vocal fold, a few millimeters in diameter spherical and often pedunculated. Made up principally of a hyaline acidophilic substance which has staining reactions like primary amyloid. Less often found in the wall of the urinary bladder and rarely in other sites.

androgenic hilar-cell t. See adrenocorticoid *adenoma* of ovary

aortic-body t. A rare benign tumor resembling the carotid body tumor but occurring at the aortic arch.

argentaffin t. See *carcinoid*.

basal-cell t. of ovary See granulosa-cell t.

basophilic t. of pituitary See basophilic *adenoma*.

benign t. One that grows by expansion, is usually encapsulated, and does not exhibit the features of malignant tumors.

blood t. See *hematoma*.

botryoid t. See *sarcoma* botryoides

Brenner t. A solid or cystic tumor of the ovaries, composed of cords or nests of polyhedral, epithelial cells separated by an abundant connective-tissue stroma, generally benign and having no known endocrine activity also called *oophoroma folliculare* (Brenner) *brennerioma*.

Brooke t. See *trichoepithelioma*

"brown" t. of hyperparathyroidism. A tumorlike lesion of bone, seen in patients with hyperparathyroidism, histologically resembling the giant-cell tumor of bone.

calcified t. of skin. (a) Any cutaneous neoplasm containing calcium. (b) Calcifying epithelioma.

calcifying giant-cell t. See *chondroblastoma*

carotid-body t. A benign tumor at the bifurcation of the common carotid artery composed of nests of ovoid or polygonal cells having a rich cytoplasm and small vesicular or dense nuclei, in vascular fibrous stroma reduplicating the histologic structure of the carotid body Clinically it is manifested only by a lump in the neck. Syn. *chemodectoma* (*nonchromaffin paraganglioma*, *paraganglion caroticum*, *potato tumor of neck*.

central giant-cell t. Same as giant-cell t. (a)

cerebellopontine angle t. Any tumor located at the cerebellopontine angle usually a neurinoma of the acoustic nerve or a meningioma.

chordoid t. See *chordoma*.

chromaffin t. Pheochromocytoma; chromaffin tumor

chromophobe t. of pituitary. See chromophobe *adenoma*.

Codman's t. See *chondroblastoma*

collision t. One in which a sarcoma invades a carcinoma, or vice versa.

colloid ovarian t. See pseudomucinous cystadenoma.

compound ovarian t. See *teratoma*.

cystic t. of tendon sheath. See *ganglion*, 2

dermoid t. See dermoid *cyst*.

desmoid t. A slightly destructive, tumorlike lesion of subcutaneous tissues or of muscle, as of the rectus abdominis, probably a form of fibrosis following injury

desmoid t. of mediastinum. One composed of sparsely cellular connective tissue; it may attain great size and be locally invasive, but does not metastasize.

ductal t. See ductal *carcinoma*.

dumbbell t. A ganglioneuroma or neurofibroma composed of a mass in both the spinal canal and thorax connected by a narrow band of tumor tissue in the intervertebral foramen. Syn. *hourglass t.*

dysontogenic t. Any tumor exhibiting defective gonadal development and function

ectopic ovarian t. See *teratoma*.

embryonal mixed t. (*of kidney*) See Wilms's t.

eosinophilic t. of pituitary See eosinophilic *adenoma*.

eosinophilic t. of sweat gland. A sweat-gland tumor characterized by the prevalence of eosinophilic [illegible] cells.

epiphyseal chondromatous giant-cell t. See *chondroblastoma*.

estrogenic t. See feminizing t. of ovary

Ewing's t. See Ewing's *sarcoma*.

feminizing t. of ovary Any functional tumor of the ovary resulting in an exaggeration of female sex characters. In children, it may produce precocious puberty in sexually mature females, clinical signs are less apparent; in the postmenopausal patient, uterine bleeding may occur Morphologically it appears in two predominant forms, *granulosa-cell tumor* and *thecoma*, but foci of one may be found in the other. Also called *estrogenic t.*, *feminizing adenoma*, *ovarian folliculoma*, *feminizing mesenchymoma of ovary*

fibroid t. A fibroma; also often used to mean fibromyoma of the uterus.

Flexner-Jobling t. See Simon Flexner

follicular t. A sebaceous cyst.

functional cortical t. See cortical *adenoma*

ganglion nodosum t. A rare tumor of the ganglion nodosum of the vagus, histologically indistinguishable from the carotid-body tumor.

giant-cell t. (a) A distinctive tumor of bone thought to arise from nonosteogenic connective tissue of marrow, composed of richly vascularized reticulum of stromal cells interspersed with multinuclear giant cells. It generally appears after the second decade of life near the end of long limb bones and it causes thinning of the compact bone. Also called *central giant-cell t.*, *giant-cell sarcoma of bone*, *osteoclastoma*, *myeloid sarcoma*,

myeloplaxic t., chronic hemorrhagic osteomyelitis. (b) Less specifically: (1) epulis (2) chondroblastoma (3) nonosteogenic fibroma; (4) chondromyxoid fibroma of bone; (5) xanthomatous giant-cell tumor of tendon sheath.

glomus jugulare t. A rare tumor histologically resembling the carotid-body tumor arising in the vicinity of the middle ear from either the glomus jugulare (of Guild) or the paraganglion tympanicum (of Krause). Clinically there is usually slowly progressing hearing loss, discharge from one ear and sometimes dizziness. Malignant behavior is fairly common. Syn., *granular-cell myoblastoma of ear canal, nonchromaffin paraganglioma of middle ear.*

glomus t. A tumor derived from an arteriovenous glomus of the skin, especially of the digits. It is usually small, blue, painful, and benign. Also called *angioneuromyoma, glomangioma.*

granular-cell t. of adrenal cortex. See *cortical adenoma.*

granulosa-cell t. An ovarian neoplasm composed of cells resembling those lining the primordial follicle, associated with clinical signs of feminization; also called *diffuse, microcystic or microfolliculoid, macrocystic or macrofolliculoid, parenchymatous or pseudoadenomatous granulosa-cell t.* Syn., *basal-cell t. of ovary, Kahlden t.*

grapelike t. See *sarcoma botryoides.*

Grawitz t. See *clear-cell carcinoma,* also see *hypernephroma.*

Grawitz t. of ovary. See *adrenocorticoid adenoma of ovary.*

heterologous t. One composed of tissue different from that in which it grows.

hilus-cell t. See *adrenocorticoid adenoma of ovary.*

histioid t. One in which the tumor is made up almost entirely of a single type of cell.

homologous t. A tumor consisting of tissue identical with that of the organ from which it springs.

hourglass t. (*of the spine*) See *dumbbell t.*

Hürthle-cell t. A thyroid tumor composed predominantly or entirely of large, acidophilic, glandular epithelial cells (Hürthle cells) and showing little or no follicular development or colloid. It is usually benign, but malignant forms have been described.

hypernephroid t. A tumor whose cells resemble those of the adrenal gland.

hypernephroid t. of ovary. See *adrenocorticoid adenoma of ovary.*

hypophyseal-duct t. An inclusive term applied to tumors derived from epithelial remnants of the involuted pouch of Rathke. Usually suprasellar, they include the adamantinoma and the so-called craniopharyngioma, which originate in the residual stalk, and cystic neoplasms, which originate from the residual cleft. More frequent in children than in adults.

interstitial-cell t. A tumor of the testis, usually benign, composed of interstitial cells (Leydig cells), which may be associated with hypersecretion of male sex hormones; also called *interstitioma, Leydig-cell t.*

islet-cell t. A tumor arising from cells of the islets of the pancreas, clinically classified as *functioning*, producing hyperinsulinism, or as *nonfunctioning*. Histological distinction between the benign and malignant forms may be difficult. Syn., *islet adenoma, Langerhansian adenoma, islet-cell carcinoma, insulinoma, insuloma.*

Kahlden's t. See *granulosa-cell t.*

Krukenberg t. A malignant tumor of the ovary secondary to a tumor of the gastrointestinal tract or breast, usually bilateral, characterized histologically by mucus-containing so-called signet-ring cells; also called *fibrosarcoma ovarii mucocellulare carcinomatodes* (Krukenberg), *carcinoma mucocellulare ovarii.*

Leydig-cell t. See *interstitial-cell t.*

lipid-cell t. of ovary. See *luteoma.*

malignant t. One which grows peripherally, invades and destroys surrounding tissues, may extend directly, and may produce distant secondary tumors by metastasis.

masculinizing t. of ovary. One of a rare group of ovarian tumors, considered together on a clinical and biological basis, and characterized by their production of defeminization or virilism. It is chiefly represented by the arrhenoblastoma and by closely related neoplastic growths grouped together as *adrenocorticoid adenomas of ovary.* Syn., *virilizing t. of ovary.*

medullary t. of adrenal. See *pheochromocytoma.*

melanotic t. Malignant melanoma.

mesenchymal (mixed) t. Mesenchymoma.

mesodermal mixed t. See *mesenchymoma.*

metastatic t. A secondary tumor produced by metastasis.

milk t. A swelling of the breast due to the obstruction of milk ducts; not a neoplasm.

mixed t. One composed of two or more tissue types or cell types. More specifically, a tumor originating from one or two of the primary germinal embryonal layers as contrasted with teratomas or teratoid tumors which contain elements of all three germinal layers.

mixed t. of breast. See *cystosarcoma phylloides.*

mixed t. of salivary-gland type. A mixed tumor similar to the type seen in salivary glands, occasionally found in the skin of almost any part of the body and containing, in addition to epithelial elements, myxoid tissue and cartilage; variously called *adenochondroma, adenomyxochondrosarcoma, pleomorphic (salivary) adenoma, chondrocarcinoma (salivary-gland type), fibromyxoendothelioma, myxopleomorphic epithelioma.*

mucous t. A myxoma.

myeloid t. See *myeloma.*

myeloplaxic t. See *giant-cell t.* (a)

myoepithelial (sweat-gland) t. See *myoepithelioma.*

Nelaton's t. See *fibroma.*

nerve-sheath t. See *neurilemmoma.*

neuromyoarterial glomus t. See *glomus t.*

nonencapsulated sclerosing t. of thyroid. A small nonencapsulated epithelial tumor of the thyroid having marked sclerosis of stroma, which are histologically malignant; thought to be a small papillary carcinoma of very low-grade malignancy.

occupational t. A tumor resulting from prolonged exposure to some physical or chemical agent in the course of one's occupation.

organoid t. One in which the components are so arranged as to resemble the general structure of an organ, as an adenoma.

osteogenic t. Any tumor of bone-forming tissue. See *osteoma, osteogenic sarcoma.*

paraganglion caroticum t. See *carotid-body t.*

perilobular pseudodermoid t. See *pseudomucinous cystadenoma.*

phantom t. A swelling simulating a tumor produced by the contraction of a muscle or by gaseous distention of the intestine.

pineal t. See *pinealoma.*

potato t. of neck. See *carotid-body t.*

Pott's puffy t. A doughy swelling which appears on the scalp as a result of a subaponeurotic, extradural collection of pus due to osteomyelitis of the skull.

primitive [illegible] t-cell t. See *liposarcoma*.
Pringle's t. See *adenoma sebaceum*.
pseudocolloid ovarian t. See pseudomucinous *cystadenoma*.
recurrent t. One recurring after surgical removal.
rhabdomyoblastic mixed t. A malignant mesenchymoma.
sand t. See *psammoma*.
Schmincke's t. Lymphoepithelioma.
Spiegler's t. See *cylindroma*.
splenic t. A term sometimes applied to an enlarged spleen, not necessarily neoplastic, and usually only hyperplastic.
sweat-gland t. A neoplasm derived from sebaceous glands, variously described, as sebaceous adenoma, sebaceous epithelioma, and cystic basal-cell epithelioma.
sympathetropic-cell t. See adrenocorticoid *adenoma* of ovary.
teratoid t. Teratoma.
theca-cell t. of ovary. See *thecoma*.
thoracic-inlet tumors. Infiltrating tumors at the thoracic inlet which produce a symptom complex, commonly known as *Pancoast's syndrome*, most frequently caused by bronchogenic carcinoma but also by the rarer branchiogenic carcinoma, sympathicoblastoma of cervical ganglia, osteogenic sarcomas, metastatic tumors, and such noncancerous conditions as tuberculosis.
tuberous cystic t. of breast. See *cystosarcoma phylloides*.
tuberous t. Any tumor, such as an angioma, which grossly resembles a tuber.
turban t. See *cylindroma*.
virilizing lipoid-cell t. See adrenocorticoid *adenoma* of ovary.
Warthin's t. A benign mixed salivary-gland tumor, usually of the parotid gland, composed of lymphoid interstitial tissue arranged in papillary processes and covered by a layer of epithelium; also called *papillary cystadenoma lymphomatosum*.
Wertz's t. See *pseudomyxoma peritonaei*.
Wilms' t. A teratoma of the renal cortex, almost always unilateral, manifesting itself usually in infancy or childhood. Malignant transformation with metastasis to lungs and brain is common. Also called *embryonal mixed tumor of kidney*, *adenosarcoma (of kidney)*, *nephrogenic dysembryoma*, *embryoma of kidney*, *hamartoblastoma of kidney*, *metablastic nephroma*.
xanthomatous giant-cell t. of the tendon sheath. A benign, usually well-defined tumor composed of vacuolated macrophages and multinucleated giant cells set in a collagenic stroma, which varies greatly in amounts.
yellow t. A tumor of the ovary; usually a luteoma; nonspecific term.

tu″mor af′fin, tu″mor af′fin [*tumor*; L. *affinis*, related to]. Substances (drugs, radiant energy, etc.) which are supposed to have some special affinity for tumor cells.
tu″mor·i·gen′ic. Tumor-forming.
tu′mor·ous [*tumor*]. Of the nature of a neoplasm or tumor.
tu·mul′tus [L.]. Tumult.
t. cordis. Irregular heart action.
t. sermonis. A stuttering manner of reading, from pathologic cause.
Tun′ga. A genus of fleas which burrow beneath the skin to lay their eggs; serious local inflammation results.
T. penetrans. A species prevalent in the tropical regions of Africa and America; also called *chigoe*, *jigger*.
tun·gi′a·sis. The cutaneous pustular inflammation caused by the gravid female sandflea, *Tunga penetrans*.
tung′sten [Swed., from *tung*, heavy; *sten*, stone] (*wolframium*). W = 183.92. A heavy metallic element. Used in steel to increase hardness and tensile strength, in the manufacture of filaments for electric lamps, in contact points, and other products where hardness and toughness are demanded. *Wolfram* is an alternative name.
tu′nic [L. *tunica*, tunic]. A coat or membrane.
tu′ni·ca (pl. *tunicae*) [L.]. A tunic.
t. adventitia. The outer connective-tissue coat of an organ where it is not covered by a serous membrane.
t. albuginea oculi. The sclera.
t. albuginea ovarii. The compact connective tissue immediately under the germinal epithelium of the cortex of the ovary.
t. albuginea penis. The fibrous investment of the corpora cavernosa.
t. albuginea testis. The dense fibrous capsule of the testis, deep to the tunica vaginalis propria.
t. dartos. The layers of connective tissue containing smooth muscle in the corium and outer portion of the superficial fascia of the scrotum and penis.
t. externa. The tunica adventitia of a blood or lymph vessel.
t. fibrosa oculi. The sclera and cornea.
t. intima. The inner coat of a blood or lymph vessel; also called *t. interna*.
t. media. The middle coat of a blood or lymph vessel.
t. mucosa. A mucous membrane.
t. muscularis. The muscular coat of certain hollow organs; e.g., the digestive tube.
t. propria mucosae. The connective-tissue coat of a mucous membrane. Syn., *lamina propria*.
t. serosa. The mesothelium and underlying connective tissue forming the visceral and parietal pericardium, pleura, peritoneum, and tunica vaginalis propria testis.
t. uvea. See *t. vasculosa oculi*.
t. vaginalis communis. The internal, middle, and external spermatic fascias of the spermatic cord and scrotum. See Plate 44.
t. vaginalis propria testis. The serous membrane covering the testis and epididymis and lining the serous cavity of the scrotum. See Plate 44.
t. vasculosa lentis. A mesodermal lens capsule in the embryo, vascularized by the hyaloid and annular arteries; the anterior part is the pupillary membrane.
t. vasculosa oculi. The choroid, ciliary body and iris of the eye.
t. vasculosa testis. A layer of loose connective tissue containing many blood vessels, on the inner surface of the tunica albuginea testis.

tu′ning fork. A two-tined metallic fork capable of vibrating at a rate which will produce a definite tone.
tu′na liver oil. Oil from the liver of the tuna fish.
tun′nel [OF *tonnel*]. A narrow enclosed passageway.
carpal t. The space between the flexor retinaculum of the wrist and the carpal bones, through which pass the tendons of the long flexors of the fingers and long flexor of the thumb and the median nerve.
t. of Corti. The triangular canal formed by the pillars of Corti, the base of which corresponds to the membrana basilaris. It extends over the entire length of the lamina spiralis. Also called *canal of Corti*, *tunnel space*.
Tunnicliff, Ruth [American physician, 1876–1946]. Introduced a measles prophylactic known as *Tunnicliff's serum*.

tu·ran·ose (tew·ran·oce, too·rah·noce, tew·ran·oze) A disaccharide yielding on hydrolysis glucose and fructose.

tur'bid [L. *turbidus*, confused]. Cloudy.

tur"bi·dim'e·ter [*turbidus*; G. *metron*, measure]. An instrument for measuring the degree of turbidity of a liquid. —**turbidimet'ric**, *adj.*; **turbidimetry**, *n.*

Parr t. A turbidimeter designed for the determination of sulfur. The source of light is a filament lamp built into the base of the tube containing a suspension of barium sulfate into which the sulfur is first converted.

tur'bi·nate [L. *turbinatus*, cone-shaped]. A turbinate bone. See *concha*, 2. See Table of Bones in the Appendix.

tur'bi·nat"ed [*turbinatus*]. Top-shaped; scroll-shaped, as turbinated bone.

tur"bi·nec'to·my [L. *turbo*, that which whirls around; G. *ektomē*, excision]. Excision of a nasal concha.

tur'bi·no·tome" [*turbo*; G. *tomos*, cutting]. An instrument used in turbinotomy.

tur"bi·not'o·my [*turbo*; G. *tomē*, a cutting]. Incision into a turbinated bone.

Türck, Ludwig [*Austrian neurologist and laryngologist*, 1810–68]. Established laryngoscopy by means of Czermak's laryngoscope. Described the temporopontile tract, called *Türck's bundle*. The direct pyramidal tracts are sometimes called *Türck's column*. Dry laryngitis is called Türck's trachoma.

tur·ges'cence [L. *turgescere*, to swell up]. Swelling.

tur·ges'cent [*turgescere*]. Swollen; tumid.

tur'gid [L. *turgidus*, swollen]. 1. Swollen. 2. Congested; hyperemic.

tur'gor [L., swelling]. Active hyperemia; turgescence.

t. vitalis. The normal fullness of the blood vessels.

Türk, Wilhelm [*Austrian physician*, 1871–1916]. Remembered for his description of agranulocytosis (1907), also called *Türk's disease*. See Türk irritation cell.

tur'key corn. Popular name for corydalis.

Turlington's balsam. See compound benzoin tincture.

tur'mer·ic. See *curcuma*.

turn [L. *tornare*, to turn in a lathe]. 1. Cause to revolve about an axis. 2. Change the position of the fetus so as to facilitate delivery.

Turnbull's blue. See under *stain*.

Turner, Daniel [*English dermatologist*, 1667–1740]. Author of an early textbook in English on dermatology (1714). Introduced a cerate containing calamine, called *Turner's cerate*.

Turner, George Grey (1877–1951). English surgeon and pioneer in the surgery of the esophagus who described local discoloration of the abdominal wall in the flanks as a sign of acute pancreatitis.

turn'ing. See *version*.

turn'key" [AS. *turnian*, *cǣg*]. An instrument formerly used for extracting teeth.

tur·pen'tine [G. *terebinthos*, turpentine-tree]. 1. A concrete or liquid oleoresin obtained from coniferous trees. 2. (*terebinthina*) The concrete oleoresin from *Pinus palustris* and other species of *Pinus*. Yellow-orange, opaque masses of characteristic odor and taste. Freely soluble in alcohol. Contains up to 32% of volatile oil. Occasionally used for local irritant effect. Also called *gum thus*, *gum turpentine*.

acetic t. liniment (*linimentum terebinthinae aceticum*). A rubefacient. Also called *Stokes' liniment*.

Canada t. The liquid oleoresin from the American silver fir, *Abies balsamea*. Commonly used under the name Canada balsam as a mounting medium in microscopy.

Chian t. The oleoresin collected in the island of Chios from the *Pistacia terebinthus*. See *mastic*.

larch t. Venice turpentine.

t. liniment (*linimentum terebinthinae*). Contains 35% of turpentine in resin cerate. Once used for burns. Also called *Kentish ointment*.

t. oil (*oleum terebinthinae*). The volatile oil distilled from turpentine. Colorless liquid soluble in 5 volumes of alcohol. Consists essentially of terpenes, principally varieties of pinene. A local irritant and feeble antiseptic. The rectified oil (*oleum terebinthinae rectificatum*) has been used as a stimulant expectorant in chronic bronchitis and carminative in flatulent colic. Externally rubefacient. Also called *t. spirits*.

Venice t. From *Larix decidua*, yielding about 15% of volatile oil. Also called *larch t.*

wood t. Prepared from stumps, roots, sawdust, etc. Not equivalent to the official substance.

tur'peth [Per. *turbid*]. *Ipomoea turpethum*, a purgative plant resembling jalap, found in Asia.

t. mineral. The yellow subsulfate of mercury once used as an emetic but discontinued because of its toxicity.

tur'peth·in [*turbid*]. 1. A resin obtained from turpeth, similar to that of jalap. 2. A glycoside from the resin of turpeth.

turps. Turpentine oil.

tur"ri·ceph'a·ly. See *acrocephaly*, *oxycephaly*.

tur'tle [corrup. of F. *tortue*]. An aquatic or marine shelled reptile of the order Chelonia.

tusk [AS. *tux*]. A large, projecting tooth.

tus'sal [L. *tussis*, cough]. Pertaining to, or of the nature of, a cough.

tus·sic'u·la [L., cough]. Tussis.

Tus"si·la'go [L., coltsfoot]. A genus of plants of the Compositae. The leaves of *T. farfara*, coltsfoot, and also other parts of the plant have been used as a demulcent in pulmonary affections associated with cough.

tus'sis [L.]. A cough.

t. convulsiva. Whooping cough.

tus'sive [*tussis*]. Pertaining to, or caused by a cough.

tussol. A trade-mark for antipyrine mandelate.

Tuthill's method. See Butler and Tuthill's method.

tutocaine hydrochloride. Trade-mark for the local anesthetic p-aminobenzoyldimethyl-amino-methyl-butanol hydrochloride. The substance is a light ivory-colored, crystalline powder soluble in 4 parts of water. Used for surface anesthesia in 2% solution in the eye, nose, and throat; in 0.5–1.0% solution for urethral use; for infiltration anesthesia, 0.2% solutions are generally used.

Tuttle, James P. [*American surgeon*, 1857–1913]. Described a rectal speculum with electric light and a device for inflation of the rectum; called *Tuttle's proctoscope*. Known for his one-stage operation for rectal cancer; called *Tuttle's operation*.

twang. A nasal quality of the voice.

tweens. Trade-mark for a series of surface-active agents consisting of partial esters of long-chain fatty acids with polyoxyalkylene derivatives of hexitol anhydride. See *spans*.

twee'zers [F. *étui*]. Delicate surgical forceps which are capable of seizing without crushing easily damaged structures, as nerves; they are also used for removing eyelashes or hairs.

twig [AS.]. A small branch, especially a nerve filament, or an arteriole.

twi'light sleep. In obstetrics, an injection of scopolamine and morphine to produce amnesia and analgesia.

twin [AS. *twinn*]. One of two born at the same birth.

allantoido-angiopagous twins. Unequal twins of which one, the omphalosite, is an acardiacus (acardius) hence parasitic on the extraembryonic vessels supplied by the comparatively normal twin, the autosite. Also called *omphaloangiopagous twins*.

conjoined twins. Equal or unequal uniovular twins, united also called *diplopagi*. See Plate 25 for several types of equal conjoined twins.

fraternal twins. Twins resulting from the simultaneous fertilization of two ova. They may be of the same or opposite sex, have different genetic constitution, and each has a separate chorion. Also called *biovular twins, dichorial twins, dissimilar twins, dizygotic twins*.

identical twins. Twins which have developed from single ovum, always of the same sex, have the same genetic constitution, and have the same chorion. Also called *monochorionic twins, uniovular twins, similar twins, monozygotic twins*.

interlocking twins. Those in which the neck of the first child becomes engaged with the head of the second above the superior strait. Such locking is possible when the first is breech and the second vertex presentation. The interlocking makes vaginal delivery virtually impossible.

omphaloangiopagous twins. See *allantoido-angiopagous twins* under *twin*.

unequal twins. Those in which only one of the pair is fully developed.

twinge [AS. *twengan*]. A sudden short, sharp pain.

twin'ning [AS. *twinn*]. Production of like structures by division.

twitch [ME. *twicchen*]. Give short, sudden pull or jerk.

twitch'ing [*twicchen*]. An irregular spasm of a minor extent.

Twort, Frederick William [*English bacteriologist* 1877–1950]. Known for his investigations in ultramicroscopical viruses (1915) Discovered in the same year an ultramicrobi agent causing transmissible lysis of bacteria. This was observed by d'Herelle (1917) and is called *Twort-d'Herelle phenomenon, bacteriophage, phage*. The agent may be separated from the organisms by filtration and is believed to be particulate and capable of multiplication.

tyl'i on (til'ee-on, ty'lee-on) [G *tylē*, swelling]. A craniometric point in the midline on the anterior border of the optic or chiasmatic groove.

ty lo ma (tye lo'muh) [G. *tylos*, callus; *-ōma*, tumor]. A callus.

ty lo sis (tye lo sis) [G making callous] 1 A localized patch of hyperkeratotic skin due to chronic pressure and friction. 2. A form of blepharitis with thickening and hardening of the edge of the lid. —**tylot'ic,** *adj.*

t. palmaris et plantaris. An ectodermal anomaly of the palms and soles producing marked hyperkeratosis. Syn., *keratosis palmaris et plantaris*.

ty"lo ste re sis [G *tylos*, callus *sterēsis*, deprivation]. Removal of callosity

tym"pa nec'to my [G *tympanon*, drum *ektomē*, excision]. Excision of the tympanic membrane.

tym pan'i a. See *tympanites*.

tym pan'i nerve. A visceral sensory and parasympathetic nerve attached to the glossopharyngeal. It innervates the mucosa of the middle ear mastoid air cells, and uditory tube, and sends filaments to th otic ganglion and parotid gland.

tym'pa nism [*tympanon*]. Distention with gas; tympanites.

tym pa ni'tes (tim puh nigh'teez) [*tympanon*]. A distention of the abdominal wall from accumulation of gas in the intestine or peritoneal cavity

tym pa nit'ic [*tympanon*]. Caused by or of the nature of, tympanites.

tym"pa ni'tis [*tympanon*; G. *-itis*, inflammation]. Inflammation of the tympanum otitis media

tym"pa no-mas'toid [*tympanon*; G. *mastoeidēs* like breast]. Relating to the tympanum and the mastoid process or the mastoid cells.

tym"pa no mas"toid i'tis [*tympanon*; *mastoid*; *-itis*]. Inflammation of the tympanum and mastoid cells.

tym pa no sis [*tympanon*; G *-ōsis*, condition] Tympanites.

tym"pa no-sta pe di al. Relating to the tympanum and stapes, e.g., the tympanostapedial syndesmosis between the base of the stapes and the oval window

tym pa no-sym pa thec'to-my [*tympanon*; G *sympathēs*, sympathetic *ektomē*, excision] The removal of the plexus on the medial wall of the middle ear for the relief of tinnitus.

tym"pa-not o-my [*tympanon*; G *tomē*, cutting] Incision of tympanic membrane Syn. *myringotomy*.

tym pa nous [*tympanon*]. Distended with gas relating to tympanites.

tym'pa num [*tympanon*]. The middle ear. —**tympan'ic,** *adj*

tym pa ny [*tympanon*]. 1. Tympanites. 2. A tympanitic percussion note. See tympanitic resonance

Tyndall blue. See *Tyndall effect*.

Tyndall effect. The scattering of light by small particles suspended in liquid or gas. The diffused light often appears blue.

Tyn"dal li za'tion [after John *Tyndall*, English physicist, 1820–93]. Fractional sterilization by the use of steam at atmospheric pressure. A sufficient period is permitted to elapse between treatments to allow spores of microorganisms to germinate.

type [G *typos*, impression]. 1. Imprint; emblem symbol; character 2. A normal average example 3. *In pathology* the grouping of the distinguishing features of fever disease, etc., whereby it is referred to its proper class.

body t. See *somatotype*.

test t. A chart of letters, most commonly the Snellen chart or its modifications, used to test the acuity of central vision.

typh lat'o-ny typh"la to'ni-a [G *typhlon*, blind *atonia*, slackness]. An atonic condition of the wall of the cecum.

typh"lec ta si-a (tif"leck-tay zhuh, -zee uh) [*typhlos*; G *ektasis*, extension]. Dilatation of the cecum.

typh lec'to my [*typhlos*; G *ektomē*, excision]. Excision of the cecum.

typh len"ter i'tis [*typhlos*; G *enteron*, intestine *-itis*, inflammation]. Typhlitis.

typh li'tis [*typhlos*; *-itis*] Inflammation of the cecum. *Obs.*

typh'lo-, typhl- [*typhlos*]. A combining form meaning cecum.

typh'lo-cele. See *cecocele*.

typh"lo-di"cli-di'tis (tif"lo-dye"kli-dye'tis, -dick li-dye tis) [*typhlos*; G. *diklis*, double-folding; *-itis*, inflammation]. Inflammation of the ileocecal valve.

typh"lo em py ma (tif"lo-em pye ee muh, -em pee-ee muh) [*typhlos*; G *empyēma*, abscess] Abscess attending typhlitis or appendicitis

typh"lo-en"ter i'tis. See *typhlitis*.

typh'loid [*typhlos*; G *eidos*, form]. Having defective vision.

typh"lo-lex'i-a [*typhlos*; G *lexis*, word] Word blindness. See *aphasia*.

typh"lo-li thi'a-sis [*typhlos*; G. *lithiasis*, disease of the stone]. The formation of calculi in the cecum

typh"lo-meg'a-ly [typhlon; G. megas, large]. Enlarged cecum.

typh"lo-pto'sis (tif"lo-to'sis, tif"lop-to'sis) [typhlon; G. ptosis, a falling]. Downward displacement or prolapse of the cecum.

typh-lo'sis [G., a making blind]. Blindness.

typh'lo-sole [typhlon; G. solēn, channel]. A longitudinal internal ridge or fold of the dorsal intestinal wall of certain worms parasitic and nonparasitic, such as the common earthworm; also, a fold in the intestinal wall of certain cyclostomes.

typh'lo-spasm [typhlon; G. spasmos, spasm]. Spasm of the cecum.

typh"lo-ste-no'sis [typhlon; G. stenōsis, a being straitened]. Stenosis of the cecum.

typh-los'to-my [typhlon; G. stoma, mouth]. A cecal colostomy.

ty'pho-, typh- [G. typhos, delusion]. A combining form denoting *typhus* or *typhoid*.

ty"pho-ba-cil-lo'sis of Lan-dou"zy' Fulminating septicemia caused by *Mycobacterium tuberculosis*, without the formation of miliary tubercles.

ty"pho-bac'te-rin [typhos; G. baktērion, little staff]. A vaccine prepared from the typhoid bacillus.

ty'phoid [G. typhōdēs, delirious]. 1. An old term for any condition resembling typhus. 2. Typhoid fever; an acute infectious disease caused by *Salmonella typhosa*, which enters the body with food and drinking water and is found in the intestine, the spleen, and the fecal discharges, but may also occur in the various complicating lesions. The principal lesions of typhoid fever are an enlargement of the spleen and the mesenteric lymph nodes. The mucous membrane of the intestine is also the seat of a catarrhal inflammation. After a period of incubation of from two to three weeks, the disease sets in with weakness, headache, vague pains, the tendency to diarrhea, and nosebleed. The temperature gradually rises, being higher each evening than the previous evening, and reaches its maximum (104–105° F.) in from one to two weeks. It then remains at this level for from one to two weeks, and finally sinks by lysis. The pulse is soft and dicrotic, but often not so rapid as would be expected from the high temperature. The tongue is at first coated on the dorsum and red at the tip and edges, but soon becomes dry, brown, and tremulous, and, like the teeth and lips, covered with sordes. There is usually complete anorexia, the bowels are loose, and the stools have a peculiar pea-soup color. At times constipation exists. Slight congestion of the lungs with cough is usually present. On the seventh, eighth, or ninth day the peculiar eruption appears; it consists of small, slightly elevated, rose-colored spots, disappearing on pressure, and coming out in successive crops. Nervous symptoms are prominent in typhoid, and consist of headache, slight deafness, stupor, muttering delirium, carphology, subsultus tendinum, and coma vigil. Complications are frequent, the most important being intestinal hemorrhage, perforation of the bowel, peritonitis, pneumonia, and nephritis. Relapses are fairly common, although second attacks are rare. —**typhoid'al**, adj.

abortive t. A form characterized by abrupt onset of symptoms, which subside quickly, convalescence following in a few days.

afebrile t. Typhoid fever with the usual symptoms, positive diazo and Widal reaction, presence of rose spots, but no increased temperature.

ambulatory t. Typhoid in which the patient does not take to his bed.

sudoral t. Typhoid fever accompanied by profuse sweating and great prostration.

t. nodules. Characteristic lesions found in the liver after fatal typhoid.

t. vaccine (*vaccinum typhosum*). A sterile suspension of killed typhoid bacilli (*Salmonella typhosa*) of a strain selected for high antigenic efficiency. The vaccine contains not less than 1,000,000,000 typhoid organisms in each cubic centimeter.

walking t. See ambulatory *t.*

ty"pho-ma-ni'a [G. typhos, delusion; mania, madness]. The lethargic state, with delirium, sometimes observed in typhus, typhoid, and other fevers.

ty"pho-pneu-mo'ni-a [typhos; G. pneumonia, disease of the lungs]. Pneumonia concurrent with typhoid fever.

ty'phus [typhos]. A group of infectious diseases caused by *Rickettsia prowazekii*. The term is commonly applied to classic epidemic typhus or murine typhus.

Brill's t. See recrudescent *t.*

canine t. See Stuttgart disease.

classic epidemic t. An epidemic type caused by *Rickettsia prowazekii*, var. *prowazekii*, and characterized by violent headache, a macular or papulomacular rash, neurological symptoms, and a high fever ending by crisis in 10–14 days. The disease has occurred in the Orient, Russia, southern and central Europe, Africa, Mexico, and Central and South America. Also called *camp fever, classic t., European t., fever, famine fever, hospital fever, jail fever, ship fever, t. fever, war fever, morbus hungaricus, epidemic t., European t., Fleck t., louse-borne t.*

endemic t. See murine *t.*

epidemic t. See classic epidemic *t.*

epidemic t. vaccine. See Cox vaccine. See also Castañeda vaccine.

European t. See classic epidemic *t.*

flea t. See murine *t.*

Fleck t. See classic epidemic *t.*

Kenya t. See *tick-bite fevers of Africa* under *fever*.

louse-borne t. See classic epidemic *t.*

Malayan t., Malayan scrub t. See tsutsugamushi disease.

Mexican t. *Murine typhus occurring in Mexico.*

mite-borne t. See tsutsugamushi disease.

murine t. A relatively mild, acute, febrile illness of 9–15 days' duration caused by *Rickettsia prowazekii*, var. *mooseri*, characterized by headache and macular rash, found throughout the world; a natural infection of rats, and sporadically transmitted to man by the flea. Case-fatality rate is about 2 per cent. Also called *endemic t., urban t., shop t., flea t., rat t.*

Nigerian t. See *tick-bite fevers of Africa* under *fever*.

North Queensland tick t. A rickettsial disease probably transmitted by a tick. The principal symptoms are malaise and headache. The fever may be either continuous or intermittent, and is often accompanied by a rash.

rat t. See murine *t.*

recrudescent t. *A relatively mild form of classic* epidemic typhus, first described by Nathan E. Brill among east-European immigrants (1910) occurring years after initial infection by *Rickettsia prowazekii. It is postulated that the infection is* latent during the interval. Patients with Brill's disease may thus become foci for the epidemic form. Also called *sporadic t.*

rural t. See tsutsugamushi *disease*.

São Paulo t. *A disease endemic in São Paulo*, Brazil, associated with tick bites and now known to be identical with Rocky Mountain spotted fever due to *Rickettsia rickettsii*.

scrub t. See tsutsugamushi disease.

sporadic t. Recrudescent *t.*

Sumatran (mite) t. See tsutsugamushi *disease*.
tropical t. See tsutsugamushi *disease*.
urban t. See murine *t.*

typ'i-cal [G. *typikos*, impressionable]. 1. Constituting a type or form for comparison. 2. Illustrative. 3. Complete.

ty'ping [G. *typos*, impression]. 1. The determination of the specific blood group. 2. The determination of the specific type into which certain bacteria (*e.g.*, *Diplococcus pneumoniae*) have been subdivided.
blood t. The method used to determine to which blood group an individual belongs. This consists of matching the unknown blood cells with known serum, one serum containing α agglutinin for type A cells, and the other serum containing β agglutinin for type B cells. If the corresponding agglutinogen is present on the unknown cells, the red cells will clump together and can be observed under a microscope.

ty'po-scope [*typos*; G. *skopein*, to examine]. A small device to exclude extraneous light, for the use of cataract patients and amblyopes in reading.

ty"ra-mine (tye"rah-meen, tirr"ah-, tye-ram'een, -in, -il). *p*-Hydroxyphenyl-ethylamine. $HOC_6H_4CH_2CH_2NH_2$. An amine present in ergot and formed in putrefied animal tissue; also prepared synthetically. Syn., *tyrosamine*.
t. hydrochloride. White, crystalline powder soluble in water; used as a vasoconstrictor and heart stimulant in shock, post-partum hemorrhage; occasionally used to stimulate the uterus in labor; stimulates the respiratory center. Dose, 0.02–0.06 Gm. (⅓–1 gr.).

tyr'an-nism [G. *tyrannos*, tyrant]. Cruelty of morbid inception, of which sadism is an erotic variety.

ty-rem'e-sis (tye-rem'i-sis) [G. *tyros*, cheese; *emesis*, vomiting]. The vomiting of caseous or curdy matter; often seen in infants.

ty'ro-, tyr- [*tyros*]. A combining form meaning *cheese* or *cheeselike*.

ty"ro-ci'din, ty"ro-ci'dine. A component of tyrothricin.

Tyrode solution. See under *solution*.

ty-rog'e-nous (tye-rodj'i-nus) [*tyros*; G. *genesthai*, from *gignesthai*, to be produced]. Produced by or in cheese.

Ty-rog'ly-phus (tye-rog'li-fus) [*tyros*; G. *glyphein*, to carve]. A genus of sarcoptoid mites which usually infest dried vegetable products, cheese, and dead or living plants. Occasionally they produce a temporary pruritus which is named by the occupation of the host. *T. farinae* causes grocer's itch; *T. siro* causes vanillism among handlers of vanilla pods, and *T. longior* causes copra itch and grocer's itch.

ty'roid [G. *tyrōdēs*, like cheese]. Cheeselike.

tyrosamine. Tyramine.

ty'ro-sin-ase (ty'ro-sin-ace, -aze, tirr'o-, tye-ro'sin-, tye-ros'in-) A copper-containing enzyme found in plants, molds, crustacea, mollusks, and some bacteria. In the presence of oxygen, it causes the oxidation of mono- and poly-phenols with the introduction of —OH groups and/or formation of quinones. May be identical with monophenol oxidase and perhaps with polyphenol oxidase.

ty'ro-sine (ty'ro-seen, -sin, tirr'o-, tye-ro'sin). *p*-Hydroxyphenyl alanine. $p\text{-}HO.C_6H_4CH_2.CH(NH_2)\text{-}COOH$. An amino acid widely distributed in proteins, particularly in casein. It is closely related to, and the probable precursor of, epinephrine, thyroxin, and melanin.

ty"ro-sin-o'sis [G. *tyros*, cheese; -*ōsis*, condition]. Excretion in the urine of unusual amounts of tyrosine and of its first oxidation products.

ty"ro-si-nu'ri-a [*tyros*; G. *ouron*, urine]. The presence of tyrosine in the urine.

ty'ro-syl. The univalent radical, $p\text{-}HOC_6H_4CH_2\text{-}CH(NH_2)CO\text{—}$, of the amino acid tyrosine.

ty"ro-thri'cin. An alcohol-soluble, water-insoluble polypeptide mixture isolated by Dubos from *Bacillus brevis* and consisting of the antibiotic substances gramicidin and tyrocidine; used as a bactericide in infections due to Gram-positive organisms. Applied topically in a concentration of 50 mg. per 100 cc. of sterile distilled water.

ty"ro-tox'i-con [*tyros*; G. *toxikon*, poison]. A [illegible] poison claimed to be present in some specimens of cheese.

Tyrrell, Frederick [*English physician and ophthalmologist*, 1797–1843]. Devised a slender hook used in eye surgery, especially for removing a piece of iris in iridectomy; called *Tyrrell's hook*.

Tyson's glands. See under *gland*.

U

U Chemical symbol for uranium.

U. Abbreviation for *unit*.

u'ber-ty [L. *ubertas*, fertility]. Fertility; productiveness. —**uberous**, *adj.*

u-cam'bin, u-kam'bin (yoo-kam'bin, oo-kam'bin). An African arrow-poison with the effects of strophanthin.

ud'der [A.S. *ūder*]. The mammary gland of the cow and other animals.

Udránszky, László von [*Hungarian physiologist*, 1862–1914]. Remembered for his tests for bile acids and tyrosine, called *Udránszky's tests*. See foam *test*.

Uffelmann's test. See under *test*.

Uhlenhuth, Paul Theodore (1870–) German bacteriologist, discoverer of a method for identification of human and animal blood (see serum *test*). He devised a treatment for spirochetal jaundice, for syphilis with organic arsenic, and for tropical diseases with organic antimony preparations, and also prepared serums against foot-and-mouth disease and hog cholera.

u-kam'bin. See *ucambin*.

u'la [G. *oulon*, gum]. See *oula*.

u-leg"y-ro-nes'the-sis (yoo-leg"ih-ro-nes-thee'sis) [*oulon*; G. *aponesthēsis*, physical pain and [illegible] irritation]. Irritation or sensory sensations in the gums. *Obs.*

u"la-tro-phi'a, u-lat'ro-phy [*oulon*; G. *atrophia*, want of food]. A shrinkage and recession of the gingivae. *Obs.*

ul'cer [L. *ulcus*, sore]. An interruption of continuity of a surface, with an inflamed base. See *Plate* [illegible]
Aden u. See tropical *u.*
amputating u. A penetrating ulcer encircling a part, such as a toe, leading ultimately to loss of the distal portion, as in yaws.
anastomotic u. A jejunal ulcer which most commonly follows a gastroenterostomy.
Annam u. See tropical *u.*

aphthous u. Canker sore of the mouth. The etiology is diverse.

arterial u. An ulcer of a part or surface due to arterial occlusion.

atheromatous u. Ulcer of the intima of the aorta or other artery due to breakdown of an atheromatous plaque.

atonic u. One which shows little or no disposition to heal.

u. atrophicum u. Chancre.

Bahia u. See *leishmaniasis americana*.

Bauru u. See *leishmaniasis americana*.

callous u. See hyperkeratotic u.

carious u. One with superimposed gangrene.

chiclero u. See *leishmaniasis americana*.

chrome u. One due to the action of chrome salts; seen in those who work with such material.

cinchophen u. A peptic ulcer produced experimentally in dogs by large oral doses of cinchophen (300 mg. per kg. given daily will cause a chronic ulcer in three weeks, usually in the pyloric region). Cases of gastric ulcer have been discovered in man with cinchophen poisoning.

contact u. A rare superficial ulcer on one or both sides of the larynx, usually on the arytenoid, caused by abuse of the voice or excessive smoking.

coral u. That produced by silica-headed darts from coral, injected into wounds in coral lacerations. The wound becomes secondarily infected, and a painful ulcer appears, accompanied by enlargement of neighboring lymph nodes, cellulitis, and lymphangitis.

crateriform u. A rodent ulcer of conical form, resembling a furuncle with fibrotic border.

creeping u. One which slowly extends peripherally, sometimes with central healing. Syn., *serpiginous u.*

Curling's u. A peptic ulcer of duodenum or stomach which is associated with extensive burns of the body surface.

decubitus u. A bedsore; that is, ulceration of skin and underlying tissue from prolonged pressure, seen especially in the aged or in paralysis.

diabetic u. Ulcer associated with diabetes mellitus.

diphtheritic u. Specifically an ulcer due to action of *Corynebacterium diphtheriae* or to detachment of a diphtheritic membrane. Also applied loosely to an ulcer on or about which is a fibrinous exudate. One of the forms of tropical ulcer appears to be due to *C. diphtheriae*.

duodenal u. A chronic ulcer usually in the anterior wall of the duodenum, near the pylorus. Syn., *peptic*

endemic u. One which is frequent in certain regions, as tropical ulcer.

erethistic u. One which is exceedingly tender such as may occur in the anus or around the fingernails.

esophageal u. A rare type of peptic ulcer found in the lower third of the esophagus.

exuberant u. One which has an excess of granulation tissue growing from the base.

fistulous u. An ulcer about the orifice of a fistula.

follicular u. An ulcer due to breakdown of a lymphatic aggregate, such as a solitary nodule of the ileum.

fungous u. See exuberant u.

funnel u. An ulcer of either of two types: in one the axis of the funnel is perpendicular to the surface of the mucosa and a bleeding or thrombosed blood vessel may be found at the apex of the funnel; in the other the axis of the funnel tends to parallel the lesser curvature, and the ulcer is characterized by an elevated, undermined margin on the cardiac side and a flat margin on the pyloric side.

Gaboon u. A tropical ulcer resembling syphilitic ulcer.

gastric u. One affecting the mucosa of the stomach. May be a peptic ulcer or due to hemorrhagic erosion.

Hunner's u. A chronic ulcer of the urinary bladder of unknown etiology found frequently near the vertex and in association with interstitial cystitis; also called *elusive u.* See also interstitial *cystitis*.

hyperkeratotic u. A chronic, nonmalignant, cutaneous ulcer with hyperkeratosis of the margin. The cornified epithelium must be removed before healing can take place. Also called *callous u.*

hypertrophic u. A chronic nonmalignant skin ulcer with an excess of granulation tissue; also called *proud flesh*.

indolent u. One with little tendency to heal, often accompanied by fibrosis of the base and margins with scanty granulation tissue.

inflamed u. One accompanied by acute inflammation.

irritable u. See erethistic u.

Jacob's u. A rodent ulcer of the eyelid.

Jeddah u. See *oriental sore*.

jejunal u. See marginal u.

kissing u. One which appears to be due to transmission from one opposing part to another, or due to pressure of opposing parts.

leprous u. One which occurs in leprosy, as in the nares or more often in the skin, due to the breakdown of a cutaneous lesion.

lupoid u. An ulcer of the skin with a resemblance to lupus vulgaris.

Mann-Williamson u. Experimental peptic ulcer occurring in dogs after gastrojejunostomy or adrenalectomy.

marginal u. An ulcer of the jejunum along the stoma of a gastrojejunostomy, due to erosive action of acid gastric juice upon the jejunum.

Marjolin's u. One due to malignant change in an indolent ulcer or in a scar, especially a scar from an old burn or roentgen-ray treatment.

Mozambique u. Tropical ulcer.

neurogenic u. One due to trophic disturbances following interruption of efferent nerve fibers plus the factor of external trauma.

neurotrophic u. Neurogenic ulcer.

papillomatous u. A type found in the stomach of rats affected with nutritional gastritis, occurring in small groups as small circular areas with a prominent rough circumference.

penetrating u. One which extends more deeply than the surface originally affected, as a peptic ulcer penetrating into muscular coats.

peptic u. One due in part at least to digestive action of gastric juice, affecting the gastric or duodenal mucosa, or the mucosa of stomach and jejunum associated with gastrojejunal anastomosis.

perforating u. One which extends through all coats of a viscus.

phagedenic u. One accompanied by extensive necrosis or gangrene of neighboring tissues.

phlegmonous u. One accompanied by acute exudative inflammation.

rodent u. See basal-cell *epithelioma*.

round u. A peptic ulcer of the stomach.

saddle u. A peptic ulcer which has elongated so that it partially encircles the lesser curvature of the stomach.

Saemisch u. An infected ulcer of the cornea.

serpiginous u. See creeping u.

stercoraceous u. An ulcer of the skin which is contaminated by feces. Obs.

stomal u. See marginal u.

tanner' u. A chronic ulcer occurring on the hands of tanners.

Tashkend u. See *oriental sore*.

trophic u. One due to disturbances of nutrition of part, such as arlcose ulcer

tropical u A cutaneous ulcer prevalent in tropical regions, not due to syphilis, yaws, leishmaniasis, or bookworm. M y be acute, chronic, or phagedenic. Various microorganisms are associated with different ulcers in different regions, *Corynebacterium diphtheriae* being found most frequently Syn., *Vaga sore, Aden u. Annam u., Mozambique u., Yemen u.*

vagotomy u. An ulcer in the mucosa of the stomach along the lesser curvature in the pyloric antrum following vagotomy Such ulcers have been produced routinely in rabbits.

varicose u. A chronic ulcer of skin due largely to malnutrition of the skin as result of varicose veins, especially of the leg. Also called *leg u.*

venereal u. Chancre or chancroid.

Yemen u. Tropical ulcer

ul'cer ate [L. *ulcerare*, to make sore]. Become converted into, or affected with, an ulcer

ul"cer tion [L. *ulceratio* from *ulcerare*]. The process of formation of an ulcer

cutis u. A chronic or subacute ulceration of the cutis and underlying subcutaneous tissue of the upper lower extremity caused by *Mycobacterium ulcerans*.

ul'cer a"tive [*ulcerare*]. Pertaining to, or characterized by ulceration

ul"cer-o-mem'bra nous [L. *ulcus*, sore; *membrana*, membrane] Pertaining to, or characterized by ulceration, and accompanied by fibrinous inflammation with accompanying formation of pseudomembrane.

ul'cus (pl. *ulcera*) [L.]. An ulcer

u. cancrosum. ( ) Cancer (b) Rodent ulcer

u. cruris. Indolent ulcer of the leg.

u. exedens. Old term for rodent ulcer

u. induratum. Chancre.

u. molle. Chancroid.

u. phagedaenicum. Phagedenic ulcer

u rodens. Rodent ulcer

u. serpens. A irritating, purulent ulcer of th cornea, often caused by pneumococci It may lead to perforation scarring with concomitant loss of vision

u. tuberculosum. Lupus vulgaris.

u. venereum. (a) Chancre. (b) Chancroid.

u. ventriculi. A gastric ulcer

vulvae acutum u. A condition of ovoid erosions and ulcers on the female external genitalia, whose cause is not definitely known, although *Bacillus crassus* has been isolated from some cases This condition probably belongs in the group of atypical erythema multiform

u"le-gy'ri [G *oulē*, scar; *gyros*, circle]. Convolutions in the cortex of the brain, made irregular by scar formation.

ulcron, ulirон. Trade-mark for dimethyldisulfanilamide, $NH_2C_6H_4SO_2NH.C_6H_4SO_2N(CH_3)$ used like sulfanilamide, particularly in the treatment of gonorrhea.

u ler"y the ma [G *oulē*, scar; *erythēma*, redness]. An erythematous disease marked by the formation of cicatrices.

u. centrifugum. Lupus erythematosus.

u. ophryogenes. Ulerythema of the eyebrows with loss of hair

u. sycosiforme. Keloid sycosis.

u-let'ic [G. *oulon*, gum]. Pertaining to the gums.

ulirон. See *ulcron*.

u-li'tis [*oulon*; G *-itis*, inflammation]. A general inflammation of the gums, as distinguished from simple gingivitis, which is confined to the margins of the gums.

ul'mus [L., elm]. The inner bark of *Ulmus fulva* (slippery elm) mucilaginous and demulcent, has been used mainly in folk medicine.

ul'na [L., elbow]. The bone on the inner side of the forearm, articulating with the humerus and the head of the radius bove and with the [illegible] below See Table of Bones in the Appendix. See Plate 1 —**ulnar** *adj.*

ul na-car'pe-us. The flexor carpi [illegible] muscle.

u loc' ce (yoo-lock'ak-see) [G. *oulon*, gum; [illegible], badness]. Ulcerative inflammation of the gum.

u"lo-der"ma ti'tis [G. *oulē*, scar; *derma*, skin; *-itis*, inflammation]. Inflammation of the skin with formation of cicatrices. *Rare*.

u"lo-glos-si'tis [G *oulon*, gum; *glōssa*, tongue; *-itis*]. Inflammation of gums and tongue.

u'loid [G *oulē*, scar *eidos*, form]. Scarlike.

u"lor rha gi-a [G. *oulon*, gum; *rhēgnynai*, to burst forth]. Bleeding from the gums.

u lo sis [G. *oulē*, scar; *-ōsis*, condition]. Cicatrization.

U"lo so ni-a par"vi-cor'nis. A beetle which may act as an intermediate host of *Hymenolepis diminuta*, the rat tapeworm.

u lot'ic [*oulē*]. Pertaining to, or tending toward cicatrization.

u lot'o-my [G. *oulon*, gum; [illegible] cutting]. Incision into the gum.

ultex. Trade name of bifocal lens ground from one piece of glass.

ul"ti mo bran'chi al (ul ti-mo-brang'kee-al) [L. *ultimus*, last G. *branchia*, gills]. Pertaining to the caudal pharyngeal or branchial pouch derivatives. See *ultimobranchial bodies* under *body*.

ul"ti mo gen'i ture [*ultimus*; L. *genitura*, birth]. The state of being the last born. —**ultimogenitary** *adj*

ul'ti mum mor'i-ens. Th right atrium, said to be the last part of the body to cease moving in death; literally the last dying.

ul'tra- [L., beyond]. A prefix denoting beyond, excess

ul"tra brach"y-ce phal'ic (ul truh-brack' [illegible]) [*ultra*; G. *brachys*, short *kephalē*, head] Having an extremely high cephalic index.

ul"tra cen'tri fuge [*ultra*; G *kentron*, center; L. *fugere*, to flee] A high-speed centrifuge, developed by Theodor Svedberg, which will produce centrifugal fields up to several hundred thousand time the force of gravity This centrifuge permits optical observation of the sedimentation of substances in solution, contained in small cells; used for the determination of particle sizes in proteins, viruses, etc., and for the analysis of such materials in complex fluids as blood plasma. —**ultracentrif'ugal,** *adj*

ul"tra fil'ter [*ultra*; ML. *filtrum*, felt]. A filter which will separate colloidal particles from their dispersion mediums and from crystalloids [illegible] times called *jelly filter*

ul"tra fil tra'tion [*ultra*; *filtrum*]. 1. The removal of all but the smallest particles, such as viruses by filtration. Either positive or negative pressure may be employed. 2. A method for the separation of colloids from their dispersion mediums and dissolved crystalloids by the use of ultrafilters

fractional u. Separation of colloidal particles into certain magnitude ranges by means of ultrafilters of varied pore size.

ul"tra mi cro-scope [*ultra*; G. *mikros*, small; *skopein*, to examine] A microscope for examination, by powerful side illumination, of objects not apparent with ordinary microscopes. Also called

ult microscope. —ultramicroscop'ic, adj.; ultramicros'copy n.

ul"tra phag"o-cy to'sis. Phagocytosis of colloidal particles.

ul"tra red' [ultra; AS. read]. Radiations of shorter wavelength than the red of the visible spectrum.

ul"tra-son'ic [ultra; L. sonus, sound]. Pertaining to sounds with frequency above that of audible sounds, that is, above 20 kilocycles. Ultrasonic waves of moderate intensity are being applied in such fields as dermatology, neurology and genetics. Waves of high intensity have been used for the destruction of cells. —ultrasound' n.

ul"tra son'o gram. A record of ultrasonic waves or their echoes. See ultrasonoscope.

ul"tra-son'o-scope. An instrument used to detect and locate the position of regions of varying density in medium by recording the echoes of ultrasonic waves reflected from these regions. The ultrasonic waves, modulated by pulsations, are introduced into the medium usually by means of piezoelectric transducer In neurology the use of this instrument has been suggested for the detection of subcortical brain tumors.

ul"tra-struc'ture [ultra; L. structura, structure]. The arrangement of ultramicroscopic particles.

ul"tra-vi'rus [ultra; L. virus, slimy liquid]. A virus which is filtrable in an ultrafilter

um'ber A native ferric hydroxide containing manganese dioxide and silicate; occurs as dark brown to brownish red powder Used as pigment.

burnt u. A reddish brown pigment obtained by heating umber

um"bil-ec'to-my [L. umbilicus, middle; G ektomē, excision]. 1. Excision of the umbilicus 2. An operation for the relief of umbilical hernia.

um bil'i-cate, um bil'i-ca"ted [umbilicus]. Having depression like that of the navel.

um-bil"i-ca tion [umbilicus]. 1. A depression like the navel. 2. The state of being umbilicated.

um bil'i-cus, um"bi li'cus [L.]. The navel; the round, depressed cicatrix in the median line of the abdomen, marking the site of the aperture which in fetal life gave passage to the umbilical vessels. See Plates 4, 41 —umbil'ical, adj

um'bo (pl. umbos, umbones) [L., boss]. A boss or bosselation; any central convex eminence as the umbo of the tympanic membrane.

um-bras'co-py See retinoscopy.

umbrathor Trade-mark for 25% suspension of thorium oxide used as radiopaque medium for the gastrointestinal tract.

u balance. See imbalance.

u ci-a [L., ounce]. Ounce.

un ci form [L. uncus, hook; forma, form]. Hook shaped

un ci form. Old name for the hamate. See Table of Bones in the Appendix.

Un"ci-na'ri a [L. uncinus, hook]. A generic name formerly applied to hookworms.

un ci-na-ri'a-sis. See ancylostomiasis.

un ci-nate [uncinus]. Hooked.

un ci-nate fit. Episodic olfactory hallucinations associated with peculiar dreamy state and smacking movements of the lips, due to irritative lesions of the uncus. It is generally idiopathic, and may be associated with gross lesions of the uncus and hippocampus.

n ci-pi"si for'mis. An occasional band of muscle running from the pisiform to the hamulus of the hamate.

un-con scious [AS. un-, not; L. conscius, knowing something with another]. 1 I psychiatry pertaining to behavior or experiences not controlled by the conscious ego. 2. Insensible in state lacking conscious awareness and with reflexes abolished. —uncon'sciousness, n.

un-con scious. That part of the personality not in the immediate field of awareness.

unc tion [L. unctio, an anointing]. 1. The act of anointing. 2. An ointment.

unc'tu ous [L. unctus, from unguere, to anoint]. Greasy; oily

un cus [L.]. 1. A hook. 2. The hooklike anterior extremity of the hippocampal gyrus.

un-dec yl. The univalent organic radical $CH_3(CH_2)_{10}$— Syn., hendecyl.

un-dec"y-len'ic ac'id (un-des"i-len'ick, -lee nick) CH_2:CH·$CH(CH_2)_8$·COOH. An unsaturated acid melting at 24° C. used therapeutically generally in combination with one or more of its salts (copper sodium, or zinc), as fungicide.

un"der weight' [AS. wiht]. A condition of the whole body which is characterized by deficiency of body tissue, lack of fat being the most obvious. Usually the term is applied to persons whose body weight is at least 10% less than that of the average for persons of the same age sex, and height.

Underwood, Michael [English physician and pediatrician, 1737 1820]. Wrote an early description of infantile poliomyelitis (1789) Scleroma of the newborn is sometimes called Underwood' disease.

un-dine (un-deen un dyne) [L. unda, wave]. A glass container for irrigating the eye.

un din ism [unda]. Old term for a condition in which water urine, or micturition arouses sexual thoughts or desire.

un-do'ing. I psychopathology, defense mechanism, particularly characteristic of the obsessive-compulsive reaction, in which the patient performs symbolic act, often repeatedly to undo or annul in some magic way the possible effects of his unrecognized impulses or of some act for which he has unconscious guilt.

un du lant fe ver Brucellosis.

un"du la'tion [L. undulatus, undulated]. A wavelike motion; fluctuation.

jugular u. The venous pulse.

respiratory u. The variations in the blood pressure due to respiration.

un'du la-t ry [undulatus]. Moving like waves; vibratory

ung. Unguentum, ointment.

unguentine. Trade-mark for an ointment containing anhydro-p-hydroxy-mercuri-m-cresol, zinc ide alum compound, phenol, and oils of eucalyptus and red thyme in petrolatum and stearate base used as an antiseptic dressing for minor burns, cuts, bruises, and skin irritations.

u guen'tum [L.]. Ointment. Abbreviated, ung.

un'guis (pl. ungues) [L., nail]. A fingernail or toenail. —ungual, adj.

u. incarnatus. Ingrowing nail.

un gu la [L., claw]. 1 An instrument for extracting dead fetus. 2. A hoof; a claw —ungulate adj

Un"gu-la'ta [ungula]. An order of mammals characterized by being herbivorous and having hoofs.

un health'y [AS. un- not; hælth]. 1 Lacking health; sickly 2. Injurious to health.

u ni- [L. unus, one]. A combining form meaning one.

u ni-ar tic'u-lar [unus; L. articulus, joint]. Pertaining to a single joint.

u"ni-cam'er-al, u"ni-cam er-ate. Having only one cavity or chamber

UNICEF United Nations International Children Emergency Fund.

u"ni-cel'lu lar [unus L. cellula, small storeroom]. Composed of but one cell.

u ni-cen'tral [unus; L. centrum, center]. Having single center of growth.

u″ni-cor′nous [unus; L. *cornu*, horn]. Having one horn or cornu.

u″ni-cus′pid, u″ni cus pi-date [unus; L. *cuspis*, point]. A tooth with but single cusp or point. —**unicus pid unicus′pidate** *adj*

unidigin. A trade-mark for *digitalis*.

u″ni fa mil′i al [unus; L. *familia*, family]. Pertaining to single family

u″ni fi′lar [unus; L. *filum*, thread]. Connected by one thread; furnished with one filament.

u″ni grav′i-da [unus; L. *gravidus*, pregnant]. A woman who is pregnant for the first time Also called *primigravida*.

u″ni lat′er al [unus, L. *lateralis*, of side]. Pertaining to, or affecting, but one side.

u″ni lo′bar [unus; G. *lobos*, lobe] Having one lobe.

u″ni loc′u lar [unus; L. *loculus*, small place]. Having but one loculus or cavity

u″ni nu′cle ar [unus; L. *nucleus*, kernel]. Having but single nucleus.

u″ni oc u lar [unus, L. *oculus*, eye]. 1 Pertaining to, or performed with, one eye. 2. Having only one eye.

un′ion [L. *unio*, union]. A joining; specifically the consolidation of bone fractures.

immediate u. That by first intention.

vicious u. The healing of fracture in improper position, with resulting deformity

u″ni-o vul [unus; L. *ovum*, egg]. Formed from one ovum; uniovular

u″ni ov′u lar [unus; ovum] Concerning, or derived from, one egg, as uniovular twins.

u nip ra [unus; L. *parere*, to bring forth]. A woman who has borne but one child.

u″ni par′i-ens. Uniparous.

u nip′ rous [unus; parere]. Bearing one offspring, or producing one ovum, at time.

u″ni po′lar [unus; L. *polus*, pole]. 1 Having but one pole or process. 2. Pertaining to one pole

u′nip′ tent. Giving rise to only on cell or tissue type said of embryonic or multiplying cells —**unipo′tency n. unipoten′tial,** *adj*

u″ni sex′u al [unus; L. *sexus*, sex]. Provided with the sexual organs of one sex only

u′nit [L. *unitas*, from *unire*, to unite]. 1. A single thing or person or group considered as whole, as hospital unit. 2. A standard of weight or measurement. Abbreviated, U

angstrom u. See *angstrom*

antitoxin u. The amount of antitoxin which neutralizes definite number of minimum lethal doses, generally 100, of given toxin.

Board of Trade u. (*B T U*) A unit of energy used in Britain equivalent to one kilowatt hour 3,600,000 joules, or 3 415 American B.T U

Bodansky u. The amount of phosphatase required to liberate 1 mg. of phosphorus as the phosphate ion from sodium beta-glycerophosphate substrate during the first hour of incubation at 37° C. and pH 8.6.

Bourquin-Sherman u. The amount of riboflavin which, when fed daily to rats, will give an average gain of 3 Gm. week during test period of 4 to 8 weeks in excess of gains in control rats without riboflavin.

British thermal u. (B.Th.U in British usage, American usage is B.T U I Britain, B.T U means Board of Trade unit.) The heat required to raise one pound of water 1 F One B.T U is equivalent to 1,054 joules, 0.000293 kilowatt hours, 777 7 foot-pounds, 0.2520 large calories.

BTU B.T U., Btu, B.Th.U British thermal u.

cat u. The amount of digitalis which will kill cat when injected intravenously calculated per kilogram of the animal.

centigrade heat u. Th quantity of heat required to increase the temperature of 1 lb of water 1 C. at atmospheric pressure; approximately 454 small calories. Abbreviated CHU.

C.G.S. u. A unit in the centimeter-gram-second system.

clearing u. *In U S. Army medicine*, medical organization establishing one or more clearing stations. It receives and classifies casualties, gives them emergency medical treatment, if they are fit, returns them to duty or prepares them for further evacuation.

clinical u That amount of substance, glandular extract, which will produce desired response in patient. Abbreviated, C.U

cobalt-60 cancer teletherapy u. A machine for high-energy radiation t distance, using cobalt-60 in the treatment of cancer in the way that -rays are now used.

Collip u. One denoting a dose of parathyroid extract calculated as 1/100 of the amount of calcium necessary to cause 5-mg. rise in the calcium content of 100 cc. of blood after 15 hours in dog weighing 20 kg.

Cooke pollen u. See protein nitrogen

Cornell u. f riboflavin. One Cornell unit of riboflavin = 1γ of riboflavin, defined by the growth effect on chicks.

Dam u. of vitamin K. 10 Dam units of vitamin K = 1 Thayer-Doisy unit.

electric u. One for measuring the strength of an electric current. Three different systems of electric units are used the electromagnetic, the electrostatic, and the ordinary or practical units. The commonly used practical units are the ampere unit of current, the volt or unit of electromotive force, the ohm or unit of resistance, the coulomb or unit of quantity the farad or unit of capacitance, and the watt or unit of power

electromagnetic units. Fundamental electric units expressed in the electromagnetic system; they are usually characterized by adding ab- to the unit, such as abampere, abvolt. Units measured in the electromagnetic system are 3 × 10[10] times as large as electrostatic units

electrostatic units. Fundamental electric units expressed in the electrostatic system; they are usually characterized by adding stat- to the unit, such as statampere, statvolt.

u. See roentgen u.

Florey u. See Oxford u.

flotation u See Svedberg flotation u.

gravitational u. One gravitational unit equals one pound of force divided by one pound of mass. Abbreviated, G.

heat u. The amount of heat required to raise the temperature of one kilogram of water from 0° to 1 C.; it is technically called calorie.

hypothetical units. The ultimate vital units of protoplasm, speculatively regarded as molecular aggregates, ultramicroscopic in size, usually endowed with the properties of growth and reproduction, and any other properties depending upon the demands required of them. Also called *organic molecules, physiologic units, gemmules, pangenes, plastidules, micellae, biogens, idioblasts, zymes, plasomes, biophores, pangenes, idiosomes, somacules, chondria, bioblasts, protomeres* [illegible]

immunizing u. Antitoxin u. Abbreviated, I U

international u. An arbitrarily defined weight of an international standard of reference adopted by the Permanent Commission on Biological Standardization of the League of Nations Abbreviated, I.U.

International Units of vitamins. See vitamin A, vitamin B vitamin C, vitamin D.

Jukes u. See Bourquin-Sherman u.

Kienböck's photometric u. See Robert Kienböck.

Lovibond u. One Lovibond unit of vitamin A = 205 international (or U.S.P.) units.

M.K.S. units. Meter-kilogram-second system of fundamental units mostly used by engineers.

motor u. The axon of an anterior horn cell, or the motor fiber of   cranial nerve, together with the striated muscle fibers innervated by its terminal branches. The proportion of muscle fibers innervated (innervation ratio) varies greatly muscles carrying out skilled movements having the lowest ratio.

mouse u. That amount of estrus-producing substance which, when injected into   spayed mouse, will produce   characteristic change in the vaginal epithelium also called *Thayer Doisy u.*

Noon pollen u. Th quantity of pollen extract which contains 0.00001 mg. of total nitrogen.

Oslo u. A unit of vitamin D; 1.66 Oslo units are equal to one international unit.

Oxford u. The minimum quantity of penicillin which, when dissolved in 50 cc. of   meat broth, is sufficient to inhibit completely the growth of   test strain of *Micrococcus*   ureus. Syn. *Florey u.*

physiologic u. The ultimate vital unit, as named by Herbert Spencer See *hypothetical units* under unit.

proviral u. One related to early stages of intracellular virus multiplication   number of such units surrounded by   matrix comprise   fully formed virus particle.

protein nitrogen u. The quantity of pollen extract which contains 0.00001 mg. of protein nitrogen. Syn. Cook pollen u.

rat growth u. The amount of vitamin A necessary to maintain   weekly gain of 3 Gm. in test rats previously depleted of vitamin A. Also called *Sherman-Munsell u.*

roentgen u. Unit of x-ray dose in which the quantity of x- or gamma-radiation is such that the associated corpuscular emission per 0.001293 Gm. of air produces, in air ions carrying one electrostatic unit of quantity of electricity of either sign also called roentgen. Abbreviated r.

  u. See roentgen u.

sensation u. The degree of increase in the intensity of   stimulus just discernible by an individual, lately used in audiometry   here the unit measuring an increase in intensity of   tone is not   constant, but the expression of   ratio between two tones whose intensity varies sufficiently to make recognition of difference possible. Also see Fechner' law W ber law.

Sy u. See Svedberg flotation

Somogyi u. A measure of diastase or amylase activity; the amount of diastase in 100 cc. of plasma, serum, or urine necessary to produce 1 mg. of copper-reducing substance from   starch substrate after 30 minutes of incubation at 40° C

Steenbock u. The amount of vitamin D which will produce   line of calcification at the distal ulnar and radial epiphysis of rachitic rats within ten days.

Svedberg flotation u. Flotation rate of any molecule in   centrifugal field Example. S_f or S 10 lipoproteins

Thayer-Doisy u. See mouse u.

thermal u. The amount of heat required to raise the temperature of   pound of water one degree F or C

Toronto u. The anticoagulant activity of 0.01 mg. of   standard barium heparin employed at the University of Toronto.

toxic u. The smallest dose of   toxin which is capable of proving fatal to an experimental animal, usually   guinea pig, of definite eight, in   specified period of time.

u. character One of   pair of sharply contrasted traits which are inherited according to the Mendelian law of segregation.

u. of force. The dyne the force which, when acting for one second, will give to one gram   velocity of one centimeter per second.

u. of heat. The calorie or B T U.

u. of length. See Tables of Weights and Measures in the Appendix.

u. of light. Foot-candle. The foot-candle is the illumination equal to one lumen per square foot or the illumination of   surface   t   uniform distance of one foot from   point source of one candle.

u. of volume. See Tables of Weights and Measures in the Appendix.

u. of weight. See T bles of Weights and Measures in the Appendix.

u. of work. The erg. Also called *u. of energy.*

U.S.P u. A certain amount of   substance as standardized by the United States Pharmacopeia.

u″ni tar″y (yōō ni terr″ee) [unit]. 1. Pertaining to, or having the qualities of,   unit. 2. Pertaining to monsters having the organs of   single individual.

United N ti n International Children s Emergency Fund (UNICEF) An organization, created by and dependent on the General Assembly of the United Nations, which deals with rehabilitation of children in war-ravaged countries, with maternal and child welfare, and, where necessary with development of   technical and health program particularly as applied to children.

United States Public Health Service. The division of the Federal Security Agency of the United States concerned with the development of   public-health program and the handling of health problems within the jurisdiction of the federal government It is charged with interstate and foreign quarantine matters, the representation of the United States in international health activities, and the compilation of national vital statistics. Its four statutory bureaus are: the Office of the Surgeon General, responsible for the general administration of Public Health Service activities; the National Institutes of Health, which carry on research; Bureau of Medical Services, which administers   program of medical and hospital care the Bureau of State Services, which gives assistance to state and local health services upon request. Abbreviated, U.S.P.H.S.

u″ni va′lent (yōō″ni vay′lunt) [L. unus one valere, to be strong]. Having   valence of one.

u″ni-ver′sal do nor The blood donor of the group O type.

u″ni ver′sal re-cip′i ent. An individual of AB blood group. *Obs.*

univis. Trade name for   brand of bifocal lens.

Unna, Paul Gerson [German dermatologist, 1850–1929]. One of the foremost figures in dermatology Originated the idea of using coated pills to provide for local absorption in the intestine (1884) Introduced ichthyol and resorcin into medicine (1886) Described seborrheic eczema (1887); also called *Unna disease.* For *Unna' hard* and *soft zinc pastes,* see under paste. For *Unna' stains,* see under stain.

Un na's paste boot. A sheath or casing for the leg used in treating varicose ulcers and veins by relieving venous hydrostatic pressure. A paste of zinc oxide (Unna s) gelatin, and glycerin is applied to the leg, and   bandage is placed over the paste commonly three layers of paste and three layers of bandages are applied alternately

un of fi″cial (AS. un- not; L. officialis, of office).

Describing a drug or remedy that is not included in the Pharmacopeia or National Formulary.

un·or′gan·ized [un-; G. *organon*, organ]. 1. Without organs. 2. Not arranged in the form of an organ or organs.

un·rest′ [un-; AS. *rest*]. A condition characterized by general body and mental tension, and especially by vigorous and irregular movements of the gastrointestinal tract.

un·sat′u·ra·ted [un-; L. *saturare*, to fill up]. 1. Not saturated. 2. Describing an organic compound having double or triple bonds.

un·sex′ [un-; L. *sexus*, sex]. Remove the testes in male, or the ovaries in female, animals.

un·sound′ness [un-; L. *sonus*, sound]. The state of being not healthy, diseased, or not properly functioning. —**un·sound**, *adj.*

u. of mind. Incapacity to govern one's affairs.

un·stri′a·ted (un-stry′ay-tid) [un-; L. *striare*, to furnish with channels]. Not striped, as unstriated muscle.

un″u·ni′ted [un-; L. *unire*, to unite]. Not joined, as an ununited fracture.

Unverricht's disease. See Unverricht's familial myoclonus.

un·well′ [un-; AS. *wel*]. 1. Ill; sick. 2. Menstruating; lay term.

u·ra·chus (yōō ray′kus) [G. *ourachos*, urachus]. An epithelial tube or cord connecting the apex of the urinary bladder with the allantois, regarded as the stalk of the allantois or as the degenerate apex of the primitive bladder. Its connective tissue forms the median umbilical ligament. See Plate 44. —**urachal**, *adj.*

patent u. A condition in which the urachus of the embryo does not become obliterated, but persists as a tube from the apex of the urinary bladder to the umbilicus.

u′ra·cil. $C_4H_4N_2O_2$; 2,4(1,3)-pyrimidinedione; pyrimidine base constituent of nucleic acids.

u″ra·cra′si·a, u″ra·cra′ti·a [G. *ouron*, urine; *akrasia*, incontinence]. Incontinence of urine; enuresis.

uradal. Trade-mark for *carbromal*.

u·ra·gogue (yoor′uh-gog) [*ouron*; G. *agōgos*, leading]. A diuretic. —**uragogue**, *adj.*

u′ra·mil. $C_4H_5NO_3$; 5-aminobarbituric acid; derivative of barbituric acid and certain related compounds, occurring as crystals, insoluble in cold water.

u′ra·mine. See *guanidine*.

u′rane. 1. Uranium oxide. 2. A unit of radioactivity. See *kilurane*.

u′ra·nin. See *fluorescein sodium*.

u·ran′i·nite. Pitchblende. Native uranium oxide, source of radium.

u″ra·nis′co·plas″ty. Uranoplasty. *Obs.*

u″ra·nis·cor′rha·phy [*ouraniskos*; G. *rhaphē*, suture]. Suture of a palatal cleft; staphylorrhaphy. *Obs.*

u″ra·nis′cus [*ouraniskos*]. The palate. *Obs.*

u·ra′ni·um. U = 238.07. A heavy metal of the radium group; occurs as silver-white, lustrous, radioactive crystals or powder. As concentrated from its ores uranium contains 99.3% of the isotope weighing 238, 0.7 per cent of the 235 isotope, and a negligible amount of the 234 isotope. Uranium 235 may be made to undergo fission with the release of a large amount of energy. Uranium 238 can absorb a neutron to produce uranium 239; this spontaneously loses a beta particle to form neptunium, which, in turn, loses another beta particle to form plutonium, the last also being fissionable. In large doses the soluble salts of uranium are violent poisons.

u″ra·no·col″o·bo′ma [G. *ouranos*, vault; *kolobōma*, the part taken away in mutilation]. Cleft hard palate, not involving the alveolar process.

u′ra·no·plas″ty [*ouranos*; G. *plassein*, to form]. A plastic operation for the repair of cleft palate, formerly called *uraniscoplasty*. —**uranoplas′tic**, *adj.*

u″ra·no·ple′gi·a [*ouranos*; G. *plēgē*, stroke]. Paralysis of the muscles of the soft palate.

u″ra·nor′rha·phy [*ouranos*; G. *rhaphē*, suture]. Suture of a cleft palate; staphylorrhaphy.

u″ra·nos·chi′sis (yoor″uh-nos′ki-sis), **u·ra·nos′chi·sm** (yoo-ras′ki-zum, -siz-um), **u″ra·no·schis′ma** [*ouranos*; G. *schisis*, cleavage]. 1. Cleft hard palate. 2. Cleft hard palate and alveolar process. Also called *gnathopalatoschisis*.

u″ra·no·staph′y·lo·plas″ty. Uranoplasty.

u″ra·no·staph″y·lor′rha·phy [*ouranos*; G. *staphylē*, bunch of grapes, uvula; *rhaphē*, suture]. Repair of a cleft in both the hard and soft palates.

u′ra·nyl. The bivalent uranium radical UO_2, which forms salts with many acids, as, for example, uranyl acetate, $UO_2(C_2H_3O_2)_2.2H_2O$.

u″ra·re′ma [G. *ouron*, urine; *arōma*, aromatic herb]. Aromatic odor of urine.

u′rase (yoor′ase, -aze). Urease.

u′ra·sin [*ouron*]. A ferment derived from urea.

u′rate. A salt of uric acid. —**urat′ic**, *adj.*

u·ra·te′mi·a, u″ra·tae′mi·a [*ouron*; G. *haima*, blood]. The presence of urates in the blood.

u″ra·tu′ri·a [*ouron*; *ouron*]. The presence of urates in the urine.

Urbach, Erich [American dermatologist, 1893–1946]. Described, with Wiethe, a syndrome with cutaneous and mucous lesions consisting of yellowish-white infiltrations, dystrophies of different types, and disturbances of lipid metabolism, often of familial occurrence; called *lipoidosis cutis et mucosae*, *lipoid proteinosis*, *Urbach-Wiethe disease*. Introduced the term necrobiosis lipoidica diabeticorum, also known as *Oppenheim-Urbach disease*.

ur″ban·i·za′tion [L. *urbanus*, of a city]. A term to express the tendency of modern society to develop cities at the expense of the country population, with a consequent influence upon disease, the death rate, etc.

u·re′a [G. *ouron*, urine] (urea). $CO(NH_2)_2$. Carbonyldiamide, found in urine, occurring as colorless to white, prismatic crystals, or as a white crystalline powder. 1 Gm. dissolves in 1.5 cc. of water and in about 10 cc. of alcohol. Used as a diuretic, similar in its mode of action to the saline diuretics, and also used externally in treating infected wounds in 10% solution or by application of pure crystals. Dose, 8–20 Gm. several times daily. See Table of Normal Values of Blood Constituents in the Appendix. Syn., *carbamide*. —**ureal**, *adj.*

quinine and u. hydrochloride. A salt employed as a local anesthetic and sclerosing agent.

u. nitrogen. The nitrogen of urea. A term used to distinguish that nitrogen from the nitrogen in the form of protein.

u. peroxide. A solid compound of urea and hydrogen peroxide; in contact with water it liberates urea and hydrogen peroxide. Also called *carbamide peroxide*. See *thenardol*.

u″re·am′e·ter [*ouron*; G. *metron*, a measure]. An apparatus for determining the amount of urea in a liquid by measuring the volume of nitrogen evolved.

u″re·am′e·try [*ouron*; *metron*]. The determination of the amount of urea in a liquid.

u′re·ase (yoor′ee-ace, -aze). A urealytic enzyme obtained from the jack bean, the seed of *Canavalia*; occurs as a fine, white, or cream-colored powder readily soluble in slightly alkaline water. Used in the estimation of urea.

u·rec'chy·sis (yoo-reck'i-sis) [*uron*; G. *ekchysis*, outflow]. Extravasation of urine into the tissues.

u·rech'i·tin (yoo-reck'i-tin, yoor'i-kigh'tin) $C_{28}H_{42}O_8$. A poisonous glucoside from *Urechites suberecta*, with action similar to strophanthin.

u·rech"i·tox'in (yoo-reck"i-tock'sin, yoor"i-ki-) A highly poisonous principle from the leaves of *Urechites suberecta*, with action similar to urechitin.

urecholine chloride. Trade-marked name for bethanechol chloride.

u"re·de'ma [*uron*; G. *oidēma*, swelling]. Swelling of tissues from extravasation of urine.

u're·ide. A compound of urea and an acid radical.

u·re'mi·a [*uron*; G. *haima*, blood]. The retention in the blood of urinary constituents, due to failure of the kidneys to excrete them, and the constitutional symptoms resulting. There may be headache, nausea, vomiting, and coma. —**uremic**, *adj.*
prerenal u. Failure of urinary excretion because of physiologic disturbances outside the urinary tract, such as shock, dehydration, hemorrhage, or electrolyte loss.

u"re·om'e·ter. See ureameter.

u"re·om'et·ry. See ureametry.

u"re·o·tel'ic [*uron*; G. *telos*, the end]. Characterizing an animal in which urea is the principal compound of nitrogenous waste, as in mammals. —**ureotelism**, *n.*

u·re·ryth'rin. See uroerythrin.

u·re"si·es·the'si·a (yoo-ree"see-ess-thee'zhuh, -zee-uh) [G. *ourēsis*, making water; *aisthēsis*, sensation]. The impulse to urinate.

u·re'sis [*ourēsis*]. Urination.

u·re'ter, **u're·ter** [G. *ourētēr*, ureter]. Either of the long, narrow tubes conveying the urine from the pelvis of each kidney to the urinary bladder. See Plates 8, 14, 43, 44, 45. —**ure'teral**, **ureter'ic**, *adj.*
aberrant ureters. Ureters emptying at some point other than into the urinary bladder.

u·re"ter·ec'ta·sis [*ourētēr*; G. *ektasis*, extension]. Dilatation of a ureter.

u·re"ter·ec'to·my [*ourētēr*; G. *ektomē*, excision]. Excision of a ureter.

u·re"ter·i'tis [*ourētēr*; G. *-itis*, inflammation]. Inflammation of a ureter.
cystic u. That characterized by multiple cystic protrusions from the mucosal surface.
u. cystica. Cystic u.

u·re'ter·o-, **ureter-** [*ourētēr*]. A combining form denoting the ureter.

u·re'ter·o·cele [*ourētēr*; G. *kēlē*, hernia]. A cystlike dilatation at the termination of a ureter, of congenital origin or due to a narrowing of the terminal orifice. It is identified by cystoscopic examination.

u·re"ter·o·ce·lec'to·my. Surgical removal of a ureterocele.

u·re"ter·o·co·los'to·my [*ourētēr*; G. *kolon*, colon; *stoma*, mouth]. Implantation of a ureter severed from the urinary bladder into the colon.

u·re"ter·o·cys'tic [*ourētēr*; G. *kystis*, bladder]. Pertaining to the ureter and urinary bladder.

u·re"ter·o·cys·tos'to·my [*ourētēr*; *kystis*; G. *stoma*, mouth]. The surgical formation of a communication between a ureter and the urinary bladder.

u·re"ter·o·en·ter'ic [*ourētēr*; G. *enteron*, intestine]. Relating to, or connected with, a ureter and adjacent bowel.

u·re"ter·o·en"ter·os'to·my [*ourētēr*; *enteron*; G. *stoma*, mouth]. Surgical formation of a passage from a ureter to some portion of the intestine.

u·re"ter·og'ra·phy [*ourētēr*; G. *graphein*, to write]. Radiography of the ureters after the injection of some radiopaque substance.

u·re"ter·o·hem"i·ne·phrec'to·my. Surgical removal of a portion of a kidney and its ureter in cases of reduplication of ureter, pelvis, or the entire upper urinary tract.

u·re"ter·o·hy"dro·ne·phro'sis [*ourētēr*; G. *hydōr*, water; *nephrōsis*, from *nephros*, kidney; *-ōsis*, condition]. Distention of a ureter and the pelvis of its kidney due to distal obstruction of outflow of urine.

u·re"ter·o·in·tes'ti·nal a·nas"to·mo'sis. Surgical implantation of a ureter into the colon.

u·re'ter·o·lith [*ourētēr*; G. *lithos*, stone]. Calculus in a ureter.

u·re"ter·o·li·thi'a·sis [*ourētēr*; G. *lithiasis*, disease of the stone]. The presence or formation of a calculus in a ureter.

u·re"ter·o·li·thot'o·my [*ourētēr*; G. *lithos*, stone; *tomē*, a cutting]. Incision of a ureter for removal of a calculus.

u·re"ter·ol'y·sis [*ourētēr*; G. *lysis*, loosing]. Surgical repair of a tortuous or kinked ureter.

u·re"ter·o·ne"o·cys·tos'to·my. Surgical reimplantation of the upper end of a divided ureter into the urinary bladder.

u·re"ter·o·ne"o·py"e·los'to·my [*ourētēr*; G. *neos*, new; *pyelos*, trough; *stoma*, mouth]. Suturing the distal end of a severed ureter into a new opening in the pelvis of its kidney.

u·re"ter·o·ne·phrec'to·my [*ourētēr*; G. *nephros*, kidney; *ektomē*, excision]. Removal of a kidney and its ureter.

u·re"ter·o·pel'vic. Pertaining to a ureter and renal pelvis.

u·re"ter·o·pel'vi·o·plas"ty. A surgical procedure aimed at the correction of abnormalities of the ureter and renal pelvis.

u·re'ter·o·plas"ty [*ourētēr*; G. *plassein*, to form]. A plastic operation on a ureter.

u·re"ter·o·py"e·li'tis [*ourētēr*; G. *pyelos*, trough; *-itis*, inflammation]. Inflammation of a ureter and the pelvis of a kidney.

u·re"ter·o·py"e·log'ra·phy [*ourētēr*; *pyelos*; G. *graphein*, to write]. Roentgenographic visualization of the upper urinary tract by the injection of contrast medium.

u·re"ter·o·py"e·lo·ne·os'to·my [*ourētēr*; *pyelos*; G. *neos*, new; *stoma*, mouth]. Formation of a new passageway from the pelvis of a kidney to its ureter.

u·re"ter·o·py"e·lo·ne·phri'tis [*ourētēr*; *pyelos*; G. *nephros*, kidney; *-itis*, inflammation]. Inflammation of a ureter and its kidney and pelvis.

u·re"ter·o·py"e·lo·ne·phros'to·my [*ourētēr*; *pyelos*; *nephros*; G. *stoma*, mouth]. Surgical anastomosis of the ureter with the pelvis of its kidney.

u·re"ter·o·py'e·lo·plas"ty [*ourētēr*; *pyelos*; G. *plassein*, to form]. Any plastic operation involving the upper portion of a ureter and the adjacent pelvis of the kidney.

u·re"ter·o·py"e·los'to·my [*ourētēr*; *pyelos*; G. *stoma*, mouth]. Excision of part of a ureter and implantation of the remaining part into a new aperture made into the pelvis of the kidney.

u·re"ter·or·rha'gi·a [*ourētēr*; G. *rhēgnynai*, to burst forth]. Hemorrhage from a ureter.

u·re"ter·or'rha·phy [*ourētēr*; G. *rhaphē*, suture]. Suture of a ureter.

u·re"ter·o·sig"moid·os'to·my [*ourētēr*; G. *sigmoeidēs*, shaped like the letter sigma; *stoma*, mouth]. Implantation of a ureter severed from the urinary bladder into the sigmoid colon.

u·re"ter·os'to·my [*ourētēr*; *stoma*]. Transplantation of a ureter to the skin; the formation of an external ureteral fistula.

u·re"ter·ot'o·my [*ourētēr*; G. *tomē*, a cutting]. Incision of a ureter.

u·re"ter·o·u·re"ter·al [*ourētēr*; *ourētēr*].

to both ureters, or to two parts of one ureter as ureteroureteral anastomosis.

u re"ter-o-u re"ter-os'to my [ourētēr- ourētēr; G stoma, mouth]. Surgical formation of passage between the ureters or between different parts of the same ureter

u re"ter o u"ter ine [ourētēr- L. uterus, womb]. Pertaining to the ureters and th terus.

u re"ter vag'i nal (adj'i-nul, -va jy' ul) [ourētēr- L. vagina, vagina]. Pertaining to the ureters and the vagina.

u're than u're-thane. 1 C_2H_5O CO.NH Ethyl carbamate, occurring as crystals or white powder 1 Gm. is soluble in 0.5 cc. of water and in 1 cc. of alcohol. Used as somnifacient and, recently in the treatment of myeloid and lymphatic leukemia. Dose, 1 3 Gm. (15–45 gr) Also called *ethyl urethan*. 2. Any ester of carbamic acid.

u re thra [G ourēthra, urethra]. The canal through which the urine is discharged, extending from the neck of the urinary bladder to the external urethral orifice, divided in the male into the prostatic portion, the membranous portion, and the spongy or penile portion, and from 8 to 9 inches long. (See Plate 44.) In the female t is about 1½ inches in length. (See Plates 41, 43.) —urethral adj

membranous u. The part of the urethra between the two layers of the urogenital diaphragm.

phallic u. See urogenital *canal*.

primary u. That part of the urogenital tube between the embryonic bladder and the urogenital sinus in the female it forms the definitive urethra in the male the proximal part of the prostatic urethra from urinary bladder to ejaculatory ducts.

prostatic u. That portion of the male urethra within the prostate gland.

secondary u. The definitive urethra, especially in the male where it includes the primary urethra as well as the urogenital sinus

spongy portion of u. That contained in the corpus spongiosum of the penis, the penile urethra also called *cavernous u.*

u. muliebris. Female urethra.

u. virilis. Male urethra.

u-re'thra scope. See *urethroscope*.

u"re-threc'to-my [ourēthra; G ektomē, excision]. Excision of the urethra or portion of it.

u"re thri'tis [ourēthra, G -itis, inflammation]. Inflammation of the urethra.

allergic u. A nonspecif type of inflammation, acute or chronic, of the urethral mucosa, which represents local sensitivity response to specific antigen or group of antigens.

nterior u. Inflammation of the part situated anterior to the inferior layer of the urogenital diaphragm.

gra lar u. A type of nonspecific chronic inflammation of the urethral mucosa, characterized by discrete or confluent circumscribed areas of hyperemia and edema located principally about the openings of the paraurethral ducts.

polypoid u. A type of nonspecific chronic inflammation of th urethral mucosa, characterized by edematous bullae and blebs which project into the urethral lumen as inflammatory polyps.

posterior u. Inflammation of the prostatic and membranous portions of the male urethra.

simple u. A nonspecific inflammation of the urethra.

specific u. That due to the gonococcus; gonorrhea.

u. cystica. A condition similar to cystitis cystica, but confined to the urethra.

u. orificii externi. Inflammation of the urethra at the meatus, usually characterized by superficial ulceration about the glans penis; most often seen in male infants.

u. venerea. Gonorrhea.

u re thro- urethr- [ourēthra]. A combining form denoting *the urethra*.

u re"thro bulb ar [ourēthra; L. bulbus, bulb] Relating to the urethra and the bulb of the corpus spongiosum.

u-re'thro-cele [ourēthra; G kēlē, hernia] A urethral protrusion or diverticulum involving, usually the female urethra.

u re"thro cys ti'tis [ourēthra, G kystis, bladder; -itis inflammation]. Inflammation of the urethra and urinary bladder

u re'thro-gram [ourēthra; G. gramma, letter] A roentgenographic visualization of the urethra, obtained through the injection of contrast medium.

u re'thro graph [ourēthra; G. graphein, to write] A recording urethrometer

u re-throg'ra phy [ourēthra; graphein]. Roentgenography of the urethra performed after the injection of the urethra with an opaque contrast substance.

u"re throm ter [ourēthra; G. metron, measure]. An instrument for determining the caliber of the urethra or for measuring the lumen of stricture

u re"thro phy'ma [ourēthra, G. phyma, growth] Old term for urethral tumor

u re'thro plas"ty [ourēthra; G. plassein, to form] Plastic operation upon the urethra, surgical repair of the urethra.

u re"thro pro-stat'ic [ourēthra; G prostatēs, one who stands before]. Relating to the urethra and the prostate.

u"re thror'rha phy [ourēthra; G rhaphē, suture] Surgical restoration of the continuity of the urethra.

u re thror rhe [ourēthra, G. rhein, flow] A morbid discharge from the urethra.

u. ex libidine. Old term indicating the normal glandular mucous secretion occurring during sexual excitement preparatory to coitus.

u re thro-scope [ourēthra, G skopein, to examine] An instrument for inspecting the interior of the urethra. —urethroscop'ic, adj.

u"re thros'co-py [ourēthra, skopein]. Inspection of the urethra with the aid of the urethroscope.

u re thro-spasm [ourēthra; G. spasmos, spasm]. Spasmodic contraction of the urethral sphincter.

u re"thro-ste-no'sis [ourēthra; G. stenōsis, being straitened]. Stricture of the urethra.

u"re-thros'to-my [ourēthra; G. stoma, mouth]. Perineal section with permanent opening of the membranous urethra in the perineum.

u re'thro tome [ourēthra; G tomos, cutting] An instrument used for performing urethrotomy

dilating u. A combined urethrotome and dilator

u"re throt'o-my [ourēthra; G. tomē, cutting] The operation of cutting stricture of the urethra.

external u. Division of urethral stricture by an incision from without.

internal u. Division of urethral stricture from within the urethra.

u-re"thro-tri"go-ni'tis. Inflammation of the trigone of the urinary bladder usually the anterior segment, and the adjacent urethra

u re"thro-vag'i nal (-vadj'i nal, -va jy nal) [ourēthra, L. vagina, vagina]. Pertaining to the urethra and the vagina.

Urey Harold Clayton (1893–) American physical chemist known for isolating deuterium (heavy hydrogen) and scientific work in developing atomic power Nobel laureate in chemistry (1934)

ur'gen-cy [L. urgere, to impel]. Urgent desire to empty the urinary bladder

Ur·gin·e·a [NL., from the name of an Arab tribe in Algeria]. A genus of the Liliaceae.

U. maritima. The plant that produces the official squill. See *squill*.

urginin. Trade-mark for a mixture of two water insoluble glycosides urginin-A and urginin-B, derived from squill, in the proportions in which they exist in the drug; the substance occurs as a pale yellow granular powder insoluble in water but soluble in alcohol. The cardiac action of urginin is essentially similar to that of digitalis.

ur"hi·dro·si (yoor"hi-dro'sis, high-dro'sis) [G. *ouron*, urine; *hidrōsis*, sweating]. A condition in which some of the constituents of the urine, chiefly urea, are excreted in excess of normal with the sweat.

u'ri·an. Urochrome.

u'ric [*ouron*]. Pertaining to the urine, as uric acid.

u'ric **acid.** $C_5H_4N_4O_3$. The end product of purine metabolism in man. It is a normal constituent of the blood and urine. Abnormal metabolism of uric acid with a high blood level and decreased excretion are characteristic of gout. Also called *trihydroxypurine, 2,6,8-trioxypurine.* See Table of Normal Values of Blood Constituents in the Appendix.

u"ri·ac"i·de·mi·a (yoor"ick-as"i-dee'mee-uh) [*ouron*; L. *acidus*, sour; G. *haima*, blood]. The presence of an abnormal amount of uric acid in the blood. Syn., *uricemia*.

u"ric·ac"i·du'ri·a (-ass"i-dew'ree-uh) [*ouron*, *acidus*; *ouron*]. The presence of excessive amounts of uric acid in the urine.

u"ri·can'i·case. An enzyme in the liver which catalyzes conversion of urocanic acid to *l*-glutamic acid.

u'ri·case (yoor'i-kace, -kaze) An enzyme present in the liver, spleen, and kidney of most mammals except man. In the presence of gaseous oxygen, it converts uric acid to allantoin.

u"ri·ce'mi·a. See *uricacidemia*.

u"ri·col'y·sis [*ouron*, G. *lysis*, a loosing]. The disintegration of uric acid.

u"ri·co'su'ri·a. Urinary excretion of uric acid.

u"ri·co·su'ric. Promoting uricosuria, as benemid.

u"ri·co·tel'ic [*ouron*, G. *telos*, the end]. Characterizing an animal in which uric acid is the principal compound of nitrogenous waste, as in birds, snakes, and lizards. —**uricotelism**, *n.*

u"ri·dine. Uracil riboside; the nucleoside obtained when phosphoric acid is removed by uridylic acid.

u"ri·dro'sis. See *urhidrosis*.

u"ri·dyl'ic ac'id. A mononucleotide of yeast nucleic acid which yields uracil, ribose, and phosphoric acid upon complete hydrolysis.

u'ri·nal [L. *urina*, urine]. A vessel for receiving urine.

u"ri·nal'y·sis [*urina*; G. *lysis*, a loosing]. Analysis of the urine. In routine examination, this involves description of appearance (color, turbidity), determination of pH, specific gravity, presence or absence of proteins (albumin), sugar, ketone bodies, pus, or crystals, as well as microscopical examination of the sediment for abnormal constituents such as casts, erythrocytes, leukocytes, and epithelial cells. Abnormal findings are followed by special quantitative and semiquantitative tests. Also spelled *uranalysis*.

u'ri·nate [*urina*]. Discharge urine from the bladder. —**urina'tion**, *n.*

u'ri·na·tive [*urina*]. A drug which stimulates the flow of urine; a diuretic.

u'rine [*urina*]. The fluid excreted by the kidneys. In health, urine has an amber color, a slightly acid reaction, a faint odor, a saline taste, and specific gravity of 1.005 to 1.030. The quantity excreted in 24 hours varies with the amount of fluids consumed but averages between 1000 and 1500 cc. The amount of solids in the urine varies with the diet, more being excreted on a high protein, high salt diet. Normally between 40–75 Gm. of solids are present in the 24-hour urine, of which approximately 25% is urea, 25% chlorides, 25% sulfates and phosphates, and the remainder organic substances including organic acids, pigments, neutral sulfur, hormones, etc. The most important abnormal constituents present in disease are albumin, sugar, blood, pus, acetone, diacetic acid, fat, chyle, tube-casts, various cells, and bacteria. —**urinary**, *adj.*

incontinence of u. Inability to retain the urine. See *enuresis*; *incontinence*.

residual u. Any considerable amount of urine remaining in the bladder after urination. The commonest causes are in the male, prostatic hypertrophy and vesical disease; in the female, cystocele and pressure from uterine tumors.

retention of u. Anuria.

suppression of u. Anuria.

u·rif'er·ous [*urina*; L. *ferre*, to bear]. Carrying or conveying urine, as uriniferous tubule.

u"ri·fic [*urina*, L. *facere*, to make]. Excreting or producing urine.

u"ri·nip'a·rous [*urina*; L. *parere*, to bring forth]. Producing urine.

u"ri·no-, **urin-** [*urina*]. A combining form denoting urine.

u"ri·no·cry·os'co·py (-krye-os'ko-pee) [*urina*; G. *kryos*, icy cold; *skopein*, to examine]. Cryoscopy of the urine.

u'ri·nod [*urina*]. A substance whose formula is said to be C_6H_8O, and upon whose presence the odor of stale urine is said to depend.

u"ri·no·gen'i·tal [*urina*; L. *genitalis*, genital]. Urogenital.

u"ri·nog'e·nous (yoor"i-nodj'i-nus) [*urina*; G. *gignesthai*, from *gignesthai*, to be produced]. Urogenous.

u"ri·nol'o·gy [*urina*, G. *logos*, word]. The science of diagnosis of disease by means of urinary analysis. *Obs.*

u"ri·no'ma [*urina*; G. *-ōma*, tumor]. A cyst containing urine.

u"ri·nom'e·ter [*urina*; G. *metron*, a measure]. A hydrometer for ascertaining the specific gravity of urine.

u"ri·nom'e·try [*urina*; *metron*]. The determination of the specific gravity of urine.

u"ri·no·scop'ic. Pertaining to uroscopy.

u"ri·nos'co·py. See *uroscopy*.

u'ri·nose, **u'ri·nous** [*urina*]. Having the character of urine, as a urinose or urinous odor.

u"ri·sol'vent [G. *ouron*, urine; L. *solvere*, to loose]. Dissolving uric acid.

u·ri'tis [L. *urere*, to burn; G. *-itis*, inflammation]. Inflammation following a burn. *Rare.*

uritone. Trade-mark for a brand of methenamine.

ur'ning (oor'ning) [Ger.]. A homosexual male. *Obs.*

u·ro-, **ur-** [G. *ouron*, urine]. A combining form denoting urine.

u"ro·ac"i·dim'e·ter (yoor"o-ass"i-dim'i-tur) [*ouron*, L. *acidus*, sour; G. *metron*, a measure]. An instrument for measuring the acidity of urine.

u"ro·am·mo'ni·ac. Relating to, or containing, uric acid and ammonia.

u"ro·an'thel·one. Anthelone derived from urine.

u"ro·az"o·tom'e·ter [G. *ouron*, urine; *a-*, not; *zōē*, life; *metron*, a measure]. An apparatus for quantitative estimation of the nitrogenous substances in urine.

u"ro·ben·zo'ic ac'id. Old term for hippuric acid.

u"ro·bi'lin (yoor-o-bye'lin, -bil'in) [*ouron*, L. *bilis*, bile]. A bile pigment produced by the putre-

faction of bilirubin in the gut and excreted by the kidneys or removed by th liver A brown, resinous mass, sol ble in alcohol, ether or chloroform used as reagent.

u″ro bi″li ne mi a (-buy″li-nee mee-uh, bil″i-nee mee-uh) [*uron*, *bilis*; G *haima*, blood]. The presence of urobilin in the blood.

u ro bi″lin ic ter u (buy″li-nick tur-us, -bil″i) [*uron*, *bilis*, G *ikteros* jaundice]. J undice associated with urobilinemia. *Rare.*

u″ro bi lin o gen (buy-lin o-jen, bi-lin o-jen) [*uron*, *bilis*; G *gennethai*, from *gignesthai*, to be prod ced] A chromogen from which urobilin is formed by oxidation when urine is allowed to stand.

u″ro-bi″li noi′din (buy″li-noy din, bil i) [*uron*, *bilis*; G. *eides*, form]. A form of urinary pigment derived from hematin and resembling urobilin though not identical with it. It occurs in certain pathologic conditions.

u″ro bi″li nu ri-a (buy″li-new′ree uh, bil) [*uron*, *bilis*; *ouron*]. The presence of an excess of urobilin in urine.

u″ro-can′ic ac′id. C H N₃CH-CHCOOH. An acid, found in dog' urine, resulting from deamination of histidine

u roch e-ras (yoo-rock′ur-us) [*uron*, G. *cherades*, gravel]. Gravel in urine.

u″ro-che zi a (yoor o-kee shuh, -zee-uh) [*uron*, G. *chezein*, to ease oneself]. Discharge of urin through the anus.

u″ro-chlo ral′ic ac′id. Trichlorethylglycuronic acid; metabolic product of hloral hydrate which is excreted in the urine after the ingestion of chloral hydrate. It gives false positive test for sugar

u ro-chrome [*uron*, G *chrōma*, color]. A yellow pigment in urine.

u″ro-chro mo gen [*uron*, *chrōma*, G *gennethai*, from *gignesthai*, to be produced]. A substance occurring in tissues, which is oxidized to urochrome.

u″ro-clep′si a [*uron*, G *kleptein*, to steal]. Involuntary or unconscious urination.

u″ro-cri′si a (yoor kris ee uh, krizh ee-uh) [*uron*, G *krisis*, distinguishing] Diagnosis by means of urinary examination and analysis.

u″ro-cri′sis [*uron*, *krisis*]. 1 The critical stage of disease distinguished by the excretion of large volume of urine. 2. Severe pain in any part of the urinary tract occurring in tabes dorsalis.

u″ro-cy′ nin. See *uroglaucin.*

u″ro-cy an′ gen (yoor sigh-an o-jen) [*uron*; G *kyanos*, blue *gennethai*, from *gignesthai*, to be prod ced]. A blue pigment found in urine.

u″ro-cy′a nose. See *urocyanogen.*

u″ro-cy a no sis [*uron*, *kyanos*; G. *-osis*, condition] Blue discoloration of the urine, usually from the presence of excess amounts of indican oxidized to indigo blue also from drugs such as methylene blue.

u ro de-um. The portion of the cloaca into which the urogenital ducts open

u ro de′ ma (yoor i-dee muh) See *uredema*

u″ro-er′yth rin (yoor″o-err′ith rin, i rith rin) [*uron*; G *erythros*, red]. A red pigment found in urine.

u″ro fla vin. A fluorescent compound of unknown structure, with properties similar to riboflavin, excreted in the urine along with the vitamin, following ingestion of riboflavin.

u″ro-fus′cin [*uron*; L. *fuscus*, dark]. A pigment found occasionally in urine in cases of porphyrinuria.

u″ro fus co hem′a tin (yoor″o-fus″ko-hem uhtin, hee′muh-tin) [*uron*, *fuscus*; G *haima*, blood]. A red pigment derived from hematin, occurring in the urine.

u″ro-gas′trone [*uron*, G *gastēr* belly] A substance extracted from urine which inhibits gastric secretion and motility; probably related to enterogastrone.

u″ro-gen′i tal [*uron*, L. *genitalis*, genital]. Pertaining to the urinary and genital organs.

u rog′e nous (yoo-rodj′i nus) [*uron*, G *genēs*, from *gignesthai*, to be produced]. Producing urine

u″ro glau′cin (yoor″o-glaw sin) [*uron*, G. *glaukos*, bluish green]. A blue pigment sometimes occurring in urine.

u′ro gram [*uron*, G *gramma*, letter]. A radiograph or roentgenographic visualization of the urinary tract made after intravenous or retrograde injection of an opaque contrast substance.

u rog′ra phy [*uron*, G. *graphein*, to write]. Roentgenographic visualization of the urinary tract by the use of contrast mediums.

excretory u. That following intravenous injection of contrast medium and depending on the ability of the kidney to excrete the medium concentration sufficient to make the urine radio-opaque while passing through the urinary tract.

intravenous u. Excretory u.

retrograde u. See retrograde *pyelography*

u″ro-gra vim e-ter See *urinometer*

u″ro hem tin (yoor o-hem′uh-tin, -hee muh tin) [*uron*, G. *haima*, blood]. Altered hematin in the urine.

u ro-hem″a to ne-phro sis (-hem uh to-ef fro sis, hee muh-to-) [*uron*, *haima*; G. *nephros*, kidney, *-osis*, condition]. Distention of the pelvis of kidney with blood and urine.

u″ro-hem″ to-por phy rin [*uron*, *haima*; G *porphyra*, purple]. Urohematin urinary pigment occasionally occurring in urine in certain pathologic states

u″ro-hy″per-ten sin [*uron*, G. *hyper* over; L. *tensus* stretched]. A substance derived from urine which increases blood pressure when it is injected intravenously

u″ro-ki net′ic (ki-net′ick, -kigh net′ick) [*uron*, G *kinētikos*, of putting in motion] Due to urine from the urinary system; term generally used to denote form of indigestion secondary to irritation or disease of the urinary tract.

urokon sodium Trade-marked name for sodium 3-acetylamino-2,4,6-triiodobenzoate, or sodium acetrizoate; $C_9H_5I_3NNaO_3$, prepared in aqueous solution by the interaction of acetrizoic acid and sodium hydroxide used in 30% or 70% w/v solution as contrast medium for excretory urography, retrograde pyelography nephrography translumbar arteriography and angiocardiography.

u″ro-leu kin′ic ac′id An acid found in the urine in alkaptonuria.

u′ro-lite. See *urolith.*

u′ro lith [*uron*, G *lithos*, stone]. A calculus occurring in urine. —**urolith′ic**, *adj*

u″ro-li thi′a sis [*uron*, G *lithiasis*, disease of the stone]. 1 The presence of, or condition associated with, urinary calculi. 2. The formation of urinary calculi.

u″ro-li thol gy [*uron*; G *lithos*, stone; *logos*, word]. That branch of medicine pertaining to the diagnosis and treatment of disease caused by the presence of urinary calculi. Obs.

u″ro lith-ot′o-my. Removal of calculus from anywhere in the urinary tract.

u rol′ gist [*uron*, *logos*]. One skilled in urology; specialist in the diagnosis and treatment of diseases of the urogenital tract in the male and the urinary tract in the female.

u rol′o-gy [*uron*, *logos*]. The scientific study of the urine. That branch of medical science embracing the study and treatment of the diseases and the

abnormalities of the urogenital tract in the male and the urinary tract in the female. —urolog'ic, adj.

u"ro lu'te-in [ouron; L. luteus, yellow]. A yellow pigment sometimes found in urine.

u'ro man"cy, u"ro-man'ti-a [ouron; G. manteia, divination]. Diagnosis or prognosis by observation of the urine. Obs.

u"ro-mel'anin [ouron; G. melas, black]. A black pigment which sometimes appears in urine as a decomposition product of urochrome.

u-rom'elus [G. oura, tail; melos, limb]. A monster in which there is more or less complete fusion of the legs, with but a single foot. Also called sympus monopus.

u-rom'e-ter. See urinometer.

u"ro ne phro sis. See hydronephrosis.

u ron'ic ac'id. Any of a group of monobasic sugar acids obtained when the primary alcohol group of an aldose is oxidized to carboxyl, without oxidizing the aldehyde group.

u"ro-nol'o-gy. See urology.

u"ron-on-com'e-try [ouron; G. ogkos, mass; metron, measure]. Measurement of the quantity of urine passed or excreted in a definite period, as 24 hours.

u"ro-nos'co-py [ouron; G. skopein, to examine]. Examination of urine by inspection and use of the microscope. Syn., urinoscopy, uroscopy.

u rop'athy [ouron; G. pathos, disease]. Old term for any disease involving the urinary tract, as indicated by urinary pathology.

u"ro pep sin. The urinary end product of the secretion of pepsinogen into the blood stream by peptic cells, followed by transport to the kidneys and excretion in urine.

u"ro-phan [ouron; G. phainein, to appear]. A generic name for substances which, taken into the body appear again unchanged chemically in the urine. —urophan'ic, adj.

u"ro-phe'in [ouron; G. phaios, gray]. A gray pigment found in urine.

u"ro-pit'tin [ouron; G. pitta, pitch]. A resinous decomposition product of urochrome.

u"ro pla ni-a [ouron; G. planos, wandering]. Urine elsewhere than in the urinary organs; discharge of urine from an orifice other than the urethra.

u"ro-poi-e sis [ouron; G. poiesis, production]. Old term for the production of urine.

u"ro por'phy-rin [ouron; G. porphyra, purple]. Any of several isomeric, metal-free porphyrins, occurring in small amounts in normal urine and feces, characterized by having as substituents 4 acetic acid ($-CH_2COOH$) and 4 propionic acid ($-CH_2CH_2COOH$) groups. Increased excretion of uroporphyrin I results in porphyrinuria.

u" psam'mus (yoor" sam us, yoor"op-sam us) [ouron; G. psammos, sand]. Urinary gravel or sediment. Obs.

u"ro ro sein, u"ro ro se in. A urinary pigment which does not occur preformed in the urine, but is present in the form of chromogen, indoleacetic acid, which is transformed into the pigment upon treatment with mineral acid. It is said to be identical with urorrhodin.

u"ror-rha gi [ouron; G. rhēgnynai, to burst forth]. Excessive discharge of urine.

u ror rho din, u"ro-rho din [ouron; G. rhodon, rose]. A red pigment found in urine and derived from urorosein.

u ror rho-din o-gen [ouron, rhodon; G. gennaein, from gignesthai, to be produced]. The chromogen which by decomposition produces urorrhodin.

u"ro-ru'bin [ouron; L. ruber, red]. A red pigment found in urine, seen only in disease.

u-ro sa-cin. See urorrhodin.

u ros'che-sis (yoo-ros'ki-sis) [ouron; G. schesis, retention]. Anuria. Obs.

u-ros co pist [ouron; G. skepsis, to examine]. One who makes a specialty of urinary examinations, technician who examines urine for evidence of disease.

u-ros'co-py [ouron; skepsis]. Examination of urine; uronoscopy. —uroscop'ic, adj.

u-ro'se-in. See urorrhodin.

u"ro-se"mi-ol'o-gy (yoor"o-sem ee-ol'o-jee) [ouron; G. sēmeion, sign; logos, word]. Examination of the urine as an aid to diagnosis. Obs.

u"ro-sep sis [ouron; G. sēpsis, decay]. A systemic infection originating in the urinary tract. Rare. —uroseptic, adj.

u"ro-spec'trin [ouron; L. spectrum, image]. A pigment of normal urine.

u"ro-ste'a-lith [ouron; G. stear, fat; lithos, stone]. A fatlike substance occurring in some urinary calculi.

u"ro-the" ...bro'mine. See paraxanthine.

u"ro-tox'ic [ouron; G. toxikon, poison]. 1. Pertaining to poisonous substances eliminated in urine. 2. Pertaining to poisoning by urine or some of its constituents. Obs.

u"ro-tox-ic'i ty (yoor"o-tock-sis'i-tee) [ouron, toxikon]. The toxic properties of urine. Obs.

u"ro-tox'in [ouron, toxikon]. Poison of urine. Obs.

u"ro-tox"y, u"ro-tox'i a [ouron, toxikon]. The unit of toxicity of urine; the amount necessary to kill a kilogram of living substance. Obs.

urotropin. Trade-mark for a brand of methenamine.

u ro-xan'thin (yoor" zan'thin) [ouron; G. xanthos, yellow]. A yellow pigment in human urine which yields indigo blue on oxidation.

u-rox'in. See alloxantin.

ur"rho-din (yoor'o-din, yoo-ro din). See urorrhodin.

ur-sol'ic ac'id (ur-sol'ick). $C_{30}H_{48}O_3$. A triterpene acid occurring in the waxlike coating of the skin or cuticle of fruits and in the leaves of certain plants. Used as an emulsifying agent in the manufacture of pharmaceuticals and food products.

ur'ti-ca, ur ti'ca [L.]. 1. A plant of the genus Urtica; nettle. 2. A wheal.

ur"ti-ca ri a [urtica]. Hives or nettle rash. A skin condition characterized by the appearance of intensely itching wheals or welts with elevated usually white, centers and a surrounding area of erythema. They appear in crops, widely distributed over the body surface, tend to disappear in a day or two, and usually are unattended by constitutional symptoms. —urticar'ial, adj.

allergic u. That due usually to the ingestion, more rarely inhalation of or contact with, substance to which the individual is sensitive. Common food allergens are strawberries, citrus fruits, fish and shellfish, eggs, tomatoes, and chocolate.

caterpillar u. Caterpillar dermatitis.

cholinogenic u. Wheals due to an abnormal response to choline esters.

cold u. A form due to a physical allergy to exposure to cold.

factitious u. Dermographia.

giant u. See angioneurotic edema.

u. bullosa. A type with the formation of fluid-filled vesicles or bullae on the surface of the wheals.

u. hemorrhagica. A type of urticaria bullosa in which the vesicles contain bloody fluid.

u. medicamentosa. That due to the ingestion of a drug to which the individual is allergic.

u. papulosa. An intensely pruritic skin eruption seen in children, characterized by recurrent crops of erythematous patches and papules on the extensor surfaces of the extremities. Also called lichen urticatus, prurigo mitis.

u. pigmentosa. A rare form of urticarial eruption, marked by more or less persistent, yellowish, brownish, or slate-colored lesions, which may be macules, papules, or nodules.

u. solaris. A type occurring in certain individuals due to exposure to sunlight.

ur'ti-cate [*urtica*]. Characterized by the presence of wheals.

ur"ti-ca tion [*urtica*]. 1. A sensation as if one had been stung by nettles. 2. Production of wheals. —**ur'ticate**

u ru'shi-ol (yōō-rōō shee-ol) [(J p. *urushi*]. The irritant principle of poison ivy and poison oak, consisting of one or more derivatives of catechol with an unsaturated 15-carbon side chain.

Usher Barney David (1899–) Canadian dermatologist who, with F Senear described dermatitis combining features of pemphigus and lupus erythematosus.

U nea [Ar *ushnah*, moss]. A genus of lichen.

U. barbata. Yields usnic acid.

us nic ac'id. $C_{18}H_{16}O_7$ an antibacterial phenolic substance found in lichens, as in *Usnea barbata* also called *usninic acid*, *usnin*.

U S. P United States Pharmacopeia.

U S. P H S. United States Public Health Service.

us"ti lag'i nism (us ti ladj -nis um) [L. *ustilago* thistlelike plant, from *ustulatus*, burned]. Condition resembling ergot poisoning caused by eating sm tty corn.

Us"ti la go [L.]. A genus of parasitic fungi—the smuts.

U maydis. Corn smut, fungus parasitic pon maize or Indian corn. In properties it resembles ergot of rye.

us'tin. An antibiotic substance produced by *Aspergillus ustus.*

us tion [L. *ustio* burning]. *I* *surgery*, cauterization.

u'ta. See *leishmaniasis* americana.

u"ter l'gi a [L. *uterus*, womb G *algos*, pain]. Pain in the uterus.

u ter ine (yōō tur-in, yōō tuh-ryne) [*uterus*] Pertaining to the uterus.

u"ter i 'mus (yōō tur-i mus) [*uterus*]. Uterin contraction f spasmodic and painful character

u"ter i'tis [*uterus*; G -*itis*, inflammation]. Inflammation of the uterus metritis.

u'ter-o-, uter [*uterus*]. A combining form denoting *pertaining to th uterus.*

u"ter-o- b dom'i nal [*uterus*; L. *abdomen*, bdomen]. Pertaining to the uterus and the bdomen.

u ter-o-cer'vi-cal [*uterus*; L. *cervix*, neck]. Relating to the uterus and the cervix of the uterus.

u"ter-o-col'l [*uterus*; G *kolon*, colon]. Relating to the uterus and the colon.

u"ter-o-fix tion. See *hysteropexy.*

u"ter-o ges ta'tion [*uterus*; L. *gestatio*, bearing]. Gestation within the cavity of the uterus normal pregnancy

u"ter-og'ra phy [*uterus*; G *graphein*, to write]. Roentgenographic visualization of the uterine cavity by means of an iodized oil or other contrast medium injected therein through the cervical canal; metrography

u"ter-o-in tes'ti nal [*uterus*; L. *intestinus*, intestine]. Relating to the uterus and the intestine.

u"ter ma ni [*uterus*; G *mania*, madness]. Mental disorder associated with uterine disorder *Obs.*

u"ter om e-ter [*uterus*; G *metron*, measure] An instrument used t measure the uterus.

u"ter-o-o-va'ri an. Pertaining to the uterus and the ovaries.

u"ter pa ri'e-tal [*uterus*; L. *paries*, wall]. Pertaining to the uterus and the bdominal wall.

u"ter-o-pel'vic [*uterus*; L. *pelvis*, basin]. Pertaining t the uterus and the pelvic ligaments.

u"ter o pex'i a, u'ter-o-pex"y See *hysteropexy*

u"te pla cen tal [*uterus*; L. *placenta*, cake] Pertaining to the terus and the placenta.

u'ter-o-plas"ty [*uterus*; G. *plassein*, to form]. A plastic operation on the uterus.

u"ter o-rec'tal [*uterus*; L. *rectus*, straight]. Relating to the uterus and the rectum.

u"ter-o-sa cral [*uterus*; L. *sacer* sacred]. Pertaining to the uterus and the sacrum.

u"ter sal"pin gog'ra phy [*uterus*; G. *salpinx*, trumpet; *graphein*, to write]. Radiographic visualization of the cavities of the uterus and uterine t bes by means of an iodized oil contrast substance injected into the cervical canal under pressure. Also called *hysterosalpingography*, *metrosalpingography.*

u"ter-o-scope [*uterus*; G *skopein*, to examine] A uterine speculum.

u"ter-ot o-my See *hysterotomy.*

u"ter-o-ton'ic [*uterus*, G. *tonos*, tone]. Increasing muscular tone of the uterus.

u"ter o trac'tor [*uterus*; L. *tractum*, from *trahere* to draw]. 1 Old term for uterine tenaculum or volsella forceps. 2. A wide, heavy sharp-toothed retractor used to make continuous traction on the anterior portion of the cervix of the uterus during surgery

u"ter o-tu'bal [*uterus*; L. *tubus*, tube]. Relating to the uterus and the oviducts.

u"ter vag'i nal (yōō tur-o-vadj ml, -va jy nal) [*uterus*; L. *vagina*, vagina]. Relating to the uterus and vagina.

u"ter-o-ven tral [*uterus*; L. *venter* belly]. Relating to the uterus and the abdomen.

u"ter-o-ves'i cal [*uterus*; L. *vesica*, bladder]. Relating to the uterus and the urinary bladder

u'ter us (pl. *uteri*) [L.]. The womb the organ of gestation which receives and holds the fertilized ovum, during the development of the fetus, and becomes the principal agent in its expulsion during parturition. It is pear-shaped, muscular organ, three inches long, two inches wide, and one inch thick, and is divided into three portions: the fundus, the body and the cervix. The fundus the upper and broad portion the body gradually narrows to the neck, which is the contracted portion. The orifice, os uteri, communicates with the vagina. The inner surface is covered with mucous membrane continuous with that of the vagina The outer surface of the fundus and body covered with peritoneum. The hole organ is suspended in the pelvis by means of the broad and round ligaments and the uterosacral ligaments. The uterine tubes enter one on each side of the fundus, at the cornua of the organ. See Plates 41 42.

anteflexion of u. See *anteflexion of the uterus.*

bipartite u. See u. septus.

Couvelaire u. A uterus with bluish, purplish coppery coloration, resembling an ovarian cyst with twisted pedicle this ppearance is due to premature separation of the placenta. Also called *uterine apoplexy*, *uteroplacental apoplexy*

fetal u On of defective development, in which the length of the cervical canal exceeds the length of the cavity of the body

gravid u. A pregnant uterus.

infantile u. A uterus normally formed, but arrested in development.

pubescent u. An abnormality of the uterus in which the characters of that organ peculiar to the epoch preceding puberty persist in the adult.

retroflexion of u See *retroflexion of the uterus.*

retroversion of u. See *retroversion of the uterus.*

incarcerated u. A incarceration of the retroverted pregnant uterus at term.

u. acollis. A uterus in which the vaginal part is abnormally small or absent.

u. arcuatus. A subvariety of uterus bicornis in which there is merely vertical depression in the middle of the fundus uteri.

u. bicornis. A uterus divided into two horns or compartments due to an arrest of development.

u. bilocularis. See u. septus.

u. didelphys. Double uterus from failure of the paramesonephric ducts to fuse. Syn., u. duplex.

u. duplex. A uterus that is double from failure of the paramesonephric ducts to unite.

u. masculinus. See utricle 2.

u. parvicollis. A malformation described by Herman in which the vaginal portion is small but the body is normal. Also called u. acolis.

u. septus. A uterus in which median septum more or less completely divides the lumen into halves.

u. unicornis. A uterus having but single lateral half with usually only one uterine tube; it is the result of faulty development.

Uthoff, Wilhelm [German ophthalmologist, 1853–1927]. Described the nystagmus of multiple sclerosis called *Uthoff* sign.

u'tri-cle [L. *utriculus*, small skin]. 1. A delicate membranous sac communicating with the semicircular canals of the ear. 2. The uterus masculinus, or prostatic utricle; a vestigial blind pouch in the colliculus seminalis opening into the prostatic urethra. The homolog of part of the female vagina; derived from the fused distal ends of the paramesonephric ducts. Syn., *utriculus masculinus, sinus pocularis.* See Plate 44. —**utric'u·lar,** *adj.*

u·tric"u·li'tis [utriculus; G. -itis, inflammation]. Inflammation of the prostatic utricle.

u·tric"u·lo·sac'cu·lar [utriculus; L. sacculus, little sack]. Pertaining to the utricle and saccule of the ear.

u·tric·u·lus [L.]. Utricle.

u. masculinus. The uterus masculinus. See utricle, 2.

u'va ur'si (yōō vuh ur'sigh) (uva ursi). The dried leaf of *Arctostaphylos Uva-ursi* or its varieties coactylis and adenotricha. Contains, besides tannic and gallic acids, quercetin, bitter extractive resin, gum, the glycosides arbutin (ursin) and methylarbutin. Also reported present are ursolic acid (urson), isoquercitrin, and hydroquinone, decomposition product of arbutin. It has been used in the treatment of inflammations of the urinary tract.

u've·a [ML. from L. *uva*, grape]. The pigmented, vascular layer of the eye, the iris, ciliary body, and choroid. —**uveal,** *adj.*

u"ve·i'tis [uvea; G. -itis, inflammation]. Inflammation of the uvea. —**uveit'ic,** *adj.*

u"ve·o·par"o·ti'tis. See uveoparotid *fever.*

uviol. Trade-mark for glass which is transparent to large part of the ultraviolet spectrum, as in uviol lamp, lamp with uviol glass, for supplying ultraviolet rays.

u·vi·o·lize [L. *ultra*, beyond; *viola*, violet]. Subject to the action of ultraviolet rays. *Rare.*

u"vi·o·re·sist'ant (yōō vee o·ri·zist ant) [ultra, violet; L. *resistere*, to oppose]. Not responding to ultraviolet rays.

u'vu·la [dim. from L. *uva*, grape]. The conical appendix hanging from the free edge of the soft palate, containing the uvular muscle covered by mucous membrane. —**uvular,** *adj.*

bifid u. Cleft uvula.

u. cerebelli. A small lobule of the inferior vermis of the cerebellum, forming the posterior boundary of the fourth ventricle.

u. fissa. Cleft uvula.

u. palatina. The uvula.

u. vermis. The uvula of the vermis; the uvula cerebelli.

u·vu·lae. The muscle of the uvula.

u"vu·lap·to'sis, u"vu·lap·to'sis. See uvuloptosis.

u"vu·lec'to·my [uva; G. *ektomē*, excision]. Resection of the uvula.

u"vu·li'tis [uva; G. -itis, inflammation]. Inflammation of the uvula.

u"vu·lop·to'sis [uva; G. *ptōsis*, falling]. A relaxed and pendulous condition of the uvula.

u'vu·lo·tome, u'vu·la tome [uva; G. *tomos*, cutting]. An instrument used in uvulotomy.

u"vu·lot'o·my, u"vu·lat'o·my [uva; G. *tomē*, cutting]. The operation of cutting off the uvula.

V

V Chemical symbol for vanadium.

V Abbreviation for vision.

v v. Volt.

vac'cin. See vaccine.

vac·ci'na (vack sigh nuh). See vaccinia.

vac·ci·na·ble [L. *vaccinus*, of cows]. Susceptible of successful vaccination.

vac·ci·nal (vack si nul) [vaccinus]. Pertaining to vaccination or to vaccine.

vac·ci·nate [vaccinus]. Perform vaccination.

vac·ci·na'tion [vaccinus]. 1. Inoculation with the virus of vaccinia in order to protect against smallpox. 2. Inoculation with any organism to produce immunity against given disease.

compulsory That legally required, as for admission to school or to foreign country.

Jennerian v. See vaccination, 1.

vac'cine (vack seen, -sin) [vaccinus]. 1. Smallpox vaccine. 2. Any organism used for preventive inoculation against specific disease.

acne v. One made from organisms cultured from the patient's lesions, or from mixture of several strains of staphylococci or from the acne bacillus, Corynebacterium acnes.

anthrax Attenuated cultures of anthrax bacilli used to immunize animals against the disease.

autogenous A vaccine made from culture obtained from the patient himself.

bacterial v. An emulsion of bacteria, killed, living, or attenuated, in normal salt solution used hypodermically for the purpose of raising the immune response of patient suffering from infection by the same organism.

BCG (Bacillus Calmette-Guérin). One made from cultures of attenuated human tubercle bacilli, used orally to obtain immunity against tuberculosis. It has been suggested that the vaccin might also give some protection against leprosy. Also called *Calmette's*

bovine v. That derived from the cow

brain-tissue v One prepared from brain tissue.
brucella One obtained from *Brucella melitensis, abortus* or *suis* used in the treatment of brucellosis.
Castañeda v A vaccine against typhus f ver prepared from lungs of mice infected with *Rickettsia prowazekii.*
cholera v (*vacci um cholerae*) A sterile suspension of killed cholera vibrios (*Vibrio comma*) of strains selected for high antigenic efficiency in isotonic sodium chloride solution or other suitable diluent; it shall contain, in each cubic centimeter at least 8,000,000,000 cholera organisms.
Cox v A vaccine against classic epidemic typhus, prepared from *Rickettsia prowazekii* cultivated on the allantoic membrane of the developing chick embryo.
epid mi typhus v Co v., Castañeda v.
Haffkine v See Waldemar M. W H ffkine
heter genous v One prepared from organisms derived from some source other than the patient in whose treatment they are to be used; the source is usually stock culture.
homologous See utogenous v.
humanized v That obtained from vaccinal vesicles of man.
mixed A vaccine prepared from more than one species of bacteria.
multivalent See polyvalent
paratyphoid v A vaccine made from cultures of *Salmonella schottmülleri* for immunization against paratyphoid.
pertussis v. One made from cultures of *Hemophilus pertussis,* used in the prevention and treatment of whooping cough.
poliomyelitis v One prepared by cultivation of representative strains of 3 types of poliomyelitis virus, commonly in monkey kidney tissue culture medium, followed by an inactivation treatment with formaldehyd used to stimulate immunity against paralytic poliomyelitis in man.
polyvalent v A bacterial vaccine made from cultures of two or more strains of the same species of bacteria.
rabies v (*vaccinum rabies*) An uncontaminated suspension of the attenuated, diluted, dried or dead, fixed virus of rabies. The virus is obtained from the tissue of the central nervous system of an animal suffering from fixed virus rabies infection. Rabies vaccine is used exclusively as prophylactic agent. By treatment with rabies vaccin after the bite of rabid animal, immunity is often established before the incubation period of the disease is completed.
Rocky Mountain spotted-fever A prophylactic accine against Rocky Mountain spotted fever prepared from the supernatant fluid secured after grinding and centrifuging infected ticks also called *Spencer-Parker vaccine.*
Salk v Poliomyelitis v.
sensitized One prepared from killed microorganisms, to which has been added material containing homologous antibody material.
smallpox (*vaccinum variolae*) A glycerinated suspension of the vesicles of vaccinia or cowpox which have been obtained from healthy vaccinated bovine animals. Smallpox vaccine is used exclusively for the prevention of this disease. Also called *virus vaccinum, glycerinated v. virus, Jennerian v., antismallpox v.* Also see *vaccinia.*
Spencer-Parker v See Rocky Mountain spotted-fever v.
staphylococcus v One made from *Micrococcus pyogenes var aureus* (*Staphylococcus aureus*) used in the treatment of furunculosis and other infections due to the organism.
stock v A standard mixture of various bacteria.
streptococcus v. One made from the culture of streptococci, used in treatment of infections due to the organism.
T.A.B. v Typhoid-paratyphoid A and B vaccine
triple for typhoid. Typhoid-paratyphoid A and B vaccine
typhoid-paratyphoid A and B v. One containing organisms of typhoid, and paratyphoid A and B strains, for simultaneous immunization against all three diseases.
typhoid v A sterile suspension of killed typhoid bacilli used to produce immunity against typhoid.
typhu See Cox v., Castañeda v.
vac cin'i a (vak-sin ee-uh) [*vaccinus*]. Cowpox, contagious disease of cows characterized by vesicopustular lesions of the skin which are prone to appear on the teats and udder and transmissible to man by handling infected cows and by vaccination; it confers immunity against smallpox. In the human subject inoculated with cowpox, small papule appears at the sit of inoculation from one to three days, which becomes vesicle about the fifth day and at the end of the first week is pustular umbilicated, and surrounded by red areola. Desiccation begins in the second week and scab forms, which soon falls off, leaving white pitted cicatrix.
vac-cin'i fer (vack-sin'i fur) [*vaccinus*; L. *fero,* to bear]. 1. A person or animal from whom vaccine virus is taken. 2. A vaccine point.
vac-cin'i form (vack sin'i form, vack sin i form) [*vaccinus*; L. *forma,* form]. Resembling vaccinia.
vac cin"i-o'la (vack-sin ee o'luh, vack [illegible] luh) [*vacci us*]. A secondary eruption, [illegible] following vaccinia, and resembling the eruption of smallpox.
va ci noid [*vaccinus*; G *eidos,* form]. Resembling vaccinia.
vac"ci-no-pho'bi-a [*vaccinus*; G. *phobos,* fear]. Morbid dread of vaccination.
vac'ci no-style (vack sin-o style vack-see'[illegible]) [*vaccinus*; G *stylos,* writing instrument]. A small metallic lance formerly used in smallpox vaccination.
vac"ci-no ther'a py [*vaccinus*; G *therapeia,* treatment]. The therapeutic use of vaccines.
vac'u-o-lar [dim. from L. *vacuum,* empty space]. Pertaining to, or of the nature of, vacuole
vac u-o late [*vacuum*]. Having or pertaining to vacuoles.
vac'u o-la"ted [*vacuum*]. Containing one or more vacuoles, said of cell or cytoplasm.
vac u-o-la'tion [*vacuum*]. The formation of vacuoles the state of being vacuolated.
vac'u-ole [*vacuum*]. A clear space in cell.
contractile A vacuole in the cytoplasm of certain protozoa, which rhythmically and gradually increases in size and then collapses.
diffusion v. In the in vitro method of conducting living cells, minute droplet of the surrounding colored liquid which has been absorbed by the cell.
plasmocrin v. A crystalloid-filled vacuole in the cytoplasm of secretory cell.
rhagiocrin v A colloid-filled vacuole in the cytoplasm of secretory cell.
vac"u-ol'i za'tion. See *vacuolation.*
vac'u-ome [*vacuum,* G -*oma,* tumor]. The internal reticular pparatus, consisting of vacuoles found singly or forming canalicular network near the centrosome and stainable with neutral red in living cells.
vac u um [L.]. A space from which most of the air has been exhausted.
high v A vacuum in which the exhaustion of air has been extreme.

Torricellian v. The vacuum above the mercury in the tube of a barometer.

va′gal [L. *vagus*, wandering]. Pertaining to the vagus nerve.

va′gal at·tack. A condition characterized by a feeling of impending death, dyspnea, cardiac discomfort, and a sinking sensation; supposed to be due to vasomotor spasm.

va′gal es·cape′. One or more spontaneous beats of the heart, occurring in spite of the fact that the function of the sinus node that normally initiates heart beats has been arrested by stimulation of the vagus nerve.

va·gi′na (pl. *vaginas, vaginae*) [L., sheath, vagina]. 1. A sheath. 2. The musculomembranous canal from the vulvar opening to the cervix uteri, ensheathing the latter and the penis during copulation. See Plates 41, 43. —**vag′i·nal**, *adj.*

mucosa of v. The mucous membrane lining the vagina.

septate v. One more or less completely divided by a longitudinal septum; a congenital abnormality.

v. dentis. Fleshy sheath surrounding the fang in venomous snakes.

v. masculina. See utricle, 2.

vag″i·na·lec′to·my. See vaginectomy, 2.

va·gi′na·pex″y. See colpopexy.

vag″i·nec′to·my (vadj″i·neck′to·mee) [*vagina*; G. *ektomē*, excision]. 1. Excision of the vagina or a portion of it. 2. Excision of the tunica vaginalis.

vag″i·nic′o·line [*vagina*; L. *colere*, to inhabit]. Living in the vagina, as an animalcule.

vag″i·nif′er·ous (vadj″i·nif′ur·us) [*vagina*; L. *ferre*, to bear]. Producing, or bearing, a vagina.

vag″i·nis′mus (vadj″i·niz′mus, -nis′mus) [*vagina*]. Painful spasm of the vagina.

mental v. That due to extreme aversion to the sexual act.

perineal v. That due to spasm of the perineal muscles.

posterior v. That due to spasm of the pubococcygeal portion of the levator ani muscle.

vag″i·ni′tis (vadj″i·nigh′tis) [*vagina*; G. *-itis*, inflammation]. 1. Inflammation of the vagina. 2. Inflammation of a sheath.

atrophic v. Inflammation of the vagina occurring after the menopause, surgical or other.

circumscribed v. Inflammation of the mucosa of the vagina which is enclosed in or confined to certain area of the vagina.

emphysematous v. That characterized by vesicles which contain a gaseous material. Syn. *emphysematous colpitis, colpohyperplasia cystica.*

exfoliative v. That characterized by peeling away or shedding of large fragments of the surface tissue.

gonococcic v. That caused by infection with gonococci, usually seen only before puberty.

senile v. Inflammation of the vagina occurring after the menopause; properly called *atrophic v.*

***Trichomonas vaginalis* v.** Vaginitis associated with, and thought to be caused by *Trichomonas vaginalis*.

vag″i·no- (vadj″i·no-), **vagin-** [*vagina*]. A combining form denoting the vagina.

vag″i·no·cele. Colpocele.

vag″i·no·dyn′i·a [*vagina*; G. *odynē*, pain]. Neuralgic pain of the vagina.

vag″i·no·fix·a′tion [*vagina*; L. *fixus*, from *figere*, to fix]. Fixation of the uterus to the vagina.

vag″i·no·my·co′sis (vadj″i·no·migh·ko′sis, va·jy″no-) [*vagina*; G. *mykēs*, fungus; *-ōsis*, condition]. A fungus infection of the vagina, usually by *Candida albicans*.

vag″i·no·plas″ty (vadj″i·no·plas·tee, va·jy′no-, vadj″i·no·plas′tee) [*vagina*; G. *plassein*, to form]. A plastic operation on the vagina.

vag″i·no·scope (vadj″i·no·scope, va·jy′no-) [*vagina*; G. *skopein*, to examine]. A vaginal speculum.

vag″i·nos′co·py [*vagina*; *skopein*]. Inspection of the vagina.

vag″i·not′o·my [*vagina*; G. *tomē*, a cutting]. Incision of the vagina; colpotomy.

va·gi′tus [L., a crying]. The cry of an infant.

v. uterinus. The cry of a child while still in the uterus.

v. vaginalis. The cry of a child while the head is still in the vagina.

va·got′o·mized [L. *vagus*, wandering; G. *tomē*, a cutting]. Having had the vagus nerves severed.

va·got′o·my [*vagus*; *tomē*]. Division of the vagus nerve.

va″go·to′ni·a [*vagus*; G. *tonos*, tension]. A condition due to overaction of the vagus nerves and modification of functions in organs innervated by them. —**vagoton′ic**, *adj.*

va·got′o·nin, vag″o·to′nin [*vagus*; *tonos*]. A hormonal substance from the pancreas which stimulates the parasympathetic system.

va″go·trop′ic (vay″go·trop′ick, vag″o-) [*vagus*; G. *tropos*, to turn]. Having an effect upon, or influencing, the vagus nerve.

va′grant [OF. *wacrant*]. Wandering, as a vagrant cell.

va′gus (pl. *vagi*) [L., wandering]. The tenth cranial nerve, a mixed nerve whose motor fibers arise in the nucleus ambiguus and are distributed to the muscles of larynx and pharynx; parasympathetic fibers from the dorsal motor nucleus of the vagus are widely distributed to autonomic ganglia to function in the regulation of motor and secretory activities of the abdominal and thoracic viscera. Somatic sensory fibers go to the skin of the external auditory meatus and the meninges, and visceral sensory fibers reach the pharynx, larynx, and thoracic and abdominal viscera. Formerly called the pneumogastric nerve. See Table of Nerves in the Appendix.

va′gus·stoff. Substance liberated at the terminations of the fibers of the vagus nerve that depresses heart action; now believed to be similar to, or identical with, acetylcholine.

va′lence, va′len·cy [L. *valere*, to be strong]. 1. The capacity of an atom to combine with other atoms in definite proportions. 2. By analogy also applied to radicals and atomic groups. Valence is measured with the combining capacity of a hydrogen atom taken as unity. —**valent**, *adj.*

coordinate v. Covalence in which one atom or ion contributes both electrons of the pair and the other atom or ion supplies no electrons.

covalence. The sharing of valence electrons between atoms.

residual v. forces. The unsatisfied forces of ions or molecules which lead to formation of more complex substances from apparently saturated ions or molecules.

Valentin, Gabriel Gustav [German physician, 1810–83]. Described, with Purkinje, motion of the cilia of epithelial cells (1834). Named the nucleolus of the cell nucleus (1836).

Valentin's bodies. Small amyloid bodies in nerve tissue. Also called *Valentin's corpuscles*.

Valentin's ganglion. A small ganglionlike enlargement at the junction of the posterior and middle superior alveolar nerves.

Valentine, Ferdinand C. [American surgeon, 1851–1909]. Known for his description of a position used in urethral irrigation. With the patient supine, the hips are flexed by means of a double inclined plane.

val′er·ate. A salt of valeric acid. Also called *valerianate*.

vas″o·to′nin [vaso-; G. *tonein*, to stretch]. A vasoconstrictor substance present in the blood.

vas·o·tribe. See *angiotribe*.

vas·o·troph′ic (vay″so·trof′ick, ·tro′fick, vay″so-) [vaso-; G. *trophē*, nourishment]. Concerned in the nutrition of blood vessels.

vas″o·va′gal [vaso-; L. *vagus*, wandering]. Pertaining to the blood vessels and vagus nerve, as paroxysmal vasovagal attacks, or vasovagal syncope.

vas″o·va′gal at·tack′. Loss of consciousness, marked pallor usually drop in heart rate and rapid fall in blood pressure, occasionally profuse sweating; due to exaggerated vagal action through abnormal sensitivity of the carotid sinus. If it occurs in epileptiform diseases, it is called **paroxysmal vasovagal attack.** Also see carotid sinus *syncope*.

vas″o·vas·os′to·my [vaso-; vas; G. *stoma*, mouth]. Surgical anastomosis of one portion of a ductus deferens to another

vas″o·ve·sic″u·lec′to·my [vaso-; L. *vesicula*, vesicle; G. *ektomē*, excision] Excision of ductus deferens and seminal vesicle.

vasoxyl hydrochloride. Trade-marked name for the pressor substance methoxamine hydrochloride.

Vassale, Giulio [*Italian physiologist*, 1862–1912]. With E. Sacchi, studied hypophysectomy With F. Generale, demonstrated that tetany and death follow complete removal of the parathyroids (1896)

vas′tus [L., immense]. A portion of the quadriceps femoris muscle which extends the knee joint. Its origin is from three heads on the femur its insertion is on the patella and ultimately into the tubercle of the tibia, and it is innervated by th femoral nerve See Tabl of Muscles in the Appendix. —**vas′tus,** *adj.*

v. verticalis linguae. The vertical muscle fibers of the intrinsic musculature of the tongue

Vater Abraham [*German anatomist* 1684–1751]. Described the ampulla of the common bile duct (1720) called *ampulla of Vater* See also Paccinian *corpuscle*.

Vaughan, Victor Clarence [*American bacteriologist*, 1851 1929]. Remembered for his investigations of the poisons produced by bacteria and protein split products.

vault [OF *voute*, from L. *volvere*, to roll]. 1 An arched structure, as dome 2. Specifically the vault of the skull calvaria

vau·que·line (vo″ki·leen′) See *strychnine*.

VD V.D., vd .d. Venereal disease.

V D H Valvular disease of th heart.

Veale, Henry Richard Lobb [*Scottish physician*, 1832–1908]. Described an epidemic of German measles (1866) in which he originated the term rubella.

Veau′ operation. A modification of Dieffenbach operation for the repair of cleft palate.

ve·cor′di·a [L., senselessness]. Any mental disorder Obs.

vec′tion [L., from *vehere* to carry] The conveyance of disease germs from th sick to the well.

vec′tis [L., bar] An instrument similar to the single blade of forceps, used in hastening the delivery of the fetal head in labor

vec′tor [L. from *vehere*, to carry] 1 An arthropod which carries microorganisms from sick person to some other person. 2. A quantity involving both magnitude and direction, as velocity force, momentum, which may be represented by a straight line of suitable length and direction. —**vec·to′ri·al,** *adj*

patient vectors. *I psychoanalysis*, immature transference needs expressed between persons when there is som possibility of their satisfaction and resolution.

v quantity *I electrocardiography*, magnitude, direction, and sense of the cardiac potential derived from the electrocardiogram.

vec″tor·car′di·o·gram [vector; G. *kardia*, heart; *gramma*, letter]. A single record or figure which represents the electric forces that are present in the standard leads of the electrocardiogram in such way that the instantaneous values of the magnitud and direction of the electric phenomena within the heart are clearly shown Vectorcardiograms may be obtained by the use of the cathode-ray oscillograph or other special apparatus. Also called *monocardiogram*.

vec″tor car′di·o·graph. Apparatus for making vectorcardiogram.

Vedder Edward Bright [*American physician and Army medical officer* 1878–1952]. Demonstrated the action of emetine against the amebe in the intestinal tract (1911). See also Vedder's *sign*.

veg′ tal (vedj′i tal) [L. *vegetus*, lively] Trophic, rather than mitotically active. See vegetal pole

veg″e·ta′tion [L. *vegetare*, to quicken] An outgrowth resembling plant in outline, as the projections on the cardiac valves in endocarditis, papillomas, polypoid growths, etc.

adenoid vegetations. Growths of lymphatic tissue in the nasopharyngeal cavity

ve′hi·cle [L. *vehiculum*, conveyance]. A liquid or solid substance, generally inactive therapeutically employed as medium or carrier for the active component of a medicine.

veil [L. *velum*, veil]. A caul or piece of the amniotic sac covering the face of newborn infant

acquired v An obstruction or imperfection of voice from exposure to cold, catarrhal conditions, overuse, or bad training.

uterine A cap fitted over the cervix uteri to prevent the entrance of semen.

Veillon's tube. A glass tube for use in making bacterial cultures. One end is fitted with rubber stopper one with cotton plug

Veil″lo·nel′la (vay yo·nel′ah, vah yo·nel′ah) [after Adrien *Veillon*, French bacteriologist, 1864–1931]. A genus of microorganisms belonging to the family Neisseriaceae; they are small, Gram-negative, anaerobic cocci.

V gazogenes. A species found in the saliva of man and other animals.

V parvula. A species found in the mouth and digestive tract of man and other animals

vein [L. *vena*, vein]. A blood vessel carrying blood from the tissues toward the heart. Veins, like arteries, have three coats, but the media less well developed; many also possess valves For veins not listed here, see Table of Veins in the Appendix. See Plates 9, 10.

advehent v *In embryology*, the portion of the omphalomesenteric vein caudal to the liver and cranial to the transverse anastomosis; it becomes branch of the portal vein.

afferent veins. Those conveying blood directly to an organ, as the portal vein

allantoic veins. See umbilical veins under vein.

anterior cardinal veins. The paired primary veins of the anterior part of the early embryo.

arcuate A venous arch t the base of renal pyramid, accompanying an arcuate artery

azygos line veins. See medial sympathetic vein under vein.

central (a) The vein in the center of liver lobule into which the sinusoids empty (b) That which receives blood from all vessels of the cortex and medulla of the adrenal gland.

cephalic v. See *cephalic vein*.
collecting v. A vein formed by the confluence of several intercalated veins of the liver.
common cardinal veins. Paired primary veins located in the septum transversum, connecting the anterior and posterior cardinals with the sinus venosus. Syn., *ducts of Cuvier*.
diploic v. One of the large, thin-walled veins occupying bony channels in the diploë of cranial bones, and communicating with each other, with meningeal veins and sinuses of the dura, and, through emissary veins, with the veins of the pericranium.
intercalated. See *sublobular v.*
interlobar. In the kidney, one of the veins running in the renal columns and draining into the renal vein.
interlobular v. In the kidney, a tributary of an arcuate vein, lying in the cortical substance between the medullary rays.
intralobular. See *central* (a).
lateral sympathetic veins. Longitudinal venous trunks of the embryo lateral to the sympathetic ganglions and dorsomedial to the posterior cardinal veins. The right vein forms the postrenal part of the inferior vena cava. Syn., *paravertebral vein*, *supracardinal veins*.
medial sympathetic veins. Longitudinal venous channels of the embryo medial to the sympathetic ganglions, forming the azygos and hemiazygos veins. Syn., *azygos line veins*, *supracardinal veins*.
meningorachidian veins. See *vertebral veins* under *vein*.
oblique v. of Marshall. The small vein passing downward across the posterior surface of the left atrium and draining into the coronary sinus; it represents the remnant of the left common cardinal vein. O T
omphalomesenteric veins. Embryonic veins uniting yolk sac and sinus venosus; their proximal fused ends form the portal vein. Syn., *vitelline veins*.
paravertebral veins. See *lateral sympathetic veins* under *vein*.
posterior cardinal veins. The paired primary veins of the embryo draining body and mesonephros, located in the dorsolateral part of the urogenital fold; they unite with the anterior cardinal veins to form the common cardinal veins.
primary head veins. The chief veins developing in the head of an early embryo; they are continuous with the anterior cardinal veins and lie medial to the trigeminal, but ventrolateral to the more posterior cranial ganglions.
pulp. One of the veins draining the venous sinuses of the splenic pulp.
revehent. In embryology, the portion of the omphalomesenteric vein between the liver and the sinus venosus. The veins of the two sides join and form the inferior vena cava.
stellate veins. Radially arranged subcapsular veins of the renal cortex which drain into the interlobular veins.
subcardinal veins. Paired longitudinal veins of the embryo partly replacing the postcardinals; the prerenal part of the inferior vena cava develops largely from the right subcardinal.
sublobular v. A vein formed by the joining of the central veins of several liver lobules. Syn., *intercalated*.
supracardinal veins. Paired longitudinal venous channels of the embryo that replace the postcardinal and subcardinal veins and form the azygos-hemiazygos system of veins, and, on the right side, most of the postrenal part of the inferior vena cava.
systemic. One of those conveying venous blood from the systemic circuit to the right atrium of the heart.
Thebesian veins. Small veins from the myocardium which open directly into the atria and ventricles.
trabecular. In the spleen, a tributary of the splenic vein, formed by the confluence of pulp veins.
umbilical veins. Originally paired veins conveying blood from the placenta to the sinus venosus; the proximal right umbilical vein disappears early in development and the extraembryonic parts fuse to form a single vein in the cord.
varicose veins. Those which have become abnormally dilated and tortuous, due to interference with venous drainage or weakness of their walls.
vertebral veins. The plexus of thin-walled valveless veins situated about the spinal cord within the vertebral canal; also called *meningorachidian veins*.
vitelline veins. See *omphalomesenteric veins* under *vein*.

vein seek'er. A small pipet equipped with a teat-bulb, a glass sight filled with sodium citrate solution, and armed with an infusion needle. The teat is emptied by pressure of the fingers. The point of the needle is inserted under the skin where the vein is suspected, and the pressure released. The teat remains collapsed until a vein is entered, when blood appears in the tube. Obs.

ve la'men [L., covering]. A veil or covering membrane.
v. vulvae. The Hottentot apron.

vel"a men'tum [L., covering]. A veil, or covering membrane. —**velamentous,** *adj.*

Velden, Reinhard von den [German physician, 1880–1941]. Said to have been the first to restore heart action after complete cessation, by intracardiac injection (1919); called *von den Velden method*.

veldt sore (velt, felt). A disease common in the African desert, but seen also in Australia and Burma, characterized by multiple, shallow, chronic, painful ulcers on exposed parts of the bodies of light-skinned individuals. It usually follows slight trauma, such as an insect bite. Exposure to sunlight is necessary, and there are usually secondary bacterial invaders. Also called *Barcoo disease*, *desert sore*, *Natal sore*, *septic sore*.

ve'li ger (vee'li-jur, vel'i-jur) [L., sail-bearing]. A larval mollusk with a velum.

vel'li-cate [L. *vellicare*, to twitch]. Twitch spasmodically.

vel"li-ca'tion [*vellicatio*, from *vellicare*]. Spasmodic twitching of muscular fibers.

vel lo sine (veh-lo'seen, -sin, vel'o-). $C_{23}H_{28}N_2O_4$. An alkaloid in Pao-Pereira bark, *Geissospermum vellosii*, having it resembles brucine in physiologic action.

Velpeau, Alfred Armand Louis Marie [French surgeon, 1795–1867]. Described silver-fork deformity, called *Velpeau's deformity*, which occurs in fractures of the lower end of the radius (Colles' fracture). See also *Velpeau's bandage*.

ve'lum (pl. *vela*) [L.]. A veil or veil-like structure. —**velar,** *adj.*
anterior medullary v. A thin leaf of medullary substance forming the roof of the anterior portion of the fourth ventricle of the brain. Formerly called *valve of Vieussens*.
posterior medullary v. The commissure of the flocculus of the cerebellum.
v. interpositum. The choroid plexus in the roof of the third ventricle of the brain.
v. palati. The posterior portion of the soft palate. Syn., *palatinum*.

v. pendulum palati. The soft palate especially the uvula.

v. terminalis. Lamina terminalis.

VEM Vasocreitor material produced by the kidney; formed anaerobically in normal kidney; formed aerobically and anaerobically in the kidney in hypertensive states.

ve'na (pl *venae*) [L.] A vein.

v. cava inferior A vein formed by the junction of the two common iliac veins and emptying into the right atrium of th heart. It receives the l mbar right spermatic, renal, suprarenal phrenic, and hepatic veins. See Plates 5, 8, 9, 10, 14.

v. cava superior A vein formed by the union f the innominate veins, and conveying the blood from the head, chest wall, and upper extremities to th right trium. See Plates 5, 9

venae comitantes. The veins accompanying an artery

venae cordis minimae. The smallest of the cardiac vessels, entering into the cavities of the heart.

venae Galeni. Two venous trunks in the brain.

venae Thebesii. See *Thebesian veins* under *vein*.

venae vorticosae. The stellate veins of the choroid coat of the eyeball.

venapis. A proprietary preparation of bee venom has been used in the treatment of arthritis.

ve na tion [vena]. Distribution of venous circulation f part or organ

ven ec'to-my [vena; G *ektomē*, excision]. Excision of vein or portion of one.

ve nene Venin.

ven e-nif'er-ous (ven i-nif'ur-us, vee ni-) [L. *venenum*, poison; *ferre*, to bear]. Conveying poison.

ven ne se [L. *venenosus*, full of poison]. The venomous snakes.

ven" punc'ture. See *venipuncture*.

ve ne r al [L. *Venereus*, from Venus, goddess of love]. Pertaining to, or produced by sexual intercourse.

ve ne re-ol'o gist [*Venereus*; G *logos*, word]. An expert in venereal diseases.

ve ne"re-ol' gy [*Venereus*; *logos*]. The study of venereal diseases.

ve ne re-o pho'bi a [*Venereus*; G *phobos*, fear]. Morbid fear of getting venereal disease

ven er y [L. *Venus*, goddess of love]. Copulation.

ven"e-sec'tion (ven"i seek shun, vee ni-) [L. *vena*, vein; *sectio* cutting] The abstraction of blood from the body by incising vein, popularly known as *bleeding*. In practice, blood is usually removed in measured quantity by the use of needle or trochar passed into the l men of a vessel. Locally a small amount of blood may be removed by scarifying or leeching.

ven e-su'ture, ven"i su'ture [vena; L. *sutura*, sewing] The suturing of vein.

Ve-ne'tian red. A form of ferric oxide used as red pigment.

ven'in. A mixture of the venoms of various poisonous snakes, used in neurasthenia, hysteria, chorea also spelled *venene*

ven"i punc'ture (ven"i-punk'chur vee ni ven"i-punk"chur vee ni) [vena; L. *punctura*, puncture] The surgical puncture of vein.

ve-noc'ly sis [vena, G *klysis*, drenching]. Injection of food or drugs into vein.

ve n gram [vena, G *gramma*, letter] Roentgenogram of vein.

ven og'ra-phy [vena; G *graphein*, to write]. Radiographic examination of veins following injection of an opaque contrast medium.

ven m [L. *venenum*, poison]. Poison, especially poison secreted by certain reptiles and arthropods. **snake v.** A secretion of the posterior superior labial glands of poisonous snake, usually yellowish, sometimes colorless, possessing varying degrees of toxicity T ide constituents include neurotoxins, cytolysins, proteolysins, hemolysins, and hemocoagulins

ven o mo sal'i var"y (ven mo-sal'i-ver'ee) [venenum, L. *saliva*, saliva]. I oology, designating the salivary glands of certain animals, that secrete venom instead of saliva.

ve"no-mo tor [L. *vena*, vein; *motor*, from *movere*, to move]. Causing veins to contract or dilate

ven om-ous [L. *venenum*, poison]. Poisonous.

ve"no per"i to-ne-os'to-my [L. *vena*, vein; G *peritonaion*, membrane which contains the lower viscera; *stoma*, mouth]. Surgical implantation of a divided greater saphenous vein into the peritoneal cavity for drainage of ascites. Also called *Ruotte' operation*.

ve"no pres'sor [vena; L. *premere*, to press]. Pertaining to blood pressure in the veins and right side of the heart.

ve"no-scle-ro si [vena, G. *sklērōsis*, hardening] Induration of veins; phlebosclerosis

ve nos'i ty [L. *venosus*, full of veins]. A condition in which the arterial blood shows venous qualities.

ve no-sta sis, ve-nos'ta-sis [L. *vena*, vein, G *stasis*, standing]. Retardation or prevention of the return flow of the blood by compression of veins, obstruction, varicosities, weakness of vessel walls, or lowering of venous pressure.

ve n throm bot'ic [vena; G. *thrombos*, clot]. Having the property of producing venous thrombosis.

ve-not o-my [vena; G *tomē*, cutting]. Phlebotomy incision of vein.

ve nous [vena]. Pertaining to the veins.

ve no ve-nos'to-my [vena; vena; G. *stoma*, mouth]. The anastomosing of two veins.

vent [L. *findere*, to split]. Any aperture or outlet. **alveolar vents.** Communicating pores between neighboring alveoli in the lung.

common The cloaca.

vent er [L.]. 1 The belly or bdomen. 2. The belly of muscle. 3. The cavity of the bdomen.

ven'ti late [L. *ventilare*, to brandish in the air]. 1 Renew the air in a place. 2. Oxygenate the blood in the capillaries of th lungs.

ven"ti la'tion [L. *ventilatio*, from *ventilare*]. 1. The art or process of supplying fresh air whose partial pressure of oxygen is higher and of carbon dioxide lower than in the air being replaced. 2. The art or process of purifying the air of a place.

alveolar v A calculated expression of the effective ventilation of the diffusing region of the lung. In principle, alveolar ventilation = (tidal volume — physiologic dead space) X respiration rate.

minute The volume of air respired in minute. This depends on degree of activity strength of the impulses from the respiratory center and the ability of the respiratory apparatus to respond. **walking v.** A test of breathing response to mild exercise. The patient walks at the rate of 2 miles per hour on level ground, and after 4 minutes the expired air is collected and measured. Abbreviated, WV

ven"ti lom'e-ter An apparatus used in a fixed-time hyperventilation test in electroencephalography; it makes possibl greater precision of interpretation because the total ventilation volume is kept constant from patient to patient.

ven"ti lom try. Pneumometry

ven'tral [L. *venter* belly]. 1 Pertaining to the belly. 2. Referring to the anterior aspect of the body or to the flexor aspect of the limbs. —**ventrad**, *adv*

ven'tri cle [L. *ventriculum*, ventricle]. A small cavity or pouch. —**ventric'ular** *adj*

Arantius' The terminal depression of the median sulcus of the fourth ventricle immediately ventral to the obex.
fifth v The cavity of the septum pellucidum: a misnomer
fourth v The cavity of the metencephalon and upper half of the myelencephalon, bounded by the brain stem anteriorly and posteriorly by the anterior medullary velum, fastigium of the cerebellum, and tela choroidea.
laryngeal v The lateral recess on either side between the true and false vocal folds.
lateral v The cavity of either cerebral hemisphere communicating with the third ventricle through the interventricular foramen, and consisting of triangular central cavity or body and three smaller cavities or cornua. See Plates 10, 17
left v of the heart. That forcing the blood through the aorta and throughout the body. See Plate 5.
pineal v One found occasionally within the pineal body: the persisting remnant of the fetal cavity
right v of the heart. That forcing the blood through the pulmonary artery into the lungs. See Plate 5.
single of the heart. See cor triloculare biatrium.
sixth The cavum Vergae misnomer
terminal The dilated portion of the central canal of the spinal cord in the conus medullaris.
third v The cavity of the diencephalon, narrow cleft between the two thalami. See Plate 18.
ventricles of the brain. Cavities in the interior of the brain, comprising the two lateral ventricles and the third and fourth ventricles.

ven-tric'u lar es-cape Single or repeated ventricular beats, arising from the A V node usually following long diastole.

ven tric'u lar sep'tal de fect. Congenital defect of the muscular septum between the ventricles of the heart anterior to the membranous portion of the septum. Syn *maladie de Roger*

ventriculin. Trade-mark for preparation of dried and powdered, defatted, hog gastric tissue. A brand of powdered stomach. The substance is used orally as hematopoietic drug

ven-tric"u li'tis [ventriculus, G -itis, inflammation] Inflammation of the ependymal lining of the ventricles of the brain. Syn *ependymitis.*

ven tric"u lo cis"ter nos'to my Surgical establishment of communication between the ventricles of the brain and the subarachnoid cisterns it may be performed by third ventriculostomy or by the Torkildsen procedure in which communication is established between lateral ventricle and the cisterna magna.

ven t ic"u l -cor dec to-my [ventriculus; G *chordē* cord *ektomē* excision]. Excision of the wall of the laryngeal ventricle and part of the vocal folds, for the relief of bilateral abductor paralysis of the vocal folds.

ve tric'u lo gram" [ventriculus, G *gramma*, letter] A roentgenogram of the brain after the introduction of air or an opaque medium into the cerebral ventricles through trephine openings in the skull.

ven tric"u log'ra phy [ventriculus; G. *graphein*, to write] A method of demonstrating the ventricles of the brain by roentgenography after the ventricular fluid has been replaced by air or by an opaque medium injected through trephine openings in the skull.

n tric u lo ma t id os t my A surgical treatment of hydrocephaly in which the temporal horn of lateral ventricle is connected to the ipsilateral mastoid antrum, usually by piece of polyethylene tubing.

ven tric"u-lom -try [ventriculus; G. *metron*, measure]. Measurement of the intraventricular pressure.

ven tric'u lo punc'ture [ventriculus; L. *punctura*, puncture]. Puncture with spinal puncture needle of ventricle of the brain, particularly the lateral ventricle.

ven tric'u l -scope" [ventriculus, G. *skopein*, to examine]. An instrument for inspecting the interior of the cerebral ventricles and for electrocoagulation of the choroid plexus.

ven tric"u-los'co py [ventriculus, *skopein*]. E amination of the ventricles of the brain by means of an endoscope.

ven tric"u los'to-my [ventriculus; G. *stoma*, mouth]. The surgical establishment of drainage of cerebrospinal fluid from the ventricles of the brain.
external That accomplished by communication between lateral ventricle and an external closed drainage system: the more common procedure.
internal v See third v.
third v That accomplished by communication between the third ventricle and basal cistern. Syn., internal v.

ven tric"u lo-sub arach'noid (-sub -rack' noyd) [ventriculus; L. *sub*, under; G. *arachnoeidēs*, like cobweb]. Of or pertaining to the subarachnoid space and the cerebral ventricles.

ven tric'u lus (pl. *ventriculi*) [L.]. 1 Ventricle. 2. Old term for stomach.
v cerebri. Ventricle of the brain.
cordis. Ventricle of the heart.
v dexter Right ventricle.
v lateralis. Lateral ventricle.
v medius. Middle (third) ventricle.
v opticus. The lumen of the embryonic optic vesicle continuous with that of the diencephalon.
v quartus. Fourth ventricle.
sinister Left ventricle.
tertius. Third ventricle.

ven"tri-cum'bent [L. *venter* belly; *recumbere*, to recline] Prone.

ven"tri-duc'tion [venter L. *ducere*, to lead]. Drawing part toward the abdomen.

ven tril' -quism [venter L. *loqui*, to speak]. The art of speaking or singing without seeming to use the organs of speech. When the hearer' attention is properly directed, the voice seems to come from elsewhere, as from dummy

ven"tri me·sal (ven tri mee'sul) [venter G *mesos*, in the middle]. In the middle in front.

ven'tro- [venter]. A combining form denoting the abdomen or anterior aspect of the body.

ven"tro-cys tor'rha-phy See marsupialization.

ven"tro-fix-a'tion [venter L. *fixum*, from *figere* to fix]. The stitching of displaced viscus to the abdominal wall specifically the operative attachment of the uterus to the anterior abdominal wall for prolapse or displacement.

ven"tro hys ter-o-pex"y [venter G *hystera*, womb; *pēxis*, fixing]. Ventrofixation of the uterus.

ven"tro-lat er-al [venter L. *latus*, side]. Relating to the ventral and lateral aspects of part.

ven"tro-me'di-an [venter L. *medius*, middle]. At the middle of the ventral surface.

ven"trop-to sis. See gastroptosis.

ven tros'co-py [venter G. *skopein*, to examine]. Direct examination of the abdominal and pelvic cavities by means of an apparatus resembling the cystoscope. Also called *peritoneoscopy*

ve n'trose [venter]. Having belly or a swelling like belly (potbelly)

ven tros'i ty [venter]. Corpulence.

ven"tro-sus-pen sion [venter L. *suspensio* from

suspendere, to hang]. The operation of correcting displacement of the uterus by shortening the round ligaments or attaching them to the anterior abdominal wall.

ven"tro·ves"i·co·fix·a'tion [*venter*; L. *vesica*, bladder; *fixum*, from *figere*, to fix]. Suturing of the uterus to the urinary bladder and abdominal wall.

ven·tu'ri me'ter A differential pressure flowmeter used for measuring pulsatile flow.

ven'ule [L. *venula*, small vein]. A small vein.

ve'nus [L., goddess of love]. 1. Old term for sexual intercourse. 2. Alchemic name for copper.

collar of v. A rarely seen, mottled, marblelike skin of the neck; a syphilitic condition. Also called *melanoleucoderma colli*, venereal collar.

crown of v. A syphilitic eruption about the hair line with associated patchy alopecia of the area.

mound of v. See mons pubis, mons veneris.

ver"a·ce'vine. A nonketonic base, obtainable from veratrum viride, believed to be one of the original alkanolamine bases of veratrum viride alkaloids. It is isomeric with cevine and cevagenine and is probably the precursor of these compounds.

ver·al'bi·dine. $C_{27}H_{43}NO_{3}$; an alkaloid isolated from *Veratrum album*.

ve·rat'ra·mine. $C_{27}H_{39}NO_{2}$; the aglucone of veratrosine, isolated from veratrum viride.

ve·rat·ric acid. $(CH_3O)_2C_6H_3COOH$. Dimethoxybenzoic acid, found in sabadilla seeds.

ver·at'ri·dine (vuh·rat'ri·deen, ·din). $C_{36}H_{51}NO_{11}$; an alkaloid isolated from both sabadilla seed and veratrum viride, formerly considered to be veratric acid ester of cevine, but now believed to be the same ester of veracevine.

ver'a·trine. 1. Cevadine: original name. 2. A mixture of alkaloids from veratrum viride.

ve·rat"ro·ba·sine. $C_{24}H_{37}NO_{3}$; an alkaloid isolated from *Veratrum album*.

ve·rat'ro·sine. A glucoside isolated from veratrum viride. On hydrolysis it yields D-glucose and veratramine.

ve·rat"ro·yl·zy"ga·de·nine. An ester alkaloid isolated from *Veratrum fimbriatum* Gray and also from *Zygadenus venenosus* Watson.

ve·ra'trum vi'ri·de. The dried rhizome and roots of green hellebore (*Veratrum viride*). It contains a number of alkaloids, including germidine, germitrine, cevadine, veratridine, jervine, rubijervine, pseudojervine. It is irritant, causes sneezing if inhaled, and vomiting if swallowed in sufficient dose. The outstanding physiologic actions of the drug after moderately large dose are slowing of the respiration, slowing of the pulse, and fall of blood pressure. Used for the reduction of blood pressure in various conditions of hypertension. Also used to lower the pulse rate in various forms of tachycardia. It has also been widely used by obstetricians in the treatment of puerperal eclampsia. Dose, 0.06–0.12 Gm. (1–2 gr.). Also called *green hellebore*, *American hellebore*.

Ver·bas'cum [L., mullein]. Mullein. A genus of plants of the family Scrophulariaceae. The leaves and flowers of *V. thapsus* have been used as demulcent in catarrhal inflammation of mucous membranes and as an application to hemorrhoids.

ver·big"er·a'tion (vur·bidj"ur·ay'shun) [L. *verbigerare*, to chat]. The frequent and uncontrollable repetition of the same word, sentence, or sound without reference to its meaning.

ver'di·gris (vur'di·grees, ·gris) [OF. *vert de Grice*, green of Greece]. 1. A mixture of basic copper acetates. 2. A deposit upon copper from the formation of cupric salts.

ver"do·fla'vin. A naturally occurring flavin of grass which is said to be chemically identical with riboflavin.

ver"do·glo'bin. Choleglobin.

ver"do·he'min. A green-colored bile pigment; derivative of hemin in which the porphyrin ring has opened, rendering the iron labile.

ver"do·per·ox'i·dase. A green-colored peroxidase in leukocytes.

ver du Cayor. See *Cordylobia anthropophaga*.

ver'gen·ces (vur'jin·seez) [L. *vergere*, to bend]. A term applied to associated disjunctive movements of the eyes, as convergence, divergence.

ver'ge (vur'jens) [*vergere*]. Inclining.

deorsum. Inclining downward, as of the axis of vision in one eye in strabismus.

v. sursum. Upward inclination.

Verger, Henri (1873–1930). French neurologist who introduced intraneural injection of alcohol for the treatment of neuralgia.

ver'ger prism. An instrument used in the measurement and enlargement of the fusion power of the eyes.

ver'ge ture. Stria atrophica.

Verheyen, Philippe [*Flemish anatomist*, 1648–1710]. Described the venous plexus of stellate form situated on the surface of the kidney just beneath the capsule, called *Verheyen's stars*, *stellae verheyenii*.

Verhoeff, Frederick Herman [American ophthalmologist, 1874–]. Known for his operation for retinal detachment, in which he performed posterior sclerotomy followed by multiple electrolytic punctures. Devised a technic for cataract extraction whereby the lens is grasped above and slid through the corneal incision. In *Verhoeff's operation*, the cataract is removed within the capsule. See Verhoeff depth perception *test*, Verhoeff's *stain*.

veriloid. Trade-mark for the fraction of veratrum viride alkaloids known by the generic name *alkavervir*.

ver'i·tol. $OHC_6H_4CH_2CH(CH_3)NHCH_3$. Parahydroxyphenyl-isopropylmethylamine; a base isomeric with ephedrine. Its action is more nearly related to that of ephedrine than to that of epinephrine. Used largely in Europe as a stimulant in circulatory failure. It is marketed in the form of the hydrochloride.

ver ma·caque (vair mah·kahk'). A club-shaped larval form of the tropical warble fly *Dermatobia hominis*.

ver"mi·ci'dal [L. *vermis*, worm; *caedere*, to kill]. Destructive of worms.

ver'mi·cide [*vermis*; *caedere*]. An agent that destroys worms.

ver·mic'u·lar [L. *vermiculus*, little worm]. Wormlike.

ver·mic'u·late [*vermiculus*]. Resembling or shaped like a worm.

ver·mic"u·la'tion [*vermiculus*]. A wormlike motion; peristaltic motion.

ver'mi·cule [*vermiculus*]. A small worm.

ver·mic'u·lose, ver·mic'u·lous [*vermiculus*]. 1. Vermiform, vermicular. 2. Infested with worms or larvas.

ver·mic'u·lus [L.]. A little worm or grub.

ver'mi·form [L. *vermis*, worm; *forma*, form]. Worm-shaped, as vermiform process.

ver'mi·fuge [*vermis*; *fugare*]. Any agent that kills or expels intestinal worms. —**vermif'ugal**, *adj.*

ver"mi·lin·gual [*vermis*; L. *lingua*, tongue]. Having a worm-shaped tongue.

ver'min [*vermis*]. A term applied to animals which are obnoxious or harmful to man, especially those infesting his person, domesticated animals, or buildings, as flies, lice, rats, or mice.

ver"mi·na'tion [L. *verminatio*, from *verminare*]. Infestation with vermin or worms. The multiplication of parasitic vermin by breeding.

ver'min-ous [*vermis*]. Infested with, or pertaining to, vermin.

ver"mi-pho'bi-a [*vermis*; G. *phobos*, fear]. Morbid fear of worms or of worm infestation.

ver'mis [L.]. 1. A worm. 2. The median lobe of the cerebellum, between the hemispheres, or lateral lobes.

inferior v. The inferior portion of the vermis, which includes the lobules called *nodulus*, *uvula*, *pyramid*, and *tuber*.

superior v. The superior part of the cerebellar vermis, which includes the lobules called *central lobule*, the *monticulus* consisting of *culmen* and *declive*, and the *folium*.

Vernet, Maurice (*French neurologist*, 1887–). Described associated laryngeal paralysis due t lesions of the glossopharyngeal, vagus, and spinal accessory nerves; called *Vernet' syndrome*.

Verneuil, Aristide Auguste Stanislaus (*French surgeon and anatomist*, 1823–95). One of the first to use hemostatic forceps in surgery (1875). Described syphilitic bursitis, also called *Verneuil's disease* or *bursitis*. A plexiform neuroma, or cirsoid neuroma, is also known as *Verneuil' neuroma*.

ver'ni er [after Pierre *Vernier* French physicist, 1580–1637]. A device attached to the graduated scale of various instruments which permits subdividing and measuring the smallest unit of this scale into tenths or other fractions.

ver'nine. Guanosine.

ver'nix ca se-o sa. A cheesy deposit on the surface of the fetus derived from the stratum corneum, sebaceous secretion, and remnants of the epitrichium.

Ver-no ni [after William *Vernon*, English botanist, seventeenth century]. A genus of plants of the Carduaceae.

V anthelmintica. That found in East India; the seeds are anthelmintic.

V nigritiana. That found in West Africa, contains vernonin.

ver'no nin, ver no'nin. A glycoside from *Vernonia nigritiana* (Nigerian ironweed) has digitalislike actions.

Verocay José (1876–1927) Uruguayan pathologist in Czechoslovakia who showed that neurofibromas are derived from the sheath of Schwann cells. See also *Verocay bodies* nder *body*.

ver ni gen. Gitalin.

eronal. Trade-mark for brand of barbital.

sodium. Trade-mark for brand of barbital sodium.

ver-ru'ca (pl. *verrucae*) [L.]. Wart.

venereal v. Condyloma acuminatum.

acuminata. A venereal wart occurring on the genitals. M y occur in the absence of venereal disease, but usually some discharge is present. Syn *condyloma acuminatum*.

digitata. One usually seen on the scalp or in the beard with fingerlike projections and horny cap. The lesion is soft.

filiformis. A soft, slender soft-pointed, threadlike lesion usually seen on the face and neck.

v. necrogenica. A warty excrescence found on the fingers of those who frequently handle the tissues of tuberculous subjects. Also called *anatomic tubercle*, *dissection tubercle*.

peruviana, v. peruana. The benign form of bartonellosis (Carrión disease) endemic in the mountainous areas of northwestern South America, characterized by skin eruption of purpuric vascular papules interspersed with nodular elements, the proliferation of epithelial cells, and the presence the lesions of the causative agent, *Bartonella bacilliformis*, usually in the cytoplasm of endothelial cells. It is related etiologically and immunologically to Oroya fever but the two diseases differ greatly in their clinical picture. Both are associated with the name of Daniel A. Carrión, who first demonstrated their etiologic relationship.

v plana juvenilis. A smooth, flat, and small type of wart seen most often in children on the back of the hands and face, ften arranged in lines.

plantaris. A wart on the sole of the foot. It is often quite painful due to ingrowth and pressure. Usually multiple but often grouped. Covered with callus.

senilis. A brownish, pigmented, hypertrophic lesion, usually seen on the skin of the face, chest, and back of older people It is usually scaly and greasy While listed with precancerous lesions, it occasionally may become malignant. There is no inflammation, and the crust or scale is soft. Syn., *keratosis seborrheica*.

v vulgaris. The common wart, disease caused by a filtrable virus. It is usually seen on the hands, bout the nails, or on the arms or legs, and is more common in children. Lesions are horny projections of normal skin color but soon become dark with papillary projections. They are of various sizes but usually are circular and from ½ to 2 cm. in diameter

ver ru ci form [*verruca*; L. *forma*, form]. Wartlike.

ver'ru-coid, ver ru'coid [*verruca*; G. *eidos*, form]. Resembling wart.

ver'ru cose, ver'ru-cous [L. *verrucosus*, full of warts] Warty; covered with, or having, warts.

ver ru'ga. See *verruca*.

versene A trade-mark for various synthetic amino cids and their salts, as ethylenediaminetetraacetic acid and its salts the substances are used as chelating and sequestering agents.

ver'si-col"or ver-sic'o-lor [L. *vertere*, to turn *color* color]. Denoting change of color

ver'sion [*vertere*]. Turning manipulation during delivery to alter the presentation of the fetus.

abdominal Manipulations made exclusively through the external abdominal wall. Also called *external v.*

anopelvic v Manipulation of the pelvis of the fetus with finger in the mother's rectum.

bimanual Manipulation through the bdominal wall with one hand with the aid of one or more fingers of the other within the vagina. Also called *combined v.*

bipolar v Manipulation of both the pelvis and the vertex of the fetus.

Braxton Hicks Manipulation by the bimanual method to bring the fetal head into the pelvis. This has been advocated in treatment of placenta previa and prolapsed cord.

cephalic v. Turning of the fetus to establish vertex presentation.

combined v. See bimanual v.

external See abdominal v.

forced v Accouchement forcé.

internal v Turning of the fetus by introducing the entire hand within the uterus.

pelvic v. Turning the fetus to bring bout breech presentation.

podalic One in which one or both feet are brought down to the outlet.

prophylactic v. Converting vertex into breech presentation to avoid prolonged pressure on the head. Formerly employed in moderate dystocia.

spontaneous Turning of the fetus without artificial assistance.

ver'te-bra (pl. *vertebrae*) [L., joint, vertebra]. One of the 33 bones forming the spinal or vertebral column. A typical vertebra consists of a body and

an arch, the latter being formed by two pedicles and two laminas. The arch supports seven processes—four articular two transverse, and one spinous. See Table of Bones in the Appendix. See Plates 1, 14. —**vertebral**, *adj*

basilar v The last lumbar vertebra.

cervical vertebrae. Those of the neck.

false v One of the sacral or coccygeal vertebrae.

flexion vertebrae. All except the first two cervical vertebrae.

primitive v The condensed caudal half of an embryonic sclerotome from which develops the greater part of vertebra. Also called *scleromere*.

rotation vertebrae. The first and second cervical vertebrae.

true v One of the cervical, thoracic, or lumbar vertebrae.

v dentata. The axis.

v. magna. The sacrum.

v prominens. The seventh cervical vertebra, so called because its spinous process projects beyond the others.

ver″te-bra dym′i a. See *spondylodidymia*.

ver″te brar te ri al [*vertebra*, G *artēria*, artery]. Giving passage to the vertebral artery as the vertebrarterial foramens in the transverse processes of the cervical vertebrae.

Ver″te bra ta [*vertebra*]. One of the most important groups in the animal kingdom, comprising the fishes, amphibians, reptiles, birds, and mammals. They are characterized by spinal column composed of bony or in the case of certain groups of fishes, cartilaginous, vertebrae. The spinal column also contain the spinal cord, which connects with brain enclosed in skull. The spinal column develops in embryonic lif bout notochord; and the Vertebrata are commonly classified as subphylum of th Chordata.

ver′te brat ver′te bra″ted [*vertebra*] 1 Having a vertebral column. 2. Resembling a vertebral column in flexibility as vertebrate catheter

ver″te-brec′to-my [*vertebra*; G. *ektomē*, excision]. Excision of portion of vertebra.

ver′te-bro- vertebr [*vertebra*]. A combining form denoting *vertebrae* or *vertebral*.

ver″te bro di-dym′i a [*vertebra*; G *didymos*, twin]. Conjoined twins united by vertebrae.

ver′tex [L., top]. 1 The highest point, in the sagittal plane, on the outer surface of skull oriented on the Frankfort horizontal plane. 2. The crown. 3. The center of lens surface; the point on either lens surface which lies on the principal axis.

corneae. Th central portion of the cornea.

ver′ti-cal [*vertex*]. 1 Pertaining to the vertex. 2. Perpendicular referring to the position of the long axis of the human body in the erect posture.

ver′ti-cal di men sion. See under *dimension*.

ver′ti-cil [L. *verticillus*, the whirl of a spindle]. A whorl; circle of leaves, tentacles, hairs, organs, or processes radiating from an axis on the same horizontal plane. —**vertic′illate**, *adj*

Ver″ti cil′li um gra phi i (vur ti sil′ee-um gray′fee-eye) A mold sometimes found in the external acousti meatus in otitis externa.

ver tig′i nous (vur-tidj′i-nus) [L. *vertigo*, whirling around]. Resembling or affected with vertigo.

ver′ti go [L.] The sensation that the outer world is revolving about the patient (*objective vertigo*) or that he himself is moving in space (*subjective vertigo*) The word frequently is used erroneously as synonym for dizziness or giddiness to indicate an unpleasant sensation of disturbed relations to surrounding objects in space.

auditory See Ménière′ *syndrome*.

cerebral v That due to cerebral disorder

epileptic v Vertigo associated with or preceding an ttack of epilepsy

essential v One not due to any discoverable cause.

gastric v That arising from dyspepsia.

intestinal (a) That caused by intestinal disorder (b) That caused by pressure on the terminal portions of the intestine by gas or feces, or even when finger introduced into the rectum, irritates the intestinal wall.

labyrinthine Vertigo, pallor and aural, ocular, or gastric disturbances due to congestion or inflammation of the semicircular canals. See Ménière *syndrome*.

lithemic v. A form associated with gout and lithemia.

neurasthenic v Psychologic vertigo found in neurasthenia.

objective v One in which objects seem to the patient to move.

ocular v That due to eye disease.

organic v That due to brain lesion.

peripheral v That due to irritation that is not central.

psychogenic v See neurasthenic

stomachal v Gastric vertigo caused by disorder of the stomach.

subjective v One in which the patient has a sensation as if he himself were moving.

toxemic That due to some poison in the blood

vertical That caused by looking downward from or upward to height.

v tenebricosa. That accompanied by dimness of vision and headache.

vestibular v That due to irritation of or injury to the labyrinth or vestibular nerve.

ver tig′ra phy. See sectional radiography

ver″u mon ta ni′tis [L. *veru*, spit *montanum*, of mountain G *-itis*, inflammation]. Inflammation of the verumontanum.

ver″u mon ta num (veer oo mon-tay′num, ver oo-) [*veru*; *montanum*]. The colliculus seminalis.

Vesalius, Andreas [Flemish anatomist, 1514-64] His *De humani corporis fabrica* is one of the great classics of anatomy Described an inconstant foramen at the base of the skull anteromedial to the foramen ovale called *Vesalius′ foramen* The emissary vein passing through this foramen from the cavernous sinus is called *Vesalius′ vein*. The inguinal ligament was sometimes called *Vesalius′ ligament*.

ve-sa ni [L., madness]. Unsoundness of mind (Ob.) —**vesan′ic**, *adj*

ves′i ca [L.]. A bladder

bipartita. A urinary bladder which is incompletely reduplicated by partial frontal or sagittal septa.

v duplex. Reduplication of the urinary bladder

v fellea. The gallbladder

umbilicalis. The umbilical vesicle, or yolk sac of mammals.

v urinaria. The urinary bladder

ves′i-cal [*vesica*]. Pertaining to bladder

ves′i-cant [*vesica*] 1. A blistering agent. 2. *In* ... *tory medicine*, blister gas.

ves″i ca′tion [*vesica*]. The formation of blister; blister —**ves′i cate**

ves′i-ca to ry [*vesica*]. Blistering

ves″i ca-to′ry A blistering agent.

ves′i-cle [L. *vesicula*, vesicle]. 1 A small bladder especially small sac containing fluid 2. A small bulla, as seen in herpes simplex or varicella

1 v. An alveolus of the lungs, the ultimate dilations of the air passages.

allantoic v The allantois. See allantoic sac.

amnicocardiac v. In lower vertebrates th

birds) that part of the coelom which lies below and lateral to the developing heart in its early stages.
amnioembryonic The early amnion.
amniotic v The amnion.
anterior brain v See prosencephalon.
auditory The vesicular anlage of the inner ear Also called otocyst, otic v.
blastodermic v. A blastocyst.
brain vesicles. The primary embryonic subdivisions of the brain.
cerebral vesicles. The paired lateral outpouchings of the telencephalon which become the cerebral hemispheres also called telencephalic vesicles.
cervical v See cervical sinus.
chorionic v. The gestation sac covered by chorionic villi and containing the embryo.
germinal The special name given (Purkinje, 1825) to the egg nucleus before nucleus was recognized as constant feature of all cells (Brown, 1831) and before the egg itself was recognized as single cell (Gegenbaur 1861).
Greeff's v. I histopathology. small vesicle of the ciliary process associated with hyaline degeneration of that structure.
lens v The ectodermal vesicle that differentiates into the lens of the eye.
medullary coccygeal v. The enlarged caudal termination of the spinal cord present in embryos of 10–17 mm.
optic The embryonic evagination of the diencephalon from which are derived the pigment and sensory layers of the retina.
otic v See auditory v.
primary brain v One of the first subdivisions of the embryonic brain; the prosencephalon, mesencephalon, or rhombencephalon.
prosencephalic v See prosencephalon.
seminal The contorted, branched, saccular glandular diverticulum of each ductus deferens with which its duct unites to form an ejaculatory duct. See Plate 44.
umbilical v The yolk sac.
ves'i-co- [L. vesica, bladder]. A combining form denoting bladder
ves"i-co-pro-stat'i [vesica; G. prostatēs, one who stands before]. Pertaining to the prostate gland and the urinary bladder
ves"i-cot'o-my [vesica; G tomē, cutting]. Incision of the urinary bladder; cystotomy
ves"i co-u'ter ine (ves ko-yoo'ter-in. -yoo'tah-ryne) [vesica, L. uterus, womb]. Pertaining to the urinary bladder and the uterus.
ve-sic'u la (pl. vesiculae) [L]. A vesicle.
v fellea. The gallbladder
v ophthalmica inversa. The optic vesicle after it has invaginated to form the optic cup. Also called cupula optica.
v. prostatica. The prostatic utricle.
v. seminalis. See seminal vesicle.
ve-sic u-lar [vesicula]. 1 Pertaining to, or composed of, vesicles 2 Produced in air vesicles, as vesicular breathing, vesicular murmur
ve-sic u lase. An enzyme of the prostate gland which coagulates seminal fluid in certain lower animals, not detected as yet in man.
ve-sic"u-la tion [vesicula]. The formation of vesicles; the state of becoming vesiculated.
ve sic"u lec'to my [vesicula; G. ektomē, excision]. Resection, complete or partial, of the seminal vesicles.
ve-sic u-li'tis [vesicula, G. -itis, inflammation]. Inflammation of the seminal vesicles.
ve-sic"u lo-bul'lous, ves"i-co-bul'lous, Characterized by both vesicles and bullae at the same time.
ve-sic'u-lo-gram" [vesicula; G. gramma, letter]. A radiograph of the seminal vesicles, made by injecting radiopaque substance by way of the ejaculatory ducts.
ve-sic"u log'ra phy [vesicula; G graphein, to write]. Radiography of the seminal vesicles also called seminal v.
ve sic"u lo-pap u lar [vesicula, L. papula, pimple]. Consisting of vesicles and papules.
ve-sic"u lo-pus'tu lar [vesicula, L. pustula, blister]. Consisting of vesicles and pustules.
ve-sic u lot'o-my [vesicula; G. tomē, cutting]. Division of seminal vesicle.
ves'sel [L. vascellum, small vase]. A receptacle for fluids, especially tube or canal for conveying blood or lymph.
ves'sig non (vess-ig-non, vess-in-yon, vess-een-yohn See Notes §§ 1, 35) [L. vesica, bladder]. I veterinary medicine, tumor within the synovial membrane of the hock of horse.
ves'ti bule [L. vestibulum, vestibule]. An approach; an antechamber —vestib' la adj
aortic v. The space formed by the left ventricle adjoining the root of the aorta.
pyloric Antrum between the body of the stomach and the duodenal cap.
of the ear The oval cavity of the internal ear which forms the entrance to the cochlea. See Plate 20.
v of the mouth. The vestibular space: it is bounded internally by the teeth and gums, externally by the lips and cheeks.
v of the nose. The skin-lined portion of each nasal cavity between the naris and the limen nasi.
v. of the vagina. That portion of the vulva bounded by the minor lips.
ves tib"u-lot' my [vestibulum, G tomē, cutting]. A surgical opening into the vestibule of the labyrinth.
ves'tige [L. vestigium, footprint]. A trace or remnant of something formerly present or more fully developed; vestigium. —vestig'ial, adj
caudal medullary v See coccygeal v.
coccygeal v A remnant of the neural termination of the embryonic neural tube located in the integument near the tip of the coccyx; derived from the medullary coccygeal vesicle.
ves tig'i-um (ves-tidj'ee-um, ves tig ee-um) [L]. An anatomic relic of fetal or embryonal lif ; g the thymus becomes in adults vestigium.
ves ti men'tum mor'tis [L. the clothing of death]. The seeming of improvement shortly before death.
ve ta (vay'tah, vee'tah) [Sp.]. Mountain sickness.
vet"er i na ri-an, vet'er i nar"y [L. veterinarius, of beasts of burden]. One who practises veterinary medicine.
vet er-i-nar"y (vet'ur-i-nerr ee) [veterinarius]. Pertaining to the practice of medicine with animals, especially domesticated animals.
Vi Chemical symbol for virginium.
vi'a-ble [F vie, life; cf L. vita]. Capable of living, likely to live; applied to fetus capable of living outside of the uterus. —viabil'ity
vi'al [M.E. viole, G. phialē]. A small glass bottle.
Vi-an'ti gen. An antigen discovered by Felix and Pitt which they thought was related to the virulence of the organism (typhoid). It is similar to the somatic and flagellar antigens and heat labile in water but heat stable in absolute alcohol, acetone, and glycerol. It is present in bacteria isolated from disease but disappears upon repeated culture transfers.
vi'bo-ra de la cruz' (vee'bo-rah day lah krOos') A venomous snake. Syn., Bothrops alternata.
vi bra'tion (vye-bray'shun) [L. vibratio vibrare]. Oscillation; also, rapid

period movement in alternately opposite directions from position of equilibrium. —vi'brate v.
vi'bra tor [vibrare]. A device for conveying mechanical vibration to part.
vi'bra to ry [vibrare]. Characterized by vibrations.
Vib ri (vib'ree vib ry-o) [vibrare]. A genus of the Spirillaceae. Short bent, motile rods, single or united end-to-end in spirals. Many species liquefy gelatin.
V comma. The causative organism of cholera.
vi bri-on' sep tique' (vee-bree-ohn sep teek. See Notes § 35) See Clostridium septicum.
vi bri ss (vye-bris uh, vi-bris'uh) [L. vibrissae, hairs in the nose, from vibrare]. 1 One of the hairs in the vestibule of the nose. 2. One of the long, coarse hairs on the face of certain animals.
vi"bro mas-sage [vibrare; F massage]. See vibratory massage.
vi brom ter An instrument which registers at which point on the body surface sensation is felt.
vi bur'num o pu lus (vye-bur'num pew-lus, op yoo lus) The dried bark of Viburnum opulus. It contains valeric acid, an enzyme, viburnin, and volatile oil. Preparations containing it have been used empirically in various menstrual disorders, especially those of painful nature. Also called high-bush cranberry bark, true cramp bark.
vi bur'num pru ni fo'li um [L the wayfaring tree]. The dried bark of the root or stem of Viburnum prunifolium or V rufidulum. It contains crystalline glycoside, salicin, which has relaxing action on uterine muscl ther ctive constituents appear to be present also. It has been used to treat various uterine colics and as general antispasmodic. Also called blackhaw.
vi car'i ous (vye-kair'ee us, vi-) [L. vicarius, substituted]. Taking the place of something else; said of habitual discharge occurring in an abn rmal situation, as vicarious menstruation.
vice [L. vitium]. 1 A physical defect. 2. Depravity 3. Immorality —vicious, adj
Vi'chy wa"ter (vish ee, vee shee, vee-shee') A mildly laxative and antacid mineral water obtained from Vichy France; has been used in rheumatic and gouty conditions and in disorders of the liver
vi'ci-an-ose. A disaccharide which, on hydrolysis, yields l-arabinose and dextrose.
Vicq d'Azyr Félix [French anatomist, 1748–94]. Described foramen at the upper end of the median groove of the anterior surface of the medulla blongata called cecal foramen of the medulla oblongata, Vicq d'Azyr foramen. Inferior laryngotomy is called Vicq d'Azyr' operation. See also mammillothalamic tract
Vidal, Jean Baptiste Emil [French dermatologist, 1825–93]. Described lichen chronicus simplex, also called Vidal' disease The treatment of lupus vulgaris by carification is called Vidal' treatment.
vid"e-og ra phy. Television transmission of -ray pictures makes possible long distance consultation and diagnosis.
Vidian artery canal, nerve. See Guido Guidi.
Vierordt, Karl [German physiologist 1818–84]. Used spectroscope in the analysis of blood, bile, and urine (1876) Devised method f counting blood cells based on essentiall modern principles (1852) Developed sphygmograph (1854) which was probably the first practical instrument for graphi recording of the pulse. Invented hemotachometer for measuring the rate of blood flow (1858)
Vieussens, Raymond [French anatomist, 1641 1715]. Noted for his study of the brain and spinal cord. One of the first to describe th pathology of mitral stenosis and pulse changes in aortic disease. Described aortic regurgitation. Best remembered for his description of the centrum ovale, also called centrum ovale of Vieussens. The annulus ovalis is also called Vieussens annulus and the ansa subclavia is also called ansa of Vieussens.
vig'il [L., on the watch]. Watchful wakefulness.
coma v See coma vigil.
vig"il am'bu lism" (vidj il-amb yoo-liz um) [vigil; L. ambulare, to walk]. Ambulatory automatism the waking state.
vig'i lance [L. vigilantia, wakefulness]. Insomnia, vigil.
Vigotsky See Kasanin-Vigotsky test.
Villaret, Maurice [French neurologist, 1877-19]. Known for his description of syndrome of the retroparotid space in which there is paralysis of the faucial muscles and loss of taste in the posterior portion of the tongue with vesicular paralysis, called retroparotid syndrome, Villaret' syndrome.
Villemin, Jean Antoine [French physician, 1827-92]. Proved, by inoculation with tuberculous material (1865) that tuberculosis is transmissible.
vil lik'i nine (vi lick'i-neen, -nin) The active principle of crude secretin extracts, which produces strong movements of the intestinal villi.
vil li tis [L. villus, shaggy hair; G. -itis, inflammation]. I veterinary medicine, inflammation of the laminae of the corium of horse' hoof.
vil"l -si'tis [L. villosus, hairy -itis]. Inflammation of the villous surface of the placenta.
vil'lous [villosus] Pertaining to villus; covered with villi, characterized by villuslike projections.
vil'lus (pl. villi) [L., shaggy hair]. A minute, elongated projection from the surface of mucous membrane or other membrane.
anchoring v One of the placental villi with ends attached to the exposed surface of the decidua basalis by basal ectoderm.
arachnoid v See arachnoidal granulations under granulation.
chorionic A villus of the chorion or the placenta.
cotyledonary villi. Villi grouped in rosettes and separated by smooth chorion, as in cotyledonary placentas of ruminants.
diffuse villi. Villi evenly spaced ver the entire surface of the chorion or placenta.
intestinal villi. The villi of the mucous membrane of the small intestine. Each consists of an epithelially covered, vascular core of connective tissue containing smooth muscle cells and an efferent lacteal end-capillary
labial villi. Min te, conical projections from the inner aspect (pars villosa) of the fetal lips, sometimes retained until birth.
primary villi. The earliest villi of the embryo, consisting of cordlike masses of trophoblast separated by blood lacunae
secondary v. A definitive, placental villus having a core of connective tissue and blood vessels. Also called true v.
synovial v One of the processes extending from synovial membrane into an articular cavity
zonary villi. Villi restricted to an annular zone about the chorion, as in carnivores.
vil"lus-ec'to my [villus; G. ektomē, excision]. Synovectomy; excision of hypertrophied fold of the synovial membrane of joint.
vin bar'bi tal. 5-Ethyl 5-(1-methyl-1-butenyl) barbituric acid. Delvinal sodium is a trade-mark for brand of the sodium derivative.
Vincent, Jean Hyacinthe (1862 1950). French bacteriologist who described an angina due to fusiform bacilli (1898) See necrotizing ulcerative gingivitis. Vincent angina, Vincent's stomatitis.

vin·ce·tox′i·cum [L. *vincere*, to conquer; G. *toxikon*, poison]. The root of *Cynanchum vincetoxicum* (white swallowwort), indigenous to Europe; has been used as an emetic and in menstrual disorders.

vin·cu·lum (pl. *vincula*) [L., bond, chain]. A ligament, frenum.

tendinum. One of the slender tendinous filaments which connect the phalanges with the flexor tendons.

vin·e·gar. 1. A weak (approximately 6%) solution of acetic acid containing coloring matter and other substances (esters, mineral matter, etc.) formed by the fermentation of alcoholic liquids. It is commonly obtained from fruit juices or other sugar-containing liquids that have first undergone alcoholic fermentation. The process involves the oxidation of ethyl alcohol, forming acetic acid as the final product. 2. A pharmaceutical preparation obtained by macerating a drug with diluted acetic acid and filtering.

Vineland social maturity scale. See under *test*.

vinethene. A trade-mark for divinyl ether CH_2:CH.O.CH:CH$_2$. The substance occurs as a clear colorless liquid, with a slight purple fluorescence. Contains 3.5% of absolute alcohol and 0.01% of phenyl-α-naphthylamine. An inhalation anesthetic to be used for short anesthesias; differs from ether in the rapidity of its action. Intended for use in minor surgical operations of short duration, and in dentistry where gas anesthesia is not available. Also useful as an induction anesthetic. It is inflammable and deteriorates on exposure to air and light.

Vinson, Porter Paisley [*American physician*, 1890–]. Described hysterical dysphagia (1922); called *Plummer-Vinson syndrome*.

vi′nyl, vin·yl. The univalent organic radical H_2C:CH—.

v. cyanide. See *acrylonitrile*.

ether. See *divinyl ether; vinethene*.

vi′nyl·ene. The bivalent organic radical

—CH:CH—

vi·nyl′i·dene. The bivalent organic radical

H_2C:C=

vioform. A trade-mark for *iodochlorhydroxyquin*.

vi″o·la·ce·in. A dark purple antibiotic substance produced by *Chromobacterium violaceum* (*Bacillus violaceus*).

vi″o·la·quer′cit·rin. Rutin.

vi″o·la′tion [L. *violatio*, from *violare*, to outrage]. Rape; the act of violating or ravishing. In a medicolegal sense, it is sometimes used to indicate the act of coitus without violence or force but by means of deception, by the influence of alcohol, or by intimidation.

vi′o·let [L. *viola*, violet]. 1. A reddish blue color resembling the extreme blue end of the visible spectrum or the purple of violets; possesses the greatest refrangibility of the spectral colors. 2. A dyestuff imparting the above color.

gentian. Methylrosaniline chloride.

vi′o·let blind′ness. Amianthinopsy.

vi″o·lu·ric ac′id. 5-Isonitroso-barbituric acid.

vi″o·my′cin. An antibiotic substance isolated from culture filtrates of a violet-colored soil microorganism, *Streptomyces floridae* or *S. puniceus*. It is active against mycobacteria, including tubercle bacilli, and some Gram-negative organisms. It does not inhibit fungi, yeasts, protozoa, or viruses.

vi·os′ter·ol (vye-os′ter-ole, -ol, -awl). Activated ergosterol. Ergosterol is the principal sterol of yeast and molds and occurs as a colorless or white solid. On activation (irradiation) with ultraviolet light it undergoes a series of progressive molecular rearrangements forming several sterols of which calciferol possesses the greatest antirachitic activity. Viosterol is also known as vitamin D_2. It is used to fortify fish liver oils, and, as a solution in an edible vegetable oil, is used in the treatment of rickets. Activation of the ergosterol may also be brought about by bombarding the ergosterol with low-velocity electrons.

v. in oil. See synthetic *oleovitamin* D.

vi-penta drops. Trade-mark for a concentrated solution of vitamins A, B_1, B_2 (G), C, and D.

vi-penta perles. Trade-mark for capsules containing vitamins A, B_1, B_2(G), C, and D.

vi′per [L. *vipera*]. A poisonous snake of the genus *Vipera*. —**vi′perine,** *adj.*

Vi′pera [L.]. A genus of the family Viperidae or true vipers.

V. russellii. One of the most important species of venomous snakes of Asia. Also called *tic-polonga*.

Vi·per′i·dae (vye-perr′i-dee) [*vipera*]. A family of venomous snakes possessing long, curved, movable front fangs which can be erected when striking. Some Viperidae are *Bitis gabonica*, Gaboon viper; *B. lachesis*, puff adder; *B. nasicornis*, rhinoceros viper; *Echis carinatus*, saw-scaled viper; night adders of the genus *Causus*; *Aspis cornutus*, horned viper; and the pit viper (see *Crotalidae*). Outstanding representative in southern Asia is *Vipera russellii* (Russell's viper).

vi′per·ine (vy′puh-rin, -ryne, -reen) [*vipera*]. A toxalbumin extracted from the venom of vipers.

Virchow, Rudolf Ludwig Karl [*German pathologist*, 1821–1902]. Described leukemia, neuroglia, and thrombosis. The angle formed by the union of a line joining the nasofrontal suture and the most prominent point of the lower edge of the superior alveolar process with a line joining the superior border of the external auditory meatus is called *Virchow's angle*. Established the principle that all cells are derived from preexisting cellular elements, and stated it as a law called *Virchow's law*. A line from the root of the nose to the lambda is called *Virchow's line*. See also *signal node*; *perivascular spaces*, under *space*.

vi·re·mi·a. The presence of a virus in the blood stream.

vir′gin [L. *virgo*, maiden]. A female who has never experienced sexual intercourse as normally understood; medicolegally, perforation of the hymen need not have occurred for loss of virginity. —**virginal,** *adj.*; **virgin′ity,** *n.*

vir·gin′i·um [NL., from the state *Virginia*]. Element number 87, symbol Vi, reported in 1930 by Allison and Murphy but not isolated until 1939, by Perey, who named it *francium*.

vir′i·din. $C_{19}H_{16}O_6$, an antibiotic substance produced by the fungus *Trichoderma viride*.

vir′ile (virr′il, vy′ril) [L. *virilis*, manly]. Pertaining to, or characteristic of, the male.

vir″i·les′cence [*virile*]. The acquiring of characters more or less like those of the male.

vir′il·ism [*virile*]. 1. Masculinity; the development of male traits or characteristics in the female. 2. A rare form of pseudohermaphroditism in which the subject is female, but has external genitals which appear in some degree like those of a male. Syn. *gynandry*.

vir″i·li·za′tion (virr″i-li-zay′shun) [*virilis*]. Virilism.

vi·ril′i·ty (vi-ril′i-tee, vye-ril′i-tee) [*virilis*]. 1. The condition of being virile. 2. Procreative power.

vi·rip′o·tent (vi-rip′o-tunt, vye-rip′o-tunt) [L. *vir*, man; *potens*, powerful]. Sexually mature.

vi·rol′o·gist (vi-rol′o-jist, vye-) [L. *virus*, slimy liquid; G. *logos*, word]. One who studies viruses and virus diseases.

vi·rol′o·gy (vi-rol′o-jee, vye-) [*virus*; *logos*]. The study of viruses and virus diseases.

vir"u-ci'din [*virus*; L. *caedere*, to kill]. An agent capable of destroying virus.

vir'u lence [L. *virulentus*, poisonous]. Malignancy noxiousness infectiousness. The disease-producing power of microorganism. —**virulent**, *adj*

vir"u lif'er-ous [*virulentus*, L. *ferre*, to bear]. Containing, or conveying, virus.

vi'rus [L.]. 1 A general term for the poison of an infectious disease. 2. One of a group of pathogenic agents smaller than the accepted bacterial forms, some being visible by ordinary microscopical examination; others, also known as ultraviruses, are beyond this range. They are of particulate nature, and in each virus disease they are represented by particles of fairly constant size. They range from 0.2μ (200 $m\mu$) to 0.01μ (10 $m\mu$) Their animate nature was *strongly* suggested *before* they were actually seen, because of the results of serial transmission of virus diseases. They multiply in the animal body much like pathogenic bacteria. Unlike bacteria, they have ever been cultivated on inanimate media. Virus cultures can be set up with surviving cells or proliferating embryonic cells. *Cultivation is carried out in number of* cases on the chorioallantois of the developing chick. The virus of the tobacco mosaic disease has been isolated as crystalline or paracrystallic protein which retains its infectivity (Stanley 1935) As small an amount as 1 ml. of one in ten billion dilution of the protein may produce infection. The virus of the tobacco mosaic disease has molecular weight of 17×10^6 to 50×10^6 Among the well-known virus diseases of man are: rabies, poliomyelitis, encephalitis lethargica, St. Louis encephalitis, smallpox, chickenpox, herpes facialis, herpes zoster molluscum contagiosum, common cold, influenza, measles, yellow fever and mumps. The virus diseases of animals and plants are numerous. —**viral**, *adj*

alastrim v See smallpox v.

attenuated One whose disease-producing ability has been lessened by heat, chemicals, transfer through animals, or other means.

Bruahilde v Type I poliomyelitis v.

Dunyamvera An encephalitis virus isolated from *Aëdes* mosquitoes in Uganda and pathogenic for various animals, including man.

Coxsackie viruses. A group of antigenically distinct viruses characterized by the capacity to induce destruction of striated muscle, paralysis, and death in infant mice some strains cause pancreatitis in adult mice related to Coxsackie disease of man.

C Coxsackie virus.

filtrable One capable of passing through fine filter such as the porcelain or diatomaceous earth filters. Actually all specific disease-producing viruses are filtrable. See *virus*, 2.

fixed rabies Street rabies virus which is injected into rabbits and passed from one animal to another until it acquires shorter and more constant incubation period than the naturally occurring virus. It is this fixed virus which is used for immunization. Also see rabies *vaccine*.

hepatitis A The virus of infectious hepatitis.

hepatitis B The virus of homologous serum hepatitis.

herpes simplex The virus responsible for variety of diseases, as herpes simplex, eczema herpeticum, keratoconjunctivitis, and an encephalitis. Complement-fixing and neutralizing antibodies are developed four to five days after initial infection. *In general, the characteristic* pathologic finding is that of th large intranuclear inclusion body called *Lipschütz body* (1921) or *Type A inclusion body* (Cowdry 1934)

IH v Infectious hepatitis virus.

Lansing poliomyelitis v A strain of virus which can infect human beings; it was adapted to the cotton rat and white mouse in 1937 and is useful in serological studies of poliomyelitis.

Lansing v Type II poliomyelitis v.

Leon v Type III poliomyelitis v.

neurotropic v One that attacks and has its most serious effects upon nerve tissue.

poliomyelitis A small (20-35 $m\mu$), relatively stable virus which is the causative agent of poliomyelitis. On an immunological basis, three distinct types have been identified, of which the classical prototypes are: Type I, Brunhilde; Type II Lansing Type III, Leon. Type I is most frequently responsible for the epidemic form of the disease.

Saraerelli v The virus of infectious myxomatosis.

SH v The virus of homologous serum hepatitis.

smallpox v That which causes smallpox, one of three major types, all closely related, yet distinguishable by their effects in both man and animals. The viruses are smallpox or variola, alastrim, and vaccinia or cowpox. Smallpox and alastrim viruses, by animal passage, become transformed into vaccinia virus. Various strains of vaccinia virus are in use, the dermal strains, used for vaccine, being maintained by passage through calves, sheep, rabbits. Recently the virus has been grown in tissue cultures and in the egg.

street rabies The virus of rabies as found in dogs in nature or in the street as contrasted with the so-called fixed virus of rabbits.

Theiler' v A neurotropic virus recovered from the intestines of normal laboratory mice by Theiler in 1930. It is known as mouse poliomyelitis.

tobacco mosaic v A specific virus causing the mosaic disease of tobacco, frequently used in virus studies.

vaccine The virus of vaccinia.

vaccinia See smallpox

Venezuelan An immunologically distinct type of virus recovered from the brains of Venezuelan horses affected with equine encephalomyelitis. Infection of man has occurred with this strain.

West Nile v A virus occurring in central Africa and producing very mild encephalitis similar to the St. Louis and J panese B encephalitides.

vi rus-cytes Atypical lymphocytes resembling those seen in infectious mononucleosis, frequently present in small percentage of cases of various viral diseases, such as influenza, infectious hepatitis, and acute respiratory disease.

vis (pl *vires*) [L.]. Force; energy; power

frente A force that attracts.

v a tergo. A force that pushes something before it.

conservatrix. The healing power of nature

v formativa. Energy manifesting itself in the formation of new tissue to replace that which has been destroyed.

v inertiae. That force by virtue of which body at rest tends to remain at rest

i situ Intrinsic force due to position.

v medicatrix naturae. The healing power of nature apart from medicinal treatment.

v vitae. Vital force.

vis- na min. Khellin a more recent term.

vis'ce-ra. Plural of viscus. See Plates 13, 14, 41.

cervical The cervical portions of the digestive and respiratory tracts, and the thyroid and parathyroid glands [illegible] descriptive term.

vis"cer-al'gi-a [L. *viscera*, inner organs; G. [illegible] pain]. Pain in [illegible] viscera.

vis cer o- [*viscera*]. A combining form denoting the [illegible] viscera.

vis"cer-o-in-hib'i-to"ry [viscera; L. *inhibere*, to check]. Inhibiting the movements of viscera.

vis"cer-o-meg'a-ly Abnormally large viscera; enlargement of viscera. Syn., *splanchnomegaly*.

vis"cer-op-to'sis [viscera; G. *ptōsis*, falling]. Enteroptosis.

vis"cer-o-sen'so-ry [viscera; L. *sensorium*, seat of sensation]. Relating to sensation in the viscera.

vis'cer-o-tome [viscera; G. *tomos*, cutting]. 1. An instrument used only in postmortem examinations to secure specimens of the liver. 2. The areas of the viscera supplied with sensory fibers from a single spinal nerve.

vis"cer-ot'o-my [viscera; G. *tomē*, a cutting]. The process of cutting out a piece of liver or other organ with the viscerotome.

vis"cer-o-to'ni-a [viscera; G. *tonos*, tension]. The behavioral counterpart of component I (endomorphy) of the somatotype, manifested predominantly by a desire for satisfaction and the conservation of energy through sociability, relaxation, and love of food. —**viscerotonic**, *adj.*

vis"cer-o-troph'ic [viscera; G. *trophē*, nourishment]. Pertaining to trophic changes induced by visceral conditions.

vis'cid [L. *viscidus*, sticky]. Adhesive; glutinous.

vis-cid'i-ty See *viscosity*.

vis"co-li'zer [L. *viscosus*, sticky]. A machine used in reduction of size of fat particles, or in homogenization of a mixture or tissue. Also called *homogenizer*.

vis-com'e-ter (vis-kom'i-ter) See *viscosimeter*.

vis"co-sim'e-ter [viscosus; G. *metron*, a measure]. An apparatus for determining the degree of viscosity of a fluid.

monolayer v. An instrument used for determining the viscosity of monomolecular films.

Ostwald v. An instrument used for study of the viscosity of lyophilic colloidal systems.

vis-cos'i-ty [viscosus]. The resistance which a liquid exhibits to the flow of one layer over another. The property of being glutinous or sticky and of offering resistance to a change of form, caused by the molecular attraction between the molecules of a liquid.

formula for v.: $V = \frac{\pi p r^4 t}{8 l \eta}$ in which the volume of flow of a liquid is proportional to the pressure p, the fourth power of the radius of the capillary r, the time t, and a constant $\frac{\pi}{8}$ and inversely proportional to the length of the tube l and the viscosity η of the fluid.

vis'cous [viscosus]. Glutinous; semifluid; sticky.

vis'cus (pl. *viscera*) [L.]. Any one of the organs enclosed within one of the four great cavities, the cranium, thorax, abdomen, or pelvis; especially an organ within the abdominal cavity. See Plates 13, 14, 44. —**visceral**, *adj.*

vis"i-bil'i-ty [L. *visibilis*]. 1. The maximum distance to which prominent objects, e.g., trees or houses, located in a definite direction and viewed against the horizon sky, are visible to an observer of normal eyesight under existing conditions of atmosphere, light, etc. For an object to be regarded as visible, it must be recognized by the observer, who has previous knowledge of its character from having seen it on occasions when the atmosphere was clear. 2. In physiologic optics, (a) *minimum visibile*, (b) *minimum separabile*. Also see under *acuity*.

vis'i-ble [L. *visibilis*, visible]. Capable of being seen. —**visibil'ity**, *n.*

vi'sion [L. *visus*]. The act of seeing; sight. Abbreviated, V. —**vis'ual**, *adj.*

binocular v. The faculty of using both eyes synchronously without diplopia.

central v. Vision with macula lutea.

chromatic v. That pertaining to the color sense.

double v. See *diplopia*.

gun-barrel v. See *tubular v.*

indirect v. Vision with parts of the retina other than the macula.

multiple v. A condition of the eye wherein more than one image of an object is formed upon the retina.

photopic v. Vision with accurate recognition of color, as occurs when the eyes have become properly adapted to good illumination.

qualitative v. Vision in which there is ability to distinguish objects.

quantitative v. Mere perception of light.

scotopic v. Perception of shape and form without recognition of color, as occurs with very dim illumination.

solid v. The perception of relief or depth of objects obtained by binocular vision. Also called *stereoscopic v.*

tubular v. A hysterical phenomenon in which the constricted visual field defies the laws of physical projection and maintains a uniform small size, despite a change in distance of the patient from the tangent screen or the size of the test object; popularly called *gun-barrel v.*, *tunnel v.*

vis-nag'in, **vis-nag'in**. $C_{13}H_{10}O_4$. 2-methyl-5-methoxyfuranochromone; a minor constituent of *Ammi visnaga*, from which khellin and khellinin are also obtained. It has been claimed that visnagin has a smooth-muscle-relaxing action, but this is not certain.

Visscher, Frank Evert (1912–) American biologist who, with Donald E. Bowman, described a chemical test for pregnancy in which anterior pituitary hormones are present in the urine; called *Visscher-Bowman test*.

vis'u-al an'gle. The angle at the eye subtended by the limits of the object. The angle is one minute of arc at the threshold of resolution.

vis"u-al-i-za'tion [L. *visualis*, attained by sight]. 1. Perceiving images in the mind with such distinctness that they seem to be seen by the eyes. 2. The act of making visible or of becoming visible, as by means of a microscope, x-ray photograph, otoscope, or other indirect means.

vis'u-al pur'ple. Erythropsin or rhodopsin. An organic pigment of the retina which is bleached to yellow by light. It is a conjugated protein closely related to vitamin A.

vis'u-al yel'low. A substance formed in the retina by visual purple in a photochemical reaction; it breaks up to yield colorless products and vitamin A.

vis"u-o-au'di-to"ry [L. *visus*, vision; *audire*, to hear]. Pertaining to hearing and seeing, as visuoauditory nerve fibers, which connect the visual and auditory centers.

vis"u-o-au'di-to-ry re-vi'val. Treatment in which soldiers suffering from combat neuroses are made to view moving pictures of actual battle scenes with appropriate sound effects; each individual, as he relives his emotional experiences, becomes conscious of the similar behavior of others and realizes that his reactions are universal and natural.

vis"u-og-no'sis (vizh"oo-og-no'sis, -o-no'sis) [visus; G. *gnōsis*, knowledge]. Appreciation and recognition of visual impressions.

vis"u-om'e-ter [visus; G. *metron*, a measure]. An apparatus for determining range of vision.

vis"u-o-psy'chic (vizh"oo-o-sigh'kick) [visus; G. *psychē*, soul]. Pertaining to the visual association

areas of the occipital cortex, Brodmann's areas 18, 19.

vis"u-o sen so-ry [*visus*; L. *sensorium*, seat of sensation]. Pertaining to the visual projection area of the occipital cortex, Brodmann area 17

vi'sus [L.]. Vision.

v. acrior Night blindness
v. acris. Acuteness of vision.
v. brevior Myopia.
coloratus. Chromatopsia.
v. debilitas. Asthenopia.
v. decoloratus. Achromatopsia.
v. dimidiatus. Hemianopsia.
v. diurnus. Hemeralopia.
v. duplicatus. Diplopia.
v. h betudo. Amblyopia.
juvenum. Myopia.
v. lucidus. Photopsia.
v. muscarum. Specks before the eyes.
v. senilis. Presbyopia.

vi'ta- [L., lif]. A combining form meaning *life*.

vi ta gen [L. *vita*, lif G *gennaein*, from *gignesthai*, to be produced] A name suggested for one of the nutrients which meet specific need for vital building material and general need for fuel substance. These compounds are like vitamins in that relatively small quantity is required, but are unlike vitamins that they are utilized in animal metabolism as sources of energy

vitaglass. Trade-mark for glass that transmits the ultraviolet rays of sunlight.

vi tal [L. *vitalis*, vital]. Pertaining to life.

Vitali, Dioscoride [*Italian physician and pharmacologist*, 1833–1917]. Remembered for his tests for alkaloids, for atropine, for bile pigments in the urine, and for the presence of pus in the urine.

vi'tal ism [*vitalis*]. The theory that the activities of living organism are under the guidance of an agency which has none of the attributes of matter or energy —**vitalist,** *n.*

vi tal'i ty [L. *vitalitas*, from *vitalis*]. The power to grow develop, perform living functions vigor

vi'tal ize [*vitalis*]. Endow with the capacity to grow or develop as living thing.

vitallium. Trade-mark for an alloy of cobalt, chromium, and molybdenum used in certain surgical appliances and procedures.

vi'tal red. A diazo dye, better known commercially as brilliant Congo R used as vital stain. Also called *brilliant vital red*, *acid Congo R*, *azidine scarlet R*, and *brilliant dianil red R*.

vi'tals [*vitalis*]. *The organs essential to life.*

vi'tal sen si bil'i ties. The sensations which are of prime importance in self-preservation. Also called *paleo-s.*, *factus autonomic*

vi'ta mer [L *vita*, lif]. Any dietary factor or other substance which in given species can produce vitamin effect, as carotene in human subjects produces an effect of vitamin A.

vi'ta min [*vita*, *ammonia*]. One of group of organic compounds present in variable, minute quantities in natural foodstuffs, required for the normal growth and maintenance of the lif of animals, including man, who, as rule, are unable to synthesize these compounds They are effective in small amounts and do not furnish energy but are essential for transformation of energy and for the regulation of the metabolism in the organism. See T ble of Vitamins in the Appendix.

antiberiberi v See B₁
antidermatitis See B₆.
antihemorrhagi See v. K.
antiinfection See v. A.
antineuritic v See B
antipellagra v Nicotinic acid.
antirachitic v See v. D
antiscorbutic v See v. C.
antisterility v See v. E.
antixerophthalmic v See v. A.
coagulation v See v. K.
fertility See *alphatocopherol* under *tocopherol*.
neo-vitamin A. See v. A.
sunshine See v. D
synthetic v K. See *menadione*.

v A One necessary for maintenance of normal mucosal epithelium and visual acuity Deficiency leads to atrophy of epithelial cells, and is conducive to susceptibility to local bacterial infection of mucous membranes (*eyes*, nasopharynx, genitourinary tract) xerophthalmia, and night blindness. *It is* highly complex alcohol, plentiful fish-liver oil, milk fat, and many pigmented vegetables, and is now produced synthetically The standard unit of vitamin A is the International unit which equals in activity 0.6 microgram of pure β-carotene. One United States Pharmacopeia unit has the same value Other units are the cod-liver oil unit which equals 208 International units, and the blue unit of Moore which equals 60 International units. Also called *antixerophthalmic v.*, *antiinfection* ... *xerovitamin A.*

v.-B complex. An association of an unknown number of different vitamins of which the following have been identified: thiamine (vitamin B₁), riboflavin (vitamin B₂) nicotinic acid (niacin), pyridoxine (vitamin B₆) pantothenic acid, inositol, p-aminobenzoic acid, biotin, choline acid, folic acid, and vitamin B The complex occurs in high concentration in yeast and liver.

v B_c See *folic acid*.

B_T A factor required for growth and survival of the mealworm, *Tenebrio molitor* probably identical with carnitine.

v B_x Para-aminobenzoic acid.

v B Thiamine hydrochloride or thiamine, necessary for normal carbohydrate metabolism, especially in nerves, and for maintenance of normal appetite, muscular tissues, reproduction, and lactation. Deficiency leads to peripheral neuropathy and heart failure It is distributed in whole-grain cereals, meats (especially liver and pork) legumes, and yeast One United States Pharmacopeia In ternational unit equals the activity of 3.0 micrograms of thiamine hydrochloride Also called *aneurin*, *torulin*, *antineuritic v.*, *antiberiberi factor*. See *thiamine hydrochloride*.

v B₂ *Riboflavi* found in milk, liver, meat, glandular organs, eggs, yeast, and certain leafy vegetables. Also called *lactoflavin*, *ovoflavin*, *hepatoflavin*, *vitamin G* Also see *riboflavin*.

v B As yet undetermined heat-labile factor essential for growth and weight maintenance of pigeons. Said to occur in yeast, liver, grain, and malt.

v B As yet undetermined factor postulated to prevent paralysis in rats and chicks. May be identical with mixture of arginine, glycine and cystine, or may be essential for proper utilization of these three amino acids. Said to occur in dried grass, wheat germ, liver and yeast.

B As yet undetermined heat-stable factor essential for maintaining growth in the pigeon. Possibly identical with niacin also called *factor*

v B Pyridoxine; vitamin essential to prevent edema and swelling of the skin in the rat, found in rice bran, liver yeast, and other sources rich vitamin-B complex. Its deficiency may cause convulsive disorders in infants. Also called *antidermatitis v.*, *antiacrodynia factor* adermin.

B₁₂ A essential vitamin needed for the normal

maturation of cells of the erythrocytic series, and also for normal neurological function. When given parenterally it corrects both the hematologic and neurologic symptoms of pernicious anemia. Syn., *antianemia factor, erythrocyte-maturing factor, extrinsic factor, anti-pernicious-anemia factor, maturation factor of liver, animal-protein factor,* cyanocobalamin, hydroxocobalamin.

v. B[illegible] An unidentified crystalline compound, isolated from human urine, having high cell-proliferating activity in bone marrow cultures but an inhibitory effect on certain suspensions of cells of neoplastic tissue.

v. C Ascorbic acid, cevitamic acid, cevitaminic acid, necessary for maintenance of intercellular substance of teeth, bones, and vascular walls. Deficiency leads to scurvy. Distributed in fruits, especially of the citrus variety, tomatoes, potatoes, leafy vegetables, and to a lesser degree in everything raw. It is destroyed by heat. One International unit equals the activity of 50 micrograms of ascorbic acid. Also called *antiscorbutic, scorbutamin, antiscorbutic factor.*

v. D One of several vitamins having antirachitic activity, as calciferol (D_2), irradiated 7-dehydrocholesterol (D_3), irradiated 22-dihydroergosterol (D_4), and irradiated 7-dehydrostigmasterol (D_5). Of these, vitamin D_3 is probably the most abundant in natural sources like fish-liver oils. Vitamin D is necessary for normal deposition of calcium and phosphorus in bones and teeth. Deficiency leads to rickets in children, osteomalacia in adults. Found in fish-liver oils (principally D_3), eggs, salmon, and produced after irradiation of ergosterol (to D_2) and other sterols or foods containing them. The action of sunshine on skin promotes the synthesis of vitamin D in the body so that exposure to sunshine is also antirachitic. One United States Pharmacopeia or International unit is equal in activity, in standard rachitic rats, to 0.025 microgram of vitamin D_3. One Association of Official Agricultural Chemists unit equals the activity for chicks of one United States Pharmacopeia unit in the United States Pharmacopeia Reference cod-liver oil. One standard unit equals 1 000 000 International units and one clinical unit equals 12.5–17 International units. Also called *antirachitic, antirachitic v.* See *synthetic vitamin D.*

v. E Tocopherol; three tocopherols have vitamin-E activity: α-tocopherol ($C_{29}H_{50}O_2$), β-tocopherol ($C_{28}H_{48}O_2$) and γ-tocopherol ($C_{28}H_{48}O_2$; isomer of β-tocopherol). Vitamin-E deficiency in rats produces muscular dystrophy, degeneration, death and resorption of the fetus in the gravid female, and testicular degeneration in the male. This vitamin appears to be essential for the maturation and differentiation of certain cells. Occurs in wheat-germ oil, cottonseed oil, corn oil, rice-germ oil, lettuce, and alfalfa. One rat unit, or the fertility dose, is equal to 2–3 mg. of α-tocopherol. Also called *antisterility v., tocopherol.*

v. F A term formerly used for essential fatty acids, such as linoleic acid ($C_{18}H_{32}O_2$), linolenic acid ($C_{18}H_{30}O_2$), and arachidonic acid ($C_{20}H_{32}O_2$).

v. G See v. B_2.

v. H A water-soluble component of the vitamin-B complex identical with biotin and coenzyme R.

v. H′ Para-aminobenzoic acid.

v. K Group of at least three naphthoquinone derivatives, vitamin K_1, vitamin K_2, and vitamin K_3. Vitamin K is essential for formation of prothrombin. In vitamin-K deficiency the blood-clotting time is markedly prolonged and hemorrhages result. The principal dietary sources are spinach, cabbage, kale, cauliflower, tomatoes, and soybean oil. There is no International unit standard. Also called *antihemorrhagic v., prothrombin factor.* See *menadione.*

v. K_1 Phytonadione.

v. K_2 2-Methyl-3-difarnesyl-1,4-naphthoquinone, isolated from putrefied fish meal; it occurs in microorganisms.

v. K_3 See *menadione.*

v. L One of a group of lactation vitamins. Evidence indicates that these vitamins are distinct entities, but they have not been characterized chemically or extensively studied.

v. M A factor, probably a member of the vitamin-B complex, believed to be necessary for the prevention of anemia and loss of weight in monkeys. Present in yeast and liver.

v. P-P Nicotinic acid.

v. T A substance extracted from the yeast *Torula utilis* which has a stimulating and regulating effect on growing and regenerating tissues.

v. U A supposed vitamin necessary for growth in the chick.

vi″ta·zyme″ A substance having the properties of both a vitamin and an enzyme. *Obs.*

vit′el·lar″y (vit′i·lerr″ee, vye′tə-) [L. *vitellus,* yolk]. Pertaining to the vitellus. Vitelline.

vi·tel′li·cle (vi·tel′i·kul, vye-tel′-) [*vitellus*]. Old term for the yolk sac or umbilical vesicle.

vi·tel′lin (vi·tel′in, vye·tel′in) [*vitellus*]. A phosphoprotein found in egg yolk.

vi·tel′line (vi·tel′in, -een, -yne, vye-tel′-) [*vitellus*]. Pertaining to the vitellus or yolk.

vi·tel″lo·lu′te·in [*vitellus;* L. *luteus,* yellow]. A yellow pigment of yolk.

vi·tel″lo·mes″en·ter′ic (vi·tel″o·mess·en·terr′ick, vye·tel″o-) [*vitellus;* G. *mesos,* middle; *enteron,* intestine]. Omphalomesenteric.

vi·tel″lo·ru′bin [*vitellus;* L. *ruber,* red]. A reddish pigment obtained from the yolk of egg.

vi·tel′lus (vi·tel′us, vye-tel′us) [L.]. A yolk; specifically, the yolk of the egg of the common fowl, *Gallus domesticus.*

v. ovi. The yolk of an egg.

vi″ti·a′tion (vish″ee·ay′shun) [L. *vitiatio,* from *vitiare,* to spoil]. A change which lessens utility or efficiency or neutralizes an action.

vit″i·lig′i·nes (vit″i·lidj′i·neez) [L. *vitiligo,* cutaneous eruption]. The lineae albicantes.

vit″i·li′go [L.]. A skin disease characterized by an acquired achromia in areas of various sizes and shapes. There is an almost complete lack of pigment with hyperpigmented borders. Lesions are more marked in areas exposed to sun. Also called *leukoderma, piebald skin, leukopathia.* —**vitilig′inous, vitil′igoid,** *adj.*

circumnaevic v. See *leukoderma acquisitum centrifugum.*

perinevoid v. See *leukoderma acquisitum centrifugum.*

acquisita syphilitica. See *vitiligoid.*

v. capitis. Alopecia areata.

vi·til′i·goid [*vitiligo;* G. *eidos,* form]. A rare form of pigmentary syphiloderm in early syphilis, usually occurring on the sides of the neck and more frequent in women. It appears as rounded, discrete or confluent macules of hyperpigmentation (coffee brown) or in a form simulating vitiligo, in which hypopigmented macules are bordered by slight hyperpigmentation. Also called *leukomelanoderma, leukoderma syphiliticum, vitiligo acquisita syphilitica.*

vit″i·li·goi′de·a [*vitiligo;* *eidos*]. Old term for xanthoma.

vit′re·in. A complex protein found in the vitreous body of the eye.

vit″re·o·cap″su·li′tis. See *hyalitis.*

vit″re -den tin, vit″re-o-den′tine (vit″ree-o-den tin) [L. *vitreus*, of glass; *dens*, tooth]. A variety of dentin with but few dentinal tubules.

vit′re ous [*vitreus*]. Glassy; hyaline.

vit′re-ous. The transparent, gelatinlike substance filling the greater part of the globe of th eye; also called *vitreous body*, *vitreous humor*. See Plate 19

vi tres′cence [*vitreus*]. The condition of becoming hard and transparent like glass.

vit′re um [*vitreus*]. The vitreous.

vit ric [L. *vitrum*, glass]. Relating to glass or any vitreous substance.

vi tri′na (pl. *vitrinae*) [*vitrum*]. The vitreous.

v auditoria. Th endolymph; also called *otic*.

v ocularis. The vitreous.

vit′ri ol [L. *vitreus*, glassy]. 1 Old term for any substance having glassy fracture or ppearance. 2. Sulfuric acid. Syn., *oil of v.* 3. Any crystalline salt of sulfuric acid. —**vit riolated, vitriol′ic,** *adj*

blue v Copper sulfate.

green v Ferrous sulfate or copperas.

oil of v Sulfuric acid.

v ethyl Aromatic sulfuric acid.

white v Zinc sulfate.

vit″ri ol′ic ac′id. Sulfuric acid.

vit ri′tis [L. *vitrum*, glass; G -*itis*, inflammation]. Glaucoma.

vit″re-den′tin, vit″re den′tine. 1 Calcified tissue allegedly occurring on or in the scales or teeth of certai lower fishes. 2. Vitreodentin erroneous.

vit ro-pres sion [*vitrum*, L. *pressio* pressure] Pressure with glass slide on the skin to aid in study and diagnosis of skin lesions.

vit rum [L.]. Glass.

viv″i dif fu′sion [L. *vivus*, living *diffusio*, from *diffundere*, to pour forth]. The passage of diffusible substances from blood of living animal flowing through collodion tubes into surrounding isotonic saline solution.

viv″i fi ca′tion [*vivus*; L. *facere*, to make]. The act of making alive or of converting into living tissue.

vi-vip rous (vye-vip uh-rus, vi-vip) [*vivus*; L. *parere*, to bring forth]. Bringing forth the young alive—distinguished from *oviparous*. —**vivipar′ity** n.

viv″i sec′tion [*vivus*; L. *sectio* from *secare*, to cut]. The surgical preparation of anesthetized animals for study of functions or their derangements. —**viv′isect,** v.

viv″i-sec′tion ist [*vivus*; *secare*]. One who practices or defends experimental work on animals.

viv″i-sec tor [*vivus*; *secare*]. One who uses surgical procedures on anesthetized animals to study functions or their derangements.

Vleminckx's solution. See under sulfurated lime solution.

vo cal [L. *vocalis*, vocal]. Pertaining to the voice; pertaining to the organs producing the voice

vo-ca′lis. The muscle lying beneath the true vocal folds.

Voegtlin, Carl (1879–) American pharmacologist who demonstrated that calcium metabolism is controlled by the parathyroid glands (1909) and contributed to the elucidation of the chemotherapeutic action of arsenicals.

Voges–Proskauer reaction. See under *reaction*.

Vogt, Oskar (1870–) German neurologist, who, with his brother Cecil (b. 1875) described status marmoratus, also called *Vogt' disease* or *syndrome*. A juvenile form of amaurotic familial idiocy is called *Spielmeyer–Vogt disease*.

Vogt, Paul Friedrich Emmanuel [*German surgeon*, 1847–85]. Remembered for his description of point selected for trephining in traumatic meningeal hemorrhage; *Vogt's point* is found by taking a horizontal line two fingers' breadth above the zygomatic arch, and a vertical line thumb's breadth behind the sphenofrontal process of the zygoma, the intersection of the two marking the point.

voice [L. *vox*, voice]. The sounds, especially articulate sounds, that are produced by the vibration of the vocal folds and modified by the resonance organs.

esophageal v. See esophageal *speech*.

nasal A peculiar muffled timbre of the voice, especially marked in cases of perforated palate.

void [L. *vacuus*, empty]. Evacuate.

clocked voids. Voidings at stated intervals usually initiated with assistance of manual pressure over the bladder part of regimen in patients with a neurogenic urinary bladder.

Voillemier's point. See under *point*.

Voisenet–Rhode reaction. See under *reaction*.

vo′la [L., palm]. The palm of the hand or the sole of the foot. —**volar,** *adj*

vol′a tile [L. *volatilis*, flying]. Readily vaporizing, evaporating. —**volatiliza′tion,** n., **volatilize,** v

v oils. Essential oils.

vole [Scand. in origin]. Any ratlike rodent belonging to the genus *Microtus*.

vo-le′mic [volume G *haima*, blood]. Relating to volume of blood or plasma.

Volhard, Franz [*German physician*, 1872–1950]. Introduced pericardiectomy for adhesive pericarditis (1923); also called *cardiolysis*. Devised technics for determining chloride in blood or urine using silver nitrate; called *Volhard–Arnold method*. See also *Volhard'* and *Fahr* tests under test. Malignant nephrosclerosis is called *Fahr-Volhard disease*.

Volhard–Harvey method. See under *method*.

Volhard and Löhlein method. See under *method*.

vo-li′tion [L. *velle*, to will] The will or determination to act. —**volitional,** *adj*.

Volkmann, Alfred Wilhelm (1800–1877). German physiologist who described the small canals found in compact bone, called *Volkmann canals*, which transmit blood vessels. Contributed important work on the histology of the central nervous system (1842)

Volkmann, Richard von [*German surgeon*, 1830–89]. Distinguished for having been the first to describe cancer resulting from irritation of the skin by coal tar and paraffin (1873). Excised the rectum for cancer (1878) Described ischemic contracture of the muscles due to pressure or injury accompanied often by muscle degeneration, called *Volkmann's contracture*. The resulting paralysis called *ischemic paralysis*, *Volkmann's paralysis*. Originator of splint with foot piece and two lateral supports, used in fractures of the lower extremity called *Volkmann splint*.

vol′ley [L. *volare*, to fly]. Approximately simultaneous discharges, as nerve impulses which travel simultaneously in different axons of nerve or which are discharged simultaneously from groups of central neurons.

Vollmer patch test. See under *test*.

vol. %. Volume per cent.

vol sel′la [L kind of pincers]. A forceps having one or more hooks at the end of each blade. Also called *vulsella*, *vulsellum forceps*.

volt [after Alessandro *Volta*, Italian physicist, 1745–1827]. The unit of electromotive force and of electric potential; the electromotive force that, steadily applied to conductor whose resistance is 1 ohm, will produce a current of 1 ampere. Abbreviated, v V

electronvolt. Unit of energy equivalent to the

kinetic energy which an electron acquires in falling through a potential of one volt.
million electron-volts. One million electron volts; 1.59×10^{-6} erg. Abbreviated, mev.

vol'tage [Volta]. Electromotive force measured in volts.
effective v. For alternating currents, 0.707 of the peak voltage.
inverse v. The voltage between the filament and the plate in a roentgen-ray tube during that part of the cycle that the anode is negatively charged.

volt"a·gram" [Volta; G. gramma, letter]. A faradic battery so arranged as to produce an almost continuous current. Obs.

vol·ta'ic. Of or pertaining to Alessandro Volta or to voltaism; galvanic.

vol'ta·ism. See galvanism.

vol·tam'e·ter [Volta; G. metron, a measure]. An instrument for ascertaining the electromotive force of a current in volts.

volt"am"me·ter [Volta; A. M. Ampère, French physicist; metron]. An instrument for measuring both voltage, or potential, and amperage, or amount of current.

volt"-am'pere. A watt; the rate of working in an electric circuit when the current is one ampere and the potential one volt.

Volterra method. See under method.

volt'me"ter [Volta; metron]. An instrument for measuring voltage, or electromotive force.
electrostatic v. One for measurement of high voltages; built on the principle that like electric charges repel and unlike charges attract each other.

Voltolini, Friedrich Eduard Rudolph [German laryngologist and otologist, 1819–89]. Known for his description of an acute inflammation of the internal ear of labyrinthine origin, associated with fever and severe constitutional and cerebral symptoms (1867); called Voltolini's disease. The first to use the galvanic cautery in laryngeal surgery (1867) and a pioneer in the use of external illumination in laryngeal surgery (1850).

vol'ume [L. volumen, roll, volume]. In physics, the space which a substance fills. Cubic dimension.
atomic v. The atomic weight of an element divided by the density; it represents the volume in cubic centimeters which would be occupied by the atomic weight of an element taken in grams.
expiratory reserve v. The volume of air that can be expelled after involuntary exhalation at any level of activity. Syn., reserve air, supplemental air. See also respiration.
inspiratory reserve v. Complemental air. See also inspiratory capacity, respiration.
mean cell v. See MCV.
mean corpuscular v. See MCV.
molecular v. The volume of one gram-molecule of substance; in the gaseous state under the same conditions of temperature and pressure, the molecular volumes of all substances are equal.
residual v. Air remaining in the lungs after the most complete expiration possible. It is elevated in diffuse obstructive emphysema and during an attack of asthma. Syn. residual air or capacity.
sensitive v. In radiobiology, region within a cell which is especially sensitive to radiation. Syn., sensitive region.
specific v. The volume occupied by a definite weight of a substance, as the volume in cubic centimeters of 1 Gm. of substance.
tidal v. The amount of air moved by a single breath at any level of activity; normally at rest, approximately 500 cc. (resting tidal volume). Syn., tidal air.

v. per cent. The number of cubic centimeters of substance contained in 100 cc. of medium. Usually refers to gas (O_2 or CO_2) contained in blood. Symbol, vol. %.

vol"u·met'ric [volume; G. metron, a measure]. Pertaining to measurement by volume.

vol'un·tar"y [L. voluntarius, voluntary]. Under control of the will; performed by an exercise of the will.

vol'u·tin [L. volutum, from volvere, to roll]. Inclusion bodies in bacterial and yeast cells.

vol·vu·lo'sis. Onchocerciasis.

vol'vu·lus [volvere]. A twisting of the bowel upon itself so as to occlude the lumen, occurring most frequently in the sigmoid flexure.

vo'mer [L., ploughshare]. The thin plate of bone which is situated vertically between the nasal cavities, and which forms the posterior portion of the septum of the nose. See Table of Bones in the Appendix.

vom"er·o·na'sal (vom"er·o·nay'zul, vo"mer·o-) [vomer; L. nasus, nose]. Pertaining to the vomer and the nasal cavity.

vom'it [L. vomitus, from vomere, to vomit]. Matter expelled from the stomach by vomiting.
bilious v. Vomit stained with bile.
black v. A dark fluid consisting of blood and the contents of the stomach.
coffee-ground v. Vomit consisting of altered blood and the contents of the stomach.

vom'it. To expel from the stomach by vomiting.

vom'it·ing [vomere]. The forcible ejection of the contents of the stomach through the mouth.
cyclic v. Vomiting recurring at regular periods.
dry v. Persistent nausea with attempts at vomiting, but with ejection of nothing but gas.
epidemic v. of childhood. Epidemic acute nonbacterial gastroenteritis in children.
fecal v. See stercoraceous v.
pernicious v. A variety of vomiting occasionally occurring in pregnancy and becoming at times so excessive as to threaten life.
projectile v. A form observed in some diseases of the brain stem; the vomitus is suddenly projected out of the mouth to some distance, usually without nausea.
stercoraceous v. Ejection of fecal matter in vomit, usually due to intestinal obstruction.

vom'i·tive [vomere]. Emetic.

vom'i·to ne'gro. Black vomit. Spanish term for hematemesis in yellow fever.

vom'i·to"ry [L. vomitorius, vomiting]. 1. Any agent that induces emesis. 2. A vessel used to receive ejecta.

vom"i·tu·ri'tion (vom"i·tew·rish'un) [L. vomere, to vomit]. Ineffectual attempt at vomiting; retching.

vom'i·tus [L.]. 1. Vomited matter. 2. The act of vomiting.
v. cruentus. Bloody vomit.
v. marinus. Seasickness.
v. matutinus. Morning sickness.
v. niger. Black vomit.

von Aldor's test. See under test.

vonedrine. Trade-mark for phenylpropylmethylamine, a nasal vasoconstrictor used by inhalation. See phenylpropylmethylamine.

von Graefe's knife. A small knife with a long, narrow blade, used in ophthalmic surgery.

Von Kóssa' AgNO₃ method. See under stain.

Voorhees, James Ditmars [American obstetrician, 1869–1929]. Introduced a hydrostatic rubber bag, useful in dilating the uterine cervix where it is desired to induce labor; called Voorhees bag.

vo·ra'cious [L. vorax, voracious]. Having an insatiable appetite or desire for food.

Voronoff, Serge [*Russian physiologist*, 1866–1951]. Widely known for his advocacy of rejuvenation by testicular implantations (1919); called *Voronoff operation*.

vor'tex (pl. *vortices*) [L., whirl]. A structure having the appearance of being produced by a rotary motion about an axis.

v. coccygeus. The point of convergence of the lanugo hairs over the coccyx.

v. lentis. Lens star.

v. of the heart. The region at the apex of the heart where the superficial layer of muscle of both ventricles (vortex fibers) passes into the deep layer of the ventricles.

vortices pilorum. Hair whorls.

vor'ti cose [*vortex*]. Whirling, having whorled appearance.

Vossius ring. See pigmented *cataract*.

vox [L.]. The voice.

v. abscissa. Loss of voice.

capitis. The upper register of the voice falsetto voice.

cholerica. A peculiar faint voice noted in the last stage of cholera.

v. rauca. Hoarse voice.

vo yeur' (vwah yur. *See* NOTES § 35) [F.]. Peeping Tom. One who obtains sexual gratification from witnessing the sexual acts of others or from viewing persons in the nude. **—voyeurism**, *n.*

V. R. Vocal resonance.

V. S. Volumetric solution.

vu"e-rom'e ter (view"-rom'i-tur, view-rom'i-tur) [F. *vue*, sight; G. *metron*, measure]. An apparatus for determining the interpupillary distance.

vul can ize [L. *Vulcanus*, the fire god]. Subject rubber to a process wherein it is treated with sulfur at a high temperature, and thereby rendered either flexible or very hard.

vul'ner a ble [L. *vulnerabilis*, from *vulnus*, injury]. Susceptible to injury.

vul ner ar"y (vul'nur-err ee) [L. *vulnerarius*, of wounds]. An agent useful in healing wounds. *Rare.* **—vul'nerary**, *adj.*

vul'nus [L.]. A wound. *Obs.*

Vulpian, Edme Félix Alfred [*French physician*, 1826–87]. Described progressive muscular atrophy affecting the muscles of the scapulohumeral region, called *Vulpian atrophy*. He described slow prolonged contraction obtained in denervated lingual muscle by stimulation of the chorda tympani nerve. This was believed to have been caused by diffusion of acetylcholine from neighboring end organs to the sensitized end plate; called *Vulpian effect*. See also Vulpian-Heidenhain-Sherrington *phenomenon*.

Vulpian test. See under *test*.

vul pin'ic ac'id. $C_{19}H_{14}O_5$; yellow pigment found in some rare lichens, used to kill foxes and wolves. It causes pronounced dyspnea, convulsions, and death from respiratory failure.

vul sel'lum (pl. *vulsella*). See *volsella*.

vul va [L., covering, womb]. The external genital organs in woman. Syn., *pudendum muliebre*. **—vulvar**, *adj.*

garrulity of v. Flatus vaginalis.

connivens. A form of vulva in which the labia majora are in close apposition.

v. hians. The form of vulva in which the labia majora are gaping.

vul-vec'to my [*vulva*; G. *ektomē*, excision]. Excision of the vulva.

vul vi mus (vul-vis'mus). See *vaginismus*.

vul i'tis [*vulva*; G. *-itis*, inflammation]. Inflammation of the vulva.

adhesive One associated with the sticking together of vulvar structures.

intertriginous One secondary to the irritation which follows the rubbing together of adjacent parts.

vul'vo-, vulv- [*vulva*]. A combining form denoting the vulva.

vul"vo vag"i ni'tis (vul"vo-vadj i-nigh'tis) [*vulva*; L. *vagina*, vagina; G. *-itis*, inflammation]. Inflammation of the vulva and of the vagina existing at the same time.

W

W Chemical symbol for wolfram.

w, w Watt.

Waage, Peter [*Norwegian chemist*, 1833–1900]. Described, with C. M. Guldberg, the law of mass action, called *Guldberg-Waage law*.

Wachendorf, Eberhard Jacob von [*Dutch anatomist*, 1703–58]. Remembered for his description of the fetal pupillary membrane, called *Wachendorf membrane*.

wad'ding [F. *ouate*]. 1. Carded cotton or wool, used for surgical dressings, generally not of the first quality. 2. Cotton batting, sometimes glazed to render it nonabsorbent.

wad'dle [AS. *wadan*, to go]. A clumsy swaying walk or gait.

Wade's urethral suppositories. Suppositories containing iodoform, bismuth subnitrate, chloral, and morphine.

wa'fer [Teut. in origin]. A thin sheet made by heating moistened flour and used to enclose powders that are taken internally. Also called *cachet*.

Wagner, Ernst Leberecht [*German pathologist*, 1829–88]. Described dermatomyositis (1863). First to describe colloid milium, also called *Wagner disease*. Made contributions to the knowledge of pathology of uterine cancer (1858).

Wagner, Johann Philipp [*German physicist*, 1799–1879]. Devised an instrument for opening and closing a galvanic circuit, called *Wagner hammer* or *Neef hammer*.

Wagner, Rudolf [*German physician*, 1805–64]. Remembered for his many contributions to the knowledge of sympathetic nerves, nerve ganglions, and nerve endings (1843–55). With Meissner he described the tactile corpuscles, also called *Wagner's corpuscles*; see Meissner's *corpuscle*.

Wagner, Wilhelm [*German surgeon*, 1848–1900]. Introduced an osteoplastic resection of the skull, called *Wagner operation*.

Wagner von Jauregg, Julius [1857–1940]. Austrian physician who practiced fever therapy as treatment for neurosyphilis and demonstrated paralysis, using inoculation with malaria, called *Wagner-Jauregg treatment*. Nobel laureate (1927).

Wagstaffe, William Warwick [*English surgeon*, 1843–1910]. Remembered for his description of fracture with separation of the medial malleolus, called *Wagstaffe fracture*.

Wahl, Eduard von [*German surgeon*, 1833–90]. Described a sign indicative of intestinal obstruction, in which local meteorism appears above the point of obstruction; called *Wahl's sign*.

wa hoo' bark (wah-hoo', wah'hoo). Euonymus.

waist [M.E. *wast*]. The narrowest portion of the trunk above the hips.

waistline. The circumference of the waist.

wa-kam'ba. A vegetable arrow poison, used in Zanzibar.

wake'ful ness [AS. *wacan*]. Insomnia; continued inability to sleep.

Waksman, Selman A. (1888–). American soil microbiologist known for his extensive research on soil microorganisms, such as actinomycetes and other fungi, the bacteria concerned with the oxidation of sulfur, and the organisms concerned in the formation of antibiotic substances, as well as marine bacteria. He received the Nobel prize in 1952 for the discovery of streptomycin.

Walcher's position. See under *position*.

Waldenström, Johan Anton [*Swedish physician*, 1839–79]. Reported, with A. F. Lindstedt, what was probably the first description of a case of volvulus (1878).

Waldenström, Johan Henning [*Swedish surgeon*, 1877–]. Described osteochondritis deformans juvenilis; also described the formation and disappearance of amyloid in man.

Waldeyer-Hartz, Heinrich Wilhelm Gottfried von [*German anatomist*, 1836–1921]. The germinal epithelium is called *Waldeyer's epithelium*. The duodenal fossae are sometimes known as *Waldeyer's fossae*. Described the lymphatic ring formed by the two faucial tonsils, the pharyngeal tonsil, and smaller groups of lymphatic follicles at the base of the tongue and behind the posterior pillars of the fauces, called *Waldeyer's tonsillar ring*. Modified sweat glands at the border of the tarsal plates of the eyelid are known as *Waldeyer's glands*.

Waldschmidt-Leitz method. See Willstätter-Waldschmidt-Leitz, and Hesse method.

Walker, J. T. Ainslie (1868–1930). English chemist who introduced, with Samuel Rideal, a method for testing disinfectants (1903), called *Rideal-Walker method*. See under Samuel *Rideal*.

Walker sarcoma. See under *sarcoma*.

walk'ing i'ron. A metal support attached to a splint, shoe, or plaster cast designed to permit walking without the sole of the foot coming in contact with the ground.

walk'ing wound'ed, *In military medicine*, a sick or wounded person who can walk from the place where he became a casualty to the place where he can receive medical treatment; an ambulant case.

wall [L. *vallum*, rampart]. The bounding side or inside surface of a natural or artificial cavity or vessel.

axial walls. Walls of a tooth, or of a cavity in a tooth, which are parallel with the long axis of the tooth.

cell w. (a) The cellulose cell membrane of plant cells. (b) The outer boundary or membrane of some animal cells.

Wallace, Alfred Russel [*English naturalist*, 1823–1913]. Independently developed a theory of natural selection which was in every respect comparable to that of Darwin. The accounts of both were published in a joint paper by the Linnean Society of London (1858).

Wallace and Diamond's method. See under *method*.

Wallenberg, Adolf [*German physician*, 1862–1949]. Described a syndrome involving the lateral portion of the medulla, due to thrombosis in the posterior inferior cerebellar artery. The symptoms include ipsilateral lateropulsion, hemisynergia, hemiataxia, and hemifacial anesthesia; contralateral loss of pain and temperature sensibility in arm, trunk, leg; ipsilateral laryngoplegia and palatoplegia. Called *Wallenberg's syndrome*.

Waller, Augustus Désiré [*English physiologist*, 1856–1922]. First to employ electrodes in research upon action currents and electromotive changes accompanying the heart beat (1887). His experiments had an important bearing upon the development of electrocardiography.

Waller, Augustus Volney [*English physiologist*, 1816–70]. Known for his classic experiments upon the effects of section of the glossopharyngeal and hypoglossal nerves of the frog, which demonstrated nerve degeneration (1850). Demonstrated that a nerve fiber can maintain its anatomic and physiologic integrity only when it is in uninterrupted continuity with its cell of origin; called *Wallerian law*, *law of Wallerian degeneration*.

wall'eye" [ON. *vagleygr*]. 1. Leukoma of the cornea. 2. Divergent strabismus. —**walleyed,** *adj.*

wall teeth. Molar teeth.

Walter, William Grey (1910–). English physiologist who introduced location of brain tumor by electroencephalography (1936).

Walther, Augustin Friedrich [*German anatomist*, 1688–1746]. Described the coccygeal ganglion, called *Walther's ganglion*, *ganglion impar*. Described the lateral talomalleolar ligament which was once called *Walther's ligament*.

Walton, Albert James [*English surgeon*, 1881–]. Described an operation for relief of hourglass stomach due to ulcer of the lesser curvature, called *Walton's operation*. He also described an operation for reconstructing the common bile duct.

Walton, Ernest T. S. (1903–). Irish physicist who shared the Nobel prize in 1951 with John D. Cockcroft for their work in atom-smashing.

wan'der ing [AS. *wandrian*]. 1. Moving about, as wandering cells. 2. Abnormally movable, as wandering spleen or kidney.

Wang's test. See under *test*.

Wangensteen, Owen Harding [*American surgeon*, 1898–]. Devised an instrument for relief of gastric and intestinal distention, which consists of a suction apparatus connected with a duodenal tube, called *Wangensteen's apparatus* or *Wangensteen's tube*.

war'bles (wawr'bulz). The disease produced by infestation of domestic animals and man with the larva of the warble fly or botfly, *Dermatobia hominis*.

Warburg, Carl [*Austrian physician*, b. 1804]. Introduced an antiperiodic preparation of various drugs; called *Warburg's tincture*.

Warburg, Otto Heinrich (1883–). German biochemist who conducted penetrating studies on the mechanisms of cellular respiration and photosynthesis, and on the metabolism of tumors, which were of the greatest influence on the development of modern biochemistry. He developed a manometric method for the study of tissue metabolism (see Warburg *manometer*), characterized the oxygen-activating respiratory enzyme, cytochrome oxidase (Warburg's yellow ferment or old yellow enzyme) as a heme-containing compound, and showed that carbon monoxide inhibits intracellular respiration (1926). This inhibition technique and his tissue-slice technique have been used widely in biochemical studies. He isolated several other respiratory and fermentative enzymes and coenzymes. Nobel laureate in physiology and medicine (1931).

ward [AS. *weard*]. A division or room of a hospital.

Wardell method. See Myers and Wardell *method.*

Wardrop, James [*English surgeon,* 1782-1869]. Distal ligation of an artery for aneurysm is sometimes called *Wardrop operation.* Onychia maligna is called *Wardrop's disease.*

war'far in [Wisconsin Alumni Research Foundation]. $C_{19}H_{16}O_4$ 3-(α-acetonylbenzyl)-4-hydroxycoumarin colorless powder practically insoluble in water used as rodenticide and therapeutically as an anticoagulant.

warm -blood'ed. H ving relatively high and constant body temperature, as in birds and mammals. Syn., *homothermic, homothermal.*

Warren, John Collins [*American surgeon,* 1842-1927]. Remembered for his incision for breast amputation, in which he made pear-shaped cut encircling the breast, the stem following the greater pectoral muscle at the axillary border and ending high in the axilla. A bracketlike, two-pronged extension joins the original incision at the external border of the breast. Called *Warren incision.*

Warren, Jonathan Mason [*American surgeon,* 1811-67]. Introduced a form of uraniscoplasty in which he dissected the mucous membrane upward, freeing the soft palate by dividing the posterior pillars and placing sutures in the midline; called *Warren operation.*

wart [AS. *wearte*]. A hyperplasia of the papillae of the skin, forming a small projection. See *verruca.* —**wart y** *adj*

fig w A papillary growth of filiform or vegetating projections, often covered with an offensive-smelling secretion; usually found on the genitalia. Syn., *verruca acuminata, condyloma acuminatum, venereal w.*

moist w Condyloma acuminatum.

Peruvian w See verruca peruviana.

plantar w Verruca plantaris.

venereal w Condyloma acuminatum.

Wartenberg, Robert (1887) American neurologist who described chiralgia paresthetica (isolated neuritis of the superficial branch of the radial nerve) brachialgia statica paresthetica (nocturnal arm paresthesias) partial thenar atrophy (abiotrophy of the lateral thenar muscles) sign of facial palsy (diminution of palpebral vibration of the upper lid) sign of ulnar paralysis (abduction position of the little finger) pyramidal sign (flexion of the thumb on flexion of the other fingers against resistance) sign of median-nerve palsy (defective abduction of the thumb) head-retraction reflex (retraction of the head on tapping the pper lip) He introduced the pinwheel for examination of sensibility and of superficial reflexes.

Warthin, Aldred Scott [*American physician,* 1867 1931]. Described pulmonary fat embolism (1913) Warthin sign consists of exaggerated pulmonary sounds in acute pericarditis. See also *Warthin-Finkeldey giant cells,* under *cell.*

wash [AS. *wascan*]. A lotion any of class of pharmaceutical preparations (solutions or mixtures) for local application without friction or rubbing. Mouth and nasal washes also belong to this class.

yellow w Yellow lotion.

wash'ing so da. Sodium carbonate, $Na_2CO_3 \cdot 10H_2O$

wasp's waist. Atrophy of trunk muscles in muscular dystrophy

Wasserma n, August von [*German bacteriologist,* 1866-1925]. Known internationally for his introduction, with Albert Neisser and Carl Bruck, of specific blood test for the diagnosis of syphilis (1906) Called *Wassermann reaction* or *test, complement-fixation test.* See Wassermann test.

Was'ser man-fast. See *seroresistance.*

waste [ONF *wast*]. 1. Useless matter eliminated from the body 2. Food no longer suitable for consumption.

waste T become thin to pine way

wast'er (way ster) [*waste*]. 1. A child suffering from marasmus. 2. An animal affected with tuberculosis, usually bovine type.

watch ma'ker's cramp. 1. An occupational neuritis characterized by painful cramps of the muscles of the hands. 2. Spasm of the orbicularis oculi muscle, due to holding jeweler lens

wa'ter [AS. *waeter*]. 1 The liquid consisting of molecules of the composition H_2O or aggregates thereof. 2. Pharmaceutically any saturated aqueous solution of volatile oil or other aromatic or volatile substance. Also called *aromatic*

activated w Water containing ions, free atoms, radicals, and molecules in highly reactive state the temporary result of passing ionizing radiation through it.

camphor w A saturated solution of camphor in distilled water

deep w Water btained from a porous layer beneath the first impervious stratum of the ground.

deionized w W ter purified by passage through substances which remove contaminating cations and anions and leave finally a water equivalent to distilled water in purity

distilled w (*aqua destillata*). Water purified by distillation.

ground w See subsoil w.

hard w. Water containing soluble calcium or magnesium salts and not readily forming lather with soap.

heavy w That which contains double-weight atoms of hydrogen (deuterium) instead of ordinary (light-weight) hydrogen atoms. Syn *deuterium oxide.*

mineral w A natural water containing mineral substances in solution.

purified w The U.S.P title for water obtained by distillation or deionization.

redistilled w Distilled water redistilled one or more times. For parenteral use, it is sterilized by suitabl method of sterilization, within two hours after its redistillation, and preserved against contamination. Also called *double-distilled w*

sterile distilled w (*aqua destillata sterilisata*). Sterile distilled water stored in suitable containers properly sealed or closed.

subsoil w Water which has penetrated the soil and is found immediately above the first impervious stratum.

w for injection (*aqua pro injectione*). Water for parenteral use, which has been distilled, sterilized, and stored in sealed or other suitable sterile containers, so that it is free and remains free from pyrogens.

w of crystallization. Water entering into the crystalline structure of compound in definite molecular proportions. It may often be removed by heating at 100° C. with resultant disruption of the crystal and formation of the anhydrous compound.

w of hydration. See *w. of crystallization.*

w on the brain. Hydrocephaly

wa'ter brash. Watery acid fluid regurgitated from the stomach, accompanied by nausea.

wa'ter-brax'y. A highly fatal disease of the digestive tract of sheep, causing diffuse, intense inflammation of the abomasum. It is believed to be caused by *Clostridium septicum.*

wa'ter-far'cy Old term for glanders

W terhouse Rupert (1873-). English physician known for his description of acute collapse

associated with hemorrhages into the adrenal glands in acute meningococcemia. See W ter house-Friderichsen syndrome.

wa'ter moc ca sin. The cottonmouth, venomous pit viper. See *Ancistrodon piscivorus*.

wa'ters [*water*]. Lay term for the liquor amnii; amniotic fluid.

bag of w The amnion and amniotic fluid.

wa'ter y eye. Epiphora.

Watson, Benjamin Philip (1880–) American obstetrician and gynecologist who introduced method for induction of labor by the use of castor oil supplemented by quinine and pituitary ex tract, called *Watson method*.

Watson, Cecil James [*American physician*, 1901–]. Devised methods for the estimation of urobilinogen in urine and feces, especially in relation to jaundice and anemia. Called *Watson methods*.

Watson, Edwi M. [*American surgeon*, contemporary]. Known for his method of urethral reconstruction, in which he bridged the gap between the severed ends of the posterior urethra by urethral flaps pedunculated at the proximal limit of the patent urethral canal to form the roof and sides of the urethra, called *Watson operation*.

Watson Francis Sedgwick [*American urologist* 1853–1942]. Performed median perineal prostatectomy (1889) published in 1905.

Watson, William Spencer [*English ophthalmologist*, 1836–1906]. Known for his operation for entropion, in which he transplanted bridge of skin from the eyelid through to the conjunctival surface.

Watson's test. See Proskin and Watson *test*.

watt [after James Watt, Scottish engineer 1736–1819]. The watt of power equal to 10 million units of power in the centimeter-gram-second system; the power required to cause an unvarying current of 1 ampere to flow between points differing in potential by 1 volt also called *volt-ampere*. Abbreviated, w w

watt ge [*Watt*]. Consumption or output of an electric device in watts.

watt'me"ter [*Watt*; G. *metron*, measure] An instrument for measuring electric power or activity in watts.

wave [AS. *wafian*]. 1. A uniform movement in body which is propagated with continuous motion, each part of the body vibrating through fixed path. 2. The course traced by lever or beam of light on surface moving at right angles to the direction of lever or beam.

activation w. The spread of the electrical impulse over the heart in electrocardiography

alpha w See alpha *rhythm*.

A w Alpha wave. See alpha *rhythm*.

w The trial wave of the venous pulse.

Berger w. See *rhythm*.

brain w Alpha wave. See *electroencephalography*, alpha *rhythm*.

coronary T w An inverted T wave with an upward convexity of the first limb, its pex peaked and its second limb rather straight. In some leads it may be upright. Frequently seen in electrocar diograms during various stages of myocardial infarction, but not confined to this exclusively Also called *cove-plane T w*.

cove-plane T w See coronary T w

w Ventricular contraction or systolic wave of the venous pulse

deep Q w A Q wave of large amplitude as considered in relation to other deflections of the QRS complex.

electrocardiographic waves. P Q R S T U are signs arbitrarily chosen to signify various phases of the spread of depolarization and repolarization of cardiac muscle as seen in the electrocardiogram.

excitation w The wavelike involvement of successive muscle fibers by the excitatory process.

f waves. The waves of atrial fibrillation seen in the electrocardiogram.

F waves. The waves of atrial flutter seen in the electrocardiogram, consisting of an trial depolarization wave and an atrial repolarization wave. They are precisely regular in spacing, size, and contour.

Hertzian waves. Original term for radio waves; electromagnetic waves resembling light waves, but having greater wavelength.

P mitrale w A broad, notched P wave, usually indicating left atrial hypertrophy or dilatation, as consequence of mitral stenosis or left ventricular failure.

P pulmonale w. A peaked, narrow P wave, usually indicating right atrial hypertrophy or dilatation.

prepotential w One of low amplitude recorded at the sinoatrial node, immediately preceding the action potential of the latter

pulse w. The progressive expansion followed by contraction due to the flow of blood. It begins with each cardiac systole and is propagated along the aorta and other arteries, ending normally t the capillaries.

P w of the electrocardiogram. The first wave due to depolarization of the atria. The verage maximum height is 1.25 mm., and the verage duration is 0 08 second.

QS w of the electrocardiogram. First and downward wave of the initial ventricular complex, not followed by an R wave.

Q w of the electrocardiogram. First and downward wave of the ventricular complex. It represents early ventricular depolarization. It is often absent normally

R w of the electrocardiogram. The first upward deflection of the ventricular complex, usually of relatively large amplitude It represents major portion of ventricular depolarization.

R' w of the electrocardiogram. The second upward deflection of the normal electrocardiogram, if present.

sharp w *I electroencephalography*. wave form of relatively short duration, usually showing brupt rise but slower fall.

S w of the electrocardiogram. The first downward deflection of the ventricular complex, following upon an R wave It is often bsent normally

T w of the electrocardiogram. The deflection representing atrial repolarization. Normally it is opposite in direction to the P wave, which it follows. Usually it cannot be identified in normal electrocardiogram.

Traube-Hering waves. Rhythmic oscillations in mean blood pressure not correlated with the heart beat nor with respiration.

T w of the electrocardiogram. The deflection which represents repolarization of the ventricles. In most leads it is normally upright, varying rather widely in amplitude and duration.

U w of the electrocardiogram. A deflection, usually of low amplitude, following the T wave. It is often absent normally its causation and significance are not certain.

V w The stasis or diastolic wave of the venous pulse.

w.-and-spike. *I electroencephalography*. complex consisting of slow wave followed by spike

w of the phlebogram. The first and trial

wave of the venous pulse observed in the jugular bulb.

w b or h of the phlebogram. Diastolic w ve.

w c of the phlebogram. Systolic wave.

w front. A surface at which all vibratory motion is of like phase concurrently

w number The number of waves or cycles of light flux or radiant energy measured through distance of 1 cm.

wave'length The distance in the line of advancement between two points of (sine, light, radio) wave such that the two poi ts are in the identical phase of the wave cycle. Differences in wavelength distinguish visible light, roentgen rays, and gamma rays from one another Frequency and wavelength are related by the equation, $C = f\lambda$, where C is the velocity of light and f is the frequency of the radiation. Symbol, λ. Abbreviated, wl, wl.

dominant w The wavelength of beam of light which determines its hue.

wax [AS weax]. Any substance, of plant, animal, or mineral origin, consisting of mixture of one or more of the following constituents high molecular weight fatty acids, high m lecular weight monohydric alcohols, esters of the fatty acids and alcohols, solid hydrocarbons.

earth w Ceresin.

mineral w Ceresin.

vegetabl w J pan wax.

white w (*cera alba*) Bleached yellow wax. For chemical composition and uses, see *yellow w* Also called *bleached beeswax*.

yellow w (*cera flava*) The purified wax from the honeycomb of the bee, *Apis mellifera*. It consists chiefly of myricin (myricyl palmitate) It also contains cerotic acid (cerin) melissic acid, and bout 6% of hydrocarbons of the paraffin series. It is used in the formation of ointments, cerates, plasters, suppositories, and surgical dressings in which it acts mechanically either giving stiffness or serv ing to protect from water Also called *beeswax*.

WBC, Wbc White blood cell. See *leukocyte*.

wean [AS wenian]. Cease to suckle or urse off spring at period when the latter is capable of taking substantial food from sources other than the breast.

weav'ers' bot'tom Chronic ischial bursitis due to long-continued pressur in sedentary occupa tion

web [AS webb]. A membranelike structure; especially the skin and underlying tissue between the bases of fingers or toes See also *patagium*.

Weber Adolph [*German ophthalmologist* 1829–1915] Described operations for cataract extraction, using curved bistoury and for lacrimal stricture, modification of Bowman operation in which he slit the upper canaliculus, divided the medial palpebral ligament, and dilated the duct with sound. I troduced form of rhinoplasty in which he raised an oval flap from the center of the upper lip, ttaching t to the freshened edges of the defective ala, called *Weber' operation*.

Weber Eduard Friedrich Wilhelm [*German physiologist* 1806–71]. Distinguished for his many accomplishments in the field of the physiology of the nervous system. With E. H Weber he determined the velocity of the pulse wave (1825) and discovered the inhibitory action of the vagus (1845) With Wilhelm Eduard Weber wrote an important work on motion and locomotion (1836)

Weber Ernst Heinrich [*German anatomist and physiologist*, 1795–1878] Proponent of the law in psychology that the increase of stimulus necessary to produce the smallest perceptible change in sensation is proportionate to the strength of stimulus already acting (1834); called *Weber' law*, or *Fechner Weber law*. See also Weber test

W ber Frederick Parkes (1863–), Engli physician who described hereditary hemorrhagic telangiectasis (1907) also called *Osler-Rendu-Weber' disease*, and nodular nonsuppurative panniculitis, called *Christian-Weber disease*, and nevoid amentia, called *Sturge Weber disease*

Weber Hermann David [*English physician*, 1823–1918]. Described oculomotor nerve paralysis on the side of lesion of the cerebral peduncle with contralateral spastic hemiplegia, called *Weber paralysis*. Alternate hemiplegia of various type is known as *Weber-Gubler syndrome*, *Millard-Gubler syndrome*. See also *Millard*

Weber Wilhelm Eduard [*German physicist*, 1804–91]. With E. F W Weber wrote an important work on motion and locomotion.

Weber's circles. Circles of points of tactile sense discrimination.

Weber's glands. Racemose glands situated in the posterior portion of the tongue.

Weber' organ or vesicle. The prostatic utricle of the male urethra. See *utricle*, 2.

Weber's test. See under *test*.

Webster J hn [*English chemist*, 1878–1927] Described test for trinitrotoluene in urine, called *Webster test*.

Webster John Clarence [*Canadian gynecologist* 1863–1950]. Developed an operation for the relief of retrodisplaced uterus, in which he drew the round ligaments through perforations in the broad ligaments, suturing them to the posterior surface of the uterus called *Webster operation*.

Webster dinner pills. Aloe and mastic pills. Also called *Lady Webster dinner pills*.

Webster Hill, and Kidinew method. See under *method*.

Wechsler–Bellevue intelligence scale. See under *test*.

Wecker Louis de [*French ophthalmologist*, 1832–1906]. Described large number of operations the eye. A procedure for surgical treatment paralytic strabismus is called *de Wecker operation*

Wedensky Nicolai Igorevich [*Russian neurologist* b 1844]. Contributed studies in nerve physiology Described the following phenomenon: when two stimuli are applied in succession to the nerve nerve of curarized muscle, the end-plate potentials evoked by the volleys sum, and, if the potentials evoked by the volleys reaches critical intensity mated potential reaches critical intensity conducted spike potential will appear and contraction follows. This effect resembles facilitation across nerve block and is called *Wedensky inhibition facilitation*. See also *Wedensky' inhibition*

wedge [AS. wecg]. An instrument or material used by dentists to separate adjoining teeth

Weed, Lewis Hill [*American anatomist*, 1886–19] Known for his many contributions to the knowledge of the anatomy of the central nervous system Indicated the pathways of the circulation of the broopmal fluid (1916)

Weeks, J hn Elmer [*American ophthalmologist* 1853–1949]. Demonstrated that one of the bacilli discovered by Koch as causative of Egyptian ophthalmia was also the cause of pink eye The bacillus, called *Koch-Weeks bacillus*, pleomorphic form of *Hemophilus influenzae* eye, or acute contagious conjunctivitis. It is called *Koch-Weeks conjunctivitis*.

weep'ing [AS. wepan]. 1. Lacrimation. 2. Exudation or leakage of fluid.

weep'ing. Exuding sa d of raw or excoriated faces bathed with sodi discharge.

Wegner Friedrich Rudolph Georg [*German pathologist*, b. 1843]. Described osteochon

epiphyseal separation in prenatal syphilis (1870) also called *Wegner' disease.*

Weichselbaum Anton [*Austrian pathologist,* 1845–1920]. Known for his discovery of the *Micrococcus meningitidis* (1887) the cause of cerebrospinal meningitis; also called Weichselbaum coccus, *Neisseria meningitidis.*

Weidel reaction. See under *reaction.*

Weigert, Carl [*German pathologist and histologist,* 1845–1904]. Especially known for his development of staining methods and for his discoveries in microchemistry. See *iron hematoxylin (Weigert's)* under *stain, Weigert' method for myelin sheaths* under *stain;* Weigert's resorcin-fuchsin *stain, Gram-Weigert staining method* under *stain; Weigert' law* under *overproduction theory.*

weight [AS. *wiht*]. The force with which body is attracted by the earth. For weights listed by name, see Tables of Weights and Measures in the Appendix.

atomic w A number representing the relative weight of an tom of an element compared with oxygen (= 16 000) It is the mean value of the isotopic weights of an element. Abbreviated t. wt.

equivalent w The weight of an element which can replace or combine with unit weight of hydrogen or is otherwise equivalent to the latter

molecular w The weight of molecule of any substance, representing the sum of the weights of its constituent atoms. Abbreviated, M.

specific w Specific gravity

Weigl' method. See under *method.*

Weil, Adolph [*German physician,* 1848–1916]. Remembered for his description of leptospirosis icterohaemorrhagica (1886) and his differentiation of it from other forms of acute jaundice also called *Weil' disease, spirochetal jaundice.*

Weil, Richard [*American physician,* 1876–1917]. Devised test for syphilis, based on the fact that hemolysis does not occur if an emulsion of the blood of syphilitic person is mixed with solution of dried cobra venom; known as *Weil' test.*

Weil' methods. See under *stain.*

Weil–Felix test. See under *test*

W Inbach method. See under *method.*

Weinbach modification. See Butler and Tuthill *method.*

Weinberg, Michel [*French bacteriologist,* 1868–1940] With P Séguin, isolated bacteria found in gas gangrene. Devised complement-fixation test in echinococcus disease called *Weinberg' method.*

Weir Robert Fulton [*American surgeon,* 1838–1927]. He developed lumbar incision for nephrectomy called *Weir' incision.* A procedure for correction of hallux valgus is called *Weir' operation.* Introduced appendicostomy also called *Weir' operation.*

Weisbach, Albin W [*Austrian anthropologist,* 1837 1914]. Described an angle formed by lines starting from the basion and from the middle of the frontal suture and meeting at the alveolar point called *Weisbach angle.*

Weisman, Abner Irving [*American obstetrician,* 1907]. Known for his modification of the Aschheim-Zondek test, in which he used female mice, his gynograph used in radiography and insufflation of the uterine tubes, and his work on the use of the frog in pregnancy diagnosis.

Weismann, August Friedrich Leopold [*German biologist,* 1834–1914] Proponent of theory that he hereditary material or germ plasm is distinct from the somatoplasm that there is continuity of germ plasm from generation to generation that change in the somatoplasm or body cannot affect the germ plasm, which renders it impossible for acquired characteristics to be inherited; that during development the heredity determiners are sorted out t the parts of the body where they give rise to hereditary characteristics. Called *Weismann theory.*

Weiss, Leonhard [*German physician,* contemporary]. Devised combined stain for determining the presence of tubercle bacilli, called *Weiss stain.*

Weiss, Leopold [*German ophthalmologist,* 1849–1901]. Remembered for his description of reflex on the nasal side of the optic disk; *Weiss' reflex* is regarded as prodromal sign of myopia.

Weiss, Nathan [*Austrian physician,* 1851–83]. Known for the sign which bears his name and which is manifested by contraction of the facial muscles when lightly struck appears in cases of tetany and neurasthenia called *Weiss' sign.*

Weisz test. See under *test.*

Welch, William Henry [*American pathologist,* 1850–1934]. A founder of the Johns Hopkins Medical School. Discovered, with S. Flexner pathologic processes arising from action of diphtheria toxins (1891) Discovered *Staphylococcus epidermidis albus,* or *Micrococcus albus.* Advanced knowledge of thrombosis and embolism (1899) With G H. F Nuttall, discovered *Bacilli aerogenes capsulatus,* the cause of gas gangrene (1892); also called *Bacillus perfringens, B. welchii, Clostridium welchii, Welch bacillus.*

Welcker Hermann [*German physiologist,* 1822–97]. Known for his research in the determination of blood volume in experimental animals (1854) Is credited with being the first to determine the total blood volume (1843) called *Welcker' method.*

Walker method. See Marshall and Walker *method,* Walker and Tracy *method.*

Weller Thomas Huckle (1915–) American authority in tropical medicine and public health, who with J F Enders and F C. Robbins shared the Nobel prize (1954) in physiology and medicine for their discovery that the poliomyelitis virus will grow in cultures of different tissues.

Wells, Horace [*American dentist,* 1815–48]. Celebrated in the history of anesthesia. H first used nitrous oxide as a dental anesthetic (1844) One of the trio which has received credit for the introduction of anesthesia in America, the others being William T G. Morton and Cra ford W Long.

Wells, Thomas Spencer [*English gynecologist,* 1818–97]. Pioneer ovariotomist. Described the anxious expression of face found in ovarian disease called *Wells' facies.* A type of surgical forceps is called *Spencer Wells forceps.*

Wells-Stenger test. See under *test.*

Welsbach, Carl Auer von [*Austrian chemist,* 1858–1929]. Inventor of the *Welsbach burner* which employs mixture of gas and vapor to incandesce the *Welsbach mantle.*

Weltmann's reaction. See Weltmann *test.*

Weltmer Sidney A. [*American,* contemporary]. Founder of system of treatment by suggestion, based on theory of harmony between mind and body; called *Weltmerism.*

wen [AS, *wenn*] A sebaceous cyst. The term is commonly used when the lesion occurs in the scalp.

Wenckebach, Karel Frederik [*Dutch physician,* 1864–1940]. Remembered for his investigations of the value of quinine in cardiac arrhythmia and atrial fibrillation (1914) Conducted important study of beriberi (1934) Described period, or phenomenon, of cardiac arrhythmias in which he noted that conduction disturbances m y be produced by gradually increasing prolongation of the conduction time up to final omission of the ventricular beat; called *Wenckebach period, type I* If produced by periodic lapse of ventricular beat without delay of conduction, it is known as type II

Wenzel, Michael Jean Baptiste de [*French ophthalmologist, d. 1790*]. Early cataract extractor renowned for his skill. Introduced a special operation adapted to cases of posterior synechia, called *Wenzel's operation*.

Werdnig, Guido [*Austrian neurologist, contemporary*]. Known for his description of an infantile variety of hereditary familial spinal muscular atrophy (1890); called *Hoffmann-Werdnig syndrome*. This appears to be a rare form of spinal progressive muscular atrophy appearing at an early age in the muscles about the pelvis and terminating fatally within five or six years.

Werlhof's disease. See *idiopathic thrombocytopenic purpura*.

Wernekinck, Friedrich Christian Gregor [*German anatomist, 1798–1835*]. Described the decussating fibers of the middle cerebellar peduncle; called *Wernekinck's commissure*.

Werner, Heinrich (1874–1946). German physician who described trench fever; also called *Werner's syndrome*, *Werner-His disease*, *Volhynia fever*.

Wernicke, Carl [*German psychiatrist, 1848–1905*]. Described acute, superior hemorrhagic polioencephalitis, previously noted by C. J. Gayet; called *Wernicke's disease*. Described a form of spastic hemiplegia called *Wernicke-Mann palsy*, and pseudophthalmoplegia. See also Wernicke's *aphasia*, Wernicke's *sign* (hemianopsic pupillary reaction), Wernicke's *syndrome*.

Wertheim, Ernst [*Austrian gynecologist, 1864–1920*]. Known for his modification of Watkins' operation for procidentia uteri, and for an operation for cystocele called *Wertheim-Schauta operation*. Also called *Schauta-Wertheim operation*. Introduced a radical operation for complete hysterectomy in uterine carcinoma; called *Wertheim's operation*.

Westberg, Friedrich [*German physician*, nineteenth century]. Described a condition marked by the appearance of white or atrophied spots on the skin; called *Westberg's disease*.

Westergren method. A method of obtaining sedimentation rate of erythrocytes by determining the sinking velocity of the red cells, using a glass tube graduated in 1-mm. intervals. The reading is usually made after one hour. See also under *method*.

Westphal, Carl Friedrich Otto [*German neurologist, 1833–90*]. Described agoraphobia (1871). Drew attention to the value of the knee jerk in diagnosis of disease, especially of tabes (1875). Its absence is called *Westphal's sign*. Described pseudosclerosis, a cerebral degenerative hepatolenticular condition, in which symptoms resemble those of multiple sclerosis; called *Westphal's disease* or *neurosis*, *Strümpell-Westphal pseudosclerosis*. See also Edinger-Westphal *nucleus*.

Westphal-Piltz reflex. See pupillary *reflex*.

wet'ting agent. See under *agent*.

Wetzel, Norman Carl [*American pediatrician*, 1897–]. Known for his description of a precision control chart for measuring and guiding growth and development of children from 5 to 18 years. Body build, maturation, nutritional grade, metabolic rate, and caloric intake are all determined by this graphic method. Called *Wetzel grid*.

Wever-Bray effect. The microphonic responses of the cochlea, so called because of resemblances to the electrical phenomena produced by sound waves in microphones. It consists of electrical potentials caused by the stimulation of the cochlea by sound. The exact nature of the cochlear microphonics is not known. Also called *Wever-Bray phenomenon*.

Weyer, Johann (Wierus) [*Swiss physician*, 1515–88]. Celebrated as the founder of medical psychiatry. Author of an important work on diseases of the mind (1563).

Weyl, Theodor [*German chemist*, 1851–1913]. Introduced a test for creatinine, in which he added to the solution to be tested a few drops of a dilute solution of sodium nitroprusside and, drop by drop, a few drops of sodium hydroxide. The development of a ruby-red coloration, changing to yellow and then to blue on warming with acetic acid, indicates the presence of creatinine. Called *Weyl's test*.

W has'ter Biotin.

Wharton, Thomas (1610–1673). English anatomist who wrote a treatise on glands and discovered the submaxillary duct, named for him. See also under *jelly*.

wheal [ME. *whele*]. A primary lesion of the skin that is a circumscribed, edematous, usually transitory elevation that varies in size from a pin-head to that of the palm or larger. Lesions come and go quickly and are accompanied by tingling, burning, or intense itching. They occur classically in urticaria but also occur after insect bites, animal bites, trauma, or even physical agents as heat, cold, or sunlight. Syn., *pomphus*, *urtica*.

Wheat'stone bridge. See under *bridge*.

Wheelhouse, Claudius Galen [*English surgeon*, 1826–1909]. Remembered for his external urethrotomy in which he divided the stricture on a grooved probe; called *Wheelhouse operation*. The staff used in the operation is known as *Wheelhouse's staff*.

wheeze [ME. *whesen*]. A whistling or sighing noise produced in the act of breathing. Often heard only by stethoscopic examination. It signifies partial obstruction of one or more of the air passages due to spasm, edema, inflammation, foreign body, tumor, or external pressure.

whey [AS. *hwaeg*]. The liquid part of milk separating from the curd.

whiff [ME. *weffe*]. A puff of air.

oral w. A peculiar sound heard during expiration from the open mouth, principally in cases of thoracic aneurysm.

Whipple, Allen Oldfather (1881–). American surgeon who developed an operation for excision of islet-cell tumors of the pancreas by using a wide transverse abdominal incision dividing the great omentum and freeing the duodenum, so that all parts of the pancreas can be palpated to discover the hidden tumor; first to propose with Parsons and Mullins the two-stage procedure for radical pancreaticoduodenectomy for carcinoma of the ampullary area and pancreatic head, and the first to perform radical pancreaticoduodenectomy in one stage.

Whipple, George Hoyt (1878–). American pathologist known for his studies of normal and pathological liver function, his work on the bile pigments and other endogenous pigments, plasma protein and iron metabolism. He made important contributions to knowledge of the anemias, and, with G. R. Minot and W. P. Murphy, received the Nobel prize (1934) in physiology and medicine for discovering the beneficial effects of liver therapy against pernicious anemia. He described (1907) intestinal lipodystrophy; also called *Whipple's disease*.

whip'worm [ME. *whippen*; AS. *wyrm*]. *Trichuris trichiura*.

whis'per [AS. *hwisprian*]. A low, soft, sibilant sound produced by the passage of the breath through the glottis without vibrating the vocal folds.

White, Charles [*English surgeon*, 1728–1813]. Said to be first to excise the head of the humerus (1768)

Described phlegmasia alba dolens (1772). To reduce dislocation of the humerus he advocated method in which the heel is placed in the axilla and traction is exerted on the arm (1785); called *White' method, Cooper' method.*

White, James Clarke [*American dermatologist,* 1833–1916]. First to hold chair of dermatology in the United States. Described keratosis follicularis (1889); also called *White' disease, Darier' disease.*

White, James William [*American surgeon,* 1850–1916]. Widely known for his skill in operative surgery. Devised an operation in which he removed the testes for hypertrophy of the prostate; called *White' operation.*

White method. See Lee-White method.

white [AS. *hwīt*]. Having color produced by reflection of all the rays of the spectrum; opposed to black.

white. Any white substance, as white of egg.

Whitehead, Walter [*English surgeon,* 1840–1913]. Known in his time for his operation of removal of the hemorrhoidal area from the anal canal; called *Whitehead' operation for hemorrhoids.* His excision of the tongue through the mouth, using only scissors, was also known as *Whitehead' operation.*

Whitehorn's method. See under *method.*

white lo'tion (*lotio alba*). A lotion prepared from zinc sulfate, 40 Gm.; sulfurated potash, 40 Gm.; distilled water sufficient quantity to make 1000 cc. Used in the treatment of various types of skin diseases for which sulfur is employed. It may be used full strength or diluted with an equal part of water. Also called *lotio sulfurata.*

white pine (*pinus alba*). The dried inner bark of *Pinus strobus.* It contains glycoside coniferin, tannin, mucilage, and oleoresin. Used as an ingredient in cough syrups. It is always employed in conjunction with other remedial agents. Also called *white pine bark.*

compound w. p. syrup (*syrupus pini albae compositus*). A syrup prepared by percolation from white pine, wild cherry, aralia, poplar bud, sanguinaria, sassafras, chloroform, sucrose, glycerin, alcohol, and distilled water and colored with either cudbear or amaranth. Used as mild expectorant in subacute bronchitis. Dose, 4–8 cc. (1–2 fluidrachms).

white pox [AS. *hwīt*; M.E. *pokkes*]. A varioliform disease occurring in Brazil.

whites [*white*]. A lay term for leukorrhea.

Whitfield, Arthur [*English dermatologist,* 1867–1947]. Devised an ointment used in treatment of some dermatoses. It consists of benzoic acid 6 Gm., salicylic acid 3 Gm., petrolatum 34 Gm.; often used half strength. Called *Whitfield' ointment.*

whi'ting [*white*]. Prepared chalk or white clay; purified calcium carbonate.

whit'low [perhaps from E. *quickflaw*, sore at the quick]. An old general term for any suppurative inflammation of the end of finger or toe. See *felon, paronychia.*

melanotic w. A rare melanoma of the nail bed.

Whitman, Royal [*American orthopedic surgeon,* 1857–1946]. Treated fracture of the femoral neck in children by forced abduction. Devised type of astragalectomy for relief of talipes calcaneus in which he partially removed the malleoli and performed tenoplasty of the peroneal tendons; called *Whitman' operation.*

Whitmore, Alfred [*English surgeon in the Indian Medical Service,* 1876–1946]. First to describe melioidosis, with C. S. Krishnaswami; also called *Whitmore' disease.* The bacillus isolated from the disease is known as *Pfeifferella whitmori, Malleomyces pseudomallei.*

WHO World Health Organization.

whoop (hōōp, whōōp) [OF. *houper*]. The inspiratory crowing sound which precedes or occurs during coughing paroxysm.

whoop'ing cough (hōōp'ing, hōōp ing). Pertussis, an infectious catarrhal inflammation of the air passages with peculiar paroxysms of coughing ending in loud whooping inspiration. Most frequent in children. Caused by *Hemophilus pertussis.*

Whytt, Robert [*Scottish physician,* 1714–66]. Noted that destruction of the corpora quadrigemina abolishes pupillary contraction to light; called *Whytt' reflex.* Described tuberculous meningitis in children, and acute hydrocephaly; both sometimes called *Whytt' disease.*

Wichmann, Johann Ernst [*German physician,* 1740–1802]. First to describe laryngismus stridulus, also called *Wichmann' asthma, Millar' asthma, Kopp' thymic asthma.* Demonstrated the parasitic origin of scabies (1786).

wick'ing [AS. *weoce*]. Loosely twisted unspun cotton or gauze, employed in packing cavities; gauze wick.

Widal, Georges Fernand Isidor [*French physician,* 1862–1929]. Investigated, with André Chantemesse, the possibilities of antityphoid inoculation (1888). Best known today for his description of acquired hemolytic jaundice with anemia (1907); called *Widal-Abrami' disease, Hayem-Widal disease.* See also Widal *test.*

Wiegand. See *Wigand.*

Wigand, Justus Heinrich [*German gynecologist,* 1766–1817]. Described method of extraction of the aftercoming head by pressure above the symphysis with the second hand, the first being under the child' body; called *Wigand' maneuver.*

Wiggers and Dean method. See under *method.*

Wijs method. See under *method.*

Wilbur and Addis method. See under *method.*

Wildbolz, Hans [*Swiss urologist,* 1873–1940]. Described reaction indicative of tuberculosis. The intradermal injection of few drops of the patient's urine causes local reaction known as *Wildbolz' reaction.*

Wilde, William Robert Wills [*Irish surgeon,* 1815–76]. An incision for relief of mastoid periostitis made about half an inch behind the pinna and parallel to it is called *Wilde' incision.*

Wilder, Russell Morse [*American internist,* 1885–]. Described, with Cutler and Power, test for adrenal insufficiency; see Cutler-Power-Wilder *test.* Author of many contributions on diabetes and hyperinsulinism.

Wilder, William Hamlin [*American ophthalmologist,* 1860–1935]. Described twitch of the eyeball when the position of the eye is changed from abduction to adduction, or vice versa, as indicative of exophthalmic goiter; called *Wilder' sign.*

Wildermuth, Hermann A. [*German psychiatrist,* 1852–1907]. Described congenital deformity of the ear in which the antihelix is prominent, the helix being turned downward or badly developed; called *Wildermuth' ear.*

wil for'dine. An insecticidal alkaloidal constituent of *Tripterygium wilfordi.*

wil for'gine. An insecticidal alkaloidal constituent of *Tripterygium wilfordi.*

wil for'ine. An insecticidal alkaloidal constituent of *Tripterygium wilfordi.*

wil for'trine. An insecticidal alkaloidal constituent of *Tripterygium wilfordi.*

wil for'zine. An insecticidal alkaloidal constituent of *Tripterygium wilfordi.*

Wilhelmi' method. See Frame, Russell, and Wilhelmi' method.

Wilhelmy balance. An pparatus for determining surface tension by means of a glass slide hich is weighed as it dips into liquid.

Wilkinson J H [*English physician*, nineteenth century]. Introduced compound sulfur ointme t known as *Wilkinson ointment*.

Wilkinson and Peters benzidine peroxidase reaction. See under *reaction*.

Wilks, Samuel [*English physician*, 1824–1911]. Brought Hodgkin disease to the ttention f the profession and named it (1856, 1865) Wrote classic description of bacterial endocarditis (1870) Myasthenia gravis is sometimes called *Wilks symptom complex*. Chroni parenchymatous nephritis, one form of large white kidney is called *Wilks disease*. Verruca necrogenica is also called *Wilks disease*.

will [AS. *willa*]. *I psychology*, the faculty by which the mind chooses its ends and directs action in carrying out its purpose.

w to power *I psychiatric theory* th neurotic and excessive aggressiveness of an individual compensating for feelings of inferiority and insecurity (Alfred Adler)

Willan Robert [*English dermatologist*, 1757 1812]. Distinguished psoriasis as separate disease entity (1808) called *Willan lepra*. Described (1790) onthrombopenic purpura, also called *Henoch purpura*.

Willebrand, E. A. von [*Finnish physician*, contemporary]. Described hereditary pseudohemophilia or constitutional thrombopathy rare disease of unknown etiology It is characterized by prolonged bleeding time with normal umber of platelets and normal coagulation time, and is found in both males and females. Called *von Willebrand' disease*.

Willems, Charles [*Belgian surgeon*, contemporary]. Known for his introduction of method of treating acute suppurative arthritis by arthrotomy and immediate mobilization called *Willems' method* or *treatment*.

Williams, Robert Runnels (1886–) American biochemist who determined the structure and developed the synthesis of vitamin B (thiamine)

Williams, Roger John (1893–) American biochemist who separated pantothenic acid from other members of the vitamin-B complex, and identified it chemically.

Williamson, Oliver K. (1866–1941) English physician who described a sign of pleural effusion or pneumothorax in which there is marked fall in blood pressure in the leg, as compared with that of the arm on the same side; called *Williamson test* or *sign*.

Williamson, Richard Thomas [*English physician*, 1862–1937]. Introduced blood test for diabetes using methylene blue and potassium hydroxide. When the t be is placed in boiling water the blue soon disappears from the blood of diabetic. Called *Williamson test*.

Willis, David Arthu [*American surgeon*, 1900–1952]. Inventor of forceps attached to an electric battery and lamp, the forceps blades being insulated from each other Upon contact with metallic object, the circuit is completed and the lamp glows. Called *Willis' forceps for foreign body removal*.

Willis, Thomas [*English anatomist and physician*, 1621–1675]. Described epidemic typhus and typhoid (1659) Described diabetes mellitus which is sometimes called *Willis' disease*. The corpora albicantia are called *Willis' glands* The ophthalmic branch of the fifth cranial (trigeminal) nerve is called *Willis nerve*. See also *circle* of Willis.

Willis salt flotation method. See under *method*.

Willstätter Waldschmidt-Leitz, and Kuhn method. See under *method*.

Wilmer Bradford [*English physician*, eighteenth century]. Originator of the Coventry or burnt-sponge treatment for goiter (1779)

Wilms, Max [*German surgeon*, 1867–1918]. Known for his description of embryonal carcinosarcoma of the kidney observed in early childhood and often bilateral; called *Wilms' tumor*.

Wilson Frank Norman (1890–1952) American physician who introduced the term *ventricular gradient* in electrocardiography H introduced unipolar leads using terminal connected to the three limb electrodes as point of indifferent or zero potential.

Wilson, Karl Miller [*American obstetrician*, 189–]. Introduced test for pregnancy in which urine is injected into the female rabbit *Wilson's test for pregnancy* is regarded as positive if the rabbit develops corpora hemorrhagica.

Wilson, Samuel Alexander Kinnier (1877–1937). American neurologist in England, known for his description, with Frerichs, of hepatolenticular degeneration (1912) also called *Wilson disease*, *Kinnier Wilson disease*.

Wilson, William James Erasmus [*English dermatologist*, 1809–84]. Remembered for his description of dermatitis exfoliativa, also called *Wilson disease*.

Winckel's disease. See epidemic *hemoglobinuria*.

wi d' ge (win didj) [AS. *wind*]. Compression of air by the passage of missile, shell, etc., near the body causing blast injury

Windaus, Adolf (1876–) German chemist who provided the foundation for the chemistry of the sex hormones and conducted basic studies on digitalis and the biosynthesis of vitamin D N bel laureate in chemistry (1928).

wind'-bro"ken. Affected with expiratory dyspnea said especially of horses.

wind'gall" (wind gawl") [AS. *wind*, ME. *galle*, sore spot]. A soft tumor or synovial swelling the region of the fetlock joint of the horse.

wind' kes'sel. Compression-chamber-like action of the aorta and its immediate branches in buffering the pressure and flow changes during the cardiac cycle, function of the large capacity and elastic walls of the vessels.

wind'lass (wind'lus) [Icel. *vindiláss*]. Apparatus for exerting traction upon limb by means of winding device attached to the lower end of splint, turned with metal key

Spa ish w A temporary emergency expedient for accomplishing traction upon limb supported by splint; consists of cords which are tightened by twisting with wooden skewer or similar object.

wind'lass trac'tion. A method for exerting traction on an extremity of the body Extension straps are ttached to the skin by means of adhesive tape or to bone by means of a pin passed through it. The distal ends of the straps are attached to fixed point, and traction is exerted by winding up the straps with metal key or other device.

win'dow [ME. *windowe*]. 1. An opening in wall usually enclosed by movable frame of glass panes for the admission of light and air 2. A small aperture in bone or other unyielding tissue. See *fenestra*. See Plate 20.

wind'pipe See *trachea*.

wind'-puff" See *windgall*.

wind'stroke" [AS. *wind*; ME. *strok*]. Acute spinal paralysis of horse.

wind suck'ing. See *cribbing*, 2.

wine glass [AS. *win*, *glæs*]. A measure of nearly two fluidounces, or 60 cc.

wine spot. See port-wine nevus.

wing. See ala.

Winiwarter, Alexander von [*Austrian surgeon*, 1848–1917]. Introduced an operation of cholecystenterostomy in which he first united the gallbladder to the upper portion of the jejunum, fixing the area to the parietal peritoneum. After several days, the second stage was undertaken in which the intestine was incised and communication established between it and the gallbladder. Called *Winiwarter's operation.*

wink [AS. *wincian*]. Close and open the eyelids quickly.

Winkler, Cornelius (1855–1941). Dutch neuroanatomist known for his experimentation on the neuroanatomy of animals and his laboratory manuals on the brain of the cat and the rabbit.

Winkler reagent. See under *reagent.*

Winslow, Jacques Benigne (Jacobus Benignus) [*French anatomist*, 1669–1760]. Described the uncinate process of the pancreas, called *Winslow's pancreas.* The epiploic foramen is also called *foramen of Winslow.* See also Winslow's *stars* under *star.*

Winterbottom, Thomas Masterman [*English explorer*, 1766–1859]. Wrote an account of his travels in Africa, in which he gave one of the first accounts of sleeping sickness (1803). He noted that the enlarged cervical lymph nodes indicated the probability of infection with the disease, called *Winterbottom's sign.*

win'ter green". See *gaultheria.*

win'ter itch. See *pruritus hiemalis.*

Winternitz, Wilhelm [*Austrian physician and hydrotherapist*, 1835–1917]. Invented an apparatus resembling a pulpit which he used for hot and cold needle douches, known as *Winternitz' pulpit.*

Wintersteiner, Hugo [*Austrian physician*, 1865–1918]. Described congeries of cells from the neuroepithelial layer of the retina as characteristic of glioma of the retina. See *rosette.*

Wintrich's sign. See under *sign.*

Wintrobe, Maxwell Myer (1901–). American internist and hematologist known for research in hematology and his classification of anemias, known as *Wintrobe's classification.* He devised a hematocrit, used to determine sedimentation rate, volume of packed red cells, and icterus index, called *Wintrobe tube.* With J. W. Landsberg, developed a standardized technique for blood sedimentation tests called *Wintrobe-Landsberg method.* The standard amount of venous blood mixed with anticoagulant is placed in the tube, which is placed vertically. For average cases the reading is taken after one hour.

Wintrobe method. See under *method.*

wir'ing [AS. *wir*]. Securing in position, by means of wire, the fragments of a broken bone.

continuous loop w. In *dentistry*, a procedure for reduction and immobilization of jaw fractures by the use of a long strand of wire wound around several selected teeth in each fragment.

eyelet w. See *single loop w.*

single loop w. In *dentistry*, a type of intermaxillary wiring used in fractures of the jaw.

Wirsung's canal. See *pancreatic duct.*

Wirsung's duct. See *pancreatic duct.*

wir'y [wir]. Resembling wire; tough and flexible.

wis'dom teeth. The third permanent molars. Also called *dentes sapientiae.*

Wiseman, Richard [*English military surgeon*, 1622–76]. Gave an early account of king's evil, or scrofula. Classified aneurysms. Described tuberculosis of the knee, which he called *tumor albus.*

wish ful fill'ment. A central theme in psychoanalytic theory, serving to explain the manifestation of repressed wishes in the form of neurotic symptoms, common errors, and (normally) dreams; partial substitute for the forbidden or unattainable satisfaction.

asymptotic w. f. A psychological state wherein the patient has found the neurotic expression which would resolve his conflicts or compensate for them, but wherein his ego is strong enough to compel him to postpone indefinitely putting the neurotic solution into effect (Freud).

witch ha'zel. See *Hamamelis virginiana.*

witch's' milk. Lay term for milk secreted in the breasts of a newborn infant.

Wi'tebsky's sub'stan-ces. See group-specific substance.

with-draw'al. Coitus interruptus.

Withering, William [*English physician*, 1741–99]. Renowned for his introduction of digitalis into medicine (1783–85). Acknowledged as one of the greatest medical botanists of his time. He discovered the virtues of foxglove from noting its use in dropsy. It has been steeped and administered by women experienced in its action. Published a notable treatise on scarlet fever (1779).

with'ers (with urz) [ME. *wither*, resistance]. The ridge above the shoulders of the horse, formed by the spinous processes of the first eight or ten thoracic vertebrae.

wit'kop [S. Afr. D., White head]. A noncontagious favoid condition of the scalp characterized by white, hard, dry, friable, confluent, firmly adherent crusts which give the appearance of a tightly fitting, white skull cap, seen only in prenatal syphilis in natives of South Africa, and described by MacArthur and Thornton (1911); also called *dermal mask, white head.*

Witzel, Friedrich Oskar [*German surgeon*, 1856–1925]. Known for his gastrostomy in which a catheter is passed through a small opening in the stomach and fixed in place. A tube approximately 5 cm. long is buried in the stomach wall by interrupted sutures, and the stomach is then anchored to the peritoneum. The abdominal wall is well closed about the tube. Called *Witzel operation.*

wit'zel-sucht" (vit"sul-zōōkt. See Notes § 35) [Ger.]. A mental condition characterized by silly behavior, shallow facetiousness, and unstable mood; regarded as a symptom of frontal lobe disease such as brain tumor.

wl, wl. Wavelength.

Wöhler, Friedrich [*German chemist*, 1800–82]. Remembered for his discovery that ingested benzoic acid is excreted in the urine as hippuric acid, a fact which became the starting point of modern chemistry of metabolism (1842). He was concerned with a number of important investigations in organic chemistry, including the synthesis of urea (1828).

Wohl-fahr'ti-a (vool fahr tee-uh). A genus of flesh flies. See *Sarcophagidae.*

W. magnifica. The Old World flesh fly; the larvae are deposited in cutaneous lesions or in one of the body openings.

W. meigeni. A North American flesh fly.

W. vigil. A North American flesh fly.

Wohlgemuth, Julius [*German physician*, 1874–]. Known for his methods of quantitative determination of diastatic ferments in the blood, and of the amylolytic contents of feces, both called *Wohlgemuth method.* They are especially used in determination of pancreatic function.

Wolcott, Erastus Bradley [*American surgeon*, 1804–80]. Performed the first operation for excision of the kidney (1861).

Wolfe, John Reissberg [*Scottish ophthalmologist*, 1824–1904]. Remembered for his operatio

entropion in which he transplanted full-thickness skin graft (1875) marking the earliest successful technic with this type of graft, which was made without pedicle. The area to be grafted is prepared by excising all scar ulcer and granulation tissue to make bed to receive the graft which is excised by using an exact pattern, so that it may be sutured accurately into place. Called *Wolfe' method*, *Wolfe-Krause graft*, *full-thickness graft*.

Wolfenden Richard Norris (1854–1935) English laryngologist who introduced a position to induce deglutition when this is impeded by ulceration of the epiglottis. The patient lies prone, head lower than feet, with head and arms hanging over the edge of the bed called *Wolfenden position*.

Wolff, Caspar Friedrich [*German anatomist*, 1733–94]. Noted for his advancement of the germ-layer theory (1759) The functional tubules of the mesonephros are called *Wolffian tubules*. Cyst of broad ligament is called *Wolffian cyst*. The mesonephric duct is called *Wolffian duct*. The urogenital ridge is known as *Wolffian ridge*.

Wolff, Julius [*German surgeon and anatomist*, 1836–1902]. Proponent of a law in which he stated that every change in the use or static relations of bone leads not only to a change in its internal structure and architecture but also to a change in its external form and function (1884) Called *Wolff' law*

Wolff method. See under *method*.

Wolff Eisner test. See Calmette *test*.

Wolff–Parkinson–White syndrome. See under *syndrome*.

Wölfler Anton [*Bohemian surgeon*, 1850–1917] Remembered for his operation for obstructed pylorus in which he anastomosed the jejunum to the lower part of the stomach; called *Wölfler' operation*.

wolf'ram. Tungsten.

Wolfring, Emil[i] Franzevic von [*Polish ophthalmologist*, 1832–1906]. Described the posterior tar sal glands of the eyelid; also called *accessory lacrimal glands Wolfring glands Krause glands*.

wolfs'bane 1. Aconite. 2. Any plant of the genus *Aconitum*, especially *A. lycoctonum*.

Wollaston, William Hyde [*English physician and physicist*, 1766–1828]. Remembered for his description of gouty and urinary concretions (1797) H invented two planoconvex lenses to be placed in the eyepiece of microscope, for correction of chromatic berration; called *Wollaston doublet*.

Wolters myelin stain. See under *stain*.

Woltman, Henry William (1889–) American neurologist who, with J W Kernohan, described the crus syndrome.

womb (wōōm) [AS. *wamb*]. The uterus.

Women' Medical Specialist Corps. A corps of the U S. Army Medical Service comprised of female commissioned officers, e.g., dietitians, physical therapists, and occupational therapists.

Women's Medical Specialist Corps Reserve. A section of the U S. Army Reserve comprised of female commissioned officers, e.g., dietitians, physical and occupational therapists.

Wong's method. See under *method*.

Wood Robert Williams (1868–) American physicist who developed light filter made of glass containing nickel oxide, which transmits only ultraviolet rays It has been used in the diagnosis of infections by fungi, e.g. tinea capitis, which fluoresce when radiated with ultraviolet light. Also called *Wood' light*, *Wood' filter*

Wood, William [*Scottish physician*, 1774–1857]. Usually credited with the first description of neuroma, although it was previously described by D. J Larrey (1834)

wood [AS *wudu*]. The hard fibrous part of trees; the part within the bark.

wood al'co hol. See *methyl alcohol*.

wood sor'rel. *Oxalis acetosella*, a low tender pubescent herb of North America, Europe, Asia, and Northern Africa. Contains potassium binoxalate, which is sometimes obtained from it and sold as sorrel salt.

wood spir'it. See *methyl alcohol*.

wood sug'ar Xylose.

wood vin e-gar Vinegar obtained by the dry distillation of wood.

wood wool. Prepared fibers of wood. Formerly used as surgical dressing.

wool fat (*adeps lanae*) The purified, anhydrous, fatlike substance from the wool of sheep, *Ovis aries*. Wool fat is chiefly composed of esters of high molecular weight alcohols, as cholesterol and lanosterol, with fatty acids. It is used as an ointment base, and may cause sensitization. Also called *anhydrous lanolin*, *refined w. f*

hydrous w f (*adeps lanae hydrosus*). Wool fat containing about 30% of water. Used as an ointment base. Syn., *lanolin*.

Woolner Thomas [*English sculptor and poet*, 1825–92]. He is remembered medically for his description of the apex of the helix of the auricle This known as *Woolner' tip*.

word blind'ness. See *alexia*.

word deaf'ness. See under *deafness*.

word sal'ad. Meaningless words or neologisms emitted by psychotic patients, particularly those with schizophrenia. Syn., *schizophasia*.

work'ing dis'tance. *f* microscopy, the distance between the object and the objective.

World Health Organization (WHO) A specialized agency of the United Nations Organization whose broad purposes in the international health field are primarily to assist governments upon request in the field of health; to promote standards, provide information, and foster research in the field of health; to promote cooperation among scientific and professional groups; to promote and foster activities in the fields of maternal and child health and of mental health; and to study and report on administrative and social techniques relating to preventive medicine. It has authority to make sanitary and quarantine regulations, to regulate morbidity and mortality nomenclature, and to set standards for purity and potency of biological and pharmaceutical products

Worm, Ole (Olaus Wormius) [*Danish anatomist*, 1588–1654]. Remembered for his description of the small, supernumerary bones in the sutures of the skull; called *Wormian bones*. See also *Wormian suture*.

worm [AS. *wyrm*]. A member of the phyla Annelida, Nemathelminthes, or Platyhelminthes. The medically important forms belong to the last two phyla.

dragon w See *Dracunculus medinensis*.

eye w See *Loa loa*.

Guinea w See *Dracunculus medinensis*.

hookworm. See *Ancylostoma*, *Necator*

kidney w See *Dioctophyma renale*

pinworm. See *Enterobius vermicularis*.

roundworm. See *Ascaris*.

screwworm. The larva of *Cochliomyia*.

seatworm. See *Enterobius vermicularis*.

tapeworm. See *tapeworm*.

threadworm. *Enterobius vermicularis*.

tongue w See *Linguatula*.

whipworm. See *Trichuris trichiura*.

worm'seed. *Santonica*.

w oil. See chenopodium *oil*.

wound [AS. *wund*]. The disruption of normal ne-

tomical relationships as result of injury or more specifically of trauma, as gunshot wound.

bullet splash w. One caused by a fragmentation of steel armor from the impact of bullet; this type of wound is small and frequently involves the neck; common in combat airmen.

contused w. One produced by a blunt instrument or weapon.

gunshot w. One made by projectile from gun or any small firearm.

incised w. One caused by cutting instrument.

lacerated w. One in which the tissues are torn.

open w. One having free external opening.

penetrating w. One that pierces the walls of cavity or enters into an organ.

punctured w. One made by pointed instrument.

shell w. Usually large lacerated one with accompanying devitalization of tissue and resulting from artillery fire or bombing.

spatter w. One which is peppered superficially with multitude of small splinters from an explosive.

tunnel w. One having small entrance and small exit, the wound tract being the same diameter throughout.

Wreden, Robert Robertovich [*Russian otologist*, 1837–93]. Described otomycosis (1867). Introduced test for live birth, consisting of examination for the presence of gelatinous matter in the middle ear; its absence is regarded as proof that the child was born alive and has breathed, called *Wreden* test.

Wright, Almroth Edward [*English pathologist and bacteriologist*, 1861–1947]. Widely known for his experimental work in inoculation against typhoid fever (1896). Developed an agglutination test against undulant fever (1897). Best known for demonstration of opsonins in normal and immune serums (1903). His *opsonic index* is term to indicate the relation between the phagocytic action of particular serum and that of normal serum.

Wright, James Homer [*American pathologist*, 1869–1928]. Said to have been the first to observe the origin of the blood platelets. Observed *Leishmania tropica* in Delhi, or oriental, sore (1903). See also Wright stain, Wright eosin stain.

wrin′kles [AS. *wrincle*]. Minute crevices or furrows in the skin caused by habitual frowning, etc. but particularly by old age, due to atrophy of the corium.

Wrisberg, Heinrich August [*German anatomist*, 1739–1808]. Described the medial cutaneous nerve of the arm also called nerve of *Wrisberg*. Described the pars intermedia of the seventh cranial nerve called *Wrisberg* nerve or *Wrisberg* pars intermedia, now known as nervus intermedius. The cuneiform cartilages were formerly called *Wrisberg* cartilages.

wrist [AS.]. The part joining forearm and hand. See *carpus* in Table of Bones in the Appendix.

w. joint. The articulation between the forearm and the hand, the radiocarpal articulation.

wri′ting hand. A peculiar position assumed by the hand in paralysis agitans, with an exaggerated flexion of the metacarpophalangeal joints and an extension of the fingers.

wry-head. See *plagiocephaly*.

wry′neck. Old term for torticollis.

w. s. W ter soluble.

Wu, H. [*Chinese biochemist*, contemporary]. Devised test, with Otto Folin, for urea in the blood. See Folin-W test. Also see Folin and W 's method.

Wuch″er-er′i-a (wōōtch er-err ee-uh) [Otto Wucherer, German physician, 1820–73]. A genus of filarial worms found in all the warm regions of the world. The larva or microfilaria must be ingested by a mosquito for metamorphosis to take place.

W. bancrofti. A species of filaria of worldwide distribution. Man is the only known definitive host.

W. malayi. A species of filaria infecting man by mosquito bite, endemic in the Far East, and frequently associated with elephantiasis of the upper extremities.

wu h er ri i (wōōt h er eh-ry uh-sis) [*Wucheria*; NL. *-iasis*, condition]. The disease caused by worms of the genus *Wuchereria*. The symptoms depend upon the location of the parasite within the body but are due to obstruction of the lymph vessels by the adult worms. Also called *filariasis*, *Bancroft* *filariasis*, *elephantiasis*.

Wunderlich, Carl Reinhold August [*German physician*, 1815–77]. Remembered for his observations on body heat in disease (1868). Said to have established clinical thermometry. Proponent of law or curve in typhoid fever corresponding to the present knowledge of the fever oscillations in the course of that disease, called *Wunderlich* law or curve.

Wundt, Wilhelm Max [*German physiologist*, 1832–1920]. Known for his contributions to experimental physiology and psychology. Described prolonged tetanic contraction induced in frog's muscle by injury or the closure of strong, direct electric current; called *Wundt* tetanus.

war′ras [Ar. word]. A powder obtained in Arabia from the fruits of leguminous plant, *Flemingia congesta*; used as an anthelmintic. Also called *waras*, *warrus*.

Wurster's test. See under *test*.

WV Walking ventilation.

w/v. Weight in volume; indicating that weighed quantity of solid substance is contained in solution in measured volume of liquid.

wyamine. Trade-mark for *amine mephentermine*.

w. sulfate. Trade-mark for *mephentermine sulfate*.

wyanoid. Trade-mark for hemorrhoidal suppository.

wycillin. Trade-mark for an aqueous suspension of crystalline procaine penicillin G.

wydase. Trade-mark for *hyaluronidase*.

Wyeth, John Allan [*American surgeon*, 1845–1922]. Remembered especially for his important invention of 12-in. steel pins to hold tourniquet in place in amputation at the hip or shoulder; also called *Wyeth's pins*.

Wylie, Walter Gill [*American gynecologist*, 1848–1923]. Remembered for his operation of shortening the round ligaments of the uterus for relief of retroflexion; called *Wylie* operation.

Wyllys Andrews. See Edward Wyllys *Andrews*.

X

X. Symbol for the decimal scale of potency or dilution used by the homeopaths.

xan′tha·line (zan′thuh-leen, -lin) $C_{20}H_{19}NO_4$. An alkaloid from opium.

xan′thate. A salt of xanthic acid.

xan″the·las′ma (zan″thi-las′muh, -laz′muh) [G. *xanthos*, yellow; *elasma*, metal plate]. A type of xanthoma seen on the eyelids.

xan′the·las·moi′de·a (zan″thi-las-moy′dee-uh, -laz-moy′dee-uh). See *urticaria pigmentosa*.

xan′thene. 1. $C_{13}H_{10}O$; dibenzopyran; a 3-ring heterocyclic compound resulting from the joining of two benzene rings by a methylene (CH_2) and also an oxygen bridge. Certain derivatives are medicinally important. 2. Any of several derivatives of xanthene, 1.

xan′thic [*xanthos*]. 1. Yellow. 2. Pertaining to xanthine.

xan′thic ac′id. An ester of thiosulfocarbonic acid; an unstable, colorless oil which decomposes at 25° C. into carbon disulfide and alcohol.

xan′thine. $C_5H_4N_4O_2$; 2,6(1,3)-purinedione, or 2,6-dioxopurine; crystals, practically insoluble in water; found in plant and animal tissues; an intermediate product in the transformation of adenine and guanine into uric acid. See also *hyperxanthine*.

xan′thine ox′i·dase. A flavoprotein enzyme catalyzing the oxidation of certain purines.

xan′thi·nin. $C_{17}H_{22}O_5$. A crystalline unsaturated keto lactone isolated from the leaves of *Xanthium pennsylvanicum*, or cocklebur; the principle responsible for auxin antagonism of extract of leaves of the plant.

xan″thi·nu′ri·a, xan·thi·u′ri·a [*xanthos*; G. *ouron*, urine]. The presence of xanthine in urine.

xan′tho-, xanth- [*xanthos*]. A combining form meaning *yellow*.

xan″tho·chroi′a [*xanthos*; G. *chroia*, skin]. Yellow discoloration of the skin.

xan″tho·chro·mat′ic [*xanthos*; G. *chrōma*, color]. Yellow-colored.

xan″tho·chro′mi·a [*xanthos*; *chrōma*]. 1. A yellowish discoloration of the skin. 2. The yellow discoloration of the cerebrospinal fluid, diagnostic of hemorrhage in the spinal cord or brain. —**xanthochromic**, *adj*.

xan·thoch′ro·ous (zan-thock′ro-us) [*xanthos*; G. *chroa*, skin]. Yellow-skinned.

xan″tho·cy·a·no′pi·a, xan″tho·cy·a·nop′si·a [*xanthos*; G. *kyanos*, blue; *ōps*, eye]. A defect of color vision in which yellow and blue are perceived, while red is not perceptible.

xan′tho·cyte [*xanthos*; G. *kytos*, cell]. A cell containing a yellow pigment.

xan″tho·der′ma [*xanthos*; G. *derma*, skin]. A yellow discoloration of the skin.

xan′tho·dont, xan″tho·don′tous [*xanthos*; G. *odous*, tooth]. Having yellow teeth.

xan″tho·gran″u·lo′ma. Xanthoma.

juvenile x. See *nevoxanthoendothelioma*.

xan″tho·gran″u·lo″ma·to′sis [*xanthos*; L. *granulum*, small grain; G. *-ōma*, tumor; *-ōsis*, condition]. A condition characterized by granulomalike deposits of cholesterol, chiefly in the flat bones, sometimes associated with hypercholesteremia. Exophthalmos and diabetes insipidus may occur depending on the localization of the lipid deposits in the skull. See also Hand-Schüller-Christian disease.

xan″tho·ky·an′o·py (zanth″o-kigh-an′o-pee) [*xanthos*; G. *kyanos*, blue; *ōps*, eye]. Red-green blindness, with undiminished spectrum. See *xanthocyanopia*.

xan·tho′ma [*xanthos*; G. *-ōma*, tumor]. A new growth of the skin occurring as flat or slightly raised patches or nodules from 2 to 15 mm. in size, and of a yellowish orange color. Several types are seen and often more than one type is seen in the same patient. They are all due to some disturbance of lipoid metabolism. Histologically, foam or xanthoma cells are seen with giant cells and some infiltrate. Various types of sterol crystals are seen with polariscopic examination. See *xanthelasma*.

giant-cell x. See xanthomatous giant-cell tumor of the tendon sheath.

juvenile x. One occurring in children usually as xanthoma tuberosum, but often disseminated. May occur as an evidence of Hand-Schüller-Christian disease.

x. diabeticorum. A rare disease of the skin associated with diabetes mellitus, the lesions of which are denser and firmer than those of true xanthoma, and are dull red, discrete, and solid, being more often seen on the palms and soles.

x. disseminatum. A rare form occurring as papules or plaques diffusely distributed over the face, flexor surfaces, and often the mucous membranes. Other parts of the body may be involved. Diabetes insipidus may be associated.

x. tuberosum. One of the common types. Papules, nodules, plaques, or linear lesions are seen on the extensor surfaces. The yellow color is typical. Lesions are usually grouped together and are often found about the joints. Total blood lipids are usually elevated, as is cholesterol. Tendon sheaths or other internal structures may be involved, giving various and bizarre symptoms.

xan·tho″ma·to′sis [*xanthos*; *-ōma*; G. *-ōsis*, condition]. A condition marked by the deposit of yellowish or orange lipoid material in the reticuloendothelial cells, the skin, and the internal organs. See *lipoidosis*, Hand-Schüller-Christian disease.

xan·thom′a·tous [*xanthos*; *-ōma*]. Of the nature of or affected with, xanthoma.

xan″tho·my′cin. Either of two antibiotic substances, designated xanthomycin A and xanthomycin B, isolated from cultures of a *Streptomyces* species.

xan′thone. 1. $C_{13}H_8O_2$; dibenzopyrone, or benzophenone oxide, obtained when the CH_2 bridge of xanthene is oxidized to CO. Certain dyes and some yellow flower pigments are derivatives of xanthone. 2. Any of several derivatives of xanthone, 1.

xan′tho·phane [*xanthos*; G. *phainein*, to appear]. A yellow pigment found in the retinal cones.

xan′tho·phore [*xanthos*; G. *phoros*, bearing]. A yellow chromatophore.

xan′tho·phose (zanth′o-foze) [*xanthos*; G. *phōs*, light]. A yellow phose.

xan′tho·phyll. $C_{40}H_{56}O_2$. A yellow vegetable pigment similar to chlorophyll, found in plants.

xan′tho·pi·a. See *xanthopsia*.

xan″tho·pro·te′ic ac′id. The yellow compound

resulting from the treatment of protein with nitric acid.

xan"tho-pro'te-in (zanth o-pro'tee-in, -pro'teen) [*xanthos*; G. *prōteios*, of first rank]. A yellowish derivative formed by the action of concentrated nitric acid on proteins.

xan thop si [*xanthos*; G. *opsis*, vision]. Yellow vision; the condition in which objects look yellow. It sometimes accompanies jaundice.

xan-thop'si [*xanthos*; *opsis*]. Visual yellow produced by the action of light on rhodopsin (visual purple).

xan-thop"sy-dra ci-a (zan-thop si-dray'shee-uh, -see-uh) [*xanthos*; G. *psydrax*, pimple]. The occurrence on the skin of yellow pimples or pustules.

xan-thop'ter in, $C_6H_5N_5O_3$. A yellow pigment, widely distributed in animal organisms and representing an element of the structure of folic acid; it appears to have some role in hematopoiesis.

xan"tho-rham'nin, $C_{34}H_{42}O_{20}$; the 3-rhamnoside of rhamnetin, obtained from the berries of *Rhamnus infectoria* (*tinctoria*) and other *Rhamnus* species. On hydrolysis it yields rhamninose and the aglycone rhamnetin.

xan thor-rhe a, xan"thor-rhee' [*xanthos*; G. *rhoia*, flow]. An acrid, purulent, yellow discharge from the vagina.

xan'tho-sine (zanth o-seen, -sin) A nucleoside made up of xanthine and ribose.

xa tho sis [G., from *xanthos*, -*osis*, condition]. A yellow discoloration of the skin due to deposit of carotenoid pigment, occurs from eating quantities of carrots, squash, sweet potatoes, etc. The reaction is readily reversible. A similar reaction is seen from another pigmentary deposit in the skin after taking atabrine over period of time. Also called *aurantiasis cutis*. —xan'thot"ic, *adj*

x. fundi diabetica. A condition, seen in diabetic retinopathy in which the retinal vessels are extremely well defined and the retina in the posterior part of the eye has peculiar orange-yellow color

xan"tho-tox'in, $C_{12}H_8O_4$ the methyl ether of 8-hydroxy-4',5',6,7-furocoumarin, obtained from the fruits of *Fagara xanthoxyloides* and identical with ammoidin from *Ammi majus*

xan thox'y lum (zan thock si lum) [*xanthos*; G. *xylon*, wood] (*xanthoxylum*) The dried bark of *Zanthoxylum americanum*, or of *Z. clava-herculis*. Contains xanthoxyline-N, xanthyletin, volatile oil, and resins. It has been used as an internal remedy in rheumatism, as gastrointestinal stimulant in flatulence and diarrhea, and as masticatory in toothache. Also called *prickly ash bark*.

x. fruit. The dried, full-grown fruit of *Z. americanum*, or of *Z. clava-herculis*. Contains volatile oil and hesperidin. It has no therapeutic effect other than that of mild aromatic. Also called *prickly ash berries*

xa "thu-re nic ac'id. A green pigment derived from quinoline found in the urine of rats suffering from pyridoxine deficiency appears to be tryptophan metabolic product.

xan-thu'ri a. See *xanthinuria*.

xan thy drol, $C_{13}H_{10}O_2$, an organic compound used for the detection of urea.

xan thyl'l [*xanthos*; G. *hylē*, material]. Pertaining to xanthene.

X chro mo-some. See under *chromosome*

Xe Chemical symbol for xenon.

xen o- (zen o-) **xen-** [G. *xenos*, stranger]. A combining form meaning *strange* or *foreign*.

xen o-di" g-no si [*xeno*; G. *diagnōsis*, distinguishing]. The procedure of using suitable arthropod to transfer disease from patient to susceptible laboratory animal.

xen"o-gen'e-sis [*xeno*; G. *genesis*, production]. 1 Heterogenesis. 2. The hypothetical production of offspring completely unlike the parent. —**xenogenic**, *adj*

xe-nol'o-gy [*xeno*; G. *logos*, word]. The study of the host relationship of parasites, as of intermediary and definitive hosts.

xen -me'ni-a [*xeno*; G. *mēn*, month]. Vicarious menstruation.

xe'non (zee non, zen on) [*xenos*]. Xe = 131.3. A chemically inert gaseous element found in the atmosphere.

xen pho'bi-a [*xeno*; G. *phobos*, fear]. A morbid fear of strangers.

xen"oph thal'mi [*xeno*; G. *ophthalmos*, eye] Conjunctivitis due to injury

xe no-plas'ty [*xeno*; G. *plassein*, to form]. Heteroplasty —**xenoplas'tic**, *adj*

Xen"op-syl'la [*xeno*; G. *psylla*, flea]. A genus of fleas of the family Pulicidae.

X. cheopis. The Indian rat flea; found in tropical and subtropical regions. A vector for bubonic plague and *Hymenolepis diminuta*, tapeworm. This flea attacks man and other mammals, in addition to the rat, its natural host. It transmits the organism of murine typhus, *Rickettsia mooseri*, from rat to rat and from rat to man.

Xen' pus, Xen-o'pus [*xeno*; G. *pous*, foot]. A genus of African toad belonging to the Pipidae, used in laboratory tests for pregnancy

xe-ran'tic [G. *xērantikos*, to dry up]. Having desiccative properties; drying. —**xeransis**, *n*.

xe-ra si-a (zi ray see uh) [G. desiccation]. Old term for disease of the hair marked by cessation of growth and excessive dryness.

xe ro- (zeer o-) **xer** [G. *xēros*, dry]. A combining form meaning *dry*.

xe"ro-der'ma, xe"ro-der'mi [*xēros*; G. *derma*, skin]. 1. An abnormal dryness of the skin. 2. Ichthyosis.

follicular x. See *keratosis pilaris*.

x. pigmentosum. A rare disease of the skin usually beginning in childhood, and characterized by disseminated pigment spots, telangiectasis, atrophy and contraction of the skin. Occurs particularly in areas exposed to sunlight and is made worse by it. Patients have photophobia, and there is definite familial tendency. Warty and keratolytic lesions occur that soon develop into malignant growths. The skin develops many characteristics of the senile skin in early life. Also called *angioma pigmentosum atrophicum*, *atrophoderma pigmentosum*, *Kaposi's disease*, *melanosis lenticularis progressiva*.

xe"ro-der"mos-to-o'sis. See Sjögren syndrome.

xeroform. Trade-mark for brand of bismuth tribromphenate.

xe-ro ma. See *xerophthalmia*.

xe"ro-me ni- [*xēros*; G. *mēn*, month]. Th presence of the usual constitutional disturbances at the menstrual period but without the menstrual flow of blood.

xe ro-myc te"ri a [*xēros*; G. *myktēr*, nostril]. Lack of moisture in the nasal passages.

xer-no'o-sis [*xēros*; G. *nosos*, disease]. A condition of dryness of the skin.

xe ro pha gi a, xe-roph'a-gy [*xēros*; G. *phagein*, to eat]. The eating of dry or desiccated food.

xe roph-thal'mi-a [*xēros*; G. *ophthalmos*, eye]. A dry and thickened condition of the conjunctiva, sometimes following chronic conjunctivitis, disease of the lacrimal apparatus, or vitamin-A deficiency. Also see *xerosis*.

xe ro-ra di-og'ra-phy. A rapid method of recording roentgen image by totally dry process without the necessity of darkroom. The pow-

dered surface of an electrically charged selenium plate records the roentgen image, and from this paper print is made.

xe ro sis [*xēros*; G. *-ōsis*, condition]. A state of dryness, especially of the skin (see *xeroderma*) or of the conjunctiva (see *xerophthalmia*). Syn., *asteatosis*.

x. conjunctivae. A condition marked by silver gray shiny triangular spots on both sides of the cornea, within the region of the palpebral aperture consisting of dried epithelium, flaky masses, and microorganisms. The spots are observed in some cases of hemeralopia. See *xerophthalmia*.

x. infantilis. Xerophthalmia marked by a luster less, grayish white, foamy greasy very persistent *deposit on the conjunctiva. Also called keratitis sicca.*

xe"ro sto mi a [*xēros*; G. *stoma*, mouth]. Dry mouth, caused by insufficient secretion of saliva.

x ro-tes (zeer tees, zerr o-tees, zi-ro tees) [G., dryness]. Dryness of the body

xe rot'ic [*xēros*]. Characterized by xerosis dry

xe ro t ci a (zeer o-to shee-uh, -see-uh) [*xēros*; G. *tokos*, childbirth]. Old term for dry labor

x ro trip sis [*xēros*; G. *tripsis*, rubbing]. Dry friction.

xiph-, xiph'i-. See *xipho-*.

xiph"i ster'num [G. *xiphos*, sword *sternon*, breast]. The xiphoid cartilage of the sternum. —**xiphister'nal** *adj*

xiph'o- (zif'o-, zy fo-) **xiph-** [*xiphos*]. A combining form signifying *relation to the xiphoid cartilage.*

xiph"o-cos'tal [*xiphos*; L. *costa*, rib]. Pertaining to *the xiphoid cartilage and to the ribs.*

iph d y mus (zi fod i mus y f d i mus) [*xiphos*, G. *didymos*, twin] A double monster with two heads, two thoraces, four arms, bdominal and pelvic regions in common, with two legs or occasionally rudimentary third leg. Also called *dicephalus tetrabrachius.*

xiph"o-dyn'i a [*xiphos*; G. *odynē*, pain]. Pain in the *xiphoid cartilage.*

xiph oid (zif'oyd, zy'foyd) [G. *xiphoeidēs*, sword-shaped] Sword-shaped ensiform.

xiph oid. The xiphoid process.

xiph"oid i'tis [*xiphoeidēs*; G. *-itis*, inflammation]. Inflammation of the xiphoid process

xi ph p gus (i f p h gus y f p h gu) [*xiphos*; G. *pagos*, that which is fixed]. Conjoined twins united at the inferior end of the sternum type of thoracopagus. See Plate 25.

xiph"o ster'nal crunch. Normal functional systolic sound of crunching or splitting nature, heard best, when present, to the *left* and above th xiphoid process also called *xiphosternal crunch sound*

x'-ray pho-tog'ra-phy See *radiography.*

x'-rays. See *roentgen rays* under *ray*

x-ray serv'ice. The professional service of medical institution equipped to perform -ray examinations and in some cases to give radiation therapy

x'ray u'nit. Any assemblage of equipment primarily for diagnostic or therapeutic use of x-rays

xy'lan. A hemicellulose of the pentosan type, occurring in woody tissue, corncobs, peanut shells, straw etc. On hydrolysis it yields xylose.

xy'lem (zy'lem) [G *xylon*, wood]. The inner or woody portion of vascular bundle of plant, opposed to the phloem.

xy'lene $C_6H_4(CH_3)_2$; dimethylbenzene, occurring as colorless, mobile, inflammable liquid. The xylene of commerce is mixture of the three isomerides—*o-* *m-* and *p*-xylenes. It has many industrial uses, and is used as solvent and clearing agent in microscopy Syn *xylol.*

xy'len ol. $(CH_3)_2C_6H_3OH$; dimethylphenol, existing in six isomeric forms, all crystalline and slightly sol ble in water: used in the preparation of coal-tar disinfectants.

xy'li-dene. $(CH_3)_2C_6H_3NH_2$, aminodimethylbenzene, existing in six isomeric forms, all liquids except one, sparingly soluble in water used chiefly in the manufacture of dyes.

xy'lo-, xyl- [*xylon*]. A combining form denoting *pertaining to or derived from wood.*

xylocaine hydrochloride. Trade-marked name for diethylamino-2,6-acetoxylidide hydrochloride See *lidocaine hydrochloride, lignocaine.*

xy'lol. See *xylene.*

Xy lo pi (zye-lo pee uh) [*xylon*, G. *pikros*, bitter]. A genus of shrubs. X. polycarpa yields yellow dye also used as bitter

xy'lose. $C_5H_{10}O_5$, wood sugar obtained from vegetable fibers: used medicinally as diabetic food.

xy"lo-ther'a py [*xylon*, G *therapeia*, treatment] Suggestion treatment by the application of certain woods to the body

xy'lyl. 1 The univalent radical $CH_3C_6H_4CH_2$—. 2. The univalent radical $(CH_3)_2C_6H_3$—

x. bromide $CH_3C_6H_4CH_2Br$; methylbenzyl bromide, existing as *o-*, *m-*, and *p-* forms. The mixed isomers are lacrimatory poison gas

xy'ro-spasm [G *xyron*, razor; *spasmos*, spasm]. Shaving cramp.

xys ma (zis'muh) [G filings]. The flocculent pseudomembrane sometimes seen in the stools in *diarrhea.*

xys'ter (zis'tur) [G scraper]. A surgeon's raspatory or scraping instrument. *Obs.*

Y

Y Chemical *symbol for yttrium.*

ya'kri ton. A hypothetical substance claimed to be detoxifying hormone, found in the liver

Yamagiwa, Katsusaburo [*Japanese physician*, 1863–1930]. Produced the so-called tar cancer (1916) confirming prior observations as to the etiologic relationship of chemicals to the incidence of tumors.

Yasuda method. See under *method.*

yatren. Trade name for *chiniofon.*

yawn [AS. *gānian*]. To gape, to open the mouth widely Also called *chasma.*

yawn'ing [*gānian*]. A reflex stretching of the muscles accompanied by deep inspiration, occurring during the drowsy state preceding the onset of sleep Also called *hiant.*

yaws [Cariban in origin]. An infectious, nonvenereal disease occurring in the hot, moist tropics, caused by *Treponema pertenue*; characterized by an initial cutaneous lesion, the mother yaw followed by one or more crops of multiple, papillomatous raspberrylik lesions of the skin. Occasionally late destructive lesions occur involving especially skin and bones. This aspect of yaws, if the tissues about the nose and mouth are involved, is called gangosa. The spirochetes gain entrance through

the skin. Flies, especially species of *Hippelates*, may be vectors. Serologic tests of the blood for syphilis are positive. Syn., *frambesia*, *pian*.

bosch y Leishmaniasis americana.

crab y Hyperkeratosis with fissuring of the soles of the feet, accompanying the secondary lesions of yaws. The resulting peculiarity of gait gives rise to the name.

forest y See *leishmaniasis americana*.

mother yaw The primary lesion of yaws. Also called *mamam pian*.

Yb Chemical symbol for ytterbium.

Y chro'mo-some. See under *chromosome*.

yeast [AS. *gist*]. The name applied to various species of *Saccharomyces*. Yeast is chiefly employed medicinally because of its richness in the water-soluble vitamins including thiamine, riboflavin, pyridoxine, nicotinic acid, and pantothenic acid.

autolyzed y Yeast digested by its own proteolytic enzymes used to correct dietary deficiencies or to replace meat and meat products in special diets.

brewer's y See dried yeast.

compressed y The moist, living cells of *Saccharomyces cerevisiae* or of other species of *Saccharomyces* combined with starchy or absorbent base. It contains at least two enzymes: invertase which changes sucrose to monosaccharides, and zymase which converts monosaccharides to alcohol.

dried y Consists of the dry cells of any suitable strain of *Saccharomyces cerevisiae*. It may be obtained as by-product from the brewing of beer which has been made from an extract from cereal grains and hops. The yeast cells are washed free of beer and dried. This yeast is commonly known as brewer dried yeast. Dried yeast may also be obtained by growing suitable strains of yeast, using mediums other than those required for the production of beer. This yeast is commonly known as primary dried yeast. Dried yeast is frequently fortified with vitamins of the B-complex group.

y extract. Yeast preparations usually prepared by extracting specially cultured dried brewer's yeast with aqueous mediums. The *extracts are* either concentrated to form liquid and preserved as such, or dehydrated to powder form.

yeast nu'cle-ic c'id. *Ribonucleic acid*.

yel'low [ME. *yelow*]. Of color like that of gold; producing such color

butter y See *butter yellow*.

indicator y A hypothetical intermediary product in the breakdown of visual purple to retinene.

yel'low jack. See yellow *fever*

yel'low lo'tion (*lotio flava*) A lotion prepared from mercury bichloride 3 Gm., boiling distilled water 25 cc., calcium hydroxide solution sufficient quantity to make 1000 cc. Yellow lotion is actively germicidal and stimulant and has been used for sluggish skin infections and syphilitic ulcers. Also called *yellow wash*.

yel'low root" See *hydrastis*.

Y'men ul'cer See tropical ulcer

Yerson silence test. See under *test*.

yer'ba bue'na (yair'bah bway'nah). A labiate herb of the Pacific Coast, has been used as an emmenagogue. Obs.

Yersin, Alexandre Emil Jean [*French bacteriologist*, 1863–1943]. With P P E. Roux, demonstrated the existence of diphtheria exotoxin (1888) Discovered the plague bacillus independently of Kitasato in the same year (1894).

Y lig' -ment. The iliofemoral ligament.

yodoxin. Trade-mark for diiodohydroxyquin.

yo-him'bé, yo him'bé. The rubiaceous tree *Corynanthe Yohimbi* (*Pausinystalia Yohimbe*) growing in the southern Cameroons district in Africa. The bark contains several alkaloids of which the most important is yohimbine; both bark and yohimbine have been employed for reputed aphrodisiac effect.

yo-him'bine. $C_{21}H_{26}N_2O_3$; the principal alkaloid of yohimbé, identical with quebrachine. Has been used as an aphrodisiac, also in treating angina pectoris and arteriosclerosis.

yolk [AS. *geolca*]. The nutritive part of an ovum. Also called *deutoplasm*.

yolk of wool. Suint.

yolk sac. An extraembryonic membrane composed of endoderm and splanchnic mesoderm. It encloses the yolk when the latter is present and is also the site of the formation of the primitive blood cells.

Young, Hugh Hampton [*American urologist*, 1870–1945]. Demonstrated vesiculography (1920) Devised operation for amputation of the penis with removal of lymph nodes in both inguinal regions. Devised operation for epispadias in which skin incisions are made on each side of the central groove, dissection is carried through one of them between the corpora to the skin beneath, and new tube is formed from the groove which is sutured to the lower skin; called *Young' operation*. Devised cautery punch for removal of prostatic obstruction transurethrally called *Young' punch*. Perfected method of reconstructing the posterior urethra, called *Young method*. Best known for his introduction of perineal prostatectomy called *Young operation*.

Young, John Richardson [*American physician*, 1782–1804]. Demonstrated that gastric digestion is due to the solvent action of the gastric juice (1803)

Young, Thomas [*English physician*, 1773–1829]. The first to describe astigmatism and the mechanism of accommodation (1793) His color-vision theory (1802) was modified later by von Helmholtz and is called the *Young-Helmholtz theory*. It states that there are three elements in the retina which are sensitive to the three primary colors, red, green, and blue, which, mixed in equal proportions, make white light. Vision of other colors is due to different intensity of stimulation of these three elements. Developed formula for determining drug dosage for children over two years, called *Young rule*.

Youngburg and Folin method. See under *method*.

youth [AS. *geoguth*]. The period between childhood and maturity

y'per-ite (ee'pur ite, eye'pur-ite). Di(chloroethyl) sulfide; mustard gas, $(CH_2CH_2Cl)_2S$. A vesicant liquid or vapor that is intended for use in chemical warfare.

Y-plas'ty of Schwyzer-Foley A surgical urological procedure designed to correct ureteropelvic junction obstruction, utilizing Y-shaped linear incision in the renal pelvis and area of stricture.

yp-sil'i-form (ip-sil'i form, ip sil i-form) [G *upsilon*, twentieth letter of the Greek alphabet; L. *forma*, form]. Resembling the Greek letter Υ; Y-shaped.

Yt Alternate chemical symbol for yttrium.

yt ter'bi-um (i ter'bee-um) [NL., from *Ytterby*, Sweden]. Yb = 173.04. A rare metal.

yt'tri-um (it ree-um) [Ytterby]. Y = 88.92. A rare metallic element.

Yukawa, Hideki (1907). Japanese physicist, known for his extensive research in theoretical and nuclear physics. In 1949 he received the Nobel prize in physics for his prediction of the existence of the meson.

Yvon, Paul [*French physician and chemist*, 1848–1913]. Described the ratio between the amount of urea and the phosphates in the urine represented by one-eighth; called *Yvon coefficient*. Described test for acetanilid. See Yvon *test*.

Z

Zwischenscheibe, intermediate disk. See **Z** *disk*.

Z, *Zuckung* contraction; term used in electrotherapeutics.

Zander Jonas Gustaf Wilhelm [*Swedish physician*, 1835–1920]. Introduced exercise by passive movements using special apparatus called *Zander' system*. The apparatus is called *Zander' apparatus*.

Zappert, Julius (1867 1942) Austrian physician, inventor of blood corpuscle counting chamber called *Zappert' chamber* or *cell*.

zar an than [Heb.]. Scirrhous condition of the breast.

Zaufal Emanuel [*Austrian rhinologist and otologist*, 1833–1910]. Described saddle nose due to syphilis and believed it to be pathognomonic of the disease if associated with alopecia; called *Zaufal' sign*. Improved and modified the operation of mastoidectomy; also called *Zaufal' operation*.

Z disk. See and also under *disk*.

ze' [G one-seeded wheat] (see) Consists of the fresh styles and stigmas of *Zea mays*. Contains maizenic acid, fixed oil, resin, and mucilage. Has been used in acute and chronic cystitis and urethritis. Also called *corn silk*.

ze"a xan'thine (see uh-zan theen, -thin) A carotenoid from maize, egg yolk, and many plants.

zed'o-ar"y [Per *zedwar*]. The dried rhizom of species of *Curcuma*; has actions similar to ginger

Zeidler Othmar [*German chemist*, nineteenth century]. Remembered for his experimental work in compounding chloral and brombenzol (1874) now known as DDT an important insecticide.

ze'in (see'in, tees in) [G *zea*, one-seeded wheat]. A yellowish, soft, insipid prolamine of maize.

Zeller Simon [*Austrian obstetrician*, 1746–1816]. Remembered for his operation for webbed fingers in which he dissected triangular flap on the dorsal aspect of the root of the web, the latter being divided, after which the apex of the flap was drawn down between the fingers and ttached to prepared surface on the palm.

Zeller's test. See under *test*.

zematol. Proprietary ointment used for eczema.

Zenker Friedrich Albert [*German pathologist*, 1825–98]. Described the muscular and enteric forms of trichinosis (1860) Gave one of the first adequate descriptions of pulmonary embolism (1862) Described liquefying, degenerative disease of the striated muscles occurring in acute infectious disease called *Zenker degeneration*. Described form of paralysis of parts supplied by the common peroneal nerve; called *Zenker paralysis*. Best known for his fixing fluid see *Zenker' fixing fluid*.

Zenker's pouch. See under *pouch*.

ze' lite. Any one of group of hydrated aluminum and calcium or sodium silicates, of the type Na_2O $2Al_2O_3.5SiO_2$ or $CaO.2Al_2O_3.5SiO_2$, certain of which may be used for water softening by an ion exchange process.

zephiran chloride. Trade-mark for benzalkonium chloride, quarternary antiseptic

Zernicke, Fritz (1888–) Dutch physicist who won the Nobel prize in physics (1953) for his invention of the phase-contrast microscope, which proved major advance in visualization of the living cell.

ze ro [Ar *sifr* cipher]. 1. Any character denoting absence of quantity 2. The point on thermometers from which temperatures are counted.

absolute z. Approximately −273.2° C. or −459.6° F

Ziehen, Georg Theodor [*German psychiatrist*, 1862–]. Known for his description of dystonia musculorum deformans (1911); also called *torsion spasm*, *Ziehen-Oppenheim disease*.

Ziehl-Neelsen stain. See *carbolfuchsin solution* under *stain*.

Ziemssen, Hugo Wilhelm von [*German physician*, 1829–1902]. Remembered for his use of electricity in medicine and author of volumes on the subject (1857) Described points of election in electrization of muscles corresponding to the points of entrance of motor nerves into the muscles; called *Ziemssen points*.

Zimmerlin, Franz [*Swiss physician*, 1858–1932]. Described type of progressive muscular atrophy starting in the upper part of the body; called *Zimmerlin type of progressive muscular atrophy*.

Zimmermann, Johann Georg [*German physician*, 1728–95]. Remembered for having published an early monograph on what is now known as bacillary dysentery (1767)

zinc [Ger *zink*] (*zincum*) Zn = 65.38. Occurs as bluish white, lustrous metal with crystalline fracture It is dissolved by dilute hydrochloric, nitric, and sulfuric acids with the evolution of hydrogen. Most of the salts of zinc are astringent and antiseptic and employed as such in medicine.

compound z. sulfate powder (*pulvis zinci sulfatis compositus*) Contains salicylic acid, 5 Gm of phenol, eucalyptol, menthol, thymol, 1 Gm. of each zinc sulfate, 125 Gm. boric acid, 860 Gm to make 1000 Gm. Used for making solutions for washing out body cavities, especially as vaginal douche.

iodine and z. iodide glycerite (*glyceritum iodi et zinci iodidi*) Contains zinc iodide, 5 Gm iodine, 10 Gm. glycerin, 55 cc. distilled water sufficient quantity to make 100 cc. An active germicide and astringent used chiefly for local application in gingivitis. Also called *diluted Talbot' solution*.

medicinal z. peroxide. A mixture consisting essentially of zinc peroxide, ZnO_2, with varying amounts of zinc oxide, ZnO, and zinc hydroxide, $Zn(OH)_2$; occurs as fine, white, crystalline powder; it is insol ble in water but forms smooth paste which does not cake or harden. Used as an antiseptic deodorant and astringent application to various ulcerated conditions in skin diseases It is used as dusting powder usually with talc in ointment form, or as thick suspension or cream in distilled water

z. acetate (*zinci acetas*) $Zn(C_2H_3O_2)_2.2H_2O$ Occurs as white crystals or granules; 1 Gm. dissolves in 2.5 cc. of water and in 30 cc of alcohol Used as local remedy principally as an astringent in

lyrium in ophthalmia. It has also been used as an injection in gonorrhea, after the acute stage has passed.

z. carbonate. A basic carbonate of variable composition; occurs as white, amorphous powder; practically insoluble in water or alcohol. Used as mild astringent and protective. Applied in the form of an ointment or dusting powder.

z. chloride (*zinci chloridum*) $ZnCl_2$. Occurs as white, or nearly white, crystalline powder; 1 Gm. dissolves in 0.5 cc. of water and in about 1.5 cc. of alcohol; it is very deliquescent. It is occasionally used for its caustic effect in aphthous stomatitis and venereal ulcers. In dilute solution, it is sometimes used for its astringent action in leukorrhea and is the principal constituent in certain proprietary forms of astringent mouth wash.

z. iodide (*zinci iodidum*) ZnI. Occurs as white, or nearly white, granular powder; it is freely soluble in water and alcohol; it is very deliquescent. Zinc iodide possesses astringent and caustic powers like those of the chloride but is rarely employed. It is used only as an ingredient in iodine and zinc iodide glycerite.

z. ointment. Zinc oxide ointment.

z. oxide (*zinci oxidum*) ZnO. Occurs as fine, amorphous, white or yellowish white powder; insoluble in water and alcohol; dissolves in dilute acids. Used as mildly astringent and protective application to excoriated surfaces and in various skin diseases. It may be applied as dusting powder usually with talc, in aqueous mixtures, or in the form of an ointment.

z. oxide hard paste (*pasta zinci oxidi dura*) Contains zinc oxide, 25 Gm.; purified siliceous earth, 5 Gm. benzoinated lard, 70 Gm. Also called *Unna hard z. paste.*

z. oxide ointment (*unguentum zinci oxidi*) Contains zinc oxide, 20 Gm., liquid petrolatum, 15 Gm., white ointment, 65 Gm. also called *z. ointment.*

z. oxide paste (*pasta zinci oxidi*) Contains zinc oxide, 25 Gm.; starch, 25 Gm.; white petrolatum, 50 Gm. Also called *Lassar's plain zinc paste.*

z. oxide paste with salicylic acid. See under *salicylic acid.*

z. oxide soft paste (*pasta zinci oxidi mollis*) Contains zinc oxide, 25 Gm., precipitated calcium carbonate, 25 Gm.; oleic acid, 2.5 Gm.; linseed oil, 25 Gm.; calcium hydroxide solution, 22.5 Gm. Also called *Unna soft z. paste.*

z. phenolsulfonate (*zinci phenolsulfonas*) $Zn(HOC_6H_4SO_3)_2.8H_2O$. Occurs as colorless, transparent crystals, or as white granules or powder. 1 Gm. dissolves in about 1.6 cc. of water and in 1.8 cc. of alcohol. Used as an antiseptic and astringent application to indolent or foul ulcers, and in subacute inflammations of the mucous membranes. It has also been used as an intestinal antiseptic. Dose 0.06–0.2 Gm. (1–3 gr.) Also called *z. sulfocarbolate.*

z. stearate (*zinci stearas*) A compound of zinc with variable proportions of stearic and palmitic acids occurs as fine white, bulky powder insoluble in water and alcohol. Used in eczema and other cutaneous diseases, in the form of powder or made into an ointment.

z. sulfanilate. $Zn[C_6H_4(NH_2)SO_3]_2.4H_2O$. A salt used in 0.25–0.5% aqueous solution or in ointment as an astringent application. See *nizin.*

z. sulfate (*zinci sulfas*) $ZnSO_4.7H_2O$. Occurs as colorless crystals, white granules, or white powder. 1 Gm. dissolves in 0.6 cc. of water and in about 2.5 cc. of glycerin. It is efflorescent in dry air. Internally, it is used for its emetic action in various poisonings because of its promptness and its comparative freedom from danger. Externally it is actively astringent and is used as such on the mucous membranes of the eye, nose, throat, or genital tract. Dose, as an emetic, 0.65–2.0 Gm. (10–30 gr.)

z. sulfocarbolate. Zinc phenolsulfonate.

z. undecylenate. $[CH_2{:}CH(CH_2)_8COO]_2Zn$; fine, white powder practically insoluble in water used as a fungicide. See *desenex.*

zinc'ite. 1. A native zinc oxide, orange-yellow to deep red. 2. Any ore of zinc.

zinc'um. See *zinc.*

zin'ger·one (zin'jur·ohn) Gingerol. A pungent ketone, $C_{11}H_{14}O_3$, present in ginger.

zin'gi·ber. See *ginger.*

Zinn, Johann Gottfried [*German anatomist,* 1727–59]. Author of an important atlas of the human eye (1755). Described the suspensory ligament of the lens; also called the *ciliary zonule, zonule of Zinn.* Described the annulus from which arise the superior, inferior, medial, and lateral rectus muscles of the eye, called *Zinn's ligament* or *tendon* or *ring.* Described the central artery of the retina, called *Zinn's central artery.* Described the plexus of small branches of the ciliary artery in the sclera around the entrance of the optic nerve, formerly called *circulus arteriosus halleri, Zinn's circlet* or *corona.*

Zinsser's agar slant tissue culture method. See under *method.*

zir·co'ni·um [NL.]. Zr = 91.22. A metallic element resembling titanium and silicon.

z. dioxide. ZrO_2. Occurs as a heavy white powder. Used in x-ray photography as a substitute for bismuth salts.

Zn Chemical symbol for zinc.

zoalite. Trade name for a device for producing infrared rays.

zo·o·an'thro·py [G. *zōon,* living being, animal; *anthrōpos,* man]. A form of mental disorder in which the person imagines himself transformed into or inhabited by an animal.

Zoeller, Christian [*French pathologist,* 1888–1930]. One of the first, with G. Ramon, to use tetanus toxoid in immunization of humans (1923). The reaction produced by the use of the toxoid is called *Ramon-Zoeller's reaction.*

Zoellner, Johann Carl Friedrich [*German physicist,* 1834–82]. Remembered for his production of a chart with figures composed of variously arranged lines, designed to illustrate optical illusion, called *Zoellner's lines.*

zo'e·scope. See *stroboscope.*

zo'e·trope. See *stroboscope.*

zo'na [G. *zōnē,* belt]. 1. A belt or girdle. 2. See *herpes zoster.*

z. arcuata. The inner zone of the basilar membrane, extending from the lower edge of the spiral groove of the cochlea to the external edge of the base of the outer rods of Corti.

z. cartilaginea. The limbus of the spiral lamina.

z. ciliaris. The ciliary processes collectively.

z. columnaris recti. The portion of the anal canal in which lie the rectal columns.

z. cutanea recti. The portion of the anal canal lined by skin.

z. denticulata. The inner zone of the basilar membrane, together with the limbus of the spiral lamina.

z. fasciculata. The central portion of the cortex of the suprarenal gland in which the cellular cords are radially disposed.

z. glomerulosa. The outer zone of the adrenal cortex in which the cells are grouped in rounded masses.

z. incerta. The anterior portion of the reticular formation under the thalamus.
z. intermedia recti. The portion of the anal canal which lies between the cutaneous and columnar zones.
z. ophthalmica. Herpes zoster along the course of the ophthalmic division of the fifth nerve.
z. orbicularis. A thickening of the capsular ligament around the acetabulum.
z. pectinata. The outer portion of the basilar membrane, extending from the rods of Corti to the spiral ligament.
z. pellucida. The thick, solid, elastic envelope of the ovum; also called *oolemma*.
z. perforata. The lower edge of the spiral groove of the cochlea.
z. reticularis. 1. The inner zone of the adrenal cortex in which the cellular cords form a network. 2. See reticular *layer*.
z. spongiosa. A thin zone of nerve cells and myelinated fibers, external to the substantia gelatinosa in the posterior column of the spinal cord.
z. tecta. The inner portion of the basilar membrane, bearing the organ of Corti.
Zondek, Bernhard [*German gynecologist in Israel*, 1891–]. Isolated, with S. Aschheim, prolan-A and B (1928). Author of work on hormones (1931–46). Devised a test, with S. Aschheim, for pregnancy (1928). See Aschheim-Zondek *test*, *reaction*.
Zondek, Hermann (1887–). German physician in Israel who described the condition of the heart in myxedema (1918), called *myxedema heart*, and introduced small iodine doses into the treatment of Graves' disease (1921).
zone [G.]. A delimited area or region. —**zo'nal**, *adj.*
androgenic z. The hypertrophic, inner zone of the fetal adrenal cortex. It involutes rapidly after birth, has certain hormonal functions similar to the testes, and theoretically serves to protect the fetus against the excessive effect of maternal estrogens. Also called *x-zone*, *fetal cortex*.
chondrogenic z. The layer of cartilage formation under the deep face of the perichondrium.
ciliary z. The ciliary processes collectively.
cochlear z. Old term for the membranous part of the spiral lamina or basilar membrane; also called *cochlear z. of Eiers*.
Cozzolino's z. See *fossula* ante fenestram.
dentofacial z. That facial area which includes the teeth and their supporting alveolar process. It is subdivided into four sections: upper apical, upper coronal, lower apical, lower coronal.
ectopic z. An area in the prosencephalon surrounding the optic vesicle on its dorsal, cephalic, and ventral aspects. From this zone several parts of the telencephalon and diencephalon take origin. Also called *ectopic z. of Schultz*.
entry z. The parts along the posterior horns of gray matter of the spinal cord where the posterior roots enter the cord.
ependymal z. The internal zone of the embryonic neural tube containing ependymal cells and undifferentiated, proliferative cells.
erotogenic z. Any part of the body which, on being touched, causes sexual feelings.
hepatic zones. The central, midzonal, and peripheral parts of the liver lobule.
hysterogenic z. Painful spots occurring in hysteria, not due to organic disease.
interpalpebral z. That part of the cornea which ordinarily is not covered by the lids when the eye is open.
isoelectric z. The range of pH over which the isoelectric condition prevails. See isoelectric *point*.
latent z. That part of the cerebral cortex in which a lesion produces no recognized symptoms.
limitrophic z. Any area of the cerebral cortex transitional between two neighboring well-defined areas; also called *limitrophic area* or *sector*.
Looser's zones. Ribbonlike zones of decalcification, or united but uncalcified pseudofractures, characteristically seen on roentgenograms in osteomalacia, including Milkman's syndrome and rickets.
radiary z. A layer in the cortical gray matter of the brain, characterized by radiating nerve fibers.
root entrance z. See Obersteiner-Redlich area.
scleritic z. A condition occurring in iritis, marked by a ring of anastomoses of deep, conjunctival vessels around the periphery of the cornea, which perforate the sclera and anastomose with those of the iris and choroid.
supraradiary z. The layer of cortex immediately above the radiary zone.
trigger z. Any area of hyperexcitability, stimulation of which will precipitate a specific response such as an epileptic seizure or an attack of neuralgia.
x z. See androgenic z.
z. of antibody excess. See under z. of equivalence.
z. of antigen excess. See under z. of equivalence.
z. of equivalence. This term applies to the precipitation reaction in serology. A series of test tubes is prepared containing a constant amount of antiserum in each tube but increasing amounts of the soluble antigen. Precipitation occurs in those tubes in which there is excess antibody and the supernatant fluid contains excess, uncombined antibody (*z. of antibody excess*). Precipitation also occurs when the proper or optimal ratio of antigen and antiserum are mixed so that there is no uncombined antigen or antibody in the supernatant fluid (*z. of equivalence*). When the ratio of antigen to antibody is increased slightly, precipitation still occurs; however with further increase in the ratio of antigen to antibody, precipitation is inhibited (*z. of inhibition*). Both situations are said to occur in the z. of *antigen excess* where excess antigen is present in the supernatant fluid.
z. of inhibition. See under z. of equivalence.
zon"es-the'si-a, zon"ees-the'zi-a (zo"nes-thee'zhuh, -zee-uh) [*zone*; G. *aisthēsis*, sensation]. A sensation like that produced by a tight girdle encircling the waist. Syn., *girdle pain*.
zo-nif'u-gal [*zone*; L. *fugere*, to flee]. Pertaining to the tendency to pass out of, or away from, a zone.
zo-nip'e-tal [*zone*; L. *petere*, to seek]. Pertaining to the tendency to pass into a zone from without.
zon'ule (zone'yool, zon'yool) [L. *zonula*, dim. from *zona*]. A small band. —**zon'u-lar**, *adj.*
ciliary z. The suspensory structure supporting the lens of the eye. Also called *z. of Zinn*.
zon"u-li'tis (zone"yoo-lye'tis, zon"yoo-) [*zonule*; G. *-itis*, inflammation]. Inflammation of the ciliary zonule.
zon"u-lot'o-my [*zonula*; G. *tomē*, a cutting]. The severing of the ciliary zonular fibers.
zo-o-, zo- [G. *zōion*, living being, animal]. A combining form denoting *animal* or *pertaining to an animal*.
zo"o-der'mic [*zoo-*; G. *derma*, skin]. Pertaining to, or taken from, the skin of some animal other than man; applied to a form of skin grafting.
zo"o-er-as'ti-a [*zoo-*; G. *erastēs*, lover]. Sexual intercourse with an animal.
zo"o-ge-og'ra-phy [*zoo-*; G. *geographia*, geography]. The study of animals and animal life in various parts of the earth.

zo″o-glе a (zo o-glee uh, zo-og′lee-uh) [*zōion*, G. *gloia*, glue]. Microorganisms which are embedded in a jellylike matrix formed as the result of their metabolic activities. —**zoogleal**, *adj.*

zo-og′o-ny [*zōion*, G. *gonē*, offspring]. The breeding of animals.

zo o-graft [*zōion*, G. *graphein*, to write]. A graft of tissue taken from an animal.

zo oid [*zōion*]. An individual member of a metazoan colony.

zo o-lag′ni-a [*zōion*; G. *lagneia*, coition]. Sexual attraction toward animals.

zo-ol′o-gist [*zōion*, G. *logos*, word]. A scientist who studies animal life.

zo-ol′o gy [*zōion*, *logos*]. The study of animals.

zo″o-no′sis (pl. *zoonoses*). A disease which can be transmitted to man by vertebrate animals. —**zoonot′ic**, *adj.*

zo o par′a-site [*zōion*, G. *parasitos*, parasite]. An animal parasite.

zo-oph a-gous [*zōion*; G. *phagein*, to eat]. Subsisting on animal food.

zo-oph′i-lism [*zōion*; G. *philein*, to love]. The love of animals; it is usually immoderate, and toward certain animals, illustrated in the fanaticism of antivivisection.

erotic z. The desire or impulse to stroke or pet animals for sexual excitement.

zo o-pho′bi a [*zōion*; G. *phobos*, fear]. Morbid fear of animals.

zo o-phyte [*zōion*, G. *phyton*, plant]. An invertebrate animal that superficially resembles a plant in appearance, as the sponges, hydroids, bryozoa.

zo o-plas″ty [*zōion*; G. *plassein*, to form]. The surgical transfer of zoografts; the transplantation of tissue from any of the lower animals to man.

zo-op si-a [*zōion*; G. *opsis*, vision]. The seeing of animals, as an illusion or as a hallucination or in dream; occurs commonly in delirium tremens.

zo o-spore [*zōion*; G. *spora*, seed]. A motile spore.

zo-os′ter-ol. Sterol of animal origin.

zo- ′to-my Anatomy of animals other than man.

zo o tox′in [*zōion*, G. *toxikon*, poison]. A toxin or poison of animal origin.

zos′ter [G. girdle]. An acute inflammatory disease, consisting of grouped vesicles corresponding in distribution to the course of a cutaneous nerve accompanied by pain or burning, and usually unilateral. Syn., *herpes zoster*.

z. auricularis. A form affecting the ear.

z. brachialis. A form affecting the arm or forearm.

z. facialis. That involving the sensory fibers of the trigeminal nerve distributed over the face. Any or all of the three branches may be involved.

z. femoralis. That occurring over the sacrum and extending down the thighs. The perineal region may be involved.

z. ophthalmicus. An eruption in the course of the ophthalmic division of the fifth nerve.

zos ter′i form [*zoster*; L. *forma*, form]. Resembling zoster.

zos′ter-oid [*zoster*; G. *eidos*, form]. Zosteriform.

Z-plas′ty See Z-plastic relaxing *operation*.

Zr Chemical symbol for zirconium.

Zsigmondy's movement. See Brownian *movement*.

Zuckerkandl, Emil [*Austrian anatomist*, 1849–1910]. Described retroperitoneal chromaffin bodies close to the main vessels and associated with the sympathetic ganglions called *Zuckerkandl′ bodies*. The gyrus subcallosus is called *Zuckerkandl′ convolution*. The pharyngeal (formerly called nasal) tonsil is called *Zuckerkandl′ tubercle*.

zuck ung [Ger.]. Contraction; a term used in electrotherapeutics. Abbreviated, Z.

Zwemer's test. See potassium tolerance *test*.

zwit′ter-i″on. An ion which contains both a positive and a negative charge, but neutral as a whole; a dipolar ion. Amino acids may form such ions by migration of a hydrogen ion from the carboxyl group to the basic nitrogen atom as, for example, when RNH_2COOH is thus converted to $RNH_3^+COO^-$. Also written *zwitter ion*.

Zy″ga-de′nus [G. *zygadēn*, jointly]. A genus of herbs producing a crystalline alkaloid $C_{39}H_{63}NO_{10}$. *Z. venenosus*, Death camas, a liliaceous plant; an important forage poison in the western United States. It contains an alkaloid zygadenine, similar to veratrine, producing violent convulsions.

zy″ga poph′y sis (zy″guh-pof′i-sis) [G. *zygon*, yoke; *apophysis*, offshoot]. An articular process of a vertebra. —**zygapophys′eal**, *adj.*

zyg′i-on (zig′ee-on) [*zygon*]. A craniometric point at either end of the greatest bizygomatic diameter.

zy″go-dac′ty-ly See *syndactyly*.

zy go ma (zye-go muh, zi-go muh) [G. *zygōma*, zygomaticon]. 1. The arch formed by the union of the zygomatic processes of the temporal bone, maxilla, and the zygomatic bone. 2. The cheekbone. See Table of Bones in the Appendix. —**zygomat′ic**, *adj.*

zy″go mat′ic (zy″go-mat′ik) [*zygōma*]. 1. One of several small subcutaneous muscles arising from, or in relation with, the zygoma. See Table of Muscles in the Appendix. 2. A somatic sensory nerve attached to the maxillary which innervates the skin in the region of the zygoma and temple.

zy go-mat′i-co- (zy″go-mat i-ko-) [*zygōma*]. A combining form denoting *relating to the zygoma*.

zy″go-mat″i-co-fa cial [*zygōma*; L. *facies*, face]. Pertaining to the zygoma and the face, as zygomaticofacial foramen.

zy″go-mat″i-co tem′po-ral [*zygōma*; L. *tempus*, temple]. Pertaining to zygoma and temporal bone or fossa, as zygomaticotemporal foramen.

zy″go-mat′i-cus. Muscle of facial expression associated with the zygoma.

zy″go-max″il la re (zy″go-mack″si lair ee, -mack′si lair-ee) [G. *zygon*, yoke; L. *maxilla*, jawbone]. The point on the zygomaticomaxillary suture that lies most inferior to the horizontal plane.

zy go-my-ce′tes [*zygon*, G. *mykēs*, fungus]. A group of fungi characterized by sexual reproduction through the union of two similar gametes.

zygon. Trade-mark for a brand of wheat-germ oil.

zy″go ne ma [*zygon*, G. *nēma*, thread]. The chromonema when in the zygotene stage of meiosis.

zy′go-spore [*zygon*; G. *spora*, seed]. The spore resulting from the fusion of two similar gametes, as in certain algae and fungi.

zy′gote (zy goat) [*zygon*]. 1. An organism produced by the union of two gametes. 2. The fertilized ovum before cleavage.

zy′go-tene [*zygon*, G. *tainia*, ribbon]. Characterizing the stage in the prophase of the first maturation division when the chromosomes are undergoing synapsis. Syn., *amphitene*, *synaptene*.

zyloaine. Trade-mark for a local anesthetic product containing procaine, butesin, and benzyl alcohol in sweet almond oil; used by injection for the relief of painful anal conditions.

zy′mase (zy′mace). 1. An enzyme. 2. An enzyme mixture of yeast causing alcoholic fermentation.

Buchner's z. That expressed from dried yeast; yeast-cell plasma.

zyme [G., leaven]. An organized ferment. *Obs.* —**zymic**, *adj.*

zy′mo-, zym- [*zymē*]. A combining form denoting *pertaining to or produced by fermentation*.

zy″mo-ex-ci′ter An agent which activates a zymogen; a kinase.

zy′mo-gen [*zymē*; G. *genesthai*, from *gignesthai*, to

be produced]. The inactive precursor of an enzyme which, on reaction with an appropriate kinase or other chemical agent, liberates the enzyme in active form.

zy″mo·gen′ic, zy·mog′·nous (zye-modj′i-nus) [*zym-*; *-genic*]. 1. Causing fermentation. 2. Pertaining to, or producing, a zymogen.

zy″mo·hex′ase. See *aldolase.*

zy″mo·hy·drol′y·sis (zy″mo-high-drol′i-sis) [*zym-*; G. *hydōr*, water; *lysis*, loosing]. Hydrolysis produced by the action of an enzyme. Also called *enzymatic hydrolysis.*

zy′moid [G. *zymoeidēs*, like leaven]. Resembling an organized ferment.

zy·mol′o·gy (zye-mol′o-jee) [G. *zymē*, leaven; *logos*, word]. The science of fermentation. —**zymo·log′ic,** *adj.*

zy·mol′y·sis. See *zymosis*, 1. —**zymolyt′ic,** *adj.*

zy′mo·lyte. Material upon which an enzyme acts. *Obs.*

zy·mom′e·ter [*zym-*; G. *metron*, measure]. An instrument for measuring fermentation.

Zy·mo·ne·ma. See *Blastomyces.*

zy″mo·nem″a·to′sis [*zym-*; G. *nēma*, thread; *-osis*, condition]. Blastomycosis.

zy′mo·phore [*zym-*; G. *phoros*, bearing]. The active part of an enzyme, that which bears the ferment. That portion of the enzyme which possesses the characteristic activity. —**zymophor′ic,** *adj.*

zy″mo·plas′tic [*zym-*; G. *plassein*, to form]. Enzyme-producing.

zy″mo·pro′te·in (zy mo-pro′tee-in, -pro′teen) [*zym-*; G. *prōteios*, of first rank]. Any one of a class of proteins possessing catalytic power.

zy·mo′sis (zye-mo′sis) [G., fermentation]. 1. Fermentation. 2. An infectious disease due to a fungus. —**zymot′ic,** *adj.*

zy·mos′ter·ol (zye-mos′tur-ole, -ol, -awl). $C_{27}H_{44}O$. A sterol from yeast; found in ergosterol residues.

zy′mur·gy [G. *zymourgos*, maker of leaven]. The branch of chemical technology dealing with the application of fermentation or enzymatic action to any industrial process, as the curing of cheese, processing of leather, production of organic solvents, etc.

Z.Z.′Z. Increasing strengths of contraction. Also see Z.

Appendix

Tables

TABLE OF ARTERIES

(See Plates 7, 8)

Name	Origin	Branches	Distribution
Aberrant	Brachial or axillary		Radial, radial recurrent, or rarely ulnar art.
Aberrant	Descending aorta		Anastomoses with an aberrant art. from the right subclavian, costocervical trunk, or superior intercostal art.
Acetabular or articular	Obturator		Round ligament of femur, synovial membrane, acetabular fat, head of femur
Acromial	Thoracoacromial		Deltoid m., acromial rete
Acromial	Transverse scapular		Trapezius m., acromial rete
Acromiothoracic	See *Thoracoacromial*		
Afferent	Interlobular of kidney		Glomeruli
Alveolar or gingival	Posterior superior alveolar		Gums of posterior portion of upper jaw
Alveolar anterior superior (anterior superior dental OT)	Infraorbital	Dental, antral	Upper incisor and canine teeth, mucous membrane of maxillary sinus
Alveolar inferior (inferior dental OT) (see Plate 8)	Internal maxillary	Mylohyoid, lingual, dental, mental, incisive	Mylohyoid m., buccal mucous membrane, lower teeth, mandible, gums
Alveolar middle superior (inconstant)	Infraorbital		Upper premolar teeth
Alveolar posterior superior (posterior superior dental OT)	Internal maxillary	Dental, antral, alveolar, muscular	Buccinator m., upper molar and premolar teeth, gums, mucous membrane of maxillary sinus
Anastomotic of inferior gluteal	Inferior gluteal		Anastomoses with first perforating and medial and lateral femoral circumflex art. in what is known as crucial anastomosis
Anastomotic of middle meningeal (also called perforating temporal)	Middle meningeal		Anastomoses with deep temporal
Anastomotica magna of brachial	See *Collateral, inferior ulnar*		
Angular	External maxillary	Muscular, lacrimal, terminal	Orbicularis oculi, nasalis, angular head of quadratus labii superioris and procerus mm.; lacrimal sac; anastomoses with dorsal nasal branch of ophthalmic
Antral	Anterior and posterior superior alveolar		Mucous membrane of maxillary sinus (antrum of Highmore OT)

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Aorta, abdominal	Continuation of descending (thoracic) aorta from level of inferior border of tw lfth tho ei vertebra	(1) Visceral celiac superior mesenteric inferior mesenteric middle suprarenal renal internal spermatic (varian) (2) Parietal inferior phrenic lumbar (4 pairs) middle sacral (3) Terminal common iliac	Diaphragm, body al, abdominal and pelvic viscera, lower extremities
Aorta arch of	Continuation of ascending aorta outside pericardium	Innominate, left common carotid, left subclavi n (oec al lly thy oid im and bronchial art.)	
Aorta, ascending	Base of left ventricle	Right and left coronary	
A rta d s ending (thoracic)	Contin ti f arch of aorta t inferior border of left side of fourth thoracic vertebra	(1) Visceral pericardial bronchial esophageal mediastinal (2) Parietal intercostal superior phrenic subcostal (aberrant, vas aberrans)	Body wall, thoracic viscera, diaphragm
Appendicular	Ileocolic	Cecal, appendicular	Apex of cecum, vermiform process
Arciform or rcust of kidney	Interlobar	Interlobular	
Arcuate	Dorsalis pedis	S d thi d a d fourth dorsal metatarsal	Dorsal metatarsal portion of foot
Auditory internal (see Plate 17)	Basilar or anterior inferior cerebellar		Internal ear
Auricular deep	Internal maxillary	Meatal, tympanic, auricular	Skin of external acoustic meatus, external surface of tympanic membrane, temporomandibular articulation
Auricular posterior	External carotid	Muscula ricula stylomastoid, occipital, parotid	Digastric, stylohyoid, sternocleidomastoid, auricularis posterior, occipitalis, and stapedius mu; tympanic membrane and cavity, tympanic antrum, mastoid air cells, semicircular canals, scalp, parotid gland
Axillary (see Plate 7)	C nti ti f subclavian	Highest thoracic, thoracoacr mial lateral thoracic, subscapular posterior humeral circumflex, anterior humeral circumflex	Pectoralis major pectoralis minor, biceps brachii, coracobrachialis, triceps (long head), subclavius, deltoid, serratus anterior, teres major teres minor, latissimus dorsi, subscapularis, and supraspinatus mm.; mammary gland, shoulder joint, head of humerus, skin of pectoral region and shoulder acromial rete

NAME	ORIGIN	BRANCHES	DISTRIBUTION
Azygos of vagina	Uterine and vaginal		Vagina
Basilar (see Plates 17 18)	Formed by junction of the two vertebral	Anterior inferior cerebellar internal auditory pontine, superior ce bell posteri cerebral	Pons, internal ear cerebellum, pineal body anterior medullary velum, tela chorioidea of third ventricle, temporal and occipital lobes of cerebrum
Brachial (see Plate 7)	Axillary	Profunda brachii, nutrient, muscular superior ulnar collateral, inferior ulnar collateral, radial, ulnar	Deltoid, triceps, brachioradialis, biceps brachii, brachialis, coracobrachialis, and anconeus mm.; shaft of humerus, elbow joint, forearm, and hand
Bronchial	(1) D di g (thoracic) aorta (pp d lower left) (2) First aortic intercostal (right) (3) Arch of aorta (occasionally)		Bronchial tubes, areolar tissue of lungs, bronchial lymph nodes, esophagus
Buccal	See *Buccinator*		
Buccinator (see Plate 8)	Internal maxillary		B ccinator m.; skin and mucous membrane of cheek, upper gums
Bulb of urethra, art. of	Internal pudendal	M scular glandular spongiosal	Sphincter urethrae membranaceae m.; bulbourethral gland (Cowper's), bulb of urethra, corpus spongiosum urethrae
Bulb of vestibule art. of	Internal pudendal	Bulbar glandular	Major vestibular glands (Bartholin's) bulb of vestibule
Caroticotympanic	Internal carotid		Lining of tympanic cavity
Carotid, common (see Plates 5, 7 8, 19)	Right from innominate, left from arch of aorta	External and internal carotid occasi nally superior thyroid, ascending pharyngeal, and even vertebral	Region of neck and head
Carotid, external (see Plates 7 8)	Common carotid	Superior thyroid, as di g ph ryngeal lingual, external maxillary (facial) sternocleidomastoid (occasionally) occipital, posterior uri ul supe ficial temporal, internal maxillary	Anterior portion of neck, face, scalp, side of head, ear dura mater
Carotid, internal (see Plates 7 8, 17 18)	Common carotid	(1) P tro porti caroticotympanic, art. of pterygoid l (Vidi) (inconstant) (2) Cavernous portion cavernous, hypophy l al l terior meningeal, ophthalmic (3) Cer bral portion anterior cerebral, middle cerebral, post ior c m municating, chorioid	Anterior portion of cerebrum, eye and its appendages, forehead, nose, internal ear trigeminal nerve, dura mater hypophysis

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Celiac	Abdominal aorta	Left gastric, hepatic, splenic	Esophagus, cardia and lesser curvature of stomach, liver, gallbladder pylorus, duodenum, pancreas, great omentum, spleen
Central art. of retina	Ophthalmic	Superior; nasal, temporal Inferior; nasal, temporal	Retina
Cerebellar anterior inferior (see Plate 17)	Basilar		Anterior portion of inferior surface of cerebellum
Cerebellar posterior inferior (see Plate 17)	Vertebral	Bulbar choroid, nuclear medial terminal, lateral terminal	Medulla oblongata, choroid plexus of third ventricle, dentate nucleus, nuclei of cranial nerves IX, X, XI
Cerebellar superior (see Plate 17)	Basilar	Medial, lateral	Vermis cerebelli, superior surface of cerebellum, pineal body anterior medullary velum, tela chorioidea of third ventricle
Cerebral, anterior (see Plates 17 18)	Internal carotid	Anterior communicating, orbital, anterior medial frontal, recurrent, intermediate medial frontal, posterior medial frontal	Anterior perforated substance lamina terminalis, rostrum of corpus callosum, septum pellucidum, head of caudate nucleus, frontal lobe of putamen, frontal lobe of globus pallidus, orbital surface of frontal lobe of cerebrum, gyrus rectus, medial orbital gyrus, olfactory lobe, superior frontal gyrus, middle frontal gyrus, corpus callosum, cingulate, anterior commissure, internal capsule, column of fornix, precuneus, upper part of ascending frontal gyrus, upper part of ascending parietal gyrus, superior parietal lobule
Cerebral, middle (art. fossae Sylvii OT) (see Plate 17)	Internal carotid	Medial striate, lateral striate, inferior lateral frontal, ascending frontal, ascending parietal, parietotemporal, temporal	Putamen, caudate nucleus, globus pallidus, internal capsule, inferior frontal gyrus (Broca's convolution) lateral part of orbital surface of frontal lobe, ascending frontal gyrus, ascending parietal gyrus, lower part of superior parietal lobule, supramarginal gyrus, angular gyrus, posterior parts of superior and middle temporal gyri, lateral surface of temporal lobe
Cerebral, posterior (see Plate 17)	Basilar	Anterior temporal, posterior temporal, posteromedial central, posterolateral central, posterior choroid, calcarine, parieto-occipital	Posterior perforated substance, cerebral peduncle, posterior part of thalamus, mamillary bodies, walls of third ventricle, corpora quadrigemina, medial and lateral geniculate bodies, uncus, hippocampal gyrus, fusiform gyrus, cuneus, precuneus, lingual gyrus, tela chorioidea of third ventricle, choroid plexus, fornix, posterior half of visual path, half of visual center of occipital lobe
Cervical, ascending	Inferior thyroid	M ul pl l phrenic	Longus capitis, scalenus anterior and mm. of nape of neck, spinal medulla and its membranes, vertebrae, phrenic nerve

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Cervical, deep	Costocervical trunk	Muscular spinal	Semispinalis cervicis, semispinalis capitis, and adjoining neck mm.; spinal medulla and membranes via intervertebral foramen for eighth cervical nerve
Cervical, superficial	Transverse cervical	Muscular glandular	Trapezius, levator scapulae, splenius cervicis, splenius capitis mm.; posterior chain of lymph nodes
Cervical, transverse	Thyrocervical trunk	Ascending or superficial cervical, descending	Trapezius, levator scapulae, splenii, rhomboids, latissimus dorsi mm.; posterior chain of lymph nodes
Choroid, anterior (see Plate 17)	Internal carotid	Optic, peduncular ganglionic, choroid	Optic tract, cerebral peduncle, base of cerebrum, lateral geniculate body tail of caudate nucleus, globus pallidus, internal capsule, choroid plexus of inferior horn of lateral ventricle
Choroid, posterior	Posterior cerebral		Tela chorioidea of third ventricle, choroid plexus
Ciliary anterior	Muscular branches of ophthalmic and lacrimal	Episcleral, anterior conjunctival	Iris and conjunctiva
Ciliary long posterior	Ophthalmic		Ciliary muscle and iris
Ciliary short posterior	Ophthalmic		Choroid and ciliary processes
Circumflex, anterior humeral	Axillary	Muscular bicipital, pectoral	Coracobrachialis, biceps brachii, deltoid mm.; head of humerus, shoulder joint, tendons of pectoralis major and long head of biceps brachii mm.
Circumflex deep iliac	External iliac	Muscular cutaneous	Psoas, iliacus, sartorius, tensor fasciae latae, obliquus abdominis externus, obliquus abdominis internus, transversus abdominis mm.; skin over course of vessel
Circumflex lateral femoral	Profunda femoris	Ascending, transverse, descending	Muscles of thigh
Circumflex medial femoral	Profunda femoris	Muscular superficial, deep, acetabular	Adductor gracilis, obturator externus, quadratus femoris mm.; acetabular fat, round ligament of femur head of femur
Circumflex, posterior humeral	Axillary	Muscular articular nutrient, acromial	Deltoid, teres minor triceps brachii (long and lateral heads) mm.; greater tubercle of humerus, posterior portion of shoulder joint, acromial rete
Circumflex, scapular	Subscapular	Muscular articular nutrient	Subscapularis, infraspinatus, teres major teres minor deltoid, triceps brachii (long head) mm.; scapula, shoulder joint
Circumflex, superficial iliac (see Plate 7)	Femoral	Muscular glandular cutaneous	Sartorius, iliacus, tensor fasciae latae mm. inguinal lymph nodes, skin over course of vessel

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Clitoris, deep art. of	Internal pudendal		Corpus cavernosum clitoris
Clitoris, dorsal art. of	Internal pudendal		Dorsum, glans, corona and prepuce of clitoris
Colic, left (see Plate 8)	Inferior mesenteric	Ascending, descending	Left portion of transverse colon, upper portion of descending colon, splenic flexure
Colic, middle (see Plate 8)	Superior mesenteric	Right, left	Upper portion of ascending colon, hepatic flexure, right portion of transverse colon
Colic, right (see Plate 8)	Superior mesenteric	Ascending, descending	Ascending colon
Collateral inferior ulnar (anastom ti magna OT)	Brachial	Posterior anterior	Triceps brachii, brachialis, pronator teres mm., articular rete of elbow joint
Collateral, middle	Profunda brachii	Muscular anastomotic	Medial head of triceps brachii articular rete of elbow joint
Collateral, radial	Prof nda brachii	Muscular anastomotic	Triceps brachii, brachioradialis mm.; articular rete of elbow joint
C llat ral upe ior ulnar (profunda inferior OT) (see Plate 7)	Brachial	M sc la ti ul anastomotic	Triceps brachii m., skin, elbow joint, articular rete of elbow joint
Comes nervi mediani rt.	See *Median*		
Comes nervi phrenici, rt.	See *Perica d aco-phrenic*		
Comitans nervi ischiadici art.	Inferior gluteal		Sciatic nerve
Commu icating, anterior (see Pl tes 17 18)	Anterior cerebral	Anteromedial	Anterior perforated substance
Communicati g, posterior (see Plate 17)	Internal carotid	Hippocampal, middle thalamic	Optic chiasm, optic tract, tuber cinereum, mammillary body hippocampal gyrus, internal capsule, cerebral peduncle, interpeduncular region, thalamus
Conjunctival, anterior	Episcleral of anterior ciliary		Conjunctiva
Conjunctival posterior	Medial and lateral palpebral arteries		Conjunctiva
Coronary left (see Plate 5)	Left posterior aortic sinus	Anterior descending, circumflex, left marginal, left atrial, terminal	Left atrium, root of aorta and pulmonary art., myocardium of both ventricles, interventricular septum
Coronary right (see Plate 5)	Ant i rti sinus	Right atrial, posterior descending, right marginal, p ve tricular transverse	Right atrium, root of pulmonary art. and aorta, anterior wall of right ventricle, septal myocardium, left ventricle adjoining posterior longitudinal sulcus

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Costocervical trunk	Subclavian	S p rior i t costal, deep cervical, arteria berrans on right	First d sec d inte costal spaces, mm. of neck, spinal cord and its membranes
Cremasteric	See *Spermatic, ex ternal*		
Cystic (see Plate 8)	Right hepatic	Superficial, deep	Free surface of gallbladder at tached surface of gallbladder and liver substance
Deferential	Superior vesical, inferior vesical, or internal iliac	Ascending, descending	Seminal vesicle, ampulla of ductus deferens, ductus deferens, epididymis
Dental nterior superior	See *Alveolar anterior superior*		
Dental inferior	See *Alveolar inferior*		
Dental, posterior superior	See *Alveolar posterior superior*		
Digital, common volar	S pe f cial vol arch	Proper volar digital	Contiguous sides of second to fifth fingers, flexor tendons and tendon sheaths, m trix of nails
Digit l d l f thumb	Radial		Dorsum and sides of thumb
Digital, plantar	Plantar metatarsal arteries		Contiguous sides of toes, flexor tendons and sheaths, joints, skin
Digital plantar of lateral side of fifth toe	Lateral plantar		Lateral plantar part of fifth toe
Digital, proper volar of medial side of little finger	Ulnar		Medial side of little finger flexor tendon and sheath, matrix of nail
Digital, radial dorsal, of index finger	Radial		Radial dorsal surface of index finger
Dorsalis pedis (see Plate 7)	Anterior tibial	Cutaneous, lateral tarsal, medial tarsal, arcuate, first dorsal, metatarsal, deep plantar	Anastomoses with lateral plantar to form plantar arterial arch; plantar surface of first and second toes; tarsal, metatarsal, digital portions of dorsum of foot
Epigastric, deep	See *Epigastric, inferior*		
Epigastric, inferior (deep epigastric OT)	External iliac	Cutaneous, muscular, external spermatic (cremasteric in male, art. of round ligament of uterus in female) pubic	Skin and muscles of anterior abdominal wall, cremaster m., spermatic cord (round ligament of uterus in female) peritoneum
Epigastric, superficial	Femoral		Skin of abdominal wall below umbilicum, superficial fascia (Camper) inguinal lymph nodes
Epigastric, superior	Internal mammary	Cutaneous, muscular h pati perito l phrenic, xiphoid	Skin, fascia, muscles and peritoneum of upper abdominal wall, diaphragm, falciform ligament of liver

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Episcleral	Anterior ciliary	Anterior conjunctival	Iris, ciliary processes, conjunctiva
Esophageal (4 or 5)	Thoracic aorta		Esophagus
Ethmoidal anterior	Ophthalmic	Ethmoidal, anterior meningeal, nasal, frontal, cutaneous	Anterior and middle ethmoidal air cells, dura mater of anterior cranial fossa, mucoperiosteum of middle meatus, lateral wall and septum of nose, frontal air sinus, skin of dorsum of nose
Ethmoidal posterior	Ophthalmic	Ethmoidal, meningeal, nasal	Posterior ethmoidal air cells, dura mater around cribriform plate, superior meatus and superior nasal concha
Facial	See *Maxillary external*		
Facial transverse	Superficial temporal	Glandular, muscular, cutaneous	Masseter m.; parotid gland, skin of face
Femoral (see Plates 7, 11, 12)	Continuation of external iliac	Superficial epigastric, superficial iliac circumflex, superficial external pudendal, deep external pudendal, muscular, profunda femoris, highest genicular (art. genus suprema)	Skin of lower part of abdomen and groin, external genitalia, inguinal lymph nodes, mm. of medial, lateral, and anterior aspects of thigh; femur, knee joint
Femoral, deep (see Plate 7)	See *Profunda femoris*		
Fossae Sylvii, art. f	See *Cerebral, middle*		
Frenulum linguae, art. of	Sublingual		Frenulum of tongue
Frontal (see Plate 8)	Ophthalmic		Skin, mm. and pericranium of forehead
Gastric, left (see Plate 8)	Celiac	Esophageal, hepatic (occasionally)	Lesser curvature and cardia of stomach, lower end of esophagus, left lobe of liver (occasionally)
Gastric, right (see Plate 8)	Hepatic		Pyloric portion of stomach
Gastric, short (vasa brevia)	Splenic		Greater curvature of stomach
Gastroduodenal (see Plate 8)	Hepatic	Pylorus, right gastroepiploic, superior pancreaticoduodenal, omental	Pylorus, duodenum, pancreas, great omentum, common bile duct
Gastroepiploic, left (see Plate 8)	Splenic	Gastric, omental	Greater curvature of stomach, great omentum
Gastroepiploic, right (see Plate 8)	Hepatic	Gastric, omental	Greater curvature of stomach, great omentum
Genicular, highest (genus suprema OT)	Femoral	Saphenous, muscular, patellar articular	Sartorius, gracilis, distal ends of vasti, adductor magnus mm., medial knee joint, skin of the medial distal portion of thigh, arterial retia on medial and lateral sides of knee

TABLE OF ARTERIES—(*Continued*)

Name	Origin	Branches	Distribution
Genicular, lateral inferior	Popliteal		Knee joint, deep articular rete
Genicular, lateral superior	Popliteal	Superficial, deep	Vastus lateralis, vastus intermedius mm., knee joint, femur patella, deep articular rete
Genicular, medial inferior	Popliteal		Popliteus m., proximal end of tibia, knee joint
Genicular, medial superior	Popliteal		Vastus medialis m., femur patella, knee joint, deep articular rete
Genicular, middle (azygos articular OT)	Popliteal		Knee joint, cruciate ligaments, patellar synovial and alar folds
Genus suprema	See *Genicular highest*		
Gluteal, inferior (sciatic OT)	Internal iliac, anterior trunk	Inside pelvis, muscular vesical; outside pelvis, muscular coccygeal anastomotic, articular comitans nervi ischiadici	Gluteus maximus, piriformis, coccygeus, levator ani, upper portion of hamstrings and mm. of buttocks, perirectal fat, fundus of bladder seminal vesicle, prostate gland, hip joint, sciatic nerve, crucial anastomosis, skin over buttock, thigh, sacrum, and coccyx
Gluteal, superior	Internal iliac, posterior trunk	Muscular iliac, superficial, deep	Iliacus, piriformis, obturator internus, gluteus medius, gluteus minimus, tensor fasciae latae mm., hip joint, ilium, skin over sacrum
Hallucis, art. dorsalis	See *Metatarsal, first dorsal*		
Hallucis, art. princeps	See *Metatarsal, first plantar*		
Helicine	Name applied by Müller to tortuous blood vessels in [illegible] such as corpora cavernosa penis (clitoridis) uterus, etc.		
Hemorrhoidal, inferior	Internal pudendal		Ischiorectal fat, anal canal, levator ani, sphincter ani externus mm., skin around anus and lower region of buttock
Hemorrhoidal, middle	Internal iliac		Rectum, ductus deferens, seminal vesicle, prostate gland
Hemorrhoidal, superior (see Plate 2)	Inferior mesenteric		Muscular and mucous coats of the pelvic colon and proximal portion of the rectum, mucous coat of distal portion of rectum
Hepatic (see Plates 8, 13)	Celiac	Right gastric, gastroduodenal, cystic, right, left	Lesser and greater curvatures of stomach, pylorus, pancreas, great omentum, gallbladder liver
Hepatic, accessory	Left gastric		Left lobe of liver

Name	Origin	Branches	Distribution
Hypogastric (see Plates 7 8)	See *Iliac, internal*		
Ileocolic (see Plate 8)	Superior mesenteric	Ascending, descending, anterior cecal, posterior cecal, appendicular ileal	Ascending colon, cecum, vermiform process, lower part of ileum
Iliac, common (see Plates 7 8)	Abdominal aorta	Internal iliac, external iliac (occasionally accessory renal, internal spermatic, middle sacral, lateral sacral, iliolumbar) small twigs to peritoneum, psoas major m., ureter	Psoas major m., peritoneum, fascia, pelvic viscera, external genitalia, gluteal region, lower extremity
Iliac, external (see Plates 7 8)	Common iliac	Inferior epigastric, deep iliac circumflex, muscular glandular continuing as femoral art.	Psoas major iliacus, sartorius, tensor fasciae latae, cremaster, and mm. of abdominal wall; external iliac lymph nodes, peritoneum, skin of lower abdominal wall, spermatic cord (round ligament of uterus) lower extremity
Iliac, internal (hypogastric OT)	Common iliac	Anterior trunk, superior vesical, middle vesical, middle hemorrhoidal, obturator internal pudendal, inferior gluteal uterine and vaginal in female; posterior trunk, iliolumbar lateral sacral, superior gluteal	Pelvic wall and contents, gluteal region, medial portion of thigh, external genitalia, sacral region
Iliolumbar	Internal iliac, posterior trunk	Iliac, lumbar	Psoas major quadratus lumborum, iliacus mm.; ilium, cauda equina
Infraorbital (see Plate 8)	Internal maxillary	Orbital, middle superior Alveolar anterior superior Alveolar terminal	Inferior rectus, inferior oblique of the eye, levator labii superioris, orbicularis oculi mm., [illegible] orbit, lacrimal gland and sac, upper premolar canine, and incisor teeth, mucosa of maxillary sinus
Innominate (see Plates 5, 7)	Arch of aorta	Thyreoidea ima (occasionally) thymic or bronchial (occasionally) right subclavian, right common carotid	Right side of neck and head, right shoulder girdle and arm, occasionally thymus gland, bronchus, inferior portion of thyroid gland
Intercostal aortic	Descending (thoracic) aorta	Anterior collateral intercostal Muscular lateral cutaneous, mammary Posterior muscular spinal	Intercostal, pectoral, serratus anterior iliocostalis, longissimus dorsi, multifidus spinae, [illegible] dorsi mm., abdominal wall, vertebrae, ribs, mammary gland, skin of body wall and back, contents of vertebral canal
Intercostal, highest	Costocervical trunk	Muscular spinal	Posterior vertebral mm.; contents of first and second intercostal spaces, contents of vertebral canal
Interlobar of kidney	Renal plexus by primary branches	Arciform	
Interlobular of kidney	Arciform	Afferent to glomeruli (mostly)	Glomeruli of kidney

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Interosseous, common	Ulnar	Volar interosseous, dorsal interosseous	Deep mm. of forearm, radius, ulna, median nerve, volar carpal and dorsal carpal retia, rete olecrani
Interosseous, dorsal	Common interosseous	Muscular interosseous recurrent	Mm. and skin on dorsal surface of forearm, dorsal carpal rete, rete olecrani
Interosseous, recurrent	Dorsal interosseous		Supinator anconeus mm., rete olecrani
Interosseous, volar	Common interosseous	Muscular, nutrient, median, communicating, volar terminal, dorsal terminal	Flexor digitorum profundus, flexor pollicis longus, pronator quadratus mm.; radius, ulna, median nerve, volar carpal and dorsal carpal retia
Intestinal (vasa intestini tenuis OT) (10–16)	Superior mesenteric	Ileal, jejunal	Jejunum, ileum, mesentery mesenteric lymph nodes
Labial inferior (see Plate 8)	External maxillary		Mucous membrane, skin, mm. and glands of lower lip
Labial posterior	Perineal		Labium majus
Labial, superior (see Plate 8)	External maxillary	Septal, alar	Mucous membrane, skin, mm. and glands of upper lip, nasal septum, ala of nose
Lacrimal	Dorsal nasal		Lacrimal sac
Lacrimal	Ophthalmic	Recurrent, muscular zygomatic, lateral palpebral, anterior ciliary	Lacrimal gland, superior and lateral rectus mm., eyelids, conjunctiva, region of cheek, dura mater temporal fossa, sclera, iris, ciliary processes
Laryngeal, inferior	Inferior thyroid		Constrictor pharyngis inferior m. and mucous membrane of lower part of larynx
Laryngeal superior	Superior thyroid		Muscles, mucous membrane, and glands of larynx
Lienal	See *Splenic*		
Lig. m. uteri (equivalent to external spermatic in male)	Inferior epigastric		Round ligament of the uterus
Lingual (see Plate 8)	External carotid	Hyoid, dorsal lingual, sublingual, profunda linguae	Intrinsic and extrinsic mm. of tongue, mucous membrane of tongue and mouth, gums, sublingual gland, glossopalatine arch, tonsil, soft palate, epiglottis, frenulum linguae
Lumbalis ima (fifth lumbar)	Middle sacral	Dorsal	Iliacus, gluteus maximus mm., vertebral canal
Lumbar (4 pairs)	Abdominal aorta	Vertebral muscular dorsal, renal, spinal	Psoas, quadratus lumborum, obliqui abdominis, sacrospinalis mm.; contents of vertebral canal, capsule of kidney vertebrae, subperitoneal plexus of Turner
Malleolar anterior lateral	Anterior tibial		Lateral side of ankle

TABLE OF ARTERIES—(Continued)

NAME	ORIGIN	BRANCHES	DISTRIBUTION
Mall olar nterior medial	Anterior tibial		Medial side of ankle
M lleola posterior lateral	Peroneal		Lateral aspect of calcaneus, lateral malleolus
Malle l r posterior medial	Posterior tibial		Medial side of ankle, medial malleolar rete
M mmary external	See *Thoracic, lateral*		
Mammary internal	Subclavian	Pericardiacophrenic, anterior mediastinal, thymic, pericardial, sternal, anterior intercostal, per f tl g m ul phrenic, superior epigastric	Phrenic nerve, pleura, pericardium, diaphragm, connective tissue of mediastinum, lymph nodes in mediastinum, thymus gland, sternum; transversus thoracis, intercostal, pectoral, rectus abdominis, obliqui abdominis mm.; skin over chest and upper abdomen, mammary gland, falciform ligament, subpleural mediastinal plexus
Masseteric	I ternal maxillary		Masseter m.
Maxillary	See *Maxillary internal*		
M xill ry t rn l (facial OT) (see Plate 6)	External carotid	Ascending palatine, tonsillar glandular submental, muscular inferior labial, superior labial, lateral nasal, angular	Constrictor mm. of pharynx, styloglossus, stylopharyngeus, pterygoid internus, levator veli palatini, stylohyoid, masseter, buccinator and mm. of facial expression; tonsil, auditory tube, root of tongue, submaxillary gland, lymph nodes of neck and face, skin of face, ala and dorsum of nose, lacrimal sac, nasal septum
Ma illary int nal (maxillary OT)	External carotid	(1) Mandibular portion anterior tympanic deep auricular middle meningeal accessory meningeal inferior alveolar (2) Pterygoid portion deep temporal pterygoid masseteric buccinator (3) Pterygopalatine portion posterior superior alveolar infraorbital descending palatine artery of pterygoid canal pharyngeal sphenopalatine	Tensor tympani, mylohyoid mm.; lining of external acoustic meatus, temporomandibular joint, lining of tympanic cavity, dura mater, skull, facial nerve, semilunar ganglion, lower teeth, mandible, mucous membrane of mouth Temporalis, pterygoid internus, masseter, pterygoid externus, masseter, buccinator mm.; periosteum, mucous membrane of mouth Rectus inferior, obliquus inferior, quadratus labii superioris, caninus mm.; upper teeth, gums, mucous membrane of roof of mouth, soft palate, palatine tonsil, upper part of pharynx, auditory tube, conchae and meati of nose, nasal septum; mucous membrane of frontal, maxillary, sphenoidal and ethmoidal air sinuses
Median (comes nervi mediani OT)	Volar interosseous		Median nerve
Media anterior f spinal cord	Anterior spinal		Pia mater of spinal cord, substance of spinal cord, cauda equina

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Mediastinal, anterior	Internal mammary		Connective tissue, fat, and lymph nodes of mediastinum, thymus gland
Meningeal, accessory	Internal maxillary		Semilunar ganglion, walls of cavernous sinus, dura mater of middle cranial fossa
Meningeal, anterior	(1) Internal carotid (2) Anterior ethmoidal		Dura mater of anterior cranial fossa
Meningeal, middle	Internal maxillary	Ganglionic, superficial petrosal, superior tympanic, perforating temporal, orbital, anterior terminal, posterior terminal, nutrient	Tensor tympani m.; semilunar ganglion, trigeminal nerve, dura mater of anterior and middle cranial fossae, skull, tympanic cavity orbit, infratemporal fossa
Meningeal, posterior	Ascending pharyngeal		Dura mater of posterior and middle cranial fossae
Mental (see Plate 8)	Inferior alveolar		Lower lip and chin
Mesenteric, inferior (see Plate 8)	Abdominal aorta	Left colic, sigmoid, superior hemorrhoidal (occasionally hepatic, renal, middle colic)	Transverse colon, splenic flexure, descending colon, sigmoid flexure, proximal portion of rectum
Mesenteric, superior (see Plate 8)	Abdominal aorta	Inferior pancreaticoduodenal, intestinal, ileocolic, right colic, middle colic (occasionally hepatic, splenic, pancreatic, gastric, gastroepiploic, or gastroduodenal)	Pancreas, duodenum, jejunum ileum, mesentery mesenteric lymph nodes, cecum, vermiform process, ascending colon, hepatic flexure
Metacarpal, first dorsal	Radial		Adjacent sides of thumb and index finger
Metacarpal, second, third, and fourth dorsal	Dorsal radial carpal	Two dorsal digital, perforating	Adjacent sides of fingers
Metacarpal, volar (3)	Deep volar arch	Perforating	Interosseous and second, third, and fourth lumbrical mm.; common digital of superficial volar arch, metacarpal bones
Metatarsal, first dorsal (dorsalis hallucis OT)	Dorsalis pedis	Two dorsal digital	Adjacent sides of first and second toes
Metatarsal, first plantar (princeps hallucis OT)	Union of deep plantar with lateral plantar	Two plantar digital, medial digital to medial side of great toe	Great toe and medial side of second toe
Metatarsal, second, third, and fourth dorsal	Arcuate	Two dorsal digital, perforating	Adjacent sides of second, third, fourth, and fifth toes
Metatarsal, second, third, and fourth plantar	Plantar arch	Two plantar digital, perforating	Adjacent sides of second, third, fourth, and fifth toes
Musculophrenic	Internal mammary	Phrenic, anterior intercostal, muscular	Mm. of abdominal wall, diaphragm, lower six intercostal spaces
Nasal, dorsal	Ophthalmic	Lacrimal	Dorsum of nose, lacrimal sac

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Nasal, posterior lateral	Sphenopalatine		Nasal conchae and meati, sinus of frontal, maxillary, sphenoidal, and ethmoidal air sinuses
Nasopalatine	*See Sphenopalatine*		
Neubauer's	*See Thyreoidea ima*		
Nutrient	Brachial		Shaft of humerus
Nutrient	Volar interosseous		Shaft of radius
Nutrient	Volar interosseous		Shaft of ulna
Nutrient	Second perforating art. of profunda femoris		Shaft of femur
Nutrient	Posterior tibial		Shaft of tibia
Nutrient	Peroneal		Shaft of fibula
Nutrient	Transverse scapular		Shaft of clavicle
Nutrient	Transverse scapular		Scapula
Nutrient	A general term used to designate a branch of any artery that supplies the substance of bone. Usage has lifted a certain number of this type of arterial branch to the status of an artery. This should not make us unmindful of the fact that an artery which lies near bone supplies a number of nutrient branches to it		
Obturator	Internal iliac, anterior trunk	Iliac, vesical, pubic, anterior terminal, posterior terminal, muscular, acetabular	Iliacus, iliopsoas, obturator internus, obturator externus, adductors, pectineus, gracilis, semimembranosus, semitendinosus, biceps femoris (long head), ilium, pubis, hip joint, head of femur, bladder, ilium
Occipital (see Plate 8)	External carotid	Muscular, sternocleidomastoid, auricular, meningeal, descending, mastoid, medial terminal, lateral terminal	Digastric, occipitalis, stylohyoid, splenius capitis, longissimus capitis, trapezius, sternocleidomastoid, semispinalis capitis and cervicis mm.; posterior surface of auricle, mastoid cells, pericranium and scalp of posterolateral surface of the head
Ophthalmic	Internal carotid	Orbital: lacrimal, supraorbital, posterior ethmoidal, anterior ethmoidal, medial palpebral, frontal, dorsal nasal Ocular: central artery of the retina, short posterior ciliary, long posterior ciliary, anterior ciliary, muscular	Contents of orbit, diploë of frontal bone, mucous membrane of frontal sinus and ethmoidal air cells, dura mater of anterior fossa of skull, superior nasal concha and meatus, lacrimal sac, skin of dorsum of nose
Ovarian (homolog of internal spermatic in male) (see Plates 7, 8)	Abdominal aorta	Ureteric, ligamentous, uterine, tubal	Ovary, ureter, suspensory ligament of ovary, broad ligament of uterus, uterine tube, round ligament of uterus, skin of labium majus and groin

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Palatine, ascending	External maxillary	Palatine, tonsillar	Styloglossus, stylopharyngeus, superior constrictor of pharynx, levator veli palatini mm., auditory tube, lateral wall of upper part of pharynx, soft palate, palatine tonsil
Palatine, descending	Internal maxillary	Greater palatine, lesser palatine	Soft palate, palatine tonsil, mucous membrane of roof of mouth, gums, palatine glands, palatine bone, maxilla
Palatine, greater	Descending maxillary		Mucous membrane of hard palate, gums, palatine glands, palatine bone, maxilla
Palatine lesser	Descending palatine		Soft palate, palatine tonsil
Palpebral inferior medial	Ophthalmic		Conjunctiva, lacrimal caruncle, lacrimal sac, lower eyelid
Palpebral, lateral	Lacrimal		Upper and lower eyelids, conjunctiva
Palpebral superior medial	Ophthalmic		Upper eyelid
Pancreatica magna	Splenic		Posterior surface of pancreas, following course of pancreatic duct
Pancreaticoduodenal inferior	Superior mesenteric		Head of pancreas, descending and inferior parts of duodenum
Pancreaticoduodenal superior	Gastroduodenal		Second part of duodenum, common bile duct, pancreas
Penis (clitoris) deep art. of	Internal pudendal		Corpus cavernosum penis (clitoridis)
Penis (clitoris) dorsal art. of	Internal pudendal		Dorsum of penis (clitoris) prepuce, glans, corpus cavernosum and its fibrous sheath
Perforating (3)	Profunda femoris	(1) Muscular	Pectineus, adductor brevis, adductor magnus, biceps femoris, gluteus maximus mm.; crucial anastomosis
		(2) Nutrient, ascending, descending	Posterior femoral mm., shaft of femur
		(3) Muscular terminal	Adductor magnus m., posterior femoral mm.
Pericardiacophrenic (comes nervi phrenici OT)	Internal mammary		Phrenic nerve, pleura, pericardium, diaphragm
Perineal	Internal pudendal	Posterior scrotal (labial) transverse perineal	Transversus perinei superficialis, bulbocavernosus, ischiocavernosus mm. posterior portion of scrotum (labium majus) subcutaneous structures in urogenital triangle
Perineal, transverse	Perineal		Transversus perinei superficialis m., structures between the anus and the bulb of the urethra, skin of perineum

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Peroneal (see Plate 7)	Posterior tibial	Muscular nutrient to fibula, perforating communicating, lateral calcaneal, lateral posterior malleolar	Soleus, tibialis posterior, flexor hallucis longus, peroneus longus, peroneus brevis, peroneus tertius, extensor digitorum longus mm.; shaft of fibula, tibiofibular syndesmosis, dorsum of foot, ankle joint, lateral malleolar rete, rete calcaneum
Pharyngeal, ascending	External carotid	Pharyngeal, palatine prev rtebral, inferior tymp nl p t rlo meningeal	Longus colli, longus capitis, rectus capitis anterior, constrictors of pharynx (superior, medial, inferior) stylopharyngeus mm.; mucous membrane of pharynx, soft palate, palatine tonsil, auditory tube, cervical lymph nodes, tympanic cavity, dura mater of middle and posterior cranial fossae
Phrenic, inferior (see Plate 8)	Abdominal aorta	Right medial, lateral, superior suprarenal, caval, hepatic, pericardial Left medial, lateral superior suprarenal, hep tic pe icardi l, esophageal, splenic	Inferior surface of diaphragm, suprarenal gland, vena cava inferior, liver, pericardium (from the right artery), esophagus, spleen (from the left)
Phrenic, superior	Desce ding (thoracic) aorta		Posterior surface of diaphragm
Plantar arch	Lateral plantar	Perforating (3) plantar metatarsals (4)	Interosseous mm., toes
Plantar deep	Dorsalis pedis	First plantar metatarsal	Plantar surface of first and second toes, unites with lateral plantar to form plantar arch
Plantar lateral	Posterior tibial	Calcaneal, muscular cutaneous, plantar metatarsal (4) perforating (3)	Flexor digitorum brevis, quadratus plantae, abductor digiti quinti, adductor hallucis, interossei mm.; toes, heel, skin on lateral side of foot
Plantar medial	Posterior tibial	Deep, superficial	Abductor hallucis, flexor digitorum brevis mm., skin on medial surface of sole of foot
Pontine	Basilar		Pons
Popliteal (see Plate 7)	C ti ti f femoral	M s l peri sural, cutaneous, medial, superior genicular lateral superior genicular middle genicular (azygos articular) medial inferior genicular lateral inferior genicular	Add ct magnus, semimembranosus, semitendinosus, biceps femoris, gastrocnemius, soleus, vastus lateralis, vastus medialis, vastus intermedius, popliteus, plantaris mm.; femur, patella, tibia, knee joint, rete patellae, rete articulare genus
Preventricular	Right coronary		Anterior wall of right ventricle
Princeps cervicis (OT for descending branch)	Occipital	Superficial, deep	Splenius capitis, semispinalis capitis and cervicis, trapezius mm.
Princeps hallucis	*See Metatarsal first plantar*		

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Princeps pollicis	Radial	Volar digital (2)	Dorsal interosseus, adductor pollicis obliquus, opponens pollicis, flexor pollicis brevis, lumbrical mm., sides of volar aspect of the thumb
Profunda brachii	Brachial	Deltoid, middle collateral, radial collateral, nutrient	Triceps (lateral and medial heads) brachioradialis, brachialis, deltoid, coracobrachialis, biceps brachii mm.; radial nerve, articular rete of elbow shaft of humerus
Profunda femoris (deep femoral OT)	Femoral	Medial femoral circumflex, lateral femoral circumflex, perforating (3) muscular	Quadriceps femoris, iliopsoas, obturator externus, pectineus, tensor fasciae latae, quadratus femoris, adductors, semimembranosus, semitendinosus, biceps femoris, gracilis mm. hip joint, head of femur shaft of femur crucial anastomosis
Profunda linguae (ranine OT)	Lingual		Genioglossus m., intrinsic mm. of the tongue, mucous membrane of inferior surface of tongue
Pterygoid canal, art. of (Vidian OT)	Internal maxillary	Pharyngeal, auditory tympanic, muscular	Upper portion of pharynx; levator and tensor veli palatini mm.; auditory tube, tympanic cavity
Pudendal, deep external	Femoral	Anterior scrotal	Pectineus, adductor longus mm., scrotum (labium majus) skin of perineum
Pudendal, internal	Internal iliac	Muscular inferior hemorrhoidal, perineal, art. of urethral bulb, urethral, deep art. of penis (clitoris), dorsal art. of penis (clitoris)	Levator ani, coccygeus, sphincter ani externus, bulbocavernosus, ischiocavernosus, transversus perinei superficialis, t an rsus perinei profundus, obturator externus, obturator internus, gemelli, quadratus femoris, gluteus maximus mm.; skin of anus and perineum, bulb of urethra, bulbo-rethral (vestibula gland) urethra, corpus cavernosum penis (clitoridis) dorsum of penis (clitoris) posterior surface of scrotum (labium majus)
Pudendal, superficial external	Femoral		Skin of lower part of abdomen, skin of penis (clitoris) scrotum (labium majus)
Pulmonary (see Plates 8, 9)	Right ventricle of heart	Right, left	Lungs
Radial (see Plate 7)	Brachial	(1) In forearm radial recurrent muscular volar radial carpal superficial volar (2) At wrist dorsal radial carpal first dorsal metacarpal (3) In hand princeps pollicis volaris indicis radialis volar metacarpal (3) perforating (3) recurrent	Pronator teres, flexor pollicis longus, pronator quadratus, supinator brachialis, brachioradialis, extensor carpi radialis longus, extensor carpi radialis brevis, flexor carpi radialis, flexor digitorum sublimis, interossei, lumbricals, and mm. of thenar eminence; metacarpals, elbow wrist, and carpal joints flexor tendon sheaths, volar carpal rete, dorsal carpal rete, superficial volar arch, deep volar arch, radius, skin of dorsum of hand and fingers, skin of volar surface of thumb and lateral side of index finger

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Radial recurrent	Radial		Supinator brachialis, brachioradialis, extensor carpi radialis longus, extensor carpi radialis brevis mm.; elbow joint, rete of elbow joint
Radialis, volaris indici	Radial		Lateral volar aspect of index finger
Ranine	See *Profunda linguae*		
Renal (see Plates 7 14, 45)	Abdominal aorta	Inferior suprarenal, capsular or perirenal, ureteric, terminal	Suprarenal gland, capsule of kidney perirenal fat, upper end of ureter aortic lymph nodes, kidney
Renales, arteriae propriae (4 or 5)	Renal		Kidney proper
Sacral, lateral inferior	Internal iliac	Spinal, rectal	Contents of sacral canal, sacral plexus, rectum skin; piriformis and mm. on dorsal surface of sacrum filum terminale
Sacral lateral superior	I ternal iliac		Piriformis and mm. on dorsal surface of sacrum, sacral dura mater arachnoid, filum terminale, skin on dorsal surface of sacrum
Sacral middle	Abdominal aorta	Lowest lumbar lateral sacral, rectal	Iliacus, gluteus maximus mm.; contents of sacral canal, rectum, coccygeal body
Saphenous	F m l t genus suprema	Cutaneous, muscular	Gracilis and sartorius mm., skin on medial side of leg around knee, saphenous nerve, medial genicular rete
Scapular circumflex	S *Ci m/l scapular*		
Scapula transverse (suprascapular OT)	Thyrocervical trunk	Nutrient, acromial, ar ti lar be p lar suprasternal, supraspinous, infraspinous	Sternocleidomastoid, subclavius, trapezius, subscapularis, supraspinatus, infraspinatus, omohyoid (inferior belly) mm. clavicle, scapula, acromioclavicular and shoulder joints, acromial rete periosteum, skin over upper part of chest and acromial area
Sciatic	See *Gluteal, inferior*		
Scrotal, anterior	Deep external pudendal		Anterior part of scrotum (labium majus) perineum
Scrotal, posterior	Perineal		Posterior part of scrotum (labium majus)
Septal, posterior	Sphenopalatine		Mucous membrane of posterior superior portion of nasal septum
Sigmoid (2 or 3) (see Plate 8)	Inferior mesenteric		Lower part of descending colon, iliac colon, and sigmoid or pelvic colon
Sp rm tic extern l (cremasteric OT)	Inferior epigastric		Spermatic cord, cremaster m (round ligament of uterus in female)

TABLE OF ARTERIES—(Continued)

NAME	ORIGIN	BRANCHES	DISTRIBUTION
Spermatic, internal (ovarian in female) (see Plates 7, 8)	Abdominal aorta	Ureteric, cremasteric, epididymal, testicular	Ureter cremaster m., epididymis, body of testis
Sphenopalatine (nasopalatine OT)	Internal maxillary	Posterolateral nasal, posterior septal	Nasal conchae and meati, mucous membrane of frontal, maxillary sphenoidal, and ethmoidal air sinuses, posterior portion of nasal septum
Spinal, anterior (see Plate 17)	Vertebral		Spinal cord and its coverings
Spinal, posterior (see Plate 17)	Vertebral		Fasciculi cuneatus and gracilis, spinal cord and its coverings
Splenic (lienal OT) (see Plate 8)	Celiac	Pancreatica magna, left gastroepiploic, short gastric, terminal splenic (or trabecular)	Pancreas, pancreatic duct, fundus of stomach, greater curvature of stomach, both surfaces of great omentum, body of spleen
Stapedial	Stylomastoid		Stapedius m. and tendon
Sternocleidomastoid	Occipital		Sternocleidomastoid m.
Stylomastoid	Posterior auricular	Mastoid, stapedial, posterior tympanic	Mastoid cells, stapes, stapedius m. and tendon, posterior portion of tympanic membrane
Subclavian (see Plates 5, 7, 8)	Right innominate, left arch of aorta	Vertebral, thyrocervical trunk, internal mammary, costocervical trunk	Mm. of neck and upper extremity, cervical vertebrae and canal, skull, brain and meninges, pericardium, pleura, mediastinum, b... kl... st rnum kl... er shoulder and anterior body wall, mammary gland, peritoneum
Subcostal (twelfth thoracic OT)	Thoracic aorta	Posterior	Quadratus lumborum, transversus abdominis, obliquus abdominis internus mm.; lumbar vertebrae and contents of canal, skin of back
Sublingual	Lingual	Art. of the frenulum linguae	Mylohyoid, geniohyoid, genioglossus mm.; sublingual gland, frenulum linguae
Submental (see Plate 8)	External maxillary	Superficial deep	Mylohyoid, digastric (anterior belly) pl tysma, triangularis, quadratus labii inferioris mm.; submaxillary and sublingual glands, skin over these parts
Subscapular	Axillary	Scapular circumflex thoracodorsal	Subscapularis, teres minor teres major infraspinatus, triceps brachii (long head) latissimus dorsi, serratus anterior deltoid mm.; scapula, shoulder joint, axillary lymph nodes
Supraduodenal art. of Wilkie	Gastroduodenal	Anterior posterior	Anterior and posterior surfaces of first part of the duodenum
Supraorbital (see Plate 8)	Ophthalmic	Periosteal, muscular diploic, trochlear palpebral	Rectus superior levator palpebrae superioris mm. periosteum of roof of orbit, diploë of frontal bone, mucous membrane of frontal sinus, trochlea of obliquus superior m., upper eyelid

TABLE OF ARTERIES—(Continued)

NAME	ORIGIN	BRANCHES	DISTRIBUTION
Suprarenal, inferior	Renal		Suprarenal gland
Suprarenal, middle	Abdominal aorta		Suprarenal gland
Suprarenal, superior	Inferior phrenic		Suprarenal gland
Suprascapular	See *Scapular transverse*		
Sural (2)	Popliteal		Gastrocnemius, soleus, plantaris mm., skin and fascia of calf of leg
Tarsal lateral	Dorsalis pedis		Extensor digitorum brevis m., navicular and cuboid bones and joint between them
Tarsal medial	Dorsalis pedis		Skin of medial surface of foot, tarsal joints
Temporal deep (see Plate 8) Anterior Posterior	Internal maxillary		Temporal m., orbit, pericranium, skull
Temporal, middle	Superficial temporal		Temporal m., temporal fascia
Temporal, superficial (see Plates 7 8)	External carotid	Parotid, transverse facial, anterior auricular middle temporal, zygomatico-orbital, frontal, parietal, articular	Temporal, masseter frontalis, orbicularis oculi mm.; parotid gland and duct, skin of face, external ear external acoustic meatus, scalp
Testicular	Internal spermatic		Body of testis
Thalamic, middle	Posterior communicating		Thalamus
Thoracic, highest	Axillary		Pectoralis major pectoralis minor, intercostal, serratus anterior mm wall of thorax
Thoracic, lateral (external mammary OT)	Axillary	External mammary	Pectoralis major pectoralis minor serratus anterior subscapularis mm. axillary lymph nodes, mammary gland
Thoracic, twelfth	See *Subcostal*		
Thoracoacromial (acromiothoracic OT)	Axillary	Pectoral, acromial, clavicular deltoid	Pectoralis major pectoralis minor, deltoid, subclavius mm., mammary gland, sternoclavicular joint, acromial rete
Thoracodorsal	Subscapular		Latissimus dorsi, teres major serratus anterior mm.
Thymic	Internal mammary		Thymus gland
Thyroidea ima (Neubauer art. OT)	Innominate, arch of aorta, right common carotid, right subclavian, or internal mammary		Lower part of thyroid gland
Thyrocervical trunk	Subclavian	Inferior thyroid, transverse scapular (suprascapular) transverse cervical	Mm. of neck, scapular region and upper back; cervical spinal cord cervical vertebrae, larynx and trachea, esophagus, thyroid gland pharynx

TABLE OF ARTERIES—(Continued)

Name	Origin	Branches	Distribution
Thyroid, inferior (see Plate 5)	Thyrocervical trunk	Muscular inferior laryngeal, tracheal, esophageal, pharyngeal, ascending cervical, terminal, glandular	Scalenus anterior longus colli, sternohyoid, sternothyroid, omohyoid, inferior constrictor of pharynx, longus capitis mm.; esophagus, pharynx, larynx, trachea, posterior surface of thyroid gland, vertebrae, contents of vertebral canal
Thyroid, superior (see Plate 4)	External carotid	Hyoid, sternocleidomastoid, superior laryngeal, cricothyroid, muscular glandular	Thyrohyoid, sternocleidomastoid, sternohyoid, cricothyroid, omohyoid, platysma, inferior constrictor of pharynx, and intrinsic mm. of larynx, mucous membrane of larynx, esophagus, thyroid gland
Tibial, anterior (see Plate 7)	Popliteal	Anterior tibial recurrent, fibular posterior tibial recurrent, muscular, anterior lateral malleolar anterior medial malleolar	Popliteus, tibialis anterior extensor digitorum longus, peroneus tertius, soleus, peroneus longus, extensor hallucis longus mm.; knee joint, proximal tibiofibular joint, ankle joint, medial malleolar rete, lateral malleolar rete, fascia and skin over course of vessel on front of leg
Tibial, anterior recurrent	Anterior tibial		Tibialis anterior extensor digitorum longus mm.; knee joint, overlying fascia and skin, rete patellae
Tibial, posterior (see Plate 7)	Popliteal	Peroneal, nutrient to tibia, muscular posterior medial malleolar communicating, medial calcaneal, medial plantar lateral plantar	Soleus, tibialis posterior flexor hallucis longus, flexor digitorum longus, peroneus longus, peroneus brevis mm.; ankle joint, skin of medial and posterior part of leg and tarsus, lateral and medial malleolar retia, rete calcaneum, sole of foot, shaft of tibia, shaft of fibula
Tibial, posterior recurrent	Anterior tibial		Popliteus m., proximal tibiofibular joint
Trabecular	Splenic	Lobular	Substance of spleen
Transverse facial	See *Facial, transverse*		
Transverse perineal	See *Perineal, transverse*		
Tympanic	Art. of pterygoid canal (Vidian OT)		Lining of wall of tympanic cavity
Tympanic, anterior	Internal maxillary		Mucous membrane of tympanic cavity
Tympanic, inferior	Ascending pharyngeal		Lining of medial wall of tympanic cavity
Tympanic, posterior	Stylomastoid		Tympanic membrane
Tympanic, superior	Middle meningeal		Tensor tympani m., lining of wall of tympanic cavity

TABLE OF ARTERIES—(Continued)

NAME	ORIGIN	BRANCHES	DISTRIBUTION
Ulnar (see Plate 7)	Brachial	(1) In forearm anterior ulnar recurrent posterior ulnar recurrent common interosseous muscular (2) At wrist dorsal carpal volar carpal (3) In hand deep volar superficial volar arch	Flexor digitorum sublimis, flexor digitorum profundus, flexor carpi radialis, flexor carpi ulnaris, pronator teres, flexor pollicis longus, brachialis, pronator quadratus, anconeus, supinator abductor pollicis longus, and superficial and deep extensor mm. of forearm shafts of radius and ulna, median nerve, ulnar half of hand, dorsal carpal rete, volar carpal rete, carpal joints, skin over course of vessels
Ulnar recurrent anterior	Ulnar		Brachialis, pronator teres mm. skin over medial cubital region
Ulnar recurrent, posterior	Ulnar		Flexor digitorum profundus, flexor digitorum sublimis, flexor carpi ulnaris mm.; cubital rete, elbow joint, ulnar nerve
Ut rine (h mol g f d f tl l t i male)	Internal iliac, anterior trunk	Cervical, tubal, ovarian, vaginal, ligamentous	Uterus, broad ligament of uterus, round ligament of uterus, uterine tube, portion of vagina
Vaginal (corresponds to inferior vesical art. in male)	Internal iliac, anterior trunk	Rectal, vesical, vestibular	Vagina, fundus of bladder rectum, vestibular bulb
Vasa brevia	See *Gastric, short*		
Vertebral (see Plates 7 8, 17 18)	Subclavian	(1) Cervical spinal muscular (2) Cranial meningeal posterior spinal anterior spinal medullary posterior inferior cerebellar	Semispinalis capitis, rectus capitis posterior major and minor, obliquus capitis superior obliquus capitis inferior mm. cervical vertebrae, cervical spinal cord and its m mbra es, intervertebral disks, bone and dura mater of posterior fossa of skull, falx cerebelli, cerebellum, medulla oblongata
Vesical inferior (corresponds to vaginal art. in female)	Internal iliac	Vesical, prostatic, ureteric, deferential	Fundus of bladder prostate gland, ductus deferens, seminal vesicle, lower part of ureter
Vesical middle	Internal iliac, or superior vesical		Fundus of bladder seminal vesicle
Vesical, superior	Internal iliac	Urachal, ureteric, vesical, deferential	Medial umbilical ligament (vestige of urachus) lower part of ureter upper part of bladder ductus deferens
Vidian	See *Pterygoid canal, art. of*		
Volar rch, deep	Radial and deep volar branch of ulnar	Volar metacarpal (3) recurrent, perforating	Interossei and second, third, and fourth lumbrical mm.; metacarpals, joints of fingers
Volar arch, superficial	Ulnar and superficial volar branch of radial	Common volar digital (3)	Fl[illegible] t[illegible] d[illegible] d[illegible] t[illegible] dex sheaths, joints of fingers, bones of fingers, skin of palm and fingers
Volaris indicis radialis	Radial	Dorsal, communicating	First lumbrical, first dorsal interosseous, adductor pollicis mm., radial side of index finger
Zygomatico-orbital	Superficial temporal or middle temporal	Orbital	Orbicularis oculi m., fat between the two layers of temporal fascia, lateral portion of orbit

TABLE OF BONES

(See Plate 1)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Anvil	See *Incus*	
Astragalus (OT)	See *Talus*	
Atlas	First cervical vertebra; ringlike lateral masses, anterior and posterior arches and tubercles vertebral foramen; articular surfaces; transverse foramens; ossifies in cartilage	Occipital bone, *bilateral gliding* Epistropheus, 3 joints, *bilateral gliding* and *pivot* with dens
Axis (OT; BR)	See *Epistropheus*	
Calcaneus (calcaneum BR) (os calcis OT)	Heel bone; largest tarsal bone, irregularly cuboid; medial process (sustentaculum tali,) lateral process (trochlear process) medial, lateral and anterior tubercles on inferior surface; articular surfaces; ossifies in cartilage	Talus (3 *facets*), Cuboid, } *gliding*
Calvaria or calvarium	Skull cap or upper part of skull	
Capitate (os magnum OT)	Usually largest carpal bone; in distal row of carpal bones; occupies center of wrist; head, neck, body; ossifies in cartilage	Navicular, Lunate, Lesser multangular, Hamate, Second, Third, Fourth } metacarpal, } *gliding*
Carpus (wrist) (see Plate 1)	Consists of 8 short bones, navicular lunate, triquetrum, pisiform, greater multangular lesser multangular capitate, and hamate. See individual bones	
Clavicle	Collarbone resembles the italic *f*; body medial and lateral extremities conoid tubercle, trapezoid ridge, coracoid tuberosity costal tuberosity subclavian groove; ossifies partly in cartilage and partly in membrane	Sternum, Scapula, Cartilage of first rib, } *gliding*
Coccyx	Last bone of vertebral column; usually composed of 4 small incomplete vertebrae fused together; base, apex, cornua, transverse processes; ossifies in cartilage	Sacrum, *amphiarthrosis*
Concha, inferior nasal (inferior turbinate OT)	Irregular scroll-shaped bone situated on lateral wall of nasal cavity; lacrimal, ethmoidal, and maxillary processes ossifies cartilage	Ethmoid, Maxilla, Lacrimal, Palatine, } *synarthroses*
Costae	See *Ribs*	
Coxae (innominate OT)	Hipbone large broad bone consisting of 3 parts, with its fellow sacrum, and coccyx forms the bony pelvis or pelvic girdle; acetabulum; obturator foramen; pubic arch; greater and lesser sciatic notches; ossifies in cartilage *Ilium*—broad, expanded upper portion crest, spines, gluteal lines, fossa, iliopectineal eminence, tuberosity auricular surface 2/5 (about) of acetabulum	With its fellow of opposite side (symphysis pubis) *amphiarthrosis* Sacrum, *gliding* (very little movement) Femur *ball-and-socket*

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Coxae—(*Continued*)	*Ischium*—heavy posterior lower portion; body, tuberosity, ramus, spine, notches, lower boundary of obturator foramen; ⅖ (about) of acetabulum *Pubis*—anterior lower portion, body, superior and inferior rami, tubercle, crest, pectineal line, upper boundary of obturator foramen; ⅕ (about) of acetabulum	
Cranium	Brain case composed of occipital, parietal (2), frontal, temporal (2), sphenoid, and ethmoid. See individual bones Sometimes cranium is used to designate entire skull without mandible	
Cuboid	Roughly cubical bone in lateral part of tarsus, tuberosity; ossifies in cartilage	Calcaneus, Third cuneiform, Fourth and fifth metatarsals, Navicular } *gliding*
Cuneiform of carpus [OT]	See *Triquetrum*	
Cuneiform, first (inner cuneiform OT) (medial cuneiform BR)	Irregularly wedge-shaped, largest of the three; ossifies in cartilage	Navicular (of foot), Second cuneiform, First and second metatarsals } *gliding*
Cuneiform, second (middle cuneiform OT) (intermediate cuneiform BR)	Wedge-shaped, smallest of the three; ossifies in cartilage	Navicular (of foot), First cuneiform, Third cuneiform, Second metatarsal } *gliding*
Cuneiform, third (outer cuneiform OT) (lateral cuneiform BR)	Wedge-shaped; ossifies in cartilage	Navicular (of foot), Second cuneiform, Cuboid, Second, Third, Fourth } metatarsal } *gliding*
Epistropheus (axis OT BR)	Second cervical vertebra; body, dens, thick spine, laminae, pedicles, transverse processes, articular surfaces, transverse foramens, vertebral foramen; ossifies in cartilage	Atlas, 3 joints, *bilateral gliding and pivot* with dens Third cervical vertebra, *amphiarthrosis*
Ethmoid (see Plate 1)	Irregular shape, situated in anterior part of base of skull and forming medial wall of each orbit and a portion of roof and lateral walls of nasal cavities, horizontal or cribriform plates, nasal slit; perpendicular plate, crista galli, alar processes; labyrinth with air cells, superior and middle nasal conchae; ossifies in cartilage	Sphenoid, Frontal, Nasal (2), Maxilla (2), Lacrimal (2), Palatine (2), Inferior nasal concha (2), Vomer } *synarthrosis*
Face	Consists of nose and jaws, formed by maxilla, zygoma, nasal, lacrimal, palatine, inferior nasal concha, vomer, mandible, and parts of ethmoid and sphenoid	
Femur	Thigh bone, largest, longest, and heaviest bone in the body; shaft, head, neck, greater and lesser trochanters, quadrate tubercle, medial and lateral condyles, linea aspera, epicondylic lines, adductor tubercle; ossifies in cartilage	Coxae, *ball-and-socket* Patella, *gliding* Tibia, combined *hinge* and *gliding*

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Fibula	Splint bone lateral bone of leg head, body interosseous crest, lateral malleolus ossifies in cartilage	Tibia, *gliding* Talus with tibia and fibula, *hinge*
Foot	Composed of tarsus, metatarsus, and phalanges	
Frontal (see Plate 1)	Forehead bone flat bone frontal part with tuberosities, zygomatic processes, temporal line, sagittal sulcus orbital part forming upper portion of each orbit, anterior and posterior ethmoidal canals; nasal part, frontal spine; ossifies in membrane	Parietal (2) Sphenoid, Ethmoid, Nasal (2) Maxilla (2) Lacrimal (2) Zygoma (2) } *synarthroses*
Greater multangular multangulum majus (trapezium OT BR)	In distal row of carpal bones; irregular bone with 6 surfaces, ridge; distal articular facet is saddle-shaped ossifies in cartilage	Navicular Lesser multangular Second metacarpal, } *gliding* First metacarpal, *saddle*
Hamate (unciform OT)	Wedge-shaped in distal row of carpal bones; hooklike process (hamulus); ossifies in cartilage	Lunate, Fourth and fifth metacarpals, Triquetrum, Capitate, } *gliding*
Hammer	See *Malleus*	
Hand	Composed of carpus, metacarpus, and phalanges	
Humerus	Largest bone of the arm; head, greater and lesser tubercles, intertubercular sulcus, surgical neck, deltoid tuberosity, capitulum, trochlea, coronoid and olecranon fossae medial and lateral lines, condyles and epicondyles ossifies in cartilage	Scapula (glenoid cavity) *ball-and-socket* Ulna, *hinge* Radius, *gliding*
Hyoid (see Plate 45)	U-shaped bone in front of neck, body greater and lesser cornua ossifies in cartilage	None
Ilium	See *Coxae*	
Incus (anvil)	Resembles premolar tooth with two roots, body long and short processes or crura, lenticular process; middle bone of chain of auditory ossicles, ossifies in cartilage	Malleus, *gliding* Stapes, *gliding*
Inferior maxilla [OT]	See *Mandible*	
Inferior turbinate [OT]	See *Concha, inferior nasal*	
Innominate [OT]	See *Coxae*	
Ischium	See *Coxae*	
Lacrimal (see Plate 1)	Small scale of bone resembling finger nail situated in anterior medial wall of orbit crest, descending process, hamulus, groove ossifies in membrane	Frontal, Ethmoid, Maxilla, Inferior nasal concha, } *synarthroses*
Lesser multangular multangulum minus (trapezoid OT; BR)	Smallest bone of distal row of carpal bones irregular bone with 6 surfaces, ossifies in cartilage	Navicular Second metacarpal, Greater multangular Capitate, } *gliding*

TABLE OF BONES—(Continued)

NAME	PRINCIPAL FEATURES	BONES WITH WHICH ARTICULATION OCCURS AND TYPE OF JOINT
Lunate (semilunar OT)	One of proximal row of carpal bones; named from lateral crescent-shaped articular facet ossifies in cartilage	Radius, *biaxial* Capitate, Hamate, Triquetrum, N vicular } *gliding*
Magnum [OT]	See *Capitate*	
Malar [OT]	See *Zygoma*	
Malleus (hammer)	Resembles hammer head, neck, spur crista, handle, anterior and lateral processes ossifies in cartilage	Incus, *gliding*
M ndibl (infe i maxilla OT)	Lower jaw; body 2 rami, coronoid and condyloid processes, symphysis, alveolus, mental protuberance and spine, mylohyoid line and groove, mandibular and mental foramens, notch; ossifies partly in membrane and partly in cartilage	Two temporal bones, *combined gliding and hinge*
Maxilla (superior maxill OT)	Upper jaw body with infraorbital foramen and canal, maxillary sinus, lacrimal groove, greater palatine foramen and canal zygomatic process; frontal process, ethmoidal crest alveolar process, maxillary t berosity palatine process, incisive crest, spine and canal, nasal crest; ossifies in membrane	Frontal, Ethmoid, Nasal, Zygoma, Lacrimal, Inferior nasal concha, Palatine, Vomer, Fellow of opposite side, } *synarthrosis*
Metacarpus (*see Plate 1*)	Five bones of hand proper each with *head, shaft, and base* umbered *from 1* to 5 beginning on thumb side; styloid process on base of third, each ossifies in cartilage	First metacarpal with greater multangular *saddle* Four medial metacarpal bases ith each other and with distal row of carpal bones, *gliding* Metacarpal heads with corresponding phalanges, *ball-and-socket*
Metatarsus (see Plate 1)	Five bones of foot proper each with head, shaft, and base; umbered from 1 t 5 beginning on great toe side tuberosity on lateral side of base of fifth; each ossifies in cartilage	Distal tarsal bones, Metatarsal bases with each other } *gliding* Metatarsal heads with corresponding phalanges, *ball-and-socket*
Nasal (see Plates 1, 12)	Rectangular plat ; two form bridge of nose ethmoidal sulcus, crest ossifies in membrane	Frontal, Ethmoid, Maxilla, Nasal (opposite) } *synarthrosis*
Navicular (f foot) (scaphoid of foot OT)	Boat-shaped; proximal articular surface markedly concave plantar process, tuberosity; ossifies in cartilage	Talus, Three cuneiforms, Cuboid, } *gliding*
Navicular (of hand) (scaphoid of hand OT BR)	Largest bone of proximal row of carpal bones comma-shaped; tubercle ossifies in cartilage	Greater multangular Lesser multangular Capitate, Lunate, } *gliding* Radius, *biaxial*

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Occipital (see Plate 1)	Posterior part and base of cranium; saucer-shaped; squamous part with internal and external protuberances, highest, superior and inferior nuchal lines, sagittal and transverse sulci; lateral part with condyles, canal for hypoglossal nerve, condyloid canal, jugular notch, process and tubercle; basal part with pharyngeal tubercle and foramen magnum squamous part ossifies in membrane, the rest in cartilage	Parietal (2), Temporal (2), Sphenoid, } *synarthroses* Atlas, *bilateral gliding*
Palatine	Forms portions of hard palate, orbits and nasal cavities; irregularly L-shaped, horizontal part, posterior nasal spine, greater palatine foramen, palatine crest, nasal crest perpendicular part, conchal crest, ethmoidal crest, greater palatine canal, maxillary pyramidal, orbital and sphenoidal processes, sphenopalatine foramen, lesser palatine canals and foramina ossifies in membrane	Sphenoid, Ethmoid, Maxilla, Inferior nasal concha, Vomer, Palatine (opposite) } *synarthroses*
Parietal (see Plate 1)	Forms side and roof of cranium; quadrilateral plate of bone eminence, superior and inferior temporal lines, parietal foramen; sagittal and transverse sulci; ossifies in membrane	Parietal (opposite), Occipital, Frontal, Temporal, Sphenoid, } *synarthroses*
Patella	Knee cap triangular largest sesamoid; ossifies in cartilage	Condyles of femur *gliding*
Pelvis	Pelvic girdle composed of 2 coxae, sacrum, and coccyx	
Phalanges (of foot)	Two of great toe, three of each of others, 14 in all; usually fifth toe has only two; each phalanx a miniature long bone with head, shaft, and base; each ossifies in cartilage	Proximal row with corresponding metatarsal bones, *ball-and-socket* Interphalangeal joints, *hinge*
Phalanges (of hand)	Two of great toe, three of each of fingers, 14 in all each phalanx is miniature long bone with head, shaft, and base; each ossifies in cartilage	Proximal row with corresponding metacarpal bones, *ball-and-socket* Interphalangeal joints, *hinge*
Pisiform	Most medial of proximal row of carpus smallest carpal resembles half pea ossifies in cartilage	Triquetrum, *gliding*
Pubis	See Coxae	
Pyramidal [OT]	See *Triquetrum*	
Radius	Lateral bone of forearm head, shaft, tuberosity styloid process, interosseous crest, ulnar notch, ossifies in cartilage	Humerus, *gliding* Ulna, proximal, *pivot* Ulna, distal, *gliding* Lunate, Navicular, Triquetrum, } *biaxial*
Ribs	Twelve on each side; head, neck, body tubercle angle, costal groove first is relatively broad and flattened; second, tubercle 11 and 12 floating each ossifies in cartilage	Head with vertebral bodies, Tubercle with transverse processes, } *gliding* Sternum with first ribs, *synchondroses* Sternum with others, *amphiarthroses*

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Sacrum	Large triangular bone composed of 5 fused vertebrae; base, pes, foramina, superior articular processes, promontory, auricular surface, sacral canal; ossifies in cartilage	Last lumbar vertebra, Coccyx, } *amphiarthrosis* Coxae (2) *gliding* (very little movement)
Scaphoid of foot [OT]	See *Navicular (of foot)*	
Scaphoid of hand [OT; BR]	See *Navicular (of hand)*	
Scapula	Shoulder blade; flat, triangular bone of posterior portion of shoulder; head, neck, body spine, acromion, coracoid, glenoid cavity, subscapular fossa, supraspinous fossa, infraspinous fossa, crest, greater and lesser scapular notches; ossifies in cartilage	Humerus, *ball-and-socket* Clavicle, *gliding*
Semilunar [OT]	See *Lunate*	
Sesamoid	Small seedlike nodules of bone which develop in muscular tendons where they play against bone; patella; one in each tendon of insertion of flexor hallucis brevis muscle and one in tendon of insertion of flexor pollicis brevis and of adductor pollicis are constant; others are variable; each develops in cartilage	
Skull	See *Cranium*. Sometimes used to include mandible as well	
Sphenoid (see Plate 1)	Forms anterior part of base of skull and portions of cranial, orbital, and nasal cavities; in shape resembles butterfly with extended wings; body: air sinuses, sella turcica, hypophyseal fossa, dorsum sellae, posterior clinoid processes, optic groove, spine, carotid groove, crest, petrosal process, rostrum; small wings, optic foramen, anterior clinoid processes, superior orbital fissure; great wings: foramen rotundum, foramen ovale, foramen spinosum, pterygoid processes, medial and lateral pterygoid plates, hamulus, scaphoid fossa, pterygoid canal; ossifies partly in cartilage and partly in membrane	Frontal, Parietal (2) Occipital, Temporal (2) Ethmoid, Palatine (2) Zygoma (2) Vomer } *synarthrosis*
Stapes (stirrup OT)	Resembles stirrup; head, neck, base, anterior and posterior [illegible] smallest of auditory ossicles [illegible]rtilage	Incus, *gliding* Fenestra ovalis, *gliding*
Sternum	Breastbone [illegible] dagger [illegible] manubrium, body xiphoi[illegible] ossifies in car[illegible]	Cla[illegible] *gliding* Fir[illegible] *synchondrosis* C[illegible] } [illegible]ges of ribs 2 to 7 *amphi*[illegible]
Stirrup [OT]	Se[illegible]	
Superior maxilla [OT]	S[illegible]	

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Sutural (Wormian OT)	Irregular variable bones occasionally found along cranial sutures; most frequent in lambdoid suture	
Talus (astragalus OT)	Second largest bone of tarsus; head, body medial and posterior tubercles; ossifies in cartilage	Tibia, Fibula, } *hinge* Calcaneus (3 facets) Navicular (of foot) } *gliding*
Tarsus (see Plate 1)	Posterior portion of foot; consists of 7 bones calcaneus, talus, cuboid, navicular and 3 cuneiforms	
Temporal (see Plate 1)	Forms portion of lateral aspect of skull and part of base of cranium; squamous part, zygomatic process, mandibular fossa, petrotympanic fissure tympanic part, auditory process, external acoustic meatus, styloid process and sheath, stylomastoid foramen mastoid part, air cells, notch, foramen, sigmoid sulcus; petrous part, auditory tube, jugular fossa, carotid canal, internal acoustic meatus; ossifies partly in cartilage and partly in membrane	Occipital, Parietal, Sphenoid, Zygoma, } *synarthroses* Mandible, combined *gliding* and *hinge*
Tibia	Shinbone; large medial bone of leg; medial and lateral condyles, tuberosity popliteal notch, intercondylar eminence, popliteal line, medial malleolus; ossifies in cartilage	Femur combined *hinge* and *gliding* Fibula, superior Fibula, inferior } *gliding* Talus with fibula, *hinge*
Trapezium [OT; BR]	See *Greater multangular*	
Trapezoid [OT; BR]	See *Lesser multangular*	
Triquetrum (cuneiform of carpus OT) (pyramidal OT)	One of proximal row of carpal bones; wedge-shaped, ossifies in cartilage	Lunate, Pisiform, Hamate, } *gliding* Radius, *biarial*
Turbinate, inferior [OT]	See *Concha, inferior nasal*	
Turbinate, middle [OT]	See *Ethmoid, middle nasal concha.* (Not separate bone)	
Turbinate, superior [OT]	See *Ethmoid, superior nasal concha* (Not separate bone)	
Tympanic	Includes 3 auditory ossicles: incus, malleus, and stapes	
Ulna	Medial bone of forearm olecranon, coronoid process, radial notch, semilunar notch, tuberosity shaft, head, styloid process, interosseous crest ossifies in cartilage	Humerus, *hinge* Radius, proximal, *pivot* Radius, distal, *gliding*
Unciform [OT]	See *Hamate*	
Vertebra	Backbone composed of 33 in all, cervical 7 thoracic 12, lumbar 5, sacrum 5 (fused) coccyx 4 (fused); each has body arch, articular processes, transverse processes, spinous process, foramen; see *Atlas, Epistropheus, Coccyx Sacrum*, each vertebra ossifies in cartilage	Between vertebral bodies, *amphiarthroses* Between articular processes, *gliding*

TABLE OF BONES—(Continued)

Name	Principal Features	Bones with Which Articulation Occurs and Type of Joint
Vomer	Forms posterior part of nasal septum; alae; *ossifies in membrane*	Sphenoid, *Ethmoid*, Maxilla (2) Palatine (2) } *synarthroses*
Wormian [OT]	*See Sutural*	
Wrist	*See Carpus*	
Zygoma (malar *OT*) (see Plate 1)	Cheekbone; *forms* cheek and lateral aspect of orbit; tuberosity zygomaticofacial foramen temporal process, frontosphenoidal process, marginal process, orbital process, zygomatic foramen, zygomaticotemporal foramen; ossifies in membran	Frontal, Sphenoid, Temporal, Maxilla, } *synarthroses*

TABLE OF JOINTS[1] AND LIGAMENTS

(See Plate 2)

Name	Type	Named[2] Ligaments
Acromioclavicular	Gliding	Articular disk (intraarticular fibrocartilage OT) Coracoclavicular (1) Conoid (2) Trapezoid Inferior acromioclavicular Superior acromioclavicular
Ankle	Hinge	Anterior Deltoid (internal lateral OT; medial BR) (1) Anterior talotibial (2) Calcaneotibial (3) Deep talotibial (4) Posterior talotibial (5) Tibionavicular Interosseous membrane of leg Lateral (external lateral OT) (1) Anterior talofibular (2) Calcaneofibular (3) Posterior talofibular Posterior
Atlantoepistrophic	See *Central* and *Lateral atlantoepistrophic*	
Atlanto-occipital	Gliding	Anterior atlanto-occipital membrane (anterior occipitoatlantal ligament OT) Membrana tectoria (occipitoaxial ligament OT) Posterior atlanto-occipital membrane (posterior occipitoatlantal ligament OT)
Calcaneocuboid	Gliding	Dorsal calcaneocuboid Inferior calcaneocuboid (1) Long plantar (2) Plantar calcaneocuboid (short plantar OT; BR) Lateral calcaneocuboid Calcaneocuboid part of bifurcate (internal calcaneocuboid OT; medial calcaneocuboid BR)
Carpal	See *Intercarpal* and *Pisotriquetral*	
Carpometacarpal articulation of the thumb	Saddle	
Carpometacarpal articulations of fingers	Gliding	Dorsal carpometacarpal Interosseous carpometacarpal Volar carpometacarpal (palmar carpometacarpal BR)
Central atlantoepistrophic	Pivot	Alar (check or lateral odontoid OT; alar of odontoid process BR) Apical of dens (middle odontoid OT; apical of odontoid process BR) Cruciate atlantis (cruciform OT) (1) Inferior crus (2) Superior crus (3) Transverse crus (transverse of atlas BR)

[1] This table does not include sutures, synostoses, syndesmoses, synchondroses.
[2] It is understood that every diarthrodial joint has a capsular ligament composed of two layers.

TABLE OF JOINTS[1] AND LIGAMENTS—(Continued)

Name	Type	Named[2] Ligaments
Costotransverse (upper 10 ribs only)	Gliding	Anterior costotransverse (superior costotransverse OT BR) Ligament of neck of rib (middle costotransverse OT; inferior costotransverse BR) Ligament of tubercle of rib (lateral costotransverse BR) Posterior costotransverse
Cuboideonavicular (cuboideoscaphoid OT) (inconstant)	Gliding	Dorsal cuboideonavicular (dorsal cuboideoscaphoid OT) Interosseous cuboideonavicular (interosseous cuboideoscaphoid OT) Plantar cuboideonavicular (plantar cuboideoscaphoid OT)
Cuneocuboid	Gliding	Dorsal cuneocuboid Interosseous cuneocuboid Plantar cuneocuboid
Cuneometatarsal	See *Intermediate* and *Medial tarsometatarsal*	
Cuneonavicular (cuneoscaphoid OT)	Gliding	Dorsal cuneonavicular (dorsal cuneoscaphoid OT) Plantar cuneonavicular (plantar cuneoscaphoid OT)
Distal radioulnar	Gliding	Anterior radioulnar Interosseous membrane of forearm Posterior radioulnar Triangular articular disk (triangular fibrocartilage OT)
Distal tibiofibular (variable)	When present, is an extension of ankle joint	
Elbow (1) Humeroradial (2) Humeroulnar (3) Proximal radioulnar (sometimes described as separate joint)	 Gliding Hinge Pivot	Annular (orbicular OT) Anterior Interosseous membrane of forearm Posterior Quadrate [BR] Radial collateral (external lateral OT; lateral BR) Ulnar collateral (internal lateral OT; medial BR)
Heads of ribs	Combined hinge and gliding	Interarticular of head of rib (intervertebral OT; intraarticular BR) Radiate of head of rib (anterior costovertebral or stellate OT)
Hip (see Plate 2)	Ball-and-socket	Iliofemoral (Y-ligament of Bigelow OT) Ischiocapsular (ischiofemoral OT; BR) Labrum glenoidale (cotyloid OT; labrum acetabulare BR) Pubocapsular (pubofemoral OT; BR) Teres (round OT; ligament of head of femur BR) Transverse

[1] This table does not include sutures, synostoses, syndesmoses, synchondroses.
[2] It is understood that every diarthrodial joint has a capsular ligament composed of two layers.

TABLE OF JOINTS[1] AND LIGAMENTS—(Continued)

Name	Type	Named[2] Ligaments
Humeroradial	See *Elbow*	
Humeroulnar	See *Elbow*	
Intercarpal (1) Distal (between 4 bones of distal row) (2) Proximal (between 3 bones of proximal row) (3) Transverse (between proximal and distal rows)	Gliding	Dorsal carpal (extensor retinaculum BR) Dorsal intercarpal Interosseous intercarpal Radiate or volar carpal Radial collateral carpal (external lateral OT; lateral BR) Transverse carpal (flexor retinaculum BR) Ulnar collateral carpal (internal lateral OT; medial BR) Volar intercarpal (palmar intercarpal BR)
Intercuneiform	Gliding	Dorsal intercuneiform Interosseous intercuneiform Plantar intercuneiform
Intermediate tarsometatarsal	Gliding	Dorsal tarsometatarsal Interosseous cuneometatarsal Interosseous intercuneiform Plantar tarsometatarsal
Intermetacarpal (4 medial metacarpal bases)	Gliding	Basal dorsal metacarpal (dorsal metacarpal BR) Basal interosseous metacarpal (interosseous metacarpal BR) Basal volar metacarpal (palmar metacarpal BR)
Intermetatarsal (4 lateral metatarsal bases)	Gliding	Basal dorsal metatarsal (dorsal metatarsal BR) Basal interosseous metatarsal (interosseous metatarsal BR) Basal plantar metatarsal (plantar metatarsal BR) Transverse metatarsal
Interphalangeal of fingers	Hinge	Collateral (lateral phalangeal OT)
Interphalangeal of toes	Hinge	Accessory plantar (plantar BR) Collateral (lateral phalangeal OT)
Intertarsal	See *Cuboideonavicular, Cuneocuboid, Cuneonavicular, Intercuneiform, Talocalcaneal, Talocalcaneonavicular, Talonavicular* and *Transverse tarsal*	
Knee (see Plate 2)	Combined hinge and gliding	Alar folds (alar ligaments OT) Anterior cruciate Arcuate popliteal (arcuate BR) Coronary Fibular collateral (external lateral OT; lateral BR) Lateral meniscus (external semilunar cartilage OT; lateral semilunar cartilage BR)

[1] This table does not include sutures, synostoses, syndesmoses, synchondroses.
[2] It is understood that every diarthrodial joint has a capsular ligament composed of two layers.

TABLE OF JOINTS AND LIGAMENTS—(Continued)

Name	Type	Named Ligaments
Knee—(*Continued*)		Lateral patellar retinaculum [BR]
		Medial meniscus (internal semilunar cartilage OT medial semilunar cartilage BR)
		Medial patellar retinaculum [BR]
		Oblique popliteal (ligament of Winslow OT; oblique posterior BR)
		Patellar
		Patellar synovial fold (ligamentum mucosum OT)
		Posterior
		Posterior cruciate
		Superior patellar retinaculum [BR]
		Tibial collateral (internal lateral OT medial BR)
		Transverse
Lateral atlantoepistrophic	Gliding	Accessory atlantoepistrophic (accessory atlantoaxial BR)
		Anterior atlantoepistrophic obturator (anterior atloaxoid OT; anterior atlantoaxial BR)
		Posterior atlantoepistrophic obturator (posterior atloaxoid OT; posterior atlantoaxial BR)
Lateral tarsometatarsal	Gliding	Dorsal tarsometatarsal
		Interosseous cuneocuboid
		Plantar tarsometatarsal
Mandibular (temporomandibular OT)	Combined gliding and hinge	Articular disk (interarticular fibrocartilage OT)
		Sphenomandibular
		Stylomandibular
		Temporomandibular (external lateral OT)
Medial tarsometatarsal	Gliding	Dorsal tarsometatarsal
		Interosseous cuneometatarsal
		Plantar tarsometatarsal
Metacarpophalangeal	Ball-and-socket	Accessory volar (glenoid cartilage OT palmar BR)
		Collateral (lateral phalangeal OT)
		Transverse of heads of metacarpals (deep transverse of palm BR)
Metatarsophalangeal	Ball-and-socket	Accessory plantar (glenoid OT plantar of digits BR)
		Collateral (lateral phalangeal OT)
		Transverse of heads of metatarsals (transverse metatarsal OT deep transverse of sole BR)
Midtarsal [OT]	See *Transverse tarsal*	
Pisotriquetral	Gliding	Pisohamate
		Pisometacarpal
Proximal radioulnar	See *Elbow*	

This table does not include sutures, synostoses, syndesmoses, synchondroses.
It is understood that every diarthrodial joint has capsular ligament composed of two la er

TABLE OF JOINTS[1] AND LIGAMENTS—(Continued)

Name	Type	Named Ligaments
Proximal tibiofibular	Gliding	Anterior of head of fibula (anterior superior tibiofibular OT) Interosseous membrane of leg Posterior of head of fibula (posterior superior tibiofibular OT)
Radioulnar	See *Elbow* and *Distal radio-ulnar*	
Sacroiliac (see Plate I)	Gliding	Anterior sacroiliac Iliolumbar Interosseous sacroiliac Long posterior sacroiliac (bliqus sacroiliac OT) Sacrotuberous (great or posterior sacrosciatic OT) Sacrospinous (lesser or anterior sacrosciatic OT) Short posterior sacroiliac
Shoulder (see Plate X)	Ball-and-socket	Coracoacromial Coracohumeral Inferior glenohumeral Labrum glenoidale (glenoid ligament OT) Middle glenohumeral Superior glenohumeral Transverse humeral
Sternoclavicular	Gliding	Anterior sternoclavicular Articular disk (intraarticular fibrocartilage OT) Costoclavicular (homboid OT) Interclavicular Posterior sternoclavicular
Talocalcaneal (astragalocalcaneal OT)	Gliding	Anterior talocalcaneal (anterior calcaneoastragaloid OT) Interosseous talocalcaneal (interosseous calcaneoastragaloid OT) Lateral talocalcaneal (external calcaneoastragaloid OT) Medial talocalcaneal (internal calcaneoastragaloid OT) Posterior talocalcaneal (posterior calcaneoastragaloid OT)
Talocalcaneonavicular (anterior calcaneoscaphoastragaloid OT)	Gliding	Calcaneonavicular part of bifurcate (superior calcaneoscaphoid OT; lateral calcaneonavicular BR) Dorsal talonavicular (dorsal astragaloscaphoid OT) Interosseous talonavicular (interosseous astragaloscaphoid OT) Plantar calcaneonavicular or spring (inferior calcaneoscaphoid OT)
Talonavicular (taloscaphoid OT)	A portion of talocalcaneonavicular	

This table does not include sutures, synostoses, syndesmoses, synchondroses.
It is understood that every diarthrodial joint has capsular ligament composed of two layers.

TABLE OF JOINTS AND LIGAMENTS—(Continued)

NAME	TYPE	NAMED LIGAMENTS
Knee—(*Continued*)		Lateral patellar retinaculum [BR]
		Medial meniscus (internal semilunar cartilage OT; medial semilunar cartilage BR)
		Medial patellar retinaculum [BR]
		Oblique popliteal (ligament of Winslow OT; oblique posterior BR)
		Patellar
		Patellar synovial fold (ligamentum mucosum OT)
		Posterior
		Posterior cruciate
		Superior patellar retinaculum [BR]
		Tibial collateral (internal lateral OT; medial BR)
		Transverse
Lateral atlantoepistrophi	Gliding	Accessory atlantoepistrophic (accessory atlantoaxial BR)
		Anterior atlantoepistrophic obturator (anterior atloaxoid OT; anterior atlantoaxial BR)
		Posterior atlantoepistrophic obturator (posterior atloaxoid OT; posterior atlantoaxial BR)
Lateral tarsometatarsal	Gliding	Dorsal tarsometatarsal
		Interosseous cuneocuboid
		Plantar tarsometatarsal
Mandibula (temporomandibular OT)	Combined gliding and hinge	Articular disk (intraarticular fibrocartilage OT)
		Sphenomandibular
		Stylomandibular
		Temporomandibular (external lateral OT)
Medial tarsometatarsal	Gliding	Dorsal tarsometatarsal
		Interosseous cuneometatarsal
		Plantar tarsometatarsal
Metacarpophalangeal	Ball-and-socket	Accessory volar (glenoid cartilage OT; palmar BR)
		Collateral (lateral phalangeal OT)
		Transverse of heads of metacarpals (deep transverse of palm BR)
Metatarsophalangeal	Ball-and-socket	Accessory plantar (glenoid OT; plantar of digits BR)
		Collateral (lateral phalangeal OT)
		Transverse of heads of metatarsals (transverse metatarsal OT; deep transverse of sole BR)
Midtarsal [OT]	See *Transverse tarsal*	
Pisotriquetral	Gliding	Pisohamate
		Pisometacarpal
Proximal radioulnar	See *Elbow*	

This table does not include sutures, synostoses, syndesmoses, synchondroses.
It is understood that every diarthrodial joint has a capsular ligament composed of two layers.

TABLE OF MUSCLES

(See Plates 3, 4)

Name	Origin	Insertion	Innervation	Function
Abductor digiti quinti (of foot) (abductor digiti minimi BR)	Medial and lateral tubercles of calcaneus and plantar fascia	Lateral surface of base of proximal phalanx of little toe	Lateral plantar	Abducts little toe
Abductor digiti quinti (of hand) (abductor digiti minimi BR)	Pisiform and tendon of flexor carpi ulnaris	Medial face of base of proximal phalanx of little finger	Ulnar	Abducts little finger
Abductor hallucis	Medial tubercle of calcaneus and plantar fascia	Medial surface of base of proximal phalanx of great toe	Medial plantar	Abducts and flexes great toe at metatarsophalangeal joint
Abductor ossis metatarsi quinti [BR]	*Small variable portion of abductor digiti quinti of foot, inserting into fifth metatarsal*			
Abductor pollicis brevis (abductor pollicis OT)	Navicular ridge of greater multangular and transverse carpal ligament	Lateral surface of base of proximal phalanx of thumb	Median	Abducts and flexes thumb
Abductor pollicis longus (extensor ossis metacarpi pollicis OT) (see Plate 3)	Posterior aspect of ulna, radius, and interosseous membrane	Lateral aspect of base of first metacarpal and greater multangular	Dorsal interosseous branch of radial	Abducts and extends thumb
Accelerator urinae [OT]	See *Bulbocavernosus*			
Accessorius [OT]	See *Quadratus plantae*			
Accessorius [OT]	See *Iliocostalis dorsi*			
Adductor brevis	Pubis	Proximal part of linea aspera of femur and femur proximal to that line	Obturator	Adducts thigh
Adductor hallucis (1) Oblique head	Plantar fascia and bases of second, third, and fourth metatarsals	Lateral aspect of base of proximal phalanx of great toe	Lateral plantar	Adducts great toe
(2) Transverse head (adductor hallucis transversus OT) (transversus pedis OT)	Transverse metatarsal ligament and capsules of 4 lateral metatarsophalangeal joints			
Adductor hallucis transversus [OT]	See *Adductor hallucis, transverse head*			
Adductor longus (see Plates 3, 4)	Pubis	Linea aspera of femur	Obturator	Adducts thigh
Adductor magnus (see Plate 3)	(1) Inferior ramus of pubis and ramus of ischium	Linea aspera of femur	Obturator	Adducts thigh
	(2) Ischial tuberosity	Adductor tubercle of femur	Tibial	Extends hip joint
Adductor minimus (variable)	When present is separate proximal portion of adductor magnus			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Adductor pollicis (1) Oblique head	Greater and lesser multangular capitate, and bases of second, thi d and fou th metacarpals	Medial aspect of base of proximal phalanx of thumb	Ulnar	Adducts and opposes thumb
(2) Transverse head (adductor pollicis transversus OT)	Third metacarpal			
Agitator caudae (variable)	Portion of gluteus maximus. Sometimes arises separately from coccyx			
Anconeus (see Plate 3)	Dorsal surface of lat ral epico dyl f humerus	Olecranon of ulna	Radial	Extends elbow joint
Antitragicus (vestigial)	Lateral surface of antitragus	Antihelix and cauda helicis	Facial	
Arrectores pilorum (erector pili OT) (smooth muscle)	Found in corium	Hair follicles	Sympathetic	El [illegible] hairs of skin
Articularis genus (subcrureus OT)	Distal fourth of anterior surface of femur	Synovial membrane of knee joint	Femoral	D w ya vial membran proximally during extension of knee
Aryepiglotti	Apex of arytenoid cartilage	Lateral margi of epiglottis	Recurrent laryngeal	Cl [illegible] larynx
Arytenoepiglotticus [OT]	Continuation of oblique arytenoid			
Arytenoid (1) Oblique portion	[illegible] muscular process of arytenoid cartilage	Apex of opposite arytenoid cartilage	Recurrent laryngeal	Cl [illegible] larynx
(2) Transverse portion		Becomes continuous with thyroarytenoid		Approximates arytenoid cartilages
Attolens aurem [OT] (vestigial)	See *Auricularis superior*			
Attrahens aurem [OT] (vestigial)	See *Auricularis anterior*			
Auricularis (vestigial) (1) Anterior (attrahens aurem OT)	Galea aponeurotica	Helix	Facial	Move external ear
(2) Oblique	Scattered fibers across transverse sulcus of antihelix			
(3) Posterior (retrahens aurem OT)	Mastoid	Auricle		
(4) Superior (attolens aurem OT) (see Plate 3)	Galea ponerrotica	Antihelix		
(5) Transverse	Scattered fibers from concha to scapha			
Axillary arches	Occasional slips of muscl in axillary fascia			

TABLE OF MUSCLES—(Continued)

NAME	ORIGIN	INSERTION	INNERVATION	FUNCTION
Azygos uvulae [OT]	See *Uvulae*			
Biceps brachii (1) Short head (2) Long head (see Plate 2)	Tip of coracoid process of scapula Supraglenoid tuberosity of humerus	Tuberosity of radius and deep fascia of forearm	Musculocutaneous	Flexes and supinates forearm
Biceps femoris (1) Short head	Linea aspera of femur	Head of fibula, lateral condyle of femur and deep fascia on lateral aspect of knee	Peroneal	Flexes knee joint
(2) Long head (see Plates 2, 4)	Ischial tuberosity		Tibial	Flexes knee joint and extends hip joint
Biventer cervicis [OT]	See *Semispinalis capitis*			
Brachialis (brachialis anticus OT) (see Plate 3)	Anterior aspect of humerus	Coronoid process of ulna	Musculocutaneous	Flexes elbow joint
Brachioradialis (supinator longus OT) (see Plate 3)	Lateral supracondylar ridge of humerus	Lower end of radius	Radial	Flexes elbow joint
Buccinator	Alveolar process of maxilla and of mandible and pterygomandibular raphe	Blends about mouth with orbicularis oris	Facial	Compresses cheek and retracts angle of mouth
Buccopharyngeus	Portion of superior constrictor of pharynx			
Bulbocavernosus (accelerator urinae OT) (compressor vaginae OT) (ejaculator urinae OT) (sphincter vaginae OT) (bulbospongiosus BR)	Central point of perineum and median raphe of bulb	Fascia of perineum and of penis (clitoris)	Perineal	In male, compresses urethra. In female, contracts vaginal orifice and compresses vestibular bulbs
Caninus (levator anguli oris BR; OT)	Maxilla	Skin of angle of mouth	Facial	Muscle of facial expression
Cephalopharyngeus [OT]	Portion of superior constrictor of pharynx			
Ceratopharyngeus	Portion of middle constrictor of pharynx			
Cervicalis ascendens [OT]	See *Iliocostalis cervicis*			
Chondroepitrochlearis (variable)	Occasional slip of muscle in axillary fascia			
Chondroglossus (variable portion of hyoglossus)	Lesser cornu of hyoid	Side of tongue	Hypoglossal	Depresses tongue
Chondropharyngeus	Portion of middle constrictor of pharynx			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Ciliary (smooth muscle)	Scleral spur	Ciliary processes	Oculomotor parasympathetic	Visual accommodation
Meridional portion				
Radiated (reticular) portion				
Circular portion	Sphincter of ciliary body			
C yge f m lis (variable)	Occasional slip of gluteus maximus arising separately from coccyx			
Coccygeus (ischiococcygeus)	Ischial spine and sacrospinous ligament	Lateral border of lower sacrum and upper coccyx	Sacral	Helps to form pelvic diaphragm
Complexus [OT]	See *Semispinalis capitis*			
Comp s na l [BR] (mp nad OT)	See *Nasalis*			
Compressor urethrae [OT]	See *Sphincter urethrae membranaceae*			
Compressor vaginae [OT]	See *Bulbocavernosus*			
Constrictor f pharynx, inferior	Oblique line of thyroid cartilage, side of cricoid cartilage	Median raphe of posterior wall of pharynx	Accessory via pharyngeal plexus, laryngeal branches of vagus	Constricts pharynx
Constrictor of pharynx, middle	Stylohyoid ligament and both cornua of hyoid	Median raphe of pharynx	Accessory via pharyngeal plexus	Constricts pharynx
Constrictor of pharynx, superior	M dial pt yg id lamina, pterygomandibular raphe, and myl hy d ll f mandible	Pharyngeal t bercle of occiput and median raphe of pharynx	Accessory via pharyngeal plexus	Constricts pharynx
Coracobrachiali (see Plate 4)	Coracoid process of scapula	Medial aspect of shaft of humerus	Musculocutaneous	Flexes and adducts humerus
Coracobrachialis superior or brevi	Occasional proximal slip of coracobrachialis			
Corrugator cutis ani (smooth muscle)	Found in skin about anus		Sympathetic	
Corrugator supercilii	Superciliary arch of frontal bone	Skin of forehead	Facial	Muscle of facial expression
Costali [BR]	See *Iliocostalis dorsi*			
Costocervicali [BR]	See *Iliocostalis cervicis*			
C to e oid s (variable)	Occasional slip of muscle in axillary fascia			
Cremaster	Inferior margin of internal oblique muscle of abdomen	Pubic tubercle	Genitofemoral	Elevates testis

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Cricoarytenoid, lateral	Lateral surface of cricoid cartilage	Muscular process of arytenoid cartilage	Recurrent laryngeal	Approximates vocal folds
Cricoarytenoid, posterior	Dorsal surface of cricoid cartilage	Muscular process of arytenoid cartilage	Recurrent laryngeal	S p t l folds
Cricopharyngeus	Portion of inferior constrictor of pharynx			
Cricothyroid (see Plate 45)	Arch of cricoid cartilage	Lamina of thyroid cartilage	External branch of superior laryngeal	Tenses vocal cords
Crureus [OT]	See *Vastus intermedius*			
Dartos (smooth muscle)	Found in and beneath the skin of scrotum		Sympathetic	Corrugates skin of scrotum
Deltoid (see Plates 3, 4)	Clavicle, acromion, and spine of scapula	Deltoid tuberosity of humerus	Axillary	Abducts humerus, anterior fibers flex and medially rotate humerus, posterior fibers extend and laterally rotate humerus
Depressor alae nasi	Incisor fossa of maxilla	Ala and septum of nose	Facial	Pulls ala and septum of nose downward. Muscle of facial expression
Depressor anguli oris [BR]	See *Triangularis*			
Depressor epiglottidis [OT]	Fibers of thyroepiglottic			
Depressor labii inferioris [BR, OT]	See *Quadratus labii inferioris*			
Depressor septi [BR]	Portion of depressor alae nasi			
Diaphragm	Xiphoid process of sternum, lower 6 costal cartilages, and lumbar vertebrae	Central tendon	Phrenic	Acts as main muscle of inhalation; aids in expulsive actions such as parturition
Digastric				
(1) Anterior belly	Inner surface of mandible near symphysis	Lesser cornu of hyoid via fascial sling	Nerve to mylohyoid	Elevates and fixes hyoid bone
(2) Posterior belly	Mastoid notch		Facial	
Dilator naris				
(1) Anterior portion	Alar cartilage	Ala	Facial	Muscle of facial expression
(2) Posterior portion	Nasal notch of maxilla			
Dilator naris [BR]	See *Nasalis*			
Dilator pupillae (smooth muscle)	Circumference of iris	Margin of pupil	Sympathetic	Dilates pupil
Dilator tubae [OT]	See *Tensor veli palatini*			

TABLE OF MUSCLES—(Continued)

NAME	ORIGIN	INSERTION	INNERVATION	FUNCTION
Dorsoepitrochlearis (variable)	Occasional muscle slip in axillary *fascia*			
Ejaculator urinae [OT]	See *Bulbocavernosus*			
Epicranius (occipitofrontalis OT; BR)				
(1) **Anterior belly** (frontalis)	Galea aponeurotica	Skin of forehead	Facial	Elevates eyebrows and draws scalp forward
(2) Posterior belly (occipitalis)	Superior nuchal line of occiput	Galea aponeurotica	Facial	Draws scalp backward
Erector clitoridis [OT]	See *Ischiocavernosus*			
Erector penis [OT]	See *Ischiocavernosus*			
Erector pili [OT]	See *Arrectores pilorum*			
Extensor carpi radialis brevis (extensor carpi radialis brevior OT) (see Plate 3)	Lateral epicondyle of humerus	Base of second and third metacarpals	Radial	Extends wrist
Extensor carpi radialis longus (extensor carpi radialis longior OT) (see Plate 3)	Lateral epicondyle of humerus	Base of second metacarpal	Radial	Extends wrist
Extensor carpi ulnaris (see Plate 3)	Lateral epicondyle of humerus and dorsal margin of ulna	Base of fifth metacarpal	Radial	Extends wrist
Extensor digiti quinti proprius (extensor digiti minimi BR)	Lateral epicondyle of humerus	Dorsum of proximal phalanx of little finger	Radial	Extends metacarpophalangeal joint of little finger
Extensor digitorum brevis (of foot)	Dorsal surface of calcaneus	Extensor tendons of first, second, third, and fourth toes	Deep peroneal	Extends toes at metatarsophalangeal joints
Extensor digitorum communis (of hand) (extensor digitorum BR) (see Plate 3)	Lateral epicondyle of humerus	Common extensor tendon of each finger	Dorsal interosseous of forearm	Extends wrist and fingers at metacarpophalangeal joints
Extensor digitorum longus (of foot)	Anterior aspect of fibula, lateral aspect of lateral condyle of tibia, and interosseous membrane	Common extensor tendons of 4 lateral toes	Deep peroneal	Extends toes at metatarsophalangeal joints
Extensor hallucis brevis (most medial portion of extensor digitorum brevis)	Dorsal surface of calcaneus	Base of proximal phalanx of great toe	Deep peroneal	Extends metatarsophalangeal joint of great toe
Extensor hallucis longus (see Plate 3)	Medial surface of fibula and interosseous membrane	Base of terminal phalanx of great toe	Deep peroneal	Dorsiflexes ankle joint and extends great toe
Extensor indicis proprius (extensor indicis BR; OT)	Dorsal surface of ulna	Common extensor tendon of index finger	Dorsal interosseous of forearm	Extends metacarpophalangeal joint of index finger

Name	Origin	Insertion	Innervation	Function
Extensor ossis metacarpi pollicis [OT]	See *Abductor pollicis longus*			
Extensor ossis metatarsi hallucis [OT]	Occasional separate slip of insertion of extensor hallucis longus into first metatarsal			
Extensor pollicis brevis (extensor primi internodii pollicis OT) (see Plate 3)	Dorsal surface of radius and interosseous membrane	Dorsal surface of proximal phalanx of thumb	Dorsal interosseous of forearm	Extends metacarpophalangeal joint of thumb
Extensor pollicis longus (extensor secundi internodii pollicis OT)	Dorsal surface of ulna and interosseous membrane	Dorsal surface of distal phalanx of thumb	Dorsal interosseous of forearm	Extends and abducts thumb
Extensor primi internodii longus hallucis [OT]	Occasional separate slip of insertion of extensor hallucis longus into proximal phalanx of great toe			
Extensor primi internodii pollicis [OT]	See *Extensor pollicis brevis*			
Extensor secundi internodii pollicis [OT]	See *Extensor pollicis longus*			
Flexor carpi radialis (see Plate 3)	Medial epicondyle of humerus	Base of second metacarpal	Median	Flexes wrist joint
Flexor carpi ulnaris (see Plate 3)	Medial epicondyle of humerus and medial border of ulna	Pisiform, hamulus of hamate, and proximal end of fifth metacarpal	Ulnar	Flexes wrist joint
Flexor digiti quinti brevis (of foot) (flexor digiti minimi brevis BR)	Base of fifth metatarsal and plantar fascia	Lateral aspect of base of proximal phalanx of little toe	Lateral plantar	Flexes little toe at metatarsophalangeal joint
Flexor digiti quinti brevis (of hand) (flexor digiti minimi brevis BR) (variable)	Hamulus of hamate and transverse carpal ligament	Medial side of proximal phalanx of little finger	Ulnar	Flexes metacarpophalangeal joint of little finger
Flexor digitorum accessorius [BR]	See *Quadratus plantae*			
Flexor digitorum brevis	Medial tuberosity of calcaneus and plantar aponeurosis	Four tendons, one to middle phalanx of each of 4 lateral toes	Medial plantar	Flexes toes at metatarsophalangeal and proximal interphalangeal joints
Flexor digitorum longus	Posterior aspect of tibia	Four tendons, one to base of distal phalanx of each of 4 lateral toes	Tibial	Flexes toes at metatarsophalangeal and interphalangeal joints
Flexor digitorum profundus	Medial and anterior aspects of ulna and interosseous membrane	Four tendons, one to base of distal phalanx of each finger	Ulnar to medial portion, median to lateral portion	Flexes fingers primarily at distal interphalangeal joints, aids in flexing at [illegible] joints of the fingers

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Flexor digitorum sublimis (see Plate 3)	Medial epicondyle of hum rus ro id process of ulna, and anterior margin of radius	Four tendons, one to base of middle phalanx of each finger	Median	Flexes fingers primarily at proximal l t phal ge l joints. Aids in flexing wrist and meta p phalangeal joints
Flexor hallucis brevi	Plantar aspect of cuboid and plantar fascia	Base of proximal phalanx of great toe	Medial plantar	Flexes metatarsophalangeal joint of great toe
Flexor hallucis longus	Posterior aspect of fibula	Base of distal phalanx of great toe	Tibial	Flexes great toe, plantar flexes foot, supports arches of foot
Fl e as is m tacarpi pollicis [OT]	See *Opponens pollicis*			
Flexor pollicis brevi	T ra a pal ligament and ridge of greater multangular	Base of proximal phalanx of thumb	Median	Flexes metacarpophalangeal joint of thumb
Flexor pollicis longus	Anterior aspect of radius and interosseous membrane	Base of distal phalanx of thumb	Median	Flexes thumb
Frontalis (see Plate 3)	See *Epicranius*			
Gastrocnemius				
(1) Lateral head	Lateral condyle of femur	Posterior surface of calcaneus via tendo calcaneus (achillis)	Tibial	Plantar flexes ankle joint. Flexes knee joint
(2) Medial head (see Plate 3)	Medial condyle of femur			
Gemellus, inferior	T berosity of ischium	Greater trochanter of femur	Nerve to quadratus femoris	Rotates femur laterally
Gemellus, superior	Spine of ischium	Greater trochanter of femur	Nerve to obturator internus	Rotates femur laterally
Genioglossus (genio-hyoglossus OT)	Superior genial tubercle of mandible	Hyoid and lateral portion of tongue	Hypoglossal	Protrudes and depresses tongue
Geniohyoid	Inferior genial t ber cle of mandible	Body of hyoid	Descendens hypoglossi (first and second cervical)	Elevates and draws hyoid forward
Glossopalatine (palatoglossus OT; BR)	Inferior surface of soft palate	Side of tongue	Accessory	Elevates tongue and constricts anterior fauces
Glossopharyngeus	A portion of superior constrictor of phar ynx			
Gluteus maximus (see Plates 3, 4)	Lat al a f f ilium, posterior sur face of sacrum and coccyx ad sa rotuberous ligament	Gl t l tube osity and iliotibial tract	Inferior gluteal	Extends hip joint, extends trunk on legs when raising body from sitting position

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Gluteus medius (see Plates 3, 4)	Lat al f of ilium	Greater trochanter	Superior gluteal	Abducts femur
Gluteus minimus	Lat ral su f ce f ilium	Greater trochanter	Superior gluteal	Abducts and medially rotates femur
Gracilis (see Plates 3, 4)	Pubis	M di l f of tibia	Obturator	Addu t f mu flexes knee joint
Hamstrings	In l d semim mbranosus, semitendinos s, d biceps femoris			
Helicis major (vestigial)	Spina helicis	Asce ding p rt f helix	Facial	
Helicis minor (vestigial)	Spina helicis	Crux of helix	Facial	
Hyoglossus	B dy ad g ter sorn of hyoid	Sid of tongue	Hypoglossal	Depresses tongue
Iliacus	Iliac fossa and sacrum	Lesser trochanter	Femoral	Flexes hip joint and trunk on lower extremity
Iliacus minor (iliocapsularis) (variable)	Iliac fossa and sacrum	Capsule of hip joint	Femoral	
Iliococcygeus	Portion of levator ani			
Iliocostalis cervi is (costocervicalis BR) (cervicalis ascendens OT)	Upper 6 ribs	Posterior tubercles of transverse processes of fourth, fifth, and sixth cervical vertebrae	Posterior rami of cervical	The iliocostalis muscles form the lateral portion of the sacrospinalis. Extends vertebral column and assists in lateral movements of trunk
Iliocostalis dorsi (accessorius OT) (costalis BR)	Lower 6 ribs	Upper 6 ribs	Posterior rami of thoracic	Extends vertebral column and assists i lat al m ements of trunk
Ili t li lum borum (acrol m balis OT) (iliocostalis BR)	Iliac crest, lumbar rtebra sacrum d l mb d l fascia	Lower 6 ribs	Posterior rami of lumbar	Extends vertebral column and assists i late l m vements of trunk
Ili t rvi li [BR]	Composed of iliocostalis cervicis and iliocostalis dorsi			
Iliopsoas (see Plates 3, 4)	Combi ti f iliacus and psoas muscles			
Infracostals [OT]	See *Subcostals*			
Infraspinatus	Infraspinous fossa of scapula	Greater tubercl of humerus	Suprascapular nerve	R t tes hum rus laterally

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Intercostal, external (11 pairs)	Lower border of rib above	Superior border of rib below	Anterior rami of thoracic	Accessory muscle of respiration (inhalation)
Intercostal, internal (11 pairs)	Lower border of costal til ge ad lb bove	Superior border of costal cartilage and rib below	Anterior rami of thoracic	Accessory muscle of respiration (exhalation)
Interossei dorsal (of foot) (4)	Each by two heads from sides of adjacent metatarsals	Extensor tendon of each of 4 lateral toes	Lateral plantar	Abduct toes. Plantar flex at metatarsophalangeal joints and extend at interphalangeal joints
Interossei, dorsal (of hand) (4)	Each by two heads from sides of adjacent metacarpals	Extensor tendons of second, third, and fourth fingers	Ulnar	Abduct fingers. Flex t metacarpophalangeal joints, and extend at interphalangeal joints
Interossei, plantar (3)	Medial side of third, fourth, and fifth metatarsals, respectively	Extensor tendons of third, fourth, and fifth toes	Lateral plantar	Adduct toes and assist the dorsal interossei
Interossei volar (interossei, palmar OT; BR) (3)	Sides of metacarpals	Extensor tendons of second, fourth, and fifth fingers	Ulnar	Adduct fingers and assist dorsal interossei
Int rspin les (vari able, may be bsent in thoracic region)	Spinous process of vertebra bove	Spinous process of vertebra below	Posterior rami of spinal	Ext d vert bral column
Intertransversarii (intertransversales OT) (may be absent in thoracic region)	Transverse process of vertebra	Transverse process of vertebra	Anterior rami of spinal	Aid in lateral movements of vertebral column
Ischiobulbosus (variable)	Ischium	Perineal raphe	Perineal	Assists bulbocavernosus
Is hioc n sus (erector penis OT) (erector clitoridis OT)	Ischium	Crus of penis (clitoris)	Perineal	Assists in erection of penis (clitoris)
Ischiofemoralis (variable)	Occasional slip of gluteus maximus arising from ischial tuberosi ty			
Ischiopubicus (variable)	Portion of sphincter rethrae m mb naceae			
Latissimus dorsi (latissimus thoracis BR) (see Plates 3, 4)	Spines of lower 6 thoracic vertebrae, spines of lumbar vertebrae, l mbod rsal fascia, crest of ilium, lower ribs, and inferior angle of scapula	I tertubercular sulcus of humerus	Thoracodorsal	Add cts and extends humerus; used to pull body up in climbing; accessory muscle of respiration
Levator anguli oris [BR; OT]	See *Caninus*			
Levator anguli scapulae [OT]	See *Levator scapulae*			

Name	Origin	Insertion	Innervation	Function
Levator ani (1) Iliococcygeal portion (2) Pubococcygeal portion	Pelvic surface of ischial spine and pelvic fascia Pubis and pelvic fascia	Central point of perineum, anococcygeal raphe, and coccyx Some fibers form sling around the upper portion of anal canal	Anterior rami of third and fourth sacral and perineal	Supports pelvic viscera
Levator glandulae thyroideae (variable)	Hyoid	Isthmus of thyroid		
Levator labii superioris [OT; BR]	Portion of quadratus labii superioris			
Levator labii superioris alaeque nasi [OT; BR]	*See Quadratus labii superioris*			
Levator menti [OT]	*See Mentalis*			
Levator palati [OT; BR]	*See Levator veli palatini*			
Levator palpebrae superioris (see Plate 19)	Roof of orbit	Skin of upper eyelid and superior tarsus	Oculomotor	Elevates upper lid
Levator prostatae	Medial fibers of pubococcygeal portion of levator ani			
Levator scapulae (levator anguli scapulae OT) (see Plates 3, 4)	Transverse processes of upper cervical vertebrae	Vertebral margin and medial angle of scapula	Dorsal scapular and anterior rami of third and fourth cervical	Elevates shoulder; rotates inferior angle of scapula medially
Levator veli palatini (levator palati OT; BR) (see Plate 20)	Apex of petrous part of temporal bone and cartilaginous part of auditory tube	Aponeurosis of soft palate	Accessory via pharyngeal plexus	Raises soft palate
Levatores costarum (12 pairs)	Transverse processes of seventh cervical and upper 11 thoracic vertebrae	Medial to angle of corresponding rib below	Anterior rami of thoracic	Aid in raising ribs in inspiration
Lingual, inferior [OT]	*See Longitudinalis, inferior of tongue*			
Lingual, superior [OT]	*See Longitudinalis, superior of tongue*			
Longissimus (portion of sacrospinalis) (1) **Capitis** (trachelomastoideus OT)	Transverse processes of upper sixth thoracic vertebrae and articular processes of lower 4 cervical vertebrae	Mastoid process of temporal bone	Posterior rami of spinal	Longissimus muscles form middle portion of sacrospinalis. Extends vertebral column and assists in rotation and lateral movements of trunk
(2) **Cervicis** (transversalis colli OT) (transversus colli OT)	Transverse processes of upper 6 thoracic vertebrae	Transverse processes of second to sixth cervical vertebrae		
(3) **Dorsi** (thoracis BR)	Iliac crest, sacroiliac ligament, spines of lumbar and sacral vertebrae	Ribs and transverse processes of thoracic and upper lumbar vertebrae		

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Longitudinalis, of tongue (1) Inferior (inferior lingual OT) (2) Superior (superior lingual OT)	Base of tongue	Tip of tongue	Hypoglossal	Alters shape of tongue
Longus capitis (rectus capitis anticus major OT)	Transverse processes of third to sixth cervical vertebrae	Basal portion of occipital bone	Anterior rami of upper 4 cervical	Flexes head
Longus colli (longus cervicis BR) (1) Inferior oblique portion	Bodies of first 3 thoracic vertebrae	Anterior tubercles of fifth and sixth cervical vertebrae	Anterior rami of cervical	Flexes vertebral column
(2) Superior oblique portion	Transverse processes of third to fifth cervical vertebrae	Anterior tubercle of atlas		
(3) Vertical portion	Bodies of last 3 cervical and first 3 thoracic vertebrae	Bodies of second to fourth cervical vertebrae		
Lumbricals (of fingers) (4)	Tendons of flexor digitorum profundus	One to extensor tendon of each finger	Two lateral by median and two medial by ulnar	Flex at metacarpophalangeal joints and extend at interphalangeal joints
Lumbricals (of toes) (4)	Tendons of flexor digitorum longus	One to extensor tendon of each of 4 lateral toes	Medial one by medial plantar others by lateral plantar	Flex at metatarsophalangeal joints and extend at interphalangeal joints
Masseter (see Plate 3)	Arch of zygoma	Ramus and angle of mandible	Mandibular	Muscle of mastication. Closes mouth and clenches teeth
Mentalis (levator menti OT)	Incisor fossa of mandible	Skin of chin	Facial	Muscle of facial expression
Multifidus (multifidus spinae OT)	Sacrum, sacroiliac ligament, mammillary processes of lumbar vertebrae, transverse processes of thoracic vertebrae, articular processes of lower 4 cervical vertebrae	Spines of vertebrae	Posterior rami of spinal	Extends and rotates vertebral column
Mylohyoid	Mylohyoid line of mandible	Hyoid	Nerve to mylohyoid	Elevates hyoid and supports floor of mouth
Mylopharyngeal	Portion of superior constrictor of pharynx			
Nasalis (compressor nasi OT) (compressor naris BR) (dilator naris BR) (see Plate 3)	Maxilla	Skin over bridge of nose	Facial	Muscle of facial expression

Name	Origin	Insertion	Innervation	Function
Obliquus abdominis externus (see Plates 3, 4)	Lower 8 ribs	Xiphoid, linea alba, pubis, crest of ilium	Lower 6 thoracic	Supports abdominal viscera. Flexes vertebral column
Obliquus abdominis internus (see Plate 4)	Lumbodorsal fascia, iliac crest, inguinal ligament	Lower 3 ribs, linea alba, xiphoid, pubes	Lower 6 tho- [illegible] and iliohypogastri	Supports abdominal viscera. Flexes vertebral column
Obliq[illegible] [illegible]ricularis (obliquus auris OT) (vestigial)	Helix	Antihelix	Facial	
Obliquus capitis inferior	Spine of epistropheus	Transverse process of atlas	Posterior ramus of first cervical	Aids in extension and lateral movements of head
Obliquus capitis superior	Transverse process of atlas	Occipital bone	Posterior ramus of first cervical	Aids in extension and lateral movements of head
Obliquus oculi inferior (see Plate 19)	Medial aspect of floor of orbit	Sclera	Oculomotor	Rotates eyeball upward and outward
Obliquus oculi su[illegible]perior (trochl[illegible]is OT)	Margin of optic foramen	Sclera	Trochlear	Rotates eyeball outward and downward
Obturator externus	Pubis, ischium, and superficial surface of obturator membrane	Trochanteric fossa of femur	Obturator	Rotates femur laterally
Obturator internus	Pubis, ilium, ischium, and deep surface of obturator membrane	Greater trochanter of femur	Nerve to obturator internus	Rotates femur laterally
Occipitalis (see Plate 2)	See *Epicranius*			
O[illegible]ipit[illegible] f[illegible]nt[illegible]li[illegible] [OT; BR]	See *Epicranius*			
Omohyoid				
(1) Anterior belly	Intermediate tendon	Hyoid	Descendens cervicis and hypoglossal	Depresses hyoid
(2) Posterior belly (see Plates 3, 4)	Superior margin of scapula	Intermediate tendon		
Opp[illegible] digiti quinti (of foot) (opponens digiti minimi BR) (variable)	Occasional insertion of flexor digiti quinti brevis into fifth metatarsal			
Opp[illegible] digiti quinti (of hand) (opponens digiti minimi BR)	T[illegible]verse [illegible]rpal ligament and hamulus of hamate	Medial aspect of fifth metacarpal	Ulnar	Deepens palm
Opponens hallucis (variable)	Occasional insertion of some fibers of flexor hallucis brevis into shaft of first metatarsal			
Opp[illegible] p[illegible]lli[illegible] (flexor ossis metacarpi pollicis OT)	Ridge of greater multangular and transverse carpal ligament	First metacarpal	Median	Opposes thumb

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Orbicularis oculi (or orbicularis palpebrarum OT)	Medial aspect of orbit	Skin about eyelids	Facial	Closes lids
Orbicularis oris (see Plate 3)	Lies in skin about mouth		Facial	Muscle of facial expression; puckers mouth
Orbicularis palpebrarum [OT]	See *Orbicularis oculi*			
Orbitalis (smooth muscle)	Bridges inferior orbital fissure		Sympathetic	
Palatoglossus [OT BR]	See *Glossopalatinus*			
Palatopharyngeus [OT; BR]	See *Pharyngopalatinus*			
Palmaris brevis	Palmar aponeurosis	Skin of medial border of hand	Ulnar	Deepens hollow of hand
Palmaris longus (variable) (see Plate 3)	Medial epicondyle of humerus	Transverse carpal ligament and palmar aponeurosis	Median	Flexes wrist joint
Pectineus (see Plates 3, 4)	Pubis	Femur distal to lesser trochanter	Femoral (occasionally obturator)	Adducts femur and flexes hip joint
Pectoralis major (see Plates 3, 4)	Clavicle, sternum, first 6 ribs, aponeurosis of external oblique muscle of abdomen	Intertubercular sulcus of humerus	Medial and lateral anterior thoracic	Adducts and medially rotates humerus, flexes shoulder joint, depresses shoulder girdle
Pectoralis minor (see Plate 4)	Third to fifth ribs	Coracoid process of scapula	Medial and lateral anterior thoracic	Draws shoulder forward
Peroneocalcaneus (variable)	Occasional separate portion of tibialis posterior			
Peroneocalcaneus externus (variable)	Occasional slip of insertion of peroneus longus or brevis into calcaneus			
Peroneocuboideus (variable)	Occasional slip of insertion of peroneus longus or brevis into cuboid			
Peroneus accessorius (variable)	Occasional extra portion of peroneus longus or brevis			
Peroneus brevis	Lateral surface of fibula	Base of fifth metatarsal	Superficial peroneal	Everts and plantar flexes foot
Peroneus digiti quinti (variable)	Occasional extra slip of insertion of peroneus brevis into fifth toe			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Peroneus longus (see Plate 3)	Lateral condyle of tibia and lateral surface of fibula	First cuneiform and first metatarsal	Superficial peroneal	Everts and plantar flexes foot. Supports arches
Peroneus tertius	Medial surface of fibula	Fifth metatarsal	Deep peroneal	Everts and dorsiflexes foot
Pharyngopalatinus (palatopharyngeus OT; BR)	Soft palate and auditory tube	Aponeurosis of pharynx	Accessory via pharyngeal plexus	Aids in swallowing
Piriformis	Second to fourth sacral vertebrae, ilium, and sacrotuberous ligament	Greater trochanter of femur	Anterior rami of first and second sacral	Rotates femur laterally
Plantaris (variable) (see Plate 3)	Lateral condyle of femur	Calcaneus by tendo calcaneus (achillis)	Tibial	Flexes knee joint and plantar flexes ankle joint
Platysma (platysma myoides OT) (see Plate 3)	Deep fascia of cervical region	Mandible and skin around mouth	Facial	Muscle of facial expression
Popliteus	Lateral condyle of femur	Back of tibia	Tibial	Rotates tibia medially, flexes knee joint
Procerus (pyramidalis nasi OT)	Skin over nose	Skin of forehead	Facial	Muscle of facial expression
Pronator quadratus	Volar surface of ulna	Volar surface of radius	Volar interosseous	Pronates forearm
Pronator teres (pronator radii teres OT) (see Plate 3)	(1) Medial epicondyle of humerus (2) Coronoid of ulna	Lateral surface of radius	Median	Pronates forearm
Psoas major (psoas magnus OT)	Lumbar vertebrae and fascia	Lesser trochanter of femur	Anterior rami of second and third lumbar	Flexes hip joint and trunk on lower extremities
Psoas minor (psoas parvus OT) (variable)	Last thoracic and first lumbar vertebrae	Iliopectineal eminence	Anterior ramus of first lumbar	Flexes trunk on pelvis
Pterygoideus externus (pterygoid lateralis BR)	(1) Sphenoid (2) Lateral pterygoid plate	Neck of mandible and capsule of temporomandibular joint	Mandibular	Muscle of mastication, protrudes mandible
Pterygoideus internus (pterygoideus medialis BR)	(1) Lateral pterygoid plate (2) Tuberosity of maxilla	Medial surface of angle of mandible	Mandibular	Muscle of mastication, clenches teeth
Pterygopharyngeus	Portion of superior constrictor of pharynx			
Pubocavernosus	Occasional slip of ischiocavernosus arising from pubis			
Pubococcygeus	Portion of levator ani			
Puborectalis	Middle fibers of pubococcygeal portion of levator ani			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Pyramidalis abdominis (variable)	Pubis	Linea alba	Anterior ramus of lowest thoracic	Supports abdominal viscera
Pyramidalis auriculae (vestigial)	Portion of tragicus			
Pyramidalis nasi [OT]	See *Procerus*			
Quadratus femoris	Ischial tuberosity	Quadrate tubercle of femur	Nerve to quadratus femoris	Adducts and laterally rotates femur
Quadratus labii inferioris (depressor labii inferioris BR OT) (see Plate 3)	Mandible	Skin about mouth	Facial	Muscle of facial expression
Quadratus labii superioris (levator labii superioris alaeque nasi OT; BR) (see Plate 3)	Maxilla	Skin about mouth	Facial	Muscle of facial expression
Quadratus lumborum	Iliac crest, lumbodorsal fascia, and lumbar vertebrae	Last rib	Anterior rami of first 3 lumbar	Assists in lateral movements of vertebral column
Quadratus plantae (flexor digitorum accessorius BR) (accessorius OT)	Calcaneus and plantar fascia	Tendons of flexor digitorum longus	Lateral plantar	Assists in flexion of toes
Quadriceps femoris (quadriceps extensor OT)	Includes rectus femoris and 3 vastus muscles			
Rectus abdominis (see Plate 4)	Pubis	Xiphoid, fifth to seventh costal cartilages	Anterior rami of lower 6 thoracic	Supports abdominal viscera, flexes vertebral column
Rectus capitis anterior (rectus capitis anticus minor OT)	Lateral portion of atlas	Occipital bone	Anterior rami of first and second cervical	Flexes head
Rectus capitis anticus major [OT]	See *Longus capitis*			
Rectus capitis anticus minor [OT]	See *Rectus capitis anterior*			
Rectus capitis lateralis	Transverse process of atlas	Occipital bone	Anterior ramus of first cervical	Assists in lateral movements of head
Rectus capitis posterior major (rectus capitis posticus major OT)	Spine of epistropheus	Occipital bone	Posterior ramus of first cervical	Extends head
Rectus capitis posterior minor (rectus capitis posticus minor OT)	Posterior tubercle of atlas	Occipital bone	Posterior ramus of first cervical	Extends head

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Rectus femoris (1) Straight head (2) Reflected head (see Plates 3, 4)	Anterior inferior spine of ilium Dorsum ilii	Patella and ultimately int tubercle of tibia	Femoral	Extends knee joint Flexes hip joint
Rectus oculi inferior (see Plate 19)	Lower border of optic foramen	Sclera	Oculomotor	R t t y b ll d w w d nd somewhat inward
Rectus oculi lateralis (rectus oculi externus OT) (see Plate 19)	Lateral border of optic foramen	Sclera	Abducens	Rotates eyeball laterally
Rectus oculi medialis (rectus oculi internus OT) (see Plate 19)	Medial border of optic foramen	Sclera	Oculomotor	Rotates eyeball medially
Rectus oculi superior (see Plate 19)	Upper border of optic foramen	Sclera	Oculomotor	Rotates eyeball upward and somewhat inward
R t h m m m [OT] (vestigial)	See *Auricularis posterior*			
Rhomboideus major (see Plate 2)	Spines of second to fifth thoracic vertebrae	Vertebral margin of scapula	Dorsal scapular	Draws scapula backward and aids in rotating inferior angle of scapula medially
Rhomboideus minor	Spines of seventh cervical and first thoracic vertebrae	Vertebral margin of scapula	Dorsal scapular	Same as rhomboideus major
Risorius (see Plate 3)	Fascia over masseter	Skin at angle of mouth	Facial	Muscle of facial expression
Rotatores (11 pairs)	Transverse process of thoracic vertebra below	Lamina of thoracic vertebra above	Posterior rami of thoracic	Extend and rotate vertebral column
Sacrolumbalis [OT]	See *Iliocostalis lumborum*			
Sacrospinalis	Composed of longissimus, iliocostalis, and spinalis dorsi			
Salpingopharyngeus	Portion of pharyngopalatinus arising from auditory tube			
Sartorius (see Plates 2, 4)	A t ri pe i spine of ilium	Tibia	Femoral	Flexes hip and knee joints, rotates femur laterally
Sc l nu nt l (scalenus anticus OT) (see Plat 4)	Transverse processes of third to sixth cervical vertebrae	Tubercle of first rib	Anterior rami of third and fourth cervical	Flexes vertebral column laterally accessory muscle of respiration (inhalation)
Scalenus medius (see Plat 4)	Transverse processes of second to sixth cervical vertebrae	First rib	Anterior rami of third and fourth cervical	Flexes vertebral column laterally accessory muscle of respiration (inhalation)

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Scalenus post ri (l nus posticus OT) (see Plate 4)	T bercles of fourth to sixth cervical vertebrae	Second rib	Anterior rami of third and fourth cervical	Flexes vertebral column laterally accessory muscle of respiration (inhalation)
Semimembranosus (see Plate 3)	Ischial tuberosity	Medial condyle of tibia	Tibial	Flexes knee joint and extends hip joint
Semispinalis capitis (complexus OT) (biventer cervicis OT)	Transverse processes of upper 6 thoracic and articular processes of lower 4 cervical vertebrae	Occipital bone	Posterior rami of spinal	Extends head
Semispinalis cervicis (semi pi alis colli OT)	Transverse processes of upper 6 thoracic and lower 4 cervical vertebrae	Spines of second to fifth cervical vertebrae	Posterior rami of spinal	Extends and rotates vertebral column
S mi pin li d rsi (semispinalis thoracis BR)	Transverse processes of lower 6 thoracic vertebrae	Spines of last 2 cervical and first 4 thoracic vertebrae	Posterior rami of thoracic	Extends and rotates vertebral column
Semitendinosus (see Plate 3)	Ischial tuberosity	Medial aspect of proximal portion of tibia	Tibial	Flexes knee joint nd t ds hip joint
Serratus nterior (serratus anticus OT) (serratus magnus OT) (see Plates 3, 4)	Upper 8 or 9 ribs	Vertebral border of scapula	Long thoracic	Draws scapula forward, draws inferior angle laterally
Serratus posterior inferior (serratus posticus inferior OT)	Lumbodorsal fascia, spines of lowest thoracic and upper lumbar vertebrae	Last 4 ribs	Lower thoracic	Accessory muscle of respiration
Serratus posterior superior (serratus posticus superior OT)	Ligamentum nuchae, spines of seventh cervical and upper thoracic vertebrae	Second to fifth ribs	Second and third thoracic	Accessory muscle of respiration, elevates ribs
Soleus (see Plat 3)	F bula, popliteal fascia, and tibia	Calcaneus by tendo calcaneus (achillis)	Tibial	Plantar flexes ankle joint
Sphincter ani externus (subdivided into subcutaneous, superficial, and deep portions)	Tip of coccyx	Surrounds anus	Pudendal	Closes anus
Sphincter pupillae	Circular fibers of iris		Oculomotor parasympathetic portion	Constricts pupil
Sphinct urethrae m mb n e (sphincter urethrae BR) (compressor urethrae OT)	Ramus of pubis	Median raphe	Perineal	Compresses urethra
Sphinct gin (OT)	*See Bulbocavernosus*			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Spinalis capitis (variable)	Spines of upper thoracic and lowest cervical vertebrae	Occipital	Posterior rami of spinal	Extends head
Spinalis cervicis (spinalis colli OT) (variable)	Spines of lower cervical and upper thoracic vertebrae	Spines of second to fourth cervical vertebrae	Posterior rami of spinal	Extends vertebral column
Spinalis dorsi (spinalis thoracis BR)	Spines of lower 2 thoracic and upper 2 lumbar vertebrae	Spines of upper thoracic vertebrae	Posterior rami of spinal	Forms medial portion of sacrospinalis, extends vertebral column, and assists in rotation and lateral movements of vertebral column
Splenius capitis (see Plate 2)	Ligamentum nuchae, spines of last cervical and upper thoracic vertebrae	Mastoid process	Posterior rami of spinal	Extends head
Spl nius rvi i (splenius colli OT)	Ligamentum uchae, spines of last cervical and upper thoracic vertebrae	Transverse processes of pper cervical vertebrae	Posterior rami of spinal	Extends vertebral column
Stapedius	Pyramidal eminence	Neck of stapes	Nerve to stapedius	Draws base of stapes t w rd tympanal cavity
Sternalis (variable)	Fascia of chest wall	Fascia of chest wall	Anterior thoracic	
St rn l l s l l (variable)	Small separate slip of subclavius occasionally arising from sternum			
Sternocleidomastoid (see Plates 3, 4)	Manubrium of sternum and clavicle	Mastoid process	Accessory and branch from second and third cervical	Flexes head
Sternocostalis [BR]	See *Transversus thoracis*			
Sternohyoid (see Plates 2, 4)	Manubrium of sternum	Hyoid	Descendens cervicis and hypoglossal	Depresses hyoid
Sternothyroid (see Plate 4)	Manubrium of sternum	Thyroid cartilage	Descendens cervicis and hypoglossal	Depresses larynx
Styloglossus	Styloid process	Side of tongue	Hypoglossal	Elevates tongue
Stylohyoid	Styloid process	Hyoid	Facial	Elevates hyoid
Stylopharyngeus	Styloid process	Lateral wall of pharynx	Glossopharyngeal	Pulls pharynx up
Subanconeus (variable)	Posterior distal surface of humerus	Posterior aspect of elbow joint	Radial	Pulls capsule back in extension of elbow joint

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Subclavius	First costal cartilage and first rib	Clavicle	Nerve to subclavius	Depresses lateral end of clavicle
Sub est l (infracostals OT) (variable)	Lower ribs	Lower ribs	Thoracic	Muscles of respiration
Subcrureus [OT]	See *Articularis genus*			
Subscapularis	Subscapular fossa f scapula	L ss tube le f humerus	Subscapular	Rot tes h merus medially
Supinator (supinator radii brevis OT)	Lateral picondyle of humerus, fascia bout elbow joint, and shaft of ulna	Radius	Dorsal interosseous of forearm	Supinates forearm
Supin t longu [OT]	See *Brachioradialis*			
Supinator radii brevis [OT]	See *Supinator*			
Supraspinatus	Supraspinous fossa of scapula	Greater tubercle of humerus	Suprascapular	Abducts humerus
Temp ral	Temporal fossa	Coronoid process of mandible	Mandibular	Closes mouth, clenches teeth, retracts lower jaw
Tensor fasciae latae (tensor vaginae femoris OT) (see Plates 3, 4)	Iliac crest	Iliotibial tract nd ultimately into tib	Superior gluteal	Abducts leg, flexes hip joint, extends knee joint
Tensor fasciae suralis (variable)	Occasional insertion of long head of biceps femoris int tendo calcaneus (achillis)			
Tensor palati [OT BR]	See *Tensor veli palatini*			
Tensor tarsi [OT]	Portion of orbicularis oculi			
Tensor tympani	Cartilaginous portion of auditory tube	Manubrium of malleus	Mandibular	T nses membrana tympani (ear drum)
Tensor vaginae femoris [OT]	See *Tensor f scia latae*			
Tensor veli palatini (tensor palati OT BR) (dilator tubae OT)	S ph id f ss f sphenoid and wall of auditory tube	Aponeurosis of soft palate	Mandibular	Tenses soft palate and opens auditory tube
Teres major (see Plate 3)	Axillary margin of scapula	Intertubercular sulcus of humerus	Subscapular	Adducts and medially rotates humerus
Teres minor	Axillary margin of scapula	Greater t bercle of humerus	Axillary	Laterally rotates humerus
Thyroarytenoid	Lamina of thyroid cartilage	Muscular process of arytenoid cartilage	Recurrent laryngeal	Relaxes vocal cords, closes vestibule of larynx

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Thyroepiglottic (depressor epiglottidis OT)	Lamina of thyroid cartilage	Epiglottis	Recurrent laryngeal	[illegible] larynx
Thyrohyoid (see Plate 4)	Thyroid cartilage	Hyoid	Descendens hypoglossi (first and second cervical)	Draws thyroid and hyoid toward each other
Thyropharyngeus	Portion of inferior constrictor of pharynx			
Tibialis anterior (tibialis anticus OT) (see Plate 3)	Tibia and interosseous membrane	First cuneiform and first metatarsal	Deep peroneal	Dorsiflexes and inverts foot
Tibialis posterior (tibialis posticus OT)	Fibula, tibia, and interosseous membrane	Bases of metatarsals and all tarsal bones except talus	Tibial	Plantar flexes and inverts foot, supports arches of foot
Tibiofascialis anterior (variable)	Occasional slip of insertion of tibialis anterior into fascia of dorsum of foot			
Trachelomastoideus [OT]	See *Longissimus capitis*			
Tragicus (vestigial)	Crosses tragus		Facial	
Transversalis cervicis [OT]	See *Longissimus cervicis*			
Transversus abdominis (transversalis abdominis OT) (see Plate 4)	Costal cartilages of lower 6 ribs, lumbodorsal fascia, iliac crest, and inguinal ligament	Xiphoid, linea alba, inguinal ligament, and pubis	Anterior rami of lower 6 thoracic and iliohypogastric	Supports abdominal viscera and flexes vertebral column
Transversus auriculae (vestigial)	[illegible] concha		Facial	
Transversus colli [OT]	See *Longissimus cervicis*			
Transversus linguae	Median septum of tongue	Dorsum and sides of tongue	Hypoglossal	Alters [illegible] tongue
Transversus pedis [OT]	See *Adductor hallucis, transverse head*			
Transversus perinei profundus	Inferior ramus of ischium	Central point of perineum	Perineal	[illegible]
Transversus perinei superficialis (variable)	Tuberosity of ischium	Central point of perineum	Perineal	[illegible]
Transversus thoracis (sternocostalis BR) (triangularis sterni OT)	Mediastinal surface of xiphoid and body of sternum	Second to sixth costal cartilages	Thoracic	[illegible]
Transversus urethrae (inconstant)	Occasional slip of sphincter urethrae membranaceae			

TABLE OF MUSCLES—(Continued)

Name	Origin	Insertion	Innervation	Function
Transversus vaginae	Muscle in female which corresponds to sphincter urethrae membranaceae			
Trapezius (see Plates 3, 4)	Occipital bone, liga- me t m n h spines of seventh cervical and all thoracic vertebra	Clavicle, acromi n, and spine of scapula	Accessory and anterior rami of third and fourth cervical	Rotates inferior angle of scapula laterally raises shoulder, draws scapula backward
Triangularis (depressor anguli oris BR) (see Plate 3)	Mandible	Skin at angle of mouth	Facial	Muscle of facial expression
Triangul ris sterni [OT]	See *Transversus thoracis*			
Triceps brachii				
(1) Long head	Infraglenoid tuberosity	Olecranon of ulna	Radial	E t d lb w joint, long head also aids in adducting humerus
(2) Lateral head	Shaft of humerus			
(3) Medial head (see Plate 3)	Shaft of humerus			
Triceps surae [OT]	Combined gastrocnemius, soleus, and plantaris			
Trochlearis [OT]	See *Obliquus oculi superior*			
Uvulae (azygos uvulae OT)	Posterior nasal spine	Aponeurosis of soft palate	Accessory (pharyngeal plexus)	
Vastus crureus [OT]	See *Vastus intermedius*			
Vastus externus [OT]	See *Vastus lateralis*			
Vastus intermedius (crureus OT) (vastus crureus OT)	Anterior and lateral aspects of femur	Patella and ultimately into tubercle of tibia	Femoral	Extends knee joint
Vastus internus [OT]	See *Vastus medialis*			
Vastus lateralis (vastus externus OT) (see Plates 3, 4)	Capsule of hip joint and lateral aspect of femur	Patella and ultimately into tubercle of tibia	Femoral	Extends knee joint
Vastus medialis (vastus internus OT) (see Plates 3, 4)	Medial aspect of femur	Patella and ultimately int tubercle of tibia	Femoral	Extends knee joint
Verticalis linguae	Dorsal aspect of tongue	Sides and base of tongue	Hypoglossal	Alters shape of tongue
Vocalis (medial fibers of thyroarytenoid)	Thyroid cartilage	Vocal process of arytenoid cartilage	Recurrent laryngeal	Adjusts vocal cords
Zygomatic (zygomaticus major OT BR) (see Plate 3)	Zygoma	Ski bout mouth	Facial	Muscle of facial expression
Zygomaticus major [OT; BR]	See *Zygomatic*			
Zygomaticus minor [OT BR]	Portion of quadratus labii superioris			

TABLE OF NERVES

(See Plate 16)

Name	Central Attachment	Components	Branches	Distribution
Abducens (sixth cranial) (see Plate 18)	Brain stem at inferior border of pons	Motor	Muscular filaments	Lateral rectus muscle of eye
Accessory (eleventh cranial) (spinal accessory OT) (see Plates 16, 17)				
(1) Bulbar part	Lateral aspect of medulla oblongata	Motor	Internal ramus to vagus	Striate muscles of larynx and pharynx
		Parasympathetic		Thoracic and abdominal viscera
(2) Spinal part	Upper 5 or 6 cervical segments of cord	Motor	External ramus to second, third, and fourth cervical (cervical plexus)	Trapezius and sternocleidomastoid muscles
Acoustic (eighth cranial) (auditory OT; BR) (see Plate 17)	See *Cochlear* and *Vestibular*			
Alveolar anterior superior (anterior superior dental OT; BR)	Infraorbital	Somatic sensory	Filaments	Upper incisor and canine teeth, mucosa of nasal floor
Alveolar inferior (inferior dental OT; BR)	Mandibular	Motor	N. to mylohyoid muscle	Mylohyoid and anterior belly of digastric muscles
		Somatic sensory	Mental and filaments	Lower teeth, skin of lower lip, and chin
Alveolar middle superior (middle superior dental OT; BR)	Infraorbital	Somatic sensory	Filaments	Upper premolar teeth
Alveolar posterior superior (posterior superior dental OT; BR)	Maxillary	Somatic sensory	Filaments	Upper molar teeth and mucosa of maxillary sinus
Ampullary inferior	Vestibular	Sensory (movement of head in space —dynamic)	Filaments	Ampulla of posterior semicircular duct
Ampullary lateral	Vestibular	Sensory (movement of head in space —dynamic)	Filaments	Ampulla of lateral semicircular duct
Ampullary superior	Vestibular	Sensory (movement of head in space —dynamic)	Filaments	Ampulla of superior semicircular duct
Anastomotic, peroneal	See *Peroneal, anastomotic*			
Anococcygeal	Fourth and fifth sacral and coccygeal segments of cord	Somatic sensory	Filaments	Skin in vicinity of coccyx
Arnold, N. of (OT)	See *Auricular*			
Auditory (OT; BR)	See *Acoustic*			
Auricular (N. of Arnold OT)	Vagus	Somatic sensory	Filaments	Skin of auricle and external acoustic meatus

Nerves to muscles contain proprioceptive sensory fibers in addition to motor fibers; muscular branches of third, fourth, sixth, seventh, and twelfth cranial nerves may be exceptions.

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Auricular, great (see Plate 16)	Second and third cervical segments (cervical plexus)	Somatic sensory	Auricular, facial and mastoid branches	Skin about ear
Auricular, posterior	Facial	Motor	Filaments	Occipitalis and intrinsic muscles of auricle
Auriculotemporal	Mandibular	Somatic sensory	Filaments	Skin of scalp and temple
Axillary (circumflex OT BR) (see Plate 16)	Fifth and sixth cervical segments of cord (brachial plexus)	Motor	Muscular, articular and cutaneous filaments	Deltoid and teres minor muscles
		Somatic sensory	Lateral cutaneous of arm	Shoulder joint, skin of lateral aspect of shoulder and arm
Bell, N. of [OT]	See *Thoracic long*			
Bigeminus [OT]	Old term for third sacral nerve			
Buccinator (buccal BR)	Mandibular	Somatic sensory	Filaments	Skin and mucosa of cheek
Calcanean	Medial sural	Somatic sensory	Filaments	Skin of heel
Cardiac, inferior	Inferior cervical ganglion	Sympathetic. Visceral sensory	To cardiac plexuses	Heart
Cardiac, inferior or thoracic	Vagus and recurrent laryngeal	Parasympathetic. Visceral sensory	To cardiac plexuses	Heart
Cardiac, middle	Middle cervical ganglion	Sympathetic. Visceral sensory	To cardiac plexuses	Heart
Cardiac, superior	Superior cervical ganglion	Sympathetic. Visceral sensory	To cardiac plexuses	Heart
Cardiac, superior or cervical	Vagus	Parasympathetic. Visceral sensory	To cardiac plexuses	Heart
Caroticotympanic (small deep petrosal OT) (1) Inferior (2) Superior	Sympathetic plexus on internal carotid artery	Sympathetic	Tympanic plexus	Filaments
Carotid, external	Superior cervical ganglion	Sympathetic	Plexuses on external carotid artery and its branches	Filaments to smooth muscle and glands of head
Carotid, internal	Superior cervical ganglion	Sympathetic	Plexuses on internal carotid artery and its branches. See [illegible] *Caroticotympanic*	Filaments to smooth muscle and glands of head
Cervical, first (anterior division) (suboccipital OT)	First cervical segment of cord	Motor	Fibers to descendens hypoglossi	Neck muscles

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Cervical, first (posterior division) (suboccipital OT)	First cervical segment of cord	Motor	Muscular	Deep muscles of back of neck
Cervical second (anterior division)	Second cervical segment of cord	Motor Somatic sensory	Fibers to descendens cervicis and to third cervical	Neck muscles
Cervical second (posterior division)	Second cervical segment of cord	Motor Somatic sensory	Greater occipital and communicating to third cervical	Deep muscles of back of neck and skin of back of neck
Cervical, third (anterior division)	Third cervical segment of cord	Motor Somatic sensory	Lesser occipital, great auricular, supraclavicular, phrenic and cutaneous colli	Levator scapulae, sternocleidomastoid, trapezius, scalenus medius, and scalenus posterior muscles; skin of neck
Cervical, third (posterior division)	Third cervical segment of cord	Motor Somatic sensory	Third occipital muscular	Deep muscles of neck, skin of back of neck
Cervical, fourth (anterior division)	Fourth cervical segment of cord	Motor Somatic sensory	Phrenic, supraclavicular	Same as anterior division of third cervical
Cervical, fifth to eighth (posterior divisions)	Fourth to eighth cervical segments of cord	Motor Somatic sensory	Muscular and cutaneous	Deep muscles of neck and upper portion of back; skin of upper back
Cervical fifth to eighth (anterior divisions)	Fifth to eighth cervical segments of cord	Motor Somatic sensory	Nerves of brachial plexus	Muscles and skin of upper extremity
Cervical, superficial [OT]	See *Cutaneous colli*			
Chorda tympani	Intermedius	Parasympathetic	Filaments	Sublingual and submaxillary salivary glands
		Sensory (taste)		Taste buds of anterior two-thirds of tongue
Ciliary long	Nasociliary	Somatic sensory	Filaments	Eyeball
Ciliary short	Ciliary ganglion	Parasympathetic	Filaments	Ciliary muscle and constrictor fibers of iris
	Nasociliary	Somatic sensory		Eyeball
Circumflex [OT; BR]	See *Axillary*			
Cluneal, inferior (gluteal BR)	Posterior cutaneous n. of thigh	Somatic sensory	Filaments	Skin of lower gluteal region
ClunEal, medial (gluteal BR)	First, second, and third sacral (posterior divisions)	Somatic sensory	Filaments	Skin of medial portion of gluteal region
ClunEal superior (gluteal BR)	First, second, and third lumbar (posterior divisions)	Somatic sensory	Filaments	Skin of upper portion of gluteal region

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Coccygeal	Coccygeal segment of cord	Somatic sensory	Anococcygeal	Skin over coccyx
Cochlear (see Plate 20)	Brain stem at lower border of pons	Sensory (hearing)	Filaments	Spiral organ (of Corti) of cochlea
Crural, anterior [OT]	See *Femoral*			
Cutaneous, anterior of abdomen	Iliohypogastric	Somatic sensory	Filaments	Skin of lower anterior abdomen
Cutaneous, dorsal, of forearm	Radial	Somatic sensory	Filaments	Skin of lower portion of posterior aspect of arm and dorsal aspect of forearm
Cutaneous, dorsal of hand	Ulnar	Somatic sensory	Filaments	Skin of medial portion of dorsal aspect of hand
Cutaneous, dorsal intermediate, of foot	Superficial peroneal	Somatic sensory	Filaments	Skin of dorsum of foot
Cutaneous, dorsal medial, of foot	Superficial peroneal	Somatic sensory	Filaments	Skin of dorsum of foot
Cutaneous, intermediate, of thigh	Femoral	Somatic sensory	Filaments	Skin of anterior aspect of thigh
Cutaneous, lateral, of arm (upper lateral cutaneous of upper arm BR) (see Plate 16)	Axillary	Somatic sensory	Filaments	Skin of lateral aspect of arm
Cutaneous, lateral, of forearm	Musculocutaneous	Somatic sensory	Filaments	Skin of lateral aspect of forearm
Cutaneous, lateral, of leg (lateral cutaneous of calf or lateral sural)	Common peroneal	Somatic sensory	Filaments	Skin of lateral aspect of leg
Cutaneous, lateral of thigh (see Plate 16)	Second and third lumbar segments of cord (lumbar plexus)	Somatic sensory	Filaments	Skin of lateral aspect of thigh
Cutaneous, lateral palmar	Median	Somatic sensory	Digital branches	Skin of lateral portion of palm and fingers
Cutaneous, medial, of arm (lesser internal cutaneous OT)	First thoracic segment of cord (brachial plexus)	Somatic sensory	Filaments	Skin of medial aspect of arm
Cutaneous, medial, of forearm (internal cutaneous OT)	Eighth cervical and first thoracic segments of cord (brachial plexus)	Somatic sensory	Filaments	Skin of medial aspect of arm and forearm
Cutaneous, medial, of leg (medial sural) (tibial communicating OT) (sural BR)	Tibial	Somatic sensory	Filaments	Skin of medial aspect of leg
Cutaneous, medial of thigh	Femoral	Somatic sensory	Filaments	Skin of posterior aspect of buttocks and medial aspect of thigh

Name	Central Attachment	Components	Branches	Distribution
Cutaneous, medial palmar	Ulnar	Somatic sensory	Filaments. Digital	Skin of medial aspect of palm and fingers
Cutaneous, perforating (variable)	Second and third sacral segments of cord (pudendal plexus)	Somatic sensory	Filaments	Skin of posterior aspect of buttocks
Cutaneous, posterior of arm	Radial	Somatic sensory	Filaments	Skin of posterior aspect of arm
Cutaneous, posterior of thigh (small sciatic OT)	Second, third, and fourth sacral segments of cord (pudendal plexus)	Somatic sensory	Filaments	Skin of posterior aspect of buttocks, thigh, and perineum
Cutaneous colli (anterior cutaneous of neck BR) (superficial cervical OT)	Second and third cervical segments of cord (cervical plexus)	Somatic sensory	Filaments	Skin of anterior triangle of neck
Dental [OT; BR]	See *Alveolar*			
Descendens cervicis	Second and third cervical segments of cord (cervical plexus)	Motor	T… ansa hypoglossi	Geniohyoid, thyrohyoid, sternothyroid, sternohyoid, and omohyoid muscles
Descendens hypoglossi	First and second cervical segments of cord (cervical plexus)	Motor	To ansa hypoglossi	Same as above
Digital (of fingers) (see Plate 16)	Median, ulnar and superficial ramus of radial	Somatic sensory	Filaments	Skin of digits
Digital (of toes) (see Plate 16)	Superficial peroneal, deep peroneal, medial plantar and lateral plantar	Somatic sensory	Filaments	Skin of digits
Dorsal, of penis (clitoris)	Pudendal	Somatic sensory	Filaments	Skin of penis (clitoris)
Ethmoidal, anterior (internal nasal BR)	Nasociliary	Somatic sensory	External nasal, filaments	Mucosa of nasal cavity mucosa of anterior ethmoidal air sinus
Ethmoidal, posterior	Nasociliary	Somatic sensory	Filaments	Mucosa of sphenoidal and posterior ethmoidal air sinuses
Facial (seventh cranial) (see Plates 14, 17, 20)	Brain stem at inferior border of pons	Motor	Stapedius, posterior auricular temporal, zygomatic, buccal, mandibular and cervical rami	Stapedius, stylohyoid, posterior belly of digastric, and muscles of facial expression
		Parasympathetic. Sensory (taste)	See *Intermedius*	

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Femoral (anterior crural OT) (see Plate 10)	Second third and fourth lumbar segments of cord (lumbar plexus)	Motor. Somatic sensory	Muscular, articular saphenous, medial, and intermediate cutaneous of thigh	Pectineus, quadriceps femoris, articularis genus muscles; skin of anterior aspect of thigh and medial aspect of leg; hip and knee joints
Frontal (see Plate 16)	Ophthalmic	Somatic sensory	Supr bit l supratrochlear and nasociliary	Skin of upper eyelid, forehead, and scalp
Furcalis [OT]	Old term for fourth l mbar nerve			
G nitofemoral (genitocrural OT)	First and second lumbar segments f d (l u m b plexus)	Som tic sensory	External spermatic and lumboinguinal	Skin of thigh and se t m (labi majus)
Glossopalatine	See *Intermedius*			
Glossopharyngeal (ninth cranial) (see Plate 17)	Lateral aspect of medulla blongata	Motor	Muscular pharyngeal, tonsillar lingual, tympanic	Styl pharyngeus and muscles of soft palate and pharynx l ph y g al plexus;
		Visceral sensory		mucosa of posterior one-third of tongue, pharynx, middle ear and mastoid air cells
		Sensory (taste)		taste buds of posterior one-third of tongue;
		Parasympathetic		parotid gland via otic ganglion
Gluteal [BR] (cutaneous)	See *Clunial*			
Gluteal inferior	Fifth lumbar first and second sacral segments of cord (sacral plexus)	Motor	Filaments	Glut us m ximus muscle
Gluteal, superior	Fourth and fifth lumbar and first sacral segments of cord (sacral plexus)	Motor	Filaments	Gluteus medius and minimus and tensor fasciae latae muscles
Hamstrings, N. to	Fourth and fifth lumbar upper 3 sacral segme ts of cord (sacral plexus)	Motor	Filaments	Bi p f m ris, semimembranosus, semitendinosus, add ctor magnus muscles
Hemorrhoidal, inferior	Pudendal	Motor Somatic sensory	Filaments	E t r l phi ct about anus
Hypogastric	Aorti plexus	Sympathetic	T pelvic plexus	Pelvic viscera
Hyp gl ssal (tw lfth cranial) (see Plate 17)	Medulla oblongata	Motor	Filaments	Intrinsic and extrinsic muscles of tongue

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Iliohypogastric	First lumbar segment of cord (lumbar plexus)	Motor Somatic sensory	Filaments	Muscles of anterior abdominal wall; skin of buttocks and anterior abdominal wall
Ilioinguinal	First lumbar segment of cord (lumbar plexus)	Motor Somatic sensory	Anterior scrotal (labial) Filaments	Muscles of anterior abdominal wall; skin of anterior abdominal wall and [illegible] (labium majus)
Infraorbital (see Plate 16)	Maxillary	Somatic sensory	Anterior and middle superior alveolar inferior palpebral, external nasal, and superior labial	Upper teeth mucosa of nasal floor and skin of face
Infratrochlear	Nasociliary	Somatic sensory	Filaments	Skin of eyelids and root of nose
Intercostobrachial (intercostohumeral OT)	Second th[illegible] segment of cord (brachial plexus)	Somatic sensory	Filaments	Skin of axilla and medial aspect of arm
Intermedius (glossopalatine) (Wrisberg OT) (see Plate 17)	Brain stem at inferior border of pons	Parasympathetic. Sensory (taste)	Greater superficial petrosal [illegible] tympani communicating ramus with tympanic plexus external superficial petrosal (inconstant)	Glands of palate and nose, taste buds [illegible] thirds of tongue, submaxillary and sublingual salivary glands
Interosseous, dorsal of forearm (posterior interosseous OT; BR)	Radial	Motor Somatic sensory	Muscular and articular filaments	Extensor carpi radialis brevis, [illegible] digit[illegible] digiti quinti proprius, extensor carpi ulnaris; wrist joint
Interosseous, volar of forearm (anterior interosseous OT BR)	Median	Motor Somatic sensory	Muscular and articular filaments	Flexor pollicis longus, flexor digitorum profundus, pronator quadratus; wrist joint
Jugular	Communicating branch of superior cervical ganglion to vagus			
Labial, inferior	Inferior alveolar	Somatic sensory	Filaments	Skin of lower lip
Labial, superior	Infraorbital	Somatic sensory	Filaments	Skin of upper lip and cheek
Lacrimal	Ophthalmic	Somatic sensory	Filaments	Skin of region of lateral commissure of eye

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Laryngeal external [BR]	External branch of superior laryngeal nerve			
Laryngeal, inferior	Recurrent laryngeal	Motor	Filaments	Intrinsic muscles of larynx
Laryngeal, internal [BR]	Internal branch of superior laryngeal nerve			
Laryngeal recurrent	Vagus	Motor Parasympathetic	Inferior laryngeal, cardiac, and muscular	Intrinsic muscles of larynx, inferior constrictor of pharynx, trachea, and esophagus
Laryngeal superior	Vagus	Motor Visceral sensory	External and internal laryngeal branches	Cricothyroid and inferior constrictor of pharynx, mucosa of larynx, and base of tongue
Lingual	Mandibular	Somatic sensory	Filaments	Mucosa of floor of mouth and anterior two-thirds of tongue
Lumbar (5 pairs)	Lumbar segments of cord	Motor Somatic sensory Visceral sensory Sympathetic (upper segments only)	Anterior and posterior divisions	Posterior divisions to muscles and skin of lower back; anterior divisions, lumbar plexus, to muscles and skin of lower abdomen and lower extremity, pelvic viscera, and genitalia
Lumboinguinal	Genitofemoral	Somatic sensory	Filaments	Skin of anterior aspect of thigh
Malar [OT]	See *Zygomaticofacial*			
Mandibular	Trigeminal	Motor (masticator n.) Somatic sensory	Spinosus, internal pterygoid, auriculotemporal, lingual, inferior alveolar and branches to external pterygoid, temporal, and masseter muscles	Tensor tympani, tensor veli palatini, mylohyoid, anterior belly of digastric and muscles of mastication; lower teeth, mucosa of anterior two-thirds of the tongue, floor of mouth, cheek and skin of lower portion of face, meninges
Masticator	Motor portion of trigeminal nerve			
Maxillary	Trigeminal	Somatic sensory	Middle meningeal, posterior superior alveolar, zygomatic, and infraorbital	Meninges, skin of upper portion of face, upper teeth, and mucosa of nose, palate, and cheeks

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Median (see Plate 16)	Fifth to eighth cervical and first thoracic segments of cord (brachial plexus)	Motor Somatic sensory	Articular, muscular and volar interosseous	Pronator teres, flexor carpi radialis, palmaris longus, flexor digitorum sublimis, flexor digitorum profundus, small muscles of thumb, two lateral lumbricals; skin of palm, hand, and fingers; elbow, wrist and hand joints
Meningeal	Vagus	*Somatic sensory*	*Filaments*	*Meninges*
Meningeal, middle (recurrent OT)	Maxillary	Somatic sensory	Filaments	Meninges
Mental	Inferior alveolar	Somatic sensory	Filaments	Skin of lower lip and chin
Musculocutaneous (of lower extremity) [OT; BR]	See *Peroneal, superficial*			
Musculocutaneous (of upper extremity) (see Plate 16)	Fourth, fifth, and sixth cervical segments of cord (brachial plexus)	Motor Somatic sensory	Lateral cutaneous of forearm, muscular	Coracobrachial, biceps brachii, and brachialis muscles; skin of lateral aspect of forearm
Musculospiral [OT]	See *Radial*			
Mylohyoid, N. to	Inferior alveolar	Motor	Filaments	Mylohyoid and anterior belly of digastric muscles
Nasal, external	Infraorbital	Somatic sensory	Filaments	Skin of side of nose
Nasal, external (anterior nasal OT)	Nasociliary	Somatic [sic] sensory	Filaments	Skin of lower half and tip of nose
Nasal, lateral	Nasociliary	Somatic sensory	Filaments	Mucosa of lateral wall of nasal cavity
Nasal, medial	Nasociliary	Somatic [sic] sensory	Filaments	Mucosa of nasal septum
Nasal, posterior inferior lateral	Great palatine	Somatic sensory	Filaments	Mucosa of inferior nasal concha
Nasal, posterior superior lateral (short sphenopalatine BR)	Maxillary via sphenopalatine ganglion	Somatic sensory	Filaments	Mucosa of superior and middle nasal conchae
Nasociliary (nasal OT)	Ophthalmic	Somatic sensory	Anterior and posterior ethmoidal, [illegible] medial nasal, lateral [illegible] short ciliary	Eyeball, skin and mucosa of eyelids and nose, mucosa of ethmoidal and sphenoidal air cells

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Nasopalatine (l ng communicating BR)	Ma ll y v ph n p l tl e ganglion	Somatic sensory	Posterior superior medial nasal rami	Mucosa of nose and hard palate
Obturator (see Plate 16)	Second, third, and fourth lumbar segments of cord (lumbar plexus)	Motor Somatic sensory	M s ul r cuta neous, and articular filaments	Obturator externus, gracilis, adductor brevis dd ctor l gus, adductor m gnus muscles skin of medial aspect of thigh; knee and hip joints
Obturat r accessory (variable)	Second, third, and fourth lumbar segments of cord (lumbar plexus)	Motor Somatic sensory	Muscular and cutaneous filaments	Pectineus muscle, reinforces obturator n.
Obturator internus, N to	Fifth lumbar first and second sacral segments of cord (sacral plexus)	Motor Somatic sensory	Filaments	Obturator internus and superior gemellus muscles; sacroiliac joint
Occipital, greater see Plate 16)	Second cervical segment of cord	Som tic sensory	Filaments	Skin of posterior portion of scalp
Occipital, lesser see Plate 16)	Second and third cer cal segme ts of d (l plexus)	Som tic sensory	Filaments	Skin of posterior portion of scalp and posterior aspect of auricle
Occipital, third (occipital minimus OT)	Th rd cervical segment of cord	Somatic sensory	Filaments	Skin of posterior aspect of neck and scalp
Oculomotor (third cranial) see Plates 17 18)	Brain stem in region of posterior p f ted b stance	Motor Parasympathetic	Muscular root to ciliary ganglion	Levator palpebrae superioris, medial rectus, inferior rectus, superior rectus, i f ior oblique muscles ciliary and sphincter pupillae muscles
Olfactory (first cranial)	Olfactory bulb	Sensory (smell)	Filaments	Olfactory mucosa
Ophthalmic	Trigeminal	Somatic sensory	Tentorii, lacrimal, frontal, supratrochlea nas ciliary communicating to oculomotor trochlear d abducens	Skin of forehead, upper eyelids, and anterior portion of scalp, orbit and eyeball; meninges, mucosa of nose, frontal, [illegible]
Optic second cranial) see Plates 18, 19)	Optic tracts	Sensory (sight)	Filaments	Retina
Orbital	Maxillary via sphenopalatine ganglion	Somatic sensory		[illegible]
Orbital (OT)	See *Zygomatic*			
Palatine nterior (gre t [illegible] BR) (large posterior palatine OT)	Maxillary via sphenopalat ne ganglion	Somatic sensory		[illegible] of hard and [illegible]

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Palatine, middle (external) (lesser palatine BR) (accessory posterior palatine OT)	Maxillary via sphenopalatine ganglion	Somatic sensory	Filaments	Mucosa of soft palate, uvula, and palatine tonsil
Palatine, posterior (lesser palatine BR) (small posterior palatine OT)	Maxillary via sphenopalatine ganglion	Somatic sensory	Filaments	Mucosa of soft palate uvula, and palatine tonsil
Palpebral inferior	Infraorbital	Somatic sensory	Filaments	Lower eyelid
Palpebral, superior	Lacrimal, frontal, and nasociliary	Somatic sensory	Filaments	Upper eyelid
Pathetic [OT]	See Trochlear			
Perineal	Pudendal	Motor Somatic sensory	Filaments	Skin of root of penis and scrotum (labium majus)
Peroneal anastomotic (communicating fibular OT)	Common peroneal	Somatic sensory	Filaments fibers may unite with fibers of medial cutaneous of leg	Skin of lateral aspect of leg, heel and ankle
Peroneal, common (lateral popliteal BR) (external popliteal OT) (see Plate 16)	Fourth and fifth lumbar first and second sacral segments of cord (sacral plexus)	Motor Somatic sensory	Articular muscular lateral cutaneous of leg, peroneal anastomotic, recurrent peroneal, deep peroneal, and superficial peroneal	Short head of biceps femoris, knee joint
Peroneal, deep (anterior tibial OT; BR)	Common peroneal	Motor Somatic sensory	Muscular articular and cutaneous filaments	Tibialis anterior [illegible] digitorum [illegible] and brevis, and peroneus tertius muscles skin of region between first and second toes; ankle joint and joints of feet
P[illegible] (musculocutaneous OT BR)	Common peroneal	Motor Somatic sensory	Muscular and cutaneous filaments	Peroneus longus [illegible] skin of lower lateral aspect of leg and dorsum of foot
Petrosal, deep	Plexus on internal carotid artery	Sympathetic	N of pterygoid canal	[illegible] branches of sphenopalatine ganglion
Petrosal, external superficial (inconstant)	Geniculate ganglion	Not known	Filaments	T[illegible] plexus on middle meningeal artery
Petrosal, greater superficial	Geniculate ganglion	Visceral sensory Parasympathetic	N of pterygoid canal and on to sphenopalatine ganglion	Mucosa [illegible] of palate

NAME	CENTRAL ATTACHMENT	COMPONENTS	BRANCHES	DISTRIBUTION
Petrosal, lesser superficial	Formed by union of anastomotic ramus from geniculate ganglion and tympanic branch of glossopharyngeal	Parasympathetic	To otic ganglion	Paroud gland
Petrosal, small deep [OT]	See *Caroticotympanic*			
Pharyngeal	Glossopharyngeal	Visceral sensory	Filaments	Mucosa of pharynx
Pharyngeal	Maxillary via sphenopalatine ganglion	Somatic sensory	Filaments	Mucosa of pharynx
Phrenic (see Plate 16)	Third, fourth, and fifth cervical (cervical plexus)	Motor	Filaments	Diaphragm
Piriformis, N. to	Fourth and fifth lumbar and first sacral segments of cord (sacral plexus)	Motor	Filaments	Piriformis
Plantar lateral	Tibial	Motor Somatic sensory	Muscular cutaneous, and articular filaments	Quadratus plantae, adductor hallucis, small muscles of little toe, interossei, and lateral three lumbrical muscles of foot skin of lateral aspect of sole tarsal and metatarsal joints
Plantar medial	Tibial	Motor Somatic sensory	Muscular cutaneous, and articular filaments	Abductor hallucis, flexor digitorum brevis, flexor hallucis brevis, and first lumbrical of foot skin of medial aspect of sole tarsal and metatarsal joints
Pneumogastric [OT]	See *Vagus*			
Popliteal lateral [BR]	See *Peroneal, common*			
Popliteal, medial [BR]	See *Tibial*			
Pterygoid external	Mandibular	Motor Somatic sensory	Filaments	External pterygoid muscle temporomandibular joint
Pterygoid internal	Mandibular	Motor	Filaments	Internal pterygoid, tensor tympani, and tensor veli palatini muscles
Pterygoid canal N. of (N. of Vidius OT)	Formed by union of greater superficial and deep petrosal nerves	Parasympathetic. Sympathetic	Filaments to long branches of sphenopalatine ganglion	Glands of palate and nose

TABLE OF NERVES—(Continued)

NAME	CENTRAL ATTACHMENT	COMPONENTS	BRANCHES	DISTRIBUTION
Pudendal (pudic OT)	Second, third, and fourth sacral segments of cord (sacral plexus)	Motor Somatic sensory	Inferior hemorrhoidal, perineal, and dorsal n. of penis (clitoris)	Muscles and skin of perineal region
Quadratus femoris, N. to	Fourth and fifth lumbar and first sacral segments of cord (sacral plexus)	Motor Somatic sensory	Filaments	Quadratus femoris and inferior gemellus; hip joint
Radial (musculospiral OT) (see Plate 16)	Fifth, sixth, seventh, and eighth cervical segments of cord (brachial plexus)	Motor Somatic sensory	Muscular superficial branch (radial OT) deep branch (posterior interosseous OT) dorsal interosseous, digital and articular	Triceps brachii, anconeus extensor muscles of forearm, brachioradialis skin of posterior aspect of arm and dorsal aspect of forearm and hand elbow carpal and hand joints
Recurrent	See *Laryngeal, recurrent*			
Recurrent [OT]	See *Spinosus*			
Recurrent [OT]	See *Tentorii*			
Rhomboids, N. to [OT BR]	See *Scapular dorsal*			
Saccular	Vestibular root of acoustic	Sensory (position of head in space—static)	Filaments	Macula acustica of saccule
Sacral (5 pairs)	Sacral segments of cord	Motor Somatic sensory Parasympathetic Visceral sensory	Anterior and posterior *divisions*	Posterior divisions *to muscles and skin* of lower back and sacral region; anterior divisions to sacral plexus supplying muscles and skin of lower extremity [illegible] branches to hypogastric and pelvic plexuses supplying pelvic viscera and genitalia
Saphenous (see Plate 16)	Femoral	Somatic sensory	Filaments	Skin of medial aspect of leg and foot
Scapular dorsal (N. to rhomboids OT BR) (posterior scapular OT)	Fifth cervical segment of cord (brachial plexus)	Motor	Filaments	Levator scapulae rhomboideus major and rhomboideus minor
Sciatic (see Plate 16)	Fourth and fifth lumbar; first, second, and third sacral segments of cord (sacral plexus)	Composed of tibial, common peroneal, and n. to hamstrings		
Sciatic, small [OT]	See *Cutaneous, posterior of thigh*			

Name	Central Attachment	Components	Branches	Distribution
Scrotal, anterior (labial)	Ilioinguinal	Somatic sensory	Filaments	Skin of pubic area and scrotum (labium majus)
Scrotal posterior (labial)	Perineal	Somatic sensory	Filaments	Skin of posterior portion of scrotum (labium majus)
Spermatic, external	Genitofemoral	Somatic sensory	Filaments	Skin of scrotum (labium majus) and thigh near superficial inguinal ring
Sphenopalatine	Maxillary	Somatic sensory	Nasal and palatine branches of sphenopalatine ganglion	Via sphenopalatine ganglion and palatine nerves to nose and palate
Sphenopalatine, long [BR]	See *Nasopalatine*			
Sphenopalatine, short [BR]	See *Nasal, posterior superior lateral*			
Spinal (31 pairs) (see Plate 17)	See *Cervical, Thoracic, Lumbar, Sacral,* and *Coccygeal*			
Spinal accessory [OT] (see Plate 17)	See *Accessory*			
Spinosus (recurrent OT)	Mandibular	Somatic sensory	Filaments	Meninges and mucosa of mastoid air cells
Splanchnic, greater	Fifth to ninth or tenth sympathetic ganglions	Sympathetic. Visceral sensory	Filaments	Cardiac, pulmonary, esophageal, and celiac plexuses
Splanchnic, lesser	Ninth and tenth sympathetic ganglions	Sympathetic. Visceral sensory	Filaments	Celiac plexus
Splanchnic, lowest	Last thoracic sympathetic ganglion	Sympathetic. Visceral sensory	Filaments	Renal plexus
Stapedius, N. to	Facial	Motor	Filaments	Stapedius muscle
Subclavius, N. to	Fourth, fifth, and sixth cervical (brachial plexus)	Motor	Filaments	Subclavius muscle
Subcostal [BR]	Anterior ramus of twelfth thoracic nerve			
Suboccipital [OT]	See *Cervical, first*			
Subscapular	Fifth and sixth cervical segments of cord (brachial plexus)	Motor	Filaments	Subscapularis and teres major muscles
Supraacromial [OT]	See *Supraclavicular posterior*			

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Supraclavicular, anterior (medial supraclavicular BR) (suprasternal OT)	Third and fourth cervical segments of cord (cervical plexus)	Somatic sensory	Filaments	Skin of lower anterior aspect of neck and anterior chest wall; sternoclavicular joint
Supraclavicular middle (intermediate supraclavicular BR) (supraclavicular OT)	Third and fourth cervical segments of cord (cervical plexus)	Somatic sensory	Filaments	Skin of lower anterior aspect of neck and anterior chest wall
Supraclavicular, posterior (lateral supraclavicular BR) (supraacromial OT)	Third and fourth cervical segments of cord (cervical plexus)	Somatic sensory	Filaments	Skin of lateral aspect of neck and shoulder
Supraorbital (see Plate 16)	Frontal	Somatic sensory	Filaments	Skin of upper eyelid and forehead, mucosa of frontal sinus
Suprascapular	Fourth, fifth, and sixth cervical segments of cord (brachial plexus)	Motor Somatic sensory	Muscular and articular filaments	Supraspinatus and infraspinatus muscles; shoulder and acromioclavicular joints
Suprasternal [OT]	See *Supraclavicular anterior*			
Supratrochlear	Frontal	Somatic sensory	Filaments	Skin of medial aspect of forehead, root of nose, and upper eyelid
Sural [BR]	Formed by union of medial sural and anastomotic ramus of common peroneal			
Sural, lateral (lateral cutaneous n. of calf or leg)	Common peroneal	Somatic sensory	Filaments	Skin of lateral aspect of leg
Sural, medial (tibial communicating OT)	Tibial	Somatic sensory	Cutaneous and articular filaments	Skin of back of leg; ankle and tarsal joints
Temporomalar [OT]	See *Zygomatic*			
Tentorii (recurrent OT)	Ophthalmic	Somatic sensory	Filaments	Meninges
Terminalis	Medial olfactory tract	Not known	Filaments associated with olfactory n.	Not known
Thoracic (12 pairs)	Thoracic segments of cord	Motor Somatic sensory Visceral sensory Sympathetic	Anterior and posterior divisions	Posterior divisions to muscles and skin of back; anterior divisions to brachial plexus (muscles and skin of upper extremity) and muscles and skin of abdominal wall; sympathetic fibers and visceral sensory fibers for various viscera and blood vessels

TABLE OF NERVES—(Continued)

Name	Central Attachment	Components	Branches	Distribution
Thoracic, lateral anterior (lateral pectoral BR) (external anterior thoracic OT)	Fifth, sixth, and seventh cervical segments of cord (brachial plexus)	Motor	Filaments	Pectoralis major and minor muscles
Thoracic, long (N to serratus anterior BR) (posterior thoracic OT) (N of Bell OT)	Fifth sixth and seventh cervical segments of cord (brachial plexus)	Motor	Filaments	Serratus anterior muscle
Thoracic, medial anterior (medial pectoral BR) (internal anterior thoracic OT)	Eighth cervical and first thoracic segments of cord (brachial plexus)	Motor	Filaments	Pectoralis major and minor muscles
Thoracodorsal (long subscapular OT)	Sixth, seventh, and eighth cervical segments of cord (brachial plexus)	Motor	Filaments	Latissimus dorsi muscle
Tibial (internal popliteal OT) (medial popliteal BR) (see Plate 16)	Fourth and fifth lumbar and first, second, and third sacral segments of cord (sacral plexus)	Motor Somatic sensory	Muscular articular medial sural, medial, and lateral plantar	Muscles of back of leg and sole of foot, skin of back of leg and foot; knee and ankle joints
Tibial posterior [BR]	Posterior branch of tibial			
Tibial, recurrent	Common peroneal	Motor Somatic sensory	Muscular and articular filaments	Tibialis anterior muscle; knee and proximal tibiofibular joints
Trigeminal (fifth cranial) (see Plate 17)	Brain stem at inferior surface of pons. See *Ophthalmic*, *Maxillary*, and *Mandibular*			
Trochlear (fourth cranial) (pathetic OT) (see Plate 17)	Dorsal surface of midbrain	Motor	Filaments	Superior oblique muscle of eyeball
Tympanic (N of Jacobson OT)	Glossopharyngeal	Visceral sensory Parasympathetic	Tympanic plexus	Mucosa of middle ear mastoid air cells and auditory tube; filaments to otic ganglion and on to parotid gland
Ulnar (see Plate 16)	Eighth cervical and first thoracic segments of cord (brachial plexus)	Motor Somatic sensory	Muscular articular and cutaneous filaments	Flexor carpi ulnaris, flexor digitorum profundus, adductor pollicis, muscles of hypothenar eminence, interossei and medial two lumbricals of hand; skin of medial portion of hand; elbow wrist, carpal, and metacarpal joints
Ulnar collateral (inconstant)	Radial	Proprioceptive	Filaments	Brachialis muscle

Name	Central Attachment	Components	Branches	Distribution
Utricular	Vestibular	Sensory (position of head in space—static)	Filaments	Macula acustica of utricle
Vagus (tenth cranial) (pneumogastric OT) (see Plate 17)	Lateral aspect of medulla oblongata	Motor	Pharyngeal and laryngeal	Striate muscles of pharynx and larynx
		Parasympathetic	Cardiac, esophageal, and abdominal	Cardiac musculature, smooth muscle of thoracic and abdominal viscera
		Somatic sensory	Auricular (N of Arnold OT), meningeal	Skin of external auditory meatus, meninges
		Visceral sensory	Pharyngeal, laryngeal, thoracic, and abdominal branches	Mucosa of pharynx, larynx, thoracic and abdominal viscera
Vestibular (part of eighth cranial) (see Plate 20)	Brain stem near restiform body	Sensory (movement and position of head in space—dynamic and static)	Utricular, ampullary and saccular	Ampullae of semicircular canals and maculae acusticae of utricle and saccule
Vidius, N. of (OT)	See *Pterygoid canal N of*			
Wrisberg's (OT)	See *Intermedius*			
Zygomatic (temporomalar or orbital OT)	Maxillary	Somatic sensory	Zygomaticofacial and zygomaticotemporal	Skin in region of zygoma and temple
Zygomaticofacial (malar OT)	Zygomatic	Somatic sensory	Filaments	Skin over zygoma
Zygomaticotemporal (temporal OT)	Zygomatic	Somatic sensory	Filaments	Skin over anterior portion of temple

TABLE OF VEINS

(See Plates 9 10)

The following list includes only those veins and venous sinuses and plexuses which have no accompanying artery of the same name, or which differ considerably from an accompanying artery. For all other veins—as, for example, the deep veins of the upper or lower extremity or of the body wall—see the Table of Arteries for the accompanying artery of the same name: these veins have tributaries with the same distribution as the branches of the accompanying arteries.

Name of Vein	Region or Tributary Drained	Location	Drains into
Accessory hemiazygos (v. hemiazygos accessoria BNA)	Three or four upper left intercostal spaces	Left side of vertebral column	Either azygos or hemiazygos
Anterior facial (v. facialis anterior BNA)	Continuation of angular vein	Anterior side of face	Joins with posterior facial to form common facial
Anterior jugular (jugularis anterior BNA)	Anterior part of neck	Near midline of neck	External jugular or subclavian
Azygos (azygos BNA)	Right chest wall beginning from ascending lumbar vein	Right side of vertebral column	Superior vena cava
Basilar plexus (plexus basilaris BNA)	Both inferior petrosal sinuses	Basilar part of occipital bone	Anterior part of vertebral plexus
Basilic (v. basilica BNA)	Ulnar side of hand and forearm	Medial side of biceps muscle	Joins the brachial to form the axillary
Basivertebral (vv. basivertebrales BNA)	Bodies of vertebrae	Bodies of vertebrae	External and internal vertebral plexuses
Cavernous sinus (sinus cavernosus BNA)	Superior ophthalmic	Lateral to sella turcica	Superior and inferior petrosal sinuses
Cephalic (v. cephalica BNA)	Radial side of hand and forearm	Lateral side of arm	Axillary
Common facial (facialis communis BNA)	Formed by junction of anterior and posterior facial veins	Below angle of mandible	Internal jugular
Coronary sinus (sinus coronarius BNA)	Most of the veins of the heart	Posterior part of coronary sulcus	Right atrium
Coronary v. of stomach (coronaria ventriculi BNA)	Both surfaces of stomach	Lesser curvature of stomach	Portal
Diploic veins (vv. diploicae BNA)	Diploë of cranium	Inside cranial bones	Either internally into the sinuses or externally into veins like the occipital or supraorbital
Emissary veins	Venous sinuses inside cranial cavity such as the transverse sinus	Apertures in skull, named as follows according to location: condyloid, mastoid, occipital, parietal, and postcondyloid	Veins external to the skull, as the posterior auricular or occipital
External jugular (v. jugularis externa BNA)	Posterior auricular and posterior division of posterior facial	Side of neck	Subclavian
External vertebral plexus (plexus venosi vertebrales externi BNA)	Vertebrae and surrounding muscles	Anterior and posterior to vertebral column	Basivertebral and intervertebral veins
Great cardiac (v. cordis magna BNA)	Anterior side of ventricles	Anterior longitudinal sulcus of heart	Coronary sinus

TABLE OF VEINS—(Continued)

Name of Vein	Region or Tributary Drained	Location	Drains into
Great cerebral (great v of Galen) (cerebri magna [Galeni] BNA)	Internal cerebral veins	Below and behind splenium of corpus callosum	Straight sinus
Great saphenous (saphena magna BNA)	Medial side of leg and thigh	Medial side of leg and thigh	Femoral
Hemiazygos (hemiazygos BNA)	Left ascending lumbar	Left side of vertebral column	Azygos
Hemorrhoidal plexus (plexus haemorrhoidalis BNA)	Rectum	Rectum, submucosa, and external to muscular coat	Superior middle, and inferior hemorrhoidal veins
Hepatic	Substance of the liver	Converge t posterior surface f liver	Inferior vena cava
Inferior ophthalmic (v ophthalmica inferior BNA)	Lower part of orbit	Floor of orbit	Pterygoid plexus and cavernous sinus
Inferior petrosal sinus (sinus petrosus inferior BNA)	Cavernous sinus	Inferior petrosal sulcus	Internal jugular
Inferior sagittal sinus (sinus sagittalis inferior BNA)	Falx cerebri	Lower edge of falx ce bri	Straight sinus
Inferior vena cava (vena cava inferior BNA)	Common iliac veins, blood from lower extremities and abdomen	Front of vertebral column, right of aorta	Right atrium
Innominate (vv anonymae dextra et sinistra BNA)	Internal jugular and subclavian	Root of neck	Superior vena cava
Intercavernous sinuses (anterior and posterior) (sinus intercavernosus anterior et posterior BNA)	Connect the two ca ernous sinuses		
Internal cerebral (vv cerebri internae BNA)	Terminal and choroid veins	Beneath splenium of corpus callosum	Great cerebral
Internal jugular (jugularis interna BNA)	Brain, face, and neck, transverse sinus	Side of neck	Innominate
Internal vertebral plexus (plexus venosi vertebrales interni BNA)	Vertebrae and meninges	Within the vertebral canal anterior and posterior to the spinal cord	Intervertebral veins
Middle cardiac (v cordis media BNA)	Posterior side of heart	Posterior longitudinal sulcus of heart	Coronary sinus
Oblique v of left atrium (obliqua v of Marshall OT) (obliqua atrii sinistri BNA)	Left atrium	Back of left atrium	Coronary sinus
Occipital sinus (sinus occipitalis BNA)	Region around foramen magnum	Attached margin of falx cerebelli	Confluence of the si nuses
Paraumbilical (vv paraumbilicales [Sappeyi] BNA)	Commences at umbilicus	Round ligament of liver	Portal
Portal (portae BNA)	Superior mesenteric and lienal veins	Lesser omentum	Sinusoids of liver
Posterior facial (facialis posterior BNA)	Superficial temporal and internal maxillary veins	In parotid gland	Common facial and external jugular veins

TABLE OF VEINS—(Continued)

Name of Vein	Region or Tributary Drained	Location	Drains into
Posterior v. of left ventricle (v. posterior ventriculi sinistri BNA)	Left ventricle	Diaphragmatic surface of left ventricle of heart	Coronary sinus
Prostatic plexus (plexus prostaticus BNA)	Prostatic veins	Fascial sheath of prostate gland	Pudendal and vesical plexuses
Pterygoid plexus (plexus pterygoideus BNA)	Veins corresponding to branches of internal maxillary artery	Between pterygoid muscles	Internal maxillary
Pudendal plexus (plexus pudendalis BNA)	Deep dorsal vein of penis	Behind symphysis pubis, in front of bladder	Vesical and hypogastric veins
Pyloric (v. coronaria ventriculi BNA)	Stomach	Lesser curvature of stomach	Portal
Sigmoid sinus (sinus transversus BNA)	Transverse sinus	Groove on posterior surface of temporal bone	Internal jugular
Small cardiac (v. cordis parva BNA)	Back of right atrium and ventricle	Coronary sulcus	Coronary sinus
Small saphenous (v. saphena parva BNA)	Leg and foot	Back of leg	Popliteal
Straight sinus (sinus rectus BNA)	Inferior sagittal sinus and great cerebral vein	Junction of falx cerebri with tentorium cerebelli	Transverse sinus
Superior ophthalmic (v. ophthalmica superior BNA)	Tributaries corresponding to branches of ophthalmic artery	Orbit	Cavernous sinus
Superior petrosal sinus (sinus petrosus superior BNA)	Cavernous sinus	Superior petrosal sulcus of temporal	Transverse sinus
Superior sagittal sinus (sinus sagittalis superior BNA)	Superior cerebral veins, diploic veins, and dura mater	Attached margin of falx cerebri	Confluence of the sinuses or transverse sinus
Superior vena cava (vena cava superior BNA)	Head, chest wall, and upper extremities is formed by junction of two innominate veins	Behind first and second intercostal spaces and right margin of sternum	Right atrium
Transverse sinus (sinus transversus BNA)	The right one is usually continuation of the superior sagittal sinus, the left of the straight sinus	Attached margin of tentorium cerebelli	Internal jugular; the terminal portion is often called the sigmoid sinus
Vesical plexus (plexus vesicalis BNA)	Pudendal and prostatic plexuses	Lower part of bladder and base of prostate gland	Hypogastric
Vorticose (venae vorticosae BNA)	Veins of eyeball	Eyeball	Ciliary and superior ophthalmic veins

TABLE OF NORMAL VALUES OF BLOOD CONSTITUENTS

All values are expressed in mg. per 100 cc. of whole blood unless otherwise stated. Figures represent weighted averages of the observations of several investigators.

Constituent	Value
Acetone bodies, total (as acetone)	0.5–1.0
Albumin (serum)	3–6 Gm. %
Amino acids (as amino acid N)	5 0–8 0
Amylase (serum or plasma)	40–200 Somogyi units
Ascorbic acid (reduced)	0.6–2.5
Base, total (serum)	150–160 mEq./L.
Bilirubin (serum)	
Direct	0.0–0.4
Total	0.0–1.0
Calcium, total (serum)	9–11
	4 5–5.5 mEq./L.
Carbon dioxide combining power (plasma)	55–75 vol. %
Carbon dioxide content (arterial)	45–55 vol. %
Carbon dioxide content (venous)	50–60 vol. %
	22–27 mEq./L.
Carotene (plasma or serum)	0.1
Chlorides (as chloride ion) (plasma or serum)	350–380
	97 106 mEq./L.
Chlorides (as sodium chloride) (plasma or serum)	570–620
Cholesterol, total (plasma or serum)	150–250
Cholesterol esters	60–75% of total cholesterol
Creatine	3–7
Creatinine	1 2
Fat, neutral (serum)	0–370
Fatty acids	190–450
Fibrinogen (plasma)	0.2–0 4 Gm. %
Globulin (serum)	1.5–3 Gm. %
Glucose (Folin Wu method)	70–120
Guanidine	0.1–0.4
Hemoglobin	
For children	13 ± 1 Gm. %
For men	16 ± 2 Gm. %
For women	14 ± 2 Gm. %
Hydrogen-ion concentration	pH 7.3–7.5
Icterus index (serum)	4–6 units
Iodine (total)	3–13 micrograms %
Iron, inorganic (serum)	0 05–0.18
Ketone bodies (same as acetone bodies)	0.5–1 0
Lactic acid.	5–20
Lipase (serum) in terms of N/20 NaOH used per cc. of serum	0 2–1 cc.
Lipids, total (serum)	400–800
Magnesium (serum)	1 3
Nitrogen, nonprotein	25–35
Nitrogen, undetermined	4–18
Oxygen capacity	16–24 vol. %
Oxygen content (arterial)	15–23 vol. %
Oxygen content (venous)	10–18 vol. %
Phenols (free)	1 2
Phosphatase (acid)	0.0–1.2 Bodansky units
Phosphatase (alkaline)	
For adults	1–3 4 Bodansky units
For children	5–12 Bodansky units
Phospholipid (serum) (as lecithin)	150–300
Phosphorus (serum) inorganic	
For adults	2.5–4.0
For children	3.5–6 0
Potassium (serum)	16–22
	4–6 mEq./L.
Proteins (serum)	6–8 Gm. %
(Also see *Albumin*, *Globulin*)	
Sodium (serum)	310–335
	133–148 mEq./L
Solids, total	19–23%
Specific gravity	1.056
Specific gravity (plasma)	1.052–1.063
Sugar (see *Glucose*)	
Sulfates, inorganic as S (serum)	0 9–1.5
Urea	11 30
Urea nitrogen	5–18
Uric acid.	2–4
Water content	77–81%

TABLE OF ELEMENTS

Name	Symbol	Atomic Weight*†	Atomic Number
Actinium	Ac	227	89
Alabamine (now *astatine*)	Ab	[210]	85
Aluminum	Al	26.98	13
Americium	Am	[243]	95
Antimony (*stibium*)	Sb	121.76	51
Argentum. See *Silver*			
Argon	A	39.944	18
Arsenic	As	74.91	33
Astatine (formerly *alabamine*)	At	[210]	85
Aurum. See *Gold*.			
Barium	Ba	137.36	56
Berkelium	Bk	[249]	97
Beryllium (formerly *glucinum*)	Be	9.013	4
Bismuth	Bi	209.00	83
Boron	B	10.82	5
Bromine	Br	79.916	35
Cadmium	Cd	112.41	48
Calcium	Ca	40.08	20
Californium	Cf	[249]	98
Carbon	C	12.011	6
Cerium	Ce	140.13	58
Cesium	Cs	132.91	55
Chlorine	Cl	35.457	17
Chromium	Cr	52.01	24
Cobalt	Co	58.94	27
Columbium (now *niobium*)	Cb	92.91	41
Copper (*cuprum*)	Cu	63.54	29
Cuprum. See *Copper*			
Curium	Cm	[245]	96
Cyclonium (now *promethium*)	Cy	[145]	61
Dysprosium	Dy	162.51	66
Erbium	Er	167.2	68
Europium	Eu	152.0	63
Ferrum. See *Iron*.			
Florentium (now *promethium*)	Fl	[145]	61
Fluorine	F	19.00	9
Francium (formerly *virginium*)	Fr	[223]	87
Gadolinium	Gd	157.20	64
Gallium	Ga	69.72	31
Germanium	Ge	72.60	32
Glucinum. See *Beryllium*.			
Gold (*aurum*)	Au	197.0	79
Hafnium	Hf	178.50	72
Helium	He	4.003	2
Holmium	Ho	164.94	67
Hydrargyrum. See *Mercury*			
Hydrogen	H	1.0080	1
Illinium (now *promethium*)	Il	[145]	61
Indium	In	114.82	49
Iodine	I	126.91	53
Iridium	Ir	192.2	77
Iron (*ferrum*)	Fe	55.85	26
Kalium. See *Potassium*			
Krypton	Kr	83.80	36
Lanthanum	La	138.92	57
Lead (*plumbum*)	Pb	207.21	82
Lithium	Li	6.940	3
Lutetium	Lu	174.99	71
Magnesium	Mg	24.32	12
Manganese	Mn	54.94	25
Masurium (now *technetium*)	Ma	[99]	43
Mendelevium	Mv	[256]	101

* Weights as adopted by International Union of Pure and Applied Chemistry 1955.

† A value in brackets denotes the mass number of the isotope of longest known half-life.

NOTE. At this time, elements 99 and 100 are reported as having been isolated. The mass number of each of their most stable isotopes known is 253 and 254, respectively.

TABLE OF ELEMENTS—(Continued)

Name	Symbol	Atomic Weight*†	Atomic Number
Mercury (*hydrargyrum*)	Hg	200.61	80
Molybdenum	Mo	95.95	42
Natrium. See *Sodium*.			
Neodymium	Nd	144.27	60
Neon	Ne	20.183	10
Neptunium	Np	[237]	93
Nickel	Ni	58.71	28
Niobium (formerly *columbium*)	Nb	92.91	41
Niton. See *Radon*.			
Nitrogen	N	14.008	7
Osmium	Os	190.2	76
Oxygen	O	16	8
Palladium	Pd	106.4	46
Phosphorus	P	30.975	15
Platinum	Pt	195.09	78
Plumbum. See *Lead*.			
Plutonium	Pu	[242]	94
Polonium	Po	210	84
Potassium (*kalium*)	K	39.100	19
Praseodymium	Pr	140.92	59
Promethium (formerly also *cyclonium*, *florentium*, *illinium*)	Pm	[145]	61
Protactinium	Pa	231	91
Radium	Ra	226.05	88
Radon	Rn	222	86
Rhenium	Re	186.22	75
Rhodium	Rh	102.91	45
Rubidium	Rb	85.48	37
Ruthenium	Ru	101.1	44
Samarium	Sm	150.35	62
Scandium	Sc	44.96	21
Selenium	Se	78.96	34
Silicon	Si	28.09	14
Silver (*argentum*)	Ag	107.880	47
Sodium (*natrium*)	Na	22.991	11
Stannum. See *Tin*.			
Stibium. See *Antimony*.			
Strontium	Sr	87.63	38
Sulfur, sulphur	S	32.066‡	16
Tantalum	Ta	180.95	73
Technetium (formerly *masurium*)	Tc	[99]	43
Tellurium	Te	127.61	52
Terbium	Tb	158.93	65
Thallium	Tl	204.39	81
Thorium	Th	232.05	90
Thulium	Tm	168.94	69
Tin (*stannum*)	Sn	118.70	50
Titanium	Ti	47.90	22
Tungsten (*wolfram*)	W	183.86	74
Uranium	U	238.07	92
Vanadium	V	50.95	23
Virginium (now *francium*)	Vi	[223]	87
Wolfram. See *Tungsten*.			
Xenon	Xe	131.30	54
Ytterbium	Yb	173.04	70
Yttrium	Y	88.92	39
Zinc (*zincum*)	Zn	65.38	30
Zincum. See *Zinc*.			
Zirconium	Zr	91.22	40

* Weights as adopted by International Union of Pure and Applied Chemistry 1953.

† A value in brackets denotes the mass number of the isotope of longest known half-life.

‡ Because of natural variations in the relative abundances of the isotopes of sulfur the atomic weight of sulfur has a range of ±0.003.

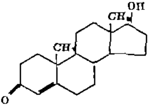
NOTE: At this time *elements 99 and 100* are reported as having been isolated. The mass number of each of their most stable isotopes known is 253 and 254, respectively.

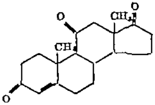
TABLE OF ENZYMES

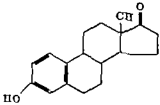
Name and Class	Distribution	Substrate	End Products
Hydrolases			
Carbohydrases		Carbohydrates	
1. Amylase	Pancreas, saliva, malt, etc.	Starch, dextrin, etc.	Maltose and dextrins
2. Lactase	Intestinal juice and mucosa	Lactose	Dextrose and galactose
3. Maltase	Intestinal juice, yeast, etc.	Maltose	Dextrose
4. Saccharase (sucrase, invertase)	Intestinal juice, yeast, etc.	Sucrose	Dextrose and levulose
5. Emulsin (glucosidase)	Plants	β-Glucosides	Dextrose, etc.
6. Cellulase	Molds, bacteria, and snails	Cellulose	Various carbohydrate fragments
Nucleases		Nucleic acid and derivatives	
1. Polynucleotidase	Pancreatic juice, intestinal juice, etc.	Nucleic acid	Nucleotides
2. Nucleotidase	Intestinal juice, and other tissues	Nucleotides	Nucleosides and phosphoric acid
3. Nucleosidase	Animal tissues	Nucleosides	Carbohydrate and bases
Amidases		Amino compounds and amides	
1. Arginase	Liver	Arginine	Ornithine and urea
2. Urease	Bacteria, soybean, jack bean, etc.	Urea	Carbon dioxide and ammonia
3. Glutaminase	Liver, etc.	Glutamine	Glutamic acid and ammonia
4. Transaminase	Animal tissues	Glutamic acid and oxalacetic acid, etc.	α-Ketoglutaric acid, aspartic acid, etc.
Purine Deaminases		Purine bases and derivatives	
1. Adenase	Animal tissues	Adenine	Hypoxanthine and ammonia
2. Guanase	Animal tissues	Guanine	Xanthine and ammonia
Peptidases		Peptides	
1. Aminopolypeptidase	Yeast, intestines, etc.	Polypeptides	Simpler peptides and amino acids
2. Carboxypeptidase	Pancreas	Polypeptides	Simpler peptides and amino acids
3. Dipeptidase	Plant and animal tissues and bacteria	Dipeptides	Amino acids
4. Prolinase	Animal tissues and yeast	Proline peptides	Proline and simpler peptides
Proteinases		Proteins	
1. Pepsin	Gastric juice	Proteins	Proteoses, peptones, etc.
2. Trypsin	Pancreatic juice	Proteins, proteoses, and peptones	Polypeptides and amino acids
3. Cathepsin	Animal tissues	Proteins	Proteoses and peptones
4. Rennin	Calf stomach	Casein	Paracasein
5. Chymotrypsin	Pancreatic juice	Proteins, proteoses, and peptones	Polypeptides and amino acids
6. Papain	Papaya, other plants	Proteins, proteoses, and peptones	Polypeptides and amino acids
7. Ficin	Fig sap	Proteins	Proteoses, etc.
8. Enterokinase	Intestinal juice	Trypsinogen	Trypsin
Esterases		Esters	Alcohols and acids
1. Lipase	Pancreas, castor bean, etc.	Fats	Glycerol and fatty acids
2. Esterases	Liver, etc.	Ethyl butyrate, etc.	Alcohols and acids
3. Phosphatases	Plant and animal tissues	Esters of phosphoric acid	Phosphate and alcohol

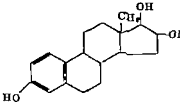
Modified from Hawk, Oser and Summerson. *Practical Physiological Chemistry*, 13th ed. New York, Blakiston Division, McGraw-Hill Book Company, Inc.

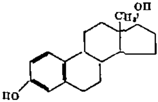
TABLE OF ENZYMES—(Continued)

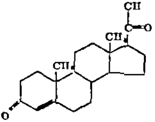












Name and Class	Distribution	Substrate	End Products
Esterases (Continued)			
4. Sulfatases	Animal and plant tissues	Esters of sulfuric acid	Sulfuric acid and alcohol
5. Cholinesterase	Blood	Acetylcholine	Choline and acetic acid
6. Cholinacetylase	Brain and other animal tissues	Choline	Acetylcholine
7. Lecithinase	Kidney, brain, intestinal mucosa, and snake venom	Lecithin	Diglycerides, choline and phosphate
Iron Enzymes			
1. Catalase	All living organisms except few species of microorganisms	Hydrogen peroxide	Water and oxygen
2. Cytochrome oxidase	All living organisms except few species of microorganisms	Reduced cytochrome C in the presence of oxygen	Oxidized cytochrome C and water
3. Peroxidase	Nearly all plant cells	A large number of phenols, aromatic amines, etc., in the presence of H_2O_2	Oxidation product of substrate and water
Copper Enzymes			
1. Tyrosinase (polyphenol oxidase, monophenol oxidase)	Plant and lower animal tissues	Various phenolic compounds	Oxidation product of substrate
2. Ascorbic acid oxidase	Plant tissues	Ascorbic acid in the presence of oxygen	Dehydroascorbic acid
Enzymes Containing Coenzymes I and/or II			
1. Alcohol dehydrogenase	Animal and plant tissues	Ethyl alcohol and other alcohols	Acetaldehyde and other aldehydes
2. Malic dehydrogenase	Animal and plant tissues	*l*(−)Malic acid	Oxalacetic acid
3. Isocitric dehydrogenase	Animal and plant tissues	*l* Isocitric acid	Oxalosuccinic acid
4. Lactic dehydrogenase	Animal tissues and yeast	Lactic acid	Pyruvic acid
5. *β*-Hydroxybutyric dehydrogenase	Liver, kidneys, and heart	*l*-*β*-Hydroxybutyric acid	Acetoacetic acid
6. Glucose dehydrogenase	Animal tissues	*d*-Glucose	*d*-Gluconic acid
7. *Robison ester* dehydrogenase	Erythrocytes and yeast	Robison ester (hexose-6-phosphate)	Phosphohexonic acid
8. Glycerophosphate dehydrogenase	Animal tissues	Glycerophosphate	3-Phosphoglyceric aldehyde
Enzymes Which Reduce Cytochrome			
1. Succinic dehydrogenase (as ordinarily prepared)	Plants, animals, and microorganisms	Succinic acid	Fumaric acid
Yellow Enzymes			
1. Warburg old yellow enzyme	Yeast	Reduced coenzyme II	Oxidized coenzyme II and reduced yellow enzyme
2. Diaphorase	Bacteria, yeasts, higher plants, and animals	Reduced coenzyme I	Oxidized coenzyme I and reduced diaphorase
3. Haas enzyme	Yeast	Reduced coenzyme II	Oxidized coenzyme II and reduced yellow enzyme
4. Xanthine oxidase	Animal tissues	Hypoxanthine, xanthine, aldehydes, reduced coenzyme I, etc.	Xanthine, uric acid, acids, oxidized coenzyme I, etc. In presence of air H_2O_2
5. D-Amino acid oxidase	Animal tissues	α-Amino acids + O_2	α-Keto-acids + NH_3 + H_2O

TABLE OF ENZYMES—(Continued)

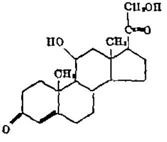
Name and Class	Distribution	Substrate	End Products
Yellow Enzymes (Continued)			
6. Amino acid oxidases	Animals and snake venom	L-Amino acids	Keto acids and ammonia
7. TPN-Cytochrome C reductase	Yeast and liver	Reduced coenzyme II and cytochrome C	Oxidized coenzyme II and reduced cytochrome C
8. DPN-Cytochrome C reductase	Liver and yeast	Reduced coenzyme I and cytochrome C	Oxidized coenzyme I and reduced cytochrome C
Hydrases			
1. Fumarase	Living organisms in general	Fumaric acid + H_2O	L-Malic acid
2. Aconitase	Animals and plants	Citric acid	*cis*-Aconitic acid and isocitric acid
3. Enolase	Animal tissues and yeast	2-Phosphoglyceric acid	Phosphopyruvic acid + H_2O
4. Aspartase	Bacteria	Aspartic acid	Fumaric acid and ammonia
5. Serine deaminase	Animal tissues	Serine	Pyruvic acid and ammonia
Mutases			
1. Aldehyde mutase	Liver and yeast	2 Acetaldehyde + H_2O	Acetic acid and ethyl alcohol
2. Glyoxalase	Living organisms in general	Methylglyoxal and other substituted glyoxals	D(−)Lactic acid
Desmolases			
1. Zymohexase (aldolase)	All cells	Fructose-1,6-diphosphate	Dihydroxyacetone phosphoric acid and phosphoglyceric acid
2. Carboxylase	Plant tissues	Pyruvic acid	Acetaldehyde and CO_2
3. β-Keto carboxylases	Animals, bacteria, and plants	β-Keto acids	α-Keto acids
4. Amino acid decarboxylases	Plants, animals, and bacteria	Amino acids	Amines and CO_2
5. Carbonic anhydrase	Erythrocytes	Carbonic acid	$CO_2 + H_2O$
Other Enzymes			
1. Phosphorylase	Animal and plant tissues	Starch or glycogen and phosphate	Glucose-1-phosphate
2. Phosphohexoisomerase	Animal and plant tissues	Glucose-6-phosphate	Fructose-6-phosphate
3. Hexokinase	Yeast and animal tissues	Adenosinetriphosphate + glucose	Adenosinediphosphate + glucose-6-phosphate
4. Phosphoglucomutase	Plants and animals	Glucose-1-phosphate	Glucose-6-phosphate

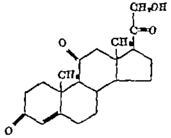
TABLE OF HORMONES

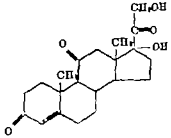
A. Steroid Hormones

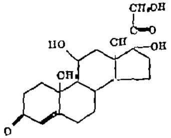
Hormone	Source	Physiologic Action	Structure
Testosterone	Testis	Androgenic	
Adrenosterone	Adrenal cort	Androgenic	
Estrone	Ovary Placenta Adrenal cortex	Estrogenic	
Estriol	Placenta	Estrogenic	
Estradiol	Ovary Placenta	Estrogenic	
Progesterone	Placenta Corpus luteum Adrenal cortex	Progestational activity	

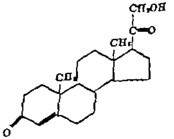
A. Steroid Hormones—(Continued)

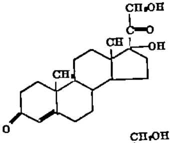


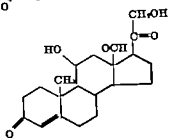












Hormone	Source	Physiolog Action	Structure
Corticosterone	Adrenal cortex	Effects in adrenalectomized animals 1 Maintains lif 2. I fluences carboby drate metabolism 3. P t t ag in t *stress, such as poisons*, cold heat, etc. 4. Influence on electrolyte metabolism 5. Influence on muscular efficiency	
11 Dehydrocorticosterone	Adrenal cortex	See *Corticosterone*	
17-Hydroxy-11-dehydrocorticosterone	Adrenal cortex	See *Corticosterone* Antiarthritic (?)	
17 Hydroxyc rticosterone	Adrenal cortex	See *Corticosterone*	
11-Desoxycorticosterone	Adrenal cortex	Effects in adrenalectomized animals 1. Maintains life 2. Influence on electrolyte metabolism	

TABLE OF HORMONES—(Continued)

A. Steroid Hormones—(Continued)

Hormone	Source	Physiologic Action	Structure
17-Hydroxy-11-desoxy corticosterone	Adrenal cortex	See *11 Desoxycorticosterone*	
Aldosterone (Electrocortin)	Adrenal cortex	1. In very small amounts, maintains life of adrenalectomized animals 2. Potent regulator of metabolism of sodium and potassium 3. Less effective regulator of carbohydrate metabolism	

B. Protein and Protein-derivative Hormones

Hormone	Source	Physiologic Action	Molecular Weight	Presence of Carbohydrate
Luteinizing hormone (LH)	Anterior pituitary	Stimulates interstitial cells. Produces corpora lutea	100,000 (Hog) 40,000 (Sheep)	Present
Follicle-stimulating hormone (FSH)	Anterior pituitary	*Male:* I size of testes and stimulates spermatogenesis; *Female:* I size of ovary and follicular growth		Present
Pregnant mares' serum hormone (PMS)	Placenta	Produces effects of both LH and FSH	30,000?	Present
Prolactin	Anterior pituitary	Produces lactation after previous alveolar development	32,000	Absent
Growth hormone	Anterior pituitary	A factor in somatic growth	44,000	Absent
Thyrotropic hormone	Anterior pituitary	Regulation of thyroid	10,000 (Beef) 2_,000 (Sheep)	
Adrenotropic hormone	Anterior pituitary	Regulation of adrenal cortex	20,000 (Hog and Sheep)	Absent
Oxytocin	Posterior pituitary	Oxytocic activity Milk-ejecting activity	1,007	Absent
Vasopressin	Posterior pituitary	Antidiuretic activity Pressor activity	1,084? (Beef)	Absent
Parathyroid hormone (parathyrin)	Parathyroid	Control of calcium and phosphorus metabolism		Absent
Insulin	Pancreas	Regulates oxidation of carbohydrates in tissues and storage of glycogen in liver	12,000?	Absent

TABLE OF HORMONES—(Continued)

B. Protein and Protein-derivative Hormones—(Continued)

Hormone	Source	Physiologic Action	Molecular Weight	Presence of Carbohydrate
Epinephrine	Ad[illegible]l medulla	Sympathomimetic activity	183.2	Absent
Thyroxin	Thyroid	Controls metabolic rate, etc.	776.9	Absent
Diiodotyrosine	Thyroid	See *Thyroxin*	433.0	Absent
Thyroglobulin	Thyroid	See *Thyroxin*	675,000	Absent
Secretin	Intestinal mucosa	Stimulates flow of pancreatic juice		
Cholecystokinin	Intestinal mucosa	Stimulates contraction of gall-bladder		
Enterogastrone	Intestinal mucosa	Inhibits contractions and secretion of stomach		
Enterocrinin	Intestinal mucosa	Stimulates secretion of glands of small intestine		

TABLE OF RADIOACTIVE AND OTHER ISOTOPES COMMONLY USED IN MEDICINE*

Name and Symbol†	Radiation: Type and Energy‡	Radioactive Half-life	Medical Uses
Deuterium (hydrogen, heavy) $_1H^2$	None; naturally occurring		*Investigative:* tracer studies
Tritium $_1H^3$	Beta (0.02)	12.5 years	*Investigative:* tracer studies
Carbon 13 $_6C^{13}$	None; naturally occurring		*Investigative:* tracer studies
Carbon 14 $_6C^{14}$	Beta (0.154)	5,700 years	*Investigative:* tracer studies
Nitrogen 15 $_7N^{15}$	None; naturally occurring		*Investigative:* tracer studies
Oxygen 18 $_8O^{18}$	None; naturally occurring		*Investigative:* tracer studies
Sodium 24 $_{11}Na^{24}$	Beta (1.39) Gamma (1.38, 2.76)	14.9 hours	*Diagnostic:* study of peripheral vascular disease, extracellular fluid volume, formation of cerebrospinal fluid, and sodium metabolism
Phosphorus 32 $_{15}P^{32}$	Beta (1.71)	14.3 days	*Therapeutic:* chronic myeloid leukemia, polycythemia vera, lymphomas, and widespread carcinomatosis *Diagnostic:* determination of blood volume; study of peripheral vascular disease; localization of brain tumors
Sulfur 35 $_{16}S^{35}$	Beta (0.167)	87.1 days	*Investigative:* tracer studies
Potassium 42 $_{19}K^{42}$	Beta (3.58, 2.04) Gamma (1.51)	12.5 hours	*Diagnostic:* localization of brain tumors; determination of intracellular fluid volume; study of potassium metabolism
Chromium 51 $_{24}Cr^{51}$	Gamma (0.32)	26 days	*Diagnostic:* study of blood volume with radioactively labeled erythrocytes
Iron 59 $_{26}Fe^{59}$	Beta (0.26, 0.46) Gamma (1.1, 1.3)	45 days	*Diagnostic:* study of blood volume, iron metabolism, and blood transfusion
Cobalt 60 $_{27}Co^{60}$	Beta (0.31) Gamma (1.17, 1.33)	5.2 years	*Therapeutic:* source of teleroentgen therapy and interstitial radiation for malignancies sensitive to gamma radiation
Strontium 90 $_{38}Sr^{90}$	Beta (0.61)	25 years	*Therapeutic:* benign conditions of the eye such as pterygia, traumatic corneal ulceration, corneal scars, vernal conjunctivitis, and hemangioma of the eyelid and in preparation for corneal transplant
Ruthenium 106 $_{44}Ru^{106}$	Beta (0.04)	290 days	*Therapeutic:* same as strontium 90

TABLE OF MEDICAL SIGNS AND SYMBOLS

Symbol	Meaning
	ation
	generation
	th
	zero
	consumption
	meta-
	ortho-
p-	para-
℞	[L. recipe]. Take
S.	[L. signa]. Write
c̄	[L. cum]. With
S̄, ss	[L. semis]. One-half
m, M	[L. misce]. Mix
O.	[L. octarius]. Pint
C.	[L. congius]. Gallon
C.	Centigrade
F.	Fahrenheit
°	degree
♏	minim
℈	scruple
ʒ	drachm (apothecaries')
fʒ	fluidrachm
oz.	ounce (avoirdupois)
℥	ounce (troy)
f℥	fluidounce
μ	micron
μμ	micromicron

Symbol	Meaning
σ	1/1000 of second
π	3.1416—ratio of circumference of a circle to its diameter
lb.	pound (usually avoirdupois)
lb.	pound (usually apothecaries)
Gm.	gram
mEq.	milliequivalent
®	registered trade-mark status
mg %	milligrams per cent
vol. %	volume per cent
mμ	millimicron, micromillimeter
μg.	microgram
cm.	centimeter
cc.	cubic centimeter
L.	liter
ml	milliliter
gr	grain
□, ♂	male
○, ♀	female
	birth
†	death
−	negative
+	positive
±	either positive or negative, not definite
⇌	denotes reversible reaction
#	number
	value considered as a vector in electrocardiography
w/v	weight in volume

TABLE OF THE MOST COMMON MICROORGANISMS PATHOGENIC TO MAN

A. Bacteria (See Plate 30)

Name	Resulting Disease
Bacillus anthracis	Anthrax
Bartonella bacilliformis	Oroya fever
Borrelia duttonii	Tick-borne relapsing fever
Borrelia recurrentis	Louse-borne relapsing fever
Borrelia vincentii	Vincent angina
Brucella abortus **Brucella melitensis** **Brucella suis**	Undulant fever
Clostridium botulinum	Botulism Food poisoning
Clostridium septicum	Gas gangrene
Clostridium tetani	Lockjaw Tetanus
Clostridium welchii	Gas gangrene
Corynebacterium diphtheriae	Diphtheria
Coxiella burnetii	Q fever
Diplococcus pneumoniae	Lobar pneumonia
Eberthella typhosa	Typhoid fever
Escherichia coli	Peritonitis Urinary-tract infection
Fusobacterium plauti-vincenti	Vincent angina
Gaffkya tetragena	Pus producer
Hemophilus ducreyi	Chancroid
Hemophilus influenzae	Acute respiratory infections Conjunctivitis Influenzal meningitis
Hemophilus pertussis	Whooping cough
Klebsiella pneumoniae	Lobar pneumonia
Leptospira icterohaemorrhagiae	Spirochetal jaundice
Malleomyces mallei	Glanders
Micrococcus albus **Micrococcus aureus**	Local suppurative inflammation, occasionally generalized
Moraxella lacunata	Conjunctivitis
Mycobacterium leprae	Leprosy
Mycobacterium tuberculosis	Tuberculosis
Neisseria gonorrhoeae	Arthritis Cervicitis Conjunctivitis Urethritis
Neisseria meningitidis	Epidemic cerebrospinal meningitis
Pasteurella pestis	Plague
Pasteurella tularensis	Tularemia
Proteus vulgaris	Internal infection (secondary invader)
Pseudomonas aeruginosa	Wound infections (usually as secondary invader)

TABLE OF THE MOST COMMON MICROORGANISMS PATHOGENIC TO MAN—(Continued)

A. Bacteria—(Continued)

Name	Resulting Disease
Rickettsia prowazekii	Typhus fever
Rickettsia quintana	Trench fever
Rickettsia rickettsii	Rocky Mountain spotted fever
Rickettsia tsutsugamushi	Tsutsugamushi disease
Salmonella choleraesuis Salmonella enteritidis Salmonella typhimurium	Food poisoning Gastroenteritis Paratyphoid fever
Salmonella schottmuelleri	Paratyphoid fever
Shigella dysenteriae Shigella paradysenteriae Shigella sonnei	Bacillary dysentery
Spirillum minus	Rat-bite fever
Streptococcus mitis.	Subacute bacterial endocarditis Local suppurative inflammation
Streptococcus pyogenes	Septic sore throat Scarlet fever Local and generalized suppurative inflammation
Treponema carateum	Pinta
Treponema pallidum	Syphilis
Treponema pertenue	Y ws
Vibrio comma	Cholera

B. Fungi

Name	Resulting Disease
Actinomyces bovis *Also called ray fungus*	Actinomycosis *Streptothricosis*
Aspergillus fumigatus.	Aspergillosis
Blastomyces dermatitidis	North American blastomycosis Gilchrist's disease
Candida albicans Also called *thrush fungus*	Thrush
Coccidioides immitis	Coccidioidomycosis San Joaquin Valley fever
Cryptococcus histolyticus Also called *Torula histolytica*	Cryptococcosis (torulosis)
Epidermophyton	Dermatophytosis Tinea
Histoplasma capsulatum	Histoplasmosis
Microsporum	Dermatophytosis
Sporotrichum schenckii	Sporotrichosis
Trichophyton	Dermatophytosis

TABLE OF THE MOST COMMON MICROORGANISMS PATHOGENIC TO MAN—(Continued)

C. Protozoa

NAME	RESULTING DISEASE
Endamoeba histolytica	Amebic dysentery
Leishmania braziliensis	Mucocutaneous leishmaniasis Leishmaniasis americana
Leishmania donovani	Visceral leishmaniasis Kala-azar
Leishmania tropica	Cutaneous leishmaniasis Oriental sore Delhi boil
Plasmodium falciparum	Malignant tertian malaria Estivo-autumnal malaria
Plasmodium malariae	Quartan malaria
Plasmodium vivax	Benign tertian malaria
Toxoplasma gondii	Encephalomyelitis Toxoplasmosis
Trichomonas vaginalis	Vaginitis
Trypanosoma cruzi	American trypanosomiasis Chagas' disease
Trypanosoma gambiense	Gambian trypanosomiasis Mid-African sleeping sickness
Trypanosoma rhodesiense	East African sleeping sickness

TABLE OF REPRESENTATIVE MONSTROSITIES AND ANOMALIES (TERATA)

(See Plate 25)

TYPE, OR PARTS INVOLVED	NAMES, EXAMPLES (SYNONYMOUS TERMS IN PARENTHESES)
Single Individual Involved	
1. Affecting the whole, or nearly the whole, body	Pantasomatous terata
Excessive size	Gigantism (Macrosomia)
Markedly less than normal size	Dwarfism (Microsomia; Nanism; Nanosomia)
Marked discrepancy of size of lateral halves of body	Hemihypertrophy. Hemiatrophy
Altered form of whole body	Fetus cylindricus. Fetus papyraceus. Lithopedion. Achondroplasia (Chondrodystrophy)
Anomalies of color (pigmentation)	
Complete or partial deficiency	Albinism
Generalized or local excess	Melanism
2. Affecting regions, parts, or organs	Merosomatous terata
Cranium and contents:	
Cleft or fissure	Cranioschisis
Complete or partial absence	Acrania
Cleft with protrusion of meninges.	Meningocele
Cleft with protrusion of brain	Encephalocele
Cleft with protrusion of brain and meninges	Encephalomeningocele (Meningoencephalocele)
Herniation of brain with fluid in the ventricles	Hydrencephalocele (Hydroencephalocele)
Herniation of brain with fluid in the meninges.	Hydromeningocele
Abnormal amount of fluid in ventricles or meninges	Hydrocephaly (Hydrencephaly; Macrocephaly)
Complete or partial lack of brain	Anencephaly
Deficiency or absence of olfactory lobes.	Arrhinencephaly. Cf. Ethmocephaly
Abnormal smallness of brain and cranium	Microcephaly (Micrencephaly)
Altered shape due to premature sutural union.	Acrocephaly. Pachycephaly. Scaphocephaly. Sphenocephaly (see *sphenocephalus*, 1). Trigonocephaly. Plagiocephaly
Occipital and cervical spinal cleft with herniation of brain and spinal cord.	Iniencephaly
Spine and spinal cord:	
Cleft or fissure of spine	Rachischisis (Spina bifida)
Cleft with herniation of meninges	Rachicele (Spinal meningocele)
Cleft with herniation of spinal cord	Myelocele
Cleft with herniation of meninges and spinal cord	Myelomeningocele (Meningomyelocele)
Herniation of spinal cord with fluid in central canal	Myelocystocele (Syringomyelocele)
Excessive fluid in central canal	Hydromyelia
Absence of spinal cord	Amyelia
Occipital and cervical spinal cleft with herniation of brain and spinal cord	Iniencephaly
Cleft of entire cranium and spine with marked deficiency of brain and spinal cord	Holorachischisis
Face and sense organs:	
Complete or partial absence of olfactory lobes with major defect of ethmoidal region	Ethmocephaly. Cf. Arrhinencephaly
Complete or partial fusion of orbits and eyes with ethmoidal defect	Cyclopia (Synopsia)
Ethmoidal and nasal defects with approximation of orbits	Cebocephaly

In compiling this table, no one classification was followed exclusively—rather those terms were adopted which most generally have been accepted in American usage. The strongest influence was the terminology used by Schwalbe (*Die Morphologie der Missbildungen des Menschen und der Tiere*) who, in turn, was influenced by Förster (*Die Missbildungen des Menschen systematisch dargestellt*) and by Ahlfeld (*Die Missbildungen des Menschen, usw., mit Atlas*). Isidore Geoffroy St.-Hilaire also exerted a strong influence but his classification into orders, genera, and species was abandoned as being antedated and unsatisfactory. Ballantyne (*Manual of Antenatal Pathology and Hygiene—I. The Embryo*) and his exposition of Taruffi's cumbersome terminology probably played the next most important role. Wilder ("Duplicate Twins and Double Monsters") made some contribution, chiefly in regard to orderly arrangement of conjoined twins.

The form of this table was planned in particular for the use of those whose acquaintance with teratology is limited. The key will make it possible to identify an unknown specimen, or at least to localize it in the proper teratologic class.

TABLE OF REPRESENTATIVE MONSTROSITIES AND ANOMALIES (TERATA)—(Continued)

Type, or Parts Involved	Name, or Examples (Synonymous Terms in Parentheses)
Absence of eyes	Anophthalmia
Absence of eyelids	Ablepharia (Ablepharon)
Absence of palpebral fissure	Cryptophthalmia
Absence of iris	Aniridia (Irideremia)
Absence of lens	Aphakia
Absence of nose	Arrhinia
Absence of mouth.	Astomia
Absence of eyes, nose, and mouth.	Triocephaly (Aprosopia)
Absence of teeth.	Anodontia
Absence of tongue	Aglossia
Absence of lower jaw	Agnathia
Approximation or fusion of ears (associated with agnathia)	Synotia. Otocephaly
Cyclopes, with agnathia and synotia	Cyclotia
Marked sphenoidal defect with partial synotia	Sphenocephaly (see *sphenocephalus*, 2)
Abnormally small face	Microprosopia
Abnormally large face	Macroprosopia
Abnormally small eye(s)	Microphthalmia
Abnormally large eye(s)	Megalophthalmia (Buphthalmos; Hydrophthalmus congenitus)
Abnormally small eyelids	Microblepharia (Microblephary)
Abnormally small palpebral fissure	Blepharophimosis
Abnormally small mouth	Microstomia
Abnormally large mouth	Macrostomia
Abnormally small ears	Microtia
Abnormally small lower jaw	Micrognathia
Abnormally large lower jaw	Macrognathia
Abnormally small teeth	Microdontia
Abnormally large teeth	Macrodontia
Abnormally small tongue	Microglossia
Abnormally large tongue	Macroglossia
Clefts of the face and jaws	
From palpebral fissure to nasal cavity	Oblique facial cleft (Type I)
From palpebral fissure to philtrum of lip	Oblique facial cleft (Type II)
From level of mandibular joint to angle of mouth	Transverse facial cleft (Cleft cheek, Genal cleft; Macrostomia)
Vertical cleft of one or both eyelids	Coloboma palpebrae or palpebrarum (Blepharocoloboma)
Cleft of iris, lens, choroid, etc	Coloboma of iris, lens, choroid, etc.
Cleft nose	Rhinoschisis
Cleft lip	Cheiloschisis
Cleft jaw	Gnathoschisis
Cleft palate	Palatoschisis (Uranoschisis)
Cleft uvula	Staphyloschisis (Uvula fissa)
Cleft lip, jaw and palate	Cheilognathopalatoschisis
Absence of nasal septum, philtrum of lip, and premaxilla	False median cleft of upper jaw
Cleft tongue	Bifid tongue. Trifid tongue
Neck.	
Median cleft or fissure	Tracheloschisis
Retention of pharyngeal pouches and grooves, or branchial ducts	Cervical cysts, diverticula, or fistulae
Congenital goiter	Struma congenita
Thorax and contents:	
Median cleft or fissure	Thoracoschisis (Sternoschisis)
Lateral cleft or fissure	Pleurosoma
Median cleft with herniation of heart	Ectopia cordis
Absence of breasts	Amastia
Supernumerary breast(s)	Polymastia (Hypermastia)
Absence of nipple(s)	Athelia
Supernumerary nipple(s)	Polythelia
Hypoplasia of breasts	Micromastia
Hyperplasia of breasts	Macromastia
Transposition of thoracic viscera	Situs inversus viscerum

TABLE OF REPRESENTATIVE MONSTROSITIES AND ANOMALIES (TERATA)—(Continued)

Type, or Parts Involved	Name, or Examples (Synonymous Terms in Parentheses)
Herniation of abdominal viscera into thorax	Diaphragmatic hernia
Various anomalies of skeleton, muscles, vessels, nerves, and viscera of the thorax.	*E.g.*, Dextrocardia. Patent foramen ovale; Patent ductus arteriosus; Right aortic arch. Cardiac lobe of lung, etc.
Abdomen and contents.	
Cleft or fissure of abdomen	Gastroschisis (Celosoma)
Herniation of viscera into umbilical cord.	Umbilical hernia
Herniation through lumbar triangle	Lumbar hernia
Herniation through inguinal canal.	Inguinal hernia
Herniation through diaphragm	Diaphragmatic hernia
Various anomalies of skeleton, muscles, vessels, nerves, and viscera of abdomen.	*E.g.* Congenital cystic kidney; Horseshoe kidney; Pelvic kidney; Double renal pelvis or ureter. Diverticula of gut; Stenosis and atresia of gut, Volvulus, etc.
Pelvis and contents.	
Cleft or fissure of pelvis	Pelvis fissa
Pelvic cleft with extroversion of bladder	Ectopia vesicae (Exstrophy of the bladder)
Rectum opens into bladder	Rectovesical fistula (Anus vesicalis)
Urogenital system.	
Double penis or clitoris	Diphallus (*see duplicity*)
Adhesion of prepuce	Phimosis
Urethra opens on dorsum of penis	Epispadias
Urethra opens on ventral side of penis.	Hypospadias
Absence of testes.	Anorchism (Anorchidism)
Absence of one testis	Monorchism (Monorchidism)
Failure of testes to descend	Cryptorchism (Cryptorchidism)
Accessory testis or testes.	Polyorchidism
Fusion of testes.	Synorchidism
Absence of ovaries	Anovarism
Uterus divided by septum	Uterus septus
Uterus possessing two horns	Uterus bicornis
Halves of uterus completely separate	Uterus duplex (Uterus didelphys)
Only one lateral half of uterus formed.	Uterus unicornis
Ovarian and testicular tissue present in the same individual	Hermaphroditism
Male genitalia simulate female type	Pseudohermaphroditismus masculinus (Androgyny)
Female genitalia simulate male type	Pseudohermaphroditismus *femininus* (Gynandry)
Rectum opens into vagina or vulva	Atresia ani vaginalis (Vulvar anus)
Extremities:	
Congenital absence of all extremities	Amelia (Amelus)
Congenital absence of one, two, or three extremities, or their imperfect development	Ectromely (Ectromelus)
Distal portion of one or more limbs absent or markedly deficient	Hemimely (Peromely)
Proximal portion of one or more limbs lacking or rudimentary	Phocomely (Phocomelus)
Limbs normal in form, but abnormally small	Micromely (Micromelus)
Arms only thus.	Microbrachius
Legs only thus	Micropus
Inversion (rotation) and fusion of legs.	Sympodia (Symelia)
With feet lacking	Sympus apus (Sirenomelus)
One foot present	Sympus monopus (Uromelus)
Two feet present	Sympus dipus (Symelus)
Skin only between limbs	Patagium
Complete or partial absence of one or more digits.	Ectrodactyly
Absence of digits II IV	Bidactyly ("Lobster-claw"; Cleft hand or foot)
Abnormally short digits.	Brachydactyly
Abnormally long digits	*Arachnodactyly*
More than normal number of digits.	Polydactyly
Accessory thumb (or great toe)	Prepollex (or Prehallux)
Fusion of digits.	Syndactyly
Web of skin between digits.	Patagium

TABLE OF REPRESENTATIVE MONSTROSITIES AND ANOMALIES (TERATA)—(Continued)

Type, or Parts Involved	Name, & Examples (Synonymous Terms in Parentheses)
More than normal number of phalanges	Hyperphalangism
Less than normal number of phalanges	Hypophalangism
Congenital hypertrophy of hand	Chiromegaly
Congenital hypertrophy of foot	Pes gigas (Macropody)
Duplication (partial) of hand	Dichirus
Congenital distortion of foot	Talipes (Clubfoot)
Congenital distortion of hand	Talipomanus (Clubhand)
Free, Completely Separated Individual	Twins (Gemini); Triplets; Quadruplets, Quintuplets; etc.
1. Individuals of equal or nearly equal size	Equal twins, etc. (Gemini aequales)
Derived from separate fertilized ova	False, or fraternal, twins (Not terata)
Derived from one ovum common chorion	True, identical, monochorionic, or uniovular twins (Gemini monochorii)
2. Individuals markedly discrepant in size	Unequal twins (Gemini inaequales)
Derived from separate fertilized ova	Retarded development of one of fraternal twins
Derived from one ovum one twin (the autosit) normal, or nearly so, the other (the omphalosite) small, markedly defective, with defective heart or no heart dependent on the circulation furnished by the autosite by way of the placenta	Acardius (Acardiacus; Placental parasite)
Two or More More or Less Complete Individuals More or Less Intimately United	Conjoined twins (Diplopagi; Double monsters)
1. Component individuals, or parts of individuals, of nearly equal size	Symmetrical conjoined twins (Gemini monochorii aequales)
Union chiefly by heads or chiefly by heads and thoraces; duplicity involves at least infraumbilical parts	Inferior duplicity (Terata anadidyma)
Union by heads only	Craniopagus (Cephalopagus)
Dorsal union in occipital region	Craniopagus occipitalis (Iniopagus)
End-to-end union by vertices	Craniopagus parietalis (Acrocephalopagus)
Ventral union in frontal region	Craniopagus frontalis (Metopagus)
Ventral union by heads and thoraces	Cephalothoracopagus (Syncephalus)
With but one laterally directed face, or major lateral face with parts of another opposite	Cephalothoracopagus monosymmetros
With two equal, laterally directed faces	Cephalothoracopagus disymmetros (Janus monster Janiceps)
Lateral union at least by heads and thoraces, grading into an individual single except in pelvic region	Dipygus
Double penis or clitoris	Diphallus
With more or less complete third (median) lower extremity	Dipygus tripus
With four lower extremities	Dipygus tetrapus
Parts of body below umbilicus mostly single; duplicity involves mostly supraumbilical parts	Superior duplicity (Terata katadidyma)
Partial or complete doubling of hypophysis	Double hypophysis
Partial or complete doubling of face	Diprosopus
Partial or complete doubling of nose	Rhinodymus (Diprosopus diophthalmus)
Double nose more or less complete third (median) eye	Diprosopus triophthalmus
Two noses four eyes facial skeleton more or less duplicated	Diprosopus tetrophthalmus (Iniodymus)
Two faces; third, more or less complete, median ear	Diprosopus triotus
Two faces; four ears heads nearly separate	Diprosopus tetrotus
Two complete heads	Dicephalus
Two heads necks fused, or single neck	Dicephalus monauchenos
Two heads on separate necks	Dicephalus diauchenos
Two heads partly double thorax two arms	Dicephalus dibrachius
Two heads partly double thorax more or less complete third, median arm	Dicephalus tribrachius
Two heads two thoraces, four arms	Dicephalus tetrabrachius

TABLE OF REPRESENTATIVE MONSTROSITIES AND ANOMALIES (TERATA)—(Continued)

Type, or Parts Involved	Name, or Examples (Synonymous Terms in Parentheses)
Parts of body both above and below the umbilicus show duplicity	Superior and inferior duplicity (Terata anakatadidyma)
Ventral union by heads and thoraces, but head somewhat doubled	Some forms of Cephalothoracopagus (see above under Inferior duplicity)
Ventral union by faces and thoraces.	Prosopothoracopagus
Extensive ventral union chiefly by thoraces	Thoracopagus
Ventral union chiefly by sterna.	Sternopagus
Ventral union in xiphoid region only	Xiphopagus
Lateral union by thoraces and hips	Ileothoracopagus
Lateral union in iliac region	Iliopagus
Dorsal union in sacral region	Pygopagus
End-to-end union by buttocks.	Ischiopagus
2. One member of conjoined twins (the autosite) complete and normal (or nearly so); the other (the parasite) markedly smaller and more or less imperfect, often represented by only a part or parts of an individual, or by an amorphous mass of tissues (teratoma)	Asymmetrical conjoined twins (Gemini monochorii inaequales)
Parasite attached to head of autosite	Craniopagus parasiticus (Epicomus)
Parasite attached to upper jaw or base of cranium of autosite	Epignathus
Attached to the maxilla.	Epignathus (sensu stricto)
Attached to the palate	Epipalatum
Attached to the sphenoid region	Episphenoid
Parasite attached to neck of autosite	Trachelopparasitus
Accessory limb attached to the neck	Deromelus
Parasite attached to thorax of autosite	Thoracopagus parasiticus
Parasite attached to epigastrium of autosite	Epigastrius (Epigastrius parasiticus)
Parasite attached below umbilicus	Dipygus parasiticus
Parasite attached in sacral region	Pygopagus parasiticus
Parasite attached in ischial region.	Ischiopagus parasiticus
Parasite attached in iliac region.	Iliopagus parasiticus
Parasite within body of autosite	Fetus in fetu
Within skin of autosite	Dermocyma
Within body wall of autosite	Endocyma

TABLE OF PHOBIAS

Substitute the combining form *-philia* for *-phobia* to obtain the antonym of fear

afraid, being	phobophobia
air currents	aerophobia
alarmed, being	phobophobia
alone, being	monophobia
angina pectoris	anginophobia
animals	zoophobia
animals' skin or fur, touching	doraphobia
animals' teeth	odontophobia
bacilli	bacillophobia
bacteria	bacteriophobia
beaten, being	rhabdophobia
bees	apiphobia
	melissophobia
blood, sight of	hematophobia
	hemophobia
blushing	ereuthophobia
	erythrophobia
bodies, dead	necrophobia
body, left side of, objects on	levophobia
naked	gymnophobia
right side of, objects on	dextrophobia
body odors	bromhidrosiphobia
books	bibliophobia
bound, being	merinthophobia
bridges, crossing	gephyrophobia
buried alive, being	taphephobia
cadavers	necrophobia
cancer	cancerophobia
	cancerphobia
cats	ailurophobia
	galeophobia
	gatophobia
celestial space	astrophobia
childbirth	maieusiophobia
	tocophobia
children	pedophobia
choking	pnigophobia
cholera	cholerophobia
clawed, being	amychophobia
cliffs	cremnophobia
comets	cometophobia
cold	cheimaphobia
	psychrophobia
colors, certain	chromatophobia
	chromophobia
red	ereuthophobia
	erythrophobia
confined space, being in	claustrophobia
contact, physical	aphephobia
	haphephobia
	haptephobia
contamination	molysmophobia
	mysophobia
crossing bridges	gephyrophobia
crossing the street	agyiophobia
crowds	ochlophobia
darkness	achluophobia
	nyctophobia
	scotophobia
daylight	phengophobia
dead bodies	necrophobia
death	necrophobia
	thanatophobia
defecation	coprophobia
deformity	dysmorphophobia
	teratophobia
deity	theophobia
demons	demonophobia
depths	bathophobia
devils	demonophobia
diabetic, becoming	diabetophobia
dirt	mysophobia
disease	nosophobia
heart	cardiophobia
skin	dermatopathophobia
venereal	cypridophobia
	venereophobia
disorder	ataxiophobia
dogs	cynophobia
drafts	aerophobia
	anemophobia
drink	dipsophobia
dust	amathophobia
eating	sitophobia
electricity	electrophobia
empty spaces, large	kenophobia
error	hamartophobia
everything	pantophobia
exhaustion	kopophobia
exposure to sun's rays	heliophobia
failure	kakorrhaphiophobia
falling asleep	hypnophobia
fatigue	kopophobia
fears, one's own	phobophobia
feces	coprophobia
fever	febriphobia
	pyrexeophobia
filth	rhypophobia
finger, being touched by	aichmophobia
fire	pyrophobia
fish	ichthyophobia
floods	antlophobia
flowers	anthophobia
flutes	aulophobia
fog	homichlophobia
food	cibophobia
	sitophobia
forests	hylophobia
fur, animals', touching	doraphobia
gaiety	cherophobia
glare of light	photaugiophobia
glass	crystallophobia
	hyalophobia
God	theophobia
gravity	barophobia
hair	trichopathophobia
	trichophobia
happiness	cherophobia
hearing a certain name	onomatophobia
heart disease	cardiophobia
heat	thermophobia
heights	acrophobia
	hypsophobia
hell	hadephobia
high objects	batophobia
horse	hippophobia
house, being in a	domatophobia
human society	anthropophobia
hydrophobia	hydrophobophobia
	lyssophobia
ideas	ideophobia
infants	pedophobia
infection	molysmophobia
venereal	cypridophobia
	venereophobia
infestation, with lice	pediculophobia
with worms	helminthophobia
	vermiphobia

TABLE OF PHOBIAS—(Continued)

infinity	apeirophobia
insane, becoming	lyssophobia
insects	entomophobia
stinging	melissophobia
intercourse, sexual	coitophobia
kleptomaniac, becoming	kleptophobia
laceration	amychophobia
left side of body objects on	levophobia
leprosy	leprophobia
lice	pediculophobia
	phthiriophobia
lies, telling	mythophobia
light	photophobia
flashing	selaphobia
glare of	photaugiophobia
lightning	astraphobia
	astrapophobia
	keraunophobia
lights, northern	auroraphobia
liquids	hygrophobia
liquors, alcoholic	dipsophobia
locked in, being	claustrophobia
lockjaw	tetanophobia
lonely being	eremophobia
love, sexual	erotophobia
many things	polyphobia
marriage	gamophobia
matter fecal	coprophobia
medicine, mercurial	hydrargyrophobia
taking	pharmacophobia
men	androphobia
meningitis	meningitophobia
mercurial medicines	hydrargyrophobia
metals	metallophobia
microbes	bacillophobia
	microbiophobia
	microphobia
microorganisms	bacteriophobia
missiles	ballistophobia
mites	acarophobia
moisture	hygrophobia
money	chrematophobia
monster giving birth to	teratophobia
motion	kinesophobia
movement	kinesophobia
nakedness	gymnophobia
name, hearing certain	onomatophobia
needles	belonephobia
newness	cenophobia
	kainophobia
	neophobia
night	noctiphobia
	nyctophobia
noise	phonophobia
northern lights	auroraphobia
novelty	cainophobia
	kainophobia
	neophobia
number 13	triskaidekaphobia
objects, metal	metallophobia
small	microphobia
ocean	thalassophobia
odors	osmophobia
body	bromhidrosiphobia
oneself	autophobia
pain	algophobia
	odynophobia
parasites	parasitophobia
people	anthropophobia
deformed	teratophobia

people—(*Continued*)	
naked	gymnophobia
strange	xenophobia
pins	belonephobia
places certain	topophobia
desolate	eremophobia
open	agoraphobia
steep	cremnophobia
pleasure	hedonophobia
pointed objects	aichmophobia
poisoned, being	toxicophobia
poisons	iophobia
precipices	*cremnophobia*
projectiles	ballistophobia
rabies	lyssophobia
railroad travelling	siderodromophobia
rain	ombrophobia
rays of sun, exposure to	heliophobia
red colors	ereuthophobia
	erythrophobia
reptiles	ophidiophobia
responsibility	hypengyophobia
ridicule	katagelophobia
right side of body objects on	dextrophobia
roaming about	dromophobia
robbers	harpaxophobia
	kleptophobia
room, closed being in	claustrophobia
ruin	atephobia
sacred things	hierophobia
scabies	scabiophobia
scratched, being	amychophobia
sea	thalassophobia
seen, being	scopophobia
sex	genophobia
female	gynephobia
male	androphobia
sexual love	erotophobia
sexual union	coitophobia
sharp-pointed objects	aichmophobia
	belonephobia
shock	hormephobia
sin	hamartophobia
sitting down	kathisophobia
skin, animals' touching	doraphobia
skin diseases	dermatopathophobia
sleep	hypnophobia
small objects	microphobia
smells	osmophobia
personal	bromhidrosiphobia
snakes	ophidiophobia
snow	chionophobia
society human	anthropophobia
solitude	autophobia
sound	acousticophobia
	phonophobia
sourness	acerbophobia
	acerophobia
space, celestial	astrophobia
confined being in	claustrophobia
spaces, large empty	kenophobia
open	agoraphobia
speech	lallophobia
	lalophobia
	phonophobia
spiders	arachnephobia
staircases	climacophobia
standing upright	basophobia
	stasibasiphobia
	stasiphobia

TABLE OF PHOBIAS—(Continued)

—	—
stared at, being	ophthalmophobia
stars	astrophobia

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING

Term or Abbreviation	Latin or Greek	Translation
āā, āa	ana	of each
a.c.	ante cibum	before meals
ad	ad	to, up to
add.	adde; addantur addendum addendo	add (thou) let them be added to be added by adding
ad lib.	ad libitum	at pleasure
admov	admove; admoveatur; admoveantur	apply (thou) let it be applied let them be applied
ad part. dolent.	ad partes dolentes	to the painful parts
agit.	agita	shake (thou) stir (thou)
alb.	albus	white
alter	alter	the other
alternis horis	alternis horis	every other hour
ante	ante	before
aq.	aqua	water
aq. bull.	aqua bulliens	boiling water
aq. comm.	aqua communis	common water
aq. dest.	aqua destillata	distilled water
aq. ferv	aqua fervens	hot water
aut	aut	or
bacillum	bacillum	bougie
bene	bene	well
bib.	bibe	drink (thou)
b.i.d.	bis in die, bis in dies	twice daily
bis	bis	twice
bol.	bolus	large pill
c̄,	cum	with
calefactus	calefactus	warmed
cap.	capiat	let him (her) take
caps.	capsula	capsule
caute	caute	cautiously
cera	cera	wax
cerat.	ceratum	cerate
chart.	charta	paper
chart. cerat.	charta cerata	waxed paper
chartula	chartula	small paper
cibus	cibus	food
cit. disp.	cito dispensetur	let it be dispensed quickly
co.	compositus	a compound, compounded
coch., cochleat.	cochlear cochleare cochleatim	spoonful; by spoonfuls
coch. amp.	cochleare amplum	tablespoonful
coch. mag.	cochlear magnum	large spoonful (about ½ oz.)
coch. med.	cochleare medium, cochleare modicum	dessertspoonful (about 2 fluidrachms)
coch. parv	cochleare parvum	teaspoonful (about 1 fluidrachm)
col.	cola	strain (thou)
colat.	colatus	strained
colent.	colentur	let them be strained
colet.	coletur	let it be strained
coll.	collyrium	an eyewash
collunarium	collunarium	nose wash
collut.	collutorium	mouth wash
collyr	collyrium	an eyewash
coloretur	coloretur	let it be colored
commisce	commisce	mix (thou) together
comp.	compositus	compounded
conf	confectio	confection
confricamentum	confricamentum	liniment
cong.	congius	gallon
cons.	conserva	conserve; keep (thou)
consperg.	consperge	dust (thou) sprinkle (thou)
contra	contra	against
cont. rem.	continuentur remedia	let the medicines be continued
contusus	contusus	bruised
cor	cor	the heart
cordis	cordis	the heart
cort.	cortex	the bark

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING—(Continued)

Term or Abbreviation	Latin or Greek	Translation
cotula	cotula	measure
cuj.	cujus cujuslibet	of which; of any
d.	da	give (thou)
de	de	of, from
dec.	decanta	pour (thou) off
decem	decem	ten
decimus	decimus	the tenth
de d. in d.	de die in diem	from day to day
deglut.	deglutiatur	may be swallowed, let be swallowed
dein	dein	thereupon
det.	detur	let be given
detur in duplo	detur in duplo	let twice as much be given
dexter	dexter	the right
dextra	dextra	the right
dieb. alt.	diebus alternis	every other day
dieb. tert.	diebus tertiis	every third day
digere	digere	digest (thou)
dil.	dilue; dilutus	dilute (thou); diluted
dim.	dimidius	one-half
d. in p. aeq.	dividatur in partes aequales	let it be divided into equal parts
direc. prop.	directione propria	with proper direction
divid.	divide	divide (thou)
dividendus, -a, -um	dividendus, -a, -um	to be divided
donec	donec	until
D.P	directione propria	with proper direction
d.t.d. No. iv	dentur tales doses No. iv	let 4 such doses be given
e.	ex,	from, one of
eadem (*fem.*)	eadem	the same
ejusd.	ejusdem	of the same
elect.	electuarium	an electuary
elix.	elixir	an elixir
e.m.p.	ex modo prescripto	after the manner prescribed as directed
emp.	emplastrum	plaster
emulgens	emulgens	an emulsifying agent
en.	enema	an enema, clyster
enem.	enema	an enema
enemata	enemata	clysters
epistom.	epistomium	stopper
et	et	and
etiam	etiam	also, besides
ext.	extende	spread (thou)
f	fac· fiat; fiant	make (thou); let it be made; let them be made
farina	farina	flour
febris	febris	fever
ferv	fervens	boiling
fiat pulvis in chartulas xii dividenda	fiat pulvis in chartulas xii dividenda	let 12 powders be made
filt.	filtra	filter (thou)
flav	flavus	yellow
fldxt.	fluidextractum	fluidextract
fol.	folium	leaf
f. pil. xi	fac pilulas xi	make (thou) 11 pills
ft.	fac· fiat; fiant	make (thou) let it be made; let them be made
ft. cataplasm.	fiat cataplasma	let poultice be made
ft. cerat.	fiat ceratum	let a cerate be made
ft. chart. vi	fiant chartulae vi	let 6 powders be made
ft. collyr	fiat collyrium	let an eyewash be made
ft. emuls.	fiat emulsio	let an emulsion be made
ft. enema	fiat enema	let an injection be made [for rectum]
ft. garg.	fiat gargarisma	let gargle be made
ft. infus.	fiat infusum	let an infusion be made
ft. injec.	fiat injectio	let an injection be made [for urethra]
ft. linim.	fiat linimentum	let liniment be made
ft. mass.	fiat massa	let mass be made

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING—(Continued)

Term or Abbreviation	Latin Greek	Translation
ft. mas. div in pil. xiv	fiat massa et divide in pilulas xiv or fiat massa in pilulas xiv dividenda	let 14 pills be made
ft. mist.	fiat mistura	let mixture be made
ft. pil. xxiv	fiant pilulae xxiv	let 24 pills be made
ft. pulv	fiat pulvis	let powder be made
ft. pulv et div in chs xii	fiat pulvis et divide in chartulas xii or fiat pulvis in chartulas xii dividenda	let 12 powders be made
ft. solut.	fiat solutio	let solution be made
ft. suppos.	fiat suppositorium	let suppository be made
ft. suppos. iv	*fiant suppositoria i*	*let 4 suppositories be made*
ft. ung.	fiat unguent m	let an ointment be made
garg.	gargarsma	gargl
gland.	glandula	gland
glyc.	glycerinum	glycerite
gradatim	gradatim	by degrees, gradually
grana	grana	grains
granum	granum	grain
gtt.	gutta( )	drop(s)
H	hora	an hour
haec	haec	this
haust.	haustus	draught
H.D	hora decubitus	at th hour of going to bed
herba	herba	an herb
hic	hic	*this*
hoc	hoc	this
hor som.	hora somni	at bedtime
H.S.	hora somni	at bedtime
idem	idem	the same
identidem	identidem	repeatedly
in d.	in dies	from day to day daily
inde	inde	therefrom
inf	infusum	an infusion
I ger in capsulas	inger in capsulas	put (thou) in capsules
inject.	injectio	an injection
inter	inter	between
involve gelatina	involve gelatina	coat (thou) with gelatin
ita	ita	in such manner
lac	lac	milk
lamella	lamella	leaf, scale
leniter terendo	leniter terendo	by rubbing gently
leviter	leviter	lightly
lin.	linimentum	liniment
liq.	liquor	solution
lot.	lotio	l tion
M.	misce	mix (thou)
m.	minimum	minim
mag.	magnus	large
massa	massa	mass
massa pilularis	massa pilularis	pill mass
min.	minimum	minim
minutum	minutum	minute
mist.	mistura	*mixture*
mitt.	mitte	send (thou)
mittatur	mittatur	let it be sent
mitt. tal.	mitt talis	send (thou) of such (or this)
mod. praesc.	modo praescripto	in the manner prescribed
more dict.	more dicto	in the manner directed
more sol.	more solito	in the usual manner
nisi	nisi	unless
no.	umero, numerus	mber
nocti	noctis	of the night
non	non	not
non rep.	non repetatur	do not repeat
nox	nox	night
nunc	nun	now
O	*octarius*	a pi t

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING—(Continued)

Term or Abbreviation	Latin or Greek	Translation
obduce	obduce	cover (thou) conceal (thou) coat (thou)
octavus	octavus	eighth
octo	octo	eight
oculus	oculus	the eye
O.D	oculus dexter	the right eye
O.L.	oculus laevus	the left eye
ol.	oleum	oil
omn. bih.	omni bihorio	every 2 hours
omn. hor	omni hora	every hour
omn. 2 hor	omni secunda hora	every 2 hours
omni mane	omni mane	every morning
omni nocte	omni nocte	every night
omn. quadr. hor	omni quadrante horae	every quarter of an hour
O.S.	oculus sinister	the left eye
p.	pondere	by weight
p. ae.	partes aequales	equal parts
pars	pars	part
partis	partis	of part
part. vic.	partitis vicibus	in divided doses
parvulus	parvulus	an infant
parvus	parvus	little
p.c.	post cibos post cibum	after eating after food
per	per	through, by
perinde	perinde	in the same manner as before
pes	pes	the foot
pil.	pilula(e)	pill(s)
placebo	placebo	substance which pleases
pocill.	pocillum	little cup
pocul.	poculum	cup
pondus medicinale	pondus medicinale	medicinal (apothecaries') weight
potus	potus	drink
prand.	prandium	dinner
primus	primus	the first
prius	prius	before, former
p.r.n.	pro re nata	as occasion arises, occasionally
pro	pro	for
pro ratione aetatis	pro ratione aetatis	according to the age of the patient
proximo	proximo	nearest
pulv	pulvis pulveres; pulveratus	powder powders; powdered
pyxis	pyxis	pill box
q.h.	quaque hora	each hour every hour
q. 2 h.	quaque secunda hora	every 2 hours
q. 3 h.	quaque tertia hora	every 3 hours
q. 4 h.	quaque quarta hora	every 4 hours
q.i.d.	quater in die	4 times day
q.l.	quantum libet	as much as is desired
q.p.	quantum placet	as much as you please
Q.Q.	quaque; quoque	each, every also
q.s.	quantum sufficit; quantum sufficiat quantum satis	sufficient quantity; as much as is sufficient
quam libet	quam libet	as much as you wish
quartus	quartus	fourth
quater	quater	4 times
quatuor	quatuor	four
quibus	quibus	from which
qui libet	qui libet	whatever you please
quinque	quinque	five
quintus	quintus	the fifth
quor	quorum	of which
quotidie	quotidie	daily
quoties	quoties	as often as
q.v	quantum vis, quantum volueris	as much as you wish
℞	recipe	take (thou)
ratio	ratio	proportion
rec.	recens	fresh
recipe	recipe	take (thou)

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING—(Continued)

Term Abbreviation	Latin or Greek	Translation
rep.	repetatur; repetantur	let it be repeated; let them be repeated
rub.	ruber	red, ruddy
S.	signa; signetur	write (thou) let it be written; label (thou)
S.A.	secundum artem	according to art
secundus	secundus	second
semel	semel	once
semidr	semidrachma	half drachm
semih.	semihora	half an hour
septem	septem	seven
septimana	septimana	week
sesuncia	sesuncia	an ounce and half
sesquihora	sesquihora	an hour and half
sex	sex	six
sextus	sextus	sixth
si	si	if
siccus	siccus	dry dried
sig.	signa; signetur	write (thou) let it be written label
simul	simul	together
sine	sine	without
si op. sit	si opus sit	if necessary
sit	sit	let it be
S.N.	secundum naturam	according to nature
sol.	solutio	solution
solutus	solutus	dissolved
solve	solve	dissolve (thou)
solvere	solvere	to dissolve
solvo	solvo	to dissolve
somnus	somnus	sleep
S.O.S.	si opus sit	if necessary
sp.	spiritus	spirit
spiritus vini tenuis	spiritus vini tenuis	proof spirit
spiritus vinosus	spiritus vinosus	ardent spirit of any strength
spissus	spissus	dense, hard
spt.	spiritus	spirit
ss ss̄	semis	half
st.	stet; stent	let it stand; let them stand
stat.	statim	immediately
stillatim	stillatim	by drops in small quantities
subinde	subinde	frequently
subtilis	subtilis	fine smooth, also
succus	succus	juice, sap
sum.	sume; sumat; sumatur sumantur sumendus	take (thou); let him take let it be taken let them be taken; to be taken
suppos.	suppositorium	suppository
supra	supra	above
S.V.R.	spiritus vini rectificatus	rectified spirit of wine (alcohol)
syr	syrupus	syrup
tabel.	tabella (dim. of *tabula*, table)	lozenge
talis	talis	such; like this
t.d.	ter die	3 times day
tenuis	tenuis	fine, thin
ter	ter	3 times
ter	tere	rub (thou)
tertius	tertius	third
t.i.d.	ter in die	3 times day
tinct.	tinctura	tincture
tr	tinctura	tincture
tres	tres	three
trid uum	triduum	3 days
trit.	tritura	triturate
troch.	trochiscus	troche
ubi	ubi	where, wherever whenever
uncia	uncia	an ounce
ung.	unguentum	an ointment

TABLE OF THE MORE COMMON LATIN OR GREEK TERMS AND ABBREVIATIONS USED IN PRESCRIPTION WRITING—(Continued)

Term or Abbreviation	Latin or Greek	Translation
ut dict.	ut dictum	as directed
utend.	utendum	to be used
uti	uti	to make use of
uto	uto	to make use of
vehiculum	vehiculum	vehicle
vel	vel	or
venenosum	venenosus	poisonous, poison
verus	verus	true, genuine
vesp.	vesper	the evening
vin.	vinum	wine
vitreum	vitreum	glass
vitrum	vitrum	glass

AMERICAN CLASSIFICATION OF PROTEINS

I SIMPLE PROTEINS—*Substances that yield only α-amino acids or their derivatives on hydrolysis.*

a. **Albumins**—Soluble in pure water or dilute salt solution and coagulable by heat.

ovalbumin	from egg white
serum albumin	from blood serum
lactalbumin	from milk
vegetabl albumin.	from plant tissues

b. **Globulins**—Insoluble in pure water soluble in salt solutions, and coagulable by heat.

ovoglobulin	from egg white
serum globulin	from blood serum
edestin	from hemp seed
amandin	from fruit kernels

c. **Glutelins**—Insoluble in neutral solvents, soluble in dilut acids and bases, and coagulable by heat.

glutenin	from wheat

d. **Prolamines** (or **gliadins**)—Soluble in 80 per cent alcohol insol ble in water absolute alcohol, or neutral solvents.

zein	from corn
gliadin	from wheat
hordein	from barley
bynin	from malt

e. **Albuminoids** (sometimes called **scleroproteins**)—Insol ble in all neutral solvents.

elastin	from ligament
collagen	from tendon
keratin	from horn and hoofs

f. **Globins**—Soluble in water acids, and alkalis and coagulable by heat.

globin	from hemoglobin

g. **Histones**—Soluble in water or dilute acids, precipitated or insol ble in ammonia.

scombrone	from mackerel spermatozoa
thymus histone	from thymus gland

h. **Protamines**—Soluble in water uncoagulable by heat. Simplest proteins or polypeptides.

salmine	from salmon spermatozoa
sturine	from sturgeon spermatozoa
clupeine	from herring spermatozoa

II CONJUGATED PROTEINS—*Substances that consist of protein combined with some other substance (the prosthetic molecule)*

a. **Nucleoproteins**—Compounds of one or more proteins with nucleic acid.

cytoglobulin	from white blood cells
nucleohistone	from cell nuclei

b. **Glycoproteins**—Compounds of protein with carbohydrates and certain derivatives such as hex osamine.

mucin	from mucus
osseomucoid.	from bone
tendomucin	from tendon
ichthulin	from fish eggs
helicoprotein	from snails

c. **Phosphoproteins**—Compounds of protein with phosphorus compound other than lecithin or nucleic acid.

casein	from milk
ovovitellin	from egg yolk

d. **Chromoproteins** (**hemoglobins**)—Compounds of proteins with chromophoric group (of pigments)

hemoglobi	from mammalian blood
hemocyanin	from blood of invertebrates
chlorophyll	from green plants

e. **Lecithoproteins**—Compounds of proteins with lecithins.

f **Lipoproteins**—Compounds of proteins with fatty acids.

g. **Metalloproteins**—Protein enzymes containing metals as an inherent portion of their molecule.

III. DERIVED PROTEINS—*Primary and secondary split products of proteins.*

a. **Proteans**—Insol ble products due to the action of water dilut acids, or enzymes.

myosan	from myosin
edestan	from edestin

b **Metaproteins**—Products resulting from the action of acids or bases.

c. **Coagulated proteins**—Resulting from the action of heat or alcohol on proteins.

d. **Proteoses**—Products resulting from further hydrolysis. They are soluble in water and not coagulabl by heat, and are precipitated by saturating their solutions with ammonium or zinc sulfate.

Peptones—Sol ble in water noncoagulable by heat, ot precipitated by saturating their solutions with ammonium or zinc sulfate.

f. **Peptides**—Compounds of two or more amino acids possessing one or more —CO.NH— or peptide groups.

TABLE OF CHARACTERIZED VITAMINS

Vitamins		Principal Vitamers	
Common Name	*Principal Synonyms*	*Natural*	*Synthetic*
p-Aminobenzoic acid	Chromotrichia factor Vitamin B Anti-gray-hair factor		
Ascorbic acid	Vitamin C Antiscorbutic vitamin Cevitamic acid	Dehydroascorbic acid	6-Desoxyascorbic acid Isoascorbic acid L-Fucoascorbic acid
Bioflavonoids	Vitamin P Permeability vitamin	Eriodictin Hesperidin	Eriodictyol Hesperetin
Biotin	Vitamin H Skin factor Anti-egg-white injury factor Bios IIb Coenzyme R	Desthiobiotin	Sulfoxide of biotin Esters Desthiobiotin
Cholecalciferol	See *Vitamin D*		
Choline	Sinkalin Bilineurine Fagin Amanitin	Methionine + ethanolamine Betaine + ethanolamine	Analog containing phosphorus instead of nitrogen Arsenocholine Methyl-diethyl homolog Triethyl homologs
Cobalamin	See *Vitamin* B_{12}		
Cyanocobalamin	See *Vitamin* B_{12}		
Ergocalciferol	See *Vitamin D*		
Hydroxocobalamin	See *Vitamin* B_{12}		
Inositol	Bios I Mouse antialopecia factor Rat anti-spectacled-eye factor	Phytin Soybean cephalin	Methyl inositol Inositol hexa-acetate
Nicotinic acid	Niacin P P factor Antipellagra factor Anti-black-tongue facto	Nicotinamide (Niacinamide) Coenzyme I Coenzyme II N′-methylnicotinamide	Nikethamide Esters of nicotinic acid
Nitrosocobalamin	See *Vitamin* B_{12}		
Pantothenic acid	Chick antidermatitis factor Filtrate factor		Esters
Pteroylglutamic acid	Folic acid Antianemia factor Vitamin B_c	*Lactobacillus casei* factor Fermentation *L. casei* factor Liver *L. casei* factor	Pteroic acid derivatives
Pyridoxine	Antidermatitis factor Antiacrodynia factor Adermin (Eur.)	Pyridoxal Pyridoxamine Pyridoxal phosphate	
Riboflavin	Vitamin B_2 Vitamin G Lacto-, ovo-, verdo- or hepatoflavin	Riboflavin mononucleotide Riboflavin dinucleotide	7-Methyl-9-(D-1′-ribityl) isoalloxazine 6-Methyl-9-(D-1′-ribityl) isoalloxazine 6-Ethyl-7-methyl-9-(D,1′-ribityl)-isoalloxazine

Modified from Hawk, Oser and Summerson *Practical Physiological Chemistry*, 13th ed., New York, Blakiston Division, McGraw-Hill Book Company, Inc.

Metric Doses with Approximate Apothecary Equivalents

The approximate dose equivalents in the following table represent the quantities that would be prescribed, under identical conditions, by physicians trained, respectively in the metric or in the apothecary system of weights and measures.

When prepared dosage forms such as tablets, capsules, pills, etc. are prescribed in the metric system, the pharmacist may dispense the corresponding approximate equivalent in the apothecary system, and vice versa. However this does not authorize the alternative use of the approximate dose equivalents given below for specific quantities on a prescription that requires compounding, nor in converting a pharmaceutical formula from one system of weights or measures to the other system for such purposes exact equivalents must be used.

Liquid Measures

Metric	*Approximate Apothecary Equivalents*
1000 cc.	1 quart
750 cc.	1½ pints
500 cc.	1 pint
250 cc.	8 fluidounces
200 cc.	7 fluidounces
100 cc.	3½ fluidounces
50 cc.	1¾ fluidounces
30 cc.	1 fluidounce
15 cc.	½ fluidounce (4 fluidrachms)
10 cc.	2½ fluidrachms
8 cc.	2 fluidrachms
5 cc.	75 minims (1¼ fluidrachms)
4 cc.	1 fluidrachm
3 cc.	45 minims
2 cc.	30 minims
1 cc.	15 minims
0.75 cc.	12 minims
0.6 cc.	10 minims
0.5 cc.	8 minims
0.3 cc.	5 minims
0.25 cc.	4 minims
0.2 cc.	3 minims
0.1 cc.	1½ minims
0.06 cc.	1 minim

Weights

Metric	*Approximate Apothecary Equivalents*
30 Gm.	1 ounce
15 Gm.	4 drachms
10 Gm.	2½ drachms
7.5 Gm.	2 drachms
